Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

PROTEST AGAINST BLACK BASS.

THE black bass must go. A combination of shad fishermen and amateur anglers along the banks of the Upper Delaware has decided his fate. Redoubtable warrior, faithful husband, devoted parent, he has been weighed in the scales (perch-pickerel-sunfish-and-other-choice-varieties scales) and found wanting—deficient in flavor and sadly insensible to the rights and liberties of his juvenile associates of every kindred. "Perhaps the highest authority hereabouts on angling matters" has said it, and now we must acknowledge that *Micropterus*, the lion-hearted, has locally degenerated into "a tough and a blackguard" forever. And all this because in the season just passed shad were less plentiful in the Upper Delaware than the above mentioned combination desired they should be. It is, perhaps, a matter of no consequence that the catch of shad in the lower Delaware was the largest known for fifteen years—so large that the price dropped to about one-half the lowest figure recorded in all that time. It may not be conclusive to the average intellect when it is known that the president of the Pennsylvania Fish Commission personally examined thousands of stomachs of black bass taken from the Delaware and found only two or three shad in the entire lot, but observed almost exclusively insect larvæ and crustaceans. Perhaps it is merely a coincidence that myriads of shad and multitudes of black bass occupy the Southern rivers in common and without inconvenience from the association.

If the shad fishermen and amateur anglers of the Upper Delaware really wish to make out a case against the black bass, let them watch the descent of the young shad in July and August, and see whether or not the black bass feed upon them. Find out also whether the perch and pickerel forget their instincts and spare the defenseless travelers. In short we invite them to study the whole subject carefully before antagonizing the work of men who are deeply interested in the successful and judicious stocking of streams for the good of the entire community. Their brethren along the Susquehanna joined in this hue and cry against the bass when the fish first showed their presence in that river because they feared they would destroy all the chubs and suckers, but now they look upon the conversion of a ten-cent sucker into a fifty-cent bass with wonderful equanimity.

BILL SYKES AND THE REST OF US.

A WRITER in the St. Louis *Globe-Democrat* presents a strong, if not savage, indictment of the dog as a factor in modern civilization. He concerns himself chiefly with the hordes of worthless curs maintained by the lower classes in his own State, and the figures quoted certainly afford a satisfactory basis for the argument that Missouri would take a decided step ahead if the armies of her mongrels were wiped out. When official statistics show that in one county the inhabitants number 12,000 and the dogs 21,000, there is something so manifestly out of proportion that the citizen who preaches a crusade against the canine surplus and rids the land of the mongrels should have a place in the calendar along with St. George and St. Patrick.

In his general indictment of all dogs and all dog owners, however, the Missouri writer has permitted his zeal to run away with his common sense. In casting about for an adequate solution of man's love for a dog and the dog's devotion to man, he claims to have discovered it in that human weakness which finds delight in flattery. The gist of his argument is this:

> There is probably no human weakness so universally diffused among all ranks and conditions of men * * * as love of skillfully administered flattery. Never was there man born of woman to whom cordial and spontaneous praise did not give a glow of satisfaction and raise in his own esteem, nor one that did not think the flatterer a most clever and far-seeing person. The difficulty is to believe the flattering tale to be the expression of genuine feeling, and absolutely free from selfish motives. If, however, dread of men's motives embitters, especially with the cynical, the sweet morsel of man's flattery, it is not so with the dumb flattery of the dog, nor did there ever exist a man, charm he never so wisely, who could flatter as can the hound. It is true that the dog has the nature of the ideal slave. He cares nothing for his own species; to him his master is all in all, and his master's fancies the laws of his being. The more brutal the master the more devoted the dog. The Bill Sykeses, who caress their canine followers with cudgels, and take pleasure in inflicting pain upon their dumb companions, are better served by their dogs than are those who are kind to them. For the brutal master, who has invariably kicked, beaten and ill-used him, the dog will give his life. * * * For those who are habitually thoughtful and kind to him the dog evidently has a certain contempt, as for persons having power, but not using it; to him the noble man, and worthy master is he with whom the lash and the bludgeon are in constant use: for him no canine sacrifice is too great. * * *

These conclusions must have been reached after sadly limited opportunities of observation. The theory of flattery may be left to be determined for himself by each sportsman who has shared his lunch with his dumb comrade by the spring's side on the morning of a day afield. It may with equal safety be left to the small boy with the yellow dog: he would be a cynical philosopher indeed who could find base motives in that companionship. The truth is, as a moment's reflection will show, that no single argument can be advanced to prove gratified vanity to be the basis of man's love for the canine race, which could not with equal reason be put forward in support of that weakness as the impelling motive of man's love for man, and the sufficient bond of all family and social ties.

Equally fallacious is the notion that those dogs which are the most severely ill-treated are the most devoted. A familiar spectacle in the police courts of our large cities is the bruised and swollen-eyed wife, pleading with the judge for the brute of a husband who has beaten her; here is an example of the love which survives brutality and clings to its object with utmost devotion. Yet no one has ever seriously advanced the general proposition that the best beloved husbands are they who cudgel and kick their wives; nor has any one ever pretended to discover that a man who treats his wife and children kindly is regarded by them with contempt. The wife-beaters of the police reports enjoy no monopoly of woman's love and devotion. What is true of mankind is true of man and dog; the Bill Sykeses are not alone in winning and holding the affections of their dumb companions; nor is cudgeling the only efficient means of awakening a dog's love. That love will survive blows; it is not created by blows. That the Bill Sykeses are beloved even unto death in spite of their cruelty speaks volumes not for the dog's servility, but for his noble character. It is only another of those good traits with which he has been endowed to fit him for human companionship.

An unfathomable mystery is this depth of the dog's devotion to his master. Who shall say that the capacity to love is not his by the merciful endowment of a Divine dispensation, a mitigation of his dumb lot, an alleviation of that stern fate which has put him on the nether side of the mysterious line between brute and human? What other than an ignorant and presumptuous theorist, looking into the upturned, wistful eye of a dog, can rail at the comradeship of dog and man, and find in it none other than ignoble motives?

SNAP SHOTS.

SUMMER travel in the National Park began May 15th, when from eight to sixteen people were going in every day. The roads were good except that on the one from the Norris Geyser Basin to the Falls there has been snow. The Yellowstone River is up and muddy, but not nearly as high as usual. There is as yet but little activity in any of the Geyser Basins. Road-building crews are at work in the Gibbon Cañon. There seems every prospect for a good season in the Park, and we hope that the visitors to the region this year may be numbered by tens of thousands. The greater the number of intelligent visitors to this Wonderland, the more hope there will be of obtaining from Congress the legislation for its protection and enlargement which is so much needed.

An interesting report as to the action of the swallows of Europe is announced from France. It is stated that these birds have for some years been slain by wholesale in spring as they land on the coast of the Mediterranean Sea on their journey northward from Africa. The Department of the Bouches du Rhône is one of their great landing places, and here machines for killing them in great numbers have been laid along the coast. These engines consist of wires connected with electric batteries. The birds, fatigued by their long flight over the sea, perch on these wires and drop to the ground dead. This has been going on for some years, and it was noticed last spring that the swallows no longer landed on this point, but have gone further east or west, and seem disposed to desert France for other and less dangerous parts of Europe. The Zoölogical Society of France has observed this fact, and has brought the subject to the attention of the Government, warning it that there is reason to think that the swallows will abandon France, and that if this should take place, the loss to her agriculturists would be incalculable.

Now that the New York State Association for the Protection of Fish and Game is about to convene for its regular yearly tournament at the trap, it is a fitting time to repeat our annual suggestion, that the association ought to drop its misleading title and adopt one more in accordance with the truth. Trap-shooting is not game protection. The two things may sometimes go together, but as a rule the trap-shooting swallows the game protection. That was the way it went with the New York Association ten years ago. The records of the yearly meetings since 1878 are absolutely barren of anything attempted or accomplished by the organization for the good of the game or fish supply. The course of events has been precisely what we then said they would be. The only game protection character preserved by the society is in its name, and that name is a misnomer. It should be changed.

Some weeks ago we called the attention of the New York police authorities to reported infractions of the law protecting song birds, which were going on in the upper part of the city. Since then the officials in control of the districts referred to have taken all possible steps to have the law enforced, and especially to watch the particular piece of property mentioned as the scene of the trapping. While danger to the song birds from this source is practically over for this season, the police will no doubt keep a sharp lookout for the trappers hereafter, and will do all in their power to put an end to this nefarious business.

California has appropriated $2,000 to be expended by the Fish Commissioners for importing and putting out "such game birds as they may be able to secure, including wild turkeys, prairie chickens, bob-white quail, pheasants, grouse, skylarks and others valuable as game birds." The introduced species will be protected for a period of years.

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[*By a Staff Correspondent.*]

I.—THE SEALING GROUNDS.

THE profitable fur sealing grounds of the world to-day are in the North Pacific Ocean. The fur seals have their breeding ground in the Bering and Okhotsk seas, and for eight or nine months of the year they are either on these breeding grounds or are traveling to or from them.

The range of the fur seal was not always thus limited. During the latter part of the last and the earlier years of the present century, these animals were found in great numbers in the South Seas. More than two hundred years ago, Dampier, who in 1683 spent a few days on the Island of Juan Fernandez, or as he quaintly terms it, "John Fernando," saw them there in great abundance. He says: "Seals swarm as thick about this Island as if they had no other place in the World to live in; for there is not a Bay nor Rock that one can get ashore on but is full of them." He goes on to say that they "have a fine, thick, short Furr; the like I have not taken notice of anywhere but in these Seas. Here are always thousands, I might possibly say millions of them, either sitting on the Bays or going and coming in the Sea round the Island, which is covered with them (as they lie at the top of the Water playing and sunning themselves) for a mile or two from the shore. When they come out of the Sea they bleat like Sheep for their young; and though they pass through hundreds of others' young ones before they come to their own, yet they will not suffer any of them to suck. The young ones are like Puppies, and lie much ashore; but when beaten by any of us, they, as well as the old ones, will make toward the Sea, and swim very swift and nimble, though on shore they lie very sluggishly and will not go out of our way unless we beat them, but snap at us."

The earlier history of fur sealing has to do altogether with these animals in the Southern Seas. They were then found on both the east and west coasts of South America, about its southern extremity, and as Allen says, "on all outlying islands, including not only the Falklands, the South Shetland and South Georgian, but at other small islands more to the eastward, at Prince Edwards, the Crozets, Kerguelen, St. Paul and Amsterdam, the southern and western shores of Australia, Tasmania, New Zealand, and at the smaller islands south of the two last named. They have been found, in fact, at all the islands making up the chain of pelagic islets stretching somewhat interruptedly from Cape Horn and the Falkland Islands eastward to Australia and New Zealand, including among others those south of the Cape of Good Hope, so famous in the annals of the seal fishery."

From 1800 to 1830 the seal fishery in these seas was at its height, but such vast numbers of the animals were taken that the fur market was glutted, and the pelts ceased to bring a price which paid for their transportation. Besides this, the pursuit had been so relentless that the seals had been exterminated on many of the islands, where once they had been abundant, and even where they still existed, their numbers were so diminished that a long voyage was necessary to secure a cargo of their skins. Before this time seals had been discovered on the Aleutian Islands, and were killed there for several seasons at the rate of 200,000 a year. There are still seal rookeries in the South Pacific Ocean about Cape Horn, but the animals are scarce and hard to find, and for many years the seal fishery in these waters has been practiced only in a desultory fashion.

Up to twenty years ago the principal sealing grounds of the North Pacific were owned by the Russians, who carefully guarded these valuable possessions. They owned the Pribyloff and Komandorski Groups and Robben Island, as well as certain other Asiatic islands on which the fur seals "haul." With the sale in 1867 of Alaska, the Pribyloff Islands, including St. Paul and St. George, passed into the possession of the United States. These islands have a history, and as they give shelter in the height of the breeding season to a multitude of seals, estimated at nearly five millions, it is worth while to devote a few words to that history and to a review of the seal life on them.

The discovery of St. George in 1786 and St. Paul in 1787, was at once followed by their occupation by sealers, and a reckless and indiscriminate slaughter was carried on up to the year 1805, which resulted in a corresponding diminution in the number of seals which visited the island each season. During the years 1806-7 no seals were killed, but in 1808 the work of destruction again began, and was continued without restriction up to 1822. In this year orders were issued by the Russian Government to spare enough young seals to keep up the breeding stock. This was the beginning of a government supervision over the islands which has continued up to the present time. The check put upon the killing of the seals was followed by a great increase in their numbers, and it is stated that in the four years following 1822 the number of seals on St. Paul increased tenfold. The good results which followed this supervision were so apparent that the conditions which governed seal life on these islands were each year more closely investigated, and the killing was so regulated that there was a constant increase in the number of seals which visited the island each year. This increase continued from 1834 to 1857, when the animals were as numerous, or nearly so, as they are at present.

Thus, when the Pribyloff Islands passed under the control of the United States, there was a large stock of seals on them. These seals were *ferœ naturæ*, and would belong to whomsoever should succeed in reducing them to possession. Heretofore they had belonged to a government which had carefully protected them, now they would pass into the hands of a government which had never been known to protect any wild creatures. It seemed probable, therefore, that whoever should be first on hand to begin the work of extermination might slay and skin all that he could carry away. The skins were very valuable, and there were enough on the islands to load many ships.

There were not wanting men who stood ready to take advantage of such an opportunity as this, and one of these was a Mr. Hutchinson, the private secretary of General Rousseau, the United States Commissioner who had gone to Alaska to receive from the Russian Governor the public property to be turned over to the United States.

Hutchinson succeeded in making the bargain with Prince Matsukoff, by which all the property of the Russian Fur Company was to be turned over to him, and under this bargain he proposed to take possession of the seal islands and the Alaska fur trade. Accordingly, he went to Victoria, British Columbia, and there entered into partnership with a Mr. Kohl, who owned a British steamship called the Fidelitor. On the plea that this was a Russian vessel at the time of the session, she obtained an American registry, and was thus enabled to carry on the coasting trade. Up to the time of their arrival at the islands in 1868, Hutchinson & Co. believed that by virtue of the bargain with Prince Matsukoff they possessed the exclusive right to take seals on the Pribyloff Islands, but when they got there they found them already occupied by a crew of Connecticut sealers under Capt. Morgan, who also claimed them by the stronger right of possession. For a time it looked as if the rival claims would have to be decided by a battle, but after long wrangling an amicable arrangement was arrived at, and it was agreed to divide the season's catch, which amounted to 250,000 skins. About this time the Russian vice-consul at Honolulu reached the islands, which he supposed to be unoccupied, intending to take possession of them, but his force was obliged to withdraw before the combined crews of Hutchinson and Morgan. The combination between these men continued, and ultimately resulted in the formation of the Alaska Commercial Company, which in 1870 obtained a twenty years' lease of the Pribyloff Islands. By their lease this corporation alone has the right to take seals on the islands of St. Paul and St. George and "in the waters adjacent thereto."

SKETCH MAP of ALASKA. Showing the relative position of the SEAL ISLANDS.

All the known rookeries in the North Pacific are leased by the Alaska Commercial Company. These are the Pribyloff Group: the Komandorski Group, consisting of Bering and Copper islands and some small rocks; some of the Kurile Islands, as Musir, Strednoy and Raikoke, and Robben Island, which lies off the southeastern end of the larger island of Saghalin. It is quite possible that there may be rookeries as yet undiscovered on some of the Aleutian Islands and on others of the Kuriles, but our present information goes no further than I have mentioned. All of these rookeries are carefully guarded, but they are deserted for a considerable portion of the year, when the seals are in the open sea, and at this time the animals are wholly without protection from man.

The seals are taken in two ways; (1) on the land when they are at their breeding grounds, at which time the legitimate killing is confined to the young non-breeding males, which are always in excess of the females, and (2) in the water, either during their migrations or while journeying to and from their feeding grounds, when they are killed indiscriminately, the number of females slain being largely in excess of the males.

II.—LAND SEALING.

To explain the method by which the fur seals are taken while on their breeding ground, some brief account must be given of their habits. Early in May the first old bull seals arrive at the islands, and take up their stations on the rocks near the shore. Each animal selects his position and endeavors to hold his territory against all comers. At first this is an easy matter, but after the shore line is filled up and as the arrivals become more and more numerous, a constant warfare goes on between those which are coming out of the sea and those which have taken up their positions. The battles which take place all over the rookery are fierce and long-continued, and terrible wounds are inflicted and received by the combatants. The conqueror in the strife drives his enemy only off his own territory, and the weaker takes up another position further back from the sea, which he again endeavors to hold. Each bull is master of a small piece of ground averaging over the whole rookery perhaps a square rod. By the middle of June all the breeding bulls have arrived, fought out their battles, and for the most part established themselves, though there is always a large number which fail to secure an available station, and take up their positions behind, or on the landward side of the rookery. None of the bulls leave their own territory after they have established title to it, so to speak: if they did they could only regain the possession by fighting for it again. They remain on this little piece of ground without eating or drinking for three months. Their courage is something extraordinary and admirable. They are ever ready to defend their stations against all comers, whether brute or human, but their tactics are purely defensive, and under no provocation do they pursue their enemy.

By this time all the male seals except [illegible] have reached the islands. As the bulls do not breed before they have attained the age of six years, there is a vast herd of young males which have no place in the rookeries, but "haul up" on the beaches and rocks, where they spend the time in playing like puppies and in sleeping. It is from these young males that the animals are selected for killing, those which are three years old being chosen on account of the superior quality of their fur.

When it is desired to secure them the natives carefully approach one of these herds of "bachelors," and getting between the seals and the sea, drive the frightened animals from the beaches or rocks on to the upland, and thence very slowly—in cold damp weather at the rate of half a mile an hour—to the "killing ground," which may be two or three miles from the point from which they started. If the weather is unfavorable, *i. e.*, warm and dry, a good many die on the way, for though the seals can travel quite rapidly on land for 100yds. or so, a longer journey is very exhausting to them. Mr. Elliott estimates that the loss is as much as 3 or 4 per cent. on the longer drives. When the killing ground is reached, the seals are allowed to cool and rest, and then a number—from one to two hundred—are separated from the main body, driven a short distance and then huddled up close together, and the natives, armed with heavy clubs, kill them by a single hard blow upon the head. They are then separated and stretched on the ground to cool. If the weather is damp and cool, perhaps a thousand are killed in this way before the work of skinning is begun, but if it is warm, each "bunch" is skinned as soon as killed.

In this way about 95,000 seals are killed on St. Paul between the middle of June and the last of July, the work usually occupying not more than forty days.

In the meantime the female seals have reached the islands, have been fought over by the bulls and passed along from one to another, until they are pretty well distributed over the rookery, those bulls nearest the water having usually more females than those further back, but the average being about fifteen females to one male. The females give birth to a single young one soon after landing, and having been impregnated are free to come and go as they please. The young soon get together in swarms, paying no attention whatever to their mothers, who seek them out from time to time to let them nurse. Early in August, the pup for the first time ventures into the water, and at first makes awkward work of his attempts at swimming, but before long he becomes very expert.

By the early part of September, the breeding bulls, which for three months have so steadfastly held their position on the breeding ground, have all retired to the water in a condition of leanness and weakness which is truly pitiable; the boundaries of the rookeries are broken up, and they are invaded by a concourse of young bulls, cows and pups. The seals begin to leave the islands in October, and by the end of November by far the greater number have gone. A few linger up to December, January and, in mild seasons, even into February.

This very briefly is the history of seal life and seal killing on the Pribyloff Islands.

The method of taking the seals described above is legitimate land sealing, as practiced by the lessees of the Seal Islands. There is another form of sealing, which is in fact a modified sort of piracy, and which is carried on to some extent on the Asiatic coast. This is nothing less than the stealing of seals off the "hauling grounds," and is sometimes attempted under the very noses of the owners or lessees. Formerly it was carried on quite successfully, and with only moderate risk, but it is more difficult nowadays, and only four or five vessels, of which a part hail from British Columbia ports, are now engaged in the trade. The schooners set sail for Yokohama, Japan, late in the winter, and there fit out for their cruise. The crew usually consists of four white men, the captain and three hunters, and of fifteen or sixteen Japanese, who are hired for from eight to ten dollars per month. These Japanese are good sailors and fine men, active, willing, obedient, never making any trouble, and ready to follow a good leader anywhere.

The rookeries which have been most troubled by the seal stealers are on Robben Island just south of Saghalin, and those on some of the Kurile Islands, especially on Musir, Strednoy and Raikoke. The latter is a rocky pinnacle of considerable area, while Musir and Strednoy are mere rocks, sticking up out of the sea. All these grounds are leased by Russia to the Alaska Commercial Company.

The vessels leave Yokohama early in April, and proceed north, ostensibly to hunt sea otters among the Kurile Islands. This they do for a part of the season, but they are always ready to take advantage of an opportunity to descend upon the seal islands and make a catch. Copper and Bering islands, of the Komandorski Group, where there are large rookeries, they rarely trouble, because there is always a considerable garrison of Cossacks stationed on them, but until recently Robben Island has not been well guarded, and this has been a favorite ground for the operations of the seal stealers.

The seals here "haul" upon a fairly smooth beach, and back of this the land rises in a precipitous wall. When the crew lands, it "cuts out" from the seals on the beach as large a bunch as it can conveniently handle, and drives them back against the bluff, up which they cannot climb. The frightened animals in their efforts to escape their pursuers hurry toward this wall, which stops those in

advance, while the hindermost in their terror spring over those in front, until there is a writhing mass of seals eight or ten feet deep piled up at the foot of the rocks. Those beneath are soon smothered by the weight of those above them, and such as do not die in this way are knocked on the heads with clubs in the ordinary method [illegible] and sealing. The animals are then spread [illegible] and the skins quickly removed, carried on board, salted and stowed.

This is the method of procedure when all goes well with the illicit sealer, but it is not always so. Sometimes, when all seems favorable for a catch, and they are just about to land, the boats find themselves saluted by a shower of balls from concealed Russian soldiery. In one such case, which occurred not long ago, one of the crew was killed, another severely wounded, and there were thirty-two bullet holes in the boat. A young man of my acquaintance, mate of a sealing schooner, has been taken four times by the Russians while engaged in this business. Robben Island is now guarded by a man-of-war, which cruises in the vicinity, usually leaving a small force of men on the island, which it visits at short intervals. G. B. G.

The Sportsman Tourist.

A MOUNTAIN MUSE.

LAST June, while camping with a party of six on the Greenbrier River, in the wilds of West Virginia, my friend the Doctor proposed a trip to the "Sinks," the headwaters of the Greenbrier, a distance of some ten or twelve miles.

Leaving Camp Cook about 2 o'clock Saturday afternoon, the Doctor upon his roan steed and I mounted upon one of our wagon horses, with a pack-saddle well padded with straw and my overcoat thrown across for a seat, we started for the house of our friend Armentrout, a worthy mountaineer living in a cabin on the summit of Rich Mountain. After a long pull up the mountain we reached the top, stopping a short while at a beautiful spring to refresh both man and beast. Then we journeyed onward for several miles, enjoying the grand and magnificent scenery peculiar to this country, arriving at Armentrout's just before dusk.

Supper was served in a few minutes, and I assure you we were not loth to respond, for the ride had sharpened our appetites. Coffee sweetened with maple sugar, cold bread, milk and ground-hog constituted the meal. Dear reader, did you ever eat ground-hog? If not, I beg you to beware. This was my first experience, and I trust it will be my last. I was helped bountifully, twice, to this insinuating dish, and after supper was prepared to exclaim: "Long live the ground-hog!" Alas for human foresight! I knew not the end. It will come later.

Gathered in the family bedroom by a cheerful wood fire—for even in June the nights on Rich Mountain are very chilly—our host, his wife and three daughters entertained us. I was not long in finding out that Miss Jessie, a bright and comely lass of sixteen summers, was the pride of the family. Living in the wild unsettled mountain country, with no opportunities for mental culture, Miss Jessie had developed a marked talent for expressing her thoughts in verse. A remark from her father, "Jessie, can't you show the gentlemen your piece?" led me to ask her for the paper she was busily engaged in copying. Shyly and with a blush she handed me the paper; and now, kind reader, if you wish to see how the spirit moves some of these far off mountain girls, I will give you the benefit of a copy I took of Miss Jessie's "piece":

SINKS AND SINKS MOUNTAINEERS.

As a general thing, outside of the Sinks,
A person talks and also thinks
That the folks out here in this wooded land
Are not civilized, but a savage kind of band,

Who care for nothing that's civil and good,
And get their living from the waters and the woods.
Out in Crab Bottom and down at Repose,
Where people are clever, as everybody knows,

You hear strange tales of deer and coons,
Of vamps, ground-hogs, and also muskrunes,
Upon which, they believe, we all subsist,
And seem surprised that we still exist.

Well, 'tis true, we are singularly blessed,
And have more wild meat than some of the rest
Of the folks who live in the wide fertile valleys,
Or some city people who shelter in the alleys.

But however wild our food may thus appear,
It imparts none of its nature to the common mountaineer,
Whose home is lifted high in the fresh, pure air,
Where the eagle builds its nest and the lion makes his lair.

The people of the valleys, the cities and the towns
Find it pleasant to be with us in our rich mountain grounds,
We treat them kindly to the best in our store,
And use them so well that they always come more.

But as for book learning and general education,
In styles, fashions, laws, and also legislation,
We're somewhat behind, or backward, they say,
And not quite up with the freaks of the day,

As any one very quickly may see,
By taking a synopsis of the other girls and me.
We work hard and labor and tussle,
And have no time to fix on a fashionable bustle.

You may see, too, by the shape of our waist,
That we don't use cords and splits and go tight-laced,
And thus destroy the beauty of form that nature has given,
Like she has to the forest 'mong which we are living.

Our dresses are cheap but tolerable strong,
And not liable to tear as they're not very long.
Among us, 'tis true, are some a little mischievous,
They do some tricks, you know, that naturally grieve us,

And cast a reflection not upon one, but upon all,
Like in other communities when reflections fall.
But then as for that, I think it's a mistake
To blame all for a step that a few people take.

Some may think that we don't desire a peaceable school,
And care nothing for the teacher's harsh, rigid rule,
But for good schools we have a fond admiration,
And carefully obey orders without hesitation.

There you are, just as I read it; now who can do better? Miss Jessie has the ideas, even though she does not clothe them in the language of Tennyson or Whittier.

At 10 o'clock, bidding good night to our worthy host and his family, the Doctor and I clambered up the ladder to our bedroom in the loft, he "to sleep the sleep of the just" and I to dream of ground-hog. There is a song that comes to my mind at this time:

"That night I shall never forget,
That night with its pleasure and pain."

And so it was with me; I tossed and turned, vainly trying to seek rest and finding none; nor was it until the "wee sma' hours" that I managed to drop into a semi-comatose state. With the rising of the sun the voice of mine host called us down, and we came out in the fresh, pure air to see and enjoy one of the grandest of June mornings. At the well our morning ablutions were performed, and there my troubles began. The water tasted and had the odor of ground-hog. At breakfast the coffee was ground-hog; bread, butter and milk were ground-hog; everything was ground-hog; and I left the table a sadder but wiser man. The Doctor wanted me to stay and go in a party to the famous "Sinks," a stream that enters the base of a mountain, going entirely through and coming out on the other side, but my spirit was broken, and calling for my steed I slowly wended my way back to camp, solitary and alone, musing upon the evils of a misspent life and the folly of attempting to make a meal upon ground-hog. CHAS. L. COOKE.

STAUNTON, Virginia.

IN BLUE GRASS LAND.—I.

OUR notions of things, metaphysical and physical, are often dependent upon premises singularly vague and indefinite. For instance, one never sees a new country without having first formed some sort of an opinion about it; and although it is impossible that such an opinion should be just or intelligent, one can nearly always prowl around in his mental cavities and find some sort of reason for it. I always thought that the Indian Territory should be a dark purple colored country; and this notion I can trace to early reading in a Wild West book about the purple haze of Indian summer; for naturally there should be more Indian summer in the Indian Territory than anywhere else. In somewhat the same way the State of Maine will always appear to me, unless, perhaps, I some day visit it, a cold, slate-colored country, with edges fringed with pinking-iron ornamentation; because so it appeared in the old geography over which I eagerly hung when I was a boy. Kentucky, on the map I studied, was a yellow, clay-colored country, with the Ohio River making a great coasting slide from right to left across the strong hill of its northern edge. This, then, was my Kentucky; and for reasons no stronger, my Blue Grass Region was always a country where the grass was of a heavenly cerulean or azure hue, and where—so I dreamed as the sleeper rolled southward last week—the welcome extended to any stranger took the form of a stately and beauteous dame who, mounted upon a fiery thoroughbred with flowing mane and tail, rode out to extend to the visitor the freedom of the country, offering to him at the same time with one graceful hand a brimming measure of the finest whisky ever seduced from the golden corn. I beg to be allowed to show, in a hurried article or so, how different the real Kentucky and the actual Blue Grass country are from such inefficient ideals, and how infinitely superior, passing mere description, are both from the common notions of the North. If FOREST AND STREAM can do anything toward promoting a general and just conception of this singularly happy land, she will have done what no other journal, certainly, ever yet did in a way handsome enough to fit the merits of the subject.

So much has been said about the Blue Grass country as being the home of the thoroughbred horse, that a notion has gotten out that it is the home of nothing else, and that only those used and fitted to the methods of the turf should care to write about it or read about it. Nothing could be more inaccurate than this. I have nothing to say against the horseman of the North, except that he too often is given over to wide checks, to diamonds with a yellow luster, and to a general aroma of tips, odds and strong tobacco; but I have to say, and am going to say it, that the typical turfman is as different from the thoroughbred Blue Grass breeder of fine horses as a beer glass crystal is from a genuine diamond. The former does not love a horse for itself; the latter does. The former talks stable; the latter talks horse. The former is not necessarily a gentleman; the latter is necessarily and absolutely so. The word "turf" in Kentucky brings to mind no idea of hot and dusty rings, of eager, vulgar interest, of crowds, noise and confusion; but calls up the thought of wide and cool fields, of calm and gentle breezes, of broad perfumes, and of goodly creatures instinct with the grace and beauty of vigorous life, and fit for the scenes wherein they live. To guard and house these creatures, to watch them play and grow, to lean over the fence and note their natural grace and speed, to stroke each silky nose with almost the unapproachable pride of the inventor for his model, and to finally send them off into the world, the proudest, gentlest, gamest, most gentlemanly creatures that tread the crust of earth, and infinitely superior to many of the creatures who subsequently use or abuse them—that is the occupation of the Blue Grass horseman.

Four millions of dollars come into this little Blue Grass strip every year for Kentucky horses, nearly all of which are bought as untried yearlings. My friend with the broad hat and plain clothes, who leans against the gate and watches a groom polish up a horse, for which he has refused, perhaps, $25,000, has small care in life. He yearly sells fifty blue-blood yearlings at an average of $1,000 each. He is a man of leisure, a horseman and not a turfman. His traditions are not of the ring, but of his class, his family, his State. He thinks first of you, then of his horses, then of his traditions. He belongs to a class indisputably the aristocracy of this country, if this country could be ever said to have an aristocracy. I do not like the word, but I mean by it only the aristocracy of courage, of gentleness and generosity. I dare not say that this is found nowhere else; but I know if I could build a net about this little Blue Grass region I would catch so few men whom all the world would not call gentlemen! If I run my net about the same space in a city, and catch the so-called aristocracy, beside my "400" of New York, or Chicago, or any other town, what else must I expect? Why, money-makers, hucksters, and all the unpardonable dross of human life. These I must sift out, to find my men of the angle and the gun, and to find my gentlemen. I like Kentucky, because you do not have to sift. You have your class already, even and consistent, and as uniform as the race of their own thoroughbreds. I was impressed by this truth in the chance remark of one of my new Kentucky friends, as we rode home from a pleasant fishing trip at a club preserve, which I shall presently write about: "There are about 200 members in our little club," said he, contemplatively, "and out of the number I don't believe there is one you would be afraid to ask home to dinner with you."

In a class like this, men of wealth and leisure and with sportsmanlike tendencies strengthened by long heredity and constant opportunity, it might be expected that one would find ardent lovers for every branch of manly outdoor sport. I do not know where the notion arose that a Blue Grass man cared for nothing but a horse race. A good horse he dearly loves, and therefore loves a horse race, wisely and with all his heart. But he who loves a horse as a horse always should be loved, must also love a dog; and when he has gone so far, his love for a gun is certain, and since he must love a gun, so also is his love for a rod assured. There is some silken bond of sympathy between all these, different as they are. I need not discuss it, but only say briefly that Lexington, a city of perhaps 30,000, the capital of the Blue Grass land and the citadel of the equine heaven, is the strongest sporting community I ever saw. It has the strongest and most admirable hunt club I ever met, and one which uses both foxhounds and greyhounds. It has the largest fishing club I ever happened to fall in with. It has devotees and experts at the trap. It has duck shooters and upland shooters in plenty. It has the finest people under heaven, and each of these, bar none, has the biggest and most kindly heart on earth. There is but one question in regard to the relations of FOREST AND STREAM and this country, and that is the question of room to hold what one ought to write about it. I am puzzled to write at all. In the North, if one calls you "dear friend," he usually wants your watch. It takes me quite a while to realize that these people didn't want my watch.

* * * * * * *

The Blue Grass region proper, or at least its inner penetralia, may be said to embrace only six counties, Fayette, Bourbon, Scott, Woodford, Clark and Harrison. To these the railway guides commonly add Boyle, Jessamine, Mercer and Madison, with portions of Nicholas, Bath, Pendleton, Franklin, Montgomery, Garrard and Lincoln. At its largest estimate there is not very much of it. Lexington is fairly to be called its center, and a radius of 30 or 40 miles swept about that point would cover all there is of the real Blue Glass country. The line thus circumscribed is a charmed circle, and outside of its circumference there is not in the whole world to be found anything the counterpart or equal of the country lying within it. No king on earth can boast a realm like this, and yet this realm can boast hundreds of kings, unsuspicious and innocent of their royalty. I presume the flower of the South blooms in the Blue Grass country. The war impoverished the planter magnates of the lower South, and Mississippi, Alabama, Georgia, Louisiana have seen decadence in the old Southern life since then, while Virginia, parent of Kentucky and home of a population essentially the same, has known such changes that she is hardly the "ole Virginny" she once was. The war destroyed a principal source of revenue in many of the Southern States, and it has taken years to set on a new order of things, and to inaugurate another era of prosperity. Yet this little Blue Grass kingdom has hardly flagged a moment. It has been prosperous all the time, and satisfied and contented. It does not ask for manufactories, and does not wish railroads. It lacks all of what we in the North call energy, yet has what we fain must call absolute prosperity. It toils not, neither does it spin; yet Solomon in all his glory was not arrayed like it. It is a lily country, and a land for lotus eaters.

The reason for this prosperity is almost whimsical in its simplicity, and yet it will be as sufficient a hundred years from now as it has been for the past century. It lies in the natural grasslands of the region, whose like is not to be found and cannot be produced elsewhere. There are nourishing and strength-giving qualities in this grass, and in the limestone water of the district, which even the most skeptical will now admit are not found elsewhere. Broken-down horses are sent to the Blue Grass pasture lands to recover, and they do recover, and grow strong. Kentucky stock bred and raised, say in California, is not the stock of Kentucky. Owners of large racing stables send their horses to the Blue Grass lands during the idle season, knowing that they will acquire vigor there they will not get elsewhere. The buyer of a blue-blood colt leaves him in the Blue Grass paddock as long as possible, knowing it is there he will best gain the bone of ivory and the muscle of steel which mark the winning thoroughbred. Horsemen do not now stop to explain this, but merely accept it as a fact confirmed by experience. It is common to call the Blue Grass country the "Heaven of horses," and this title was applied by no mistake. It rests upon the foundation of the country's natural peculiarities. It has qualities much sought for and not found elsewhere; this demand brings in money, and therefore comfort, ease, luxury are shed upon this region in every ray of the golden sun; happiness bubbles up out of every limestone spring, and dollars grow, not upon the trees, but down among the grass. The growth of the peculiar and admirable social life of the country are therefore natural. All this seems to me a very delightful lesson for the columns of FOREST AND STREAM, for it shows how dependent we all really are upon nature, and how cross, crabbed, inefficient, unrestful and unbeautiful is any man's life removed out of direct touch with nature. If, therefore, we sound pæan for a class which deserves all of that, let the body-harmony of it be praise for the spirit of the sky, the stream, the green fields and the growing trees. This is the spirit of the calm restfulness which lies upon this land of the lotus; and I suppose it must be some vague idea connected therewith which makes me feel that, when I have grown old and can no longer sit a horse or sight a gun, and when my fingers are too stiff for a pencil or a rod, I want to go down to that old town of Lexington and crawl around its narrow, shaded, silent streets and finish up this business in a place where I can comfortably think back a hundred years and know the grass was all right then, and probably will be for the thousand next to come,

The traveler on the railway which carried me into Lexington is told that he has not yet seen much of the real beauties of the Blue Grass country. This will astonish him, for he has certainly passed through a landscape whose alternating vistas of field and foliage have an unspeakable charm. The country, different as I found it from my vague schoolboy notions, was a great delight to me, and I could not get enough of the ceaseless rolling hills, the wooded banks and the strangely blooming trees. Perhaps I grew needlessly enthusiastic about these, for my host—Mr. Roger D. Williams; I presume everybody knows him who was at the Great Bend meet last fall, and everybody else who doesn't know him ought to—laughed at me, and said I had not yet made a beginning. We got into a buggy behind a good square trotter and made our beginning that afternoon.

"This," said Mr. Williams, as we passed a large brick building on one of the most important business streets of the town, "is the spot where Daniel Boone built his first stockade. There used to be a strong spring of water right there, but that has long ago been choked up." Then we fell to talking about Daniel Boone. It appears that Daniel also founded Bryan's Station, Harrodsburg, Boonville, and almost all the other towns in Kentucky. He was an industrious old gentleman, and must have been quite busy founding towns with one hand, while he killed Indians with the other.

We passed the place where Henry Clay was married, and visited the world-famous Ashland, his home. From the lawn of Ashland—said to be the best kept and most beautiful lawn in the world—the magnificent Clay memorial statue is visible, two miles distant, rising up above the graves of Breckinridge, of handsome and gallant if misguided Morgan, of the hundreds of Union and Confederate soldiers who have lain down to sleep peacefully together. Lexington cemetery is the most beautiful natural spot I ever saw, unless that were the headwaters of the Rio Bonito, in New Mexico. The terraces and trees are those of nature, and but little change has been made in the natural appearance of the spot in any regard. It is very quiet and impressive. Squirrels and birds were playing all through it when we were there.

This is one singular feature of Lexington and the country lying about it; there is nothing artificial about it. The country seems scarcely to have been touched, although this is really the oldest-settled point west of the Alleghanies. Real estate has not risen to any fanciful value; in spite of the modern growth of the city, and in spite of the fact that Northern men have lately bought numbers of the larger farms. These old families have great wide grounds, some of them nearly little farms, right in the middle of the city. The forest trees among which Daniel Boone hunted deer are still standing on the unbroken turf, so thickly that in many cases the great, old-fashioned houses can hardly be seen from the road, except as some tall white pillar of the olden days may peep out through the waving walls of green. These old houses are simply delightful. They are precious, and I hope no Queen Anne, ginger-bread, sky-rocket architectural craze will ever invade this land of good old beautiful homes. Commend me to Mr. D. D. Bell, whose magnificent home we passed. A short time ago his house, one of the old regime, was destroyed by fire. Being a man of wealth, it was thought he would rebuild in "modern style." Not so; he was also a man of taste, and he rebuilt the old house in perfect duplicate, stone for stone, cornice for cornice, pillar for pillar, and it stands there now, big and quaint and beautiful, a house doubly of the past, and a good monument to a commendable Kentucky pride.

We headed out of town on what is known as the old military pike. This is an heirloom from General Jackson's days. It is the longest turnpike in America, and extends from Zanesville, Ohio, to Florence, Alabama. Before we struck the pike we passed an ancient-looking cottage, which was the stopping place of the Scotch traveler and historian Mellish, whose quaint old volume on America is to be found in the quaint old library at Lexington—the first library west of the Alleghanies, and full of old, old books. Mellish speaks of Lexington as a place of coming importance. He also speaks of Cincinnati as a place of a few houses, but with fair prospects to become a good settlement. Lexington, it seems, was in those days the supply point for the great and unknown Northwest, especially for the fur trade. Evidences of this are still met occasionally in the wilds of British Columbia.

All these things we discussed as the pike whitened out behind us, and until the beauty of the scene about us forbade discussion of anything else. As far as one could see on either hand the country rolled on and on in a wide sea of green waves, always about to break but never breaking. Near at hand the prevalent tone of color was green, but in the distance, even so early in the spring as it was, the grass seemed to darken, to become bluish and almost purple to the eye. It was impossible to say where one color ceased and the other began. It is this peculiarity which got for the country the name of the "Blue Grass Region." Until the grass is very tall—and it grows knee-high, though still fresh and juicy—it looks dark green near at hand. One could not help realizing the aptness of Campbell's figure:

> "'Tis distance lends enchantment to the view,
> And clothes yon mountain in its purple hue."

The blue grass is said to have been brought to Kentucky from England late in the last century. I do not know as to that, but it is certain that it seems more at home here than anywhere else in the world. It grows so thickly that not a weed shows its head among its dense stems. The turf is as soft and springy as rare velvet. It grows so right under the great oaks and elms which are seen all over that country, and nothing can be more beautiful than one of the many great Blue Grass parks, where, as I am told, the sod has never at any time been touched with a plow. There are no signs up there of "Keep off the grass." The grass can take care of itself. It is grass, grass everywhere, as far as you can see. I did not see a single plowed field, although we rode out several miles. I am told, however, that the natural soil, in such parts of this section as are farmed, is so strong that even constant crops of hemp do not impoverish it; and the cob of the corn raised there is much heavier and stronger than that of corn grown in adjacent counties. Mr. Williams was positive about this, as the Lexington factory, which makes most of the cob pipes in the market, finds it best to purchase its cobs only on Blue Grass soil.

We rode on and on, and the country simply got more beautiful all the time. It is a much-fenced country, divided into a constant succession of pastures and paddocks. The fencing is often a neat and strong stone wall; sometimes the "stake and rider" fence is used, and there are miles and miles of curious, crooked, narrow old country lanes, leading nowhere in particular, and bordered on either hand by whitewashed "post and rail" or board fences. The division fences are nearly all whitewashed, and these white fences, showing up against the strong green or dark purple of the turf, give the country a very clean and tidy look. It would take good riding to go across this country after the hounds, yet there are plenty of gentlemen and ladies there who do it, as presently we may note.

On both sides of the road we saw horses in every field, and little else. These were nearly all thoroughbreds (or running horses; a "thoroughbred trotter" would be a contradiction of terms), and it seemed to me that we must have seen thousands of them. Mr. Williams said we could ride on out for a good many miles, and it would be the same way. We visited Elmendorf, Mr. Swigert's great breeding farm, and saw Glenelg, whose progeny have won nearly $1,000,000 for their owners, and Tremont, whose owner sold him for a few hundred dollars, and bought him back later for $25,000. Then we drove to Dixiana Farm, where King Ban and Himyah grew, and where hospitable Major Thomas wanted us to stop and live forever. I do not know how many beautiful horses we saw, but I know the type of the Blue Grass runner is no more like a city horse or a Western pony than a deer or antelope would be. I have dreamed of those grand creatures ever since. They really do look like the fiery steeds of the picture books. I do not see how anybody can admire a trotting horse, compared to a thoroughbred. Still, there are as many trotters as runners bred in the Blue Grass country.

In all the country we rode over there was scarcely level ground enough for a mile track. Indeed, Lexington race course—established in 1820, and the oldest track in the United States—is not level by any means, but has a pronounced hill at the three-quarters stretch. This is not a detriment, but a benefit, and this track is known to be the fastest of any in the circuit.

I could only say, as we rode back into town, that not the half had ever been said or ever could be said about the beauty of this strange region. You can not catch the charm of it unless you are there in the Blue Grass atmosphere. It is not a wild country, or a new country, but it is a most infatuating country to see and to write about; and if something is not done to stop me, I am sure I shall be writing about it for two or three years.

That night, when the moon came up, I was irresistibly reminded of the old town of Chihuahua, in Mexico. There were the same narrow, indeterminate little streets, almost silent, away from the business part of the town; there were the same little parks, bursts of air and moonlight edged with flowering banks of shadow; there were the old walls, the quiet houses; and here, down the silent street, came the tinkle of the silver harness of a stately pair of horses drawing a stately carriage, wherefrom stepped a stately lady. A low strain of music was coming from some serenade party; across the street was the sound of some low negro melody; a boy walked down the street picking a guitar. Everywhere broke out the faint pulse of a quiet, easy, happy, semi-tropic life. I thought I was in Mexico, till the moon rose over the city and peered from behind a dark church tower—just as it does in the poem and in pictures—and showed the wall draped in heavy ivy. Then I thought I was in England. And by and by I didn't know where I was, for I was fast asleep in Blue Grass land. E. HOUGH.

Natural History.

FROGS AND THEIR PREY.

Editor Forest and Stream:

I note in your issue of May 9, a communication from E. T. J., of Bethel, Conn., stating that he had found pickerel frogs in the stomachs of bullfrogs which he had killed, and expressing some surprise at the find. My experience is that bullfrogs will eat anything except fish which they can take alive, if it is one size smaller than themselves. Last fall, in a slough of the Mississippi River, opposite Alton, Ill., I shot an extremely large bullfrog. Noting that the stomach was peculiarly distended, I opened it, and found therein a mud turtle fully as large in circumference as a silver dollar. The head was turned around to the side and closely pressed up under the edge of the shell, and was stiff and rigid in that position. There were no signs of digestion having commenced on any portion of the turtle, and I have often wondered if the gastric juice would ever have proved equal to dissolving and digesting the turtle shell. Ten days ago, while fishing with live minnows for croppy, among some driftwood in this same slough, I saw a large bullfrog sitting on a piece of light driftwood some feet to the left of my line. Out of curiosity I drew my minnow up and dangled it within an inch of his nose, but beyond lazily blinking his big yellow eyes, he paid no attention to it. But when I held my float, the top of which was a bright red, down to the surface of the water near him, he made a vicious lunge and snap at it. Acting on the hint, I cut a small piece of red leather from the inside of my boot-top, and putting it on my hook held it near his nose. He made the same hungry grab at it, and in a minute I landed him high and dry on the bank. From this and other experiences, I judge that a large bullfrog will eat anything that comes within reach, if it has a bright color and seems to be alive, excepting fish, which appear to have no attraction for them. BERT.

ST. LOUIS, Mo.

[Red flannel is a common lure for frogs; "Nessmuk" describes this method of "fishing" for them in his "Woodcraft."]

Editor Forest and Stream:

Last summer a friend and myself were frog hunting on the Milwaukee River a few miles from this city. My friend, a school teacher, was engaged in instructing a class in anatomy, proceeded to enlighten me on the subject by becoming demonstrator of anatomy on the body of a large bullfrog I had just shot. Imagine our surprise upon opening the stomach to discover—head, legs, feathers and all—the partially digested body of a small snipe, commonly known here as tip-up.

Mr. K., of this city, relates that while out gunning with a friend in New Jersey two or three years since he shot a bluebird, which fell at the edge of a pond. The bird couldn't be found and his companion insisted that it had not been hit. Passing the place a short time after he killed at the edge of the pond a large bullfrog. Picking the animal up he discovered protruding from its mouth a pair of bird's feet, which proved to be attached to the bluebird he had recently shot, as proved by a .22cal. bullet hole in its body. W. M. F.

MILWAUKEE, Wis., May 20.

NESTING HABITS OF HAWKS.

Editor Forest and Stream:

In a recent article on the great horned owl the writer says that a friend of his took two eggs of this owl, and upon visiting the nest again some time later found it occupied by the red-tailed hawk, which greatly surprised him, as he never heard of the redtail laying in old nests. In this locality the redtail never breeds, being only a spring and fall straggler; but a friend who has spent the last five collecting seasons in southern New York, where this species is very abundant, says that, like the eagle, it occupies the same nest year after year; and he records two instances where a nest was first occupied by *Bubo virginianus*, and afterward, when the young had flown, by this hawk. He states also that when the nest is robbed, the bird will very often lay another clutch. This corresponds almost exactly with my observations of its cousin *Buteo lineatus*, which is the only common large hawk we have here. It arrives in February and departs in December.

Approach any woods of large trees around this city and you are greeted by his well-known cry as he sails in majestic circles over the trees. Soon after his arrival he selects a mate and commences constructing his nest or repairing an old one, as the case may be. The site generally chosen is the main fork of some tall monarch of the forest, in deep, swampy woods. The nest is large and bulky, being composed of sticks and twigs, slightly hollowed, and lined with cornhusks, cut blades of grass moss, leaves and down. In this slight depression the two to five, and sometimes six, eggs are laid. They are about 1¾in. broad by 2¼in. long, and of a grayish white color, spotted and blotched with brown and umber of varying shades. The following are a few notes on their nesting habits:

On March 19, 1886, I found a nest of this species which I robbed of its contents, and while passing through the same woods, a month later, I struck my climbing-irons into the tree, when to my surprise a red-shouldered hawk left the nest. Scarcely expecting another set, I climbed the tree and had the pleasure of gazing upon as handsome a set of two eggs as ever graced the cabinet of any collector, and never since, out of the 175 eggs I have taken, have I found one that could rival them in richness of color. They were profusely spotted and blotched with red and brown on a ground of light buff, and one had a blood red blotch that completely covered the large end. I again visited this nest in 1887, and found it to contain two eggs, one of which I took, leaving the other for a nest egg. It so happenened that I did not go that way for several weeks, but when I at last climbed the tree three plump, downy little hawks met my gaze.

During the last two seasons I have taken two more sets of eggs from this nest. The nesting habits of another pair of hawks, whose first nest I found the same year, are just the reverse of what has been described. This pair built a nest in an ash in a strip of low swampy woods. The tree was very easily climbed, and I had no trouble in securing the eggs. The following year they built another on a piece of hilly ground, covered with beech, about 100yds. from the first; this I also robbed March 26, 1888, I found their third nest about 50yds. from the second, and this year they went back to the first. WALTER C. WOOD.

DETROIT, Michigan.

SPRING NOTES ON MIGRATORY BIRDS

THE following observations were made at Laurel Md.:

The most abundant warblers were the yellow-rumped black-throated blue, black-throated green and chestnut sided, though the bay-breasted was fairly numerous Cape Mays were few, blackburnian more common. Only one each of Nashville and hooded, and none of the golden-winged, Kentucky or yellow-throated were seen Blue-winged yellow common in suitable localities. One and perhaps two, prothonotaries were seen, but not obtained. Worm-eating scarce.

Of the smaller thrushes, first the hermit, then olive backed and tawny were common. Up to May 14 no Bicknells and only one gray-cheeked were seen. (Last year the former was common, two being collected May 14 and 17 respectively.) Two Traill's flycatchers were obtained, also two of the Western form of the redpoll warbler (*Dendroeca palmarum*), the Eastern form (*D. palmarum hypochrysea*) having been gone for a week or more.

Of sparrows, Henslow's was rare, but yellow-winged common.

Rose-breasted grosbeaks not common; blue grosbeak not seen at all.

Snipe were phenomenally scarce throughout the season on grounds where ordinarily abundant. Solitary sandpiper very common, however. Woodcock very scarce; hardly any quail, and only one ruffed grouse heard. ROBERT RIDGWAY.

SMITHSONIAN INSTITUTION.

CHIMNEY SWALLOWS.—Knoxville, Tenn., May 31.—As the spring and fall migration of the chimney swallows vast numbers of them, several thousand, linger for a few days about the University buildings in the large, old fashioned chimneys of which they find convenient roosting quarters. They passed north about a month ago, remaining here about a week. This morning they are here again in vast numbers, being driven south by the unusually cold storm now prevailing in the north. The cold there probably deprived them of their food. It is unusually cold here.—J. S. C.

RUFFED GROUSE'S NEST WITH FIFTEEN EGGS.—Misses Inez Budding, Winifred Hill, Iva Smith, Kate Smith and Bessie Goddard, high school girls, were out in search of wild flowers last Saturday. When near the old Marm Baird place they frightened a partridge, or ruffed grouse off her nest. The girls were almost as badly frightened as the partridge, at the noise the bird made, but recovered, and succeeded in finding the nest, carefully concealed though it was. Although the partridge was very uneasy about the girls' presence, they carefully examined the nest and its contents, counting 15 of the pretty little eggs, all nicely stowed away. Without realizing what they had found, but taking one egg as a sample, the girls came home. They told of their find, as one of the pleasant incidents of the trip, and, by good luck, the story came to the ears of E. S. Knowles. With his hearing of the story steps were taken to establish its truth. For some years Wm. S. Perry, who probably knows more about the habits of the ruffed grouse than any other man in this vicinity, has been searching for a nest with a dozen eggs, and made a standing offer of $10 reward for one with over that number. Mr. Perry, as a result of years of investigation, has never succeeded in finding more than eleven eggs in one nest. The records at the Smithsonian Institute, and Audubon, give the maximum number found in a nest as twelve, this being very rare. Mr. Perry was sent for, and yesterday he accompanied two of the young ladies to the locality. The nest was found again, and in it were found fourteen eggs, just as had been reported, which, with the one taken when the discovery was made, filled out the number of fifteen. Mr. Perry promptly paid the reward offered.—*Worcester (Mass.) Spy, May 23.* [Wilson gives 15 as the maximum number of eggs.]

POISONING FROM SPIDER BITES.—At the last meeting of the Biological Society of Washington, Mr. L. O. Howard read a paper on instances of poisoning by spider bites. He cited the case of a man in North Carolina who was killed by the bite of a spider. Dr. Carson, of Savannah, had six cases of poisoning in his practice. In all of them the mischief was charged to a black spider with a red spot on its back. This description seems to indicate the genus *Latrodectus*, which is known to be a poisonous genus of wide distribution. Mr. Wright, of New Zealand, knew of a case of a fatal bite from a species locally termed the *catepo*. The discussion of this paper was taken up by several members of the society. Dr. Fletcher stated that many cases of death from the bite of the black spider are recorded, and he knew of one such instance. Dr. Theobald Smith remarked that the spider might introduce septic germs. Dr. Fox related a case of poisoning from the bite of a jumping spider. Dr. Marx observed that the statements of people as to the causes of bites are apt to be questionable. Dr. Merriam was bitten by a spider at one time with very serious results.

WOODCHUCKS IN TREES.—Smith's Farm, Stratton, Me., May 29.—I have seen articles in your paper at different times discussing the subject of woodchucks climbing trees. I have just read the one by Milton P. Peirce, in your issue of May 23, in which he states that his dog run one up a tree that was slightly leaning. The 17th of this month, while driving across the plains between this place and Flagstaff, with Mr. Julian K. Viles, we discovered a full-grown woodchuck 10ft. up a Norway pine. The tree stood erect, was about 6in. in diameter, and did not have a limb of any description within 20ft. of the ground. I got out of the buggy, picked up a club and killed him. He was evidently sunning himself, and did not move until I hit him with the club.—W. H. H. . . . To Mr. Milton P. Peirce's testimony regarding the woodchuck's climbing powers, I will add that I once saw one of these animals climb a large upright hickory to a distance of several feet. He might have gone higher but that I jumped high enough to reach him and pulled him down by the tail.—KELPIE.

CHARLESTOWN, N. H., May 25.—My neighbor, Sherman Paris, sent for me yesterday morning to ask me what time humming birds hatched out their eggs. He said he had just caught an apparently young bird in his hands on a twine trellis fixed against his piazza, and after releasing it, it fluttered up feebly into the lower branches of a Norway spruce, which stood close by. Could it have been a young bird of this season's hatching? or was it an old one which had been chilled by the cold night? The mercury only stood at 54° F. at 7 o'clock that morning, but had been much higher for a week or two, and I had seen humming birds hovering over some geranium flowers which had been moved out from the house for several days. The unusual and long continued warm weather this spring has brought our bird migration on much earlier than usual, but it seems to me too soon for this year's hatching.—VON W. [It was probably a female bird which had been chilled; the time was too early for young birds.]

IOWA BIRD NOTES.—May 20.—Nearly all the birds have returned to us. Humming and catbirds have reported; but I have not heard the brown thrush. The goldfinches, in flocks, are here. I have not yet seen the green or the purple finch. The bobolink is hardly due. Grosbeaks are making a nest in the same tree where they nested last year. They both sing, the female while on the nest and her song is short and sweet. A wren broke up a bluebird's nest in one of my boxes. We found a broken bluebird's egg on the ground. Then the wrens occupied the other box. So there is a box within a box, for the wren is a chatterbox. Now the bluebirds have taken the wren's box in the next garden. Martins and English sparrows are building and fighting as usual about the tops of high stores.—M. P. S.

CARRIER PIGEON ASTRAY.—Hazel Hill, Fredericksburg, Va., June 6.—There came to my place during the late flood (it was seen here first on the 3d inst.) a carrier pigeon with a ring on each leg, one blank, the other marked Z, 1889. One leg was broken. We set the leg and he is now doing well. If any one having an interest in the stranger will communicate they can have him forwarded when he is able to travel, by addressing BOX 169, Fredericksburg, Va.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS IN MAY.—Purchased—One common paradoxure (*Paradoxurus typus*), two Mexican agoutis (*Dasyprocta mexicana*), one aoudad (*Ovis tragelophus*), two many-colored parrakeets (*Pscpholus multicolor*), one Alexandrine parrakeet (*Palaornis alexandri*), one yellow-headed conure (*Conurus jendaya*), one bald eagle (*Haliaetus leucocephalus*), one red-eared bulbul (*Pycuonotus jocosus*), one rose-breasted grosbeak (*Goniaphea ludoviciana*), one long-tailed weaver bird (*Chera progue*), one short-crested quail (*Odontophorus parvieristatus*), two purple gallinules (*Porphyrio martinica*), one Cayenne rail (*Aramides cayennensis*), two Florida terrapins (*Pseudemys concinna*), one alligator snapping turtle (*Macrochelys lacertina*), three red-eared terrapins (*Pseudemys elegans*), two Trost's terrapins (*Pseudemys troosti*), one soft-shelled turtle (*Aspidoncctes ferox*), one yellow-bellied terrapin (*Pseudemys scabra*), two painted terrapins (*Chrysemys picta*), one pine snake (*Pityophis melanoleucus*), two variegated teguixins (*Tupinambis teguixin*) and thirty-four bullfrogs (*Rana catesbiana*). Presented—One gray fox (*Vulpes cinereo-argentatus*), three prairie dogs (*Cynomys ludovicianus*), one raccoon (*Procyon lotor*), one gray squirrel (*Sciurus carolinensis*), one opossum (*Didelphys virginiana*), one black bear cub (*Ursus americanus*) four great horned owls (*Bubo virginianus*), one mocking bird (*Turdus polyglottus*), two purple gallinules (*Porphyrio martinica*), one duck hawk (*Falco communis*), two ravens (*Corvus carnivorus*), one screech owl (*Scops asio*), one horned lizard (*Phrynosoma cornuta*), one regal horned lizard (*Phrynosoma regale*), one alligator (*Alligator mississippiensis*), one king snake (*Ophibolus getulus*), one garter snake (*Eutania sirtalis*), one hog-nosed snake (*Heterodon platyrhinos*) and one black snake (*Bascanion constrictor*). Born—one buffalo (*Bison americanus*), four prairie wolves (*Canis latrans*), ten prairie dogs (*Cynomys ludovicianus*) and four Egyptian geese (*Chelanopex ægyptiaca*).

Game Bag and Gun.

CHICAGO AND THE WEST.

CHICAGO, June 6.—I was a good deal pleased by the note from Mr. Henry Stevens, in the FOREST AND STREAM of May 23, in regard to the C. D. Gammon medal for largest score of ducks by a Cumberland Club man. I was wrong in the first announcement that the medal was offered for the largest score for the season. Its terms covered only the best score for one day, as I learned later. I am especially pleased with Mr. Stevens's remark mentioning Mr. Gammon as a thorough sportsman. I don't blame our friend "Guadalupe" for hopping on to people who kill so many ducks. I always do myself when I am not killing so many myself. But I would rather he would not jump upon men whom I know personally so well for generous and hearty sportsmen. As a matter of fact the true inwardness of that medal has not yet been brought out. It was not really so serious an affair. I am inclined to think the medal was offered just to disconcert a member or two of that club who have been passing around a good deal on their shape more than on their record, but who were claiming more glory than they deserved as the "best shots in the Cumberland Club." Henceforth let us dwell in harmony together. I am not going to have my men abused, especially when I know "Guadalupe" and Mr. Gammon would be warm friends if they knew each other. As for the scores—well, the older I get the more lenient I grow about human nature. If "Guadalupe" and Mr. Gammon and I were all in one blind, or in adjacent blinds, and that good old Cumberland flight were on, now which do you suppose would have the emptiest shell box?

By the way, Mr. Gammon has lately been sued in Indiana for stealing a dog. He raised the dog, and had always kept him, but the other man thought he ought to have him. The costs have already run up to $220, and the parties have changed venue to almost every county in Indiana. Meantime the dog has died. I don't know who will get possession. The boys are having a good deal of fun about it.

Indiana has slipped a bill through and made it a law prohibiting trap-shooting at live birds in that State. This is nothing on earth but a slap in the face for our club men. I don't see why it is that some folks hate to see anybody else have a good time; yet this is just the attitude Indiana has maintained toward these clubs. And still she is not happy. And still the clubs are.

Below is the full text of the law at date in the State of Illinois, showing amendments made in the late session of our Legislature. Mr. Low, in his annual address to the State Sportsmen's Association last Tuesday night, spoke of a gain having been made of one month in shortening the spring season. My copy of the bill was handed me by Mr. Reed, of the Hennepin Club, who was at the legislative lobby before the committee from the Association got to Springfield, and who was certainly prominent and effective in his work for this measure; and the only change I can see in the old law is in Section 2, which now prohibits night-hunting entirely. It was formerly prohibited only from January 15 to April 15. The season on ducks opens April 15, as before. That this is true is due largely to the efforts of certain clubs, who sent in petitions against abolishing spring shooting, signed by 30,000 names. Here is commentary on what sportsmen can do. Let our sportsmen in the northern part of the State work as effectually if they want to accomplish something. Better yet, let our sportsmen all over the State unite, respecting each others' opinions and necessities. Then we might get a law. Better yet, let the different States unite and frame a scale of laws of some joint sympathy and intelligence. Nothing else will do us any good. A little later I shall show that this is not a new idea, and not due to myself. There is not space to go into that now.

The night-hunting clause above referred to was a House amendment. There is also a Senate amendment, in which the House concurred, which changes the open data on prairie chickens from the 15th to the 1st of September. This is not a gain, but an absolute loss to the sportsmen's interests. The clause giving game wardens police powers is not shown below, but it is safely through, and is indeed almost the only glory of which we may rightly boast in this session of the Legislature. So far it is pretty much the same old story; but we are all bravely keeping up a magnificent lot of talking.

THE ILLINOIS LAW.

SECTION 1. *Be it enacted by the People of the State of Illinois, represented in the General Assembly*, That sections one, two and six of an act entitled "An Act to revise and consolidate the several acts relating to the protection of game, and for the protection of deer, wildfowl and birds," approved May 14, 1879, and in force July 1, 1879, be and the same are hereby amended so as to read as follows:

"SECTION 1. That it shall be unlawful for any person or persons to hunt, pursue, kill, trap, net or ensnare, or otherwise destroy any wild buck, doe or fawn or wild turkey, between the fifteenth day of January and the fifteenth day of September of each and every year, or any pinnated grouse or prairie chicken between the first day of November and the first day of September of the succeeding year, or any ruffed grouse, quail, pheasant or partridge between the first day of December and the first day of October of each succeeding year or any year; or any woodcock between the fifteenth day of December and the fifteenth day of July of each succeeding year or any year; or any gray, red, fox or black squirrel between the fifteenth day of December and the first day of June of each succeeding year or any year. And it shall be unlawful to kill, hunt, destroy, snare, entrap or to attempt to kill, hunt, snare, entrap or otherwise destroy any wild goose, duck, brant or other waterfowl at any time between the fifteenth day of April and the fifteenth day of September of any year, and it shall be unlawful to hunt, kill, trap, ensnare or attempt to hunt, kill, trap, ensnare or otherwise destroy any wild goose, brant, duck, rail or other water fowl between sunset of any day and sunrise of the next succeeding day at any period of the year; and it shall further be unlawful at any time to hunt, kill, trap or ensnare, or to attempt to hunt, kill, trap or ensnare or otherwise destroy any wild goose, brant, duck or other water fowl from any fixed or artificial ambush beyond a natural covering of reeds, canes, flags, wild rice or other vegetation above the water of any lake, river, bay or inlet or other water course wholly within this State, or in such part of such stream or water course wholly within this State, or with the aid and use of any device commonly called sneak boat, sink box or other device used for the purpose of concealment in the open waters of this State. And it shall further be unlawful to shoot, kill or destroy, or shoot at any wild goose, brant, or other waterfowl with a swivel gun, or from any sailboat or steamboat at any time in any part of the water of any lake, river, bay or inlet, or other water course wholly within this State. And any person so offending shall for each and every offense be deemed guilty of a misdemeanor, and on conviction shall be fined in any sum not less than five dollars nor more than twenty-five dollars and costs of suit, and shall stand committed to the county jail until such fine and costs are paid: *Provided*, That such imprisonment shall not exceed ten days, and the killing of each bird or animal herein specified shall be deemed a separate offense.

"SECTION 2. It shall be unlawful for any person to buy, sell, or have in possession, any of the animals, wildfowl, or birds mentioned in section one of this act at any time when the trapping, netting or ensnaring of such animals, wildfowl, or birds shall be unlawful, which shall have been entrapped, netted or ensnared contrary to the provisions of this act. And it shall further be unlawful for any person or persons at any time to sell or expose for sale, or to have in his or their possession for the purpose of selling, any quail, pinnated grouse or prairie chicken, ruffed grouse or pheasant, gray, red, fox, or black squirrel or wild turkey, that shall have been caught, snared, trapped or killed within the limits of this State; and it shall further be unlawful for any person, corporation or carrier to receive for transportation, to transport, carry or convey any of the aforesaid quail, pinnated grouse or prairie chicken, ruffed grouse or pheasant, squirrel or wild turkey, that shall have been caught, snared, trapped or killed within the limits of this State, knowing the same to have been sold, or to transport, carry or convey the same to any place where it is to be sold or offered for sale, or to any place outside of this State for any purpose; and any person guilty of violating any of the provisions of this section, shall be deemed guilty of a misdemeanor, and on conviction thereof, shall be fined not less than $5 nor more than $25 for each and every offense, and shall stand committed to the county jail not exceeding ten days until such fine and costs are paid: *Provided*, that the selling, exposing for sale, transporting or carrying and conveying, contrary to the provisions of this section, of each and every animal or bird forbidden herein, shall be deemed a separate offense.

"SECTION 6. No person or persons shall sell, or expose for sale, or have in his or their possession for the purpose of selling, or exposing for sale any of the animals, wild fowls or birds mentioned in section one, (1) of this act after the expiration of five (5) days next succeeding the first day of the period in which it shall be unlawful to kill, trap or ensnare such animals, wild fowls or birds. Any person so offending shall, on conviction, be fined and dealt with as specified in section one (1) of this act, and selling or exposing for sale, or having the same in possession for the purpose of selling or exposing for sale any of the animals or birds mentioned in this section after the expiration of the time mentioned in this section shall be *prima facie* evidence of the violation of this act: *Provided*, that the provisions of this act shall not apply to the killing of birds by or for the use of taxidermists for preservation either in public or private collections if so preserved: *Provided further*, that nothing contained in this section shall be construed as modifying or being in conflict with section two of this act, or authorizing or legalizing the sale or exposing for sale, transportation or receiving for transportation, any of the animals, birds or game as therein prohibited: *And provided also*, that inhabitants of villages and cities may receive and ship game from other States, and expose and sell the same on the market in said villages and cities, between Oct. 1 and Feb. 1 of the following year."

In the last clause above quoted may be seen the fine Italian hand of our South Water street game dealers. They also had a committee at Springfield, once upon a time. It may be seen that they cannot sell Illinois illegal game in Illinois, but they can sell other States' game in Illinois in Illinois' close season. Of course there is grave wisdom in this. Everybody knows that a mallard duck killed in Missouri can readily be told from one killed in Illinois. They don't look alike at all. They have a different expression about the eyes. When our big Smith case comes up, in 1940, any sportsman or game warden can go and pick up a duck out of the freezer and swear that he knows by the color of its hair whether it is a Dakota, Missouri, Iowa or Illinois duck. Oh, we have got a daisy law out here. We don't need any inter State law. We just look at a duck's physical configuration to tell whether it is a legal or illegal duck. We are going to protect the game, we are! The three-days-in-the-week close season on wildfowl clause was lost, it seems, although many thought it had carried.

This is about all the comment I care to make on the following, which I notice in FOREST AND STREAM for May 23: "PHILADELPHIA, May 14.—The inclosed was cut from this morning's *Record*. Can Mr. Hough tell us if it is true? 'A dealer says Chicago ships game to this State all the year round, regardless of seasons.'—ROBIN." I think it almighty probable she does. Why shouldn't she? Do you think Chicago game market is run on sentiment? And what else but sentiment is there to govern in this case? The law is a joke. All these State laws are only additional jokes. Why don't we realize that? What is the use in all our posing? Time to quit posing and to frame a general law on general common sense.

No. 175 MONROE STREET. E. HOUGH.

THE FLIGHT OF SNIPE.—The Cedars, Oakdale, Long Island, June 4.—The flight of snipe along the Long Island coast, on their way to their northern breeding grounds, has been unusually large this season, and lasting a week longer than in previous seasons. A great many have gone by to-day. Large bunches of yellowlegs and yelpers stopped on the meadows, having been headed off by so much easterly wind; and I regret to say they were shot in great numbers (contrary to law) from Rockaway to the east of Shinnecock Bay. For every pair that was bagged we lose just so much shooting next summer and fall, as every pair would have visited us, bringing their family with them.—ALFRED A. FRASER.

NESTS DESTROYED.—Towanda, Pa., June 21.—Hard rains have filled swamps, brooks, creeks and river banks full, destroying hundreds of nests and young of all descriptions of game birds, especially those nesting on low bottoms.—W. F. D.

THE ST. LAWRENCE DISTRICT, N. Y., grme protector just appointed is Daniel Staring, of Alexandria Bay.

THE NATIONAL PARK.

YELLOWSTONE NATIONAL PARK, June 1.—*Editor Forest and Stream:* On Thursday, May 30, Capt. F. A. Boutelle with K Troop, 1st U. S. Cav., arrived here from Fort Custer. On the next day Capt. B. Bomus with A Troop of the same regiment reached here from Fort McGinnis. The two companies had been several days on their journey, marching with wagon transportation. Capt. Boutelle will be the Acting Superintendent of the National Park, relieving Capt. Harris, who has fearlessly and faithfully performed the duties required for nearly three years. Capt. Harris with his troop will leave the Park on Monday, the 3d, to commence their long march to Fort Custer, the regimental headquarters, from which they have been absent longer than it is usual for a troop to be away on detached service.

Capt. Boutelle is well posted in the duties he will have to perform, and under his charge the Park will be carefully protected and preserved. He will have about 120 men at his command, a greater number than have ever been at the disposal of any former superintendent.

Capt. Bomus with his Troop A will go into camp at the Lower Geyser Basin; from there men will be detached and stationed throughout the southern part of the Park and Geyser basins.

Since the sale of the Cottage Hotel to the Yellowstone Park Association, that syndicate now holds all the hotel leases in the Park with the one exception of John Yancey's, at Pleasant Valley, on the Cooke City road.

Travel has been quite steady since the 15th of May, from eight to sixteen daily, increasing toward the last of the month. A few camping parties traveling with wagons have been making the rounds. The weather has not been all one could wish for a pleasure trip; frequent showers of rain and snow have fallen, though not enough to make the roads heavy.

The game has been back from the line of travel for several weeks. A few elk have been seen by tourists. Antelope have returned to the Hayden. In the upper end of the valley a large band of elk are camping, the cows just beginning to drop their young.

Work on the Government wagon roads is being pushed vigorously. Large crews of men and teams are at work in the Swan Lake Basin and the Gibbon Cañon. Lieut. W. E. Craighill, of the Engineer Corps, is giving the work his personal supervision. H.

THE HUNTING RIFLE.

Editor Forest and Stream:

In my younger years I never used a larger caliber habitually than the old 90-to-the-pound round ball. With this caliber I always had marked success, and upon most kinds of game from squirrels to deer, and on one occasion a large gray wolf, which I shot through the heart, killing him instantly. I killed several deer, all I ever fired at, and all with that caliber, and I never shot but one the second time. I killed a large number of wild turkeys, never failing but three times, wounding upon each occasion, but not striking a vital part. Upon one occasion I shot a black squirrel with that caliber of rifle. He had run up the body of a tall tree without limbs for at least 40ft., and stopped when about 30ft. from the ground. It was upon the occasion of a squirrel hunt, and I aimed for the heart as nearly as possible, in order not to injure the scalp. As soon as I fired the squirrel ran up the tree, and the young man accompanying me remarked that I didn't touch him. When the squirrel had run up about 15ft. further he sprang into the air and fell to the ground some 12 or 15ft. from the foot of the tree, and as dead as a salt mackerel. An examination showed that the bullet had actually torn his heart out, the larger portion of it hanging outside with parts of the liver.

Nearly thirty years ago, I bored the grooves out of a Sharps carbine, and fitted to the enlarged bore what is now called an "auxiliary" rifle barrel. The caliber of the latter was somewhat less than the present .32, probably about .28. I prepared for this cartridges similar to those then used in the Sharps rifle, and made and fitted to the weapon a good telescopic sight. The length of this little rifle was 21¼in. It proved to be one of the best hunting rifles I ever used on small game up to 200yds., and that is about the limit that small game is often killed. I have never found any game from deer to wolf, down to squirrels, so hard to kill as woodchucks, but with this little rifle I killed large numbers of them, but it was necessary to strike a vital point of their anatomy, which the telescope sight enabled me to do. I was several times called to shoot vicious beeves, especially dangerous bulls, and invariably dropped them the first shot with this little rifle. Of course, this was at short range, and the bullet was placed in the center of the brain. My experience with this little weapon in particular, satisfied me of the efficiency of small-caliber rifles for the generality of small game, providing the projectiles are properly placed.

Of course, a rifle requires a good marksman to make it effective. A telescopic sight is indispensable for the best work, and is a wonderful aid to the new beginner, or any indifferent marksmen. I do not say this because I sometimes make those sights, for I do not solicit the work, as my physical condition renders it inadvisable for me to attend to it. I have for many years owned a 15lbs. target rifle, muzzleloader, having the present .44 caliber, and mounted with a telescopic sight. Of late years I have been engaged in fishculture in New Jersey, and, in the absence of a smaller rifle, have used this one for destroying herons, minks, muskrats, snapping turtles, watersnakes and other intruders upon the premises. Upon one occasion I shot a large hen hawk with it, on the top of a tall tree, more than 200yds. distant. The hawk flew with violent movement of the wings nearly 300yds., and dropped dead. Upon going to him I found that the bullet had passed squarely through the center of his body from right to left, just back of the butt of the wings, neither of which had been injured beyond the cutting of feathers. Taking him to the house, I passed the smaller end of an ordinary broom handle through the hole made by the bullet, easily, to the extent of a foot or more. I sent an account of the matter to the FOREST AND STREAM at the time, and it was duly published. I recall the matter now as relating to the matter of large and small calibers. I have several times shot hawks in precisely the same manner with the old 90-to-the-pound caliber, and at least once with the little .28 caliber, instantly killing them in each instance.

I hunted foxes several seasons in western Massachusetts in company with another man who used a shotgun. On one occasion I saw him shoot a large fox at a distance of about 130yds., firing both barrels. He dropped instantly at the second shot, and was dead in a few moments. We skinned him on the spot. But one shot had struck him, and that evidently pierced the heart. The size of shot was BBB. Soon after this we were hunting the large white hares common in those mountain swamps. This man had heavy fox charges in his gun (BBB shot), and fired one at a hare. At the same instant we heard his hound give a piercing yell, some distance beyond the hare, and in the thicket from which he had just been started. I remarked that he had shot his dog, and, as we heard no more from him, we passed around the thicket and soon found him dying. In five minutes he was dead. A single shot had struck him between the point of the shoulder and the neck, probably cutting an artery. He was a fine hound, and his owner would not have taken $50 for him before his untimely taking off.

I think I have given some evidence of the deadliness of even very small projectiles, as well as the occasional unaccountable exceptions with large calibers. I have merely sent you a little of my personal experience, hoping it may interest your riflemen.

It may not be improper to say here that I am now mounting a .32-40 Marlin with a telescopic sight, for a gentleman in Arkansas, to be used on deer, antelope, etc. I have made and mounted these sights upon several Marlins and Winchesters of this caliber, for use on the plains, and should mount many more of them if physically able to do so. It seems to me that small calibers are coming more into use of late, though perhaps not more than thirty to forty years ago. MILTON P. PEIRCE.

COLUMBUS, Ohio.

Sea and River Fishing.

FISHING NEAR NEW YORK.

VII.—SOUTH SHORE OF LONG ISLAND.

THE most extensive fishing waters near New York are those of the south shore of Long Island. Beginning with Gravesend Bay at the island's eastern end, and including Sheepshead Bay, Jamaica Bay, Hempstead Bay and the vast stretch of water known as Great South Bay, these waters offer such a variety of fishing to the angler as no other waters near by afford. Good catches of striped bass, weakfish, kingfish, bluefish, snappers, sea bass, blackfish and flounders may be made in the portion of the south shore bays nearest New York, and the fisherman who can take the time and afford the journey necessary to fish Great South Bay and the ocean outside of the spit of sand which forms the bay's southern boundary, can be sure of sport that is truly royal.

GRAVESEND BAY.

The nearest of the south shore waters to New York is Gravesend Bay, which reaches in behind the westerly hook of Coney Island. The first stopping place is at Bath Beach, which is reached from the Battery via ferry to Thirty-ninth street, South Brooklyn, thence Brooklyn, Bath & West End Railroad to Bath Beach station. Round trip fare from Battery, 35 cents. Leave on South Brooklyn ferry from foot of Whitehall street to connect with trains at Thirty-ninth street at 7:30, 8, 8:30, 9:30, 10:30, 11:30 A. M., 12:30 P. M., and every half hour to 7 P. M. The first two trains do not run on Sundays. Returning trains leave Bath Beach every half hour in the afternoon

Near the station at Bath Beach is the place kept by Richard Green, who has twenty rowboats for hire at $1 a day or 25 cents an hour. No raise in prices Sundays. He also has a 35ft. cabin centerboard sloop, which he will hire at $8 a day for parties of ten or under; over ten persons $1 each extra. Boatman, $2 a day extra. Green keeps all kinds of tackle, and shrimp and clam bait. The fishing in the bay near his place now is for blackfish, tommies and flounders. Weakfish aren't looked for before July 1. Meals and lodgings can be had cheaply near by.

The next station beyond Bath Beach is Bensonhurst (Locust Grove). Fare, one way, from Battery, 20 cents; no excursion tickets. Here is Walter Meserole's place. Meserole has seven rowboats for hire at 75 cents a day, weekdays, $1 Sundays, or 25 cents an hour. He also has two open sailboats at 50 cents an hour, $2.50 a day, and $1 a day extra for skipper, if required. Locust Grove dock here is a well known fishing resort, good catches being made by the fishermen who fringe its edges every fair day. The same varieties are caught as at Bath Beach. The first hour of the flood is considered the best tide here. There is fine crabbing and lobstering in season off the dock. Meserole serves meals *à la carte* at reasonable prices, and will furnish lodging for 25 cents.

Two stations beyond Bensonhurst is Club House Station (round trip fare, from Battery, 40 cents), from which it is a short walk to Gravesend Beach, where Captain James Stillwell, a cousin of the veteran Adrian Stillwell of Fort Hamilton, has kept the Stillwell House for thirty-seven years. He has thirty-five rowboats. Flat-bottomed skiffs may be hired for 50 cents a day, round-bottomed boats for $1 a day, no advance in price being made Sundays. Captain Stillwell's patrons are now catching a few blackfish and flukes, and the fishermen expect the weakfish to take hold every succeeding day. The fishing here is good, comparing favorably with that of the most famous resorts on the south shore of Staten Island, and the weakfish are large and gamy. Right off Coney Island is a favorite spot, and Captain Stillwell will point out the best shoals when fishing in shoal water is profitable. The Captain keeps all kinds of bait always on hand, but no tackle.

At Gravesend Beach may also be found John Van Wart, who has his mail sent in care of Captain Stillwell, and who will take you out in his beautiful and weatherly yacht the Loretta S., 35ft. long, for $10 a day for a party of ten or under. Van Wart sails outside and knows where the big sea fish hide, so he is a good man to go along with.

At Gravesend Beach is also the Torquay House, kept by George Curnow. Curnow has twenty-five rowboats, at 50 cents a day for flat-bottomed, $1 a day for round-bottomed; boatmen $2 a day extra. He also has two catboats and one cat-rigged skiff, at from $2 to $4 a day, according to size. Curnow keeps all kinds of bait, supplies tackle to those who forget their own, and furnishes a bed for 50 cents or a square meal for 40 cents to fishermen.

Beyond Club House Station, and just before reaching Coney Island on this route, is the West End Fishing Station, where there are twelve rowboats for hire, and C. Riley's, where there are sixteen rowboats. Prices per day at each 50 cents. Neither of these places is celebrated for cleanliness or handiness, but they are mentioned that this record may be complete.

SHEEPSHEAD BAY.

Sheepshead Bay is reached by all trains that run to Manhattan Beach, it being the last stopping place before reaching that prominent pleasure resort. Ferry may be taken from James Slip or East Thirty-fourth street to Long Island City, where the trains of the Long Island Railroad (Manhattan Beach Division) are taken. Or the Bay Ridge ferry may be taken from foot of Whitehall street, and Manhattan Beach trains from Bay Ridge. The excursion fare is 40 cents from Long Island City, and the same from foot of Whitehall street. The summer time table goes into effect to-day (Thursday), and cannot therefore be given here.

There are a number of fishing resorts near the railroad station at Sheepshead Bay, all of which seem to be well patronized. All fish that can be caught anywhere in the land-locked bay of the south shore may be caught here, although of course not in such numbers as further eastward in Hempstead and Great South bays.

Anton Hinsman's place is a convenient one. He has twenty-six rowboats, mostly of the flat-bottomed variety, for hire at 50 cents a day every day in the week. The few round-bottomed boats that he owns rent for $1 a day. Boatman, $2 a day extra. Hinsman also has a 28ft. cabin sloop in which he takes fishing parties outside at $8 a day. Bait and tackle can always be procured here if desired, and lodgings and meals at 50 cents each. The fish caught now by Hinsman's patrons are blackfish, sea bass, flounders and fluke. Weakfish have just made their appearance, a Mr. Connell of New York having caught two good-sized ones on Friday of last week.

Near Hinsman's place is that of George B. S. Sickles, who succeeded to the stand kept by J. C. Dick for a long time. Sickles has thirty-two rowboats, nearly all flat-bottomed, at the same prices as at Hinsman's, except that he only charges $1.50 a day extra if a boatman is desired. Sickles keeps on hand all kinds of bait and tackle.

W. Esmark, a few steps further along shore, has sixteen boats, for which he charges a running scale of prices, from 50 cents to $1 50 a day. He also has a 32ft. centerboard cabin sloop yacht, nicely fitted up, in which he takes parties outside for fishing at $6 a day week days and $8 Sundays. This sloop fishes at the Monument, on mussel beds, Swash Channel, East Channel and the mussel beds off Gedney's Channel. On Thursday of last week the sloop's party caught seventy blackfish, averaging 2lbs. in weight, and two bluefish. There is good fluke fishing now inside the bay, Esmark says, and he says there is no bait higher esteemed by flukes than the little "killies." He always keeps bait on hand, including killies, clams and fiddlers. Esmark is an authority on all the best spots in the bay to drop a line, and if he is away from home it makes no difference, as his wife is just as well posted as her husband.

J. Colwell charges 50 cents a day for his forty flat-bottomed boats, and $1.50 a day for his four round-bottomed ones, or from 25 to 50 cents an hour for a shorter time. Off Colwell's Dock on Friday of last week Colwell himself caught a sea bass weighing 5lbs. and a blackfish weighing 11lbs., the largest of which there is any record in the vicinity. The FOREST AND STREAM man saw these fish, and will vouch for their being the largest of their kind he had ever seen. Colwell always keeps bait and tackle on hand.

Close by here is the Conger Eel Fishing Club, the members of which are Messrs. C. M. Bomeisler, A. D. Hulbert, W. H. Van Deventer, Horace Holden and G. S. Hanks. The club owns the Rhoda C., a 34ft. sloop, in which they sail outside to fish. On Saturday last they went out to the banks with no other bait than clams, and caught 480lbs. of fish. Mr. Bomeisler, who lives at the Navarro flats in New York, caught one blackfish that weighed 12lbs., on the banks off Seabright, with rod and reel, using a rod weighing 15oz. Mr. Bomeisler had quite a tussle with the big fellow. The club will make another try of it in the Rhoda C. on Saturday, June 22. The sloop can be hired on days when the club isn't using it (except Sunday) at $8 a day. She is not allowed to go out on Sundays.

At Tappen's Hotel, Sheepshead Bay, there are ten flat-bottomed rowboats for hire at 50 cents a day, and ten round-bottomed at $1 a day, or 25 cents an hour for all kinds for less than a day. Tappen also has a 32ft. cabin sloop for hire at $8 a day to go outside, and four catboats at $6 a day or $1 an hour. He has bait and tackle always on hand, can furnish lodgings at $1 a night and good meals *à la carte* at reasonable rates. Tappen says the fluke are very plenty now in the bay, and will bite eagerly on killies or sandworms. Off Rich's Point on Friday last Stephen Williamson, of Gravesend, caught a striped bass weighing 15lbs., and another party caught one at the same place on Monday of last week weighing 11lbs. These are the current reports about Tappen's Hotel. If the fish were really taken with hook and line, it was a catch to be recorded alongside the 19-pound bass taken last fall in Hell Gate and the 20-pound bass taken about the same time at the Great Kills.

[*Erratum.*—In last week's article the foot of Jersey avenue should have been printed as the place to hire boats at Communipaw, instead of the foot of Montgomery street, as it appeared.] SENECA.

[TO BE CONTINUED.]

A SUCKER AT EITHER END.—While visiting a resort in the Adirondacks recently I was interested in examining the tackle one gentleman used in capturing lake trout. The rod was about 5ft. long and as stiff as a horse's tail. A huge triple multiplying reel was suspended at one end, and at the other two deeply-grooved wheels revolved, keeping in place the 300yds. or so of line (?), made from good-sized copper wire, as it was alternately pulled out by the fish and in by the fisher. A gang of a dozen hooks impaling a sucker of a pound or two completed this abominable contrivance. Why not add a galvanic battery to stun the fish and a donkey engine to run the reel? And this is called trout fishing!—F. D.

INDIANAPOLIS FLY-CASTERS.

THE second annual fly-casting tournament of the Fly-Fishermen's Club of Indianapolis, Ind., was held at Broad Cut on the canal May 31. Secretary J. D. Blair writes:

"The weather was very disagreeable to say the least, still there were seventeen entries. The card gives the order in which they cast. The wind was strong all day, making it very difficult to get the line out on the back cast. Better records might have been made all around. The inclosed taken from the Indianapolis *Journal* will give further particulars":

A stiff northwester that carried with it a cold rain was blowing yesterday morning, but not strong enough to prevent the members of the Fly-Fishermen's Club from holding their second annual tournament. Before 9 o'clock the scientific anglers, wearing rubber boots, and coats of like material, and with heads protected by proof hats, began gathering along the banks of the canal at the St. Claire street crossing, where the little steamer General Morris was waiting to convey them to Broad Cut. Many were late in reporting, and it was after 9 o'clock when the start was begun, with about 100 members of the club and their friends on board. The stars and stripes floated from the little steamer, which, with the jolly crowd aboard, attracted much attention as she steamed up the narrow waterway. The bad weather was a great disappointment to those who had anticipated a day of such enjoyment that only a fly-caster can appreciate. It was expected that not less than 500 people would be present, as many fishermen from various parts of the State had signified their intention of witnessing the sport. Nearly all the participants in the day's sport had made arrangements to bring their families with them, but the miserable weather defeated all their plans. Even the brave fishermen, who are prone to expect bad weather when they have planned to go out with rod and line, were almost tempted to turn back when they reached the Cut, and postpone the contest until they were assured winter was over. The success of their first tournament had been marred by unfavorable weather, and it was fondly hoped that the elements might be more favorable this year. It was finally decided to go on with the contest, notwithstanding the wind was blowing crosswise of the canal, making it impossible to attain the best results.

At 10 o'clock the judges, who were Judge Byron K. Elliott, Dr. L. D. Waterman and Capt. DeWitt Wallace, shielded from the rain by immense rubber coats and umbrellas, took their place along the bank, ready to pass upon the merits of each contestant's skill. There were 17 entries for prizes, as follows: A. C. Jameson, G. A. Millard, A. B. Prather, Q. Brown, B. B. Dildine, M. D. Butler, Gen. Geo. F. McGinnis, Ed. H. Neumeyer, C. L. Hanford, George McDougall, George Powell, B. G. Fisher, F. T. Holliday, Dr. P. G. C. Hunt, B. C. Wright, J. H. Blair and James Isgrigg. All but Mr. Powell were members of the club and residents of Indianapolis. Mr. Powell is from Shelbyville. The rules allowed each one ten minutes in which to cast for distance, and he then stood aside until called in his turn to cast for accuracy and delicacy. No single-handed fly-rod exceeded 12ft. When everything was ready Ray Williams, the time-keeper, called the first contestant to come forward, and Alexander C. Jameson, the oldest fly-fisherman in Marion county, stepped out on the barge. There was a drizzle of rain, and a wind blew directly across the direction in which the lines were cast.

Mr. Jameson used a slender rod 11½ft. long and weighing 8½oz. The wind was so strong that it was several minutes before he could make any headway with his line, but after several attempts he laid the fly out 59ft. Considering the wind he showed great skill. G. A. Millard came next with a rod 9½ft. long and weighing 7½oz. After fouling his line several time he made a distance of 54ft. A. B. Prather, with a 10½ft. rod, weighing 7½oz., showed considerable skill and reached a distance of 51ft. Ignatius Brown handled a rod 10ft. 1in. in length and weighing 8oz. and made 56ft. B. B. Dildine used G. A. Millard's rod and cast for the first time. He displayed the skill of an old-timer and made 57ft. M. D. Butler, who tied with H. S. New for first place in last year's contest, next came out on the barge. He handled a rod 11½ft. long, weighing 9oz. He displayed remarkable skill and outdid all those who had preceded him by putting the fly out 62ft. 6in. He dropped the fly 60ft. out on the first throw he made. Gen. Geo. F. McGinnis, another veteran fisherman, used a rod 11½ft. long, weighing 9oz. The wind was blowing harder than ever when he began casting, and when eight minutes of his time was up it was raining so hard that time was called.

After dinner General McGinnis used two minutes due him, and succeeded in getting the fly out 58ft. Ed H. Neumeyer followed General McGinnis, with a rod 10½ft. long, weighing 7oz. He reached a distance of 42ft. Then came C. D. Hanford, who showed great skill. He had a rod 11ft. long, and weighing 9½oz. He outdid all the preceding contestants, except Mr. Butler, and made a record of 60ft. George P. McDougall followed with a rod 11ft. long, weighing 9½oz. He displayed skill, and succeeded in getting the fly out 53ft. George Powell, of Shelbyville, came next. The members of the club were anxious to see what an outsider could do, and they were greatly surprised when Mr. Powell came close up to Mr. Butler by dropping the fly out 61ft. He was applauded. B. G. Fisher, with a rod measuring 11ft. and weighing 9½oz., reached 46½ft., and F. T. Holliday, with a rod 12½ft. in length and 8½oz. in weight, made a record of 56ft. When Dr. P. G. C. Hunt came out to cast, the rain had ceased and the wind was lighter. He used a 9oz. rod, 11ft. long. He handled the line gracefully and made one of the best records, 57ft. B. C. Wright made 55ft. with a rod 11½ft. long and weighing 9oz., and J. H. Blair, with an 11½ft. rod, 9oz. in weight, made a distance of 50ft. The last man to cast was James Isgrigg, who used a rod 10½ft. long, weighing 7oz. His distance was 55ft.

The contestants were then recalled in turn, and contested for delicacy and accuracy, in the following manner: Each contestant was allowed twenty casts at an object in or on the water, 40ft. distant from him. He who reached a point nearest the object was adjudged superior in delicacy. He was judged to be the superior in accuracy who, on an average of all his casts, placed his stretcher-fly nearest the mark. This contest was fully as interesting as the casting for distance. C. L. Hanford made the best average, while that of M. D. Butler was not so good, which greatly reduced his general average. The score of the contest tells the whole story, as follows:

	Rod—Length. Ft.In.	Rod—Weight. Oz.	Distance. Ft.In.	Delicacy.	Accuracy.	Total
A. C. Jameson	11.06	8½	59 00	16	17	92
G. A. Millard	9 03	7¾	54 00	16	18	88
A. B. Prather	10 06	7½	41 00	Did not cast.		
I. Brown	10 01	7¾	56 00	16	14	86
B. B. Dildine	9 07	7¾	57 00	10	9	76
M. D. Butler	11 06	9	62 06	17	15	94½
Gen. G. F. McGinnis	11 06	9	58 00	18	18	94
Ed. H. Neumeyer	10 03	7	42 00	7	6	55
C. L. Hanford	11 00	9¼	60 00	18	19	97
Geo. P. McDougall	11 00	9¼	53 00	17½	16	86½
Geo. Powell	10 03	7	61 00	15	19	95
B. G. Fisher	11 00	9¼	46 00	Did not cast.		
F. T. Holliday	11 06	8¾	56 00	18	16	90
Dr. P. G. C. Hunt	11 06	9	57 00	13	16	81
B. C. Wright	11 06	9	55 00	Did not cast.		
J. H. Blair	11 06	9	50 00	5	6	61
Jas. Isgrigg	10 03	7	55 00	17	15	87

A strong breeze from the northwest was blowing during the casting, with occasional rain. Inspector of tackle, G. H. Hull, Lafayette, Ind; timer, M. R. Williams, Minneapolis.

In the consolation match there were four entries. Casts were for distance only. Dr. P. G. C. Hunt scored 59ft., B. B. Dildine 54ft., Ed. H. Neumeyer 47ft., J. H. Blair, 45ft. A strong wind prevailed all the time of this casting. The trial ended at 3 o'clock.

The final scores of the contestants were determined by adding to the distance in feet cast each had been adjudged the score of points assigned for accuracy and delicacy. The prizes were awarded in accordance with that aggregate as follows:

First, C. L. Hanford. Record: Distance, 60ft.; accuracy, 18 points; delicacy, 19 points; total 97.

Second, George Powell, Shelbyville. Record: Distance, 61ft.; accuracy, 15 points; delicacy, 19 points; total 95.

Third, M. D. Butler. Record: Distance, 62½ft.; accuracy, 17 points; delicacy, 15 points; total 94½.

Fourth, Gen. Geo. F. McGinnis. Record: Distance, 58ft.; accuracy, 18 points; delicacy, 18 points; total 94.

Fifth, Alexander C. Jameson. Record: Distance, 59ft.; accuracy, 16 points; delicacy, 17 points; total 92.

Sixth, Frank T. Holliday. Record: Distance, 56ft.; accuracy, 18 points, delicacy, 16 points; total 90.

Seventh, G. A. Millard. Record: Distance, 54ft.; accuracy, 16 points; delicacy, 18 points; total 88.

Eighth, James A. Isgrigg. Record: Distance, 55ft.; accuracy, 17 points; delicacy, 15 points; total 87.

The ninth prize was awarded to George P. McDougall. The consolation prizes were awarded to Dr. P. C. G. Hunt and B. B. Dildine. Considering the extremely bad weather, the records made were excellent. The club has decided to hold a tournament in September or October. But one prize will be offered, and that will be a medal offered by Bingham & Walk, jewelers. Mr. Walk's proposition is that when the medal has been won twice in succession by a contestant it shall become absolutely his property. The medal will be given to the person attaining the highest points for all-around excellence. The club also voted to admit to membership fly-fishermen of the State not residents of Marion county, upon the payment of one-half the regular initiation fee, and annual dues.

A QUARTER WITH A HOLE IN IT.

HAPPENING in the house of a friend a week or so ago, I mentioned the fact that an acquaintance of mine had just caught, by trolling, a 25-pound salmon trout in Meacham Lake, and that the reports of fishing there, taken altogether, were so promising that I had determined to spend Decoration Day there and had persuaded three friends to go with me, all of us hoping for a large trout. My expectations were laughed at by those in the room, but they could not break down my enthusiasm. Just before leaving some one said, "I'll bet you a quarter with a hole in it that you don't catch a ten-pound trout." Another, fairer-minded, suggested five pounds as the limit. In my recklessness I agreed to split the difference, and 7½lbs. of good solid trout under one skin and that quarter should be mine.

I shall not try to describe that ride up on the Hudson to Rutland, St. Albans and Malone to Paul Smith's station; my mind was for trout, and the beauties of river, lake and wood I enjoyed in but a half-conscious way. We jumped into the wagon for our 13-mile drive to Fuller's on the lake, and how filled were we immediately by the good luck that brought us to such a place. The sun now seemed to glow with a kindlier welcome; the brooks laughed loud and long as we asked how their bosom friends the trout were; the trees nodded their bows to ours, and the air, sensuous with pine and balsam, breathed upon us from all sides.

Reaching the dam at the outlet of the lake, we found boats and guides, and sending our luggage to the hotel still 3 miles away, we rigged our rods and then began the search for the quarter with a hole in it. The Doctor, the guide I had selected, was just about getting in his fine work with the ash at his end of the boat and I was waiting to begin mine with a piece of Chubb's bamboo in the other, when thug! my line struck something. In a moment I realized that something had struck my line.

There I was, grasping an 8oz. split-bamboo rod with a light casting line, single snell and three small trout flies on it, while at the other end was something of an unknown weight. It neither rose nor dove, swam nor darted, shook nor winked for full fifteen minutes. What was it? The Doctor suggested a two-pound brook trout as they are sometimes caught there, though later in the season. I sat motionless. The Doctor eyed the curve of the rod, and after taking a drink from the lake, ventured to suggest that it was a turtle. I paid no attention to his words of surmise; I just tried to look through the hole of an imaginary quarter and calculate the size of that fish.

I had gotten him up to about 4lbs. when—well, for about five minutes we had it. He shook and I held; he ran and I let him; he gave way and I wound him in, and just once he came up to see what and how large I was. I must have disappointed him for with a flip of his tail ("A laker," remarked the Doctor) he rushed down again and just sulked for another quarter of an hour, thinking possibly that I would grow tired and let him go. For long over an hour he kept up this see-saw of humor, every rush making me tremble for my light tackle.

The one comforting thing about the whole performance was that he kept growing so rapidly. When I hooked him he weighed about 2lbs. Later he had grown at least a pound with each rush, and his increased weight and age were beginning to tell on him.

"Doctor, that trout with one more rush will weigh between 7 and 8lbs., and he has got to come in out of the wet. He is just the right weight for my purpose."

"All right;" and the professional man grasped his murderous gaff with a determined look. The fish tugged and sawed and circled and slowly came up to the surface, his fat sides panting with his noble struggle and his eyes facing into forgetfulness. A cruel stroke of the gaff, and the fish was in the boat! We rowed the length of the lake and were welcomed by Mr. Fuller, his guests and a crowd of guides at the landing. How I tried to look unconcerned as the Doctor told how that fish was hooked, fought and captured, laying special emphasis on the fact that it was done with an 8oz. fly-rod and single leader, and that I had thus broken the record.

When the scales were brought out I trembled. He measured 26½in. in length, and—"Can those scales be in good order?" I asked, for there were several ounces lacking to make the required 7½lbs. The Doctor set my fears at rest by asserting that a fish of that size always loses several ounces when exposed to the air. I sent that trout home and claimed my reward. The qestion now remains, do I deserve that quarter with a hole in it?

F'LIN.

CHICAGO AND THE WEST.

CHICAGO,, June 6.—Messrs. C. D. Gammon, Wm. Cribben, H. P. Thompson, H. D. Nichols and Mr. Magoon, of the Rock Island Railway, started last night for a two weeks' mascallonge camp on Lake Vieux Desert, Wisconsin. They will meet great sport, and have more fun than anybody.

June 8.—The extremely cold and wet weather of the past three weeks has hurt our fishing season seriously. The weather is too dispiriting for even the boldest anglers, and the results are discouraging to dealers in fishing tackle and the keepers of the summer hotels at our northern lakes. It is to be hoped that June will square around and be June before long.

Last week I spoke of the great bass now on exhibition at Spalding's, and called it a small-mouthed bass. It looks to be one, and is so pronounced by many who should be authorities. A denial of this, however, by one gentleman who has seen it leads me to think the assertion may be a mistake, the more so after another examination of the fish. The varnish of the taxidermist covers the skin, and to some extent hides the "median line" of the sides, while the mouth is so arranged that it does not seem to exceed the size permissible to a small-mouthed bass of that size; but the pendulous abdomen and the general ugliness of outline are those commonly seen in the large-mouth, although these might be approached by so aged a specimen of the small-mouth. Until I can find some pronounced authority who will decide this definitely, I can at least claim the credit of having gone on record with a first-class Chicago fish story.

There are six changes in the new fish law from the text of the old law. The first change is in Sec. 1, which prohibits fishing within half a mile below a dam; the limit was formerly 400yds.

The second change is in Sec. 3, which demands a fish-way which shall be approved and kept up in approval of the Fish Commissioners: formerly a dam-owner could put in a plain chute under his water wheel and evade the law by claiming that he had put in a "fishway."

The third change is the very important improvement of granting police powers to fish wardens.

The fourth change is the similar one conveying such powers to the Fish Commissioners.

The fifth change is in Sec. 6, and extends the lawful seining season in navigable waters one month, or till the first of April. Examination of the Illinois seining clause will show that it practically prohibits seining all over the State except below the Henry dam on the Illinois River, and perhaps in a part of one or two other large streams near the mouth. As seining is forbidden "above or below any private or corporate dams," even on "such rivers or streams as are used for navigation wholly in the State," and forbids it also in the "bays and lakes connected with such navigable streams" (which is as legitimate a construction of the text as that seining is permitted in such bays and lakes), I am sure I cannot see how the seining, netting and trapping which have devastated Swan Lake district and all of Lake Senachwine district can any longer be safely carried on. In any construction of the law, these waters lie above "a private or corporate dam," for doubtless the dam at Henry could so be shown to be, and in that case the seining would be illegal at any season there.

The last change is in the same section, and clinches the matter by making it a misdemeanor to have in possession fish taken contrary to the provisions of above seining clause.

I am indebted for the correct copy of the fish law to Mr. Geo. E. Cole, one of the committee present at Springfield from the Fox River Fish and Game Association, and a gentleman prominent in such work. I believe FOREST AND STREAM to be the only paper which has this right. The copy is correct, although I have not checked back on the old law to see whether the changes noted are stated in full or in excess. Mr. Reed, who gave me the copy of the game law, states that it is correct. The revised statutes are not yet out.

E. HOUGH.

FISH PROTECTION IN CONNECTICUT.—*Editor Forest and Stream:* I inclose clipping from the Hartford *Telegram-Record*, which will show that our association still occupies a position on this mundane sphere: "Detective W. C. Fielding, of this city, who is employed by that wide-awake, get-there game protective association called the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, secured evidence enough to cause the arrest of Charles Morrison and Geo. Soules, of Chapinville, for spearing in Twin Lakes. Last week the parties were arrested by Sheriff W. B. Perry, of Lakeville, and their fines amounted to $20 each. President A. C. Collins recently put Detective Fielding on the trail of some miscreants who have been using dynamite in a pond in a neighboring county. The parties will be arrested this week, as the association means war on this style of fishing. The dynamite fiends have killed barrels of black bass and pickerel this season by the aid of dynamite." We have successfully prosecuted nine persons for spearing in the Twin Lakes this season. We trust that the Connecticut anglers will help us.—C. A. F. S. P.

G. F.

"TROUT" IN LOWER CALIFORNIA.

IN FOREST AND STREAM of Jan. 31 and April 18, 1889, will be found answers to inquiries of "Guatemala" concerning a kind of "trout" which he has observed in mountain streams in Guatemala. We suggest that some member of the family of toothed minnows (*Characinidæ*) might have been mistaken for a fish of the salmon family; indeed, a species of *Characinidæ* was described by a French author in 1835 under the name of *Coregonus niloticus*, supposing it to be a whitefish. Many writers of equal or greater fame have referred species of Characins to the genus *Salmo*, among them Linné, Gmelin, Bloch, Schneider, Forskal, Hasselquist, Kolreuter and Artedi. It would not be strange, therefore, if a person unfamiliar with the distinguishing characters of fishes should mistake a toothed minnow for a trout. Worse things than that have happened; for example, one of the mullets (*Agonostomus nasutus*) native to mountain streams in Guatemala and Lower California is locally known in the river at San José as *trucha*, or trout, and we have suspected that this may be recognized under the same name at Tumbador. This mountain mullet has the reputation of being equal to the brook trout in firmness of flesh, excellence of flavor, freedom from small bones, and in game qualities. It is possible that an attempt will be made some day to introduce into Georgia and North Carolina one or more of the fine species found in mountain streams of Jamaica, or the one known from the river of San Geronimo, in Guatemala.

NEW ENGLAND STREAMS.

THE present is proving to be the season of big trout, and best of all quite a plenty of them. Massachusetts lakes, ponds and streams have given the anglers a better chance than for many years. A gentleman who has been acquainted with a certain pond in Plymouth for fifty years was telling me the other day of a catch of a dozen trout he made there one afternoon, when on former seasons one or two on a half day was considered fairly good fishing. Another gentleman mentions a brook running into an arm of the sea on the south shore, where no trout had been seen for some years, though they were formerly abundant. His boys came in the other day with the story that they had seen a large trout. The gentleman could hardly believe the report, but the boys went afishing the next afternoon, with the result that they caught a trout weighing 2½lbs. The next day the gentleman himself took rod and line and captured two or three good trout. But we turn to Maine for the most gratifying results.

The trout stories from the Rangeleys are almost too good to be believed, especially since the season started in so early, and the first results were so very poor. Moosehead is also showing excellent results. The streams were never so full of trout, and the fisher for numbers of the little fingerlings is making his usual record up among the hundreds—the record that is so very distressing to the true angler. Where do all the trout come from? What good spirit is fast bringing back the angling of former days? It is evidently protection, though the laws of the several States are poorly enforced. But public sentiment is growing, and the poacher and law breaker is frowned upon in such a marked degree that his life is being made a burden, and he is staying out of the woods. It is a fact that trout have greatly increased in both Maine and Massachusetts waters during the past five or six years, in spite of the fact that the increase in anglers and the love of angling has been more than ten times as great.

SPECIAL.

MIDDLE DAM, Maine, June 7.—The fishing continues to be very good, and both trout and landlocked salmon are rising to a fly, furnishing fine sport to the enthusiastic angler. Mr. Hempsted, who was mentioned in my last letter, has taken one trout weighing 3¾lbs. and another of 8¾lbs. since I wrote you. Mr. Curtis, who made such a splendid record last year, among many other fish has taken two landlocked salmon weighing 5 and 3½lbs., on a fly, and a trout weighing 5½lbs. Mr. Curtis had rare sport with his 5lb. salmon, the fish breaking water no less than six times, and he told me he had never felt more pleasure in capturing a fish than in bringing this landlocked salmon to net. Besides these large fish Mr. Curtis has taken about a hundred trout. Messrs. Armstrong and Miles have taken 125 trout, all of which would be called large trout in almost any country but this. Mr. Armstrong has taken a 3½lb. trout, and several running between 2 and 3lbs. There was never better fly-fishing than at present, and it will probably be good all through this month, as the conditions are favorable. Messrs. Shattuck and Smart, of Boston, who spent a few days at their camp in the Narrows, carried home a fine lot of fish, among which were two trout weighing 8 and 8½lbs., the largest of which was on exhibition for a few days in Boston, in the window of a fishing tackle store.

The last five years, many of the fishermen visiting the lakes have brought their wives with them, and some of the ladies have developed a love for the sport, and can talk "fish" as well as any man, and seem to enjoy it as much.

Coe & Pingree's drive of logs which annually passes through this chain of lakes, are all through the Middle Dam, and by far the larger part have reached Umbagog Lake. The drive this year was the largest ever known, containing 17,000,000ft., and yet the large land owners here tell me that the lumber is still growing faster than it is cut, so that it will probably be many years yet before the timber is all cut off in this region, if it ever is, for much of the land is worthless for any other purpose than of growing a forest.

We have had rain here for several days past, and last night was one of the coldest I have ever experienced in this section at this season of the year. As I came up Lake Umbagog this morning on the fleet little steamer Parmachenee, the White Mountains presented a grand sight. Our rain of yesterday must have been snow on the mountains, for the granite crown of Washington and its attendant peaks were draped in spotless white, showing finely against the unclouded blue of the sky. By far the most satisfactory view of the White Mountains to be obtained anywhere in this region can be had from the upper part of Lake Umbagog, a little above Moose Point. Here they are in sight from summit half way to base, and each grand peak stands out clearly from its fellows.

Mr. C. P. Stevens, of Boston, who is usually one of the earliest visitors here in the spring, has been detained at home much against his wish by business, and has just made his appearance at his neat little Vine Vale camp in the Narrows. The Narrows is one of the most famous fishing grounds in this region, and as Mr. Stevens is a successful and persistent angler, he will no doubt leave a record behind him when he returns home.

J. P. Whitney and family, of Boston, and a party of friends have already been at their beautiful summer camp on Lake Molechunkamunk for several weeks, and the whole party, I understand, have enjoyed excellent fishing.

A few members of the Boston Club are at their camp, a short distance below Upper Dam Landing, and report fishing good.

One party of four anglers who were here recently and stopped a few days, carried home 480 trout, all nice ones, besides the small ones they ate and gave away and threw back into the water. Every fisherman I have met says he has never known the trout so plenty as they are this spring. As one fisherman told me, "You can catch more small and medium-sized trout than you want, but it is the big fellows I am after."

Those of your readers who have been detained from making their annual fishing trip in May can try it in June this year, with a fair show of success, for there seems at the present time to be more fish than fishermen.

CAPT. FARRAR.

OZARK MOUNTAIN TROUT.—Kansas City, Mo.—Is it possible that, with our present magnificent variety of game birds, fishes and other animals, we can add to them any one of the great salmon family? The beautiful Ozark Mountains are surely being opened, and are to become famous, indeed, as a sporting section, easy of access and good accommodations. Spring River, having its head from one of the largest springs in the world at Mammoth Spring, just over the line in northern Arkansas, is certainly one of the most beautiful and natural angling streams in the country. Those who have traveled over the Kansas City, Fort Scott & Gulf Railroad to Memphis will testify to the beauty of the Ozark Mountains and this beautiful stream. It will be a pleasure to read the experience of those who have been in that country, and more especially to hear from others as to whether there are trout in the Ozark Mountains or not. Theoretically, it would seem probable, as the Ozark watershed is the line dividing the waters flowing north into the Missouri, whose headwaters abound in trout, and the waters flowing south into White River and that into the Arkansas, it also being famous for trout at its head. The Ozark streams are clear and cold, with rocky beds, affording naturally a home for trout. It is a question worthy of investigation, and it is hoped the patrons of the FOREST AND STREAM will give it attention and the readers the result of their experience.—TILE.

A TARPON SCORE.—Mr. Edward Prime, of New York city, recently returned from Florida with a record of tarpon fishing which is worth repeating. The fish were caught at Punta Rassa, Charlotte Harbor, on the west coast, and the detailed score is:

	Lbs.	Ft.	In.		Lbs.	Ft.	In.
March 31	78	5	1	May 14	105½	6	2
April 11	116	6	..	May 14	93½	5	6½
April 20	134½	6	4	May 15	119	6	1
April 23	142	6	5	May 15	94	5	10½
April 24	135	6	2	May 15	101	5	10½
May 2	98	5	9	May 16	55	4	6½
May 3	116	6	3	May 16	134½	6	4½
May 6	53	4	8	May 16	79	5	6
May 7	126	5	10½	May 16	120½	6	1
May 8	140	6	2	May 17	146	6	4
May 9	94	5	5	May 17	103	5	4
May 9	109	5	10	May 17	153	6	7
May 10	108	5	11	May 17	132½	6	4
May 11	126	6	3½	May 18	98	5	11½
May 13	106	6	1½	May 18	120	5	4
May 14	94	5	9½				

The fish were taken with an Abbey & Imbrie rod, and gave hard fights.

BLACK BASS IN GEORGIA REFUSE THE FLY.—Macon, Ga., June 3.—The season this year for black bass has been unusually good, some superb catches having been made. The fishing is done, however, with live bait or with a bob. A number of our local amateurs have given flies a faithful trial, but we have unanimously agreed that flies are not adapted to our waters. The fishing grounds contiguous to Macon are mostly mill ponds from 25 acres to 250 acres in area. They are lined with shrubs and bushes and underneath grow grasses and weeds in great profusion. I first tried flies in midsummer and attributed my failure to the fact that insects were then plentiful. But after trying in early spring and late in the fall with no better success I know not how to account for it. Perhaps some of your readers can explain the matter for me. I am told that in the streams and lakes in southern Georgia a fly will induce a rise every time, but that is easily accounted for—abundance of fishes.—MACON ANGLER.

LATE TROUT SPAWNING.—Central Lake, Mich., May 28.—*Editor Forest and Stream:* The articles under the head "Massachusetts Trout Spawning," in your issue of May 16, lead me to send you the following facts: On the 14th of this month I caught one brook trout which contained spawn, on the 23d two, and on the 27th five (out of nine taken that day). I have little knowledge of matters pertaining to fishculture, but I should say that the spawn in no case, except perhaps the first, was ripe or fully developed.—KELPIE. [It would seem from the above statement that late spawning is not limited to trout which have the sea-going habit, and it is important that all persons interested in the preservation of this beautiful species should use their opportunities to ascertain the facts about the extent of the spawning season and govern themselves accordingly. Brook trout are not prolific and can easily be exterminated by killing the gravid females.]

BLACK BASS IN LAKE CHAMPLAIN.—We have good reports from "Samson's," Lake View House, St. Albans Bay, Vt., of the black bass fishing. This is a resort where visitors actually catch fish, as attested by numerous correspondents who have been there.

KINGSTON.—New Brunswick, June 1.—Trout fishing has commenced in this section, and although some good catches have been made, the large fish (sea trout) have not struck in as yet.—S.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston, or 199 Fulton st., N. Y.—*Adv.*

Fishculture.

LOSS OF FISH FROM CARP PONDS.

THE recent flood in the Potomac River caused it to overflow the Government carp ponds at Washington and disperse the carp and gold fish over the reservation almost as far as the Capitol. While the young carp as a rule remained on the reservation, many of the big ones of both sexes were scattered over Pennsylvania avenue and other prominent streets. One 11lbs. fish was captured at Maryland avenue and 4½ street, southwest. Three aggregating about 30lbs. in weight were taken at the doors of the Center Market. Still another, weighing 6½lbs., and measuring 25in., was captured at 12th street and Ohio avenue by a gentleman who alighted from his carriage and dispatched the fish with the butt of his whip. We learn that there are many old fish left in the ponds, and a large number of them have not yet spawned. This is very fortunate, as thousands of the young of last spring's spawning have left the ponds and cannot be recovered. Dr. Hessel fortunately recaptured a great many of the escaping young fish and returned them to the ponds. Associated with the carp were seen gold fish, spring minnows (*Fundulus diaphanus*), small sunfish (*Enneacanthus gloriosus*), minnows (*Hybognathus regius*) and young eels.

The results of this unprecedented flood will be seriously felt for a long time to come.

SALMON IN THE DELAWARE.—The U. S. Commissioner of Fish and Fisheries, Col. Marshall McDonald, has received a letter from Mr. Wm. J. Thompson, of Gloucester, N. J., stating that he caught a salmon weighing 14lbs. in his shore net May 27. Mr. Thompson remarks that this is the second one caught this season. The fish was sold for ten dollars.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCualg, Secretary.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

DOG LICENSE LAWS.

WE begin to-day the publication of our reports on the laws relating to dogs in towns, and the methods adopted to reduce the number of vagrant curs. The information has been secured by correspondence with the mayors or presiding officers of the several places named, and the reports were all made in 1888:

Maine.

The State tax is $1 for dogs and $3 for bitches.

Bath.—We have no unlicensed or stray dogs.—WM. B. BROWN, Pres.

Biddeford.—We have no dog law in force here whatever.—E. A. HUBBARD, City Clerk.

Bangor.—The license for dogs is $1.20 for males, $2.20 for females. Unlicensed and stray dogs are destroyed, principally by shooting. No active measures have been taken for a strict enforcement of the law for a year or two, and consequently I am unable to give any pound statistics.—C. F. BRAGG, Mayor.

Rockland.—The tax imposed on dogs for this present year is $1. Dogs at large without collars with owner's name thereon are subject to seizure by police or pound drivers, and drowned unless owner claims them and pays tax. No license is issued. The clause in ordinance authorizing the seizure of dog is not operative, as little attention is paid to it. Most of the dogs are taxed to the owners by the assessors.—W. S. WHITE, Mayor.

Vermont.

St. Albans.—The license and police regulations in regard to dogs are not matters of municipal regulation, but are the subject of State regulation, and the provisions in respect thereto may be found in Chap. 182, Secs. 4028 to 4052 inclusive, Revised Laws of Vermont, as amended by several acts passed in 1882. The substance of the provisions is that each dog is required to be licensed on or before April 1 each year, the fee being $1 for a male and $4 for a female. On failure to procure license by April 1, party may procure one by May 15, in that case the fee being $2 for male and $4 for female. The fees are paid to the town treasurer and are kept as a separate account by him. Damages done by the worrying, maiming or killing of sheep, lambs, fowls or other domestic animals by dogs in the town are required to be ascertained and certified by the selectmen of each town in December each year, and on or before the first Wednesday in January the treasurer is required to pay such allowances if the dog fund is sufficient, otherwise he is required to pay the same *pro rata* to the extent that the fund will allow. All dogs not licensed as required by law on May 15 are required to be killed. The chairman of the selectmen in each town is charged with the duty to issue a warrant for such slaughter directed to any police officer or constable, and the police officer or constable is required to execute the warrant at $1 per dog killed, to be paid by the town.—ALBERT P. CROSS.

Montpelier.—Dogs are taxed here $1 if paid before the 15th of May, if not until after that $2. The law here is if dogs are not licensed they are to be killed by one of the officers that has the warrant from the proper authorities to put the same in force. Female dogs are taxed $2. The law is not very well executed, only as far as the tax is concerned. This part of it is done all right and according to law.—CLARK KING.

New Hampshire.

Keene.—The tax is $1 on males and $2 on females per year. We intend to tax all dogs in the month of April in each year. No dogs are killed by city authorities unless found committing some depredation or sick. So few are killed that nothing is done with them except to bury them as soon as possible.—MILLERD BLAKE, City Clerk.

Massachusetts.

The State tax is $2 on males, $5 on females.

Brockton.—We have but very few unlicensed dogs, so that we give it very little attention. We usually notify once and that only, which usually has the desired effect. The few stray dogs, or unlicensed ones, are shot by order of city marshal.—ALBERT R. WADE, Mayor.

New Bedford.—We do not impound stray dogs, as is the custom in your city, but they are at the mercy of the police, who have the power to shoot them.—D. B. LUNARD, City Clerk.

Lynn.—I think nearly every one here licenses their dog; 1,882 have been licensed here this year so far; 19 only have been killed.—CHAS. E. PARSONS, City Clerk.

Lowell.—Unlicensed and stray dogs are supposed to be shot, at any rate, such is the law; but very rarely such happens, though frequently owners of unlicensed dogs are arrested and fined. No pound is used.—CITY CLERK.

Lawrence.—Dogs are killed by police if owners refuse to pay license. The number licensed during the current year was 1,210. Amount of license fee collected to date, $2,758.—N. E. MACK, Mayor.

Holyoke.—Unlicensed dogs are shot and the owners prosecuted. We have no dog pound in this city.—J. E. DELANEY, Mayor.

Haverhill.—All parties who own unlicensed dogs after Sept. 15 each year are notified, and if they do not at once get the dog licensed, he is shot by the police officer who attends to that duty, one of the day police. We have no pound. Almost all owners get the dogs licensed; only a very few are killed. We have licensed 1,000 dogs since May 1, 1888. The officer gets a fee of $1 each for all dogs killed.—JAMES M. BALL, Mayor's Clerk.

Amesbury.—The license is given by the town clerk and the fee paid by him to the treasurer of Essex county, who in turn pays for all damages done by dogs out of the accumulated fund, and the balance is divided *pro rata* among the towns and cities of the county. By the 10th day of October the constable of the town, actiug under a warrant issued to him in July, which orders him to kill all unlicensed dogs, is obliged to make a return to the selectmen and the county of his doings—of the number of dogs licensed and the number killed. The number of licensed dogs this year is 335. The fee, $2 each. Number of dogs killed, 10. Damage reported, 9 dogs $100.—W. H. B. CURRIN.

Worcester.—The license fee collected on dogs by this city is $3 for males and $6 for females. There is no system of impounding dogs. Any person known to own or harbor an unlicensed dog is complained of before the courts, and if convicted, fined usually $15. Stray or unlicensed dogs that are picked up and no owner found are usually killed, either by chloroforming or shooting.—T. H. BARTLETT, Clerk for Mayor.

Greenfield.—Our town imposes no license fee or tax on dogs. This State imposes a license fee due May 1 each year, or on the dog's attaining the age of 3mos. July 1 a warrant is issued to kill all unlicensed dogs. But the owner is still permitted to pay the license and preserve the dog, and practically in this town only stray dogs are ever killed. Up to date for current year $635 in license fees has been received. This will doubtless be increased by May 1 to nearly $700.—FREDERICK L. GREENE, Town Clerk.

Westfield.—Tax on all dogs $2, on bitches from $5 to $25. There is no impounding of dogs here, the constable is required to destroy unlicensed dogs and lodge a complaint against their owners.—W. C. CLARK, Chairman.

Melrose.—Fee $2 for male, $5 for female dogs, to be paid May 1, annually. July 1 each year the chairman of selectmen issues warrants to constable ordering him to "kill or cause to be killed all dogs not licensed and collared with its owner's name and registered number." Warrant returnable Oct. 1. Complaint is also made against owners of unlicensed dogs when known. Fine, $15 and costs of court. In 1887 we licensed 394 males, 58 females and one breeder's license, $25; total receipts $1,012.40. It will be about the same this year.—LEVI L. GOULD, Chairman Selectmen.

Taunton.—Officers are detailed by the mayor once a year to kill all unlicensed dogs, or dogs found outside of their owner's premises without collars and registered numbers and owner's name thereon. The receipts for dog licenses for the current year are not yet all in, but the sum will be not far from $2,400, which is by the city appropriated for the public library.—EDWIN A. TETLOW, City Clerk.

Springfield.—Unlicensed dogs, if they are worth anything, are given to farmers in the surrounding country; if worthless they are shot; 1,391 dogs were licensed the present year.—J. H. CLUNE, City Marshal.

Last Sunday's Springfield *Republican* had this about the dog licensing in that city:

For some men to pay a dog license is a burdensome, unwelcome duty; for others it is a happy privilege to secure the safety of a beloved pet. The difference in the man's appearance before the city clerk depends, of course, on the ratio of the affection for the animal. The distinction is apparent, however, the minute the door is opened. Those who come through home influences or an uneasy conscience open the door slowly, shuffle their shoes along the marble floor, their lips turned up as if about to take a disagreeable dose of medicine. As they advance the needful $2, with which they part as if from a dear friend, they remark that they have delayed the payment as long as possible, "hoping the old dog would die." Not so do the "willin'" ones enter. They come with glee, remarking eagerly as soon as in sight, "Look here, I want to license my dog; I wouldn't take $150 for him." Sometimes the dog comes, too, and he generally watches the proceeding with great interest; and E. A. Hall's little spaniel always brings the $2 in his mouth, and presents the money to the city clerk with due deliberation. There is one young woman who always brings her Skye terrier with her. It has long silky hair, pathetic eyes, and a ribbon tied in a bow over its head. While the city clerk is writing the certificate to the cute little fellow walks all over the book following the tracings of the pen with its black diamond nose.

A few weeks after the city clerk had been elected a very stylish, well-dressed woman entered the office and requested a dog license. As he bent over the big book, Mr. Newell, pursuing the regular formula, asked: "What is the dog's name?" "You know," was the reply. "Madam, what did you say?" "You know" was repeated again with emphasis. "No, madam, I do not know," said the urbane official, looking inquiringly over his eye-glasses. "Of course you don't," was the explanation; "my pug dog's name is You Know; U-N-O—now do you see?" And so it was entered. Equally puzzling is the answer when the owner says the name of his pet is Ino, or Guess. But the clerk becomes accustomed to these names in time, and it would be hard now to find a dog's name that would suggest ambiguity to one who records 1,160 in a year. Tiger, Tempest, Pill, Pompey, Spider, Jim Blaine (the name of a pug), Darkey, Veto, Comet, Frisk, Cute, Koko, Bijou, Grover, Cussie, Wing, Flint, Ferji and Doctor, these are the names most frequently appearing, although there are many time-honored Jacks, Rovers and Jips recorded on the leaves. Pugs are by far the most numerous in the city, while terriers and Newfoundlands come next. There are about a dozen St. Bernards owned here, but comparatively few greyhounds.

The revenue from these licenses goes to the city library after the damages the dogs may have done have been deducted by the county commissioners. All the licenses are due May 1, but delinquents hang on amazingly. A time of settling comes, however, for about this time warrants are handed over to the policemen. They visit all who are remiss in this respect, and if they continue to overlook or forget about the matter soon the owner is summoned to police court, where he is fined $20 if found guilty. Half this sum goes to the man who makes the complaint. The record licenses show that the number of dogs has nearly doubled in seven years, the number each year being as follows: Last year, 1,399; 1887, 1,315; 1886, 1,215; 1885, 1,068; 1884, 964; 1883, 924; 1882, 741.

Fitchburg.—A special dog constable is appointed each year, and after July 1 he kills all unlicensed canines and prosecutes the owners thereof.—WALTER A. DAVIS, City Clerk.

Framingham.—The fee for a dog is $2, for a bitch $15, with special provision for dogs kept for breeding purposes. All dogs not licensed by July 1 are killed by constables under warrant from selectmen. We do not impound.—WALTER COLLINS, Chairman of Selectmen.

Northampton.—Unlicensed and stray dogs are shot when found by the police on the mayor's warrant to do so. Nearly 600 dogs licensed this year, and no returns of any being killed made to this office.—E. I. CLAPP, City Clerk.

Salem.—This city has passed no regulations, but the licenses are issued under provisions of the public statutes. We have no dog pound. A constable is on duty from July 1 to Oct. 1., for the purpose of killing unlicensed dogs and prosecuting their owners.—H. M. MEEK, City Clerk.

Waltham.—Unclaimed and stray dogs are killed by shooting. They are not impounded. Number of dogs killed the present year 56.—HENRY N. FISHER, Mayor.

Newburyport.—We have no pound for dogs. All dogs not licensed are supposed to be killed by dog officers.—ALBERT C. TITCOMB.

Connecticut.

The State law requires a fee of $1.15 on dogs; $6.15 on bitches.

Middletown.—All unregistered dogs are liable to be shot by any officer. We have no pound in the city. The whole number registered so far this year is 1,466.—CHARLES R. LEWIS.

Hartford.—Stray or unlicensed dogs are impounded and kept two or three days, when, if the owners do not call to claim them they are shot and buried. The impounding and disposal of them are under the supervision of the police department, which receives $1 from the town for each dog so disposed of. Should the owner call and claim the dog, $1 must be paid to the said department before the property can be taken away. If a dog remains unclaimed for two or three days, any person by paying the dollar fee can have the same. Number of dogs impounded was 115; 123 were killed, 3 were claimed by owners, and 2 were given to parties by paying fee.—JOHN E. HIGGINS, Town Clerk.

Willimantic.—We have no pound.—JOHN M. ALPAUGH, Warden.

New Britain.—This city does not require the payment of a license fee or tax for dogs. The State has a statute. Every unlicensed dog may be killed. The number are so few they are usually shot. We have no pound.—JOHN WALSH, Mayor.

New London.—The law requires that all dogs not licensed shall be killed. The law is a dead letter as far as killing is concerned in this city.—ISAAC W. THOMPSON, Town Clerk.

New York.

Rome.—The mayor of Rome reports the dog license in that city as 50 cents on dogs and $2 on bitches, but the dogs are not punished for the failure of their owners to comply with the ordinance.

Watertown.—We impose a tax of $1 on dogs and $3 on females. This we find works well, and all that do not pay the tax are destroyed and buried.—W. E. HART, Mayor.

Peekskill.—The tax on dogs is 50 cents, on females $1. We do not bother much with unlicensed dogs unless called on to do so. We get what tax we can and let the rest go.

Poughkeepsie.—We have no license or tax on dogs in this city. We direct that they shall be muzzled during July and August, and theoretically we impound unmuzzled dogs caught in the streets. None are killed unless exhibiting some symptoms of rabies or other disease. I have urged a tax, and we may come to it some day.—EDWARD ELSWORTH, Mayor.

Utica.—Dogs are neither licensed nor taxed in this city. We have a city ordinance that all dogs running at large between April 1 and Nov. 1 shall be muzzled, otherwise to be shot by the police, the ordinance, however, has not been enforced for many years. We have no pound. The city provides for the burial of dead dogs found in the streets.—HENRY MARTIN, Mayor.

Canandaigua.—There is no license or tax on dogs in Canandaigua. There is no pound and dogs may roam unmolested.

Tonawanda.—We have no dog pound, neither do we impose any tax on dogs—A. A. BELLINGER, Pres. of Village.

Binghamton.—The city does not license dogs. Between June 20 and Sept. 20 no dog is allowed to go abroad in any of the streets unless muzzled with a good and sufficient wire muzzle, rendering it impossible for such dog to bite, under the penalty of $10. And it is lawful for any person to seize and kill any dog running at large, contrary to the provisions of the ordinance. It is lawful for the chief of police when the safety of the citizens require the vigorous enforcement of this ordinance, to employ any number of discreet persons he deems proper, to kill all dogs found running at large unmuzzled, or with defective muzzles, provided the expense shall not exceed 50 cents. Ferocious and howling dogs are prohibited outright, and those that bark and bite, or howl at night, may be killed by any person on sight. We have no dog pound.—TRACY R. MORGAN, Mayor.

Buffalo.—No license is imposed on dogs in this city. They are allowed to go at large if collared and muzzled, and are liable to be impounded if not. (Of course this part of the ordinance is not enforced except during the summer months). If not claimed and released by the payment of a fine of $2 within 36 hours they are killed. The pound-keeper gets a fee for killing.—H. S. THAYER, Mayor's Sec'y.

Ogdensburg.—No license is charged on dogs. There is no regulation in regard to unlicensed or stray dogs. Dogs that are killed from any cause are generally thrown into the St. Lawrence River.—GEO. HALL, Mayor.

Ithaca.—For the current year we have done nothing with dogs except to shoot a cur occasionally.—D. B. STEWART, Mayor.

Dunkirk.—This city imposes a license fee on dogs of 50 cents, on bitches $2. Unlicensed and stray dogs are permitted to run at large, and are not destroyed. We have no dog pound.—W. BOOKSTAN, Mayor.

Troy.—There is no license fee on dogs imposed in this city. Our city ordinance provides that all unmuzzled dogs running at large shall be seized by the police and impounded. The owner may claim the return of the dog within one week by paying to the pound-keeper the sum of $2. If not claimed within one week the pound-keeper is directed to kill the dog by shooting or drowning. All moneys collected by the keeper belong to the city.—DENNIS J. WHELAN.

Penn Yan.—Our village imposes no special tax on dogs. The township collects 50 cents on dogs and $5 on bitches, which includes the corporation. We fortunately are not pestered with enough to make them a nuisance, hence no by-law or ordinance in force relating to dogs; no pound.—G. C. SNOW, President.

Schenectady. No tax is imposed on dogs in the city. The county towns about tax each dog 50 cents. We have no pound. Every dog has a home, and should one be so unfortunate as to be killed by the cars or otherwise lose his life, and in death lie in state upon a thoroughfare, he or she is buried at an expense of 50 cents to the city.—T. LOW BARHYDT, Mayor.

Yonkers.—The city ordinance provides for a license fee of $1 on dogs and $3 on bitches. Neither licensed nor unlicensed dogs may roam the city at any time without muzzle unless he is held on a chain not exceeding 4ft. long, and dogs thus roaming unshackled are taken to the pound, and if not claimed within twenty-four hours are disposed of by killing or otherwise at the discretion of the pound-keeper.

Rhode Island.

Providence.—All unlicensed or stray dogs found by the dog officers are destroyed forthwith and buried. The city has no pound whatever.—MAYOR'S SECRETARY.

Newport.—A license is imposed by law on male dogs of $1.15, on females of $5.15 per annum. Unlicensed dogs or dogs without collars may be killed by any one outside of the owner's premises. All dogs must wear a collar marked with owner's name and number of license. Stray dogs or uncollared dogs are brought in by the policemen, held twelve hours, and if unclaimed in that time, are killed. There is no regular dog pound. Skins or carcasses are not utilized in any way, as the number is never large. A dog brought here can be kept for thirty days before it must be licensed. Any person keeping an unlicensed dog is liable to a fine of $10, one-half to the complainant. Every person keeping or harboring or knowingly suffering the same to be done is liable for all damages done by said dog as if he were the owner. A fine of $20 imposed for removing the collar from a licensed dog's neck.—JOHN HARE POND, Mayor.

Westerly.—The license on a male dog is $1.15, and on a female dog $5.15, payable in the month of April. If not paid in April $1 is added, and after the last day of May if not paid a fine of $10 is imposed, collected by complaint and warrant. We have no dog pound. The dog is killed and buried, and the person doing so recovers $2 from the town, and therefore no use is made of the skin. There are about 400 dogs in this town, the greater part of them pay the tax very promptly. I have had the oversight of them for ten years, and I have had occasion to sue but one, and have had to kill only one dog during the present year.—GEORGE G. WELLS, Town Sergeant.

DOG TALK.

AT the dog show—an old campaigner gives us this: She did not arrive until the judging was over and was evidently ignorant that it had taken place, as with graceful steps and bewitching smiles she hastened to her pet and fondly caressing the darling, sweetly prattled to him of the lonesome hours she had passed away from his presence. Raising her eyes she gave a nervous start as she caught sight of the commended card that adorned the top of the cage, then with a swift glance along the row, she proudly drew herself to her full height and gazed with a look of indignant scorn upon the coveted blue ribbon that adorned the neck of the fortunate occupant of the adjoining cage. Soon, however, the dimpled chin began to quiver, the flashing eyes were veiled with drooping lashes, then with a convulsive shudder and sigh that seemed to tear at her heart-strings, she bowed her beautiful head upon the silky coat of her pet and silently wept. We had been deeply interested in watching the very entertaining performance, but tears, Lord bless us! we couldn't stand them from those gazelle-like orbs: so catching my companion by the coat sleeve, I led him up facing the stall, and as I gently crowded in front of the almost broken-hearted beauty, exclaimed in a tone of voice that expressed deep indignation, "This is the most glaring outrage ever committed at a dog show; just see what the fool of a judge has done, here is this little darling with only a commended card while that brute of a mongrel has been given first prize." Although my back was toward the maiden I could readily see by the changing expression of my companion's countenance that the charm had worked, and when we had reached a safe distance he murmured with a sigh, "I would give one-half my kingdom for the look she bestowed on you."

We understand the advisory committee of the A. K. C. have decided the matter in dispute between Messrs. Wm. Graham and Lorenzo Daniels by exonerating Mr. Daniels, providing he pays Mr. Graham the sum claimed by the latter. The committee have also decided that the American Field Trial Club must pay Mr. Anthony the prize money claimed by him.

Mr. Henry Müller, of Stapleton, Staten Island, arrived in the steamship Wieland, June 8, with three Russian wolfhounds and six Great Danes, a dog and bitch and four puppies. The wolfhounds are orange and white and have won prizes in Germany. The Great Danes are "tiger" marked and are said to be a very handsome lot. They can be seen at the kennel of Mr. Müller.

Mr. E. B. Goldsmith, forwarding agent, of 58 Wall street, informs us that he received on the steamer Egypt, June 7, five setter bitches from the kennel of Mr. George Cartmels, Kendal, Eng. They were forwarded to their purchaser, Mr. Charles Pharo, Bethlehem, Pa.

The *Breeder and Sportsman* publishes a very good portrait of Mr. Wm. Graham, who judged at the San Francisco dog show last month. The paper speaks well of him as a judge. We are sorry to learn that the show did not pay expenses by nearly $500.

We learn from the *Stock-Keeper* that the bulldog bitch Mischief, that was defeated in the recent celebrated bulldog match between Messrs. Peace and Pybus-Sellon, has been purchased for 75 guineas and that she will be sent to this country.

We learn that the "poison fiend" is at work on Staten Island, and that nearly 30 dogs have been killed. Some of them were valuable animals and their owners will spare no expense to find out the miscreant.

Several recent cases of rabies are reported to have occurred in London, Eng., and the *Stock-Keeper* expresses grave fears of an epidemic of the dread disease and recommends that all dogs be muzzled until the danger is over.

Mr. F. F. Dole, of New Haven, Conn., has just received from England the black and tan terrier dog Kaiser, a litter brother to Sheffield Lass recently imported by Mr. Dole.

The celebrated greyhound Misterton, winner of the Waterloo cup ten years ago, is dead. His services in the stud have been in great demand and his owner received over $20,000 from this source.

Mr. D. Baillie, of Lexington, Ky., sails for England to-day. We understand that he will bring back quite a number of dogs of different breeds.

Messrs. Thos. A. Logan and E. O. Hurd, of Cincinnati, O., contemplate importing some Griffons and starting a kennel of this breed.

The dates for the next Birmingham (England) dog show are Nov. 30, Dec. 2, 3, 4 and 5.

ST. BERNARD CLUB SPECIALS.—New York, June 11. —*Editor Forest and Stream:* At an executive meeting of the St. Bernard Club of America, last evening, the following specials were offered for competition at the Toledo Kennel Club show in September: Cup for best American-bred smooth dog or bitch; cup for best American-bred rough dog or bitch.—LORENZO DANIELS, Sec'y.

LYNN DOG SHOW.—Lynn, Mass., June 8.—*Editor Forest and Stream:* The Massachusetts Kennel Club, Lynn, Mass., claim the following dates for their second annual bench show: March 25, 26, 27, 28, 1890.—D. A. WILLIAMS, Sec.

"OLD ENGLISH MASTIFFS."

Editor Forest and Stream:

The general tenor of Mr. Taunton's articles on the above recently published, accord so closely with mine, that I correct a few errors in them, in no carping spirit, but that readers may not be confused by them.

Mr. Wynn's contradiction of Mr. Lukey's statement in "Stonehenge" (that he first used Couchez and then Pluto) is sustained by the stud book, which shows that Yarrow was bred to Couchez, and Mr. Wynn's statement is so circumstantial, going into such minute details, that, coupled with his intimacy with the widow and family of Mr. Lukey, it can hardly be doubted. Mr. Lukey was said to pay little attention to pedigrees, being a thoroughly practical breeder aiming only at results. He never kept account of more than the right male line of a pedigree. He certainly owned dogs that never appear in his pedigrees, as for instance, that splendid specimen, Lukey's Lion, that he imported direct from Mt. St. Bernard. Mr. Edward Nichols hardly gets his due meed of praise from Mr. Taunton, as very much credit is due Mr. Nichols for animals of which he does not appear as the breeder. He was really the breeder of both Old Champion Turk and Champion Beau, as he bred Hilda, mated her with Old King and sold her, in whelp, to Miss Aglionby, who appears as the breeder of Turk, Wolf, etc. The same as to Beau, he bred Belle, mated her with his Prince, and sold her, in whelp, to Mr. Beaufoy, who thus appears as the breeder of that great crack, Beau. Nor can I admit that Mr. Nichols owed his early successes to Lyme Hall blood; the renowned Cautley's Quaker was the spring from which Mr. Nichols drew his best results, and although Quaker only served one bitch, his name appears more frequently in pedigrees than that of any other dog of his date. Mr. Nichols's use of Donaldson's Oscar must also be taken into consideration.

Mr. Taunton repeats his "Lyme Hall" mistake in his mention of Hilda, dam of Turk; only one-eighth of her blood was Lyme Hall, and it was certainly overcome by the blood of Capt. Cautley's Quaker, who was in the same degree of relationship, and of Donaldson's Oscar, who was one degree nearer. As to Big Ben, Mr. Taunton somewhat misleads by quoting his descent through Meg from the Duke of Devonshire's Bendigo, as Big Ben is said to be by Turk, whom he must have resembled very little. But it is very questionable if Turk really was his sire. Mr. Nichols had the gigantic Hercules at the time, and, without aspersing Mr. Nichols's truthfulness in the least, "accidents" will happen, in kennels as well as in "the best regulated families." Hercules had a shocking ring tail, a fault that he transmitted very strongly, and which appeared in both Big Ben and Cardinal. (Parenthetically, let me say that I do not owe this piece of scandal to Mr. Wynn.) Green's Monarch was by this same Hercules, who himself was by a pedigreeless watch dog of Lord Marsham's, out of Whynault, and he probably derived all his merit from his dam, she being the dam of Banford's Wolf, etc. Monarch's blood exists in plenty outside of the Cardinal strain, through Idalia and Brenda Secunda, whose produce, Ilford Chancellor, Ilford Coroner, Debonair, etc., are pretty well scattered through England and America. Mr. Taunton omits Monarch's best son in Mr. Curtis's Marquis, who was out of Duchess, 2366, litter sister to Mrs. Rawlinson's Countess, dam of The Emperor. (From photos of the two, Duchess appears to have been much the best.) Marquis was a most frightful savage, however; I think that Mr. Aylmer of Darlington (to whom Mr. Curtis sold the dog) had him killed on this account.

In mention of Colonel, Mr. Taunton omits Negress's chief produce in Crown Princess, who was counted by "Billy" Graham and Marsden as better than Cambrian Princess. In the case of Queen, Mr. Taunton gets somewhat off the track. Her usefulness in mastiffs does not lie through Wolsey, but through his brother, Nichol's Prince, who, as sire of Beau, etc. (not by way of Young Prince), will not often be found out of mastiff pedigrees; and there is an instance of scientific breeding here that Mr. Taunton failed to note: Queen was by the leggy, light-bodied Druid, but she was out of that almost perfect bitch, Hanbury's Phyllis, who was by Banford's (and Pemberton's) Wolf and out of the sister of Governor. To her dam Queen owed all her merits, and I cannot agree with Mr. Taunton as to those, as her head was most coarse and St. Bernardlike; but although Druid was one-quarter deerhound in blood, the cross of Rajah seems to have utterly extinguished it, as no animals were freer from such appearance than Prince, Wolsey, Creole, etc. Note that Prince and Wolsey were inbred to Wolf, 2353, through Phyllis, dam of Rajah and Queen.

"Mr. J. G. Thompson" puzzles me. I never met such a name in mastiff pedigrees. Mr. James Wigglesworth Thompson was a most distinguished mastiff breeder, the one to whom we probably owe more than any other. He bred Saladin, Bill George's Tiger, Lukey's Duchess (dam of Lukey's Countess, through whom Mr. Lukey got his fawn strain) and a host of others. In this he was materially aided by old John Crabtree, the head keeper of Sir George Armitage. Mr. J. W. Thompson certainly did not get his dogs from Bill George, for Sal, Bet, Nero, Waterton's Tiger, etc., were either bred by himself, his father, John Crabtree, or, as in Waterton's Tiger, were imported. If I remember aright, he did buy Cymba from Bill George, and he presented George with his famous Tiger, 2,345. The portraits of Turk and Colonel are, as usual, very poor. These dogs are the direct opposite of Governor in the faculty of reproducing likenesses of them. I have seen several pictures of them, and none preserve the peculiar dignity, power and majesty that characterized the photographs from which they are made. It must be entirely in the expressions, as the portraits of Governor, Rajah and Queen are fac-similes of the photographs from which they are copied, while those of Colonel and Turk are complete failures.

Mr. Taunton's picture of Governor is most admirable (as far as head). There is a peculiarity about this dog that could be recognized at sight in every picture I ever saw of him, including a drawing by Col. Garnier, showing his Lion, Lukey's Countess, and their sons, Harold and Governor. Col. Garnier's description of the dogs accords exactly with his picture, Harold being a reproduction of his dam, short and broad in head, of immence substance, but a bit light in bone, a larger dog than Governor every way. Unfortunately he left no produce; had he done so mastiffs might have been very different, for he was the beau ideal of a mastiff, short-muzzled and large-skulled enough for anybody, yet immense in size and thoroughly sound everywhere.

The pictures of Beau, Cardinal and Crown Prince are also unsatisfactory. I have several photos of Beau (including the one from which this picture seems to have been made), but none of them show the miserable, lanky hindquarters of the picture. Nor does the picture of Cardinal do him justice. I have a photo showing much less of dish face and more depth of muzzle, while the picture of Crown Prince entirely fails to show the horrors of his most detestable hocks, the most wretched abortions I ever saw in a photo of a dog.

The champion funny thing of the year is the editorial note on these pictures, that "we have secured copyrights in England of those of Governor, Turk, Queen and Crown Prince, as we own the only portraits of those dogs in existence, so far as we have been able to ascertain." This just beats Jews and Gentiles! If anybody wants photographs, from the life, of either of these dogs, let him write to S. M. Robinson, photographer, No. 1 Sixth street, Pittsburgh, Pa.; and he can get them, and I will make Mr. Robinson "divy" with me on the proceeds, as I own the originals from which those photos were made. If the inquirer happens to be in England, let him call at the office of the *Stock-Keeper* or the *Fanciers' Gazette*, where he can find most of them, with the addition of Hanbury's Prince, Field's Nellie (by Cautley's Quaker), Phyllis, Wolf, King, Miss Hale's Lion, etc. The pictures of Governor, Turk and Colonel appeared in *A. K. R.*, FOREST AND STREAM and the London *Stock-Keeper* about two years since, and the idea of parading such chestnuts is too utterly ridiculous. (Don't you send Mr. Robinson a bill for the above "ad.")

In an article on "Pillars of the Stud Book," it is an unfortunate mistake that the names of such pre-eminent factors as Bill George's Tiger, Cautley's Quaker, Lukey's Rufus, Saladin, Pemberton's Wolf, etc., should be omitted. Bill George's Tiger seems to have been the pivot at his time on which the short head turned. Rufus entirely modified the heads of Mr. Lukey's strain by begetting King from the daughter of Cautley's Quaker. Wolf got Hanbury's Phyllis, with her beautiful head, from the slight and long-muzzled Phœbe, and Phyllis produced Rajah and Queen, from whom come Beau, The Shah, The Emperor, Crown Prince, Beaufort, King Canute, Cambrian Princess, Minting, etc., *ad inf.*

Mr. Taunton does not well state the inquiry into the paternity of Crown Prince. It was "violently attacked" because it found that there was "no evidence that the registered pedigree of Crown Prince is not correct," while the evidence pointed most unmistakably toward the conclusion that, be the sire who he may, it was a hawk to a hen that it was not Young Prince. To support the Young Prince sire-age (so sapiently championed by our "American Kennel Club, sir!") there was nothing but the word of Mr. Burnell, who had repeatedly said to reputable gentlemen that The Emperor was the sire, and against the statement in favor of Young Prince was the express declaration of Burnell's kennelman (then in the employ of Mr. Sewall), that he had bred Merlin to The Emperor by Burnell's own direction, supported by the Dudley nose so common in the blood of the litter, which was a common characteristic of the Sultan-Flora litter's offspring. Through The Emperor, Stanley and Marquis, sons of Mrs. Rawlinson's Countess and Mr. Curtis's Duchess; my Gypsey, a daughter of Marquis, threw ginger-faced pups to Mr. Hoskin's The Monarch, son of Marquis. Of course, when I refer to a dog's appearance, I mean his appearance in his photo.

W. WADE.

HULTON, Pa., May 27.

CHESTNUT HILL KENNELS' MANEY TREFOIL.

DOG TRAINING INSTRUCTIONS.

THIS new book, "Modern Training, Handling and Kennel Management," by B. Waters, is a work that should be in the hands of every one who owns a pointer or setter. Mr. Waters has had an experience in the field that but few men can boast, and in addition to this he has the happy faculty of putting on paper the results of this experience in a manner that will be readily comprehended by all. Although an advocate of the force system, his methods of applying it are such that the system is shorn of its worst features, and we commend this portion of the work to those who, by ill-advised or ill-tempered application of punishment to their dogs have done so much to bring the system into disrepute. We give place to no one, so far as love for the dog and our interest in his humane treatment is concerned, and we have ever championed his cause by opposing the application of force while training him to become the fitting companion of the sportsman, for the reason that a very large majority of those who undertake the training of dogs are unreasonably severe in their methods and in many cases brutal in their treatment of the animals under their charge, the result of their course of instruction being that instead of a loving friend and cheerful companion their dog is an eye-serving slave, ever in fear of the whip and consequently does not perform his part nearly so well as he is capable of doing when he has confidence in his master and is working for the pleasure of both without fear that the cruel lash will, he knows not when or what for, descend upon his cringing form. Mr. Waters believes that dogs are endowed with reasoning faculties, and his system of training is based upon principles consistent with this belief, and he strenuously urges the imperative necessity of the exercise of reason while training them. Above all he insists upon kind treatment and a close companionship that fosters a mutual love, without which not much can be satisfactorily accomplished in the way of training.

In addition to the training of the pointer and setter there is a chapter devoted to the training of spaniels, one to watch dogs and one to foxhounds, all containing valuable information. Mr. Waters also has something to say about guns, the habits of game birds in different sections, together with points to traveling sportsmen and a chapter on field etiquette that is well worth a careful perusal. There are also several chapters devoted to kennel management, breeding, raising, kenneling, feeding, etc. Scattered all through the work are bits of personal experience and words of wisdom that cannot fail to be of benefit to the expert as well as the amateur.

* "Modern Training, Handling and Kennel Management." By B. Waters ("Kingrail"), Chicago. Published by the author, 1889. Cloth, 373 pages. Illustrated. Price $2.50.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

MANEY TREFOIL.

WE give this week a capital illustration of the Chestnut Hill Kennels' recently imported collie dog Maney Trefoil. He made his first appearance in this country at the Boston show last April. Our report of that show said of him:

"Maney Trefoil, that has caused such commotion in the collie world, is a son of The Squire and Scotch Pearl, whelped July 25, 1887; breeder, Mr. H. C. While. The portrait which appeared in the *Stock-Keeper* of Feb. 22 is a most excellent likeness, except that it shows him to have plenty of bone and good feet, whereas it is here that Maney Trefoil fails. He has a good head, that is not quite equal to Scotilla's, well-set and well-carried ears, good neck, short, strong back, a loin that could only be improved by being a little more arched, and hindquarters that, while not perfect, are decidedly better than can be found in a majority of prominent winners. He has a profuse undercoat of the best quality, and, with the exception that his bodycoat is somewhat soft across the flanks and sides of chest, it is almost perfection, and in mane and frill we have never seen any one that surpassed him. He swings a lengthy stern that is perfectly coated, stands over lots of ground and moves in good style. He is big enough for any kind of work, but, as we have already stated, he is light in bone and not first class in feet. He also shows a disposition to stand over at the knees. While we do not think him the equal of old Charlemagne he is undoubtedly a beautiful specimen, and has no peer in this country."

He was first shown in England at Barn Elms last July, where he won second in the open class under two years, first in the puppy class, the Collie Club Derby and £5 special.

At Darlington, three weeks later, he won a first and second, and at Ecclesfield and Cambridge he also won first. At Birmingham in December he won first in the open class, and the Collie Club specials. These were the only times that he was shown in England. His winnings in this country are first and specials at Boston, Chicago and Philadelphia. The cut is from a sketch by Harry B. Tallman, and is an excellent likeness.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Koin. By A. E. Pitts, Columbus, O., for silver fawn pug bitch, age not given, by Kash (Bradford Ruby—Lady Cloud.) out of Peggie II. (champion Joe—Pody).

Eberhart's Cashier, Pitts, Whitney, Gillivan, Duke of Montrose, Spokane and Prince Charlie. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dogs, whelped June 2, 1889, by champion Kash (Bradford Ruby—Lady Cloudy) out of Lady Thora (Santa Claus—Almah).

Buffalo Prince. By H. W. Smith, Buffalo, N. Y., for orange and white St. Bernard dog, whelped March 7, 1889, by Merchant Prince II. (champion Merchant Prince—Sequa) out of Lady Snowdrift II. (Prince—Lady Snowdrift).

Golden Boy. By J. B. Martin, San Francisco, Cal., for white, black and tan fox-terrier dog, whelped Jan. 16, 1889, by Regent Jock (Regent Vox—Blemton Saffron) out of Beatrice (champion Bacchanal—Blemton Arrow).

Bridford Kennels. By W. T. Payne, New York, for his kennels of spaniels; also the prefix Bridford for all spaniels bred by him.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lass of Naso—King Don. Wm. New's (Philipsburg, Mont.) pointer bitch Lass of Naso (Nick of Naso—Nelly) to King Don Kennels' King Don (Vandevort's Don—Luck), May 29.

M'liss—Beaufort H. G. W. Lovell's (Middleboro, Mass.) pointer bitch M'liss (Glenmark—Zanetta) to his Beaufort H. (Beaufort—Zuba), May 28

May B.—Beaufort H. G.W. Lovell's (Middleboro, Mass.) pointer bitch May B. (Glen Graphic—Jeanette) to his Beaufort H. (Beaufort—Zuba). May 24.

Lou Tell—Beaufort H. D. F. Wilbur's (Middleboro, Mass.) pointer bitch Lou Tell (Wm. Tell—Daisy A.) to G. W. Lovell's Beaufort H. (Beaufort—Zuba), May 21.

Miss Daisy—Bradford Ruby II. R. L. Wayman's (Cincinnati, O.) pug bitch Miss Daisy to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), June 2.

Fair Inez—Kash. F. C. Nims's (Painesville, O.) pug bitch Fair Inez (Zango—Nellie) to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), May 27.

Dottie—Kash. C. C. McLean's (Janesville, Wis.) pug bitch Dottie to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), May 21.

Nun Nicer—Kash. A. E. Pitts's (Columbus, O.) pug bitch Nun Nicer (Douglas II.—Dot) to his Kash (Bradford Ruby—Lady Cloudy), May 10.

Cute—Kash. H. L. Goodman's (Auburn Park, Ill.) pug bitch Cute to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), May 7.

Belle Valentine—Beauchamp. Halfway Brook Kennels' (Glens Falls, N. Y.) St. Bernard bitch Belle Valentine (champion Rector—Emmet's Jura) to Teague & Tilton's Beauchamp (Beauchief—Berengaria), May 8.

Schatz—Herr Otho. Tracy Gould's (Vineland, N. J.) St. Bernard bitch Schatz (Merchant Prince—Bernice V.) to Halfway Brook Kennels' Herr Otho (champion Otho—Swiss Rhona), April 10.

Belle of Halfway Brook—Herr Otho. Halfway Brook Kennels' (Glens Falls, N. Y.) St. Bernard bitch Belle of Halfway Brook (Cato—Belle Valentine) to their Herr Otho (champion Otho—Swiss Rhona), May 3.

Medea—Herr Otho. Halfway Brook Kennels' (Glens Falls, N. Y.) St. Bernard bitch Medea (Merchant Prince—Bernice V.) to their Herr Otho (champion Otho—Swiss Rhona), March 29.

Queen Valentine—Herr Otho. Halfway Brook Kennels' (Glens Falls, N. Y.) St. Bernard bitch Queen Valentine (Cato—Belle Valentine) to their Herr Otho (champion Otho—Swiss Rhona), April 15.

Forest Corinne—Aldershot. F. E. Smith's (Groton, N. Y.) Irish setter bitch Forest Corinne (champion Bruce—Little Nell) to D. Rhonds's Aldershot (Chief—Bizreena), June 4.

Bridford Ruby—Newton Abbot Don. Bridford Kennels' (New York) Sussex spaniel bitch Bridford Ruby (champion Bridford Dallin—Bridford Birdie) to E. M. Oldham's Newton Abbot Don (champion Newton Abbot Darkie—Newton Abbot Lassie), May 26.

Bridford Lady—Newton Abbot Skipper. Bridford Kennels' (New York) Sussex spaniel bitch Bridford Lady (champion Bridford Laddie—Bridford Ruby) to W. T. Payne's Newton Abbot Skipper (champion Newton Abbot Darkie—Newton Abbot Blossom), May 29.

Nell—Jubilee. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Nell (champion Count—Bertha) to his champion Jubilee (Bendigo—Queen), June 4.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Hops. E. Dexter's (Charlottesville, Va.) pointer bitch Hops (Mike—Romp), May 31, four (two dogs), by his King of Kent.

Daisy A. Geo. W. Lovell's (Middleboro, Mass.) pointer bitch Daisy A. (Pete, Jr.—Daisy), May 23, ten (seven dogs), by his Beaufort H. (Beaufort—Zuba).

Lass of Maine. H. F. Farnham's (Portland, Me.) pointer bitch Lass of Maine (Graphic—Zitta), May 21, eight (four dogs), by his Duke of Maine (Beppo III.—May F.).

Puss B. Geo. Gilliyan's (West Jefferson, O.) pug bitch Puss B. (Treasure—Peggie), June 4, six (three dogs), by A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy).

Sulu C Toledo Kennel Club's (Toledo, O.) English setter bitch Sulu C. (Count Noble—Dashing Novice), May 24, six (two dogs), by J. Dager's Toledo Blade (Roderigo—Lillian).

Bohemian Girl. J. S. Hudson's (Covington, Ky.) English setter bitch Bohemian Girl (Count Noble—Mollie Belton), June 5, nine (six dogs), by S. Bogg's champion Paul Gladstone.

Psyche. C. L. Griffith's (New York) Gordon setter bitch Psyche (Roy—Doll), June 6, eight (five dogs), by Dr. J. H. Meyer's champion Beaumont (Ronald III—Floss).

Topsy. R. T. Pearce's (Philadelphia, Pa.) cocker spaniel bitch Topsy (Harry Obo—Blackie H.), May 22, six (one dog), by A. W. Pancoast's Marmaduke (Bozique—Daisy Dean).

Daisy. Toledo Kennel Club's (Toledo, O.) cocker spaniel bitch Daisy (champion Brant—Bonita), March 13, five (three dogs), by C. M. Nelles's Red Rover.

Renah W. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Renah W. (Black Pete, Jr.—Gilt), June 1, six (five dogs), by T. J. Hook's champion Little Red Rover (Obo II.—Woodstock Dinah).

Bonnibel. Bridford Kennels' (New York) spaniel bitch Bonnibel (Wallace II.—Suzette), March 4, six (five dogs), by Dr. Beck's Jerry (Othello—Suzette); bitch and all the whelps since dead.

Cleopatra. Wm. F. Murphy's (New Haven, Conn.) cocker spaniel bitch Cleopatra (champion Black Prince—Zona), June 5, six dogs, by G. D. Gregory's Cubo (champion Black Pete—Riette).

Meersbrook Girl. Rochelle Kennels' (New Rochelle, N.Y.) black and tan terrier bitch Meersbrook Girl (Punch—Meersbrook Jessey), May 28, six (four dogs), by E. Lever's Vortigern (Viper—Gipsey).

Gipsey Queen. A. W. Smith's (Buffalo, N. Y.) black and tan terrier bitch Gipsey Queen (Vortigern—Fortune), May 30, four (two dogs), by his Buffalo General (Halifax General—Lady Lottie).

Glen Ettie. Toledo Kennel Club's (Toledo, O.) Scotch terrier bitch Glen Ettie (Dundonald—Glen Linne), May 11, six (four dogs), by Meadowthorpe Kennels' Donald (Athold—Madge Wildfire).

SALES.

Beaufort H.—Belle of Maine whelps. Black and white ticked pointers, whelped March 4, 1889, by G. W. Lovell, Middleboro, Mass., a dog to W. W. Hurd, Bridgeport, Mass., and a bitch to C. Russell, Jr., New Haven, Conn.

Beaufort H.—Portland Lilly whelp. Liver and white pointer dog, whelped March 29, 1889, by G. W. Lovell, Middleboro, Mass., to C. T. Garreth, Boston, Mass.

Kash—Daisy whelps. Silver fawn pug bitches, whelped May 4, 1889, by A. E. Pitts, Columbus, O., one each to Eberhart Pug Kennels, Cincinnati, O., and H. S. Hume, Greenfield, Ind.

Roxie. Orange tawny, correct white markings, rough St. Bernard bitch, whelped June 17, 1888, by Brunswick out of Lady Marian, by Halfway Brook Kennels, Glens Falls, N. Y., to Mrs. B. H. Kathe, Chillicothe, O.

Pet. White and brindle, black facings, rough St. Bernard dog, whelped April 28, 1888, by Cato out of Nutmeg, by Halfway Brook Kennels, Glen Falls, N. Y., to A. A. Schafer, Crescent, N. Y.

Schatz. Orange brindle and white, black facings, rough St. Bernard bitch, whelped May 26, 1888, by Merchant Prince out of Bernice V., by Halfway Brook Kennels, Glens Falls, N. Y., to Tracy Gould, Vineland, N. J.

Gun—Dora Gladstone whelp. Black, white and tan English setter dog, whelped June4, 1888, by Chas. York, Bangor, Me., to H. E. Kleber, New York.

Flash Boy. Red Irish setter dog, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to C. W. Sweet, Wilsonia, W. Va.

Nepaul. Red Irish setter dog, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to R. Robley, Cathlamet, W. T.

Sarsfield's Blaze. Red Irish setter dog, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to H. J. Smith, Louisville, Ky.

Iowa Lad. Red Irish setter dog, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to F. W. Hubbard, Huron, Mich.

Mina. Red Irish setter bitch, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to J. B. Charlton, Washington, Pa.

Spinaway. Red Irish setter bitch, whelped Aug. 3, 1888, by Chief out of Nellie, by A. B. Tyrell, Haverhill, Mass., to F. Thurlo, Newburyport, Mass.

Corinne. Red Irish setter bitch, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to G. E. Everett, Grand Island, Neb.

Prairie Rose. Red Irish setter bitch, whelped Dec. 24, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to J. C. Sawyer, Oregon.

Marco. Black and tan, with white frill, cocker spaniel dog, whelped Oct. 25, 1888, by Koko out of Phyllis D., by J. E. Weston, Utica, N. Y., to R. G. Hoerlein, same place.

Golden Boy. White, black and tan fox-terrier dog, whelped Jan. 16, 1889, by Regent Jock out of Beatrice, by J. B. Martin, San Francisco, Cal., to Mrs. Sterrett, same place.

Golden Gem. White and tan fox-terrier bitch, whelped Aug. 25, 1888, by Dick out of Norwich Belle, by J. B. Martin, San Francisco, Cal., to C. H. Kobicke, same place.

Regent Jock. White fox-terrier bitch, whelped April 10, 1887, by Regent Vox out of Blemton Saffron, by J. B. Martin, San Francisco, Cal., to C. H. Kobicke, same place.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

R. K. M., Baltimore, Md.—I have a fox-terrier bitch pup about 6 months old who suddenly started to run violently about the house, barking sharply all the time; this lasted about 3 minutes, after it was over she seemed very much frightened and cowed, but knew me and answered to her name. She had been confined in a small house until about 10 minutes before the paroxysm, and was fed about 4 hours previous on meat. What is the name of these attacks and a remedy, if any? Ans. You should never feed a puppy on meat. The attack is due to digestive troubles, possibly worms. Keep the bowels free with teaspoonful doses of syrup of buckthorn, once or twice daily. Feed light diet, bread and milk, soups with bread and scraps from the table. Corn meal mush is excellent. Exercise regularly.

G. H. C., Hartford, Conn.—I have a spaniel pup three months old. A month since small white particles of dandruff appeared in his coat. Then he began scratching, became thin and had diarrhœa and what passed was streaked with blood. For two weeks I gave Fowler's solution of arsenic in three drop doses twice daily, and fed cooked meat chopped fine. The bowels are now all right. To his coat I applied zinc oxide and diachlor in equal parts, also washed him in Little's sheep dip. His appetite is good and bowels regular now. Yet the hair is off on his throat, armpits and thighs. Will you kindly tell me what the trouble is, and the proper treatment? Ans. Do not feed much meat. Give Fowler's solution, 4 drops night and morning in the food, for a month. Exercise regularly and keep the bowels easy.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

MAKING MILITIA MARKSMEN.

FOR now these 16 years the State of New York has led the list of Commonwealths in looking after the instruction of the civilian marksmen in rifle practice. Gen. Robbins has just issued his orders for the practice of 1889, which runs during the season from May 15 to Nov. 9. Each year the entire militia force of the State is classified as shots into several groups.

The third class shall consist of all who do not appear on a range for practice.

The second class consists of all present for practice, without reference to qualification in previous years, and the practice in this class will be at 100yds. standing, on a third class or No. 3 target, and at 200yds. kneeling, or sitting, on a third class or No. 3 target.

The first class consists of those who score 25 and upward in the second class, and the practice in this class will be at 200yds. standing, No. 3 target, and at 500yds. lying prone, No. 2 target. A score of 25 and upward in the first class constitutes a marksman, and entitles the maker to receive the State decoration. A score of 42 and upward in the first class constitutes a sharpshooter, and entitles the maker to receive a silver bar.

All officers and enlisted men who practice must shoot through the regular classes, except as otherwise hereinafter provided, and are prohibited from shooting for a second or higher score in a class in which they have already qualified. The record must stand upon the first qualifying score made. But should any marksman, without expense to the State, on other than a practice day, and under proper supervision, make a score qualifying as a sharpshooter, he will be credited with such score. No score by officer or enlisted man will be recognized unless made at a target to which he has been regularly assigned, and where his name has been previously entered on a score blank.

At the first general practice (*a*) the practice will commence with class firing in squads, under a competent non-commissioned officer, or other duly designated instructor, at each firing point, and the whole under the supervision of an inspector of rifle practice, subject to the orders of the commanding officer present.

Five consecutive shots will be fired at each distance.

This practice will be continued to the end by all present without reference to the scores recorded, except that those who fail to qualify in the second class may be restricted to two shots for practice at each of the higher ranges, and any officer or enlisted man who has won the marksman's decoration for the five years last past need not practice at the lower (*i. e.*, 100yds. and 200yds., standing and kneeling) ranges.

The practice at 500yds. may be postponed until after the course of firing in ranks.

In regular class practice no officer or enlisted man will be permitted to fire more than five consecutive shots at any one distance on the same day, except the necessary sighting shots to ascertain elevation, windage and the condition of pieces, which may be fired by officers or well instructed men, under inspection or approval of an inspector of rifle practice. Trial practice between classes will not be permitted.

At the first distance of either class (*i. e.*, at 100 or 200yds.), a score of 12 or upward is considered as qualifying, and second practice may be allowed to such men as fail to qualify at either distance (as above), provided time will permit; but third practice shall not be allowed in any case. If, however, the entire tour of duty, including volley and skirmish firing, has been performed, and time still permits, such practice may be had as the inspector of rifle practice deems proper.

Those who may have qualified at 200 and 500yds., and not at 100 and 200, may make their scores valid by practicing through the second class without shooting in the first again.

In regular practice each enlisted man will shoot with the piece issued by the State, and brought by him on the ground, unless the same is declared imperfect by the inspector in charge. In that case the man may shoot with the nearest approved piece in the ranks.

(*b*) Volley Firing, Five Rounds.—Firing in ranks at 100yds. shall then be taken up in the following order, the squad or company being formed in single rank: Fire by squad [or company], three rounds. Fire by squad [or company], kneeling, two rounds.

(*c*) Firing as Skirmishers.—The troops shall be exercised as skirmishers from 325 to 100yds. and return; firing, on the advance, one round at 300yds., one at 200yds. and one at 100yds., and on the retreat, one round at 150yds. and one at 250yds. As soon as the last (fifth) shot is fired, assemble on the right (or left), thus leaving the front uncovered, so that the second squad or company may deploy; during this time the marking can be done.

At the second or third day's practice those present will practice in the classes to which they respectively belong. In other respects the tour of duty will be identical with that prescribed for first general practice, including volley firing and firing as skirmishers.

In practice officers shall shoot first, then non-commissioned officers, then privates, on such targets as may be assigned to their companies.

The responsibility of officers on the range is great. Good officers should be proficient in the use of the rifle and able to apply armory instructions in the field. The men will be instructed as much as possible while waiting their turns to shoot, and especially in aiming and position drill, for which a competent instructor should be detailed in each company. They should be taught how to blacken their sights and how to fix the correct elevation and windage before going to the firing points.

Wooden targets for volley and (where needed) for skirmish firing should be erected without expense to the State on each range. A simple fence painted to represent the necessary lines or divisions, or a frame covered with paper or muslin painted, if backed by a mound sufficient for safety, will suffice. Iron targets, second class, may be used for skirmish drill, but must not be used for volley firing.

Front sight covers of such pattern as may be easily detached will be allowed in practice for the marksman's decoration, but they must not be permanently attached to the rifle.

BOSTON, June 8.—In the regular shoot of the Massachusetts Rifle Association to-day, Mr. Francis won the gold medal in the 20-shot rest match, and Mr. Howard won the gold champion medal. Following are the scores finished to-day:

20-shot Rest Match.

ST. LOUIS PISTOL SHOTS.—St. Louis, Mo., June 8.—The last of a series of three matches between the Cincinnati and St. Louis Pistol Clubs was shot last Tuesday night, and, as before, it resulted in an easy victory for the local club. Mr. O. Neuhaus of St. Louis made the highest score, and a member of the Cincinnati club ("Wick") had the honor of scoring the lowest. 10 men, 10 shots, 12½yds., standard American target, strictly off-hand, any .22cal. pistol, any number of sighting shots allowed, but shooter must announce score when ready to shoot at marked target. Scores made by the St. Louis Club:

L V D Perret	10	9	8	9	6	9	10	10	10	8—89
M Billmeyer	9	5	8	9	7	0	10	7	7	10—81
E Mohrstadt	10	10	8	9	8	10	8	9	9	8—89
F A Fodde	7	10	8	8	8	9	9	9	10	9—87
O Neuhaus	8	9	9	9	10	10	10	10	9	10—94

A E Bengel	9	6	8	7	9	5	0	8	8	9—69

ZIMMERMAN VS. HOFELE.—There was a magnificent showing of marksmanship at the Morrisania Schützen Park on the afternoon of June 11. It was at once a test of shooting and a measure of endurance. For three successive hours Gus Zimmerman of the Zettler Rifle Club and Fred W. Hofele, President of the G. A. R. Rifle Association, stood up and blazed away with hardly a moment's cessation at a 12in. bullseye 200yds. distant. The shooting was off-hand, and the conditions of the match were that the competitor making the greatest number of bullseyes in the three hours should be the winner. All shots not hitting the bullseye were to be counted as misses.

The match grew out of a rivalry between Zimmerman and Hofele, which sprung up at the German Hospital fair several months ago. The first prize, a grand piano, which was to go to the marksman making the greatest number of bullseyes, was won by Zimmerman, who made over 2,500, defeating Hofele by several hundred. Hofele, however, was not satisfied, and challenged Zimmerman to the match which finally came off yesterday. Zimmerman wanted to shoot for $500 or $1,000 a side, but $100 was the sum agreed upon.

Firing began at 2 o'clock, and kept up without a moment's cessation until 5. Zimmerman made only ten stops during the entire three hours, and those were of only a few seconds to perhaps a minute and a half in length. Hofele did not make a single pause. Great drops of perspiration stood upon his brow, but still the crack of his rifle kept sounding as though he were a part of the mechanism which sent forth the bullets. Ten minutes after the beginning a violent rain fell and almost obscured the targets for a time, but the marksmen fired right on.

Though Hofele's firing was more constant, his rival's was more rapid. Zimmerman fired 846 shots, an average of 282 per hour, or nearly 5 per minute. Hofele fired a total of 646, an average of about 215 an hour, or a little more than 3½ a minute. Zimmerman used three .38cal. Winchester rifles. Hofele used two .38cal. Ballard rifles. At the conclusion of the match Zimmerman looked remarkably fresh, and said he was good for three hours more. Hofele appeared to be badly used up. Sergt. T. J. Dolan, of the Twelfth Regiment, who acted as referee, announced the result:

	No. fired.	Bullseyes.	Misses.
Zimmerman	846	601	245
Hofele	646	325	321

WILMINGTON, Del., June 3.—As if to make amends for a long line of rainy Mondays, to-day proved a perfect one for rifle shooting at our range. The wind was not strong enough to cause any trouble, and what little there was made it from the field, both refreshing and bracing. The partially cloudy sky produced a mellow, leaden light which a rifleman always gladly welcomes. Being favored with every favorable condition, the riflemen at Healdmoor range commenced early for a good afternoon's sport. Following are the scores, standard American target, off-hand:

Record Practice, 200yds.

H Simpson	8	9	7	6	10	7	9	8	6	8—78
H D Missimer	6	2	4	4	7	8	6	8	8	7—60

CREEDMOOR.—New York, June 10.—The first of the series of marksmen's badge matches of the N. R. A. was shot at Creedmoor on Saturday, June 8. The conditions were very good as to weather, and the scores made were excellent. The attendance was very large. The 7th, 9th, 12th, 13th, 22d, 23d, 47th and 69th regts., 17th separate company and Governor's Staff were represented, and 140 succeeded in winning their badges. The following qualified as sharpshooters:

			200yds.	500yds.	Total.
*J W Cochran	N C S	7th Regt	22	24	46
*Alex Stein	Co C	7th Regt	24	22	46
*W J Underwood	H	7th Regt	21	24	45

*Winners of the cash prizes. Next matches June 15 and July 4.
—J. MANZ, Jr., Asst. Sec'y, N. R. A.

JERSEY CITY, June 5.—At the shoot held by the Marion Club of Jersey City this afternoon the following scores were made: L. P. Hanson 201, Willam Weber 199, T. Stiff 186, J. Speicher 178, H. Hoersch 165, J. Diehle 161, J. Rebham 150, G. C. Varick 169.

FOREST AND STREAM.

SUPPLEMENT No. 5——TRAP TOURNAMENTS.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

June 17, 18, 19.—Tournament of the Sportsmen's Association of the Northwest, Tacoma, W. T. A. W. McNaughton, Secretary.

June 17 and 18.—Tournament of the Massachusetts State Shooting Association, on Jamaica Plain Gun Club Grounds, Clarendon Hills, Mass.

June 18, 19, 20, 21.—Illinois State Sportsmen's Association's tournament, Grand Crossing, Ill.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

ILLINOIS STATE SHOOT.

CHICAGO, Ill., June 4.—The day dawned fair and the weather kindly continued favorable throughout this, the first day of the fifteenth annual convention and tournament of the Illinois State Sportsmen's Association. The assemblage at Watson's Park, Grand Crossing, was jubilant at the prospect of good weather. The shooters are not yet all accounted for, to-day being of interest only to those resident in this State. Illinois day proved fairly prosperous, the Diamond Badge shoot showing 19 clubs and 61 entries, as may be seen by reference below. The entry was not so large as was wished but was quite sufficient to make this one of the most important trap contests of the country. The birds were a fair lot only, and the scores ran high, phenomenally so in some instances. All appointments were perfect, and the shoot progressed with a regular swing which was gratifying. James Watson as referee was prompt and pushing, and allowed no time to be lost at the traps. Scores were recorded by the secretary and by a blackboard scorer also, and no crowding was permitted about the books. The scorer at Watson's Park sits in a little wire cage, and is thus afforded immunity. A set of blackbird traps at the right of the gate kept a set of side sweepstakes going, and the L. C. Smith cup match was shot from the shed and traps to the left of the gate. The live bird traps were of course at their old place in front of the grand stand, and here the main interest of the day centered. The scores:

Shoot No. 1, for the Board of Trade Diamond Badge, emblematic of the individual championship of the State, the winner of the badge this year to receive the proceeds of next year's tournament. Ten live birds. Entrance, $10. First prize, the Diamond Badge, value $500; second, cash and merchandise, $155; third, cash and merchandise, $82; fourth, cash and merchandise, $59:

The tie shooting between Mr. W. E. Phillips and Mr. C. E. Willard was the finest exhibition at the trap ever seen on these grounds, or probably anywhere in this country, and was especially notable for the rare courtesy and gentlemanly observances shown by each shooter to the other. In the thirties Mr. Willard grassed a bird which stood for some moments with its head up, a fair invitation for a challenge. Mr. Phillips declined to challenge the bird. A few moments later Mr. Phillips landed a right quarterer which stood even more strongly, but which was not challenged by Mr. Willard, although some of his more inconsiderate friends were anxious to have him do so. The excitement grew steadily. When Mr. Phillips missed his 24th tie bird it seemed he had lost, but the next instant a great shout went up as Mr. Willard's bird also got off over the fence. From the 24th bird out the contestants worked beautifully, and every shot was greeted with full applause, there being no longer any partisan feeling at all. Mr. Phillips is a mere smooth-faced boy, and belonging to the Naperville Club, had not been heard of here before. Mr. Willard is well known at the trap, and last year won the L. C. Smith cup. Before the shoot was over the friends of either were the friends of both. Both did excellent work. Mr. Willard being exceptionally good at long second shots, and Mr. Phillips extremely good with his first. The latter gentleman does not hold his gun so well down as Mr. Willard, but is a wonderfully clean killer. Mr. Willard shot a Smith and Mr. Phillips a Lefever gun, both 10-gauge. It was anybody's race until Mr. Phillips's 53d bird, a great red fellow, got away out of No. 5 trap to the right and quartered sharply, carrying off the charge. Mr. Willard killed his 53d bird with the first barrel, and so won the medal amid great hurrahing and congratulations, which would all have gone as freely to his plucky young opponent had the result favored him.

By agreement of the 10-tie men, each man drew out $25 before the tie-shooting began, conditional, of course, upon the next year's entry amounting to so much. In the 25s, the others having fallen out, Messrs. Willard and Phillips agreed to divide the remaining money upon similar conditions. While Mr. Willard wins the beautiful Board of Trade badge, therefore, Mr. Phillips also will have substantial reward for his sturdy and gentlemanly contest. It was nearly dark at the close of the first shoot before ties on 9 were begun. Meantime there had been shot all but the ties of the great 20 inanimates race.

Shoot No. 2, for the L. C. Smith cup, emblematic of the individual State championship at inanimate targets, the winner of the cup this year to receive 60 per cent., and the club of which he is a member 40 per cent. of the proceeds of the shoot at next year's tournament, the winner to execute bonds in the sum of $500 to guarantee the production of the cup next year. Twenty Keystone targets per man; entrance $5. First prize, the L. C. Smith cup, value $500; second, cash and merchandise, $98; third, cash and merchandise, $75; fourth, cash and merchandise, $40:

H. Babcock, of Carmen, Ill., won the L. C. Smith cup with the only straight score made. Mr. Babcock wore blue overalls, but he got there just the same. G. L. Deiter, of the Gun Club, Chicago, won second on 19. Ties deferred till Wednesday.

THE BUSINESS MEETING.

The regular business meeting of the Association was held this evening at the Palmer House parlors, the members assembling at about 9 o'clock. Delegates or representatives were present from the following clubs: Mak-saw-ba, Cumberland, Foresters, Grand Calumet Heights, Lake George Sportmen's Association, Audubon, the Gun Club, Chicago Shooting and Prairie clubs, all of Chicago; the American Gun Club, La Salle Rod and Gun Club, Geneseo Sporting Club, Freeport Shooting Club, Prairie Shooting Club of Evanston, Lake View Gun Club and Evanston Gun Club.

After roll call of delegates, which transpired amid some confusion as to who were really delegates and why some delegates were not on hand, Mr. Wolfred N. Law offered the president's address. Mr. Law said:

"Gentlemen of the Association: There is little I care to say or can say, except to glance briefly at the past and give you good hope for the future. Any look at the past meets, first, that most lamentable occurrence, the death by gunshot accident of our beloved friend and comrade, Harry F. Orvis, first vice-president of this Association, a man noble and beautiful in every way, and whom we mourn as a fit model of what a true sportsman may and should be. The committee who sent to the family of Mr. Orvis the beautiful floral emblem and the engrossed resolutions of respect, have thought that you in this convention would so choose to ratify their action as to make it the offering of this central body, and this will be duly brought before you, I trust.

"I wish to explain the appointment by the president of only Chicago men upon the executive committee. I did this for a reason which the committee themselves could well explain to-night. It was necessary to have some one right on hand to do the work of preparation and of conduct. What that work has been, we cannot overestimate, we owe our thanks to the gentlemen who have so cheerfully and ably performed it.

"We have struggled with a whole menagerie of ineffective game laws. We sent a committee to the Legislature, and we fortunately met there a committee from the Fox River Fish and Game Association. These gentlemen aided us largely, and I am glad to say we secured important improvements in the game laws. We have cut off two weeks of spring shooting, and have the prairie chicken season now opening Sept. 1, materially better than August. The bill in full will soon be published in the sporting journals, and you may there see fully for yourselves. A very marked good feature is that we have secured police powers for the game wardens. This State is the most backward and niggardly in the Union in the matter of enforcing the game laws. Nebraska appropriates $10,000 for that purpose. We do next to nothing.

"In the absence of our Fish Commissioner, Mr. Bartlett, I shall ask Mr. Cole, who represents him and his association here to-night for that purpose, to lay before you the plan we discussed in united committee at Springfield. We are going to ally the lovers of the rod with the lovers of the gun, and we are going to make it politically hot in Illinois for any member who will try, as our Chicago representative has quietly tried this session, and will try again next session, to sneak a bill through prohibiting trap-shooting in this State. This worthy legislator thought such a bill would be popular. We will show him what popularity means. This bill had passed the Senate, and was only postponed in the House because it was learned we sportsmen had 5,000 men in Chicago who controlled a little 'popularity' of their own. We are going to add to these numbers all over the State. If it means politics we are going into politics, at least to the extent of going to the polls against these idiotic legislators who belittle the harmless and manly sports of the field."

Applause met Mr. Low's remarks. Mr. Cole was called for. Mr. Cole said:

"In behalf of the Fox River Association, and of the fishing men of this State, I wish to say that the plan proposed is this: We would issue a call to the different and numerous fishing clubs of the State for a State convention similar to that of this honorable body. We would encourage the founding of clubs in every legislative district of this State. We would appoint a committee at our State convention to confer with a committee from this body, and in joint committee we would discuss the measures needful, and the best way of gaining the political respect so numerous a following as ours jointly should command. We should defer to you in game matters, but would back you and would ask you to do so with us."

It was moved by Col. C. E. Felton that a committee be thus appointed to confer with the Fox River Association committee. Discussion was asked. Mr. Harbaugh, of Geneseo, said: "Our little club has kept the game laws enforced. We would indorse this joint action heartily." Mr. Chas. Kern, of Evanston, said: "This is a right move. We and the fish men have been too much apart. Let us pull together." Motion carried.

Minutes of last meeting were read and approved. Executive committee submitted that they had no report to make, but simply pointed to their work done. The secretary's report was read and approved, and his resumé of 1889 work showed a small balance on hand at date in the treasury. The resolutions of regret upon the death of Mr. Harry F. Orvis were read, and the action of the committee in this regard made the action of the Association. A letter of regret for absence was read from Mr. H. H. Fahnstock and was duly spread in minutes.

Lively discussion followed the submission by Mr. R. B. Organ of a resulution to change date of the annual tournament to February of each year instead of June. Supporting the motion when seconded, Mr. Organ said:

"I think we ought to consider our country members. They can not come here in corn-planting time, but they can come in February. Besides, we will all be hungry for a shoot in that month. More than that, we can get good birds then. It is a shame to kill birds when they are nesting, as they are now. Moreover, our meeting would then fall when the Legislature is in session, and we could have more influence then in stopping spring shooting and making other reforms."

Mr. Geo. T. Farmer opposed the motion. He would shoot in the spring so long as he could carry a gun, for that matter. But he thought the February date a bad one at any rate.

Mr. Organ offered that the Davenport February tournament always filled well.

Col. Felton thought Mr. Organ's remarks just. He thought winter the proper season for trap-shooting.

Mr. Reed of Evanston moved to amend by substituting November for February.

Mr. Keon thought the wild pigeons might come back, and then June would be best. Mr. Gillespie thought that the trap-shoot should be a secondary and not the primary object of the Association. Mr. A. Price thought either February or November rather than June. Mr. Cunningham was in favor of February. There would be at least twenty more country entries in February.

Mr. Colcord here rose to show that the Constitution had yet the date for May or June, and would have to be amended by a two-third vote. Mr. Reed's November amendment was called for. The chair could not decide. The roll was called for, and the chair ruled that delegates should vote each for himself and not by majority of delegation. Confusion resulted. It was moved to amend the Constitution, following the sense of Mr. Organ's resolution.

THE CHAIR: "This motion can only be in order when the original motion is withdrawn."

The original motion and the November amendment were withdrawn, and the motion to amend Constitution being then in order, Mr. Reed moved to amend the same by changing February to November. The chair advised that the matter be left largely to the country members, who should be most consulted herein. Several outside clubs declared themselves for February. On roll call Mr. Reed's November amendment was lost, 29 to 16. The motion to amend Constitution to February was carried, 29 to 17.

THE CHAIR: There being no two-thirds vote of the Association, the Constitution is not amended. The date therefore remains as first provided, for May or June.

On motion of Mr. Colcord, a committee was appointed to revise Constitution and By-laws.

On motion of Mr. Sheehan it was carried that no member should be allowed to participate in any tournament after having been convicted of an offense against the game laws.

On motion of Mr. Organ, the place of the next meet was set for Chicago, and it was voted carried that the tournament for 1890 should be given under the auspices of the Gun Club of Chicago.

Election of officers being now in due order, Mr. John Gillespie, in a neat speech, put in nomination Mr. Fred C. Donald for the presidency. Mr. Cleaver placed in nomination the former able incumbent, Mr. Wolfred N. Low. Mr. Low declined. One ballot was cast by the secretary for Mr. Donald.

One ballot was cast for Mr. Thos. P. Laflin, of Geneseo, for First Vice-President. One ballot was cast for Dr. J. M. Hutchinson for Second Vice-President. One ballot was cast for the former incumbent, Mr. W. L. Shepard, for Secretary.

Thanks were heartily voted to the retiring officers. Mr. Low has filled his part nobly and unselfishly. Thanks were voted also to the donors of cash and merchandise prizes, and to the Palmer House for courtesies. The meeting then adjourned.

Mr. F. C. Donald, the gentleman who will fill the responsible position of president of the State Association, is a young man of fine appearance and established record, added to the esteem in which he is held by his modest and manly speech in acceptance. Mr. Donald is general passenger agent of the C. & A. Railway. He is the president also of the Gun Club of Chicago. Mr. Laflin and Dr. Hutchinson are two other well-known figures of the Association, and Mr. Shepard's past term in office has familiarized him with the secretary's duties.

Wednesday, Second Day, June 5.

The day was bright throughout, though a trifle chilly. The club team shoot was the event of the day, although much interest centered in the ties for second, third and fourth in the diamond badge shoot of yesterday. Following are the results:

Ties on 9—A. W. Reeves, W. P. Mussey, Henry Kleinman, W. G. Payson and G. L. Deiter divided the $60 cash in second. Continuing the shoot-off all dropped out in a long run except Payson and Kleinman. Payson bought out Kleinman's interest in the hammerless Parker gun, and finally shot out Kleinman for the 100 cigars. Kleinman killed 33 out of 34 in the tie, and Payson 34 straight, making in all 43 out of 44 birds shot at. Ties on 2—W. L. Shepherd and F. Thompson divided third, $82; Shepherd took the boat, Thompson the hat and coat. Ties on 7—J. P. Card and L. C. Willard divided fourth, cash and merchandise, Mr. Willard choosing the most valuable prize, the subscription to FOREST AND STREAM, best sporting paper on earth.

The results of the ties for third and fourth in the L. C. Smith cup race were announced: Ties on 18—L. C. Willard, W. E. Phillips, Frank Mosher and P. E. Bradley were in 18. Willard and Bradley divided cash, $40. Bradley won the coat in the shoot-off. In the shoot-off for remaining prize, Mosher won the shells and the paper. Ties on 17—Henry Kleinman broke 6 straight and found that good enough to win fourth alone.

Regular shooting now began. Shoot No. 3, the club team championship, open to teams of 4 from any club a member of the Association; 10 live birds per man; entrance, price of birds only. First prize, diamond ring, donated by the Association, value $100; four diamond rings, one to each member of the winning team, donated by the Chicago Shooting Club, value $60—$160; second, cash and tent, $70; third, cash and 200 Peters cartridges, $35; fourth, cash and 200 Peters cartridges, $25:

The shoot-off was at 5 birds to each man. Lake George Sportsmen's Association and the Chicago Shooting Club, ties on 37 went to the score at once. Mr. Booth, of the former club, dropped 2 birds: The Shooting Club got their 20 straight by hard knocks and won first.

It being now nearly dark, the FOREST AND STREAM reporter returned to the city. It was said that ties on 36, Austin, South Chicago and Blue Island clubs would divide the cash and appoint one man from each club to decide the tie for the remaining prizes. This will be announced Thursday morning. Lake County Shooting Club won third on 35. Cumberland and La Salle Clubs, ties on 34, were nearly agreed to divide.

Meantime the blackbird shed had not been idle. The open tournament had begun.

Shoot No. 4, at 15 Keystone targets, to be shot under the Loyd system, entrance $3, six moneys div. into three pots, each 50, 30 and 20 per cent:

This shoot being under the Loyd system, there were 6 pots and 4 moneys in each pot. An equal pot was won by ties on 15, 14, 13, 12, 11 and 10, and in each pot the moneys were as below: First, $23.40; second, 11.70; third, $7; fourth, $3.65. C. E. Willard was alone with 15 straight and won first, remaining ties divided. The live bird traps being occupied by the club team shoot, the programme could not be followed by shooting No. 5. The next therefore, as per programme, was shoot No. 6, 18 Keystone targets, under the Tucker system, ties decided on last 6 birds, entrance $4, 5 moneys, 30, 25, 20, 15 and 10 per cent.:

S E Young..0110110111100100111—11 Strawn.....1011101101111111011—14

Budd, Babcock and Loyd divided first, Purvis, Stice, White and Brewer divided second, Hart and T. E. Willard divided third, Strawn shot out and won fourth.

Three or four impromptu sweepstakes were also shot at the blackbird traps, Budd, Stice, Ruble, Tucker and others of the cracks figuring largely in them; but as the scorer did not see fit to leave any record of the results, it will not be necessary to report them. As for the scoring at this shed, it was for the most part about as loose and bad as it well could have been. The reporters for the dailies were almost unable to get full results anywhere, and helpless as they usually are at such a meet, would have fared badly except for representatives of the sporting press, who were able to guess more intelligently. Press accommodations were poor in the extreme throughout the shoot.

Friday, Fourth Day, June 7.

It was raining in the morning, and the day promised to be a wet one, but by 10 o'clock the clouds had partly broken, and noon saw quite a respectable number of shooters on the grounds. It has been a marked feature of this shoot that, while the numbers might have been greater, those that were present stayed wonderfully well, the entries even on such a day as to-day filling very favorably as compared with those of the first day of the open shoot. Phillips, the Naperville boy who ran the great race for the badge with Charlie Willard, is employed in the city and could not attend more than one day. Babcock, the other young shooter—he is only a boy—who won the L. C. Smith cup, was also absent this afternoon. The oldtimers were on hand, and as usual the chief interest for them centered in the live bird shoots, the first of which was a little sweep. The score:

Sweep, 5 live birds, entrance $5, two moneys, 60 and 40 per cent:

Kleinz.....22101—4 White.....22111—5
Budd.....11210—4 Brewer.....10111—4
Stice.....11112—5 Bangs.....12011—4
Irwin.....21221—5 Thompson.....12121—5
Watson.....12111—5 H Kleinman.....21111—5

Stice and Irwin divided first, Budd and Kleinz shot 7 in ties and divided second, Brewer and Bangs falling out.

The next shoot, No. 7 of the programme, hung up a good deal of money and filled well. The score:

Shoot No. 7, 20 live birds, entrance $20, four moneys, 40, 30, 20 and 10 per cent.:

F Kleinz.....0112111112112121101—17

W L Shepard.....2112202020102210121—15
W P Mussey.....2211122202111112110—18
C E Willard.....1121112021221111101—18

The ties were not divided by the Tucker system, as billed in the programme. Laflin, Wadsworth, Budd and Eich divided first, $138; Stice, Powers and H. Kleinman divided second, $103.50. Ties on 18, 3 birds tickets: Irwin 12, A. Kleinman 3, White 15, Payson 15, Loyd 12, Mussey 1, Willard 0. White and Payson divided third, $69; Kleinz, Calhoun, Brewer and E. I. Reeves divided fourth, $34.50. It is a singular fact that every man in this shoot who was a winner in any of the first three ties received the same amount, $34.50. Thus the four men who killed 20 straight divided $138, one-fourth of which is $34.50; the three 19 men divided $103.40, one third of which is $34.50, and the two 18 men divided $69, one-half of which is $34.50. This would not often happen, and is a commentary on the comparative merits of first rate and second and third rate shooting.

Mr. Irwin, who bid very fair to stay in the 18 ties as long as anybody, lost his thirteenth bird in a singular manner. The bird did not take wing, and snapping at it, he overshot. He pulled on it with second barrel, but the gun missed fire. The bird still stood at the trap, apparently about to fly. "Try the shell again," called out somebody. "Kill the bird on the ground," said the referee, Mr. Watson. Without stopping to think very much, Mr. Irwin cut away carelessly at the bird and knocked it over, but did not kill it. It rose and fell dead out of bounds, and the referee declared it a "lost bird" and did not allow another bird. He decided that the bird must have been killed under the circumstances before a "no bird" could be decided, and since Mr. Irwin accepted the chances he must abide by them. Mr. Irwin was thus deprived of the privilege usually following upon a miss-fire. It was obvious that he expected to shoot at another bird, and the puzzled look did not leave his face for about four hours. It was an incident no one remembered to have seen before at the trap, and is still puzzling some of the shooters.

Special Prizes.—The Lefever Arms Company offered as a prize for the best combined scores made in shoots Nos. 1, 5 and 7, a Lefever hammerless gun with all improvements, value $100, made especially to order. For the same contest and under the same conditions the *Chicago Herald* offered a valuable medal emblematic of the championship of the State of Illinois. The gun and medal won at the tournament to be subject to future competition as follows: On the request of five persons, members of the State Sportsmen's Association, the president shall call shoots for these trophies not oftener than once in three months, and shall give 30 days' notice of the date of the shoot; the contests shall be held at Chicago, and shall consist of 20 live birds to each man; the entrance fee shall be $20, including birds; from the purse $50 shall be awarded to the previous winner of the trophies; the remainder shall be divided into four money, on the basis of 40, 30, 20 and 10 per cent. Ties for the trophies shall be decided at 5 birds. The gun and medal shall become the personal property of any contestant winning them three times. Enough had now been done to show that Mr. Thos. Laflin, of Geneseo, the first vice-president of the Association for the ensuing year, had won the above special prizes. His score was 40 straight. Mr. R. B. Wadsworth was chasing him with 39. Considering the scores in this last shoot, and the long ties in this and former shoots, it is safe to say that the record of this tournament is far above the average of other late shooters elsewhere.

In the mean time not a great deal had been doing at the inanimates, barring a few sweeps in which the entry rarely exceeded 10 shooters. It was late in the evening and rain was again falling when the only programme shoot at inanimates was run off. The score:

Shoot No. 14, 9 Keystones, entrance $2:

Stice.....111111111—10 Budd.....111111111—10
Willard .....1111111011— 9 Powers.....111111111—10
Eich.....1111011111— 9 Cahoon.....1101110101— 7
Strawn.....111111111—10

Ties on 10, Stice 10, Strawn 10, Budd 5, Powers 10. Stice, Strawn and Powers div. first; Willard and Eich div. second and Cahoon won third. There wasn't anything very big in that shoot. Everybody went home. Rain began to fall steadily before the trains had reached the city.

Thursday, Third Day, June 6.

The members of the Shooting Club of Chicago showed up radiant in the diamond rings wrested from the Lake George men late on the evening before in the tie shoot on 37. Ties on 36, Austin, South Chicago and Blue Island clubs divided the cash, as announced last night. Austin appointed Bangs, South Chicago appointed Reeves and Blue Island chose Airey as champions for their respective club teams, to decide which team should own the tent. Bangs won for Austin. Lake County Club won third on 35, as announced; Cumberland and La Salle divided fourth without shoot-off.

The weather throughout the day was clear and fine, growing warmer. Interest was unabated. Several new faces were seen, among others Mr. J. G. Smith of Algona, president of the last Iowa State meet.

Secretary Shepard was much incensed at a little attack which an irate daily reporter had placed in a morning paper, to the effect that Mr. Shepard refused the scores to the press. The exact truth is that Mr. Shepard offered to the daily reporters the same privileges extended to the sporting press; namely, that of looking over Mr. Shepard's shoulder at the scoring desk when there happened to be room on the bench, or when he did not want all the desk himself in the business of settling ties. The sheets were not divided, and were not accessible otherwise, but there was a short blackboard score on live birds which a reporter could use if he had time to spend all day at it, or if he had some one else to watch the scores at the other sheds. The pampered daily press, not being used to such hustling, grew angry at the enforced delay, and hence the tears of all concerned.

Shoot No. 5, 10 live birds, under the Keystone system of dividing ties, entrance $10, four moneys, 40, 30, 20 and 10 per cent.:

Powers	111	112 112—9	Kleinman	212	111 111—9
Stice	111	111 222—9			

Budd, Powers, Stice, Kleinz, Farmer and Abe Kleinman div. remainder of first, $117. In the ties on 9, A. W. Reeves and J. G. Smith drew out their entrance fees, G. L. Deiter, W. W. Foss, M. J. Eich and C. E. Willard shot out and div. second, $90. In the ties on 8 there were eight men, each of these drew out $5 before the shoot off began; then in the second tie of the shoot off Mussey, Dingee, Henry Kleinman and Shepard drew out $5 more; Kleinman, Dingee and Mussey then shot out and div. remainder, $18.50. The above shoot began near noon and lasted all day. Meantime shooting went on at inanimates.

Shoot No. 10, at 9 singles and 3 pairs of Keystone targets, entrance $8, four moneys, 40, 30, 20 and 10 per cent:

Pinney .... 111110111 10 10 00—10 Stice.....1111110111 11 11 11—14
Budd.....1111111111 01 10 11—13 Forbes.....1111111101 10 10 11—12
Franklin...1111011111 11 11 10—13 Magruder..1111111111 01 10 10—12

Wichan.....1101001111— 7 Stice.....0110111111— 8
Brewer.....1111111110— 9 Babcock.....1101111111— 9

Sprague and Middleton div. first, $10.50, Franklin shot out and won second, $7.92, Hill shot out and won third, $5.28, Willard and Taylor div. fourth, $2.64.

Two or three other minor sweeps were shot, the programme not being followed very closely. As some shooters were also in the live-bird match, the usual confusion existed when it came to shooting out the ties and dividing the money. It seems strange that a more business-like system cannot be brought to bear upon these matters. It would make things run far more smoothly. Everybody was good-natured, however, and the day closed pleasantly.

Saturday, Fifth Day, June 8.

Rain fell all the morning. Nothing was done at the inanimates. There was only one event at live birds. Shoot No. 9—Two-men team shoot, open to any two shooters to constitute a team, at 10 live birds per man, entrance $15 per team, four moneys, 40, 30, 20 and 10 per cent.:

Jack Brewer...2111112221—10
Frank Kleinz..2112011111— 9—19

Ties on 20 and ties on 19 div. first and second. Ties on 18—H. Kleinman 6, A. Kleinman 6, T. Laflin 4, Irwin 3, Calhoun 6, Bangs 6. The Kleinmans, Calhoun and Bangs div. third, ties on 17 div. fourth.

Special Prizes.—A. G. Spalding & Bros. donated a 44-caliber Colt's magazine rifle, value $38, for the best average in shoots Nos. 1, 5, 7 and 9. As Mr. Laflin had dropped a bird in shoot No. 9, he no longer preserved the lead which had won for him the State championship trophies, but was now tied by Mr. R. B. Wadsworth. Shooting off the tie at 5 birds, Mr. Laflin missed his second and third birds, and Mr. Wadsworth killed 4 straight, thus winning the rifle. M. W. Dilley offered to the Chicago team making the highest score in the club team championship, 100 fine cigars, valued at $20. This prize was won by the Shooting Club of Chicago, when they shot out Lake George Club. Haskell Bros. donated an elegant shooting trunk, to be awarded to the shooter who shall make the second best record in the tie birds for the diamond badge. This prize was won by Mr. W. E. Phillips, the plucky Naperville boy who came so near winning the Board of Trade diamond badge.

The tournament had now reached its wet but happy termination. It was the sentiment of all that the meet had been a success, and those who parted to-night could not help feeling that the cause of sportsmanship had been advanced, and the ties of good comradery more closely knit. Next year's tournament, under the auspices of the strong and able club which will have it in charge, will be a yet larger and more widely known meet than that of this year, although nothing whatever could be said by the most captious man to the disparagement of the tournament just now closed. A carload of shooters will leave here next Monday night for the great American Association shoot at Cincinnati.

E. HOUGH.

BUDD—KLEINZ.—The match between C. W. Budd, of Des Moines, Ia., and J. Frank Kleinz, of Philadelphia, for the championship and $100 a side, was shot at the close of the State tournament, at 100 live birds, Mr. Kleinz being the challenger and Mr. Budd the holder of the cup. The exhibition was a fine one, and it is doubtful if a closer and prettier shoot was ever seen under the circumstances. In spite of the wet and soggy weather, the birds were a screaming lot, and as by the terms of the match the guns were 12-gauges under 8lbs., the resultant score was phenomenal. It is doubtless true that Mr. Budd has made the best score ever made with the light gun. Mr. H. A. Penrose, of the Keystone Company, was chosen referee. John Watson, of course, furnished the birds. There was no imputation of any unfairness, and the match was one of perfect gentlemanliness throughout. At the beginning of the match Mr. Kleinz's check showed discoloration from previous pounding of his gun; at the sixteenth bird his cheek was open and bleeding, and at the close of the match he was covered with blood. He was plucky throughout, however, and never flinched on a bird, so far as any one could see. Two of his birds fell dead just out of bounds. Mr. Kleinz had two miss-fires and two "no birds," the 8th and 99th. Frequent bursts of applause greeted both shooters. They did some of the best second barrel work ever seen here. Mr. Budd is a trifle quicker with his second, and he comes pretty near being a double cross-bolted terror all around at the trap. The score:

J Frank Kleinz.....2111021011111212111121—23
1120121210111122101231111121—26
1112111120202112112112111—24
1121122121212112122021—24—94
C W Budd.....2121122222211112011112111—24
2121221211112112212112—25
1212121111212111111212111—25
1101112121111111112111212—24—98

Budd retained cup and championship. He shot an L. C. Smith under 8lbs., and his load for both barrels was 3¼drs. American wood (trap) powder, and 1⅛oz. chilled Chicago 7s. Mr. Kleinz shot a Greener 8lb. 14oz., and used Schultze powder in both barrels, 3¼drs. in the right and 4drs. in the left, with 7s in the right barrel and 6s. in the left.—E. HOUGH.

WILMINGTON, Del., June 3.—A practice shoot at clay-pigeons was held this afternoon by the Wawaset Gun Club at the grounds of the club. The sport was witnessed by a large crowd of spectators:

NEW YORK STATE SHOOT.

THE thirty-first annual tournament of the New York State Association for the Protection of Fish and Game was given last week on the 3d, 4th, 5th, 6th and 7th, at Albany, N. Y., under the auspices of the Elm Grove Gun Club. The members of the various gun clubs throughout the State began arriving on Monday to take part in the business meeting which was held at the Delavan House on Monday evening, and a full report of which was given in our last issue. It will not be amiss, however, to repeat the fact that 24 new clubs applied for membership and were unanimously elected. This uncommonly large accession to the ranks shows plainly the reviving interest in the Association, and is an evidence of the boom in trap-shooting all over the country. At this meeting it was also decided to hold the 1890 convention at Lyons, N. Y., under the auspices of the Spencer Gun Club, and Mr. W. S. Gavitt of that club was elected president of the Association.

There was some talk about adopting a system of classification which would be fair to all and give the amateurs a more equal chance, and a committee was appointed to confer together and suggest a plan. The meeting then adjourned till Tuesday evening at 8 o'clock to hear the report of this committee, and also one on financial matters. The adjourned meeting was not held until Wednesday evening at the Stanwix Hall. The classification committee reported that they had been unable to hold a regular meeting or to agree on any plan, and requested to be discharged. This was done and another committee appointed, consisting of Messrs. Hoadley, Whitney and Gavitt. The committee on finance presented a report stating that in 1881 the Association voted a salary of $300 a year to the recording secretary, Mr. John B. Sage, which had not been regularly paid, and they now owed him about $1,250. Owing to the depleted condition of the treasury Mr. Sage had now kindly offered to donate this amount to the Association. On motion, this was accepted with thanks, which were also extended to the committee for their services.

On motion, adjourned.

Tuesday, June 4.

The tournament proper did not commence until Tuesday morning, and when at 9 o'clock the shooters commenced their journey toward the Fair Grounds, on the Troy road, which is one of the shooting grounds of the Elm Grove Gun Club, everything looked promising for a good day's sport; but during the morning lowering clouds began gathering and finally burst in several hard showers; shooters, as a rule, however, do not mind a little rain, and a half hour's delay during the hardest shower was the only result. A large number were in attendance, and the traps for events open to all, run under the Keystone system, were soon in brisk operation under the guidance of "Tee Kay," who hustled the shooters around in a lively manner; he hustled rather too much for his own comfort on the second day, accidentally stepping into a hole and severely twisting his ankle, and during the balance of the shoot limped around with the aid of a crutch. This did not affect his unflagging spirits, however, nor his shooting form, as the scores show. He appeared on the grounds with breast covered with the badges of the various clubs which gained for him the sobriquet of "The Badger."

While the open events were being shot at five traps, the Association purses were run off at two other sets of three traps, and still another set of three traps was used for events open to all. With all these traps and the number of shooters present, many more birds would have been thrown if the home club had had a few more men to run the traps. There were many visitors from other States, notably New Jersey, Connecticut, Massachusetts, Ohio, etc., who, not being eligible to shoot in the State events, could only use the other traps, and some of them did not get shooting enough to satisfy them, and were compelled to carry home ammunition they expected to use. However, it is no easy matter to run a four days' tournament, with so large an attendance, and keep all shooting all the time.

A great many more events were on the programme than were shot, and of some that were run off it was impossible to get the scores. Enough are given, however, to show the size of the attendance and the quality of the shooting done. In all the State events except that for the Dean Richmond trophy, merchandise prizes were given in addition to the money, and where two or more tied the money was usually divided and then the merchandise shot for. Among the list of donations were pictures, cigars, subscriptions to the sportsmen's journals, rubber coats, an accordeon, cartridges, fishing rods, reels, trousers, shot, decoy ducks, rifles, guns, shoes, powder, candy, and even a ton of coal, so it will be seen the variety was great. Two State events and seven open sweeps were shot as follows:

Contest No. 1, $340 in prizes, entrance $4, class shooting, 9 kingbirds, ties shot off on 6 single kingbirds. Ninety per cent. class: First $45, second $25, third $18, fourth $20, total $108. Eighty per cent. class: First $40, second $25, third $25, fourth $15, fifth $13.50, total $118.50. Seventy per cent. class: First $35, second $25, third $23.50, fourth $10, fifth $10, sixth $10, total $113.50.

Ties in the 90 class were decided as follows: First, H. McMurchy, F. D. Kelsey and J. Koch; second, divided by H. B. Whitney, H. Gardner and J. E. Brigden; third, divided by those breaking 10; fourth won by M. C. Smith alone. The 80 class moneys were won, first by Cunningham after a shoot-off; second by Peacock, Beckwith, Lord and Livingston; third shot off and divided by Gavitt and Gove; fourth shot off and won by Eames; fifth won by E. Andrews without a tie; sixth prize not awarded, no score being made to win it. Ties in the 70 class, first shot off and won by Geo. A. Mosher after breaking 18 straight; second money contained $25, which was divided $3 to each of the seven in the 11 hole, leaving $4, which was shot for and divided by Hunter and Keel; third money was divided, but on a shoot-off for the gun Schemerhorn won after breaking 15 out of 18; fourth money was divided and then shot off for the rifle; it was a hot tie, requiring 30 birds to decide, and was finally won by Howell; fifth divided by J. J. Carr, A. Rickman, Fred Strange, J. G. Stacey and J. H. Hillabrant; sixth divided by N. W. Irving and T. H. Greer; seventh won by Stryker alone.

Contest No. 1, 9 kingbirds, 5 traps, $1, four moneys:

Carr	101011111—7	Hancox	001100001—3

First and second div., third shot-off and div. by Paul and Baker, Stacey took fourth after a shoot-off.

Thursday, June 6.

The attendance still held good and quite a number of events were run off. After dinner the wind blew very strong right across the traps and made the flight of the birds somewhat erratic. During the day an extra sweep was shot under the new Tucker system, as a result of some talk between the classification committee. It worked quite satisfactorily to most of the contestants, even to some who did not win. It certainly forces men to shoot and in the long run the luck of winning would be as often in favor of one man as against him.

Only one State event was shot to-day, but that was at 15 birds with 58 entries and 24 prizes to the various classes, of cash and merchandise, so that it took some time to decide.

Contest No. 5, $681 in prizes, entrance $4, class shooting, 15 kingbirds, ties shot off on 6 birds, 90 per cent. class, first $100, second $50, third $20, fourth $17.50, fifth $15, total $182.50; 80 per cent class, first $100, second $40, third $15, fourth $15, fifth $10; sixth $11.50, seventh $11.50, eighth $5, total $218; 70 per cent. class, first $100, second $40, third $30, fourth $25, fifth $17, sixth $13, seventh $16, eighth $14, ninth $12.50, tenth $8, eleventh $5, total $280.50.

Albee	011111111011111—13		

First and fourth div., second shot off and won by Peacock, third shot off and div. by Livingston, Miller, Schutt and McCormack.

Extra event at 9 kingbirds, under Tucker system, in three divisions of three birds each, the division which shall decide ties to be determined by drawning a numbered wad from a hat. Entrance $1, four moneys. This event was the result of some talk between the members of the Committee on Classification, and was tried to see how the system would work. It has been fully explained in our columns, but for the benefit of those who are unacquainted with its provisions we repeat them. It was devised by Mr. S. A. Tucker as a means of making men shoot honestly, and to prevent the dropping of birds and pooling against the poorer shots. It provides that all matches shall be shot in specified divisions containing an equal number of birds in each, all the birds in all the divisions having the value of tie birds. The total score of course classifies the shooters, but the division of the money is to depend on a certain one of the tie divisions, which is to be determined by the drawing of numbered wads, of which as many as there are tie divisions are placed in a hat by the referee. The total scores being equal, the man or men who have killed the greatest number of birds in the tie division so designated are the winners. In this event the wads determined that division number two should decide the second money, number three the third money and number one the fourth money. Straight scores of course took first money:

Paddock	111 011 111—8	Richards	111 101 010—6
Lefever	101 111 011—7	Elliott	111 111 111—9
Miller	110 111 111—8	Hadley	011 101 111—7
Gavitt	111 011 100—6	Brigden	111 011 111—8
Stockwell	010 001 000—2	Gates	101 010 010—4
Mathias	110 101 111—7	Badger Tee Kay	111 110 111—8
Lindsley	111 111 010—7	Besser	101 100 010—4
Beach	100 010 000—2	Albee	101 101 011—6
Collins	111 111 110—8	Hunter	110 111 111—8
Heikes	111 110 011—7	Harris	111 111 111—9
Carr	111 110 111—8	Sigler	111 110 111—8
Kipp	100 110 111—6	Felton	111 010 111—7
Strange	101 101 111—7	Candee	110 010 110—5
Paul	101 111 111—8	Hookway	101 001 011—5
Livingston	001 110 111—6	Banta	101 110 111—7
Hillabrant	111 111 101—8	C Beckwith	111 100 111—7
Schutt	110 111 111—9	W H Beckwith	101 111 111—8
Luther	101 110 111—7	Doan	101 111 111—8

Miller, Collins, Paul, Hillabrant, Hunter, W. H. Beckwith and Doan div. second, Mathias, Strange, Luther, Hadley, Banta and C. Beckwith div. third, and Gavitt and Richards fourth because they missed no birds in the divisions which decided their respective ties.

Friday, June 7.

This was the day in which most interest was centered, as the two team contests for the championship trophy and the Dean Richmond cup, the latter at 20 single live birds, were to be run off. The first event for the championship was at 20 single kingbirds, four men to a team, and was hotly contested, each good score receiving rounds of applause, and when the trophy finally went to the Onondaga Sportsmen's Club of Syracuse, the satisfaction was quite general after the first sting of defeat had worn off. As the time for the live bird race drew near, spectators, who had not been present in large numbers at any time, now began to arrive until when the event commenced there were over three hundred present, thus proving that no matter what may be urged against live bird shooting, it is what the average man likes to see. The shooting was done from three plunge traps under N. Y. State Association rules, one barrel, 21yds. rise, gun below the elbow till bird is on the wing. There were but five teams entered for this contest, and all after shooting was stopped while it progressed. The birds were only an average lot, but some strong flyers were among them, and some very long kills were made, eliciting rounds of applause. The Onondaga Sportsmen's Club of Syracuse had held the trophy since last year and were looked upon as probable winners here, but as events proved they were not in the hunt. Considerable money changed hands on the result, and the winners, the Queen City Gun Club of Buffalo, were very jubilant

over their victory. It was a narrow one, however, as the Elm City Gun Club pressed them very hard and only fell one bird below the winning score.

Contest No. 6, $347 in prizes, class shooting, race for team championship on inanimate targets for New York State, four members to a team, $10 per team, $2.50 per man; each club can enter one or more teams. 20 singles per man, 80 per team, ties shot off on 12 single kingbirds per team. First, championship trophy, bronze French mantel clock, value $80, second $80, third $60, fourth $50, fifth $29, sixth $26, seventh 23; total $347:

W. H. Beckwith	3	1	2	3	2	1	12

This event closed the day's work and the tournament of 1889 was over; guns were hurriedly packed up and preparations made for an early departure, to meet again at Lyons in 1890.

FRANK MASON.

EVANSVILLE, Ind., June 7.—The Leisure Club match dwindled down into a blood-thirsty struggle between Mr. Henry Halwes, who held the club medal, and Mr. F. M. Gilbert. Mr. Halwes was handicapped by distance, having won the medal at the last shoot. The high wind made the birds hard to hit, and the left quarterer had a way of "ducking" when the wind caught it that made it very uncertain to "find" with a gun. The match was regulation, 15 singles and 5 pair doubles:

Halwes	111111111110111	10 11 10 11 01—21
Gilbert	111111111111111	10 10 11 11 11—23

After this they shot a second match, 7 rounds of the 3 traps, pulled indiscriminately, making 21 birds each. Of these Gilbert broke 20, and Halwes 19. Considering the wind, the shooting was pretty fair indeed.

SOUTHERN ILLINOIS.

BELLEVILLE, Ill., June 8.—The eighth annual tournament of the Southern Illinois State Sportsmen's Association was held June 6, 7 and 8. The weather was favorable with the exception of the last day, when it rained almost continuously and interfered very much with the shoot. For three years more the tournaments of the association are to be held in this city. The officers for the year are: A. B. Fleischbein, President; W. E. Craig, of Coultersville, and J. W. Baker, of Bunker Hill, Vice-Presidents; C. F. Krebs, Treasurer, and C. P. Richards, of Coultersville, Secretary. The scores in detail are as follows:

First Day, Thursday, June 6.

Shoot No. 1, 5 bluerocks; entrance $1:

Chas Krebs	10100—2	J Baker	01011—3
W Crosby	01110- 3	J Victor	11111—5

G Crosby	11100—3	C P Richards	11111—5
B Baldwin	10010—2	E Spencer	11001—3
P Labadie	11111—5	T Bauer	11111—5
W Baldwin	00111—3	N Crosby	11101—4
A Reuss	11101—4	E Robley	11001—3

Craig, Richards and Bauer first, Reuss and N. Crosby second, W. Crosby third.

No. 2, 10 bluerocks, entrance $1:

Bauer	0111111111— 9	N Crosby	0110100101— 5
Labadie	0000101001— 3	West	1111110111— 9
Victor	1011110110— 7	Mack	1001011010— 5
Spencer	1111111111—10	Simpson	1101010100— 5
Craig	0110001111— 6	Dr Spencer	0110011111— 7
G Crosby	1111011111— 9	W J Baker	1111111111—10
R Baldwin	0100010101— 4	E Robley	1111111101— 9
C Krebs	1110011100— 6	J Jarvis	1111101111— 9
W Crosby	1101111111— 9	A G Fleichbein	1101100111— 7
Pike	0110101111— 7	C P Richards	1111111111—10
Reuss	0111111111— 9	M Heim	1011100011— 6
W Baldwin	1110111110— 8	Brown	1010101100— 5

E. Spencer, Baker and Richards first, Bauer, G. Crosby, W. Crosby, Reuss, Robley, West and Jarvis second, W. Baldwin third.

No. 3, 10 Bandle birds, entrance $1.50:

Bauer	1000010111— 5	Jarvis	0100110010— 4
Labadie	0000101000— 2	W Baldwin	1010111011— 7
E Spencer	1001010111— 6	Baker	1110001110— 6
Dr Spencer	0100101111— 6	Brown	0001110100— 4
Victor	0111111110— 8	Krebs	1111010011— 7
Reuss	1111111110— 9	G Crosby	1110101110— 7
West	1000001011— 4	W Crosby	1111111111—10
Craig	1101010111— 7	Fleichbein	0011001011— 5
Pike	0100111100— 5	Robley	1100110100— 5
B Baldwin	1111010000— 6	Mack	0000001101— 3
M Heim	0100110010— 4		

W. Crosby first, Reeves second and Victor third.

No. 4, 15 bluerocks, entrance $1:

Reuss	110111010101000— 9	Baker	111111101111111—14
West	001001101111011— 9	M Heim	110100101111101—10
Craig	111111010111101—12	G Crosby	011111111111101—13
Krebs	111111111011111—14	Richards	110110101111111—12
Jarvis	111110111100010—11	Simpson	111111100111100—11
W Crosby	111101111111111—14	W Baldwin	010100111111111—11
Victor	111111000111110—12	B Baldwin	101010011111111—11
N Crosby	010111111011111—12	Fleichbein	100011010011111— 9

Ties on 14 div. first, G. Crosby second, ties on 12 div. third.

No. 5, 10 Bandle birds, entrance $1:

Heim	1000011101— 5	Reuss	0111111111— 9
Krebs	1110010110— 6	B Baldwin	1111111001— 8
West	1110010111— 8	Ed Spencer	1010111111— 8
Labadie	0100011011— 5	G Crosby	1110110111— 8
Bauer	0001011110— 5	Craig	1110100110— 6
Dr Spencer	1111101111— 9	Mack	0011010100— 3
W Baldwin	0111000111— 6	Jarvis	1111101110— 8
W Crosby	1111111101— 9	Roe	0101010000— 3
Roy	1111011011— 8	Baker	1111100110— 8
Victor	1111111111—10	Robley	0101011100— 5
N Crosby	1001101111— 7		

Victor first, ties on 9 divided second, E. Spencer and Jarvis third.

No. 6, 5 live birds, ground traps, entrance $2.50:

West	11111—5	Fleischbein	11000—2
Reuss	11011—4	Bauer	11011—4

Picked Team No. 1.

McAninch	1011111101— 8	West	1111111100— 8
Dr Spencer	1011011111— 8	C Spencer	0110101111— 6—30

Picked Team No. 2.

N Crosby	1110111101— 8	B Baldwin	1100010111— 6
W Baldwin	1101100101— 6	Robley	1111110001— 7—27

Independent Club first, Bunker Hill second, Picked Team No. 1 third.

Shoot No. 17, 10 Bandle birds: J. Sieminskie 9, Bauer 5, Gooro 7, B. Baldwin 8, E. Spencer 9, W. Crosby 8, West 10, Victor 8, Craig 8, Richards 7, N. Crosby 8, Krebs 9, G. Crosby 10, W. Baldwin 8, Roy 8, McAninch 10, Robley 7, Dr. Spencer 10. Ties on 10 and 9 div., B. Baldwin, W. Crosby, Victor and W. Baldwin third.

Shoot No. 18, 10 Bandle birds: West 8, Roy 8, Bauer 9, W. Baldwin 7, N. Crosby 10, Victor 10, Krebs 7, B. Baldwin 9, Craig 8, Woods 6, G. Crosby 6, W. Crosby 9, E. Spencer 9. Three moneys, all ties were div.

Shoot No. 19, 15 Bandle birds, $25 added: West 11, Krebs 12, Craig 14, B. Baldwin 13, Reuss 13, N. Crosby 11, Victor 11, Richards 11, W. Crosby 13, G. Crosby 13, W. Baldwin 11. Craig first, Baker second, West third.

UNSER FRITZ.

BREWER ON BRITISH SHOOTERS.

JOHN L. BREWER, the famous American trap expert, and who has had a recent experience on the English trap ranges, talks vigorously to the gun editor of the Philadelphia *Item*. He says some very sharp things about his treatment in England, and brings back some interesting notes of how matters are conducted by the trap shooters abroad. He says:

Each State can produce a champion that ought to beat the best man England can produce, if allowed to shoot on equal terms. And this is just where the English trap shots are cute. They know that if an American visits England he must be a first-class man, or he would not travel such a distance. The mere announcement that he is an American puts a handicap on him, and this handicap is increased until he has little or no show to win. This is a high compliment to the skill of American trap shots, but it is not fair play. Every man ought to have a chance for his money, but in a country like England, where personal feeling is developed to a frightful degree by personal pride, outsiders must be beaten, and if they cannot be beaten on their merits, they must be prevented from winning by excessive handicapping or other severe conditions. I should like to have used an American gun while in England, but it is probable that I might not have been so, I might have been asked to withdraw. If there is any article that is ridiculed more heartily throughout England than the American gun, I failed to hear of it. Manufacturers laugh at it, and the people generally speak of it contemptuously as a "club"—that is, out of balance, awkward, unfinished, and like a club.

You will see that I did not care to raise feeling against me, so I said little or nothing about the American gun. I am inclined to the opinion, however, that the time is coming, when the American gun will make its way not only in England, but on the Continent. English makers will not turn out a good gun unless they get a big stiff price for it. American makers not only turn out a good serviceable gun at a moderate price, but they guarantee its shooting qualities. Those are points that are bound to have effect, and if the English were not bound hand and foot to their prejudices, and so easily deceived into believing everything they are told by interested parties, the people as a whole might be struck with a regular American gun cyclone. I am positive in my opinion that the English high grade guns are the best and only first-class guns made, and that American makers cannot approach such guns any more than a pig can fly to the North Pole; but there is also no doubt in my mind that Americans can turn out a good gun at a much lower price than English makers, and hence can undersell them in their own market. Of course the profit on a high grade gun is proportionately high, but when an Englishman is sure of getting the best results, he never hesitates to pay liberally.

You ask me about the most important event in which I took part. That is rather a hard question to answer, as I took part in a large number of equally important events, while I was constantly shooting to break records and to test the killing range of my gun. Probably the most important event in which I was a part winner was an open-to-all shoot at best bluerocks for £300, equal to almost $1,500 of our money. In this big event I was placed at 35yds., while the next nearest handicap was 29yds. You will see that I conceded 6yds. or 18ft. to my opponents, very much more than any handicapper in an American event would dare to penalize a contestant. I was assured that I was allowed to compete at 35yds, just to show that English trap-shots were not afraid of me. You can bet a toothpick that I smiled, and that I also determined to get a share of the pot, as Englishmen call the stake money. When a fellow is paraded over a pot he might as well tumble in, and I fell in by killing 15 straight, and won one-third of the money, or $500. I used a Purdey hammerless, 8lbs. weight, 32in. barrels, both full choke. This gun has an extra set of barrels, 7lbs., 30in., full choke, as a relief in a long shoot.

It may be interesting to know something about this gun. It was shot by me in a rough or unfinished state for four months, at the end of which time it was turned over to Purdey to be completed. It was built specially for trap shooting, and I will back it against any gun in the world. I never saw a gun to equal it for hard shooting at long range. When I first got this gun, I was so well satisfied with it, that I said it ought to kill 60 out of 100 best bluerocks, at 33yds. rise. This bit of boast was at once snapped up by an English sportsmen, who laid £100 to £50 on the birds.

I finally agreed to make the attempt. All previous attempts had been to kill only 50 out of 100, and every attempt had been a failure, the men who backed the birds being heavy winners. The birds in my race were specially picked out of a choice lot, and were all ring-tried; that is, each bird was put through a ring, the size of the ring being a standard for the very best birds, such as were noted for speed and courage. The boundary of this race was 60yds, from the traps, and the wind was with the birds. The betting was £5 to £1 on the birds, and there were not many takers. I was so confident that I would accomplish the feat that I put up all the money I had on it, and the walking was not very good, either. It never is in England. Well, I killed 41 out of the first 50, and still the betting was against me. I closed the race on the 81st bird, having killed 19 out of 31, and scored a win. Final score: Killed 60, missed 21. I thus established a new world's record at the distance and on the number of birds. I never shot in better form or with more confidence, and although I did not win much money, I did something to make my countrymen feel proud of me. In this race my loading was as follows: In each barrel 4 drams Schultze wood powder, 1¼oz. Newcastle chilled shot; Eley's improved paper shell, with specially strong primer. The kills were in nearly every case made with the first barrel, although the second was occasionally used as a precaution, rather than a necessity.

In all English pigeon shooting matches the birds always have

the benefit of the wind. Indeed, a match with the wind against the birds is seldom, if ever, allowed in England, the traps being changed promptly, in accordance with the direction of the wind. The general rule that governs all the shooters in England is to load not over 3drs. powder and 1¼oz. shot, and to hold the gun just as the shooter pleases. This is susceptible of explanation. The shooter goes to the traps, has the privilege of taking aim, and can hold the gun to his shoulder or not, as he pleases. This rule is followed everywhere, and the idea of holding the gun below the elbow until the bird is on the wing, is laughed at by English sportsmen. The gauge of gun is limited to a 12, and any weight not over 8lbs. I did not see a 10-gauge gun in use, and only a few at the gun stores, where I was told they were used for duck shooting. I told them that tens were used a great deal in the United States, not only at the trap, but in the field, and that many sportsmen thought that eights, sixes and fours were the proper things for ducks, at which much surprise and amazement were manifested, and the expression was made, "We would call that punting!" The punt gun is a big gun mounted on a swivel, and used principally by sailors who hunt ducks, and want to get enough game with one or two discharges to last for a week!

You ask me which guns stand at the head in England? The Purdey is first in workmanship, the Greener gun first in shooting qualities; Riley of Oxford street stands very high. W. & C. Scott & Son are not recognized in London, and it is well known that their trade is principally among Americans, with whom, it is understood, their guns have given satisfaction. The guns of London makers are considered far ahead of all others made in England; Birmingham manufacturers, with one or two exceptions, are not classed with anything but rubbish. This is probably a little too severe, as Westley Richards, who is a Birmingham maker, undoubtedly turns out a good gun. I saw only one Westley Richards gun in use during my shooting throughout England, and was told that most of their guns were made for foreign trade. Clabrough is another one of the unknown guns in England with an American reputation. I could say more that might be interesting, but I do not want to be considered personal. A number of prominent English gun makers are exceedingly clever mechanics of means in London, who have shops connected with their residences, and employ from ten to fifteen workmen, and only turn out guns to order, putting any name on the gun that is desired. Thus thousands of guns are turned out by these expert mechanics, and named to suit the whim or wishes of the purchaser. With the exception of the Colt Company (which has a store in London), the American guns are comparatively unknown, not only in London but throughout England. Our system of manufacture is laughed at as being rough, clumsy and defective in nearly every respect. Our guns are called clubs. This criticism is on a par with the wholesale condemnation of the Birmingham makers.

MASSACHUSETTS STATE SHOOT.

THE Massachusetts State Shooting Association will hold its tenth annual summer tournament on the grounds of the Jamaica Plain Gun Club, Clarendon Hills, Mass., June 17 and 18. Shooting on the regular programme will begin promptly at 9 o'clock A. M. on each day as follows:

Monday, June 17.—1. Individual Subscription, 6 clay-pigeons, entrance 50 cents. 2. Individual Subscription, 6 bluerocks, entrance 50 cents. 3. Grand Championship, for the individual challenge gold badge of the Association, 15 bluerocks, entrance free, optional sweepstakes. 4. Individual Subscription, 6 clay-pigeons, straightaway, entrance 50 cents. 5. Individual Subscription, 6 bluerocks, entrance 50 cents. 6. Grand Championship, for the amateur team gold badge of the Association, 5 clay-pigeons and 5 bluerocks per man, open to any number of teams of 5 men from each club belonging to the Association, entrance free, optional sweepstakes. 7. Individual Subscription, 5 pairs bluerocks, entrance 50 cents. 8. Grand Championship, for the glass ball team gold badge of the Association, 10 bluerocks per man, open to any number of teams of 5 men each belonging to the Association, entrance free, optional sweepstakes. 9. Individual Subscription, 5 pairs clay-pigeons, entrance 50 cents. 10. Individual Subscription, bluerocks at 21yds., miss and out, entrance 50 cents.

Tuesday, June 18.—11. Individual Subscription, 6 clay-pigeons, entrance 50 cents. 12. Individual Subscription, 6 bluerocks, entrance 50 cents. 13. Grand Championship for the Ligowsky gold badge and the individual clay-pigeon championship of the Association, 15 single clay-pigeons per man, entrance free, optional sweepstakes. 14. Individual Subscription, 3 pairs bluerocks, entrance 50 cents. 15. Individual Subscription, 7 bluerocks, entrance 50 cents. 16. Grand Championship for the individual amateur challenge gold badge of the Association, 8 clay-pigeons and 7 bluerocks, entrance free, optional sweepstakes. 17. Individual Subscription, 6 single and 3 pairs bluerocks, entrance 50 cents. 18. Grand Championship at clay-pigeons, for the team gold badge of the Association, open to any number of teams of 5 men each from each club belonging to the Association, 10 birds per man, entrance free, option sweepstakes. 19. Individual Subscription, 6 bluerocks, entrance 50 cents. 20. Individual Subscription, clay-pigeons at 21yds., miss and out, entrance 50 cents.

The Association will donate two valuable prizes, suitably inscribed, to the shooter in his respective class making the best average for the two days in shooting at 50 clay-pigeons and 50 bluerocks each day. In case of ties, 10 birds per man till won.

A meeting of the delegates will be held on the evening of the 17th. CHAS. HARTWELL, Sec'y, Gardner, Mass.

N. Y. SUBURBAN SHOOTING GROUNDS ASSOCIATION.—Claremont, Jersey City.—June 8.—Lefever trophy, match at 25 singles, 25 cents entry:

Johnson	1111011111111111011111111—23
Richards	1110100110001010010001000—10

Jersey	1100101101— 6	Hathaway	1111111101— 9
Collins	1111111111—10	Allen	1111001100— 6
King	1111101011— 8		

No. 3:

Johnson	1111111111—10	King	1000110000— 3
Jersey	1111111110— 9	Richards	1011000100— 4
Collins	0111011111— 8	Hathaway	1010111001— 6

No. 4:

Johnson	1111111101— 9	Collins	0111111111— 9
Jersey	1100011010— 5	Hathaway	1110011110— 7
King	1111110111— 9	Allen	0101110111— 7

Johnson and Collins div. first on shoot off.

No. 5, same: Johnson 8, Jersey 10, Collins 8, King 5, Hathaway 10, Allen 5.

No. 5: Johnson 8, Jersey 10, Collins 8, King 5, Hathaway 10, Allen 5.

No. 6: Johnson 8, Jersey 9, Collins 8, King 6, Pringle 10, Hathaway 4, Zorn 4, Allen 9.

No. 7: Johnson 9, Jersey 10, Zorn 6, Collins 9, Dittmar 7, Pringle 7. Second divide.

No. 9: Johnson 8, Jersey 8, Pringle 6, Collins 6, Hathaway 9, Evans 6, Dittmar 6, Allen 5. Collins won third on shoot off.

EATON, N. Y., June 8.—Eaton Gun Club. Match at 15 single kingbirds, 3 traps, 18yds., for badge:

Richardson	0010111101011111—10	Bell	1110000010100— 6
Peet	1111111111111111—15	Briggs	0000010001010— 4
Hamlin	0001001010000111— 5	Stone	1000000001011— 5
Curtis	0111011111101110— 11	Short	1011110011011111—11

Peet won badge on 15 straight. Five pairs doubles:

Richardson	11 11 10 11 11—9	Briggs	10 01 10 10 00—3
Peet	10 00 11 10 10—5	Stone	10 10 10 00 10—4
Hamlin	00 10 00 10 01—3	Short	00 10 10 10 10—4
Bell	00 11 10 10 10—5		

The most fun of the day was when Richardson and Curtis chose sides, 5 pairs kingbirds:

Richardson	11 00 11 10 10—6	Curtis	00 00 01 10 00—2
Short	10 10 10 10 10—5	Peet	11 10 11 11 00—7
Briggs	00 10 10 00 10—3	Bell	11 10 11 11 01—8
Stone	10 10 10 00 00—4—18	Hamlin	00 10 00 00 00—1—18

The tie not shot off.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

POMPTON PLAINS, N. J.—The annual "shaking up" of the old residenters, who quietly while away the time in solid enjoyment of the beauties with which nature has surrounded their homes so snugly located on the Plains, was celebrated by the Pequannocks, the local gun club, on Thursday, May 30. By a little extra labor and expense the event was announced through circulars, which brought together young and old—shooters and lookers on—by wagon, on foot, cross lots and other unknown ways, until a hundred people were enjoying the sport, and backing some favorite shooter with a dime or quarter that had lain dormant since a year ago. It is amusing and as good as a circus to attend such an event, and witness the jolly good feeling among all present. But woe be to that class whose ambition to "scoop the pile" and unwillingness to divide a small prize with a whole-souled shooter manifest themselves at such places—all such can get accommodated on the spot, and generally return home wiser, but poorer. The day opened with light rains, which prevented some from getting out in the morning, but as the old hills echoed back the sound of the guns at ten o'clock, and the mist cleared away, they began to gather from far and from near. The puffy winds of the afternoon made the bats very erratic, and, as many of the shooters had never seen a bat thrown from the trap, they were bothered some in their efforts to find them. The following events and scores will show the day's doings:

First event, 10 Lockport balls:

Taylor	1101101111— 8	Demorest	1011101000— 5
Smith	1111101011— 8	Ford	1111111111—10
Clark	0100000100— 2	Card	1111111111—10
Curtis	1010000000— 2	Gormley	0011001111— 6

All ties divided.

Second event, 10 bats:

Taylor	1111110011— 8	Card	0010110111— 6
Smith	0101110011— 6	Kahart	1111111010— 8
Post	1000001001— 3	Perry	1100001011— 5
Kiersted	1110111111— 9	Cook	1111000001— 5
Mead	0110000111— 5	Ford	1111111111—10
Gormley	0110010000— 3	Curtis	0111011010— 6
Demorest	0000010100— 2	All ties divided.	

Third event, 5 balls:

Van Saun	11011—4	Card	11110—4
Hopper	00000—0	Cook	10111—4

Fourth event, 5 balls:

Hopper	00000—0	Perry	11001—3
Van Saun	00011—2		

Fifth event, prize shoot No. 1, 10 balls, entrance 25 cents; first prize, 25lbs. shot; second, 3lbs. powder; third, 100 shells; fourth, 500 wads:

Ford	1111111101— 9	Kiersted	1011111011— 8
Taylor	0111111101— 8	Kahart	0101110111— 7
Smith	0111111111— 9	Card	1111111111—10
Curtis	1101111101— 8	Cook	1111111111—10
Post	0101110101— 6	Gormley	0101010110— 5
Mead	0011111000— 6	Perry	0001111111— 7

First, second and third divided, ties on 7 won by Kahart.

Sixth event, prize shoot No. 2, 15 bats, entrance 50 cents; first prize, 22lbs. turkey; second, pair fowls; third, $1 cash; fourth, 50 cents cash:

Ford	0101111111101100—10	Kahart	0111100010001001— 7
Smith	1001100103011111— 8	Card	0001101110111100— 9
Taylor	0010111111111101—11	Gormley	1011001000010011— 7
Mead	1101000017001111— 8	Demarest	1001000001011111— 7
Kiersted	0000111011110100— 7	Curtis	1100000101010111— 7
Post	1110010111101100— 9	Cook	1001101111113031—11
Doremus	1110110011111111—12	Perry	0000111001110001— 8
Clark	1110000100001001— 6	Stanley	0101101000000101— 6

Ties on 11 for second won by Taylor; on 9 for fourth by Post.

Seventh event, 5 balls:

Card	01101—3	Curtis	11101—4
Demorest	00101—2	Cook	10111—4
Smith	00000—0	Ties div.	

Eighth event, 5 pairs bats:

Taylor	01 10 11 11— 8	Ford	11 11 11 11 11—10
Smith	01 10 11 11 11— 8	Curtis	00 01 11 00 11— 5
Clark	11 10 10 01 11— 7	Ties div.	

Ninth event, 5 balls:

Curtis	01111—4	Van Vorhees	10111—4

Targets used: Balls 282, broke 187, per cent 66$^{3}_{10}$. Bats 440, broke 262, per cent 60.—FORD, Newark, N. J.

MONTGOMERY, Pa., June 6.—The second annual shoot and barbecue of the Capital City Gun Club took place at Jackson's Lake to-day. A large number of visitors were present from different sections of the State and the shooting was good all round. The team match was as follows, 4 from each club, $20 entrance double birds, 21yds. rise:

Clanton Team.		Montgomery Shooting Club.	
Foshee	10 01 00 11—4	S Westcott	11 11 10 11—7
W Callen	10 00 10 11—2	Dickerson	11 00 11 00—4
H Callen	10 01 10 10—4	Frazier	11 00 10 10—4
Gallahern	11 10 10 10—5—15	W H Taylor	11 10 10 10—5—20
Dallas Gun Club.		Fort Deposit Gun Club.	
Field	10 11 11 10—6	Rogers	10 01 01 10—4
Norris	11 01 10 10—6	Weaver	01 11 11 10—6
Pettus	00 10 00 11 3	Tyson	00 00 11 11—4
Hosker	00 11 10 11—5—20	Walker	00 00 10 10—2—16
Lowndes Gun Club.		Capital City Club.	
Robinson	11 11 10 00—5	Abercrombie	01 11 11 10—6
Russell	11 11 00 11—6	R Holte	10 11 10 11—6
Curtis	00 11 11 00—4	Roberts	01 10 11 11—6
Haynes	00 11 00 10—3—18	B Holt	11 01 01 11—6—24
Birmingham Team.		Snowdown Club.	
Ceesly	10 11 11 00—5	Mastin	10 11 11 10—6
Warren	00 00 00 00—0	Leigh	10 00 00 10—2
Embank	01 01 10 10—5	Olen	11 10 10 10—5
Abbott	10 11 10 10—6—16	Randolph	11 11 10 10—6—18

The first prize was won by the Capital City Gun Club with a score of 24 out of a possible 32. The second prize was divided by the Dallas and Montgomery clubs.

SPRINGFIELD, N. J., June 3.—Scores made by the Union Gun Club at its sixth monthly badge and prize shoot held on its grounds here this afternoon. Twelve of the members faced the traps and found that the targets to be used were Ligowsky clay-pigeons, and thrown as far and as hard as it was possible to make the traps do. The boys caught on first rate, as the following scores will show. The shooting off of the ties was quite exciting, Conover having to break 49 out of 50 before claiming the Keystone trophy. But he got there all the same. Following are the scores, 18yds.:

Miller	1111111111111011111101111111—28
Johnson	1111111111111111111101111111—29
Conover	1111111111111111111111111101—29
Roll	1111111111101111101111011111—27
A Sickley	1111011111100001111111111111—25
H Sayre	1111111101111011011111011111—26
Williams	1111101111111111111111111111—27
Terry	1111111111101110011111111110—25
G Pudney	0110111110010011011111111011—22
Dunican	1101111001101101110111101111—23
Eager	1101111101110011111101100110—22
Riggott	1111111111101101111111011111—27

Ties shot off on 29: Johnson missed his 19th and Conover won with 20 straight. Miller 2d. On 3d, at 5 each, Roll 3, Williams and Riggott 5 straight; Williams 4 and Riggott 5 and won 3-1, Sayre 4th. On 5th at 5 each, Sickley 4, Terry 3. Dunican 6th. On 7th at 5, Pudney and Eager 4 each, then Pudney 5 and Eager 4. Next match July 1.—12-BORE.

WILLIMANTIC, CONN., ROD AND GUN CLUB, June 4.—Fifth shoot for merchandise prizes, 15 bluerocks, 5 traps, and 10 Ligowsky clay birds, 3 traps, 18yds.:

Baldwin	10	6	16				

BREWER'S CHALLENGE.—John L. Brewer is out with a general challenge to all shooters as follows: This fall, when the birds get good, I will shoot any man in America or in the world a race at 100 or 200 birds, 30 or 35yds. rise, London Gun Club rules, for $500 a side, match to be shot under the auspices of the Mercer Gun Club, Middlesex Gun Club or Suburban Shooting Association, or any other organization of equal prominence. I want to give every champion a chance to meet me, and I don't bar any one.

BROOKLYN, June 9.—The Fountain Gun Club is old in years yet ever young in good works and encouragement of shooting. For the present year it has a rush of prizes, and at the meeting of the club last week no less than six valuable prizes were offered. The first prize for the best marksmen of the season was given by Mr. Abel Crook, a Parker hammerless gun, especially designed for the club members, being a No. 12 gauge and weighing only seven and one-half pounds, costing about $100. The second prize is a handsome hand-painted medallion scarf pin by Bierstadt, the subject being a quail just found by the dog. It was presented by Mr C. N. Wingert. For the third prize Mr. J. Beacham gave a piece of solid silver of a design known to sportsmen. Mr. Augustus W. Phelps, who has already donated a handsome club flag, gave a championship medal for competition by the members of the club, the winner of the most shoots at the end of the season to claim the ownership. Mr. John H. Sawyer, the late president of the club, who has just recovered from a severe attack of sickness, presented to the club, as a special member's prize for the July shoot, a handsome solid silver tankard by Tiffany & Co., of New York, with a wish that one of the old men would win it and keep it as a memento of the Fountain Gun Club. Several other members present signified their intention to donate prizes at each shoot of the year, so that the members will have a strong inducement to shoot for them. No one member will be permitted to take a second prize. The Seddons medal, which has been competed for during the past season, has not yet been awarded. The late secretary, Mr. O. Lange, and the present secretary, Mr. John Carney, have the disposal of the emblem, and their decision will be given at the next meeting.

WELLINGTON, Mass., June 8.—Several clean scores were made to-day in the sweepstake matches of the Wellington Gun Club, and in the silver pitcher match at 8 clay-pigeons and 7 bluerocks Bond and Field were tied with 14 each, and in the shoot-off Bond won. In this match the following scores were made: Roxton, Choate, Chase, Melcher, Schaefer and Baxter 13 each, Snow and Swift 12 each, Bradbury, Stanton, Dill and Chapin 11 each, Warren 10, Short and Snow 9 each, Wetherbee 7. The scores in the merchandise match were as follows: Schaefer and Field 15 each, Sanborn and Chapin 14 each, Bond, Chase and Snow 13 each, Stone and Warren 12 each, Dill and Bradbury 11 each, Robinson and Coy 10 each, Melcher and Stanton 13, Swift 14. The winners in the sweepstake matches were as follows: Six bluerocks: Chase. Five clay-pigeons: Bradbury. Five clay-pigeons: Bradbury, Baxter and Choate. Six bluerocks: Chase. Five clay-pigeons: Baxter and Perry. Six bluerocks: Chase. Seven bluerocks: Bond. Eight clay-pigeons: Chase and Swift. Five clay-pigeons: Warren, Stanton and Snow. Six bluerocks: Warren and Bowker. Five clay-pigeons: Stone, Chapin, Schaefer, Swift and Warren. Six bluerocks: Dill. At a meeting of the directors of the Wellington Gun Club this afternoon, Messrs. Perry and Snow were chosen delegates to attend the annual meeting of the Massachusetts State Shooting Association at Young's Hotel, June 17.

SMALL BORES AHEAD.—Kansas City, Mo., June 1.—The great State shoot has drawn to a close, and some fine work has been done. J. H. McGee of the Sixteen Club, Kansas City, won the big medal with his little 16-gauge yesterday against sixty-four competitors, killing 10 straight and 14 out of 15 on the tie shoot. This is a great victory for small bores over the "spatter guns."—TILE.

NEW HAVEN.—Pres. Chas. B. Bristol issues an order thus: "Attention battalion! You are hereby warned to appear on the New Haven Gun Club grounds, armed and equipped as the law directs, to shoot in the several events on July 4; Keystones, shooting at 9 o'clock A. M.—CHAS. B. BRISTOL, President."

THE TEAM FOR ENGLAND.—Within ten days the team which is to go from Massachusetts to measure shooting skill with the British riflemen will be on the ocean carrying trusty rifles and lots of skill and hope with them. The team is a good one, and it is understood to be practically the same which has represented the State at Creedmoor the past two years. Capt. Mildmay, secretary of the National Rifle Association of Great Britain, has notified Maj. Frost of the appointment of Quartermaster Southwicke of Devonshire as honorary secretary of the team while in England. The gentleman has a splendid reputation, and will undoubtedly do the team full justice. The shooting engagements are now complete, and comprise Berkshire on July 2, London Rifle Brigade, July 3; South London, July 4; Sussex, July 5, and either the Honorable Artillery Company or the Lincolnshire team on July 6. The following two weeks will be devoted to individual work at Wimbledon, where the team will be in camp. Many courtesies are being showered upon the team, a notable one being the tendering of a handsome private car by the London & Northwestern Railway from Liverpool to London. Major Frost has declined many offers of escort to the depot with thanks, preferring to slip away without demonstration. He has been a quiet hard worker all along, and for some time past the team has been rolling up rattling big scores in private practice.

Canoeing.

FIXTURES.

JUNE.

15-17. Puritan, Annual Meet, Nantasket.
15. Brooklyn Annual.
16-17. South Boston, Local Meet, Petticks Island.
16. Puritan, Record Races, No. 2.
17. Puritan, Record Races, No. 3.
22. N. Y. C. C. Annual, Staten Island.
29. Corinthian Mosquito Fleet Larchmont.

JULY.

4. Puritan, Record Races, No. 4.
10-22. Atlantic Division Meet.
13-29. W.C.A. Meet, Ballast I'd.
27. Yonkers, Annual, Yonkers.

AUGUST.

—. Pequot Meet, Thimble Islands.
7-23. A. C. A. Meet, Sugar Island, St. Lawrence River.

SEPTEMBER.

8. Puritan, Record Races, No. 5.
14. Ianthe, Annual, Newark.

THE EASTERN DIVISION MEET.

THE annual meet of the Eastern Division of the A. C. A. will be held at Calla Shasta, 4 miles below Springfield, Mass., on the Connecticut River, on June 15-18, the races being on June 17. Meals can be had at a farmhouse by those not prepared to cook, and some extra tents and straw for bedding will be provided. A launch will make regular trips between Howard street, Springfield, and the camp. The prizes will be small cups instead of flags.

The regatta programme is as follows: Sailing races—1. Classes A and B. Sail area unlimited. 2. Classes A and B. Sail area limited to 75ft. 3. Novice. Unlimited. 4. Combined sail and paddle. Each one mile. The above to be one mile to windward or leeward and return.

Paddling races—1. Classes A and B, Decked, ½ mile straightaway. 2. Class 1. Any canoe, ½ mile straightaway. 3. Tandem. Open canoes, single blades, 1 mile with a turn. 4. Hand-paddling, 160yds. 5. Tandem, decked canoes, 1 mile. 6. Upset. 250yds. 7. Standing paddling. 300yds. The order of races will be announced as early as possible on race day, and will depend on wind and weather. The usual rules will govern.

R. E. TOWNSEND, CHAS. P. NICHOLS, JOHN F. SEVIN, Jr., Regatta Committee.

DELAWARE RIVER MEET.

THE camp of the Delaware River canoeists broke up on June 2, and though the weather had been very unfavorable during the wole week, it having rained every day of the camp, about 30 experienced canoeists remained in camp the most of the week and others came and went.

It being too unpleasant for sailing and cruising a good part of the time, a good many plans were concocted to keep the ball rolling. Upon one day the boys disguised themselves in as many ingenious costumes as the camp could provide, a striking one being the camp ghost, made up with a model of a skull upon the bearer's head and draped artistically with one of the dude camper's sheets. This was a most appalling sight, as a good many of the natives will testify who saw it at night, illuminated by green lights, parading the town, headed by buglers playing a most solemn air. A good many of the races were cancelled, but the most important were held. The unlimited was sailed in a little gale, as the following schedule will show. Mr. Bair, of the Mersey C. C., England, viewed the races on Decoration Day.

The events were as follow:

Start 2 P. M., Unlimited Sailing, 3 miles.—First prize, silver pitcher; second, silver cup:

	Finish.	Actual.
Naomi, Wm. Roberts	Q. C. C. C.	Swamped.
Fern, F. Geizer	R. D. C. C.	Disabled.
Valesca, H. Kreamer	R. D. C. C.	Upset.
Bubble, F. Seigler	Trenton	2 53 00
Puzzle, J. A. Barten	Q. C. C. C.	Swamped.
Cigarette, F. W. Noyes	R. D. C. C.	2 42 00 0 53 00
Malta, E. H. Barton	Q. C. C. C.	Withdrew.
*Lassie, H. La Motte	R. D. C. C.	2 42 00

* Lassie stopped to help Naomi, who was sinking.

Start 2 P. M., 75ft. Limit, 3 miles.—First prize, silver cup; second, silk flag:

		Finish.	Actual.
Puzzle, J. A. Barten	Q. C. C. C.	Broke rudder.	
Bubble, F. Soigler	Trenton	Withdrew.	
Valesca, H. Kreamer	R. D. C. C.	3 23 90	1 22 00
Picknic, W. Norgrave	R. D. C. C.	4 21 00	2 20 00
Pandora, F. Woodwood	Trenton.	3 41 00	1 39 00
Malta, E. H. Barten	Q. C. C. C.	Withdrew.	
Naomi, Wm. Roberts	Q. C. C. C.	3 56 00	1 54 00
Waif, A. Fennimore	R. D. C. C.	Withdrew.	
Thetis, D. M. Bond	R. D. C. C.	3 19 30	1 16 30
*Cigarette, F. W. Noyes	R. D. C. C.	3 21 00	1 14 00

*Cigarette broke centerboard penuant just before crossing and had to go ashore to fix it, losing 6m.

Novice Sailing—Prize, silver cup:

Pandora, F. Woodwood.....Trenton.....1
Snail, C. H. Cunningham.....Q. C. C., did not finish.
——, Fleischman.....Q. C. C., did not finish.

Class I., Paddling—Prize, silk flag.

Valesca, H. Kreamer.....Red Dragon.....1
Malta, E. H. Barten.....Q. C. C.....2
Puzzle, J. A. Barten.....Q. C. C.....3
Thetis, D. M. Bond.....Red Dragon.....4
Ripple, Lorette.....Burlington.....5
Wave, Haley.....Burlington.....6
Naomi, Wm. Roberts.....Q. C. C. C.....7
Pandora, F. Woodwood.....Trenton.....8
Cigarette, F. W. Noyes.....R. D. C. C.....9
Lassie, H. La Motte.....R. D. C. C, did not finish.

Paddling Upset—Prizes, first, silk flag; second, A. C. A. flag:

Cigarette, F. W. Noyes.....Red Dragon.....1
Thetis, D. M. Bond.....Red Dragon.....2
Valesca, H. Kreamer.....Red Dragon.....3
Lassie, H. La Motte.....Red Dragon, did not finish.
Pandora, F. Woodwood.....Trenton, did not finish.

1,000yds. Tandem Paddling.—Prizes, first, silk flag; second, bunting flag:

Valesca, H. Kreamer / D. M. Bond.....Red Dragon C. C.....1
Malta, J. A. and E. H. Barton.....Q. C. C. C.....2
Pandora, F. Woodwood / F. W. Noyes.....Trenton / R. D. C. C.....3

Tournament.—Prize, silk flag:

Waif, F. Woodwood / A. Fennimore.....Trenton / R. D. C. C.....1
Valesca, H. Kreamer / D. M. Bond.....R. D. C. C., upset.....

Hand Paddling:

Thetis, D. M. Bond.....R. D. C. C.....1
Valesca, H. Kreamer.....R. D. C. C.....2
Lassie, H. La Motte.....R. D. C. C.....3

Hurry-Skurry.—Prizes, first, silk flag; second, pocket lamp:

Malta, E. H. Barten.....Q. C. C. C.....1
Pandora, F. Woodwood.....Trenton.....2
Puzzle, L. A. Barten.....Q. C. C. C.....3
Thetis, D. M. Bond.....R. D. C. C.....4
Snail, Wm. Roberts.....Q. C. C. C.....5
Valesca, H. Kreamer.....R. D. C. C.....6
Lassie, H. La Motte.....R. D. C. C, did not finish.....7
Cigarette, F. W. Noyes.....R. D. C. C, did not finish.....8
Waif, A. Fennimore.....R. D. C. C, did not finish.....9

Record prizes, first, silk banner; second, bunting flag:

		Points.
1. Valesca, H. Kreamer	R. D. C. C.	32
2. Thetis, D. M. Bond	R. D. C. C.	27
3. Cigarette, F. W. Noyes	R. D. C. C.	26
4. Pandora, F. Woodwood	Trenton	18
4. Malta, E. H. Barten	Q. C. C. C.	18

All other races had to be abandoned on account of rain.

The regatta committee included Dr. H. La Motte, R. D. C. C.; Western Underwood, R. D. C. C., and J. A. Barten, Q. C. C. C.

THE MEET AT PETTICK'S ISLAND.—The final arrangements have been made in regards to the meet to be held at Pettick's Island, Boston Harbor, on June 15, 16 and 17. The regatta committee's headquarters will be at the large cottage on the island. The entire island will be for the exclusive use of canoeists. All the local clubs about Boston have announced their intention to be represented and compete for prizes. In the paddling, Class A, there will be one first prize, and in Class B, first and second prizes. Sailing and paddling, first and second prizes. Sailing 3 miles, first and second prizes. Upset sailing race, one prize. All the above prizes will be awarded with the honor of champion of Massachusetts Bay, 1889. Arrangements have been made to convey all parties attending the meet from Hull by means of a launch.

A. C. A. MEMBERSHIP.—Atlantic Division: C. F. Hemmenway, New Jersey. Eastern Division; E. B. Hovey, Springfield, Mass.; J. H. Fennessy, Springfield, Mass.

THE STEAM YACHT "W. B."

THE new steam yacht herewith illustrated was launched on May 28 at the yard of her designer, Dr. C. D. Miller, at Poughkeepsie, N. Y. She was built for Mr. W. B. Hayden, of Columbus, O., for use on the St. Lawrence River, and is similar, though larger, to Indienne, by the same designer, whose plans were lately published in the FOREST AND STREAM. The "W. B." is 87ft. over all, 79ft. 6in. l.w.l., 13ft. beam and 4ft. 6in. draft, with a triple expansion engine and Roberts's coil boiler. She is built of wood and is very handsomely fitted below. All the work was done under cover in Dr. Miller's yard.

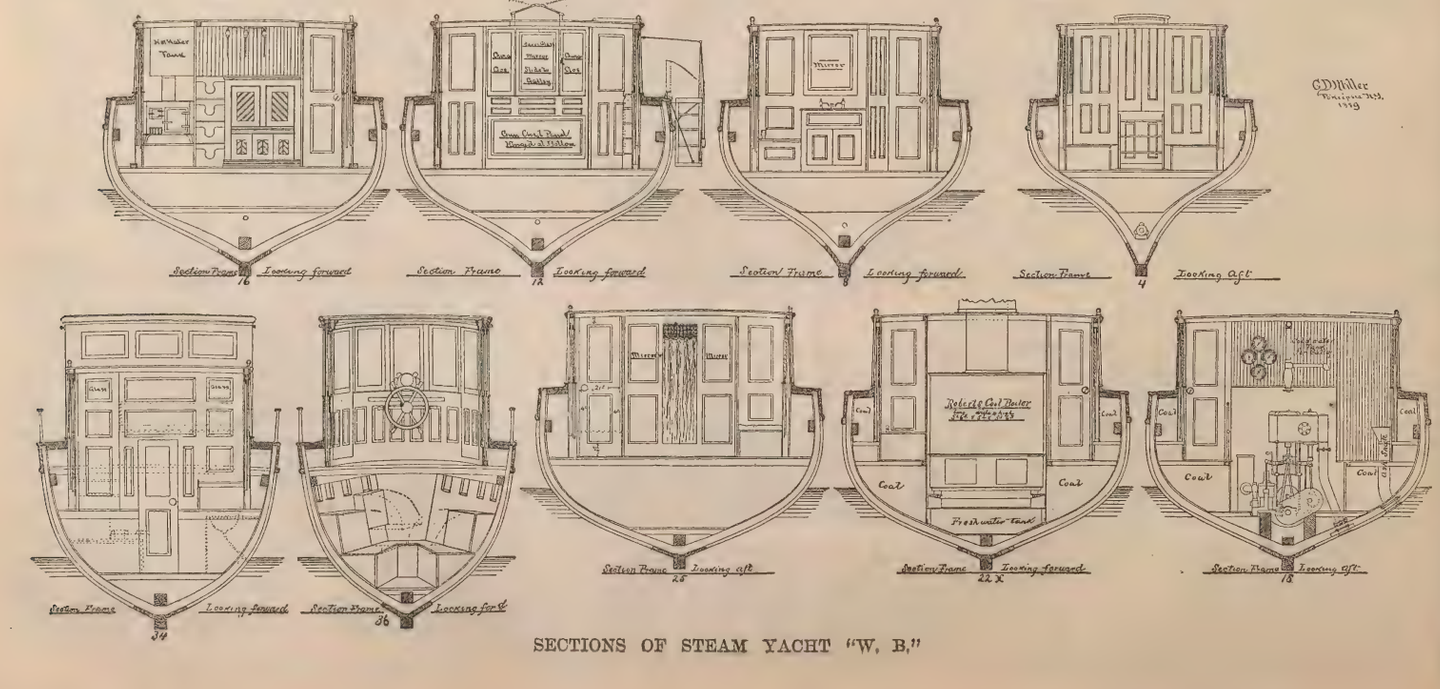
LARCHMONT Y. C. SPRING REGATTA, JUNE 8.

THE entry list in the postponed spring regatta of the Larchmont Y. C., on June 8, was very little to the credit of yacht owners about New York; in fact, it looks as though all the sporting spirit was concentrated in the club as a body, and had pretty well disappeared among the individual owners. A regatta with good prizes, in the finest of June weather, was allowed to go begging with a total of but twelve starters. This lack of racing spirit was most conspicuous in the 40ft. class, where such boats as Chispa, Tomahawk and Maraquita were sailing over the course without entering, evidently sizing up the only two of their class in the race, Nymph and Banshee. With craft designed and built specially for racing, and after at least sufficient trial to put them in fair form, it would naturally be supposed that they would take the first good chance of a trial, rather than merely knocking about the course where their fellows were racing, and leaving to their smaller sisters to represent the keel class. The result of the race was hardly encouraging to the club or to the members who gave their time to its management, and in view of the limited entries and the fluky and tedious ending, the race can hardly be called a success; but the yachtsmen on the judges' tug were treated to two very pretty and exciting duels during the greater part of the day, and to some very fine bits of sailing at times.

Clara, looking in fine form this year under the blue and red burgee of her new owner, Dr. Barron, and with Captain Barr again at the stick, was booked to sail alone in her class. Of the big fleet of forties only two of the older boats, Banshee and Nymph, came to the line, though three of the new keel craft were out in full feather to watch the battle of the two centerboards. In the 35ft. class the only entries were Eurybia and Volusia; while in the 30ft. class there were Saracen, Kathleen and Amazon. The latter, a centerboard boat, is an old resident about the western end of the Sound, and needs no description, but of the two new comers, both keels, the former, built last year, was counted the fastest of her class in Eastern waters, while her rival, Kathleen, lately described in the FOREST AND STREAM, is a new boat, this being her maiden race. But little interest was attached to the three cats, Orient, Punch and Giggle, while in the jib and mainsail class the Coyote, lately brought from Boston, had no competitor. Nymph was sailed by Mr. E. A. Willard, Banshee by Mr. A. Bryan Alley, Saracen by her owner, Mr. W. A. Fowle, and Kathleen by Mr. Wm. Whitlock. The course for the cabin boats was around the usual mark in Hempstead Bay, then around a mark off Captain's Island, and home over the same course, 20 knots; the open boats sailing around the red spar buoy on Scotch Caps Reef, leaving it on starboard, thence to and around stakeboat in Hempstead Harbor, passing it on starboard, thence to and around red spar buoy on Scotch Caps Reef, passing it on port, thence finish, 10 knots.

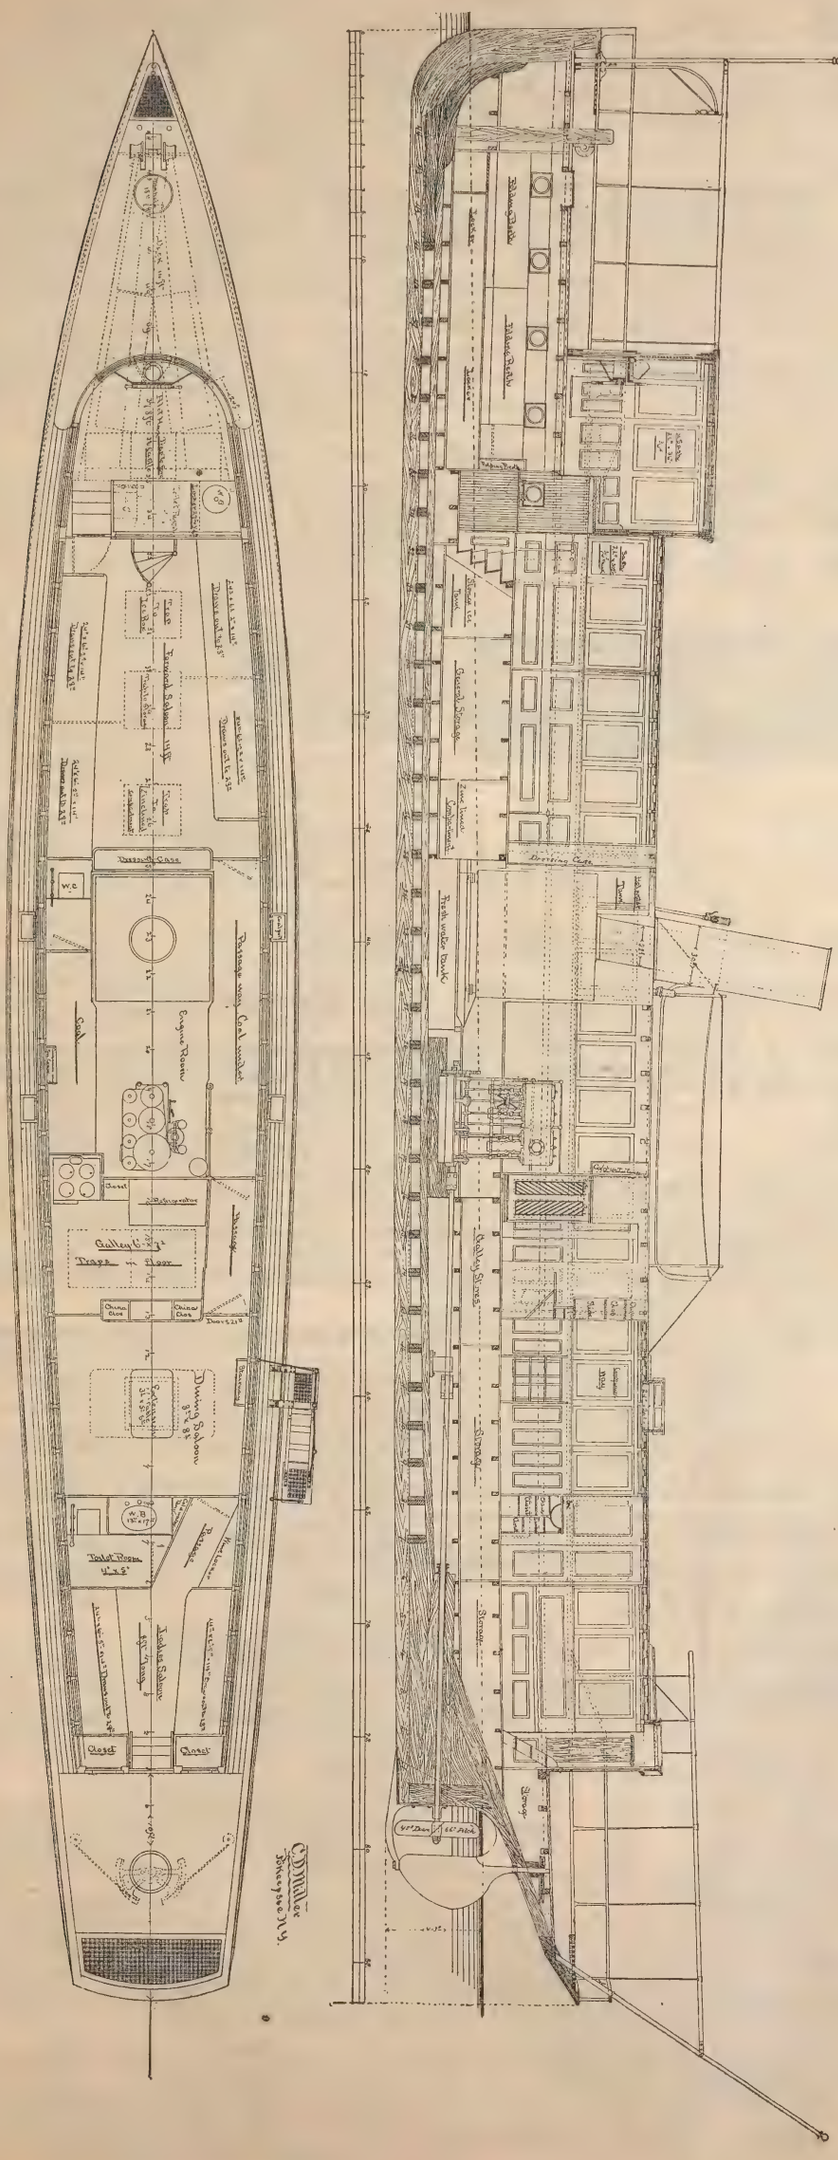
The weather was cool and hazy in the morning, with a light S. W. air, and the start was not made until 11:45. Clara went over promptly, and the others were in position to do so, too, but both forties and thirties wasted valuable time in jockeying above the line. Eurybia, Amazon and Volusia crossed, but Banshee came for the line with a good full and then tacked, waiting for Nymph, who came up and passed her, Banshee going under Nymph's stern and out on her weather quarter. They went over the line on starboard tack, but a few seconds apart, but Nymph was going fairly fast, while Banshee had hardly gathered way after tacking. Just astern of the pair came Saracen, leading Kathleen by a hundred feet or so, the latter having a most unnecessary handicap of 24s., the start was timed:

Clara	11 46 27	Punch	11 53 09
Amazon	11 47 27	Volusia	11 53 09
Giggle	11 49 21	Nymph	11 54 08
Coyote	11 50 39	Banshee	11 54 22
Eurybia	11 51 32	Saracen	11 54 40
Orienta	11 52 37	Kathleen	11 55 00



The four settled down, jammed well on the wind, for Hempstead markboat, carrying jibtopsails and working topsails. The two smaller boats were soon scuppers-to, in spite of the moderate breeze, both heeling very readily. They weathered out at first, however, on the centerboard boats. Banshee was outsailing Nymph a little from the start; but when, near the middle of the Sound, both eased sheets and reached for the mark, she gained rapidly, and at 12:15 walked handsomely through Nymph's weather and took a good lead just in time for the turn. Saracen and Kathleen held by the wind for a time longer, but when they, too, eased off Kathleen had a very good place on Saracen's lee quarter, but the nearer to the mark, from which she reached ahead, through Saracen's lee, until she was well clear of her at the turn.

Kathleen dropped her spinaker boom to port, Clara, now well ahead, carrying a spinaker, but while setting the spinaker and for a long time afterward, the jibtopsail sheet was left to mind itself, to the serious detriment of speed. Kathleen had very cleverly passed her rival at the turn, and had a very good lead, but she lost while maneuvering with the spinaker, and Saracen, more carefully managed, soon ran through her lee under working canvas. Saracen set her balloon jibtopsail, sailing faster than Kathleen, and soon set spinaker also. Banshee continued to lead Nymph as long as they could be distinguished, but the fleet was left astern for a time while the tug ran ahead to time Clara at the Captain's Island mark. Mayflower, for the first time under schooner rig, was sailing about in company with Sachem, looking very handsome in her new clothes. Clara of course turned alone, and as the wind was quite light it was some time before the others came up, Banshee leading Nymph by ¼ mile. The two keels Saracen and Kathleen had not only done well in hanging on to the forties, but had overtaken the two 35ft. boats, all four, Banshee, Nymph, Eurybia and Volusia, being centerboard craft. The turn was timed:



Clara	1 11 25	Volusia	1 36 24
Banshee	1 30 09	Kathleen	1 37 19
Nymph	1 33 12	Saracen	1 37 47
Eurybia	1 35 13	Amazon	1 38 50

The wind was blowing fresh by the time that all had turned, and the two big schooners were having a quiet brush, from which Sachem finally came out victorious. Banshee and Nymph held over toward the New York shore, in spite of the chances of less wind there. Kathleen and Saracen were near enough to make a very exciting race, the latter at first doing much the better work to windward, but after a time Kathleen not only made up what she lost just after coming on the wind, but added more to it. A little rain fell but did not hurt the wind, which was now blowing quite fresh over the Long Island hills, though very light along the opposite shore. Banshee stood in well, but finally came across, jammed hard on the starboard tack, for Hempstead mark. Nymph was some distance to leeward and also astern, but as they came on she outfooted Banshee rapidly, though not heading so high, until she was ahead when near the Long Island shore. How much good this would have done her had the wind held was a question, but she found it stronger well in shore, and a little more favorable as well. Banshee still had a safe lead, however, crossing Nymph's bows and tacking for the last leg to the turn. She held her lead at the turn and seemed a certain winner on her merits this time, but the wind was very light before the pair were far from the Long Island shore, Clara also lying almost becalmed.

When but a couple of miles from the finish a westerly breeze suddenly broke off Banshee and then left her absolutely becalmed, while Nymph, a few hundred feet to windward, took a nice little breeze that soon placed her ahead and a little later drifted her in, the winner by a minute. The thirties had been visible at a distance when the others turned Hempstead mark, first coming across the Sound on starboard tack and later on port tack for the turn, Kathleen with a long lead all the time. After turning, however, the wind dropped, and it was nearly two hours after Nymph and Banshee that they crossed the line. In the tedious drifting match across the Sound Saracen took the lead and won by 22s., elapsed time, neither being measured. Kathleen was handicapped a little by a new and unstretched mainsail, but she sailed very fast, and is apparently a very dangerous match for Saracen. The latter, handled by her owner, three friends and a paid hand, was the better sailed of the two, taking the lead at the start and also making up by good handling what she lost in

SECTIONS OF STEAM YACHT "W. B."

CRUISING STEAM YACHT "W. B."—DESIGNED AND BUILT BY DR. C. D. MILLER.

speed at the first turn. The honors of the sailing, so long as the wind held, certainly belonged to Banshee and Kathleen, but the luck landed the prizes in the lockers of Nymph and Saracen. The times were:

Nymph beats Banshee 1m. 10s. and Saracen beats Kathleen by 22s.; Eurybia beats Volusia 2m. 19s. elapsed time.

THE REPLIES OF THE NEW YORK Y. C.

THE following letters were made public last week as we were going to press, but we give them now in full. As will be seen in the two really important letters to the Royal Yacht Squadron and Lord Dunraven the New York Y. C. reiterates its position in standing by the last deed of gift. A great deal has been made of the exact relations between the secretaries of the Royal Clyde and the Royal Yacht Squadron, especially by the papers, with a view of proving that the latter was fully conversant from the first with the exact terms under which the challenge must come; and some elaborate arguments have been advanced to show just how fully Mr. Grant was in the confidence of Mr. Yorke, and that he must have known from the first that the new deed would be rigidly adhered to. The matter is but a trifling one and has little to do with the main question, which is: Now that the Royal Yacht Squadron does fully understand the case, will it withdraw all objections to the last deed and consent to challenge under it? It is certain that with Lord Dunraven pressing for a race on any terms, and with a boat that is too small to be feared, the New York Y. C. will not depart in the least from the position it has taken since the so-called revision was made. Some time must elapse before an answer can be received from the challenger and it promises to be late in the summer before it is definitely known whether the races will come off. In regard to the minor details of the races in negotiation between Lord Dunraven personally and the club, the latter has good grounds in its past experience for the position it has taken as to the manner of starting. The present method has one serious disadvantage, in that it places a great responsibility on the regatta committee, and even a perfectly fair and impartial decision on their part might, by a change of weather, give rise to a serious misunderstanding. This, however, seems less of an objection than the certainty of a great loss of time in the effort to start the races at a fixed hour, wind or calm, especially with a time limit.

NEW YORK, May 27, 1889.

DEAR SIR: Your letter of April 29, 1889, addressed to the Secretary of the New York Yacht Club, was duly received and was referred by the club to the America's Cup Committee. The committee has carefully considered the communication, and notes especially that in acknowledging the receipt of the letter of the Secretary of the New York Yacht Club, dated April 12, you state that it contains a condition in reference to the challenge of the Royal Yacht Squadron on behalf of the Earl of Dunraven not previously referred to. The committee presumes that you refer to the following provision: "But with the positive understanding than if the Cup is won by the club challengi. g it shall be held under and subject to the full terms of the new deed, dated Oct. 24, 1887."

I am instructed by the committee to point out to you that the provision referred to was not a condition imposed by the club upon the acceptance of the challenge now under consideration, but it was the condition upon which the club consented to sail a race under the rules which governed the contest between the Genesta and Puritan, Galatea and Mayflower, Thistle and Volunteer, and that such condition was clearly stated in the letter of the Secretary of the New York Yacht Club to Mr. York, Secretary of the Royal Clyde Yacht Club, dated Dec. 14, 1888, as you will see by the following extract:

"And whereas, in the deed of gift by which the Cup is now held by this club, any mutual agreement may be made between the challenged and challenging party; therefore, be it

"*Resolved*, That the terms under which the races between the Genesta and Puritan, Galatea and Mayflower, Thistle and Volunteer were sailed are satisfactory to this club, and a challenge under these terms would be accepted, but with the positive understanding that if the Cup is won by the club challenging it shall be held under and subject to the full terms of the new deed, dated Oct. 24, 1887, inasmuch as this club believes it to be in the interest of all parties, and the terms of which are distinct, fair and sportsmanlike."

In your communication of March 19, 1889, addressed to the Secretary of the New York Y. C., conveying the challenge of the Earl of Dunraven, you make the following specified reference to that letter: "In accordance with your cable of Dec. 12, 1888, to Mr. W. York, secretary of the Royal Clyde Y. C., and your letter confirming the same, stating that in the event of a challenge for the America's Cup the same terms would be accepted as in the Volunteer and Thistle matches, I have now, on behalf of the Royal Yacht Squadron and in the name of the Earl of Dunraven, a member of the squadron, to claim the right of sailing a match for the America's Cup," etc.

Thus the condition in question is a part of the terms of the challenge as submitted by the Royal Yacht Squadron and accepted by the New York Y. C. In reference to the mention of such provision in the letter addressed to you by the secretary of the New York Y. C. under the date of April 12, I am instructed by the committee to say that such mention was in no way intended as the imposition of a new condition, but simply as the reiteration of terms already stated and to which you had not referred.

The committee has seized this early opportunity to lay the facts of the case before you as they appear from the correspondence, for the New York Y. C. could not waive this condition and could consent to no arrangement for a contest which would leave any question open concerning the conditions under which the Cup should be held if won by the challenger. I remain, dear sir, yours faithfully,

JAMES D. SMITH, Chairman.

To Richard Grant, Esq., Secretary Royal Yacht Squadron.

NEW YORK, May 28, 1889.

MY LORD: I have the pleasure to acknowledge receipt of yours of May 3, and have submitted the same to the committee. They request me to state in reply to your remarks under head of "Date of Races," that they will be glad after your arrival to make such arrangements as to actual dates of sailing as may then be deemed most convenient. They fully agree with you as to the desirability of getting the races off within a reasonable time, but it must be borne in mind that the starting point is about 25 miles from the city, and that it is therefore questionable, on account of supplies, etc., whether either party would care to race more than two days consecutively at the most. This, however, can be arranged much better by word of mouth than by letter, and if agreeable to you, the committee will leave the question in the present shape till your arrival.

As to time of starting, the committee, having had considerable experience in this matter, state unhesitatingly that, in the interests of both parties, and especially with a view of getting the match sailed off with as little delay as possible, the whole question of starting ought, in accordance with their letter to you of the 15th ult., to be left entirely in the hands of the regatta committee, but they are confident that this question can be readily settled to the satisfaction of both parties on your arrival here, and will therefore leave it open till that time—no start, however, to be made in a fog.

Your wishes as to marking out courses shall of course be carried out, and suitable stakeboats with easily distinguishable marks will be provided.

The appointment of Gen. Paine as umpire would, of course, be entirely acceptable to the committee, but as it is uncertain whether that gentleman will be able to act, the committee would like to suggest as an alternative name that of Capt. Lloyd Phoenix, of the Intrepid.

The committee feel that all the more important details of the races may be now considered as settled and the match, subject, of course, to the formal acceptance by the Royal Yacht Squadron of the terms on which the Cup is to be held if won by your yacht. On this point the committee will have the pleasure of addressing you separately in reply to the remarks contained in yours of the 4th inst. to the secretary of the New York Y. C. I remain, my Lord, very sincerely yours,

JAMES D. SMITH, Chairman.

To the Right Honorable the Earl of Dunraven, etc.

NEW YORK, May 29, 1889.

MY LORD—Your letter of the 4th inst., addressed to the secretary of the New York Y. C., having been referred to the America Cup Committee, I have now the pleasure of acknowledging receipt of same on their behalf. The club also received a letter from Mr. Richard Grant, secretary of the Royal Yacht Squadron, upon the subject to which you refer, but I inclose herewith a copy of the committee's reply thereto. This reply calls the attention of the Royal Yacht Squadron to the facts of the case as they appear from the correspondence, and you will see that the New York Y. C. could consent to no arrangement for a contest which would leave any questions open concerning the conditions under which the Cup should be held if won by the challenger. The matter now remains with the Royal Yacht Squadron, from whom the committee await a reply, and they have no doubt that such reply will show that no obstacle remains in the way of perfecting the arrangements for a match, which the members of our club look forward to with the greatest interest and pleasure. I remain, my Lord, very sincerely yours,

JAMES D. SMITH, Chairman.

To the Right Honorable the Earl of Dunraven, K. P., 20 St. James square, London, W.

THE TEN-MONTHS'-NOTICE CLAUSE.

IN commenting on the objections to the last deed of gift the Boston *Herald* says: "Gen. Paine knows better than any one else the great difficulties and disadvantages under which American yachtsmen were put. Challenged at the last moment by an owner with boat already built, the American was expected to design and build a boat and get her in trim in six months, and such an advantage taken was called sportsmanlike. Ten months' notice is fair, both parties have ample time in which to prepare, and then the contest is placed where it should be best boat win."

As we have repeatedly shown, this plea for a longer notice is entirely groundless in view of the action of all former challengers, who have been only too anxious to arrange all terms a year in advance. The New York Y. C. had ample notice in October, 1886, of a challenge from the Royal Clyde Y. C., but it flatly declined all overtures for a friendly agreement as to size of boat, under the plea that such an agreement would be informal and not a challenge under the existing (second) deed of gift. The New York Y. C. distinctly prohibited a challenger from giving more than seven months' notice; in cases where a longer notice has been given, as by Mr. Webb in 1884 and the Royal Clyde Y. C. and Mr. Watson in 1886, it has brusquely declined to recognize such notice, compelling the challenger to wait until March before sending his challenge. In the face of these facts it is absurd to talk about being taken at a disadvantage and the necessity for ten months' notice. The great point of a ten months' notice is not that the club shall have fair warning to prepare for a challenge, but that it shall have all the leading dimensions of the challenging yacht, in order to be able to outbuild her. Such a demand is so unfair and mean that it cannot be disposed of by the general defense that Gen. Paine was on the Cup committee, and that he would not be a party to any unfairness. The holder of the America's Cup has a right to the measurement of the challenger by the method in vogue, but it has no right to inquire into the specific dimensions which do not enter into that measurement, such as beam at two points and draft; nor has it any right to limit the designer of a challenging yacht in the alterations of her dimensions when the actual work of building commences, nor in altering the trim of his boat after trial.

The whole of the ten months clause is cleverly framed to limit and hamper the designer of a challenging yacht, and to give the greatest possible amount of information to his opponents in addition, they giving nothing in return. It is more than likely that no one, on either side, would object to the mere condition that ten months' notice must be given. Such a demand would be fair enough, and no challenger would be likely to object. The great points, which are carefully avoided by the *Herald* and other papers which have commented on this clause, are the demand for information and the disadvantages under which it places the designer of a challenger. His design must be completed and mailed not later than the first week in December, in order that a series of races may be sailed before Nov. 1. He must give the most important details to his opponents thus far in advance, with no guarantee from them as to the boat they will meet him with in nearly a year's time; and at the same time he is bound not to depart from the dimensions thus put on record, or to change the ballast or trim of his proposed boat after trial. It is not the demand for ten months' notice, or the clause admitting centerboards to race for the Cup which have caused the strong objections to the last deed of gift, but it is such conditions as these mentioned, designed to keep the Cup in the hands of its present possessors.

ATLANTIC Y. C. ANNUAL REGATTA, JUNE 11.

THE Atlantic Y. C. was particularly unfortunate this year in the weather for its annual regatta, the day opening with little wind, a heavy rain squall coming up at the hour for the start, 10:30 A. M. About noon the sky cleared and a light wind from the west came over the bay, so a start was made at 12:41, the tide being then on the last of the ebb. The fleet went over on starboard tack, Titania leading, with Grayling and Sea Fox after her. Shamrock, Gracie and Katrina were together under Sea Fox's lee, the former working clear of the pack, while Gracie and Katrina were hampered by want of room. The starting line was a particularly bad one, being located in the midst of a fleet of yachts at anchor. The times were:

Titania	12 42 54	Banshee	12 51 45
Grayling	12 43 19	Ilderan	12 51 45
Sea Fox	12 44 01	Stella	12 51 45
Gracie	12 44 33	Bijou	12 53 44
Katrina	12 44 54	Marjorie	12 54 19
Fanny	12 46 33	Tarpon	12 54 19
Anaconda	12 47 28	Ma Belle	12 54 40
Clara	12 48 14	Wona	12 55 16
Daisy	12 48 55	Arab	12 51 35
Roamer	12 48 58	Frolic	12 55 46
Cavalier	12 46 58	Kathleen	12 56 38
Hypatia	12 51 23	Mouette	12 56 45

For over half an hour the fleet merely drifted, Anaconda going ashore off Gwit's Head and taking a line from a passing tug to get off. Finally a light wind came in from the Narrows, and Titania, Shamrock and Grayling managed by good handling and "leaders' luck" to get well outside the forts, Shamrock now leading. The new 30, Kathleen, was doing very well, having already passed her principal opponent, Arab, when the schooner Fearless on the port tack crossed her bows and knocked her bowsprit off; Kathleen being on starboard tack. One of her Corinthian crew who was on the bowsprit end was taken on board the Fearless, who continued in the race, Kathleen of course giving up. The wind soon fell, and it was 5 P. M. before Shamrock, the leader, was off Buoy 8½, with Titania half a mile astern and Grayling well to leeward of both, the wind being light S. E. Soon after a very violent thunderstorm came up, the sky being black and threatening in all directions.

Katrina, Sea Fox, Gracie and others had given up, but those that were left dropped all canvas, only Shamrock and Titania running under foresails. The storm, though very violent and destructive in this city, did not reach Sandy Hook, there being merely a very heavy rain for half an hour, with no wind. About 6 P. M. the sky cleared, the leaders setting all sail for the Scotland, then but a couple of miles away. There was no prospect of the race finishing within the limit, 10 hours, especially as the ebb tide was now setting out. On being hailed by the judges Mr. Maxwell declared his intention to continue the race in spite of the calm and a heavy mist now rising, and Titania also held her course. The tug returned, passing the other yachts becalmed near Buoy 8. The stakeboat remained at the finish all night to time any boats that might finish, but none succeeded in finishing within 10 hours.

SING SING Y. C.—The pennant regatta of the Sing Sing Y. C. was sailed on June 7 over a 10-mile course on the Hudson; the wind being strong southwest. The times were:

CLASS 1.

Alice, G. F. Secor	2 06 40	Lurline, J. T. Washburn	2 24 55

CLASS 2.

Aller, Sainstag Bros.	1 43 53	Cora, B. R. Smith	2 00 22
Madge, Ralph Brandreth	1 49 19	Lotta, Washburn Bros.	2 09 26
Pauline, Jas. Smith	1 56 27		

CLASS 3.

Surprise, Osborn & Hoff	2 37 04	Scola, E. S. Pelham	2 37 38

MINNETONKA Y. C.—The first regatta of the Minnetonka Y. C., on Lake Minnetonka, near Minneapolis, Minn., was sailed on May 30, the corrected times being:

Atlanta	2 08 38	Catherine	2 31 50
Curlew	2 21 07	Princess	2 37 09
White Wings	2 50 52		

YAMPA.—Mr. Chapin's schooner has reached the Azores, her time from New York being 3 days, 21 hours.

CORINTHIAN Y. C. OF NEW YORK.

THE second annual regatta of the Corinthian Y. C. of New York will be sailed on June 19, being open to yachts of any recognized yacht club; to be steered by amateurs. The crews are limited to one man for each 5ft. of length on deck, and one professional is allowed for each 10ft. of l.w.l., or fraction of 10ft., thus a 40-footer may have a crew of 8 to 12, of whom but 4 can be professionals. The yachts will be classed by corrected length; sail area, measured as by the Seawanhaka rule, plus l.w.l. length, divided by 2. The classes will be 50ft. and less than 60, sailing rating as above: 40ft. and less than 50., 30ft. and less than 40, 25ft. and less than 30, and less than 25ft. A flying start will be made at 10 A. M.

Course No. 1, 33 nautical miles. Starting from a line between the club steamer and buoy 15 to buoy 10 on Southwest Spit, keeping it on port; thence to and around buoy 8½, keeping it on port; thence to and around Sandy Hook Lightship, keeping it on starboard, and return over same course to buoy 15, keeping to eastward of buoys 9, 11 and 13 on West Bank, and outside of buoy 5 on point of Sandy Hook, going and returning.

Course No. 2, 26 nautical miles. From starting line to buoy 10 Southwest Spit, keeping it on port; thence to and around buoy 8½, keeping it on port, thence to and around Scotland Lightship, keeping it on starboard, and return over same course to buoy 15, keeping to eastward of buoys 9, 11 and 13 on West Bank, and outside of buoy 5 on point of Sandy Hook, going and returning.

Course No. 3, 19 nautical miles. From starting line to buoy 10, keeping it on starboard; thence to and around buoy 1, off Point Comfort, keeping it on starboard; thence to buoy 15, keeping to eastward of buoys 9, 11 and 13, going and returning.

If a stakeboat is anchored off buoy 1 it is to be rounded instead of buoy.

Course No. 4, 15 nautical miles. From starting line to and around buoy 16 on East Bank, keeping it on starboard; thence to and around buoy 10, keeping it on starboard; thence to finish line, buoy 15, keeping to eastward of buoys 9, 11 and 13, going and returning.

The first class will sail course No. 1, the second No. 2, the third No. 3, the fourth and fifth No. 4. The regatta committee includes Messrs. E. B. Clarke, W. H. Plummer, W. Gardner and J. W. Wilson.

ATLANTIC Y. C., LADIES' DAY, JUNE 3.—The annual "ladies' day" race of the Atlantic Y. C., was sailed on June 3, after being once postponed. The weather was all that could be desired, clear, warm, and with a fresh breeze. The course was 8 miles in the Upper Bay, off the Atlantic Basin. The times were:

CLASS 2—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Cavalier	3 31 20	4 47 00	1 15 40	1 15 40

CLASS 3—SCHOONERS.

Azalea	3 30 30	4 35 50	1 05 20	1 05 20
Fearless	3 32 00	4 45 00	1 13 00	1 11 00

CLASS 3—SLOOPS.

Hildegarde	3 30 50	4 32 55	1 02 05	1 02 05

CLASS 4—SLOOPS.

Anaconda	3 33 05	3 34 55	1 01 50	1 01 50
Roamer	3 34 10	3 45 03	1 10 53	1 09 35

CLASS 5—SLOOPS.

Stella	3 35 05	4 51 55	1 16 50	1 16 50

CLASS 6—SLOOPS.

Polly	3 35 07	4 52 50	1 17 45	1 17 43

CLASS 7—SLOOPS.

Daisy	3 38 10	4 52 03	1 13 52	1 12 23
Hypatia	3 38 30	4 51 45	1 13 15	1 13 15

CLASS 8—SLOOPS.

Gem	3 38 10	4 58 00	1 19 50	1 19 50

CLASS 9—SLOOPS.

Iris	3 39 55	5 09 50	1 29 55	1 29 30
Frolic	3 39 40	5 03 00	1 23 20	1 22 55
Mouette	3 37 05	5 06 50	1 29 45	1 28 17

CLASS 11—CATS.

Marjorie	3 38 50	4 53 30	1 15 00	1 15 00
Lotta	3 39 40	Did not finish.		

A prize, an oxidized silver breastpin, was given to each lady on board of a winning yacht. Roamer was protested, but the protest was not decided. During the afternoon a band was in attendance on the grounds of the club, and the club house was opened to visitors who did not care to go afloat, a dinner being served after the race.

MONATIQUOT Y. C.—The opening regatta was sailed on June 6, off Weymouth, in a reefing breeze from the west, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Moondyne, A. J. Shaw	24.10	1 28 32	1 02 44

SECOND CLASS.

Posy, R. G. Hunt	22.03	1 29 48	1 01 32
Eureka, E. B. Rogers	20.08	Disabled.	

THIRD CLASS.

Flora Lee, E. B. Glover	17.05	1 10 54	0 45 21
Peri, Frank Driscoll	18.10	1 13 50	0 49 43
Hester, R. B. Blackmur	19.11	1 13 59	0 50 52
Maud, H. Nash	19.02	1 14 40	0 50 52
Diadem, L. A. Hayward	18.02	Disabled.	

The judges were Henry Gardner, E. P. Worster, G. H. Bicknell, E. T. Jordan. In the evening a dance was held, with music by Baldwin's orchestra.

NEW JERSEY Y. C.—But seven yachts started in the 18th annual regatta of the New Jersey Y. C. on June 10, the times, as given out, being:

CLASS D—JIB AND MAINSAILS, OVER 20FT.

	Start.	Finish.	Elapsed.	Corrected.

Dash	10 51 20	1 57 45	3 06 25	3 01 55

Winners: Eagle Wing, Leader and La Mascotte.

SAVIN HILL Y. C.—The first race of the season was sailed on June 8 in a light S.W. wind, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
White Fawn, W. C. Cherrington	23.01	1 56 45	1 12 52
Annie Maud, F. O. Vegelahn	23.03	1 53 00	1 24 26

SECOND CLASS.

Peri, Frank Driscoll	19.00	1 17 15	0 51 28
Nora, E. M. Denny	16.09	1 24 30	1 02 02
Avis, J. H. Odell	18.09	1 39 00	1 10 32

The judges were Messrs. Lyman Spalding, Reuben K. Rice, L. T. Howard.

DORCHESTER Y. C.—The first regular race for the season was sailed off the club house, Harrison Square, on June 5, starting at 3 P. M., the wind at the start being light southwest, shifting to southeast. The summary was:

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Faustina, W. P. Whitmarsh		1 34 50	

FIFTH CLASS.

Peri, F. J. Driscoll		1 50 10	
Water Witch, M. J. Kiley	20.06	1 58 30	

SIXTH CLASS.

Rocket, H. M. Faxon	17.11	1 46 16	1 17 04
Paradox, L. M. Clark	19.00	1 58 07	1 30 10
Psyche, Frank Gray	18.06	2 02 41	1 34 10
Mirage, John Dearborn	18.08½	2 06 45	1 38 22½

The judges were W. C. Gay, A. J. Clark and E. R. Tilton.

OBJECTIONS TO THE DEED OF GIFT.—"The centerboard bogie is the last dying defense of the new deed. All the other preposterous conditions have been thrown overboard by the writers on the subject, and were never indorsed by any considerable portion of American yachtsmen. This is, so far, satisfactory, and we see no objection to the New York Yacht Club and Royal Yacht Squadron agreeing to adopt a by-law as to centerboards; but, as we pointed out last week, there is nothing in the original and only legal deed under which the Cup can be held to prevent centerboards being used, and no club holding the Cup could interpolate any condition barring centerboards. We think it very desirable that the New York Yacht Club, out of their experience with the Cup, should draw up certain by-laws to attach to the original deed, but they should not part with the Cup under any other deed but that bearing the signatures of the five donors. The two deeds signed by the surviving donor in point of law are not worth the paper they are written on."—*Field, June 1.*

PARADOX.—Mr. W. Leybourne Popham's lugger, Paradox, designed by Mr. W. C. Storey, was launched on June 7 at Eastbourne, Eng., where she was built by G. Gausden. She is 70ft., l.w.l., 20ft. beam, with two large lug sails.

WHAT WE HAVE ALWAYS CLAIMED.—In speaking of the sale of the Volunteer the Boston *Herald* says: "The boat is of no earthly use to a man as a pleasure boat, because she is too large to handle as a sloop, and too expensive to run, and would have to be turned into a schooner." This bears out the point that the FOREST AND STREAM made in first commenting on the new deed of gift, that the 90ft. class was a most undesirable and unnecessary one, and that it could not be permanently kept up. Mayflower was afloat for the first time in public on Saturday under her new schooner rig, and Volunteer must follow, sooner or later. The *Herald* also hints that a scheme is on foot to buy her in order to prevent her from contending for the Cup; but there is probably no truth in the rumor.

VALKYRIE'S MEASUREMENTS.—The official measurements of Valkyrie are given in the *Field* as follows: L.W.L., 69.64ft.; sail area 6588.1sq. ft.; rating 76.46. This, we believe, is with a sprit instead of a clubtopsail, so that with the latter, which she would carry under New York Y.C. rules, she would measure about as we estimated two weeks since, 6,684ft. The photos of Valkyrie have just reached New York, and are being used as the basis for some very absurd calculations, the *Times* giving her a sail area of 8,208ft. The above figures show, as we have contended from the first, that she must be smaller than the American boats of her length.

SEA BIRDS AND OIL ON WATER.—The English *Army and Navy Journal* prints a letter from a naval officer, who suggests that the ancients, who knew the value of oiling troubled waters, learned this habit from observing the sea birds. All the fish-eating birds, cape-pigeons, petrels and the like, eject oil from the mouth when captured. In the South Atlantic and South Pacific the writer had witnessed sea-birds floating in spaces of comparatively quiet water when the sea around was rough. The unusual smoothness of the water was evidently due to considerable quantities of oil deposited by the birds.

HUDSON RIVER Y. C.—The 17th annual regatta of the Hudson River Y. C. was sailed on June 3, in a very light N.E. wind, the courses being off Seventy-fourth street, River. The winners in each class were: Argo, H. F. Allen; Aggie, J. Kaufer; Cameron, J. McCarthy; Gesine, W. Luther; Oliver, W. Arndt; Lone Star, J. Reis, and Ripple, C. E. Mott. The judges were Frank Oliver, Com. A. J. Prime, and Henry Andruss. The regatta committee included E. R. Wilson, H. F. Allen, J. Kelly, J. R. Tucker and John Reisenweber.

CEDAR POINT Y. C.—The first of a series of five monthly races was sailed on June 4 over a 15-mile conrse, in a strong breeze and some sea. The winners were: Class E, Carrie, Chas. Hill; Class F, Teal, Frank Burrett; Class H, Roana, John H. Jennings; Class K, Rival, F. Hitchcock; Class L, Kit, Herbert Woodward.

STEAM YACHTS, BOATS AND CANOES.—We have received from the St. Lawrence River Skiff, Canoe and Steam Launch Co. a very complete catalogue of small craft, including the St. Lawrence skiff, of which they make a specialty, together with canoes and steam launches. The illustrations of the various boats are very good, showing both lines and details of fittings.

ANOTHER CUP FOR THE FORTIES.—Com. Henry S. Hovey, of the Eastern Y. C., has offered a handsome cup for the 40ft. class in the regatta of the club on July 15, off Marblehead, and 8 entries have already been made.

ARRIVAL OF THE LADY EVELYN.—The keel schooner Lady Evelyn, lately purchased in England by Sir Roderick Cameron, arrived off Staten Island on June 8, after a somewhat stormy passage, in which some damage was done to her bulwarks and skylights. She left Cowes on May 1, taking a southerly route and meeting heavy S. W. winds.

LAKE CHAMPLAIN Y. C. OFFICERS, 1889.—Com., Colonel W. Seward Webb, of New York; Vice-Com., W. A. Crombie; Meas., A. C. Tuttle, Burlington; Pres., John Gregory Smith, St. Albans; Vice-Pres., Elias Lyman B. LeGrand Cannon; Treas., Horatio Hickok; Sec., Joseph Antel, Burlington.

ROYAL CANADIAN Y. C.—A lively race was sailed on June 1 for the following yachts, over 25ft. l.w.l.: Aggie, Marlatt & Armstrong; Verve, N. B. Dick; Escape, F. Turner; Rivet, Hume Blake; Whistlewing, E. C. Rutherford. The wind was strong southwest: Verve won, with Aggie second and Rivet third.

KATRINA AND SHAMROCK.—A series of three matches was sailed last week between Katrina and Shamrock, under the management of the New York Y. C., Katrina winning every race.

CORINTHIAN MOSQUITO FLEET.—Two successful races were sailed at Larchmont on June 8 and 10, but reports were received too late for publication this week.

ELF, Mr. Wilkinson's 30ft. cutter, left Boston on June 6 for New York, where she will enter the races this week. Her owner, with three friends sails with her.

VOLUNTEER.—Gen. Paine has lately advertised Volunteer for sale in a Boston paper.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

M. D. R., Elmira, N. Y.—The A. K. R. number of the Yorkshire terrier Lady Dido is 6923.

T. T. L.—Maine is a good State, and you will do well to communicate with F. C. Barker, Rangeley, Me.

E. L. B., Fitchburg, Mass.—Would a Marlin .32-40 rifle be large enough for deer? Ans. Yes, where the hunting is done in a timbered country.

A. G., Ottawa, Can.—Dr. M. H. Cryer's Max won first in the open class for pug dogs at New York in 1884, and John Parker's Punch won first in 1885.

E. M. B., Lowell.—Please give date when entry of cocker spaniel was sent, also name of dog. We cannot trace anything from the meager information given.

M. E. A., New York.—Will you kindly settle an argument about the plumage of the quail. A says the white-necked bird is the male one. B says the brown-necked one is the male bird. Which is right? Ans. A.

L. S. G., Richmond, Va.—I have a very fine gun, and would like to ascertain the trigger pull; how shall I do it? Ans. Set the trigger, then ascertain with a spring scale, the weight indicated by the pull to fire the gun. You can readily accustom yourself to a light or heavy pull.

G., Negaunee, Mich.—While fishing last week in a small brook for trout I caught 30 trout that weighed 20lbs., the largest was 16½in. long and weighed 3lbs., and was 11in. around the thickest part. Is this large for brook trout, or how large do they grow? Ans. See reports of larger fish in our angling columns from week to week.

C. W. S., New York.—Will you kindly tell me the best locality on the Delaware River for black bass fishing? Ans. The tributaries of the upper Delaware abound with black bass. Callicoon (N. Y. & L. Erie R. R.) is a good place. Egypt Mills, Pike county, Pa., is noted at present. Go to Mr. Van Gordon's; board about $1 per day; minnows and helgramites can be had for bait; boats can probably be obtained at the house.

F. P., Saugerties, N. Y.—It was stated in your paper several weeks ago that the upper waters of the Delaware and the Susquehanna were teeming with black bass. Will you be kind enough to furnish more specific information, especially in regard to the Delaware, saying exactly at what point it would be best to strike the river with a view to fishing with a fly, and whether the fishing would be from a boat or by wading? Ans. Go to Port Jervis (N. Y., L. E. & Western R. R.). Between that place and the East Branch of the Delaware you will find many good points for black bass, among them Pond's Eddy, Lackawaxen, Cochecton and Callicoon. Boat fishing is preferable.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

The Fishing Rod Manufacturer,
Post Mills, Vt.
(Mention this paper).

No Chemicals.

W. BAKER & Co.'s Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ANSWERS TO CORRESPONDENTS.

DAMS.

IF it be remembered that only within a short period has any considerable attention been paid to the conserving of a food fish supply in the inland waters of this country, we need look no further for an explanation of the improvident and foolish methods of damming rivers and streams without making any provision whatever for the ascent of fish to their spawning grounds. So eager have the American people been to exploit the material resources of the land, its forests, mines and agricultural capabilities, that they have gone ahead without thought of what a tremendous waste they were guilty of in respect to the wealth of the waters. In this way it has come about that one of the most important questions of the day in connection with our inland fisheries is the provision and maintenance of suitable fishways in the thousands of dams, which now constitute insurmountable barriers to the ascent of fish.

The laws on our statute books governing this subject are by no means satisfactory. Take New York. Here before a necessary fishway can be constructed it must be made a subject of special legislative enactment. When the Hudson has been stocked with salmon, the next thing in order is found to be the task of getting a bill through the Legislature providing fishways, that the fish may make their way to the spawning grounds. This is equivalent to jeopardizing the whole project by the whims, stubbornness and petty peanut trading of the professional politicians who make up the legislative body. There should be no necessity of going to the Legislature for individual fishways where the State is not an owner. The law should be a general one compelling dam proprietors to provide the ways whenever called upon to do so by the Fish Commissioners.

The Illinois law is more sensible than that of New York. It requires all owners of dams to erect suitable fishways, and provides that in case the owners fail to build the fishways after due notice from the Fish Commissioners, the Commissioners may build and recover from the owners double the cost of so doing. The chief drawback to this system, as found in practice, is that the Commissioners have no funds to pay for the work as it progresses, and cannot therefore carry out the intent of the law without special legislation, or unless the funds are guaranteed to them by outside sources.

Last year we reported a movement set on foot by the Fox River Fish and Game Association, a body organized at Chicago, for the special purpose of supporting the Commissioners in the task of providing fishways in the Fox River. This river was obstructed by twelve dams impassable by fish; and when the owners refused to build fishways the Commissioners were powerless for want of funds. The Association therefore, as the most wise and practicable step, pledged the necessary financial aid; notice was served on the owners; and at last accounts the evil in this particular case was in a fair way to be righted.

So far, throughout the country at large, the fishway problem is not settled; it is one to which the several Legislatures may profitably give their attention. The expenses of erecting these ascents should be borne by dam owners; individuals should no longer be permitted to practice this imposition on the community. As the enormous value of our waters and the possibility of largely augmenting that value become better understood, fishways will multiply and rivers and creeks will more nearly contribute their full share to the wealth of the country.

MAINE DEER DOGGERS.

THE report which comes to us from an intelligent correspondent, of lawlessness in the Nicatous Lake region of Maine, is not at all surprising. That district has long been known as one where the law against dogging deer was systematically derided and set at naught. Deer always have been driven into the lake there and killed in the water, and in all probability they will be killed in that way for years to come. The root of the evil is this, that there are in Boston, New York and other cities men who find satisfaction in going "down to Maine" and defying the game law in this particular respect. They want deer, and they want them in the water, where they can have a dead sure thing of it. In the Nicatous Lake district live men who are always ready to take these city fellows' money, if their mongrel hounds can earn it for them by dogging the game into the lake. They are always ready for a job of this sort, and just so long as there are city tourists in Maine willing to pay the natives for deer dogging, the practice will go on.

An end might be put to it perhaps if the suggestion of our correspondent were acted upon and a warden or a force of wardens were assigned to the region. To arrest and convict the offenders would be no child's play, for there are among them men who have vowed to shoot down the wardens as wardens have been shot before. The enforcement of the non-hounding law in the Nicatous Lake region is one of the grave problems for the Maine Commissioners to solve; in it they have to cope not alone with the defiant spirit of the natives, but as well with the rascality of Robin Hoods from the cities, who seem to find in their hunting added zest if it be in violation of a wise law.

SNAP SHOTS.

WE understand that Captain Boutelle, the new Superintendent of the National Park, is about to start out on a long trip with pack animals to visit remote sections of the Park. It is expected that he will start from the Mammoth Hot Springs, go through the mountains to the western boundary line and follow that as nearly as possible south to the Falls River Basin. He will visit the summer range of the buffalo in the Park. This indicates that Captain Boutelle understands that the first thing necessary to an intelligent care of the Park is a knowledge of the region. We have good reasons for stating that Captain Boutelle will take all possible measures not only for the protection of game in the Park, but also, when it is practicable, will lend his influence to assist in enforcing the Territorial game laws. The public is to be congratulated on the wisdom and intelligence which seems to be directing affairs in the National Park.

The posting of trout streams goes on apace, and the questions involved in the custom are coming year by year to have more importance. In the last report of the Wisconsin Commissioners of Fisheries they say that the renting of streams in some parts of the State has become so common as to make virtually a monopoly of the fish food supply, and the Board will henceforth decline to furnish fry for stocking such waters. In New York many are the bitter disputes over certain streams which have been taken up by clubs to the exclusion of the public. The same holds true of Connecticut, whence a correspondent, who has done very much in years past to secure proper game laws and to promote their observance, writes us: "To my mind, one fact is certain; that is, that all fishing for the general public in this State, except in navigable waters, is a thing of the past, all good streams and ponds having been taken up by clubs or individuals. I exceedingly regret this state of affairs; it is not right, but cannot be helped, as far as I can see. And what makes it worse is, that it was just at a time when the general public was beginning to appreciate the game laws and to respect them."

Human nature is much the same the wide world over. The slave of business here in America, who cannot resist the impulse to take to the woods, when the fish are biting, has his counterpart in far off Siberia. In Kennan's paper in the June *Century* describing the Kara penal settlement is a paragraph relating how in early summer, when the convicts of the free command hear the notes of the cuckoo, they run away for a free life in the forests. The Russian name of the cuckoo is Kukushna; it is called by the convicts General Kukushna; its first call in those northern wastes is a sign that summer has come; and those who in response to that note run away are said "to go to General Kukushna for orders." It is stated that no less than 30,000 of these free convicts obey General Kukushna's orders, and live the life of a brodyag, or tramp, in the trackless Siberian wilds. Their period of freedom is short; they are constantly pursued and hunted down by the soldiers, and in the end are compelled to return to their convict life; but in spite of all this, it is related, they cannot resist the cuckoo's early summer summons.

In our issue of May 2 we spoke of the work of the Sociedad de Caza, of Havana, Cuba, in introducing exotic species of game birds into that island. The importation of Spanish partridges which we then reported has been followed by another one of chachalacas from Mexico. These promise to constitute a valuable accession to Cuba's game resources; they are strong, hardy birds, easily domesticated, and will no doubt thrive in their new habitat. The Sociedad has much to contend against, notably the lawless spirit which prevails in Cuba; but a step in advance has already been gained, for the club has secured an order from the Governor of the Province to the officers of the law for the strict enforcement of the close season, and although this will be resisted by all the instincts of the race, the energetic club will no doubt succeed in a comparative degree.

The floods in Pennsylvania have played havoc with many famous trout streams of the Susquehanna watershed. Drift and débris have effectually blotted out some of the streams; some have been diverted from their old courses; the channels of others have been scooped out into ditches; and the banks of others are unsightly with driftwood and that dismal desolation which always is left in the path of a flood. Bridges have been swept away, favorite pools filled up, and the ancient, familiar loved scenes destroyed beyond recognition and enjoyment, and beyond reward to the angler as well.

Our trap columns give evidence of the popularity of this form of sport. The increased attendance at tournaments, the frequency of club shoots and the multitudes of new clubs constantly springing up all testify to the growth of trap-shooting of artificial targets. It is doubtful if such popularity could ever have been attained for live bird shooting at the trap, even were the supply of live pigeons sufficient.

"For shooting, fishing and the enforcement of the game laws." That is the customary formula of a new club's purpose. As a matter of fact the shooting and fishing programme is carried out, but there soon ceases to be any fun in the rest of it; and all the game and fish protected could be stuck into a small headed man's hat. But the formula has the dignity of age, and promoters of new clubs will keep on using it.

In Australia recently a sale of thoroughbred horses and greyhounds resulted in larger returns for the dogs than the horses. We have not got so far as that yet in this country, but enthusiastic greyhound fanciers are looking forward to a time when America will be as advanced as Australia in these matters.

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[*By a Staff Correspondent.*]

III.—WATER SEALING.

WITHIN the last few years an entirely different method of taking fur seals has been pursued on the North-west coast and in the Bering Sea. Instead of killing the seals upon their "hauling grounds," that is, upon the land, the sealers look for them in the water; either as they are on their way north in the spring, or when they have come off their hauling grounds to feed. In other words, the sealers have adopted the method of seal hunting which has always been employed by the Indians of the British Columbia coast, who know the seals only as migrants and not as residents.

The seals which pass the months of May, June, July, August, September and October on their breeding grounds, leave these islands at the approach of winter, and passing southward disappear into the illimitable waste of waters of the Pacific Ocean.

Just where they go, or what they do for the next two months, is not certainly known, but it is more than probable that they spend their time resting and feeding in the open sea, recuperating from the exhausting cares of the breeding season. However this may be, we know that on their return journey for their summer home, the seals reach the coast of California and British Columbia at the same time, usually from Dec. 15 to Dec. 25. They are always off these coasts by Jan. 1.

The sealing vessels usually leave Victoria, B. C., in December, and proceed south as far as the Farallone Islands to meet the advancing droves. They spend the months of January, February and March off the coasts of California, Oregon, Washington Territory and British Columbia, and in May return to port to refit for their voyage to the Bering Sea. Each captain keeps a careful record of the date and place where he finds seals abundant, and the next year tries to be back at the same spot at the same time. This does not always insure a good catch, for the seals are somewhat irregular in their movements, but usually they pass the same places at about the same dates each year. When the seals have been found, the vessels try to keep with them as long as possible.

No seals are killed nearer the land than from fifteen to twenty-five miles, and the animals are found and killed up to 125 miles from the coast. The "fishing" is more successful at the greater distances. Near the shore the animals are moving forward and backward, traveling either to or from their feeding grounds, and so are always awake and difficult of approach, while, after reaching their feeding grounds and having a hearty meal they turn over on their backs and go to sleep on the surface of the water. It is at this time that the sealers take them.

Two methods of taking the seals are employed; (1) with white crews and (2) with Indians, and the vessels used are schooners of from 25 to 100 tons burden.

If the crew consists of white men, it usually numbers from 20 to 25. For a crew of this number six boats would be required. These sealing boats are double-ended, built on the same principle as a whaleboat, and are so small that two men can pull a pair of sculls each. They are provided with a mast and sail, and when there is wind they proceed under canvas. Each boat carries a compass and a fog horn, and the vessel has always a fog horn and a bomb gun or small cannon, for sometimes the boats get lost in a fog, though it is unusual for anything serious to happen to them. Each boat is provided with a water breaker, holding from three to five gallons, and with enough cooked food for two or three meals. The sculls are fitted with leather, so that progression shall be as nearly noiseless as possible. The seal hunter carries a repeating rifle and a double-barreled shotgun and an ammunition box.

One day on board a sealing schooner is very like another. If the vessel is on good sealing ground, and at the approach of evening considerable numbers of the animals are in sight, the captain endeavors to remain as nearly as possible in the same position. If it is calm or the wind is light, he heaves to, or if there is much wind, he beats a little to windward. If he is not on good sealing ground, sail is made for the next nearest known ground—some spot where seals have previously been found—so as to be there by daylight the next morning.

All hands are called a little before daylight, breakfast is hastily eaten, and the boats are at once lowered. If the weather is calm they row off, but if there is a breeze the sail is raised. The boats take parallel courses, keeping about half a mile apart, and if there is wind the schooner follows, keeping near the leeward boat. If it is still the boats must, of course, return to her. They usually come on board at night about dark.

Each boat has a crew of three men, who are known as the "seal hunter," the "boat puller" and the "boat steerer." When seals are plenty the boat steerer remains at the tiller, the boat puller handles the oars and the seal hunter stands in the bows. When a boat sights a seal it is carefully approached, and if asleep, there is usually no difficulty in getting near enough to it to shoot it. If it is awake, however, the task may be much more difficult. Sometimes the seal through curiosity will come quite close to the boat, and in this way they sometimes swim up to within fifteen or twenty yards. Others take the alarm at once, move off and are hardly seen again. With a "wake" seal it is always a question whether it is best to take a long shot at it with a rifle at the first opportunity or to wait for a closer, and more certain, chance with the shotgun. From his position on the bows the hunter can see each motion of the seal upon the surface of the water, and from its actions must promptly make up his mind what the animal is going to do.

Good judgment and discretion are prime requisites for the seal hunter. He must know when to shoot and when to hold his fire. He must avoid alarming the seal, and must make a sure shot. Experience and judgment, therefore, are more important qualifications for success than good marksmanship. An experienced man can tell almost at once by the actions of a "wake" seal, whether it will be possible for him to get a shot at it or not, and when it dives can determine pretty nearly where it will appear again. The hunter always tries to shoot the animal through the head. Unlike the hair seal, which on receiving a wound, at once sinks like a stone, the fur seal after being fatally wounded floats for some minutes, sometimes even for half an hour. Most of the seals taken are shot within thirty yards of the boat, and a few strokes of the oars bring the boat alongside. The hunter stands ready with his gaff, and the animal is quickly lifted in. It is said that very few are lost by sinking, probably not three per cent., and twenty-five seals to a boat are considered a good day's work. Ten a day for a month are a good average. Sometimes a boat may get fifty or sixty in a day, but this is very unusual. In the season of 1886-87 Captain William O'Leary had two boats, one of which got fifty-seven and another forty-eight the same day. That day's catch for the six boats was 242 seals. The same season Captain Alexander McLean got 247 in one day to his six boats. Such good luck as this does not come often, however.

As soon as a boat gets twenty five or thirty seals the men begin to remove the pelts, one man attending to the boat while the others skin. The operation is not a long one. The hide is ripped along the median line of the belly from chin to tail, a cut is made around each fore-flipper and around both hind ones, and the hide is rapidly peeled off. A very quick workman will skin a seal in three minutes, an ordinary workman in from six to seven. The average time occupied is perhaps between four and five minutes. If the seals are plenty they are skinned in this way, but if less than thirty are taken they are usually brought on board unskinned, and if there is time after reaching the vessel the men skin them that night; if not, the work is done next morning after breakfast. The hides are then salted in bulk, stowed in the hold and left there until the vessel reaches port.

The white crews are hired in various ways: Sometimes for wages, sometimes for "lays," or shares in the catch, and sometimes by the piece, that is a boat's crew is paid a certain price for each seal that it brings in. These systems are only different names for the same thing, since either method amounts to about $30 per month for the ordinary hands. A lay might be as follows:

Vessel, including interest, time, outfit, provisions, etc	1-3
Captain	1-10
Mate	1-30
Hunter (where there are six boats)	1-30
Boat steerer and puller (where there are six boats), each	1-60
Cook, who is always hired for definite wages, say $60	1-60
Total	51-60

The remainder of the catch would be the owner's profit.

No dependence is placed on getting fresh provisions, and all eatables are brought on board before leaving port. Sometimes the liver and tongue of the seal are eaten, and the vessel catches some codfish, but usually their provisions are salt.

The perils which attend this method of sealing are not many, and are only those to which fishermen in general are exposed. The sealers never attempt to capture any of the larger marine mammalia, such as whales, walruses or sea lions. The loss of the boats in rough or thick weather is the most serious danger, but as they seldom get more than eight or nine miles from the vessel, loss of life very rarely results from this cause. In May, 1887, however, Capt. Wm. O'Leary, of the schooner Pathfinder, lost a boat which was never heard of afterward. The morning on which it started out was fine, but soon became foggy; the wind, which had been blowing from the northwest, whipped around to the southeast and blew a gale, and the boat never got back to the schooner. In a case like this there is manifestly nothing to be done except for the larger craft to await the return of the smaller, and the schooner remains as nearly as possible in the position which she occupied at the time of the boat's departure. For her to go in search of the latter, sailing through the fog over the wide ocean, would be worse than looking for a needle in a haystack, and by leaving her position she would of course miss the boat if it returned.

When Indians are employed as hunters a somewhat different method of pursuit is followed. Boats are not used, but the Indians go out from the vessel in their canoes. A large vessel will carry twenty-five of these canoes, and the average is perhaps fifteen or twenty. To each canoe there are two Indians, each of whom wields a paddle. They do not shoot the seals, but use altogether the native spear. The seal spear is about 12ft. long and two-pronged, the second prong being lashed to the shaft about 3ft. from the end and at a very acute angle with it.

The spear heads, which fit on the prongs, are movable and barbed, so that when struck into the animal they readily become detached from the shaft. A line is attached to each spear head, and these two come together a few feet back from the points, and are knotted to a main line 10 or 12 fathoms long, which in turn is fastened to the spear shaft by one or two half hitches, the spear line being coiled in the bow of the canoe. The object of the double-headed spear is to give two chances at the seal; if one head misses, the other may pierce him. Sometimes it happens that an Indian, who comes upon two seals sleeping together, as they often do, may secure both at a single throw. These people are very skillful with the spear and paddle, and never wake a sleeping seal when approaching it. When the spear is thrown and the points strike a seal, the shaft falls away from them, but the barb remains imbedded in the flesh. The end of the line is firmly held by the hunter and the animal is allowed to run free—to "play," so to speak—until partially exhausted, when it is hauled up to the side of the canoe and killed by beating over the head with a heavy club carried for that purpose.

Although these Indians never get as many seals as the white boats' crews, yet they are very skillful and successful hunters. On the sealing ground they work somewhat differently from the white crews, the canoes radiating out from the vessel in all directions, while she either heaves to or beats about in one place, instead of following the small craft.

All the Indians employed in this trade are from the west coast of Vancouver Island, Ahousit, Hesketh, Barclay and Nootka Sound tribes. All these were at one time very troublesome, and not a few crews of white men wrecked on this stern coast were murdered for the clothing they wore when they reached land. One of the last cases of this kind occurred over twenty years ago, and when at length the news reached Victoria, Admiral Denman despatched the man-of war Sutlej to bring back the offenders or punish the village. The chiefs laughed in the face of the officer when he demanded that the murderers should be delivered to them, and the vessel proceeded to shell the village. Shells were something new to the Indians, who at once took shelter in the woods in a panic, but a few shells thrown beyond them drove them back to the beach again, and in a very humble frame of mind. The lesson they then received was not forgotten. The next year after this occurrence an American crew was wrecked near this same place, and a number of the crew got ashore alive. They were well received by the Indians, who cared for them and took them to the settlements. In return for this they were given some medals and a lot of clothing by the United States Government.

A souvenir left at this village by the Sutlej was a shell, which for some reason had failed to explode. Some time after the departure of the vessel it was found by the Indians, who, in complete ignorance of what it was, laboriously transported it to the village and placed it in the largest house, where for several years it served as a seat. But one day while a chief was giving a great "potlatch," or feast, some of the Indians who were drunk began to try to open the shell to see what was inside of it. They never found out, for when it exploded it killed all the investigators and some others, blew the roof off the house, and the chief who was giving the "potlatch" was blown either entirely away or at all events into such small fragments that no portion of him was ever found. This added somewhat to the respect which these Indians already felt for the "Boston men's" warships.

Of late years several Roman Catholic priests have gone among these people, and under their tuition and guidance they are rapidly becoming civilized. G. B. G.

The Sportsman Tourist.

IN BLUE GRASS LAND.

II.—KENTUCKY FOX HUNTING—THE IROQUOIS CLUB—NOTES AND INCIDENTS.

IN an earlier paper, perhaps, I have rambled over enough space to convey the idea that the Blue Grass region, provided it were the possession of foxes, would be a great country for fox hunting. As a matter of fact I presume there is no place in the United States where that sport is more zealously followed, or where it can be seen in better form. There are plenty of red foxes within a dozen miles of Lexington, and the country is certainly hard enough to provoke all the energy of the most daring rider, even in that section, which is more than any other of our land, a country of fine horses and fine horsemen. There is plenty of leisure, plenty of foxes and fences and plenty of skill and grit in riding. Every town of consequence in the Blue Grass country has its pack, and some of these are famous. They tell me that Kit Clay's pack, of Bourbon county, is the finest pack of foxhounds in the United States. Jack Chinn's pack, kept not far out from Lexington, is another of renown. The class of foxhounds used in this section is very high. If it were not good the Blue Grass men would not tolerate it, for in the matter of four-footed running creatures they are connoisseurs of the most ably critical sort.

There is no more typical hunt in the entire Blue Grass country than that of the Iroquois Hunting and Riding Club, of Lexington, composed of twenty-five gentlemen and twenty-five ladies. Their winter hunts are the talk of the day. They are a set of hard riders, and there is not one of them, gentleman or lady, who does not follow the music until something breaks. It is cross-country riding of the hardest sort. The turf is usually good, but the innumerable fences fairly keep the horses in the air. There is little difficulty with the stone walls and stake-and-rider fences, but the stiff post and rail fences sometimes balk the best of them. Once in the hunt there is no getting out of it. The average Blue Grass thoroughbred goes fairly wild when he hears the hounds open, and there is no stopping him. Mr. Williams was remarking to me that his horse, Abstembler, was too nervous and high strung to be pleasant on the road. "Why don't you take it out of him?" I asked. "Do you want the job?" he said. "You can ride him twenty miles across, as hard as you please, and that won't take it out of him. Some of these horses are demons when they get started." In this wild work—the very thought of which is enough to set one's pulses tingling in eagerness—there have been several pretty serious accidents, and recently one fatal mishap, although I do not recall that the young gentleman who lost his life was a member of the Iroquois Club. Once, Mr. Williams told me, he was riding for a fence, with two other riders in front of him. Both of the latter fell at the fence, and they and their horses were tangled into a confusion whose only result seemed death or maiming. There was no time to stop—for full speed is the only way to take a fence—so over went he, clearing the whole bunch of fallen horses and riders. Out of this apparently ugly accident everybody came unhurt, beyond a few bruises.

There is one peculiarity about Blue Grass fox hunting, which may be very well known to the general public, and which may not; I know it was a surprise to me. This is, that all the fox hunting is done at night! There is no meet of a clear and crispy morn, and no return at bluff and stinging evening. At night the fox plays around in one locality, and does not lay a straight line out of the country as he is apt to do in the daytime. The scent lies better at night, the time is cooler in warm weather, and not too cold in that mild climate. Above all, the multifold hum of the day has subsided, so that the wild music of the hounds comes across the fields with double volume and melody. To this music the horses will go, and little is left but to ride straight, never to flinch or waver at a jump, and keep the horse's courage backed by that of his rider. The Black Forest stories of the night-huntsman and his demon pack would have good foundation if on some starlit time of midnight one heard the swelling cry of the running pack come near and die away, and saw flitting by shadowy figures which faded off across the fields or vanished in the wood, with few sounds save the pant of the straining steeds and the thunder of their hoofs upon the sturdy turf. For some unknowing stranger, belated on some lonely lane of that quiet country, what a rare midnight experience that would be! How he could tell his children of the clash of bit, and gleam of spur, and glitter of eye, and body at the horse's neck as he rose to a fence, and well back to save his knees when he took the ground—each spirit riding like a human being, but all so wild, following the music of the spirit pack that lessened and sank in the distance of the rolling fields! Tam O' Shanter himself had not so good an opportunity! Yet

such is the real custom of the country, and so devoted do the people become to it that I was told of one farmer and his daughter who have more than once arisen from bed, saddled up their horses and joined a midnight hunt which their pack had started on their own account, as country foxhounds sometimes will. I saw this young lady on the street, and she looked equal to such an exploit. Some of the most skillful and daring of the riders of that whole country are ladies. In passing I should say that I had heard much of the beauty of the ladies of the Blue Grass country, but not enough. I do not think one could speak too respectfully of them. They follow much one type, are usually tall and of slender form, though rounded and graceful to a degree. Their complexions are beautiful and indeed wonderful to a city dweller, their hair is pure silk of the corn, and they have an exquisitely thoroughbred look. No wonder they can ride. They can and do, and they belong in any talk of Kentucky fox hunting.

Accounts of New England fox hunting with a gun excite the liveliest disgust in a Kentuckian. If it were known that a man had killed a fox with a gun, he could never after that be received into good society in Blue Grassdom, that is certain; but there is small danger of such a contingency, for to kill a fox with a gun is something not to be dreamed of in that country. Equally Homeric is a Blue Grass man's laughter at a drag hunt, which latter is my own pet abomination. There is not in the history of Kentucky the record or remembrance of more than one drag hunt, and that is spoken of to-day with as much gusto as that of the story of the fox which took to earth under the doorstep of General Wm. C. Preston's elegant home in the heart of Lexington, or that of the fox which ran straight down the street of Winchester town. I presume the story of Deacon Dick Redd's drag hunt will be remembered as long as Lexington has a court house. Mr. Redd was candidate for county assessor, and he had a hard opponent. The election drew on apace, and Mr. Redd felt that something had to be done to appeal to the patriotic ardor of his constituents. He waited till midnight of the day before election, and then sent out a trusty emissary, who dragged a dead fox through all the streets of Lexington, taking especial care to double through all the shaky districts of the aforesaid constituents, and winding up the trail on Mr. Redd's front doorstep. Presently, just as Lexington was falling asleep, and "in light-winged dreams ascending up to Heaven," there burst out in the shady, silent streets the full-voiced music of a pack in full cry. Round and round they went, till every wall and spire was alive with echoes. It was too much. Doors and windows flew open, and out came men half clad and buckling on their spurs, while halloas sounded on every hand. All Lexington turned out and joined the hunt, which, of course, wound up at Mr. Redd's house, where the dogs had the fox killed. Then there was a little speech, in which Mr. Redd modestly alluded to himself as a child of destiny. He was more than that; he was a genius! The people placed the seal of approval upon the man who could afford the whole town a fox hunt. Mr. Redd was elected assessor without a dissenting vote, and he is assessor to-day, and always will be as long as he lives. That is the only drag hunt I ever heard of that was of any account, and I think that was a pretty good one.

The Iroquois Hunting and Riding Club see this thing with perfect clearness. When they want to hunt foxes, they hunt; and when they want simply to ride, they ride. They very often form riding parties and go out to points of interest, their little cavalcade of fifty bang-tail thoroughbreds with well-dressed riders making a pleasant commotion along the quiet country lane. Russell's Cave, about five miles out from the city, not far from Major Thomas's farm, Dixiana, is one of the points often thus visited. This is a very considerable cavern, whose entrance we could plainly see from the road. The family house is built directly above. There is a pleasant rivulet of cold water running out of the cave, upon whose banks grows abundance of that peculiar herb which lends flavor to mint juleps. Just within the cave entrance is a little châlet, and here, doubtless, the equestrian picnickers partake of the refreshments, which on an occasion of this kind are always sent out in advance by servants. This summer the club will take a riding tour across country to Crab Orchard, stopping there and visiting points about there for ten days or so. It is a part of Blue Grass religion to go somewhere in the summer. The famous White Sulphur is much visited by Lexington people. I found many whom I met very well acquainted with notables in Washington and New York. There seems to be no intermediate step between Lexington and those points.

The Iroquois Club members all own their thoroughbreds, and every year they hold a midsummer racing meet on the Kentucky Association track. Only members are allowed to compete, and it is customary for each member to ride his own horse, no jockey being allowed to mount. At these meets some remarkably fast time has been made.

Not satisfied with fox hunting and riding and racing, the Iroquois Club very often go out with the greyhounds after a little sport, the peculiar nature of the country making the coursing of the local cottontails or woods rabbits a thing quite difficult enough for greyhounds and horsemen.

It has been said that there are 50 members of the Iroquois Club. I recall the following among the names: Mr. and Mrs. Roger Williams, Mr. and Mrs. Thomas McDowell, Mr. and Mrs. Suydam Scott, Mr. and Mrs. Hamilton Scott, Mr. and Mrs. Spencer Berryman, Mr. and Mrs. J. Will Payne, Mr. and Mrs. Thomas Moore, and Mrs. William Bright; Misses Hettie McDowell, Ida Barker, Linda Payne, Jennie Jeffrey, Mary Payne, Anna McClellan, Lucy Shelby and Misses Gibson and Gratz; Messrs. E. L. Hutchinson, Percy Talbert, Garland Barr, G. W. Williams, W. K. Massie, Ed. L. Graves, John Patterson, John Payne, Will McDowell, Winslow Dudley, Henry McDowell, Will Talbert, Albert France, Robt. Swigert, Lee Stedman, Wm. Ford, Percy Walker, Hart Gibson, Will Shelby, Geo. B. Kinkead, Chas. Berryman.

The club has a board of six governors, three ladies and three gentlemen. Its present executive officers are R. D. Williams, president, and Miss McDowell, vice-president. The latter is a granddaughter of Henry Clay, and lives at the old place, Ashland. She is famed as a beautiful and skilled horsewoman.

I think this little club is entitled to notice as a genuine sporting organization of a superior sort, and the little that has been said may give some idea of the heartiness with which they enter into the enjoyment of life and the greatest of life's privileges—the following of rightful pastimes in the open air and in scenes blessed by the beauty of unhurt Nature. I left the Blue Grass country more fully than ever impressed with the belief that people of the North do not know how to live. They are learning, and the sporting instinct is growing; but for a long time yet they may seek their scheme for a happy life down among the blue hills of old Kentucky.

In a trip of the kind, one cannot help falling upon an amount of information which can hardly be called sporting news, but which might be of interest to sporting readers. For instance, I saw at a restaurant counter at Lexington race track a card hung up bearing the inscription "Genuine Kentucky Burgoo." Now, I didn't know what genuine Kentucky burgoo was and I was afraid to ask for any, because I didn't know whether you drank it with a straw or ate it with a fork. Later on I learned that the Kentucky burgoo is nothing so ghastly and weird as its name would indicate, but is a regular institution of the great thoroughbred sales of the large breeding farms. It is of the same purpose as the barbecue, but differs from the latter in that it is a boil and not a roast. It is a boiled aggregation of meats, fowls, squirrels and vegetables of all sorts. It is made in a kettle that will hold about 400 gallons, and is served in cups. The real burgoo is not found except at the thoroughbred sales on the large farms, and I fear my friend of the restaurant did not tempt the knowing ones who live in that country.

A mint julep is where a man pours whisky in a glass of ice, and pokes green mint into the glass with three straws. I saw the fellows do that.

When you ride up to the gate of one of the big stock farms, there is a little nigger boy standing to open the gate for you. You pitch him a quarter. When you drive out there is another nigger boy waiting to shut the gate. You pitch him another quarter. They both say "Thank ye, boss," and look happy. They say all our best negro waiters come from Kentucky. I am inclined to think all our Pullman car porters do also. There is one negro to every white man in the Blue Grass country, and two negroes to every horse. One negro cannot take care of a horse. The colored people are far more deferential in that country than they are in the North.

There is no real hospitality in the North. We are too busy, too selfish, and too ignorant of how that is done. In the Blue Grass country hospitality is princely, because it is simple, sincere, spontaneous and unstudied. You are simply temporary owner of the establishment and circumjacent earth; and things are run to suit your notions. These old Southern customs are admirable, and I pray they may never change. They are almost all that is left to us of a pure American life. They are not conventionalities, but have root in the gentle and generous part of human nature, all too much obscured to-day. It is this breath of a kindlier life which makes the lingering charm of a visit to this country, and which makes you feel the force of the Blue Grass farewell, laughing as it is—"Good-bye. We will see you again whether you come soon or not. You will have to pass through here, you know, on your way to heaven." E. HOUGH.

THE VETERAN OF PANTHER LEON.

There died in Chester, a few miles from Fernandina, several days since, the oldest person probably in the United States. He claimed to remember perfectly incidents of the revolution, and was brought from Africa seven years before that period, and was at that time nearly twenty. The nearest estimate of his age is 130 years.—*Jacksonville (Fla.) Times-Union.*

THE above clipping "reminds me." On Panther Leon Island, seven miles from Cape Romano, lives an old Frenchman, John Gomez. I met him first some three years ago, when he told me he was over one hundred years old. On my canoe cruise round the cape last year I called there and had a long conversation with the old man. He told me he was born on the island of Mauritius, and that his parents soon removed to Bordeaux, where he lived until 1814 or 1815, when he came to the United States. He followed the sea around Florida and the West Indies until the first Seminole war, when he joined the forces under Col. Taylor, and served through the war.

He told me of one experience he had on the Caloosahatchee. Col. Taylor arrived at the mouth of the Caloosahatchee with troops and provisions. Col. Smith was in charge of Fort Demon up the river. Col. Taylor sent Gomez with a letter to Col. Smith for boats to carry stores up river. Gomez missed his way and wandered through the woods five weeks, subsisting on roots and berries. Once during that time he saw what he took to be a mule lying by the side of a large log. Gomez thought, "Here is my chance; I'll creep up and catch him, and he'll carry me somewhere where I can get something to eat." He says, "I started to crawl up as close as possible to make a rush and catch him. When I got within a rod or so—*Boof!* Up jumped a big black bear, and as he tore away through the woods my heart fell again."

On the last day he went staggering through the bush, regardless whether there were Indians about or not. Near night he came in sight of a man carrying a gun. The man raised his gun, but Gomez said, "For God's sake don't shoot, I'm hungry," staggered forward and fell in a faint. He knew no more until he found himself in Fort Thompson, where all care and kindness were shown to bring him back from death's door. As he had an excellent constitution he soon recovered and was in active service again.

His experience during the last war would fill a book. He was on the west Florida coast, dodging the blockaders, running cotton out and provisions in, always with small craft that could work through the inland channels and among the keys.

Since I saw Gomez last I have met with a French naturalist from Bordeaux. He told me he had become interested in old John, and had written to Bordeaux to find out his age if possible. He told me that the records in Bordeaux show that a family named Gomez came from Mauritius to that place in 1783, that the family consisted of the father, mother and a five-year-old boy named John. This, if correct, would place his birth in 1777, making him 112 years old.

The old man is bright and active, and makes his own living by fishing. He has a wife much younger than himself, perhaps fifty years old, but the old man is the smartest of the two. On the morning I left the island the old man was going off fishing. He remarked to us that he would like a boy to go with him. His wife said, "Why don't you take Clement? Clement was a man living on an adjoining island, and was apparently some thirty or forty years of age. "Oh!" said John, "he's too slow."

The old man has a little garden on the island; he raises a few vegetables, but his main dependence is the water and what it brings him. Fish, turtle and turtle eggs, with a little coffee, sugar and meal, make up the sum of their subsistence.

It looked like a lonely, sad life, but I don't know as in all my wanderings I ever saw a happier couple than old John Gomez and his wife on Panther Leon. TARPON.

TARPON SPRINGS, Fla.

MAINE FISH AND GAME.

THE Kineo Club got back to Boston the other day from Moosehead well pleased with the trip. This club is made up of Boston merchants and professional men, and the trip is made annually to Kineo. A steamer is hired, and the club and its invited guests, with guides and boats, goes to some part of the lake each for fishing. The party is much pleased with the fishing this season. Trout of 3lbs. and over were caught with the fly. The members of the club are chiefly fly-fishermen, some of them never fishing in any other way, though others will deign to take a trout with bait, if a trout is to be had no other way. The party is "well browned up" this time, though the story is that it could hardly have been the sun, for it rained about every day that the club was at the lake.

The people of Maine themselves are giving more and more attention each year to sporting matters. The early fishing at the lakes is pretty thoroughly followed up by her prominent business and professional men, and later in the season other methods of sport are adopted. Grouse hunting is very popular. The streams are thoroughly fished. A party, made up of Hon. H. M. Bearce, Freeland Howe, F. H. Noyes, F. W. Sanborn, editor of the *Oxford County Advertiser*, S. D. Andrews, Esq., and H. D. Smith, cashier of the Norway National Bank, all prominent citizens of Paris and Norway, or formerly citizens, have been making a fishing trip through Sumner and vicinity, and camping in tents on the ponds and streams. They also went with two-horse wagons, gypsy-like.

One has only to take up the Maine papers to become convinced that there are still some game and fish left in the State. Bears are getting to be numerous and rather free, so far as the farmers' sheep are concerned. The barn of Albert Parsons, of Pittsfield, was entered the other night by a very large bruin, and three sheep and one lamb were killed and partly eaten. The beast entered through a manure window, some four feet from the ground. Hunters have since tried to capture the fellow, but without success; though several bears have been trapped in that section this summer. In Washington county bears are reported to be very numerous, and the farmers are losing sheep and lambs from their depredations. Here is a field for the hunters. Why is it that no more attention is given to bear hunting in Maine? The hunters of the State scarcely know of any other way to capture black bruin than by the heavy steel trap, and even in that way not many are taken. The farmers would welcome sportsmen from the cities who desire to hunt the bear, and would render them all the aid in their power.

Deer are certainly more plenty than ever before in the Pine Tree State. It is easy to talk by the book, and one can write on deer all the better for having seen them. I was favored with a sight, on May 29 of this year, that well repaid me for many an excursion into the woods. We had been fishing the stream that joins the two ponds, (I would say exactly what ponds, did I not fear that those two deer would fall unlawfully to some poacher's shotgun before Oct. 1.) I had come down to the first pond before the others of the party. We had seen fresh tracks, and I happened to look a little way over the water to the east shore, not more than 100yds., and there was a deer, though it was about midday. I kept perfectly quiet, in order to watch the motions of the handsome animal. It would feed along the rushes and wade into the water for a minute, and then bound back into the thicket. This lasted for several minutes, when behold there were two of them! They would turn and butt each other, like lambs at play, and then would bound into the water and jump into the air. Such grace I have never seen in any animal. The bounds would sometimes be straight up into the air several feet. They would whirl and whisk their "cotton," all in play, in a manner that would make any sportsman long for his rifle. But for me the sight was too grand for shooting, even if I had been armed with any other weapon than a ten-ounce fishing-rod. My only desire was that the beautiful creatures should remain till the others of the party came up, but they did not. They evidently satisfied their desire for the fresh grass of the shore of the pond, and disappeared into the forest. From all parts of the State come the stories of deer, and prospects for shooting in the fall are excellent, if the poaching is kept down through the close season. In Washington county the farmers are again complaining of the depredation of deer in their grain fields, if we may believe the papers. "Last week several farms at the Ledge were raided by deer and a good deal of damage done." But it must be remembered that this story comes from the section where the two wardens were shot while trying to enforce game laws a few years ago, and where the people have but little love for the deer that the State tries to protect during the breeding and helpless seasons.

The Aroostook *Republican* tells a rather bad story, if it is true, on this subject. That paper says that the game laws are not enforced in that county, and hints that the game wardens are not doing their duty. "Trout are being netted and killed by dynamite in the Madawaska lakes by the thousands, and in the region of Woodland and Perham yards of deer were broken up, nearly every animal being slaughtered. This is a matter for the people of Aroostook county to attend to. If the game and fish are slaughtered wantonly by poachers there will be no inducement for tourists to travel that region in the spring and fall."

I do not echo this because I know it is true, neither

would I blame those who have the enforcement of the game laws in their power. But I hear sometning of the same story from other parts of the State. In the case of the two deer that I saw, I am assured by guides and others that they both will be killed before the beginning of August; that jack shooting in close time is regularly practiced on the pond in question. If any one in authority, and desiring to look after that pond, will write the FOREST AND STREAM, the letter will be forwarded to me and I will give the needed information. SPECIAL.

Editor Forest and Stream:

I have just returned from a fishing trip to the Maine woods, having visited the Moosehead and Nicatous region. In Moosehead Lake and at its west outlet the fishing was all a sportsman should desire. Fly-fishing was not as good as I have seen it there, but large trout could always be gotten trolling with flies. The fishing in Nicatous Lake and Passadumkeag stream, its outlet, was decidedly poor, there being too much water from the recently heavy rains.

What I especially wish to call attention to is the lawless spirit of the inhabitants of both Moosehead and Nicatous. While fishing at the dam at the west outlet of Moosehead (Wilson's) I saw a river driver deliberately jigger a large trout which was lying in water a foot deep on the apron of the dam. Upon being asked if he knew he was breaking the law he said, "Yes, but there is no law in the woods." This fellow was a Canadian Frenchman, and a hard-looking specimen. I told several people around the dam about it, but they seemed to think it was all right.

In the Nicatous region a large part of the inhabitants gain a living by assisting self-termed sportsmen in clubbing deer to death in canoes. From the time one gets out of the train at Olamon station on the Maine Central Railway till the lake is reached, a unanimous and loudly expressed contempt for the law against hounding deer is expressed. They openly declare that they will hound deer, and defy the authorities to stop them. Preparations for next fall's shooting were already in progress, and men boasting of the ability of their dogs to drive deer to water or pull them down. The only way the game commissioners can stop this Nicatous poaching is to send several game wardens to establish a camp on the lake the first of September and keep them there till the lake freezes, or the poachers are all arrested. An efficient fish warden should be kept at the west outlet dam, Moosehead Lake, from June 1 to Dec. 1, and one not connected with the lumbering or hotel interests. Winter hunting and fishing should be prohibited in future, for incalculable harm is done both interests by permitting such latitude.

PISCATAQUA.

Natural History.

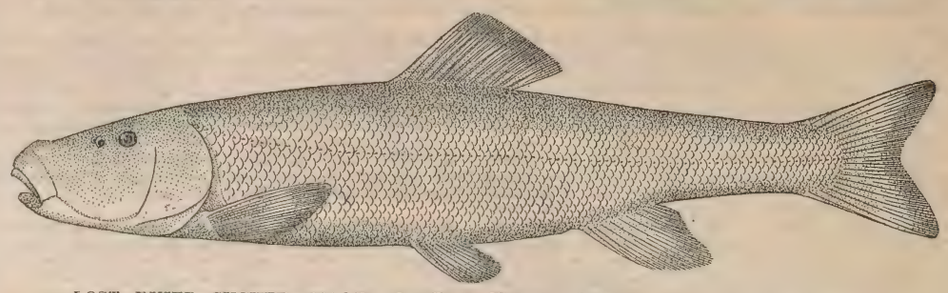
LONG ISLAND BIRDS.

Editor Forest and Stream:

Will you be good enough to ask your readers to inform me whether they know of any specimens of the following species of birds that have been taken on Long Island, New York, within the last twenty years; if so, are they now extant and where? The numbers and names are from the American Ornithologist's Union Check List.

WM. DUTCHER, 51 Liberty street, New York city.

No.	Name.	No.	Name.
9.	Black-throated Loon.	327.	Swallow-tailed Kite.
13.	Puffin.	349.	Golden Eagle.
27.	Black Guillemot.	354.	Gray Gyrfalcon.
30.	Murre.	354b.	Black Gyrfalcon.
38.	Long-tailed Jaeger.	377a.	American Hawk Owl.
62.	Sabine's Gull.	445.	Gray Kingbird.
65.	Royal Tern.	465a.	Traill's Flycatcher.
71.	Arctic Tern.	486.	American Raven.
80	Black Skimmer.	511b.	Bronzed Grackle.
90.	Manx Shearwater.	514.	Evening Grosbeak.
98.	Black-capped Petrel.	515.	Pine Grosbeak.
104.	Stormy Petrel.	547.	Henslow's Sparrow.
126.	Brown Pelican.	593.	Cardinal.
135.	Widgeon (European).	597.	Blue Grosbeak.
138.	European Teal.	601.	Painted Bunting.
150.	Ring-necked Duck.	618.	Bohemian Waxwing.
171a.	Am. White-fronted Goose.	642.	Golden-winged Warbler.
174.	Black Brant.	645.	Nashville Warbler.
184.	White Ibis.	646.	Orange-crowned Warbler.
186.	Glossy Ibis.	650.	Cape May Warbler.
194.	Louisiana Heron.	679.	Mourning Warbler.
203.	Yellow-crowned Night Heron.	724.	Short-billed Marsh Wren.
219.	Florida Gallinule.	734.	Tufted Titmouse.
225.	American Avocet.	736.	Carolina Chickadee.
226.	Black-necked Stilt.	763.	Varied Thrush.
260.	Ruff.	765.	Wheatear.



THE LOST RIVER SUCKER.

THIS is the local term, applied to a good-sized fish, first described by Prof. E. D. Cope in the *American Naturalist*, Vol. XIII., 1879, p. 784, under the name of *Chasmistes luxatus*. He tersely describes it as follows: "Elongate in form, head long, flat above and with a large fontanel. Mouth terminal, the spines of the premaxillary bones projecting, so as to form a hump on the top of the snout. Lower lip very thin, dermal fold extending entirely around the chin. Scales 12-80-9. Radii: D. 11; A. 9.

"Color, clouded above with black punctuations, below paler, with red shades in some specimens, fins uncolored. It attains a length of nearly 3ft. It ascends the streams in thousands in the spring, and is taken and dried in great numbers by the Klamath and Modoc Indians. The former call it Tswam. Its habitat is given as Klamath Lake, Or."

This is all there is on record regarding this species, and as it has never been fully described nor figured, I make this the principal excuse for this article at this late date, believing that a short description of the mode employed in catching the fish will be of interest to some of the readers of FOREST AND STREAM.

While stationed at Fort Klamath, Oregon, during parts of the years of 1882 83, I learned from the settlers and Indians living in the vicinity of the post that early in March each year countless thousands of a large species of sucker ascended Lost River out of Tulé Lake, for the purpose of spawning about the headwaters of this stream, and that it was a sight well worth seeing. From the descriptions given me I believed that this fish was then still unknown to science, and I therefore at the time caused drawings to be made of fresh specimens, both colored and uncolored, which are inclosed herewith. These were made by Sergt. C. Gloster, Troop K, 1st Cav., and are good likenesses. A pair, male and female, were skinned by me on account of their large size, and forwarded to the National Museum at Washington, D. C., where they are still the only representatives of this species. The only other specimen in the hands of a naturalist, so far as known to me, is the type in the possession of Prof. E. D. Cope, at Philadelphia. The following detailed description was kindly made for me from the skins above referred to, by Dr. T. H. Bean, the ichthyologist of the U. S. Fish Commission:

LOST RIVER SUCKER, MALE. ONE-FIFTH NATURAL LENGTH. (From Alcohol Specimen.)

Chasmistes luxatus Cope.—The two skins in the U. S. National Museum are about thirty inches long and represent two sexes. The dorsal has eleven developed rays and the anal nine; there are twelve rows of scales between the lateral line and the beginning of the dorsal fin, nine rows between the lateral line and the beginning of the anal fin, and from eighty to eighty-two scales in the lateral line. The eye is one-fifth as long as the snout and is contained between ten and eleven times in the length of the head. The head is about one-fourth of the total length to the end of the scales. The distance between the eyes is nearly four times the length of the eye. The length of the dorsal base is about one-half the length of the head and is somewhat greater than the longest ray of this fin. The anal base is about equal to the distance from the tip of the snout to the anterior nostril. In the male the longest ray of the anal equals the length of the pectoral fin, which is a little more than one-seventh of the total length to the end of the scales. The male is profusely covered with minute spiny tubercles most abundant on the snout, top of head, the fins and the posterior half of the body. The table of measurements given below will enable authors to compare this species with others of the same genus.

	Female. Inches.	Male. Inches.
Total length	30.00	29.75
Length to end of scales	26.50	26.75
Head, length of	7.00	6.40
greatest depth	3.20	3.80
width of mouth	1.70	1.30
length of lower jaw	2.30	
upper jaw	1.50	1.80
snout	3.40	3.30
snout to nostril	2.50	2.50
nostril to eye	.50	.50
width of interorbital space	2.50	2.30
length of eye	.70	.60
Dorsal, length of base	3.25	3.50
longest ray	3.20	2.90
Anal, length of base	2.40	2.40
longest ray		4.00
Pectoral, length of longest ray	4.20	4.00
Ventral, length of longest ray	2.80	3.10
Caudal, length of middle rays	2.00	1.80
external rays	4.00	4.00

The maps examined by me show no Tulé Lake on them; but according to these Lost River flows into Rhett Lake, which is evidently the same body of water universally known in that region under the former name. This lake is located about forty miles from Fort Klamath in a south-southeasterly direction, and is not quite so large as either of the Klamath lakes. As near as I have been able to ascertain, the so called Lost River sucker is indigenous to Tulé Lake, and is not found in either the Upper or Lower Klamath lakes, as stated by Prof. Cope in his original description. In a conversation I have had with him recently on this subject, he told me that he obtained his specimen from an Indian, and understood that it was caught in Klamath Lake. During the eighteen months I was stationed at Fort Klamath, I never heard of nor saw a fish of this kind caught in the Klamath Lakes or their tributaries, but am aware that a smaller and less important species of the same genus, the *Chasmistes brevirostris* Cope, is found in these waters, and may be seen in considerable numbers along the shores of the upper lake from the wagon road running along Modoc Point almost any day in the spring of the year. This species is much smaller, and one of the large Lost River suckers would be noticed at once among such comparatively small fry. As I was making a general collection of the fishes found in that region for the U. S. National Museum, I am certain that such a conspicuous fish as the latter would not have been overlooked by me.

In order to obtain some of these fish I made a special trip to the fishery on Lost River, some forty miles south of the post, and secured several specimens, which I packed in ice, and after having drawings made of a pair, male and female, I skinned and forwarded them with a general collection for the National Museum.

I arrived at the fishery on Lost River early on the morning of March 6, 1883. The surrounding country is flat and uninteresting and for the greater portion covered with sage brush. Looking westward, Tulé Lake could be seen probably about ten miles distant, and beyond it the outskirts of the Modoc stronghold, the lava beds, appeared in plain view. A few scrubby willows fringe the banks of the stream, which at the fishery is probably 30ft. wide. There the river flows over a rocky ledge, forming shallow riffles with perhaps 2 or 3ft. of water on them. The riffles are about 100yds. in length and the banks on each side some 3ft. high. Above and below these the stream widens out and the water in most places seems to be sluggish and deep. At the time of my visit it was quite muddy from the melting of the snow in the mountains, and the run of these fish was not at its height yet. However, it appeared to me that they were caught quite abundantly even then, and both sides of the streams were lined with whites and half-breeds as well as Indians, the last camped in the immediate vicinity with their families and a full complement of papooses and dogs. The squaws were busy splitting the fish up along the back, removing the heads and backbones and spreading the split fish upon the numerous sage bushes in the immediate vicinity to dry. The stench from the mass of decaying offal, which was scattered about everywhere, was anything but pleasant, but one can get used to most anything in time, and after having been there a little while I forgot all about the odoriferous condition of the atmosphere and enjoyed the scene almost as much as the Indians.

The bucks, encumbered with but little clothing, although the air was still anything but spring-like, did the fishing proper. The only implement I saw in use was a long slender pine pole about 20ft. long, to one end of which a piece of iron rod about half an inch thick was attached. This rod was bent in the shape of a hook with the point well sharpened. The operator would reach out into the stream with his pole, as far as practicable, the curve of his rod dragging on the bottom, the point upward, and when coming in contact with a fish, a sharp jerk would be given, which usually impaled the poor brute in some part of the body, and after considerable struggling on its part to break away, it would be landed and at once removed from the hook by one of the squaws in waiting. As the majority of the fish will average from 6½lbs. to 7lbs. it took quite a skillful hand and no little labor to raise them up the steep bank without allowing the slender and pliable pole to turn and let the fish drop off before being properly landed. It all seemed simple enough looking on, so I concluded to try my hand also, but found it everything else but easy work to land my fish after hooking one. They make things especially lively when hooked near the tail, and my vain efforts to get control of one so hooked by me afforded considerable amusement to the entire Indian population then at the fishery. I never worked so hard to get a fish, and after all my endeavors it managed to wriggle off, just at the

LOST RIVER SUCKER. ABOUT ONE-THIRD NATURAL SIZE. (FROM LIFE.)

time I thought I had it all right, much to my mortification, and the gratification of the large audience present. Of course it was the largest one hooked that morning; at any rate I thought so. An expert will readily catch in this manner a hundred such fish a day, and even more, and I am sure that he will not be disturbed by unpleasant dreams at nightfall after such a day's work, judging from my limited experience.

A handsome young Modoc, while engaged in this work, especially attracted my attention, as well as that of several of the young squaws present. He proved himself exceedingly skilled in the handling of his pole, his graceful and sinuous figure anticipating every movement of his victim and preventing his escape. He probably landed two fish to most of his competitors' one. There seemed to be a good deal of rivalry among the younger members to see who could catch the most fish, and while a bungler was most unmercifully chaffed, every one notwithstanding seemed to be in the best of humor, and I presume that your humble servant came in for his full amount of their jokes. Possibly, for my peace of mind, it was about as well that I did not understand all that was said about myself.

These fish vary from 5 to 8lbs. in weight and an occasional one will reach 10lbs. It certainly cannot be called handsome, but its flesh is firm and white, much freer from bones than ever I supposed a sucker to be, and well flavored, free from the muddy taste that even sticks to many of the larger trout found so abundantly in that region. I certainly preferred those I had cooked on my return to the post to any of the average trout in the Klamath basin, excepting the small ones possibly, and I was not alone in that opinion. The females were full of nearly ripe eggs which were almost ready to be deposited. They are about the size of a No. 4 shot and pale straw yellow in color. The Indians made no use of these as food. I am told that this fish, when slightly salted and then dried, tastes very much like codfish, and some of the cattlemen in the vicinity put up barrels full yearly. The Indians use no salt on them whatever; after having the entrails and head removed and split open, they are simply spread out on sage bushes to dry, and occasionally the drying process is accelerated by smoking.

When the run of this fish is at its height, these riffles at the fishery are said to be completely covered with a struggling and squirming mass, fairly raising each other out of the water at times in their efforts to rush over the narrow and shallow stretch of river at this point. As one of the old residents expressed it, "By gosh, Cap, there are millions of them there." After the spawning season is over the fish return to the lake and few are caught while they remain there, the shores of this lake are shallow and a dense growth of tulé obstructs the ready approach to deep water in most places.

Of course this species cannot be considered a game fish, and would probably afford but poor sport to the angler, still its abundance and edible qualities as well as its size, entitle it to some importance as a food fish, especially when the fact is taken into consideration that excepting the *Salmonidæ*, the Pacific coast has but very few other edible fresh-water fishes that attain such a size, excepting the sturgeon.

Should my surmise be correct, which, however, is entirely based on the statements of settlers and Indians, who (especially the latter) would be likely to know, that this fish is only found in Tulé or Rhett Lake, and not in any of the other numerous sheets of water abounding in southeastern Oregon and northern California and Nevada as well—some of these, like Harney and Malheur lakes in Grant county, Oregon, of considerable size—it appears to me that it would be well worth the trouble for the U. S. Fish Commission, which has already done so much valuable and successful work in the line of propagation and distribution of food fishes, to investigate this species to a certain extent. Inasmuch as one of the most complete stations, the one at Baird, Shasta county, Cal., is now within comparatively easy reach, it would not entail such a great amount of labor to do it. I believe the Lost River sucker to be a hardy one, that would stand transportation and transplanting very readily.

CHAS. E. BENDIRE.

TO PENNSYLVANIA ORNITHOLOGISTS.—West Chester, Pa., June 6.—Having been informed that you are interested in the study of ornithology, I take the liberty of addressing you and stating that by a recent act of our State Legislature I have been directed to prepare a second and revised edition of the "Birds of Pennsylvania," for gratuitous distribution. I am exceedingly anxious to correspond with competent field naturalists in every county of our Commonwealth. If it is not imposing too much on your time and good nature I will be pleased to correspond with you relative to the bird-life occurring in your section of the State. Inclosed please find a printed list of birds recorded as occurring in Pennsylvania. I will be greatly obliged if you will kindly mark the list as indicated and return it to me at your earliest convenience. Should you decide to furnish me with information relative to the feathered tribes, which is worthy of special mention, full credit will be given in the forthcoming edition of the "Birds of Pennsylvania." If you know of any naturalists in this State with whom I can correspond in relation to birds and mammals, please give me their names and post office address.—B. H. WARREN, State Ornithologist. [A provisional list of the birds of Pennsylvania accompanies this open letter.]

FEMALE NARWHAL WITH TUSKS.—The male narwhal has only one developed tusk, and that is on the left side. The female has two tusks, but they are usually not functional. About the month of July, 1887, Captain James Fairweather harpooned a female narwhal with two tusks in Prince Regent's Inlet. Specimens of narwhal with two tusks are rare in museums. About eleven examples are recorded, but the sex of only one of these is certain. A female captured in 1684 is preserved in the Hamburg Museum. Robert Brown says that double-tusked narwhals are not rare; Scoresby denies this. In the specimen recently obtained by the National Museum the spirals turn in the same direction and the symmetry of the two sides is wonderful. It is questionable whether a male narwhal with a right tusk is known.

PENNSYLVANIA SONG BIRDS are protected by a law patterned after the New York law. To take birds for scientific purposes a certificate must be obtained from the county prothonotary.

RANGE OF THE TURKEY BUZZARD.—Belmar, N. J., May 27.—On Saturday last while driving along the beach at this place I came across a pair of turkey buzzards. As they did not take wing until I was within 50ft. of them I was enabled to get a good view and to recognize them as being the same species I had so often seen on the Homosassa River, Florida. I have also seen them at the southerly end of Barnegat Bay, but never in this neighborhood before. What is their northern limit?—BIG REEL. [The turkey buzzard occurs as far north as southern New England on the Atlantic coast and on the western plains to latitude 53°. We have seen them in Connecticut.]

Game Bag and Gun.

DUCKING FROM A CATAMARAN.

A GUST of wind swept in through the car door as the brakeman swung it open. His indistinct exclamation of "Amityville!" recalled my dozing senses.

"Come, Ed, wake up; here we are!" "All right, old man; I'm not asleep; only thinking. Let me help you with that bag."

The train moved off into the darkness, leaving us the sole occupants of the little station room. We were speculating as to whether Frank had received the telegram and considering the advisability of setting out for his shanty without him, for he usually met us at the station.

"Hello, boys! Darned if I ain't glad ter see yer, Shake!" was his greeting as he stalked into the clean house, making havoc with the neat floor wherever his cowhides, covered with mud, landed.

"It's good you youngsters had sense enough to fetch 'long them ileskins of yourn. Better crawl right into them now, an' doan't waste no time. Thars supper waitin' fur yer down ter the ranch."

Keeping within the narrow circle of Frank's lamp we plodded through mud and water, congratulating ourselves that our backs were to the fierce storm of wind and rain. The eye could trace nothing beyond the circumference of that little spot of light emanating from Frank's lamp, the only cheering ray or sign of life in this vast gulf of palpable darkness. How the wind did moan through the low pines that lined the road, driving the rain in vicious sheets among the branches and upon us with all the fury of a March nor'wester. It was a relief, after tramping over a mile, when we saw in turning a bend the ruddy glow from the windows of our guide's house.

All those who love the gun for the scenes and incidents it brings them among, know the enjoyment of being one of three or four sportsmen when grouped together around the after-supper table. Who cannot recall such evenings? Who cannot, if he is a sportsman, recollect some of the reminiscences that accompany the curling haze of tobacco smoke?

"Wall, boys, yer'll have a clear day ter-morrow, I'm thinking," said Frank in his paternal tone. "This yer storm has been a whooping things up fur the last two days, an' it'll blow itself out ter-night. I've got everything all ready ter jump right inter, so as we'll not waste no time in the mornin'. The broadbills have been rather plenty lately."

"By the way, Frank, where is that catamaran that you used over on the beach last summer?" I inquired.

"She's over there yet hauled up 'longside my fishing shanty."

When the ducks are migrating they fly along the shore, some days in numbers. Ever since my eyes had fallen on that little double boat, the idea occurred to me that it might be used as an excellent means of preventing the onward course of a few south-southerlies. This scheme had become firmly fixed in my mind, and I determined to give it a trial this trip.

Like all old settlers, Frank's head was stored with stories of hunting trips and happenings that are inseparably connected with the pursuit of sport upon land or water. It required little more than an interrogative word now and then to extract these retrospections from him. We all know these genial characters. Frank possessed all those virtues that make a man universally liked. Good-natured, honest, a child of nature, living but to-day, taking the world with the same even philosophy, whether the days bring misfortune or good luck. It was a very tender point with him to have his friends call him Frank. This arose rather from an indication of sincere fellowship than to make him feel young, for he had scarcely reached the half century line and was as tough as any of his fellow baymen.

It was late before we turned in, and when we last looked at the heavens the clouds were commencing to break. It seemed to me that I had been underneath the blankets something less than five minutes when I was roused by some fiend, with a lamp, shaking me.

"Come, Frank, let's have another wink," I muttered drowsily.

"All right, but yer'll have ter sleep without ther blankets," and the cold-blooded villain swept the covering over the foot of the bed.

A couple of cups of hot coffee restored the good nature in both of us. The night still hung over the earth when we sallied out, loaded down with stools, shells and guns. A small arm of the bay reached up back of the house, where Frank moored his catboat. Stowing everything hastily away, we tied down two reefs and went skimming down the little creek before the night breeze. How strange and unearthly it all appeared. The little boat swept onward over the long waves that still remained out on the bay. Everything was dark and unreal, the only sounds that disturbed the silence were the dismal sing of the wind and and the surging of the water parted by the bows. The gloom threw over my mind a feeling of vague hallucination; for a few minutes it seemed like some unusual dream. A dash of the cold briny in the back of the neck dispelled this illusion. The skipper headed the Sanderling into one of the small coves on Oak Island, threw her into the wind and let go halliards.

We were all ready, with some fifty deceits bobbing in front of our blind, by the time the daylight commenced to creep over the waters. For some time before it was light enough to distinguish anything we could hear in the air above the ducks swinging along on whistling pinions.

The sun was just peeping above the banks of clouds when the first flock came in. Only three forgot to depart. By 10 o'clock we had scored but 13 birds, and things were getting dull.

A storm of any duration from out the north and northwest, smooths the ocean close to shore. The wind beats down the surf so that there is scarcely a break. It was so to-day. The blow of the last three days had the effect of making the sea as placid as a millpond. The sun toward the middle of the day came out very warm and the dying out of the wind made it more like an April than March day.

Now or never! I could see flock after flock of "old mammies" skirting low over the water just out of range of the shore. Taking about twelve decoys I tied them together with twine (two and two) about two feet long and slung them over the supports of the catamaran. She was but fourteen feet long. Just light enough for Ed. and myself to lift easily. Before launching I fastened a short stick in each corner and wound a strip of light green muslin some eighteen inches high around them, to serve as a blind.

Running out about 300yds. I joined the strings of the stools together so that they formed a long line, each bird 2ft. from its neighbor, connecting the whole crew to my floating battery by a long cord.

Things were not fairly ready. I was just attempting to discover the softest position to assume while lying flat on a level board upon my back, when in dashed a flock of seven or eight. Drawing on one of the old birds, I let go some No. 4, and catching two as they cross tangled them up with an ounce of No. 2. One was only wing-tipped and dove instantly on touching the water. Two more flocks swing in, leaving five of their number, and I was lying low watching another approaching string, when a shadow passing just in front caused me to look up. There, almost directly above, was a large gull. Straightening to a sitting position and throwing the gun to my face, I pulled the trigger. As he turned over I recognized a bird I had long been anxious to procure. He was dead as a mackerel when I picked him up, but he was a magnificent bird. It was the only crack I had ever got at those wily pirates of the ocean, the great black-backed gull.

The wind was beginning to work around to the west and rising. The long ocean swells were gradually increasing in length and size, so I rowed in, with a number of south-southerlies, and among the lot some beautiful male birds with their long tail feathers and ruddy breasts. Ed and Frank had not been idle on the bay side. Gathering stools, etc., together we went scudding across the broad breadth of water between the beach and mainland, with a good mess of birds stowed away forward. They were not canvasbacks, true, but there was some consolation in knowing that the reason they were not of that species was because there were none of them around, *i. e.*, in the particular vicinity of our blind. Shooting ducks on the broad ocean from a catamaran is a unique experience, at least to one individual, and one not likely to be forgotten, even if the game is nothing more than the despised "south-southerly." Try it some quiet March day, and if the recollection of it in summer does not make you several degrees cooler, the writer is as wide of the mark as he once was of a certain woodcock who refused to be persuaded by two charges of No. 12.

REX B.

THE ARKANSAS DEER LAW.

BALD KNOB, Ark.—*Editor Forest and Stream:* In the category of States that have lately distinguished themselves by the supreme idiocy of their attempts at game-protective legislation, the great State of Arkansas is certainly deserving of the red ribbon. The old law as it stood prior to the last session of the Legislature, was sadly deficient in some respects; only preventing the killing of deer for seven months in the year; the open season beginning ten weeks too soon, Sept. 1, and holding on until Feb. 1. Still it effected a great deal of good, doing away with hounding while the does and fawns were comparatively powerless to escape, and preventing the butchery heretofore common during the buffalo gnat season, when any boy with an army musket could score a half dozen deer by a day's sitting near a smoking stump. As a consequence there was a marked and visible increase in the game supply to such an extent that our market gunners could make fair wages supplying the Memphis market, where it often happens that venison and wild turkey are quoted lower than beef and tame poultry.

However, our toothpickian Solons were determined not to let well enough alone. That there was room for improvement in the old law was quite apparent, but whether their effort in this line was crowned with success I leave the reader to decide.

First, instead of cutting the open season down to three months—from Nov. 15 to Feb. 15, or Nov. 1 to Feb. 1, either of which changes would have been better—they added on another month, August; so that now the ambitious sportsman who may be lacking a firearm, stands a very fair chance of running down and capturing an infantile "monarch of the forest," thus winning his laurel wreath in a manner strictly legal, though quite unique. How this change adds to the welfare of the game I am as yet unable to learn.

There has been for years a law that assessed a license on all "non-residents following hunting or trapping in Arkansas." Numerous attempts have been made to have this statute apply to sportsmen hunting in this State merely for sport alone, but the ruling has invariably been that the meaning of the clause was, "following for a livelihood," and therefore, inability to furnish proof that the accused had sold, or attempted to sell, game, naturally resulted in his acquittal. However, sportsmen who visited Arkansas with speculation in their eyes very often got poor returns for their game shipments, in the long run; and many a poor settler who found himself at the close of the crop season poorer in pocket than he had been in the spring, turned his attention to the game of the vicinity, and made more money in a month with his old "Human" rifle—as muzzleloaders are derisively termed by the happy owners of breechloaders—than he had made with the plow and hoe in the six months preceding.

Now this resource in the time of need is shut off by legislative decree. "Six years shall the Memphians hunger for the flesh-pots of Arkansas," spoke the law makers, and Gov. Eagle saw that it was good and signed

the bill with his official hieroglyphic; and the angular, hungry-looking mossyback in the wayback districts straightway broke his old rifle in disgust and gave his better half the barrel for a fire poker. (Mem.: I'm going to buy myself another gun soon.)

It is hard to understand why such a law should be necessary in a country where game is more abundant than in any other portion of the Union. When, in an "off year" for most crops, nearly a hundred deer can be killed in a circle hardly four miles in diameter—and most of these by four still-hunters poorly armed and little versed in hunting; when such a score as this is made within five miles of an old established railroad and in one of the most populous counties in the State, why should such strenuous efforts be made to prevent the farmers from getting value received for the sweet potatoes and peas destroyed by the deer during the months when they may not be molested? Possibly the framers of the bill knew what they were about.

As it stands, an impenetrable fence is built between the average Arkansas gunner and the Arkansas deer; for most of our local nimrods must combine pleasure and profit in their sports, and the majority of those able to enjoy a week in the woods without detriment to their business interests, are confronted by another new-fangled, progressive idea which makes it a misdemeanor for the resident of one county to "camp-hunt" in another. So to condense the matter in a nutshell, one must adopt the words of a late correspondence in the Little Rock *Gazette*, which asserts that the only party who can hereafter devastate our forests is the wealthy amateur "able to hire some particular friend, in the best range, to invite him to spend a few days as his honored guest."

Give us less legislation and more protection—and to the Arkansas sportsmen as well as the swamp deer.

S. D. BARNES.

CAMPS ON THE LITTLE SOUTH.

IN a letter to FOREST AND STREAM some time ago I promised some camp notes from our hunting trip to the Barnes Camp country on the Little South, or South Fork of the Cache La Poudrie River, a beautiful stream that heads high up on the Snowy Range and comes dashing down the mountains through beautiful forks and grand cañons to the fine agricultural valley of the Poudrie and empties into the South Platte River below the city of Greeley. The Little South is a fine stream for trout in the summer, but go down to deeper water for winter quarters.

Old Grey has come with me and here we are on Nov. 22 in camp all snug and nice after a two and a half days' hard pull up the mountains. Three times did we have to unload and carry our oats and bedding up the steep places in the road in order to make our load light enough so our horses could get up with the wagon and grub. Our camp is in a beautiful basin near the top of Barnes Mountain; we have pitched our tent in a grove of young aspens with plety of dry wood at our tent door. Some 30yds. distant an ice cold spring sends its waters dancing down the mountain side, and all around the camp is abundant grass for our tired horses, the snow having melted off the south slopes and in the basins.

It being late when we got our camp all in shape we made but a short trip from camp. I saw a fine flock of about a dozen of willow grouse, but did not shoot any of them for there was plenty of deer signs about, and I never allow myself to shoot at small game when hunting for deer. On my return, when near camp and just as the shades of evening were creeping through the pines, I jumped a fine blacktail doe, but the timber being so thick I missed.

Old Grey came in empty-handed. Supper over I clean and oil my Marlin .40-60 and hang in its place ready for its deadly work to-morrow, and as I write my camp notes old Grey has the camp stove red hot and is cleaning his doublebarrel muzzleloader, an old arm with the hammers on the side, shooting about a .32 ball and very accurate. Old Grey is a Virginian, seventy-one years old.

Nov. 23.—Up before day this morning, and at daylight I find that my horses have "hit the road" for home. While hunting for their tracks near camp I start two deer not more than 300yds. from our camp; most too far off for a good shot. Taking my horses' tracks I follow them to the road below camp, and after a hard tramp of about ten miles find them at the gate of a cattle ranch we had to pass through on our way in on my return. When within 500yds. of camp two deer skip across the road just ahead of me, but do not stop for my Marlin. Arriving at camp at 1 o'clock I find old Grey at work cleaning grouse to fry for supper. The inner man being satisfied I shoulder my Marlin for a short hunt over north of camp to get the lay of the country. In less than a half mile of camp I jump three deer out of a gulch of dead pines and get a running shot, but no venison for camp yet. I take their tracks and follow slowly, and as I pass over a rocky ridge and down around the mountain side, sparsely covered with dead timber, I see a deer standing and looking at me up on the side of the mountain. Knowing it will stand there but a moment I make a quick shot. Up the mountain side goes my deer, and at the crack of my gun another deer springs to its feet and goes plunging down the mountain a little quartering to me. I throw my gun on to it and fire three shots in rapid succession, the third shot breaking its neck. Pacing down to where it lay I found it was just 135 paces. Then I go to look for the one I shot at first. Where it stood I find plenty of blood; following the trail about 50yds. up the hill I find it dead, shot through. Dressing and hanging up the game I hurry to camp for a pack horse and have them both hanging in an aspen tree by the tent before dark. They were both buck fawns. Old Grey got more grouse, so there is no prospect of a meat famine in camp soon. The evening passes off pleasantly, listening to old Grey's stories of wild turkey shooting away down in old Virginia.

Nov. 24.—Had a big tramp to-day and saw no deer. Saw a beautiful white snowshoe rabbit and a white weasel, but did not shoot them. Old Grey got three grouse.

Nov. 25, Sunday.—Thought I would take a ride to-day up toward the timber line on the west side of Little South, where I camped six years ago. Found about six inches of snow, but saw no game sign except a fresh lion track, and I had not lost any lions. Returned to camp about 2 P. M. Old Grey was in camp cleaning grouse and a snowshoe rabbit. About 3 P. M. I take my gun and go over the green ridge south of camp. While going down the south side I see a nice sleek fawn in some dead timber, which I kill with the first shot; and then see another bound away down the gulch. My dead deer proves to be another buck fawn. I see the other deer walking slowly about among the dead timber a little below, apparently waiting for the other. I fire and wound it; left a strong trail of blood; but there being no snow over here, and it now most dark, I dress my dead deer and return to camp, intending to return early in the morning and follow my wounded deer. A lady passed our camp this evening on horseback, carrying a Ballard rifle, the wife of Mr. Barnes, who has a cattle ranch about three miles from our camp over on the Little South; she had killed two deer this fall: she had been helping Mr. Barnes take out a bunch of cattle and was on her return home, where she expected to remain by herself until his return, some three days later. She was a typical Western woman; a lady with plenty of grit.

Nov. 26.—This has been a red-letter day for us. Early this morning we went over the mountain and took the trail of the wounded deer. It was with great difficulty that we were able to follow it over the bare ground and rocks; but in a short distance we jumped it up out of a lot of down timber away up on the mountain side. I fired three shots at long range, but failed to get a ball into the right spot to stop it. The trail soon led me over into a thick belt of dead timber with three inches of snow; here I could follow very easily, and soon discovered that I had broken the deer's right hindleg well up in the thigh. After following over a mile, and being very cautious, I crept on to it and shot it through the heart. At almost the same instant I heard two shots fired at a short distance to my right, which proved to be by Old Grey; he had shot a fine two-point buck, a dead match to the one I had just killed. He had seen the buck coming before I shot, and snapped a cap at him, which sent the deer bounding off in my direction, when the report of my gun turned him back again. He then came just right for the old man to get a shot at—not more than 35yds.—with the other barrel; this Grey always kept loaded light for grouse, but being so close he broke the shoulder.

Hanging up our deer we again parted company. I had not gone more than 300yds. when I jumped a band of five or six just around a point on a mountain side. I fired a wing shot and wounded one, which I followed until most dark, but had to give it up. I don't think it was wounded very bad. Old Grey saw several more deer, but did not get a shot. He is as happy to-night as a schoolboy with a pair of new skates, and says he is good for a big day's hunt to-morrow. Have now hunted four and a half days, and we have five fine young deer, all bucks.

It looks stormy to-night; have doubled the blankets on our horses; got in a big pile of wood, and tied the tent down tight; old Grey has it hot; and I jot down my notes while he sits on the spring seat in front of the stove and tells about that possum he and the darky "caught up a 'simmon tree down in ole Virginia."

Nov. 27.—Looking out of the tent at the first peep of day we discover that it has snowed about an inch, just enough for a good tracking snow. We are again off for the hills and pine woods; a fine mist is still falling and a thick fog hides the high mountain tops above us. Old Grey strikes a fresh track near camp and follows it, but fails to get his deer, and comes into camp at 3 P. M. with a nice fat rabbit. I went over the mountain and found the fresh trail of three deer. After some distance they were joined by two more, and passed through the timber where we killed the two bucks yesterday, passing within a rod of each deer. I followed very cautiously now as the tracks were getting quite fresh. Going up the side of a high mountain thickly covered with green pine and spruce, I see something away up ahead of me that looks like deer hair; can just see it between two trees not more than a foot apart, but cannot tell which end the head is on. As the smoke clears away my deer is gone and all is quiet. I stand still a little while and then move cautiously up. Pretty soon I hear a loud thumping and breaking of brush, and directly I see four deer cross the head of a gulch some hundred yards up above me. Going on up I find my deer lying on its back down in a small gulch, about two rods from where it was standing when I shot. This was rather an odd shot; the deer, a very fat yearling doe, must have been standing with her head doubled back biting her right hindleg, for my bullet passed through that leg about 10in. above the hock, through her ear and then through her neck, killing her almost instantly. Dressing her I drag her down over the snow to the big gulch below and hang her up.

The air has now become thick with fog, and I think best to make for camp. To be certain of making no blunder in getting to camp, I take my back track until near where I killed the fawn on Sunday evening. I turn off here to take a look at it and find the magpies are at work on it, so I take it on my shoulder and carry it some 200yds. up the mountain in the direction of camp, thinking I will now look out a good jack trail from the deer to camp. In dodging some thick timber and a ridge of rocks I get too high up, and in the fog I pass over the top of the mountain, and instead of going to my left down through the thick green pines to our camp, I keep bearing to my right and am going directly away from camp, when hearing a noise above me, there I see old Grey coming down. I stop until he gets down to me, when he wants to know, "Where are you going?" "To camp, of course." "Camp haint off thar, it's right down here." "Not much, old man, you can't fool me in these hills if it is foggy. I just came from my fawn over there not over ten minutes ago, and I guess I know where I am a going," and on I started. "Better come with me, for I was down most to camp just a leetle spell ago, was down so I seed the hosses." Thinking perhaps the old man was right and I was wrong, I reluctantly followed him, and it was well for me I did, or I would have pulled up back in the thick timber in a dense fog. As it was we reached camp in a short time. It was now 3 P. M. Going out for my horses, I found them gone again; the one on the picket rope had become untied, and no sooner was she loose than she put for home. She had just weaned her colt. I have had her on three hunting trips up in Wyoming, and she never bothered me before, and I always let her run loose until now. I took a cold lunch in my fist and struck out as fast as I could, for I had but two hours of daylight, and when it did get dark it would be awfully dark. The way being for the most part down hill, I went nine miles in one and a half hours, when I arrived at a ranchman's house and found my horses tied up to the fence. I made the acquaintance of Mr. Hake. His wife, seeing the horses going past, had run out and caught them. I declined a kind invitation to remain over night in the cabin, and arrived at camp at 7 P. M., cold and hungry. But old Grey had things hot for me. Supper over, dishes washed and stored away in the mess box, old Grey takes his accustomed place on the spring seat in front of the camp stove, and the day's hunt is all gone over again, winding up with some of his "old Virginia" yarns.

Nov. 28.—Forty years old to-day. The fog is still thick, and the pines are beautiful with their white coating of frost, which seems to me a fitting tribute for my fortieth birthday, for ere long the frosts of many winters will whiten the top of my old head. As it was rather a poor day for hunting, we concluded to pack our game into camp. Having but one saddle, we strapped a blanket on to the other horse. By going over Barnes's Mountain on to the Little South, we have a good trail around to where our deer hangs. About three miles from camp some fresh tracks cross the road. I give my horse to Old Grey and go on ahead; at the top of a ridge a fresh track crosses the trail; judging from the size of the track, I take it to be a fawn. Keeping a sharp lookout to my right as I move slowly up the trail, I discover a deer some 70yds. distant standing behind a small green pine. I can only see its hindquarters. Holding where I think it shoulders ought to be, I fire, and such a jump and rush and running in a circle as that fawn made; but I knew I had it, so I held my fire, and it soon went down. The ball had hit it in the neck and came out through the right shoulder. I went over, and as Old Grey came over the ridge I motioned him up to me. We soon had it hanging up on a pine, and went on and got the three deer we had killed the two days previous. We packed the two bucks on the horse with a saddle on, and Old Grey took the doe on before him until we got back to the fawn killed on our way out, when we tied the legs of these together and slung them across the horse with the blanket on, and I took them. And now didn't I have a picnic packing two deer on a blanket over a big rough mountain! But all things have an end. After many stops we arrived in camp. We met Mr. Hake on our way in and he returned to camp with us. After dinner I take a horse and go over the ridge and get the fawn I killed on the 25 h, and to-night we have seven deer hanging in camp, five bucks and two does. I killed one and helped pack in five to-day. How is that for a fortieth birthday party?

Nov. 29.—Thanksgiving Day. Cold and frosty and trees still loaded with their white coating of frost. Old Grey starts out early and I remain in camp to do some camp work. Leaving camp at 10 A. M. I find trail of three deer, but only follow it a short distance when the track of old Grey comes in on the trail, so I turn off. I see plenty of tracks; several big, old bucks are out on the war path, but I fail to see a deer in all the day's tramp; the fog is too thick and the snow is crusted from the fine mist falling and freezing. We do not care to kill any more deer except one big buck; would like to get one big fine fellow if we can. There are plenty of them here, but they are smart old fellows. Old Grey did not get his usual grouse to-day, so by hard work (as they are froze hard) I skinned out a leg of venison to-night for camp meat. It is now 9 P. M., and as I write on a box by the light of a tallow candle, stuck on one corner of the box, old Grey is eating roast venison, and he says that fat venison ribs beats fat coon or 'possum down in ol' Virginia any day.

Nov. 30.—Clear and frosty, but the sun came up bright and warm, so we thought we would make one more effort for a big buck. We hunted all day and got nothing except a snowshoe rabbit, which I shot high up on the mountain among the green pines. Saw three beautiful snow-white mountain quail, but did not succeed in getting one of them. To-day is the close of the open season for deer in Colorado, and to-night we end our hunt.

BERTHOUD, Col. A. A. K.

ON THE SAULT STE. MARIE.

AS this has been one of the most peculiar seasons ever known in the region, I cannot refrain from giving some account of a three weeks' trip on the Sault Ste. Marie River and Munoshkong Bay. I call 1889 a peculior season from its forwardness, opening one month earlier than usual, and the scarcity of migratory birds which heretofore have settled and nested in the bay in countless numbers every spring. Munoshkong Bay, about half way between Lake Superior and Lake Huron, is a widening of the Sault River, about 7 miles deep; around this are several smaller bays, which in the autumn are full of tall rushes, covering thousands of acres, with many open places where the lilies grow—a perfect paradise of a wildfowl shooting ground. This is surrounded by soft swampy grassland, extending back to the timber, making a perfect home for the muskrats, which until this spring could be found by the hundreds, but were almost totally annihilated during the past winter by the ice freezing to the bottom; this caused them to perish in great numbers and their carcasses can now be seen by the score. These facts, coupled with the total failure of geese to alight and only a few small scattering flocks of ducks, go to make up a very peculiar state of affairs in this ancient and famous hunting ground of the Indians, who used to congregate here in early spring for a slaughter of ducks, geese and muskrats.

My Indian friend, Mr. Ed Shawwauna, with whom I made a most enjoyable five days' trip last September, has often given me such glowing accounts of the great quantities of duck and geese which congregate here in spring flight, that it has always increased my desire to visit the place, more out of curiosity than a desire to destroy game. Mr. S. having gone with dog and canoe over the ice early in April, to be on hand at the earliest breaking up of the ice, my desire increased each day to join him. The 20th of April found me amid the drifting ice, under sail, in a small boat with camping outfit, making down the river with a spanking breeze. After I had run the gauntlet of the little rapids amid crushing cakes of ice, and laying to in Hay Lake to partake of a cold lunch, a sailboat passed to windward with man and boy, who shouted that they were going to camp at the mouth of Charlotte River if they could get there. I set sail and followed, but fell behind and reached C. River about 5 P. M.; found Chet Perry and his little brother preparing to camp; was in-

vited to join them, which I gladly did, as they were out for a trip to Munoshkong also; and it proved a most agreeable meeting, for I found young Perry one of the best woodsmen and agreeable companions I ever met. He is a perfect genius in every sense of the word, for with axe and pocketknife he can make anything a woodsman needs.

The first night in camp we were awakened by the arrival of two canoe loads of whooping Indians, who camped near us. Next morning we moved further up the river into the thick timber where it was warmer, and we found better camp wood. Young P. set a gill-net and caught some pickerel; and here was where my companion showed his hand at cooking boiled fish and potatoes. Did I ever eat fish with such a relish? Our white tent and soft bed of sweet green balsam boughs gave as picturesque a scene as one could wish. The third day we started down the river, encountered about a mile of ice and camped on an island near the mouth of the Munoshkong, a lovely spot on high ground among the balsam, birch and poplars. Here we had smoked fish, fried fish and fish boiled. Young P. served up woodchuck, muskrat and porcupine, all of which I tried and pronounced excellent, except the muskrat, for which I confess some prejudice; it may be palatable when properly prepared, but I fancied I could taste in one dish of this kind a little musk, which settled the thing with me.

After a few days we went around into the bay and camped in the hardwood. Up to this time we had seen but few ducks, and no geese would alight, though many flocks passed over every day, and cold northwest winds and snow made life anything but agreeable. One night P.'s dog barked at something near camp. I got up, untied him and tried to sic him, but he would not seek; we concluded it was a bear, as it walked off slowly, cracking the brush as it went. Next day while building a deadfall bear trap I had the misfortune to cut my foot badly with an axe, which put a damper on our prospects. Almost every day and night deer came close to our camp, and on Sunday, April 27, an inch of snow lay on the ground and deer tracks could be seen in every direction. P. went out about two miles in the bay to a reef to get a shot at some geese, but failed to get any; the flock could not be driven away. He tried to get a shot several times afterward but finally left them unmolested.

We made our island camp a few days later, P. carrying me on his back through the swamp to the boat. One evening while drifting about in the twilight I discovered some animal poking along the shore among the rushes; paddling close I discovered it to be a porcupine. After watching his movements for some time I made a noise and sudden motion, when he suddenly lowered his head and started slowly for the woods, muttering and turning his horrid looking white back of bristling quills toward me in a defiant manner. This was more than I could stand, so I gave him a charge of No. 4 shot. He attempted to climb a log, but fell back with a stifling groan. Then I was sorry I had shot the harmless creature, and at this moment came the exact thoughts expressed by your correspondent, H. W. D. L., who asks "Is there in the ethics of the field such a thing as a sportsman's change of heart," etc.? I answer, there is. It is a clearer knowledge of right, justice and compassion, which comes to us in our advancing years. There is "less desire to kill," more of a love of the "divine revelations of nature." This love of nature is so strong in me that I am going back to feast on it for the whole summer, camping on the banks of the beautifully picturesque Sault Ste. Marie, where hot nights are never known.

ED. H. BOWERS.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

I have owned during the past ten years no less than a half dozen rifles of as many different makes, but mostly of .22cal. I have at present a No. 3 F. Ballard gallery rifle, which has been re-chambered to take the Winchester cartridge, containing 15 grains powder and 45 grains lead. Although I cannot complain of inaccuracy, I find one fault which every one who uses a .22cal. rifle on game seems to find, it too often causes a lingering death, giving the game a chance to escape. I agree with your correspondents that there should be a rifle placed on the market, midway between a .32cal. and .22cal., but I do not think the .25cal. would fill the bill, being but .03 of an inch larger in caliber than the .22. I would consider an ideal small-bore rifle a Colt repeater, .27cal., 25 grains powder, 85 grains lead, 26in. barrel, 9lbs. This would undoubtedly do good work up to 250yds., and would be in caliber about midway between the .22 and .32.

GREENHEAD.

NEVADA, Ia.

Editor Forest and Stream:

I would like to ask some of the writers who advocate the .25cal., if that will be much improvement on the .22. Would it not be better to make a rifle a little nearer half way between .22 and .32, say .27 or .28cal.?

Has any one tried the .30cal. in a rifle? If so will they give their experience? It does not seem as though a .25cal. would have much advantage over a .22 in point of ease in keeping clean. However, if any one turns out a good .25cal. rifle with good ammunition to suit, I will try and have one. I hope too they will make a good article in rim-fire cartridges, as they are cheaper, and so far as we can learn give about as good results in that size shell as the center-fires.

Cheapness in ammunition should go a great way toward making a small rifle popular. Witness the rifles using .22 short, and we predict for a .25 or .27cal. rifle with rim-fire ammunition suited for it an immense sale.

BUCKEYE STATE.

Editor Forest and Stream:

I must say that I am very glad to know through the FOREST AND STREAM that there are good men taking an interest in having a .25 rifle made. I think it would be the gun for all-around work. I have often wished for a larger bored gun than the .32, and a .32 is too dangerous for yard practice. I am sure the .25 would meet the demands of most sportsmen. It could be much more easily kept clean, although I do not find much trouble in keeping my .22 in fine condition. It would not cripple so much game to go off and die, and it would do its work at longer range.

R. H. F.

SENECA, Mo.

NEWFOUNDLAND DEER LAW.

HARBOUR GRACE, Newfoundland, May 30.—*Editor Forest and Stream:* I inclose a copy of the "Deer Preservation Act," passed in the present session of the Legislature. The act has not yet been officially promulgated, but I think you may rely on this copy as correct. It will receive the sanction of the Governor to-morrow at the close of the Legislature. This abridgment of the law gives all the provisions of interest to foreign sportsmen:

I.—Hereafter no person shall kill, or pursue with intent to kill, any caribou, except from the 1st day of October until the 15th day of February, both inclusive, in any year, nor shall any person expose for sale or have in his possession any green caribou skin or any part of the carcass of a caribou, except during the period aforesaid and the first ten days in March in any year.

II.—No one person shall, during any one year or season, kill or take more than five stag and three doe caribou.

III.—No person shall kill or take caribou without having first procured therefor to himself a license, issued for the year or season as hereinafter provided.

IV.—Every such person not usually resident in this colony or its dependencies, shall pay for such license an annual fee of $50, and every person domiciled in this country shall pay a fee of $10 for such license.

V.—The license required by this act may be issued by a stipendiary magistrate, collector or sub-collector of customs, a justice of the peace and such other officers or persons as may be empowered by the Governor in council for that purpose, the person requiring the licence first paying therefor a fee of $1 and making oath or affirmation that he will not take or kill for the season for which the license is issued in manner provided by this act a greater number than five stag and three doe caribou, and that he will use his best endeavors to have the carcasses or flesh of any caribou he may kill, and which may not be consumed for food and which is suitable for food carried out of the woods, or interior of the country into some town or settlement within ten days after the caribou shall have been killed. And that he will duly clear at the Customs' House any caribou heads, antlers, skins or other parts of the caribou which he may lawfully export or carry out of this colony.

VI.—Any person knowingly or wilfully making a false declaration on oath or false affirmation under the preceding section of this act shall in addition to any other penalty to which he may be subject under this act, be liable to be indicted, tried, convicted and punished for the crime of wilful and corrupt perjury.

VII.—Every holder of a license granted under the provisions of this act, must produce the same when required so to do, by any magistrate, justice of the peace, constable, collector, or sub-collector of customs.

VIII.—No person shall export or carry with him out of this colony any venison, or the heads, antlers, skins or other parts of caribou, without first clearing the same at some customs' house, or with a duly authorized officer of customs or an officer empowered, for the purpose of this act, and the person so claiming shall make oath or affirmation of the quantity and numbers of the property aforesaid so exported or carried, and the manner in which the same shall have been obtained and that the same is not exported as an article of commerce, and shall also make oath or affirmation of the numbers (if any) of the caribou he himself or any party he shall have been with, have killed or taken in the course of the then or of the immediately preceding season, and he shall pay a fee to the officer of $1 for each clearance.

IX.—No person shall export in any form the flesh of caribou as an article of commerce.

X.—No person shall set or attempt to set any snare or trap or pit for the destruction of caribou, under a penalty of not less than $25 nor more than $50 for each offense, and any person finding any such snare or trap may destroy the same. The possession of any such snare or trap shall be presumptive evidence of the attempt of the person in whose possession it is found to set the same for the destruction of caribou.

XI.—Any person who shall hereafter hunt or chase or kill, or pursue with intent to kill, any caribou with dogs, shall be liable to a fine of $25 in addition to any penalties to which he may be otherwise liable under this act to be recovered in a summary manner before a stipendiary magistrate or justice of the peace by any person who shall prosecute the offender to conviction.

There are one or two points in it which I think are objectionable; for instance, I think the open season should commence on Sept. 1. The horns are then hard and the venison is fat and in prime condition until the 20th or 25th of the month. During the rutting season and until the end of October the stag meat is not good food. Therefore I think they have unwisely prohibited killing in September. Besides, if September were an open month sportsmen could supply their camps with good stag meat, and there would be no necessity for killing does.

The section prohibiting hunting with dogs is an absurdity. That would apply to moose and your Virginia deer, small-hoofed animals easily brought down in deep snow, but the caribou is broad-hoofed, and in deep snow lays his hindlegs almost like a hare going over the snow, and easily distancing any dog that ever ran. However, the section is harmless, and no person is likely to violate it.

On the whole, I think the act is sufficiently liberal. Eight caribou ought to satisfy any reasonable sportsman. The license fee is not heavy, and the other requirements are necessary if it is not to remain a dead letter.

Hitherto we have always welcomed sportsmen from abroad, and had they confined themselves to reasonable limits no restriction would have been made, except those in the law I sent you. Last season some of them were ruthless in their slaughter. Of course the accounts were exaggerated in the papers, but the bare truth was bad enough. I took the trouble to investigate and found one man carried away 28 heads, another 37 heads, another 22 heads.

Am off to-morrow for a couple of days' good trouting. The spring is here, the delicate-footed May, with her fingers full of leaves and flowers, and with it comes the thirst to be away, wasting in wood paths the voluptuous hours.

B.

STAMFORD ROD AND GUN CLUB.—Stamford, Conn., June 15.—The Stamford Rod and Gun Club is the title of a new organization formed quite recently, chiefly by New York gentlemen having summer residences in Stamford and Noroton. The headquarters of the club is at Stevens Point. The club will devote itself to the promotion of the sports of shooting and fishing, and to this end will exert all its influence for the enforcement of all laws relating to game and fish. The club consists of the following named gentlemen: W. J. Parks, President; George Geis, Secretary; William Eckhert, Steward; George Costigan, Jacob Senjer, S. A. Wolf, H. C. Mount, Henry Kleisch, E. Hodgeman, William A. Ross, R. Vander Henden, Joseph Jordan, James W. Campbell, A. J. Pixley, Thomas J. Murray, J. G. Dotterwich, George A. Peters, George Rebsamen, Samuel Howard, Alfred Hopcroft, W. G. Williams, D. Budd Scofield.

CHICAGO, Ill., June 10.—Mr. J. E. Miller has resigned charge of the gun department of the Western Arms and Cartridge Co., and on July 1 will open at Cincinnati, O., his old home, a general agency office of the Oriental Powder Mills, of Boston. Mr. Miller's friends here regret that he must leave Chicago, but wish him all the luck in the world.—E. HOUGH.

THE WOODCOCK SEASON IN NEW JERSEY embraces the month of July and then the months of October, November and the first fifteen days of December.

Sea and River Fishing.

FISHING NEAR NEW YORK.

VIII.—SOUTH SHORE OF LONG ISLAND—*Concluded.*

CANARSIE BAY has been the most popular fishing resort near New York for years. In fact, it is almost too popular, for, although the majority of fishermen who go there are gentlemen and behave themselves as gentlemen, there are unfortunately many anglers met there who carry more liquid bait than any other kind, and who conduct themselves like loafers. If you are a respectable, law-abiding and peace-loving fisherman—as of course you are—go to Canarsie on any day but a Sunday or a holiday, and you can have a good quiet day's fishing.

CANARSIE SHORE.

Canarsie station, on the bay shore, is the objective point for the fishing on the north shore of Canarsie Bay. Take the Rockaway Beach and Canarsie R. R. from the Howard House, East New York, from which point the round trip fare to Canarsie is 20 cents. To reach East New York take any of the Brooklyn ferries and connection can be made on the other side for East New York by horse cars. The quickest route of all is *via* Brooklyn Bridge and Kings County Elevated R. R. Trains to Canarsie run from a half hour to an hour apart.

The fish now being caught within reasonable distance of Canarsie station are flukes, blackfish, sea bass, bluefish and weakfish. Some of the favorite spots for dropping a line are Barren Island, quite a long sail from Canarsie, Ruffle Bar, Pumpkin Patch and Fishkill. Weakfish will be very plenty after this week. There is a line of steamers (fare 10 cents) that makes connection with all trains at Canarsie for Seaside station, Rockaway Beach, the southern boundary of the bay.

On the left side of the station as you alight from the cars are the following resorts:

D. B. Morrell has twelve rowboats for hire at 50 cents a day, except on Sundays and holidays, when the price is $1. He keeps bait of all kinds constantly on hand, and can provide tackle if desired. One of Morrell's patrons, Charles Freeman, of Canarsie, caught one 5lb. and one 4lb. blackfish three Sundays ago.

John O'Brien has fifteen round-bottom and twenty flat-bottom boats, for which he charges 50 cents a day week days and $1 Sundays and holidays; boatman $2 a day extra. O'Brien keeps always supplied with bait and tackle.

Eden & Madson have six round-bottom boats, for which they charge the same rates as the others. They also have a 32ft. centerboard cabin sloop for hire at $8 week days and $10 Sundays and holidays. The sloop takes fishermen to Fire Island, Sandy Hook, the Banks, or anywhere her skipper thinks is a likely spot for hauling in big fish. Eden & Madson keep bait and tackle always on hand.

The resorts mentioned below are all on the right side of the station (south side):

James Sellers has twenty-nine rowboats which he rents at the prevailing rate. He also has three 18ft. catboats, which he rents at $2 week days, $3 Sundays and holidays; boatman $2 a day extra. Bait and tackle are always supplied if desired. Sellers says that shrimp are the best bait just now, and that fluke are the most plentiful fish at this season. Weakfish are probably biting well by this time.

William H. Lisk has thirty-one rowboats for hire at the prevailing rate. He also has five catboats from 17 to 20ft. long for hire at $3 week days, $4 Sundays and holidays; sailing master $2 extra. Lisk reports that plenty of bluefish and flukes are being caught, the last of the ebb and first of the flood tide being the best time for fishing. Eels are as plenty hereabouts now as flies in a country barroom in August. The prospects for crabbing this season Lisk declares to be great.

Garrett S. Braisted has twelve round-bottom rowboats at the prevailing rate. He also has five catboats to hire at $2 week days and $3 Sundays and holidays: sailing master, $2.50 a day extra. Braisted reports good catches of blackfish, flounders, fluke and weakfish by his patrons. He always keeps bait and tackle on hand. The celebrated catboat Ours, champion cat of Canarsie Bay, is owned by Braisted.

John Kavanagh has sixty rowboats for hire at the prevailing rates. He also has one 20ft. catboat, five 16ft. cats and two of 13ft. length, for which he charges from $1 to $4 week days, with an advance of half a dollar on holidays and Sundays. Beside these he has two sprit-sail round-bottomed boats at $1 a day week days. Kavanagh is the owner of the 40ft. centerboard cabin sloop the Katie Kavanagh, and the 35ft. centerboard cabin sloop the Fleetwood, for which he charges $8 a day week days and $10 Sundays, which prices include a sailing master. Kavanagh has bait and tackle always on hand, and can lodge fishermen at 50 cents a night. Kavanagh reports a big haul of sea bass and fluke in the bay at Fishkill recently by John Reither, of Brooklyn.

ROCKAWAY BEACH SHORE.

The south shore of Canarsie Bay is formed by the spit of sand well known as Rockaway Beach. The best fishing grounds in Canarsie Bay are reached from the stations on the New York & Rockaway Beach Railroad, which crosses Canarsie Bay on a long trestle, and runs along the beach to its western end. Trains may be taken from Long Island City, from Bushwick avenue (round trip 50 cents), or from Bedford and Flatbush avenues (round trip 45 cents). The summer time table will be in effect soon, but at present trains leave Long Island City at 5, 6:35, 9:10, 11:10 A.M., 1:30, 3, 5, 6:45 P.M.; Sundays, 7:10, 9:10, 10:30, 11:50 A.M.; 1:15, 2:15, 3:20, 4:30, 5:45, 7 and 8:10 P.M. From Bushwick avenue trains leave at the same time as from Long Island City, except that in some instances they are five minutes earlier, and the last train at night is at 6:30 instead of 6:45. On Sundays the time tables are identical. From Flatbush avenue trains leave at 6:15, 9:20, 10:57, 11:40 A.M., 1, 1:40, 2:40, 3:50, 4:40 and 6:20 P.M. Sundays at 7, 9:20, 10:15, 11:40 A.M., 1, 1:50, 2, 3, 3:50, 4:27, 5:50 and 8:10 P.M. All these trains stop at the fishing stations, which are, in the order reached by rail, the Aqueduct, Goose Creek, The Raunt, Broad Channel, Beachanel, Hammel's, Holland's and Seaside. When the angler arrives at his destination, he should make inquiry at once as to time for taking his return train. The

time table is as complex as the weakfish tackle illustrated in a New York evening newspaper.

The steamers crossing the bay from Canarsie to Rockaway Beach make their landing there at Seaside station. This is the last station if the angler comes by rail at which there is a fishing resort. It is the nearest place from which to reach the fishing grounds off Barren Island, and is convenient to several other favorite places. Martin Schultz, of this place, has for hire twenty-one flat-bottom rowboats at 75 cents a day; three round-bottomed boats at 50 cents an hour or $3 a day; one small catboat at $3 a day, and one 21ft. catboat at $1 an hour or $7 a day, including sailing master. Schultz makes all his own boats and guarantees them dry. He reports good catches of weakfish, blackfish, sea bass, bluefish and fluke. One of his customers, Mr. Charles Newman, of Brooklyn, in one day's fishing recently caught thirty fluke, which averaged two pounds in weight. Schultz always has bait and tackle on hand.

At Holland station, the next stop above Seaside toward Brooklyn, is Charley Frey's place. He has thirty-seven rowboats at 50 cents weekdays and 75 cents Sundays and holidays; one 22ft. catboat at $6 a day, and one 19ft. cat at $5 a day. He also has one 37ft. cabin centerboard sloop at $10 a day, which includes sailing master. Frey and Charles Miller caught fifty weakfish at Moxie's Creek at the head of the bay as early as June 8. On the same day Messrs. A. Phillips and J. F. Burke caught twenty-eight large blackfish at the Block House wreck opposite Barren Island. Frey keeps both bait and tackle.

At Holland station is the headquarters of the Redfield Fishing Club, of which Mr. Andrew Sutton of New York is the president.

Hammel's station (Willow Grove) is the next stopping place. E. G. Babcock has twenty-two rowboats at from 50 cents to $1 a day; three catboats from 16ft. to 22ft. at $3 a day without sailing master or $5 with one, and one 20ft. sloop at the same rates. Babcock is a boat and yacht builder and does good work. Bait and tackle can always be supplied.

M. A. Magerus, at Hammel's station, has fifty rowboats at 50 to 75 cents week days, 25 cents extra Sundays and holidays; one 21ft. catboat at $8 a day, and one 26ft. open sloop at $10 a day, sailing masters included in the last two craft. One day recently Henry Snyder, of Williamsburgh, one of Mr. Magerus's patrons, caught a 7lb. blackfish at Block House wreck, and the party he was with took twenty blackfish of an average weight of 4lbs. Magerus keeps bait and tackle.

J. Carle, at Hammel's station, has fifteen rowboats at 50 cents week days, 75 cents Sundays and holidays; one 18ft. flat-bottom catboat at $1.50 a day: one 16ft. catboat at $3 a day, sailing master $1.50 extra. He also has a 26ft. steam launch, accommodating from ten to twelve persons, at $8 week days, $10 a day Sundays and holidays.

At Hammel's station is the luckiest fishing club on the bay, the Lonesome Six. They are also the jolliest and happiest crowd that exists in all Long Island. Three of them, Louis Diessle, George Groesch and George Roehm, were down the day the FOREST AND STREAM man visited Hammel's, and they had been making a big record. They enticed 17 fluke out of the wet, one more than they coaxed the Sunday before, and their average weight was 6lbs. The night before they bobbed to get 30lbs. of eels but took 40lbs. by mistake. They want to see the Columbia Club, of Staten Island, try to beat their fishing record this season.

At Beachanel, the station between the beach proper and Broad Channel, is T. A. Smith's place. He has thirty rowboats for hire at 50 cents week days, 75 cents Sundays and holidays.

At Broad Channel, one of the most famous fishing spots on the bay (get off at Broad Channel station) is Fuller's Hotel, Charles Fuller, proprietor. He has seventy-five rowboats at 50 cents week days, 75 cents Sundays and holidays, two flat-bottomed 16ft. catboats at $2 a day, one 19ft. catboat at $4 week days, $6 Sundays, one 20ft. cat, same price, and one 24ft. open centerboard sloop at $6 week days, $8 Sundays. Last three craft are provided with sailing masters. Fuller always has bait and tackle. He will furnish lodgings and the finest fish dinners around the diggings at reasonable prices. Weakfish are being caught in plenty by Fuller's customers. The season opened here very early, Dr. Houghton, of Brooklyn, having caught 38 weakfish averaging 1½lbs. on June 7, and 2lb. snappers are also plenty. The last of the flood is the best tide.

Babcock & Rasweiler are also at Broad Channel. They have seventy-six rowboats at 50 cents week days, 75 cents Sundays and holidays; four catboats from 13 to 17ft. long at $4 a day with boatman, $3 a day without, $1 extra on Sundays; and one 27ft. cabin centerboard sloop at $5 a day for service inside the bay, $7 outside. Bait and tackle can be procured here, and lodgings at 50 cents a night. Meals can be had *à la carte*.

At Dorman's Atlantic Fishing Station, Broad Channel, there are fifty rowboats at the same price as Fuller's; three flat-bottom catboats at $2 a day; one 25ft. catboat at $7 week days, $8 Sundays; and the handsomest yacht I saw on the whole bay, the Gracie Young, 40ft. over all, with cabin, which is hired at $10 a day with a crew of two. Dorman keeps bait and tackle. His patrons have caught good creels of weakfish, the first big catch of the season being that of Mr. William Chase, of New York, who caught seven weakfish June 7. Bluefish are also caught now in large numbers. Frank Hammond, of Brooklyn, took a 5-pound sheepshead under the Broad Channel drawbridge, June 6.

The Entre Nous and the Empire, two well know fishing clubs, have their headquarters at Broad Channel.

At The Raunt, the next station above Broad Channel, there are several resorts. Michael Hanson has about thirty rowboats for hire at the prevailing price, and one 35ft. schooner at from $8 to $10 a day.

Christopher Muhr, at The Raunt, has forty rowboats, no sailboats. Prices same as at Broad Channel.

Hamm's Fishing Station, at The Raunt, has plenty of rowboats at prevailing prices.

Phillip Schappert, at Goose Creek, the next station above The Raunt, has fifty rowboats and some small sailboats. Prices same as at Broad Channel.

The Amphion Fishing Club, composed of New York business men, is at Goose Creek.

John Dayton, at the Aqueduct station, the first stopping place on the bay as you come out on the cars from New York, keeps a small place and has a few boats for hire.

SENECA.

NEAR-BY FISHING.*

MR. A. M. SPANGLER, president of the Anglers' Association of Eastern Pennsylvania, has recently published a very useful little pamphlet for the benefit of anglers, telling them where, when and how to go for fresh and salt water fishing within a radius of 100 miles of Philadelphia. The information is intended primarily for the unscientific angler, and includes "something about the habits and qualities of 'near-by' * * * fishes, where they are usually found, when they can lawfully be taken, how to reach their haunts, and the kind of tackle and bait requisite to tempt and capture them." The introductory pages are devoted to a brief sketch of the growth of scientific angling, with the consequent improvements in tackle, a glance at the depletion of streams, and the steps necessary to replenish them. Then follow directions for taking the yellow perch, the white perch, the sunfish, the wall-eyed pike, the striped bass, the species of black bass, the brook trout, the fall fish, the pickerels, the catfish, the shad, the roach and the carp. Mr. Spangler tells us a great deal about the fishes without circumlocution and in very plain terms.

Salt-water fishing introduces us to the flounder, the blackfish, the weakfishes, the bluefish, the kingfish, the Spanish mackerel, the sheepshead, the sea bass, the spot, the croaker, the black drum, the channel bass and the scuppaug. With very few exceptions the illustrations are good; the small-mouthed black bass and the pike are very poor. We believe a work of this kind should omit scientific names altogether; but the author who insists upon using them should adopt the latest names accepted by competent authorities. The source from which most of the figures were derived would have served equally well as a guide to the current nomenclature. There is, however, so much valuable information in the little volume, that we can afford to overlook its minor defects. Favorite waters for perch fishing mentioned by Mr. Spangler are the Bohemian River, a tributary of the Chesapeake, and Lake Hopatcong in Morris county, New Jersey. Good catches of large yellow perch are reported now on the flats in the eastern branch of the Potomac River at Washington. The creeks near Havre de Grace, Md., are full of spawning perch in February and March. The spawning season is the best time for taking them, and they are then in prime condition. In the lower Potomac and as far up as Washington, we find perch full of eggs in April and May. Lake Erie furnished such an abundance of this species last year that the fish were often given away.

Mr. Spangler tells us that Betterton, on the eastern shore of Maryland, has lost its glory as a place for white perch fishing through the agency of seines and fyke nets, although good scores may yet be made there when the tide and weather are favorable. He recommends the waters at the head of Chesapeake Bay, near Spesutia Island, and various points on the Susquehanna from Port Deposit to the Columbia dam. He finds the tributaries of the Delaware River, to considerably above Lambertville, full of white perch, which come early in the spring, spawn in May, and then go for a while into deep water, returning later to their retreats under submerged timbers or among the rocks and sand. At the mouth of the river at Beesley's Point, N. J., the white perch is very common in August, but large individuals are scarce in the shallow water. In the salt-water creeks emptying into Great Egg Harbor Bay vast numbers may be taken on the last of the ebb tide, and among them will be many large examples. The tidal rivers and salt creeks of New Jersey are almost everywhere well supplied with this fish. At Somer's Point some of the fishermen call it "yellow perch," and sometimes pronounce it "peerch." The finest fish at this place are caught in gill nets in winter.

Mr. Spangler names shrimp, soft-shell crabs, earthworms, minnows, sturgeon spawn and pieces of fish as baits. We have never found anything better than the first two of these.

For pike-perch, or wall-eyed pike fishing, black bass or striped bass tackle is suitable. Minnows are the most killing bait, but insect larvæ, small frogs, worms, tadpoles and crayfish will not be refused.

Mr. Spangler states that the striped bass ascends the Susquehanna as far as Columbia, but before the dam was built they ran up to Luzerne county. Almost any town along the Columbia and Port Deposit Railroad is the best place for this species, individuals weighing 20lbs. being frequently taken. The best months for striped bass fishing at Port Deposit are June and July. In the Delaware River, on the Pennsylvania side, he mentions the outlets of Pennepack and Neshaminy creeks as good localities, and says that the species ascends to Lambertville. On the New Jersey side there are numerous creeks which contain striped bass nearly all spring and summer. At Somers Point, on Great Egg Harbor Bay, the mouths of the rivers and creeks in the vicinity are moderately good places for this fish. About the middle of September fish weighing 2 or 3lbs. are pretty freely caught with a hook at the mouth of Tuckahoe River. In the Potomac the striped bass runs up to the Great Falls, eighteen miles above Washington. On the Susquehanna Mr. Spangler mentions salted eel tail as a favorite bait, and has found the spoon or spinner effective, although not equal to live minnows. Early in the morning and late in the evening are the best times for fishing and clear water is essential to success. The tackle must be selected with reference to the character of the water and the size of the fish. A well constructed rod, a multiplying reel and about 100yds. of 9 or 12 thread Cuttyhunk line are recommended for this species.

The history of the introduction of the black bass east of the Alleghanies and its rapid increase in that region are briefly sketched. The bass is defended from its detractors, and its merits, from the angler's standpoint, are recounted. The localities for black bass fishing in the Delaware and Susquehanna rivers are so numerous that it is scarcely necessary to name them. Little Washington, on the Susquehanna, and a half a dozen other places below it on the same road, are especially noted, and Lake Hopatcong, in northern New Jersey, is a celebrated bass ground. Mr. Spangler prefers an 8 or 9ft., 10 to 12oz. split-bamboo rod. Among the wooden rods he recommends bethabara, lancewood, greenheart and dagana. He advises the use of a rubber multiplier reel with a check, capable of holding 50 or 60yds. of waterproof enameled line, size G. For baits minnows, stone catfish, lampreys, crawfish and helgramites are in general use.

Brook trout streams in northern Pennsylvania are practically limited to Monroe, Pike, Luzerne and Sullivan counties, the first two preferred. Bedford, Blair, Centre, Huntingdon and Mifflin also contain some trout, and a small number of brook trout are found in Cumberland county, where also rainbow trout have recently been introduced with some success. Henryville, Monroe county, furnishes good fishing. Canadensis, reached from Cresco, is another of the places mentioned. Fork's Station is a good fishing center. Streams entering the Delaware in Pike and Wayne counties, Pennsylvania, are recommended by Mr. Spangler, as also New York tributaries of the upper Delaware. The Mongaup is especially mentioned. The Shohola and its upper tributaries and most of the creeks falling into the upper Lackawaxen are celebrated waters. Masthope and Calicoon creeks afford fine fishing. From Hancock many renowned streams of Sullivan county, New York, are reached. The author names the following choice flies for northeastern Pennsylvania: "Epting, queen-of-the-waters, black-gnat, white and royal-coachman, Cahill, Beaverkill, red-hackle, Imbrie, grizzly-king and Montreal."

The pike, which is *Esox lucius* of the books, is to be found at May's Landing, Millville, Atsion, Spring Mill and in Lake Hopatcong; also in some branches of Forked River, New Jersey. The spoon and live bait are the most successful means of catching pike, and cloudy days, early in the morning and late in the afternoon, are best for fishing. The chain pickerel, Mr. Spangler remarks, is most readily taken by skittering and trolling, the former meaning "jerking or drawing the bait along the top of the water," and called "bobbing" in Florida.

Mr. Spangler passes on to the catfish, the shad, the roach and the carp. The last he finds in Woodbury Creek, a tributary of the Delaware, in the Neshaming and the Pennypack. He refers to its capture in the Susquehanna. The common red worm is mentioned as the most killing bait, and grains of wheat, peas, bread crumb paste and partially boiled macaroni are effective. Light bass tackle is recommended and the line is to be kept on the bottom. A gut leader, a very small hook and a small bait are essentials. For salt-water fishing a rod about 7½ft. long is the most suitable, and Mr. Spangler recommends that an extra rod be carried to provide against accidents. He advises the use of a nine-thread cable-laid hemp line and a smooth-running reel that will not corrode, and holding about 100yds. of line. Leaders and snoods of gut are superior to all others. Tightly twisted snoods are to be avoided because they will unravel in salt water. Dipsies must be varied with the strength of the tide, their weight ranging from ¼oz. to 4oz. A reel for drying lines is necessary for their preservation.

The first of the fishes in Mr. Spangler's marine list is the flounder, a ubiquitous species of moderately good table qualities. It is to be found in all the bays along the coast from Virginia to Labrador, arriving on the New Jersey shores in April, and leaving late in the fall. Small hooks must be used, and generally on the bottom, but one species of flounder may often be seen catching minnows within a foot or two of the surface. This species (*Paralichthys dentatus*) is one of the best for the table; it may be seen cautiously rising in the shadow of a pile when small fish are schooling about the wharf, and suddenly darting into the midst of the school, it seizes one of the fish and slowly descends to the bottom with its prey. In such places live bait will be very successful. The species figured by Mr. Spangler is called winter flounder at Somers Point because the adults are more abundant in winter than in summer. During the spawning season, which is in January and February, this fish is at its best, and is really delicious. The summer flounder at Somers Point is the fish whose feeding habits we have described above; it is common in all parts of Great Egg Harbor Bay.

The blackfish, or tautog, is a very free biter, frequenting submerged timbers, rock-strewn tideways, and the borders of meadows where the water is deep and the tide moderate. It comes in April and continues to take the hook in suitable waters until the middle of October. As its mouth is very small and the jaws strong, the hook should be small and stout. Mr. Spangler recommends the Chestertown, and would suspend the hook about one foot from the bottom. Crabs, sandfleas and fiddler crabs are good baits; hermit crabs and soft crabs are still more taking. The scales can be removed readily after dipping in strong vinegar; but it is better to skin the fish. At Somers Point the tautog is called smooth blackfish. The weakfish, or squeteague, has been caught by Mr. Spangler at Cape May early in May, gravid females only taking the hook. They arrive at Atlantic City and Barnegat Bay two or three weeks later. They remain on the coast until September, when they begin their migration southward. After the middle of September the fishing from Somers Point is almost entirely in the ocean near the inlets. One method of angling for weakfish is by means of a float and small sinker, keeping the hook only two or three feet from the surface. For fishing in from two and a half to five fathoms we are advised to use a sinker heavy enough to keep the line taut and the lower bait on or near the bottom. "At a snell's length above the sinker loop a single snell on to the line and 3 or 4ft. further up a 2 or 3ft. leader, or a single length gut snell. The lower hook should be smaller than the upper, as the chances are largely in favor of capturing hake or kingfish while angling for weakfish." Weakfish seek their food in the channels during flood tide and retire to the deep water during the ebb. The latter half of the flood and beginning of the ebb afford the best fishing, and night is the best time. Soft and shedder crabs are excellent baits, but shrimp, clam, mussel, shiners, and a piece of the throat or eye of the weakfish are all used with good results. Cape May is recommended for the earliest fishing on the New Jersey coast. Later in the season Slaughter's Point, Ship John Light, Fortescue, Beach, Bay Side, and the "Shell Beds" opposite Fishing Creek furnish good sport.

The erratic bluefish is on the coast for a varying period depending on the temperature of the water and the presence of its food; but generally lasts from the first of June until late in October. The outfit for fishing includes a strong cotton line about 300ft. long, a bright metal squid and a pair of woolen or leather gloves to prevent injury to the hands from the friction of the line. A sailboat and a good breeze complete the requisites for

*"Near By" Fresh and Salt Water Fishing, or Angling within a Radius of One Hundred Miles of Philadelphia. Where to go. When to go. How to go. By A. M. Spangler, President of the Anglers' Association of Eastern Pennsylvania. With numerous illustrations. Philadelphia, 1889. Pp. 96.

trolling. For fishing with rod and reel the author advises the use of 200yds. of 18-thread Cuttyhunk line, holding a large stout hook fastened to a piece of piano wire, the wire necessary on account of the sharp, lancet-like teeth in the powerful jaws. A piece of menhaden is one of the best baits, or an artificial minnow is sometimes used. Anchor the boat in some place frequented by the fish and fasten a float several feet above the bait; then wait for developments, which may be prompt and will surely be startling. The important rule in reeling in a bluefish is to keep a taut line until the game is landed. At Ocean City, N. J., the species is sometimes called mackerel, but the usual designation is snap mackerel or snapping mackerel, and this will illustrate its method of taking the bait.

The kingfish is generally associated with the weakfish and arrives and leaves about the same time as this species. Mr. Spangler observed a great increase in the size of the kingfish in 1888, and especially at Anglesea, where he and a friend took 168 on a single tide. The kingfish is a vigorous biter and is decidedly a game species. It is to be found on the bottom, and a small bait and correspondingly small, but strong, hook are needed. Mr. Spangler recommends the use of a single gut snood looped 3 or 4in. above the sinker. The tackle must be light. Clams and mussels are used for bait, and small pieces cut from any of the silvery fishes, particularly the spot, or even the darker colored sea bass, will be accepted. Shedder crab is the best bait. The kingfish is one of the species which sometimes disappears from our northern waters for a term of years and then reappears in large numbers. Two kinds of kingfish are taken at Somers Point.

The Spanish mackerel shows some resemblance to the bluefish in its style of taking the hook, but has not the strength and courage of that species. This elegant fish occurs in abundance in the waters of the eastern shores of Maryland and Virginia. It is occasionally taken by trolling. The species comes in June and migrates southward in September. Fine specimens are caught at Seabright, New Jersey.

The sheepshead arrives on the New Jersey coast about the 1st of June, sometimes in large schools and sometimes in small bodies. It is usually a cautious biter and hard to land. Fiddlers and hermit crabs are in general use for bait, and some anglers use the large sand flea (*Hippa*) with good results. The best time for catching sheepshead is on the slack of the tides. A twelve-thread cable-laid Cuttyhunk line and the largest-sized Chestertown hook is preferred by the author. A light but strong rod, not more than 8ft. long, and a smooth-running reel are necessary. Sheepshead are especially fond of the vicinity of wrecks and steep meadow banks in deep but not swift water. Mr. Spangler mentions Barnegat Bay, Great Egg Harbor Bay and Carson's Inlet as furnishing good localities for this fishing. The catch in Great Egg Harbor Bay recently has been very small.

The sea bass is very abundant at five-fathom bank off Cape May, also on the banks opposite Anglesea. The fish range from ¼lb. to 5lbs. in weight. Parties are taken out to the banks in sloops and schooners, paying a dollar each for their trip. They are furnished with lines and bait and receive all the fish they catch. The baits are usually clam and cut menhaden. A stiff rod, a heavy sinker and two or three hooks of medium size are desirable. Slack water is the best time for fishing. The shoal waters swarm with young and half-grown sea bass, which become a nuisance to the angler.

The black drum is one of the largest of the angler's fishes along our northern coast, reaching a length of 4ft. and a weight of 70 or 80lbs. Its teeth are admirably adapted to crushing shellfish, the teeth in the pharynx being large and very coarse. Drum are caught with a hand line or with rod and reel. The fisherman either casts from the shore or fishes from a boat, in either case using a heavy sinker. Clams are used for bait, and the force of the tide makes a bait string necessary. The fish bites best on the flood tide. It arrives on the New Jersey coast in May.

The red drum, or channel bass, is an occasional visitor to the New Jersey coast, sometimes found on the shell beds, but usually in the surf; it is not a ready biter, but fights vigorously when hooked.

The scup, or porgy, called sea porgy at Somer's Point to distinguish it from the spot, which is also styled porgy, arrives on the New Jersey coast in May, and begins to take the hook freely in June, after the close of the spawning season. The scup will take almost any bait, but is very hard to hook; its mouth is small, with thin lips and strong, incisor-like teeth.

The pamphlet closes with a brief sketch of surf fishing for striped bass. Some of the noted places for this kind of fishing is Key East and Asbury Park. The line must be strong and of the best quality. An 18-thread Cuttyhunk line is advised by Mr. Spangler. The favorite hooks are No. 6 or 7 Sproat, 5 or 6 O'Shaughnessy and Limericks of the same sizes. The rod must be strong and stiff, but not unwieldy. Shedder crab is the most satisfactory bait, and it must be secured to the hook. In the bays and inlets smaller fish are taken, but they are more abundant and furnish rare sport.

BLOOMING GROVE PARK.—The fishing in Lake Giles has been surprisingly good. A large number of bass have been taken running from 1 to 2lbs., and several over 2lbs. A few days since one weighing 3¼lbs. was taken on minnow, and same afternoon one weighing 2¾lbs. was taken on a fly. The trout in the lake are giving great sport. Since the season opened upward of 150 have been taken averaging 1lb., quite a number of them weighing 1½ to 1¾lbs. As this is the second year since the stocking of the lake with trout began, the results are proving that Lake Giles will become one of the best trout lakes in the country. The annual fly-casting tournament of the club members, on Decoration Day, did not result in scores that are deserving of record.—XXXX.

MADISON COUNTY, New York.—Our county, especially the southern half, contains many small lakes and four or five large reservoirs which are used as feeders for the Erie Canal. Most of these have been stocked with black bass. Most of the time since the season opened it has rained, therefore not many bass have been taken. One catch of three weighing 10½lbs. is reported. From one of these lakes two of our experts with 8oz. rods captured 70lbs. in one day. Seven of these bass weighed 28lbs. and two tipped the scales at 9lbs.—WING.

PARADISE CLUB.—Lac des Grandes Iles, Canada, June 10.—*Editor Forest and Stream:* The Paradise Club of anglers of New York have completed their club house here and can boast of the finest house of its kind in the Dominion. Several members are here at present enjoying the fly-fishing, which is splendid. Catches of 50 trout weighing about 2lbs. each are an everyday incident. I took a 4 pounder with a brown hackle at noon yesterday from the boat landing. Alexander Edgley, formerly keeper of the Windsor Hotel at Lake Edward, has been appointed guardian of the new club. The building and its contents were brought from New York, and the fleet of cedar boats were made by R. J. Douglas & Co., of Waukegan, Ill. A new and commodious hotel has been erected at Lake Edward, and new and roomy boats are on hire. The trout fishing there is simply unsurpassed. Many anglers prefer to camp upon the beautiful shores of the lake. To this end everything needed can be rented at the station, and ice in plenty can be had to send fish home. I leave to-day for a tussle with the winninish of Lake St. John and an exploration of the Mistassini River.—KIT CLARKE.

LARGE TAUTOG.—The largest tautog ever taken in American waters, it is said, was caught by Elijah Elbridge at Tinker's Island, Marblehead, Memorial Day, weighing 14lbs. Elbridge caught twenty, the average weight being 3lbs. The largest salmon ever caught in that vicinity was taken off Sherman's Point at Camden, Me., Memorial Day. It weighed 35lbs. and measured 3ft. 6in. in length. Another weighing 25lbs. was captured in the same net at the same time.—*Gloucester Daily Times.*

BLUEFISH ARE SWARMING in the Great South Bay, and big catches are reported from Sayville, Bayshore, Islip and Babylon. These points are reached by the Long Island Railroad from this city; and at any of them boats may be chartered. The boatmen charge $5 a day for the boat and their services, no matter how many may be in the party; the bait costs extra, a dollar, more or less. This is the time for bluefish.

TROUT CASTS. — Cleveland, O. — *Editor Forest and Stream:* I send to you by express a plaster cast of some brook trout raised by the late Seth Green, who did so much to advance fishculture in this country. He sent the fish to me in the early spring of 1870. As it was impossible to remove the winter coating of slime from them, I could not make a perfect cast; however, they give good satisfaction.—DR. E. STERLING.

TARPON SPRINGS, Fla., June 7.—Fishing is good. Groupers are out in force. Quail will be quite plenty, if one may judge from present indications. I counted five broods the other day in less than an hour's walk. Weather cool and delightful.—TARPON.

PICKEREL IN MEACHAM LAKE.—We are told that several pickerel have been caught this year in Meacham Lake, in the North Woods. This will be unwelcome news to those who know what a fine trout water the lake is.

Fishculture.

THE FOOD CARP.

Editor Forest and Stream:

The food carp is not a German fish, and there are no German carp in this country, except a few specimens in the hands of the U. S. Fish Commission. The fish is of Chinese origin, and has been cultivated in that country for thousands of years, as was positively ascertained by Hon. John Russell Young while U. S. Minister to that Empire.

The food carp has been amazingly improved by the intelligent and systematic methods of cultivation by a comparatively few Americans, and that, too, without intelligent cooperation on the part of Fish Commissions, except in a very few instances.

There are not three varieties of the food carp, as is so often stated. There is really but one variety, while there are an infinite number of types, distinguishable only by the quantity of scales found upon individual specimens, varying from an entire covering to a partial covering of all grades up to no scales whatever, the finer bred being of these particscale types having the least number of scales. By breeding from selected specimens of any of these types specimens of all the other types are almost certain to be found, showing conclusively that there is but one variety of the food carp.

Your angling correspondent in the issue of May 23 gives seven points favorable to the carp, the first and fourth being identical; but he has failed to give the most favorable points. I here repeat, and without the least fear of successful contradiction, that our best-bred carp, as a table fish, is the peer of any fresh-water fish excepting only the *Salmonidæ*. No elaborate cookery is required. Take a properly cultivated carp of 5lbs. or upward, and prepare it in the simple manner in which Americans prepare the Thanksgiving turkey—sew it in thin muslin and bake brown—and there are few epicures who will not acknowledge its excellence. It is in season during the late fall and winter months only, and this fact has caused most of the abuse of the carp. Epicures have eaten it out of season.

Another point, and in many respects the principal one, is the important fact that the carp is as yet the only known variety of fresh-water fish that can be successfully cultivated. I mean by this that the few other varieties of edible fishes that can be cultivated at all will cost at least three times as much as they will bring in any market in this country. Take the brook trout, which has been the principal fish propagated by State Fish Commissions; not a pound was ever served upon a table that has not cost some State at least $5! Indeed, it is rare that a solitary specimen of the scores of millions of young trout consigned to public waters is ever seen again by mortal eye! In America's thirty-five years of experience in fishculture the carp is, so far, the only notable success; and, although millions of dollars have been expended, this one success will ultimately repay all the prodigious expenditures of the past. MILTON P. PEIRCE.

COLUMBUS, Ohio, May 27.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville; N.Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

COURSING.

Oct. 24.—Fall meet of the National Coursing Club at Hutchinson, Kan., M. E. Allison, Manager.

DOG LICENSE LAWS.

[*Continued from page 425.*]

WE continue below the publication of our reports on the laws relating to dogs in towns, and the methods adopted to reduce the number of vagrant curs. The information has been secured by correspondence with the mayors or presiding officers of the several places named, and the reports were all made in 1888:

New Jersey.

Bridgeton.—Tax on dogs, $1.50. First Ward of this city has just filed a list of dogs: they amount in this ward to 187. We have four wards. 12,000 inhabitants If all the rest have as many we have plenty of dogs. We have an ordinance that all dogs shall be muzzled or chained up from June 1 to Aug. 31. This ordnance is not enforced. Dogs go as they please. If one gets cross we order it muzzled. This is done by general consent, thinking a dog is more likely to go mad muzzled than unmuzzled; therefore we have no dog pound or killing of dogs in any way. But the city council talk of passing an ordinance to have dogs registered; if not, to be sent to pound and killed.—J. DUBOIS, Mayor.

Jersey City.—There is no license fee or tax imposed on dogs in this city, and there is no dog pound. The Mayor is empowered by law to issue a proclamation at any time authorizing the killing of all dogs found running at large in the streets and without muzzles, and the killing is usually done by policemen. The contractor for the removal of dead animals from the streets takes the bodies away.—D. MCAGHON, Sec'y.

Asbury Park.—We have no license fee or tax on dogs. Two years ago we employed a dog catcher and caught a few. What dogs were not claimed in a reasonable time were killed and burned. Nothing has been done in the matter the present year. I rather guess some have been stolen here the past summer, as my son lost a very valuable setter dog.—C. T. BAILEY, Chief of Police.

Newark.—The owners of dogs are taxed $1 for male and $2 for female, which when collected is applied to the contingent fund of the city. It is estimated that there are about 15,000 dogs in the city, but the assessors only find on an average about 2,300. During the dog days (the same as in other cities) they are all supposed to be muzzled or they are liable to be impounded and destroyed unless redeemed by their owners. When destroyed the carcasses are turned over to a contractor. The pound has not been in operation for a year or two until this year, and then only for a period of fifteen days.—JOSEPH E. HAYNES, Mayor.

East Orange.—There is no tax on dogs. We have an ordinance to compel persons (if enforced) to take out a license for one year, at 50 cents per year, also an ordinance imposing a penalty of $10 on the owner of any dog, male or female, running at large in the streets of the township unless properly muzzled with a wire muzzle about the nose and head, and any dog running at large without being so muzzled can be killed by any person. The ordinance is not strictly enforced. We have no dog pound. Any dogs killed in the streets are turned over to the township scavenger.—ALFRED F. MUNCE, Township Clerk.

Morristown.—No license fee or tax whatever is imposed on dogs in this city. We have no method of disposing of unlicensed or stray dogs. They are not destroyed. Until this year a tax was imposed, but it was more bother to collect than it was worth, and hence abandoned. We have not availed ourselves of the authority permitting the destruction of vagrant and worthless dogs, but in my opinion we should. —GEORGE T. WERTS, Mayor.

Paterson.—The mayor of Paterson reports that a license fee of $1 is imposed on dogs, but there is no pound and unlicensed dogs are not interfered with.

Princeton.—Dogs are taxed 50 cents apiece to owner. They are not allowed to run at large between July 15 and Sept. 15 without a substantial wire muzzle securely fastened. If so they may be impounded, and the owner has to pay $1.50 to redeem them. If not so redeemed they are destroyed and the borough pays for killing and burying, 50 cents each, $1 altogether. No statistics of the pound this year.—LEROY H. ANDERSON, Mayor.

Pennsylvania.

Bradford.—The licensed fee or tax imposed on dogs in this city is, on dogs $1, on bitches $5. There is no pound. Unlicensed dogs are shot. Revenue from license fee $100 a year.—R. A. DEMPSEY, Mayor.

Johnstown.—The registry fee for one dog is 50 cents, for each additional dog kept at same residence $1. Our method of disposing of stray dogs is a brutal one—shooting the dog; and this is usually done by an inexpert marksman. If the dog has an owner, the owner is fined if he does not pay fees. The dogs killed are not utilized. In the neighborhood of 500 dogs are registered. Only a few have been killed; I have not the record before me to give exact numbers.—CHAL. L. DICK, Burgess.

Here is a little story of one of Johnstown's five hundred, as told by a correspondent of the Philadelphia *Inquirer*: "JOHNSTOWN, June 6.—A large crowd of people attracted my attention about 6 o'clock this evening on Main street. On going closer I noticed that a number of men and women were surrounding a dog, on which each and every one of the crowd was anxious to lavish attentions and endearing terms more appropriately bestowed upon a favorite child than upon an animal. The dog, a beautiful water spaniel,

whose fur was clipped so as to give him the appearance of a miniature lion, stood as quiet and dignified among the people as if he understood each word addressed to him, taking the evidences of appreciation as matters of course which he had every right to expect. Soon I understood what it all ment. Romeo belonged to Mrs. C. F. Kress, of Washington street, Johnstown. Last Friday, the day the flood gates of the South Fork reservoir broke loose, that lady went to the house of her sister, Mrs. A. C. Kress, on Main street, taking the dog with her. While there the awfully disastrous waters came sweeping down upon them from Conemaugh so that all the people in the house were compelled to get upon the roof. There were seven in the party, and Romeo made a good eighth. But soon the terrible waves and floating débris raised horrible havoc with the buildings. Suddenly a big wave dashed upon the roof. Mrs. C. F. Kress was knocked off her place of refuge and rapidly floated along with the wild stream. No human being attempted to jump after her or make any effort for her rescue, because the surging flood had already dragged her beyond all human reach. But Romeo, the lady's dog, forgetful of his own danger, had apparently been expecting what was coming. The water had no more than closed above the sinking lady when the dog jumped after her, and when her dress appeared again above the surface he immediately grasped it between his teeth. It was a heavy burden, but the animal seemed to make a double effort. Holding the dress in his mouth he gently but firmly pushed her forward through the waters toward a frame house, which was still defying the waves. Romeo's noble efforts proved successful, and in a few moments Mrs. Kress was able to lay hold of one of the spars on the frame house and drag herself into comparative safety. But alas! it was only temporary safety. Even before the woman had realized her escape the devastating waves came mountain high, rushing against the frame house. This time the building could not withstand. With a terrific crash the wooden walls seemed to be bursting apart, and once more the woman and her dog were at the mercy of the flood. The noble brute, however, was not to be daunted. Again he clung to his mistress very closely, not as if he were to rescue her from a watery grave, but as if his whole life depended upon her safety. Constantly swimming by her side while she was borne upon the current, he contrived to keep her head above water so as to prevent her drowning. For over half an hour the dog battled with the waves for her preservation. His noble, faithful endurance was at last rewarded. He succeeded in directing his valued burden toward Alma Hall, and here Mrs. Kress was pulled out of the water. As she reached the roof unconsciousness overcame her, and during all that time Romeo, who seemed to think the woman dead, barked and howled in the most frantic manner. Only her returning breath pacified him, and then he quietly and contentedly lay down at her feet. This was the story gleaned from the people surrounding the dog, and when I called to see Mrs. Kress at her sister's home she verified every particular of the above."

Allentown.—The tax on dogs is $1 and on bitches $2 per year. There is a muzzling law in force for ninety days in the year, with a penalty of $1 for infringement with costs of suit for recovery. Unmuzzled dogs at large during this period may be shot by any one, and shooting such dogs is enjoined on the constables as a special duty.—H. W. ALLISON, Mayor.

Franklin.—The mayor of Franklin reports a license fee of $1 on dogs and $2 on bitches. Unlicensed and stray dogs are shot by the police. There is no pound.

Beaver.—There is no license for dogs in our town; all dogs are free, hence we have no method of destroying unlicensed or stray dogs. If a dog bites any of our people a policeman is sent to shoot the dog, and he is buried, as with all other dogs found dead in the streets, and at the expense of the city. We have no statistics of the number of dogs in our city, but their name is legion, and they are about as annoying as the legion we read about in disturbing nervous people of their sleep with their nocturnal barking and howling serenades, so that some evil-disposed, exasperated individual disposes of a lot of these quietly with dog buttons.—JAMES PIPER, Mayor.

Corry.—Our dog tax is $1 per year on males and $2 on females. Dogs on which no tax is paid are liable to be killed, but the penalty provisions of our ordinances have been but little observed, although some dogs have been killed. Stray dogs are seldom impounded, although our ordinances provide for that method and their destruction. We have no statistics for the past year about the dog pound.—W. ED. MARSH, Mayor.

Harrisburg.—We do not impose a license tax on dogs.—JOHN A. FRITCHY, Mayor.

York.—We have no ordinance licensing dogs. They roam at large according to their own will, and little or no restraint is put upon them. An ordinance requiring license for keeping dogs was reported to Councils, but naught has come of it yet.—D. K. NOELL, Mayor.

Oil City.—We have an ordinance that requires dogs to be muzzled during the summer months, but it is very poorly enforced. I also think that there is an old ordinance that requires a tax of $1 on dogs and $2 on a bitch; but there was such a complete failure some years ago in enforcing it, that it, too, is a dead letter.—J. H. PAYNE, Mayor.

Lancaster.—The only law we have on dogs in this city is when they are ordered to be shut up for thirty days. Penalty, $3 for obstruction of same. During said period dogs may be redeemed by their owners on payment of $1.50, and if not redeemed at expiration of said time they shall be killed and buried. This is in force only when the dogs become rabid.—J. R. M., for the Mayor.

Erie.—The only tax we now have is one of $1 on each dog, assessed by the city assessors like any other tax and collected in the same way. We do not have any license system or provision for impounding dogs.—JOHN C. BRADY, Mayor.

Pittsburgh.—This city imposes no fee or tax on dogs. Our method of disposing of unlicensed or stray dogs is by poisoning, between July 15 and Sept. 15, and the bodies are turned over to the city fall master, who makes soap out of them. There is no dog pound in this city.—WM. MCCALLIN, Mayor.

Towanda.—We formerly collected a tax on dogs, but as the county assesses a dog tax for the purpose of raising a fund to pay farmers for sheep destroyed by dogs, we no longer collect a tax on dogs.—JOSEPH KINGSBURY, Sec.-Treas.

Pottstown.—Dogs are taxed 50 cents each, bitches $1. Strays are killed by the police when a complaint is made. We have no pounds. To register a dog a fee of $1 is charged by the clerk of the court. He then becomes personal property, and the owner can sue for damages in case of a violent death.—S. HAZLETT.

Washington.—We have no law against dogs of any kind. Should any be found dead they are passed over to scavenger for burial.—W. S. RYDER, Burgess.

Eaton.—Dogs must wear collars and be assessed $1 for dogs, $2 for bitches. Collar must have on it number as assigned and recorded by the officer. Every dog or bitch not claimed or fed by any one is taken by our city dog assessor, impounded for not less than twenty-four hours, and if not called for and tax paid is shot and buried. Our city dog assessor is paid 25 per cent. for each dog or bitch on which the tax is collected, and 50 cents for each one killed and buried.—CHARLES F. CHIDSEY, Mayor.

Norristown.—Dogs are not allowed to run at large within the borough limits after June 1 and during the summer months. If found at large the officer arrests and confines them for twenty-four hours; the catcher shall kill and bury them unless within that time he shall be ordered by the Burgess to deliver the same to the owner thereof; and for every dog so killed and buried the catcher shall be entitled to be paid $1.—E. A. KITE, Burgess.

Scranton.—All dogs must be muzzled between May 20 and Sept. 20. Our manner of disposing of unmuzzled dogs at large has been to send out one of our officers (who is an expert marksman) armed with a double-barreled shotgun and accompanied by two other officers with a horse and wagon in the early morning only. The squad take a section of the city for a trip, the officer with the gun goes ahead of the others and shoots all unmuzzled dogs he finds at large, the others follow on, pick up the bodies and throw them into the wagon, and they are finally taken to a boneyard and sold for ten cents each, which about pays expenses. We have killed this year in this way about 400 dogs, all or nearly all of which were worthless curs or mongrels, the officers being instructed to spare blooded or valuable dogs, which are generally taken care of by their owners, but which might be at large by accident. We have found this plan to work well so far, and have carried it out for two seasons without accidents nor many complaints, but lots of commendations from many citizens, as it has been the means of causing people to either muzzle or keep under control their ugly curs or suffer their loss. This way of killing dogs is somewhat dangerous and should only be done by a good shot and with great care and judgment, but as our city has at present no proper pound the difficulty of catching the dogs and of disposing of them afterward is such that we deem this to be the best way of disposing of them under the circumstances.—B. R. WADE, Chief of Police.

Reading.—Our ordinance regarding the tax on dogs is a dead letter as well as the method of disposing of them. The tax on male dogs is $1 for first, $2 for second, $3 for third and $4 for fourth. For females, $3 for first and $5 for second. For harboring unregistered dog, $5 for male, $10 for female, half in each case for informer and half for city. Dogs killed and buried after twenty-four hours impounding, with notice given to owner if known. Penalty for obstructing dog catchers $10, to be divided as above. No dogs impounded for five years here.—JAMES R. KENNEY, Mayor.

Chester.—Our register fee is $1, which is good during the life of the dog. The owner is liable in addition to $1 county tax levied each year. We destroyed this year 97 dogs. We pay the dog catcher $1 each for catching them and the man who removes dead carcasses 20 cents each for taking them away.—J. R. T. COATES, Mayor.

Altoona.—We tax dogs $1 and bitches $2 per annum. Our ordinance provides that unlicensed dogs found running at large must be killed by police officers, but does not state in what manner. We have no pound. The whole ordinance is a dead letter and has never been enforced, like many other ordinances of our city, and since my induction I have been too busy with other reforms to do anything with this, but will give it my attention ere long.—E. H. TURNER, Mayor.

Lebanon.—Our city for the past two years imposed a $1 license fee on dogs. Unlicensed dogs were caught and if not redeemed in twenty-four hours, killed by shooting them. Law was not enforced under my predecessor and was so difficult to carry out that it has been repealed. We propose to enact a dog muzzling ordinance for 1889, months of June, July, August, September and October, during which months dogs must be muzzled, or will be seized, impounded, and if not redeemed, killed.—P. WEIMER, Mayor.

Delaware.

Wilmington.—The tax imposed on the owners of dogs is $1 per annum and upon the owners of bitches, $2. The method of disposing of them is by shooting. They are kept in the pound before being destroyed for 24 hours and the fee to the dog catcher, paid by owners in redeeming within that time, is 50 cents if the dog is registered, and if not registered a fee of $2.—AUSTIN HARRINGTON, Mayor.

District of Columbia.

The law requires that dogs be registered, and that the owners be furnished with a metallic tag to be attached to the dog's collar in evidence of payment. The collar is indispensable and must have the owner's name legibly engraved on it. Dogs running at large without the tax are seized and impounded and put to death at the expiration of 48 hours if not redeemed or sold. A dog wearing the tag tax is personal property and is so regarded in all the courts in the District. The owner is responsible for all injury caused by his dog, and may not let him go at large unmuzzled between May 15 and Oct. 15.

Ohio.

Columbus.—We have at present no ordinance licensing dogs. Had one some years ago, but owners of dogs kicked so much that it was repealed. Only ordinance in force is in regard to vicious dogs which have to be tied up or muzzled.—P. H. BRUCK, Mayor.

Cleveland.—The city imposes a license fee of $1 for each male dog and $2 for each female, and every dog must be provided with a tag. This permits the dog to run at large, and is only a regulation in that respect. The police are directed to kill any dog running at large not wearing a tag. The tags are renewed each year. We have no pound.—CHAS. P. SALEM, City Clerk.

Norwalk.—Our city imposes no tax or license on dogs. We dispose of none unless they are sick, cross and vicious, or mad.—P. C. BRECKENRIDGE, Mayor.

Cincinnati.—City license $2 on dogs. Any person can kill an unlicensed dog, but it is seldom done. The city pays a fertilizing company for removing dead animals, and the company sells the skins and uses the carcass for fertilizers.—E. W. PETTIT, Mayor's Secretary.

Piqua.—We have no tax or regulations (as to dogs) of any kind, but they are allowed full liberty.—G. A. BROOKS, Mayor.

Dayton.—We have an ordinance, passed in 1842, providing for the assessing and collecting a tax (50 cents per head) upon dogs, to prevent bitches from running at large, and to provide against the prevalence of hydrophobia. Now this ordinance is a dead letter law and has been for years. It was found impracticable. In fact we do not need the workings of such an ordinance. In this State (Ohio) we have a statute making a person guilty to permit a dog to run at large unaccompanied with some person. We cause the arrest of quite a number of persons each year upon such a charge, and find it has the desired effect. Dogs are kept confined and we have comparatively little complaint.—IRA CRAWFORD, Mayor, by CHARLES W. DALE, Clerk.

Sidney.—There is a State tax on all dogs in Ohio. We have no city tax and we have no pound. They run at large. Under our State law any person has a right to kill any dog away from its home or master. Dogs are plenty. I see 15 now from my office window playing in the street. The niggers sometimes kill them and utilize the skin. There are hundreds of them in our town, and it would be a blessing if they could be extirpated.—M. C. HALE, Mayor.

Painesville.—The city imposes no restriction whatever. The county imposes a tax of $1 a head.—MAYOR.

Mt. Vernon.—We have no license or tax on dogs, no pound or destruction of dog, unless hydrophobia exists, when mayor by proclamation orders all dogs killed by marshal unless muzzled.—W. B. BROWN, Mayor.

Chillicothe.—We have no city license or tax on dogs. We have no pound system. We have a city ordinance which requires owners of dogs to keep their dogs securely muzzled, so that they cannot bite, during the months of July, August and September; if this ordinance is not complied with, dogs not so muzzled may be killed.—DAVID SMART, Mayor.

Elyria—There are no city ordinances affecting dogs in Elyria.—P. H. BOYNTON, Mayor.

Springfield.—All stray dogs are destroyed under our city ordinances and buried, pelt and all. We have no pound for dogs.—O. S. KELLY, Mayor.

Mansfield.—We have no city tax or license. We shoot unclaimed and stray dogs. We have no pound. Some unprincipled party has been poisoning dogs by the dozen during last month, perhaps 100 or more. We cannot detect them; if so, we will deal with them severely.—R. B. MCCRORY, Mayor.

Oberlin.—We have a tax of $1 per year on each dog. The marshal or health officer are authorized to destroy and bury unlicensed dogs.—ARDEN DALE, Mayor.

Wooster.—Our city imposes no license fee on dogs, as no ordinance of that kind has ever been passed. Our State imposes a tax of $1 upon each animal of the dog kind, provided the owner places no value upon the dog. When owner places a value, the tax rate is the same as on other property. In our city dogs are prohibited from running at large unless muzzled, and when found at large without, are summarily disposed of by the marshal by killing them; they are not impounded. During the past eighteen months of my term there have been disposed of in the manner stated 207 animals of the dog kind.—J. R. WOODWORTH, Mayor.

Delaware.—The city has no ordinance on dogs except one to prevent dogs running at large. Dogs outside of premises or not with the owner or if not muzzled can be shot down.—J. K. NEWCOME, Mayor.

Sandusky.—The city ordinance provides for the registration of all dogs at a charge of $1 for dogs of the male kind and $3 for each dog of the female kind. All dogs must wear a collar with metallic plate with owner's name engraved on it. Dogs must also be provided with a muzzle, to be worn whenever the Mayor shall issue a proclamation requiring it. Stray dogs or dogs roaming without owners may be captured by the marshall or his subs, and if the same cannot be captured they may be killed. A dog with collar and tag and muzzle in the season is not allowed alone on the street, but it is the duty of the officer seeing such dog to notify the owner,; but the dog is to be captured or killed if loose at night in spite of license, collar, tag and muzzle. The owner of a dog loose on the street without register, collar and muzzle may be fined $5. Impounded dogs are killed after twenty-four hours if not redeemed. The cost of redemption is $1 for dogs, $3 for bitches, and 50 cents for whelps, with 25 cents for the dog's keep for the day.

Portsmouth.—The city of Porsmouth does not assess any tax upon dogs. We have no particular method of dealing with stray or other dogs, except if a dog is a nuisance, whether the owner is known or not, we find means to get rid of him under our ordinance. No dogs impounded, save and except there may be fears of hydrophobia; then I issue a proclamation to muzzle all dogs, and orders are issued to police to kill those not muzzled; they are then removed by sanitary police.—JOHN A. TURLEY.

Ironton.—Dogs are not licensed or taxed by municipal law. Under our statute laws all animals of the dog kind found running at large—unaccompanied by the owner, or some person in charge—may be killed, without penalty to the person killing the same. Persons owning dogs are allowed to fix any value they wish on their dogs, and pay taxes as upon personal property, and will be protected so long as they comply with the provisions of the law above mentioned. We have no dog pound.—JOHN M. CORNS, Mayor.

Salem.—We have no ordinance on the subject. No tax is imposed by the city, and no pound kept.—A. W. TAYLOR, Mayor.

Youngstown.—Our State law taxes $1 on every dog returned by the assessors. Nothing is done with stray dogs unless they are found committing some nuisance; then they are shot by the officers. We have no dog pound.—R. MONTGOMERY, Mayor.

Zanesville.—Our city imposes a tax of $1 per year on dogs; it is also a State tax. A city ordinance requires all dogs to be muzzled from May 1 to Oct. 1, running at large; if found on the street unmuzzled the officers are justified in shooting them. We have no pound for dogs.—JOHN W. CONRADE, Mayor.

Lima.—We have no tax on dogs in the city except the State tax. We have no dog pound.—WM. MCCOMB, Jr., Mayor.

RATIONAL BREEDING.

EVERETT MILLAIS, a well known breeder of Basset hounds, acknowledges very candidly that in the first decade of his career as a breeder he made a great many mistakes, but these mistakes resulting in a greater or less measure of failure, only stimulated him to an investigation of its causes, of the origin and perpetuation of family and strain types and of the general principles of successful breeding. As a member of the Basset Club in which he took a very lively interest his attention was very naturally occupied by the evident tendency to deterioration of the English Basset hounds. These dogs were, as is well known, of the famous Couteulx strain, founded upon Fino de Paris, a dog of great excellence and well marked characteristics, which he had very successfully perpetuated in his family, until at length too close inbreeding produced its usual results of general deterioration. Millais was not alone in attributing this deterioration to its true cause, but when he proposed to remedy this evil by crossing with Basset hounds of another strain—the Lane—he was met with the very general objection that such a cross, while it might improve the physical stamina of the Couteulx strain, would destroy all its leading characteristics. The Basset hounds of the club's strain were all dogs of three colors, while the dogs of the Lane strain were simply lemon and white, and such a cross it was feared would involve the sacrifice of this special excellency of the breed; but Millais, who had by that time got a pretty clear insight into the measures necessary to bring in fresh blood without sacrificing type, succeeded in carrying his point, after making it clear that his object was not to replace the Couteulx sires by Lane sires, but to breed dogs with a greater infusion of Couteulx and a lesser of Lane strains for sires for the club's kennel.

The experiment verified his anticipations. The families of the first cross were about one-half of them true to type in the matter of color; selecting these and breeding with them back to the Couteulx strain, the Lane characteristics have gradually disappeared, while the desired end has been attained; the hounds, invigorated with a dash of alien blood, have recovered from the ill effects of too close inbreeding, and regained the normal size and vigor of the strain.

This experiment or series of experiments which Millais has noted with careful detail, points conclusively to the leading axioms of the successful breeder, viz., first that the fundamental laws on which family and strain types are founded are the laws of individual variability, along with the laws of heredity. Second, that selecting any dog or other animal with marked individual characteristics and breeding in to him, his individual characteristics become perpetuated and intensified in a family type. Thirdly, that this inbreeding necessary to the perpetuation of an individual type as the type of a family or strain, will inevitably result in degeneration; and fourthly that this degeneration may be checked without prejudice to the maintenance of type by the introduction of a modicum of fresh blood selected with judgment.

In breeding then the laws of heredity render it possible to perpetuate the leading characteristics of an individual of any type, however aberrant it may be, even in the absence of a mate of the same family, the same strain, or even of the same variety. The greyhound, for example, may be bred to the bulldog, the terrier, or the mastiff, and bred back to its original type, the better for the infusion of fresh blood, but this has been done so frequently that if inbreeding in a family of greyhounds is carried on too far by a breeder, he has only

OLDHAM & WILLEY'S FIELD SPANIEL "GLENCAIRN."

to select sires from another strain of greyhounds to correct the evil, for every strain has its infusion of alien blood.

Dog breeders do not all breed with the same object. Some breed for no type beyond the variety. Some breed for strain and variety types, others for family, strain and variety types. Others again breed to an aberrant individual for the establishment of a family on his type; but whichever of these objects is kept in view, there is always room for the display of the keenest judgment in the selection and pairing of breeding stock. A dog may be true to family, strain and variety types, in all the essentials of these types, and yet have very bad points, and it is only by judicious selection and mating that good points in the offspring can be secured.

Successful breeding is admittedly a curiously complex question, but Everett Millais, in his "Theory and Practice of Rational Breeding," has not shrunk from the task of furnishing formulæ for achieving it with some approach to mathematical exactitude, and his little work is perhaps the best work on the subject extant.

GLENCAIRN.

THE picture of the field spaniel Glencairn published this week is from a sketch by Henry B. Tallman, and is an excellent likeness. Glencairn was imported last February by Messrs. Oldham & Willey, the well-known spaniel fanciers. He was whelped April 17, 1884, and is by Easten's Bracken (Solus—Beverley Bess) and out of Easten's Belle, a full sister to Easten's Bracken. He won in England no less than 41 first prizes, many of them at the largest shows. He made his first appearance in this country at New York, where he won first. This he repeatad at Troy, Albany, Utica, Rochester and Boston. At Worcester and Philadelphia he won first in the challenge class. In addition to these wins he received a number of valuable special prizes. His breeding is of the best, and as a sire he will undoubtedly prove to be a valuable acquisition to the spaniel breeders of the country.

INDIANA KENNEL CLUB DERBY.

Editor Forest and Stream:

The entries for the third annual Derby of the Indiana Kennel Club closed June 1 with fifty-seven nominations, forty setters and seventeen pointers, fifty-four of which are hereinafter described, one was rejected and two are held for further information. All were whelped in 1888.

P. T. MADISON, Sec'y.

SETTERS.

ALICE (P. Lorillard, Jr., Tuxedo, N. Y.), lemon and white bitch, Aug. 7 (Cassio—Allie James).

AMORET (P. Lorillard, Jr., Tuxedo, N. Y.), black and white bitch, Aug. 7 (Cassio—Allie James).

BEN HARRISON (J. H. Ricksicker. Sterling, Kan.), black and white dog, April 1 (Marksman—Don's Nellie).

BESSIE GLADSTONE (W. A. Kinsley, Indianapolis, Ind.), black and white bitch, April 19 (Rush Gladstone—Queen of Tennessee).

BRAXTON BRAG (N. B. Nesbitt, Chesterville, Miss.), black, white and tan dog, June 13 (Roderigo –Lufra).

CHIEF (N. K. Fairbanks, Chicago, Ill.), black and tan dog, Aug. 3 (Don—Fannie Mitchell).

CLOCHETTE (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, Feb. 3 (Roderigo—Lavalette).

COUNT V. (J. I. Case, Jr., Racine, Wis.), blue belton dog, May 15 (King Noble—Queen Vashti).

DAD WILSON'S BOY (J. Shelly Hudson, Covington, Ky.), black, white and tan dog, July 15 (Dad Wilson—Dolly S.).

DAISY GIRL (G. R. Howse, Trenton, Tenn.), black, white and tan bitch, May 6 (Count Paris—Nellie Cambridge).

DEE (J. I. Case, Jr., Racine, Wis.), black, white and tan bitch, July 18 (King Noble—Elsie Belton).

DORA DEAN (L. Gardner, Mt. Vernon, N. Y.), black, white and tan bitch, May 6 (Count Paris—Nellie Cambridge).

ERIC (B. Nesbitt, Chesterville, Miss.), black, white and tan dog, July 1 (Jean Val Jean—Sheena Van).

FRANKIE FOLSOM (A. J. Gleason, Alma, Kan.), lemon and white bitch, April 1 (Marksman—Don's Nellie).

GATH'S HOPE II. (Dudley & Fisher, Nashville, Tenn.) lemon and white dog, March 13 (Gath's Hope—Daisy F.).

GEORGE (R. Riley, Indianapolis, Ind.), black, white and tan dog, May 1 (Nick—Quail).

HOPE'S RAY (D. E. Rose, Lawrenceburg, Tenn.), black, white and tan dog, Jan. 16 (Gath's Hope—Lady May).

KATE MILLER (N. B. Nesbitt, Chesterville, Miss.), lemon belton bitch, June 13 (Roderigo—Lufra).

KING LEO'S BOY (Wm. Dingle, Denver, Col.), black, white and tan dog, Aug. 25 (King Leo—Flaxey Gladstone).

LADY HARRIET (Elms Kennel, Forest Lake, Minn.), blue belton bitch, Aug. 17 (Rockingham—Princess Phœbus).

LADY JEAN (N. B. Nesbitt, Chesterville, Miss.), black, white and tan bitch, July 1 (Jean Val Jean—Sheena Van).

LILLY BURGESS (G. N. Whiteley, Helena, Mont.), orange and white bitch, June 29 (Gath's Mark—Esther).

LADY GLADSTONE (P. T. Madison, Indianapolis, Ind.), black, white and tan bitch, April 18 (Rush Gladstone—Queen of Tennessee).

MODESTY (Dr. J. McDowell, Bruceville, Ind.), blue belton bitch, June 29 (Gath's Mark—Esther).

MONK OF LINDUM (Elms Kennels, Forest Lake, Minn.), lemon and white dog, March (Monk of Furness—Queen of Rosebury).

NANNIE B. (J. I. Case, Jr., Racine, Wis.), lemon belton bitch, May 15 (King Noble—Queen Vashti).

NED CLEARY (J. Shelly Hudson, Covington, Ky.), lemon and white dog, April 14 (Dad Wilson—Lit).

PAUL NOVICE (J. O'H. Denny, Pittsburgh, Pa.), black, white and tan dog, April 30 (Paul Gladstone—Dashing Novice).

QUADROON (P. Lorillard, Jr., Tuxedo, N. Y.), liver and white bitch, Feb. 3 (Roderigo—Lavalette).

RODERICK RANDOM (W. H. Colcord, Chicago, Ill.), black, white and tan dog, July I (Jean Val Jean—Sheena Van).

ROY (R. H. Wehrle, Blairsville, Pa.), black and white dog, Oct. 27 (San Roy, Jr.—Roberta H.).

RUBY WHISTLE (W. H. Colcord, Chicago, Ill.), orange belton bitch, April 9 (Pegbid—Lady Athol).

SAM B. (J. I. Case, Jr., Racine, Wis.), lemon belton dog, March 8 (King Noble—Cricket).

SIMONIDES (Rose & Madison, Lawrenceburg, Tenn., and Indianapolis, Ind.), black, white and tan dog, March 10 (Gath's Hope—Gladys).

SIR DARNOC (Elms Kennel, Forest Lake, Minn.), black, white and tan dog, Aug. 17 (Rockingham—Princess Phœbus).

SPINSTER (W. H. Colcord, Chicago, Ill.), blue belton bitch, June 13 (Roderigo—Lufra Cross).

TEMPIE CAMBRIDGE (G. R. Howse, Trenton, Tenn.), black, white and tan bitch, May 6 (Count Paris—Nellie Cambridge).

ZULU (J. I. Case, Jr., Racine, Wis.), black, white and tan dog, March 3 (King Noble—Nellie Belton).

POINTERS.

CLOVE DEE (J. W. Blythe, Burlington, Ia.), lemon and white bitch, June 18 (Cornerstone—Dee).

CROXTETH CA(Thos. F. Howell, Indianapolis, Ind.), liver and white dog, Jan. 29 (Beauvoir—Devonshire Flirt).

DEVONSHIRE JILT (J. W. Patterson, Noblesville, Ind.), liver and white bitch, April 25 (Fowler—Cherrystone).

ELECTRIC (F. Carlisle, Newton Falls, O.), orange and white dog, January (Croxteth—Young Beulah).

FANCY FREE (W. Hoyt, Cleveland, O.), liver and white bitch, Feb. 5 (Donald—Lady Bow).

FEDORA (F. W. Samuels, Indianapolis, Ind.), black, white and tan bitch (Graphic III.—Topsy W.).

GRAPHIC'S CLIP (J. R. Daniels, Cleveland, O.), liver and white bitch, March 16 (Graphic—Lass).

GRAPHIC'S TOPIC (J. R. Daniels, Cleveland, O.), liver and white dog, March 16 (Graphic—Lass).

INDEX (P. T. Madison, Indianapolis, Ind.), liver and white dog, July 20 (Ossian—Nellie E.).

LOU (Castleman Kennels, Trenton, Tenn.), liver bitch, July 6 (Reximus—Katy).

MISS FREEDOM (L. Gardner, Mt. Vernon, N. Y.), liver and white bitch, July 4 (Pilate—Fairy II.).

NANCY STONE (W. H. Holmes, Kansas City, Mo.), liver and white bitch, December (Cornerstone—Firenzi).

PEARL'S DOT (J. B. Turner, Chicago, Ill.), liver and white bitch, June 1 (Trinket's Bang—Pearl Stone).

ROBERT SPRING (H. F. Schmidt, Columbus, O.), liver and white dog, Jan. 3 (Hairspring—Diables).

TAFFY (L. Gardner, Mt. Vernon, N. Y.), liver and white bitch, July 4 (Pilate—Fairy II.).

THOMASTONE (W. H. Holmes, Kansas City, Mo.), liver and white dog, December (Cornerstone—Firenzi).

TEXAS FIELD TRIALS.

MARSHALL, Texas, June 13. — *Editor Forest and Stream:* The fourth annual meeting of the Texas Field Trial Club will be run on partridges (quail) near Marshall, beginning on Feb. 11, 1890, open to amateurs only:

DERBY—Open to all pointers or setters whelped on or since Jan. 1, 1888. Retrieving required. Entrance fee $5. $50 to first, $25 to second, $10 to third. Entries close Feb. 10, 1890, at 9 o'clock P. M.

ALL-AGED STAKE—Open to all pointers and setters, regardless of previous winnings. Entrance fee $5. $100 to first, $25 to second, $10 to third. Entries close Feb. 10, 1890, at 9 o'clock P. M.

Prizes will be paid in cash or silverware at the option of the prize winner.

President, Edmund Key, Marshall; First Vice-President, W. J. Wolz, Marshall; Second Vice-President, R. R. Scott, Scottsville.

For particulars, running rules, etc., apply to W. L. THOMAS, Sec'y-Treas., Marshall, Texas.

DOG TALK.

MR. E. H. MOORE has met with a great loss by the death of his well known mastiff dogs champion Minting and Ilford Caution, and the bitch Countess. All the particulars we have are that Minting died from heart disease, and Ilford Caution and Countess from peritonitis. The loss is a severe one not only to Mr. Moore, but to the breeders of the country as well. A description of the dogs and a list of their many winnings is unnecessary, as readers of FOREST AND STREAM are familiar with their record. The many friends of Mr. Moore, we are sure, will sympathize with him in his great loss and join us in the wish that he may succeed in securing specimens of the breed worthy to fill their vacant stalls.

A kennel club has been formed at Kansas City, Mo., with Hon. J. E. Guinotte, President; Messrs. J. A. Graham and S. F. Field, Vice-Presidents, and Mr. F. B. Rice, Secretary and Treasurer. The club will probably hold a dog show as soon as the necessary arrangements can be made.

Mr. Wm. Graham sailed for home yesterday on the Celtic He reported having had a most enjoyable time during his brief visit, and stated that he had learned at least one new wrinkle about dog dealing that he would not soon forget. We understand that he received a number of important commissions from prominent fanciers for the purchase of dogs to be sent out in season for the shows next spring.

Mr. E. M. Oldham, of Mamaroneck, N. Y., has made an addition to his kennels and will take a few dogs to board. This will be welcome news to residents of the city, who wish to leave their dogs in good hands while they are absent on their summer vacation.

Mr. D. Baillie, of Lexington, Ky., sails for England to-day instead of last Thursday, as noted last week. Mr. Baillie takes with him the Chestnut Hill Kennels' collie Dublin Scot for competition at the Kennel Club's show, Olympic, London, next month.

Mr. E. D. Morgan, of this city, has recently purchased in England the bull-terrier dog Spotless Prince, a well known winner, said by some to be one of the best in the country. He was whelped January, 1888, and is by Cato and out of Young Venus.

We hear complaints that some of the special prizes that were offered at two or three of the spring dog shows have not been paid. The A. K. C. should see to this.

The fall meet of the National Coursing Club will take place at Hutchinson, Kan., Oct. 24. The address of the manager is Mr. M. E. Allison, Hutchinson, Kan.

Schipperkes are looking up, Mr. W. J. Comstock, of Providence, R. I., has recently imported a pair, and we understand that others will soon arrive.

There will be a dog show at Kingston, Ont., the first week in September, in connection with the exhibition of the Central Fair Association of Canada.

Mr. J. H. Naylor, of Chicago, will shortly visit England, and if he finds a terrier or two that suit he will bring them over on his return.

Mr. H. S. Pitkin, of Hartford, Conn., has quite a kennel of St. Bernards, and is doing his best to breed some winners.

Where is the new list of judges that the Spaniel Club was to vote for? Is it not about time that they were announced?

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie Naso. By W. H. Larison, Madison, N. J., for liver and white pointer bitch, whelped March 17, 1889, by Nick of Naso (Naso II.—Pettigo) out of Nellie (Duke of Bergen—Dora).

Ermine. By Eberhart Pug Kennels, Cincinnati, O., for fawn pug bitch, whelped May 4, 1889, by champion Kash (Bradford Ruby—Lady Cloudy) out of Daisy.

Alpine Monarch and Alpine Ben Abolin. By Alpine Kennels, Fairfield, Conn., for white and orange St. Bernard dogs, whelped May 17, 1889, by champion Ben Lomond (Barry—Thetis) out of Satellite (Monk II.—Sheila).

Alpine Friar and Alpine Monk. By Alpine Kennels, Fairfield, Conn., for orange and white St. Bernard dogs, whelped May 7, 1889, by champion Ben Lomond (Barry—Thetis) out of Satellite (Monk II.—Sheila).

Alpine Nun, Alpine Rose and Alpine Maud. By Alpine Kennels, Fairfield, Conn., for orange and white St. Bernard bitches, whelped May 7, 1889, by champion Ben Lomond (Barry—Thetis) out of Satellite (Monk II.—Sheila).

Salvo. By McBeth Kennels, North Lawrence, O., for black and white English setter dog, whelped May 5, 1889, by Rollick B. (Royal Ranger—Kit Kilbird) out of Fanny McBeth (McBeth—Vic).

Edge Mark. By D. A. Goodwin, Jr., Newburyport, Mass., for black, white and tan English setter dog, whelped Feb. 7, 1888, by Skidmore (Roderigo—Gem) out of Flo Maclin (Gath's Mark—Cosy).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Brunette—Caro. Prof. L. P. Braive's (New York) Newfoundland bitch Brunette (Bruno—Mirza) to Chris. Eimer's Caro (Jumbo—Nora), June 10.

Regina—Keeper. Contoocook Kennels' (Peterborough, N. H.) St. Bernard bitch Regina (champion Sirius—Hilda Josepha) to J. F. Smith's Keeper (Ivo—Sans Peur), April 9.

Flo Maclin—Bob Gates. D. A. Goodwin, Jr.'s (Newburyport, Mass.) English setter bitch Flo Maclin (Gath's Mark—Cosy) to J. L. Breeze's Bob Gates, May 2.

Nell—Terry. J. J. Geary's (South Boston, Mass.) Gordon setter bitch Nell (Maloy's Jack—Daisey) to C. S. McClellan's Terry (champion Turk—Nellie), June 11.

Lady Nell—Black Duke. J. G. Jorgensen's (Woodstock, Ont.) cocker spaniel bitch Lady Nell (Burmah—Molly) to Jas. Luckwell's Black Duke (champion Obo II.—Woodland Queen), June 10.

Lillias Beverwyck Trap. Jas. E. Unke's (Muncie, Ind.) fox-terrier bitch Lillias (Splauger—Blemton Lilly) to his Beverwyck Trap (Dusky Trap—Daze), April 19.

Jessie—Bradford Harry. J. Hackett's (Hamilton, Ont.) Yorkshire terrier bitch Jessie to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), May 1.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Olga. Geo. Shepard Page's (Stanley, N. J.) deerhound bitch Olga (Dunrobin—Shelloch), June 5, six (four dogs), by John E. Thayer's Chieftain (champion Bevis—Heather).

Fannie M. Hornell-Harmony Kennels' (Covert, N. Y.) greyhound bitch Fannie M., May 25, seven (one dog), by their champion Memnon.

Lady Olivia. Hornell-Harmony Kennels' (Covert, N. Y.) greyhound bitch Lady Olivia, June 8, nine (four dogs), by their champion Memnon.

Harmony. Hornell-Harmony Kennels' (Covert, N. Y.) greyhound bitch champion Harmony, June 4, eight (four dogs), by their champion Memnon.

Sall La Blonde. H. W. Neefus's (Elizabeth, N. J.) pointer bitch Sall La Blonde (Ted of Bergen—Duchess of Hessen), May 27, three dogs, by his Sancho Pedro.

Regina. Contoocook Kennels' (Peterborough, N. H.) St. Bernard bitch Regina (Sirius—Hilda Josepha), June 11, twelve (three dogs), by J. F. Smith's Keeper (Ivo—Sans Peur).

Fanny McBeth. McBeth Kennels' (North Lawrence, O.) English setter bitch Fanny McBeth (McBeth—Vic), May 5, ten (eight dogs), by H. A. Wise's Rollick B. (Royal Ranger—Kit Kilbird).

Nellie. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Nellie (Obo, Jr.—Woodstock Belle), June 11, five (three dogs), by Jas. Luckwell's Black Duke (champion Obo II.—Woodland Queen).

Black Meg. H. S. Reynolds's (Poughkeepsie, N. Y.) cocker spaniel bitch Black Meg (Obo II.—Darkie), May 25, five (one dog), by J. P. Willey's Black Pete (Obo, Jr.—Phonsie).

Lady. J. F. Campbell's (Montreal, Can.) Yorkshire terrier bitch Lady, June 15, four (two dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

Floss. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Floss (Dreadnaught II.—Maggie), May 19, two (one dog), by his Toons Royal (Kavanagh's champion Dreadnaught—Hamilton's Tricksey).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Trumpeter—Nellie whelp. Beagle dog, whelped Jan. 23, 1889, by Associated Fanciers, Philadelphia, Pa., to H. J. Tiffin, Courtney, Fla.

——— *whelp.* Beagle bitch, whelped Feb. 17, 1889, by Associated Fanciers, Philadelphia, Pa., to H. J. Tiffin, Courtney, Fla.

Archie. Collie dog, whelped June 16, 1887, by Glenlivat out of Nellie McGregor, by Associated Fanciers, Philadelphia, Pa., to John Dupee, Jr., Chicago, Ill.

Donald—Miss Hero whelps. Fawn mastiff dogs, whelped Jan. 13, 1889, by Associated Fanciers, Philadelphia, Pa., one each to Wm. Darrow, Jr., New York, and E. R. Abadie, Grass Valley, Cal.

Mars II. Fawn mastiff dog, whelped Aug. 5, 1882, by Rover out of Lady Edna, by E. Penn & Co., Gretna, Man., to Schutze & Hansen, Morden, Man.

Prince Edwy. Stone fawn, black points, mastiff dog, whelped March 24, 1889, by Edwy out of Ilford Comedy, by Dr. George B. Ayres, Omaha, Neb., to Hugh Murphy, same place.

Belle Comedy. Light fawn, brown points, mastiff bitch, whelped March 24, 1889, by Edwy out of Ilford Comedy, by Dr. George B. Ayres, Omaha, Neb., to P. P. Stone, same place.

Rod Roy. Orange and white English setter dog, whelped February, 1888, by Skidmore out of Flo Maclin, by D. A. Goodwin, Jr., Newburyport, Mass., to S. A. Ellis, Harwich, Mass.

Ponto, Jr. Black and tan Gordon setter dog, whelped Jan. 12, 1889, by Havey's Ponto out of Nell, by J. J. Geary, South Boston, Mass., to Frank Wood, same place.

Roger. Black and tan Gordon setter dog, whelped April 25, 1889, by Royal Duke out of Jennie II., by Louis Parisette, Brooklyn, N. Y., name of purchaser not given.

PRESENTATIONS.

Nellie Naso. Liver and white pointer bitch, whelped March 17, 1889, by Nick of Naso out of Nellie, by E. McConnell, Madison, N. J., to W. H. Larison, same place.

DEATHS.

Minting. Mastiff dog, whelped May, 1885 (Maximilian—Cambrian Princess), owned by E. H. Moore, Melrose, Mass., from heart disease.

Ilford Caution. Mastiff dog, whelped May, 1883 (Crown Prince—Ilford Claudia), owned by E. H. Moore, Melrose, Mass., from peritonitis.

Alice Royal. Black and white English setter bitch, whelped July 23, 1886 (Frank Royal—Lee's Belle), owned by McBeth Kennels, Massillon, O., in parturition.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. A. G., Boston.—I have a pointer dog 2 years old next August. He is a handsome dog, but has always been inclined to be quite thin. Eats pretty well, but for a year or more he appears every day to be sick at his stomach and vomits. This does not seem to be a natural state of things, and what would you advise me to do for it? This dog Joe has been sire to two litters, and the puppies all seem to be stronger and more robust than the sire. It looks as if he had some trouble in digesting his food; but is there any remedy for such a trouble? Ans. Give 5 drops of Fowler's solution of arsenic in food night and morning as stomach tonic. Also give a 3-grain quinine pill three times daily. You can conceal the pill in a small morsel of meat. Do not feed much meat. Keep the bowels free. Exercise regularly.

F. A. E., Clinton, N. Y.—My pointer bitch, 14 months old, rather fat, fed with scraps from table, very little meat, apparently in healthy condition and feels well, has an eruption on outside of both hindlegs. Looks very red, and the hair has come out largely. It does not seem to annoy her any as yet. Is it probably a species of mange; and if so, what would you suggest? Ans. A form of mange. Keep the bowels open. Give two or three compound cathartic pills every day for four or five days. Reduce her weight. Exercise. Use the following ointment:

℞ Ung. diachylon.
Ung. zinc oxid.....āā ℥ i
Mix. Sig. Externally applied twice daily after washing.

G. F. M., Maynard, Mass.—An Irish setter, 1 year old, has been troubled with the under eyelid turning up in his eye every time he closed it; the lid would turn up so the hair would touch the eyeball; he has been troubled with it since he was 3 months old. Ans. Turn the lid out and examine for ingrowing hairs or a growth. Let a few drops of solution of zinc sulphate (2grs. to the ounce) fall into the eye. It may be congenital and incurable.

ELMIRA DOG SHOW.—*Editor Forest and Stream:* I have been engaged as superintendent for the dog show to be held under the auspices of the Inter-State Fair, at Elmira, N. Y., Sept. 17 to 20, 1889. The Pet Stock Association will apply for membership in the A. K. C. We will give over $1,000 in premiums, and I think will have no puppy classes. Lots of specials have been promised.—J. OTIS FELLOWS.

BOSTON DOG SHOW.—Boston, June 16.—*Editor Forest and Stream:* The New England Kennel Club claim dates of April 1, 2, 3 and 4, 1890, for their sixth annual bench show of dogs at Boston, Mass.—J. W. NEWMAN, Sec'y.

Rifle and Trap Shooting.

THE TEAM FOR ENGLAND.

ON Tuesday last the rifle team of the Massachusetts volunteer militia left for England to test their prowess with the crack shots of the English volunteers.

The team met at noon, and by special invitation of the proprietress of the Hotel Bellevue, on Beacon street, sat down to a substantial lunch shortly before 1 o'clock. At 2 P. M. the members took a handsome drag with six horses, and through the courtesy of Sergt. Kenney of the artillery staff, were driven to the State House, where at 2:15 P. M. Adjt.-Gen. Dalton made the formal inspection of officers and men, and Maj.-Gen. Frost received the official paper, giving the team leave of absence, permission to take State property across the sea and the royal permit of the English authorities to enter Great Britain armed and equipped as a military body. The members were then presented to Gov. Ames, who officially bade them "Godspeed." Many of the ladies who were instrumental in the presentation of the stand of colors given to the team were present and gazed with pride at the beautiful emblems borne by two sergeants of the team.

The next stop was at City Hall, where Mayor Hart, in behalf of the city, said "good-by." Then Treasurer Asa B. Potter was commented with a call at the Maverick Bank about 3 P. M., and after marching through Faneuil Hall market the team were driven to the Boston Athletic Association building, where the club held an informal reception complimentary to Maj. Frost, who is a member, and the association was the last to say good-by. The team arrived at the Boston & Providence station at 4:45 P. M. and at 5 o'clock rolled away in a special car, handsomely decorated with flags by General Passenger Agent Connor, on the Shore Line express for New York. The team slept and breakfasted at the Sturtevant House, and sailed for Europe on the City of Chicago of the Inman line at 10 A. M. On arrival at Liverpool a special saloon carriage will be in waiting on the London and Northwestern Railway, decorated with American and English flags, and on arriving in London the team will proceed direct to the First Avenue Hotel, Holborn, where the members will quarter until they go into camp at Wimbledon. Team matches will be shot on July 2, 3, 4, 5 and 6, and the men will be under canvas July 8 to 20.

The Massachusetts men are fortunate in the selection of Quartermaster G. F. Gratwicke of the 4th Devonshire as their English honorary secretary. Quartermaster Gratwicke is adjutant of the English Twenty, and honorary secretary as well, and one of the best known and posted rifle shots in England.

The final acknowledgment of subscriptions will be made by Treasurer Potter on Monday morning, and shows a fund of some $7,000. The personnel of the team is as follows: Major J. P. Frost, Second Brigade, Captain; Major C. W. Hinman, First Brigade; Major G. H. Marion, First Infantry (Surgeon); Major G. H. Benyon, Fifth Infantry (Adjutant); First Lieut. S. B. Newton, First Cavalry (Quartermaster); First Lieut. S. S. Bumstead, Second Infantry; First Lieut. R. B. Edes, Fifth Infantry; First Lieut. W. G. Hussey, Eighth Infantry; Sergt.-Major W. M. Merrill and Sergt. W. C. Johnston, Jr., Second Brigade; Sergt. M. W. Bull, Second Infantry; Sergt. George Doyle, Fifth Infantry; Corporal W. D. Huddleson, First Infantry; Privates F. R. Bull, L. T. Farnsworth and W. M. Farrow, Second Infantry.

The team is considered fully equal, if not superior, to any team yet representing Massachusetts. If these men should wear all the championship medals which they have won they would be nearly invisible, for they own among them the enormous number of 246, all of them genuine tokens of championship.

Major Frost, who commands the team, is 33 years old, and has had 15 years experience in the Massachusetts militia, largely in the cavalry arm. He is an expert with the rifle and has numerous medals and trophies to show. Mr. Frost won all the cavalry matches during his term of service in that branch, and his record at mid-range with the carbine has never been equalled in the United States.

Major C. W. Hinman, of Boston, has been a member of two international teams, and at present holds the record with the United States Springfield rifle at 200yds., and the record with sporting rifles at 800, 900 and 1,000yds. He has won the President's match at Creedmoor, which carries with it the military and naval championship of America, and also won the Judd match at off-hand work. At Creedmoor last year he accomplished the feat of winning the Governor's match, 500yds., with a clean score.

Dr. Marion is surgeon of the First Regiment, a bright, wide-awake Harvard graduate, who, though not one of the shooting men of the team, is a good marksman. Adjutant Benyon, of the Fifth Infantry, is appointed because of his executive ability and his good nature. Lieutenant Newton is probably without a superior as a military caterer, having been for seven years quartermaster of the First Battalion of Cavalry.

Lieut. Bumstead is a Springfield man. He was a member of the famous army team years ago, and came within one of being selected for the last international team. He has been a member of the State team four years, and for three of the four led the entire team in the interstate match.

Sergt. Doyle, of Boston, is the military and naval champion of America, has served ten years in the regular army, most of the time in the Engineer Corps at Willet's Point. In 1887 he won the Division of the Atlantic Skirmishers' medal; also the fourth gold medal in the division match. In the same year he won also the first prize department gold medal, the first prize department skirmishers' medal and the first sailor medal on the Division of the Atlantic team, and was made a "distinguished marksman." In 1880, at Creedmoor, he won the President's match with a score of 47 in a possible 50 at 600yds.

Corp. Huddleson, of Boston, is another old army shot. He was five years in Battery K, Fourth Artillery, stationed at Fort Warren. He represented his battery in the department and division competitions of 1884, 1885, 1886 and 1887, being a member of the winning team in Sheridan's skirmishers' matches in 1884 and 1885. He won the division gold medal at Fort Niagara in 1886 with a total of 449 points.

Private F. R. Bull, of Springfield, is probably without a superior in the use of the Springfield rifle, for he is head mechanic in the National Armory, and tests nearly every rifle which the Government issues. All the extremely fine mechanical work is looked after by him in person; also all the testing of service rifles, etc. Very naturally, therefore, he has developed remarkable skill as a marksman, and thinks very little in rolling up clean scores at the mid-ranges. His score for sharpshooters in 1888 at 500, 600 and 800yds. was 147 in a possible 150.

Private Farnsworth is Mr. Bull's right hand man at the armory, and, like him, is an expert. He is a veteran of the Thirty-second Massachusetts Volunteers, and his skill with the old musket was such that he was detailed as a sharpshooter at the headquarters of the First Division of the Fifth Army Corps.

The last man on the list is the famous Farrow, one of the great riflemen of the world. He wears the proud title of "Shooting King," having won it at Newark last fall. Mr. Farrow, whose home is in Holyoke, has been a rifleman twelve years. He made the first ten consecutive bullseyes ever made off-hand at 200yds. in a public trial. At Wimbledon he won the Albert prize of £100, with 70 in a possible 75 points. The next year, also at Wimbledon, he won the Wimbledon Cup, valued at $500. At international shoots at Normandy he received the first prize, a Sèvres vase.

Messrs. Frost, Hinman, Bumstead, Hussey, Merrill, Sergeant Bull, Private Bull and Farrow were members of the team which went to Ireland in 1887.

In the course of conversation Major Frost said that his team men were taking the regular service rifles. "No alterations, no fancy sights or anything of the sort; simply the rifles served out to us by the adjutant general." Then he continued:

"The public does not understand the great significance of these matches. This will be the first time the service rifles of the two nations have been brought into competition. In view of the fact that the English say that our Springfield rifle is not so good a shooting weapon or so serviceable as the Martini-Henry the result will be very significant."

"How about conditions?"

"Everything is to be under English rules except that I have stipulated that in firing at 200yds. we need not kneel, as they do. We don't know anything about kneeling."

"Have they agreed?"

"They had to. We instructed our honorary secretary to refuse the applications of all teams that demurred. There are enough things against us without being obliged to take positions that we don't know anything about."

The team men take with them the regular Springfield 3-groove rifles, and will shoot with the regular U. S. cartridge, having 500grs. of lead and 70grs. of powder. The ammunition is sent directly from the U. S. service supply. It has been used throughout the practice of the team, and the members declare they could ask for no better. The armory is now using the tinned shells altogether. With the old brass and copper shells it was found that the cartridges loaded for some time the chemical action of the powder salts upon the metal so corroded it that it was weakened, and frequently rings or fragments from the shell were carried up into the barrel. With the shell tinned inside and out, there is no corrosion and no galvanic action from the deliquescence of the powder salts, and the exact machinery used turn out the cartridges by the thousand with less than 1 per cent. variation in powder charges; while the swayed bullets run on with the evenness of coin, as to weight and density.

The team went off by the City of Chicago in the best of spirits, and none promised to make a better report of his doings than the FOREST AND STREAM's special correspondent with the team.

CANADIAN WIMBLEDON TEAM.

THE members of A Company, Royal Grenadiers of Toronto, gave the four members of the Wimbleden team selected from their company a grand send-off on the evening of June 14. Sergt. Mowat presided, and the guests of the evening were Staff-Sergt. Ashall, Q.O.R.; Staff-Sergt. McVittie, Royal Grenadiers; Staff-Sergt. Mitchell, Royal Grenadiers; Sergt. Kerswell, Royal Grenadiers; Capt. Kemp, Staff-Sergt. Hutchinson, Royal Grenadiers, and Sergt.-Major Cox, Royal Grenadiers. Sergeants Ashall, McVittie, Mitchell and Kerswell have been chosen to sustain the honor of Canadian shooting in the coming contest, and the following record of the representatives will show the reason of the confidence felt in them by their comrades:

Sergt. McVittie's record is the first given, and shows a most remarkable marksman's experience. The prizes and medals he won are as follows: At Wimbledon—Eight times in the final stage of Queen's, St. George's vase, Dragon cup, gold jewel, grand aggregate, Dominion of Canada trophies and gold cross, Olympic, first stage of Albert, Bass, Secretary of State for War, Wills, fifteen times in Elcho shield, Scotch eight, Henry, Arthur, Ladies', etc. Glasgow—First, second and third service National Rifle Club, grand aggregate three times, Bannockburn cup, Association first prize service, Edinburgh—President's, Lord Provost, Lord Advocate's, first stage of Caledonian shield. Sergt. McVittie won many more medals and prizes which space will not permit to mention.

Staff-Sergt. Thos. Mitchell has had a most distinguished career. He has for a long time past held the position of champion shot and gold medalist of the Dominion, and his companions have all confidence in his retaining his old reputation, if not adding to it, in the approaching trial of skill.

The representatives to Wimbledon left Toronto on Monday night, and on Tuesday night set sail on the Parisian from Montreal. They took on the Nova Scotian marksmen on Wednesday, and if the good wishes of their corps are of any avail, will arrive in England a week later.

The last change in the *personnel* of the team was the resignation of Staff-Sergt. Pink, 43d Battalion, Ottawa, who has been obliged to withdraw owing to continued ill health. He is well on in years and thinks he could not stand the voyage. The waiting man, Sergt. Mumford, 63d Halifax Rifles, was notified, and reported at Quebec on Wednesday, with the rest of the Nova Scotia contingent.

The competing teams will be as follows, giving the competitors' names in the order of their selection: Commandant, Lieut.-Col. Bacon, Ottawa; Adjutant, Major Hood, Montreal; Staff-Sergt. Mitchell, Grenadiers, Toronto; Staff-Sergt. McVittie, Grenadiers, Toronto; Private Armstrong, Guards, Ottawa; Sergt. Rolston, 20th Battalion, Capt. Rogers, 3d, Ottawa; Staff-Sergt. Curzon, Grenadiers, Toronto; Lieut. Jamieson, 43d, Ottawa; Major Sherwood, 43d, Ottawa; Lieut. Wilson, 33d, Huron Battalion; Staff-Sergt. Corbyn, 63d, Halifax; Staff-Sergt. Ogg, Guelph Artillery; Lieut. Conboy, 30th Battalion; Major Weston, 66th, Halifax; Egan, 63d, Halifax; Lieut. Dimock, 78th Battalion, Truro, N. S.; Lieut. Blackmore, 63d, Halifax; Corp. Crowe, Guelph Artillery; Staff-Sergeant Ashell, Queen's Own; Private Horsey, 45th, Bowmanville, Ont.; Sergt. Mumford, 63d, Halifax. At Wimbledon most of the battalion matches are for teams of six men. There is one, however, the Mappins, for battalion teams of four. Had Pink not resigned, the 43d would have been the first battalion to be able to enter such a team. His withdrawal transfers the opportunity to the 63d, as they now have four men. The match consists of an obstacle race, with four obstacles, a quarter mile course, and the firing of seven shots at four and seven and five hundred yards. The whole performance is to be accomplished within five minutes.

RANGE AND GALLERY.

NEW YORK, June 17.—The second match for the marksman's badge was shot at Creedmoor on Saturday, June 15. The attendance was very good but the conditions for shooting were very bad, a heavy, gusty wind blowing from 8 o'clock in the forenoon, and thunder storms delayed the shooting until dark. Following are the sharpshooters' scores:

	200yds.	500yds.	Total.
*J W Halstead, Co C, 7th Regt.	22	23	45
*P L Klock, Co H, 7th Regt.	21	23	44
*G S Scott, Jr, Co A, 23d Regt.	21	23	44
*C B Jackson, Co C, 12th Regt.	22	22	44
*A T Weston, Staff, 22d Regt.	20	23	43
*H W Janssen, Co A, 7th Regt.	20	23	43
*E C Smith, Co A 12th Regt.	21	22	43
†C A Jones, Co G, 7th Regt.	19	24	43
†W B Thurston, Co E. 23d Regt.	20	23	43
O E Dudley, Co F, 7th Regt.	21	22	43

WILMINGTON, Del., June 10.—The regular weekly shooting at Healdmoor range, Wilmington, Del., to-day was favored with good weather conditions, with the exception of the slight shower during the middle of the afternoon, but the shooting continued without interruption. Some fine scores were made, E. J. Darlington especially distinguishing himself in good even all-round shooting. His scores in the special record match were particularly fine, making a run of 20 consecutive bullseyes, 5 consecutive 10s, the second string being a clean score of bullseyes and the first and second both beating his brother's record. Following are the scores in detail, Standard American target, off-hand:

Record Match—200yds.

E J Darlington	8	4	5	10	9	9	5	7	8	7	—72
H Simpson	9	8	5	7	5	7	9	5	6	10	—71
J Howard	7	7	7	7	2	6	10	6	6	6	—64
W Rice	7	5	7	7	6	5	7	5	5	3	6—62
E Darlington	5	5	7	6	8	6	6	5	5	5	6—60
W S Darlington	5	5	6	7	4	3	5	4	5	7	—53

Special Record Match—100yds.

E J Darlington	9	7	8	10	8	10	10	10	10	10	—92
W S Darlington	8	8	7	5	10	7	7	8	6	8	—74

Pistol Match—50yds.

E J Darlington	9	7	9	6	10	9	9	8	6	10	—83
E Jackson	10	7	8	10	7	6	6	8	2	8	—72
E Darlington	10	6	7	7	5	4	8	10	4	7	—68
*H Simpson	9	9	4	7	10	10	4	5	5	2	—65
G W Darlington	6	5	2	4	7	5	8	7	7	10	—61
W S Darlington	7	6	6	6	6	6	5	5	5	7	—31
*H Johnson	5	5	5	4	6	5	4	4	9	7	—54
*W Rice	3	4	4	4	5	5	10	8	4	4	—51

*Revolver.

ST. LOUIS, Mo., June 15.—A good attendance and good scores were the rule at the last meeting of the Pistol Club. Mohrstadt led the van with 91, and will have possession of the medal for one week. The scores are as follows; 20yds., standard American target and .22-caliber pistols:

E Mohrstadt	10	10	7	9	9	10	7	10	9	10	—91
G Alexander	8	6	9	9	9	10	10	9	9	8	—87
M Summerfield	9	10	10	6	8	9	7	9	8	10	—86
L V D Perret	10	9	7	8	10	10	9	8	10	5	—86
O Neuhaus	8	7	8	7	10	9	10	8	8	10	—85
F A Fodde	9	9	8	10	10	6	6	10	7	6	—85
W J Lord	10	7	8	7	10	10	8	7	7	9	—83
W H Hettel	8	8	9	7	10	6	7	8	8	8	—79
J A Lee	8	9	7	10	8	7	5	7	9	7	—77
W Bauer	9	9	9	7	6	5	5	8	9	10	—77
Dorman	9	4	8	7	10	8	10	6	10	8	—76

A E Bengel	8	9	6	10	5	9	5	8	8	5	—73

UNSER FRITZ.

NEWARK, N. J., June 14.—Great scores were in order at the Shooting Park to-day despite the tricky wind. In the fifth match for the members' trophy J. Williams won with 226, this being his third victory, Coppersmith made 219, Boyken 216, Hoegel 213, Drexler 195, Dietz 194, Derivaux 192, Begerow 189, Laute 189, F. A. Freisenshner 183, Fisch 174, Mink 135, Townsend 132. In the expert match Barney Walther won a gold medal on 10 scores of 67 or better. The leaders were as follows: Williams 70, 69, 68, 66, 65; Boyken 69, 65, 64, 64, 63, 62, 62, 61; Freisenshner 66, 62, 60; Walther 68, 68, 67, 67, 66, 65, 65, 65, 64, 64, 64, 64, 61, 61; Begerow 63, 60; Campbell 60.....The liveliest kind of a shoot is expected to take place in Shooting Park on Saturday, when the return match between the "Zettler Twins," Walther and Dorrler, and the "Two Obadiahs" of the Newark Shooting Society will take place. The first match shot on Centennial Day was won by the "Twins" with 95 points to the good, the rifle of "Old Obadiah" getting out of order. According to agreement the Newarkers will receive an allowance equal to the number of points they were beaten in the first match. The match will begin at 3 o'clock.

FOREST AND STREAM.

SUPPLEMENT No. 6——TRAP TOURNAMENTS.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

AMERICAN ASSOCIATION SHOOT.

CINCINNATI, O., June 11.—A large portion of the earlier festivities of the much talked of tournament of the American Shooting Association began yesterday evening, when the sleeper "Mirage" rolled out of Chicago over the Kankakee line. Mr. C. E. Willard, of the advisory board of the Association, had conspired with Mr. J. C. Tucker, general northwestern passenger agent, Mr. C. S. Burton, city ticket agent, and Mr. H. W. McCinniff, city passenger agent, and the result was a very pleasant little excursion party, which has proved to-day to constitute a very material portion of the attendance from the West. On this car were Messrs. C. W. Budd, fresh from his Chicago victories, and carrying a carpetsack full of boodle; J. R. Stice, as big and good-natured as ever; S. A. Tucker, of the Parker people; H. A. Penrose, from Keystonetown; J. A. Ruble, of Albert Lea; Frank S. Parmalee, of the Collins Gun Co., Omaha; Chas. E. Willard, long with the Blatchford Cartridge Co., and bearing his diamond badge honors blushing thick upon him; J. E. Miller, late of the Western Arms and Cartridge Co.; E. S. Rice, general agent of the Dupont Powder Co.; F. H. Lord, of the St. P., M. & K. C. R.R.; C. E. Strawn, of Jacksonville; H. J. Cassady, of Hibbard, Spencer, Bartlett & Co.; H. W. Jenney, president of the Jenney & Graham Gun Co. of Chicago; Henry Smith, of the same city; Geo. I. Maillet, clerk of the Circuit Court at Crown Point, Ind.; A. T. Coffin and W. C. Nicholson, also of Crown Point Club, and Frank Mosher, of Gilman, Ill. It might be expected that a combination of such explosive, volatile, projectile and detonative ingredients as the above would be more or less noisy, and such was indeed the case. Besides the fun there was also a good deal of hard sense talked about guns and ammunition, and especially about shooting tournaments in general, the latter much mingled with speculation upon the success of the coming most interesting experiment of the Association.

Arrived at Cincinnati, it was discovered that shooters had been dropping in for a day or so. The genial president of the Association, Mr. Charles W. Dimick, was on hand, and so was the general manager, well-known and popular Major Taylor. Of the advisory board there were present Messrs. H. W. McMurchy, of Syracuse, Mr. Edwin Taylor, Mr. Al. Bandle, of Cincinnati, Messrs. Willard and Tucker, as above named, and Mr. G. E. Albee, of Hartford. Among the other shooters were Messrs. Sherman and Vincent, of Guildford, Ind.; Rollo O. Heikes and Walter Keenan, of Dayton, O.; Paul North and C. G. Hebbard, of Cleveland; C. W. McPhee, of Bulletsville, Ky.; E. S. Benscoten, of Huron, O.; Fred Kimble, of Peoria, Ill.; Al. Spangler, an old Cincinnati boy, and last, but not littlest, a whole show by himself, Tee Kay, which the same is Tom H. Keller, of Plainfield, N. J. Yet other shooters were noticed when the grounds were reached and when the entries began to fill up.

There was a little sweepstake shooting yesterday, preliminary to the first day's work to-day. Following are the results:

Match No. 1, entrance $2: Heikes 9, Tee Kay 3, Spangler 4, Chubb 4, Bandle 8, A. Paul 9, Murphy 9, F. Ferris 7, Albee 8, North 8, Vincent 8, Benscotten 8, E. Taylor 7, J. M. Taylor 8, McPhee 8. Murphy, Paul and Heikes first; Bandle, North and J. M. Taylor second; Ferris and E. Taylor third.

Match No. 2, 9 Peoria birds, entrance $2: Bandle 9, J. M. Taylor 7, Murphy 7, Heikes 9, A. Chubb 8, E. Taylor 8, Benscotten 8, Ferris 6, Vincent 6, Paul 8, E. Frey 7, Tee Kay 7, North 9. Bandle, Heikes and North first; E. Taylor and Vincent second; Major Taylor and Murphy third.

Match No. 3, 9 Peorias, entrance $2: Bandle 8, Benscotten 9, Heikes 9, Chubb 2, Paul 9, Vincent 9, E. Taylor 9, North 8, Ferris 9, J. M. Taylor 7, Murphy 9, Tee Kay 7. Frank and Benscotten and Heikes first money; Bandle and North second; Major Taylor and Tee Kay third.

Match No. 4, 9 Peorias, entrance $2, one gets money: Tee Kay 7, Heikes 8, Paul 9, Bandle 9, Vincent 9, J. M. Taylor 7. Bandle won.

Individual match, $25 a side, at 25 standard single birds.

Tee Kay.....1111011011101111111111000 -19
Spangler.....0100001001011111011101100—16

First Day, Tuesday, June 11.

The grounds chosen by the Association to-day are at the old base ball park, and are those leased by Al Bandle for his tournaments. They are small and level, covered with a beautiful turf, but lying as they do in a little valley with a heavy background of green trees, they are difficult to shoot on, and a number of complaints about the puzzling background of green have been heard. The grounds are distant about 40 minutes by horse car from the central hotels. The fitting and supplies, traps, tents, etc., are under the supervision of Mr. Al Bandle. He supplies all the targets shot and furnishes traps, trappers, etc.; for this he is paid 3 cents per bird by the Association, which is thus relieved of further responsibility. There is a very pleasant little city of tents and awnings on the grounds to-day, and the cool and breezy arrangement of the latter was appreciated, for the day is disposed to be sultry.

And now came up the much mooted question of classification. By 10 o'clock every shooter had his finger on the pulse of the Association; a little later some few fingers would, perhaps, gladly have been transferred to the Association's throat, for there will always be some shooters who are hunting for a sure thing. To the entire credit of the Association be it said that the management stood firm and relentlessly attended to the sure-thing men as quickly as they manifested themselves. There was considerable growling among the malcontents, but enough has been done even to-night to show that these classifications, while necessarily not mathematically accurate, are nevertheless practical, feasible and desirable. For instance, one shooter called "Shorty" (Mr. Bacon, from up country) had gotten into the C class (although he during the match, while boasting of his gun, remarked that he had broken 50 straight with it) and won first money, $60, with a straight score of 12. The management raised him a notch without any ceremony. Mr. Ruble, of B class, unfortunately got to shooting too well and was offered a nice new badge with a large letter A on it, which came very far indeed from pleasing him. There was infinite squirming and twisting and efforts on the part of certain knights of the gun to show that they could't shoot, never could shoot, and couldn't learn to shoot. In its comic features all this reminded one much of the mule race at country fairs, in which the slowest mule wins. In its more serious features it was an affair not in the least to be laughed at, and one quite enough to provoke a fair-minded man into impatience. More than even this, there were one or two attempts made which, if known publicly, as they are known fully, should at once disqualify the guilty party from ever shooting in the company of gentlemen, at this or any other shoot. In one instance a B Class man, wealthy enough, too, not to care for an odd dollar or so, laid aside his badge and undertook to shoot in C Class, being prevented only by the warning of a member. In two other cases class badges were traded by shooters, each thus gaining an opportunity to shoot in the class below him. The scorers had no *prima facie* evidence of a shooter's class except the classification badge showing his letter, A, B or C, pinned upon his breast. Such petty deceit as exchanging these badges is on a par with an action which would rule one off from any race track in the world. Are not shooters as much gentlemen as horsemen are, and should they demean themselves for one moment by association with such tricky characters? These would be harsh words if they were not true. It is due to the prompt and decided stand of the management that these things are hushed up now and will never again be heard of. It would not be safe to try it any further. At the close of this shoot the classifications will be published generally, and any one seeking by trickery to evade his due class would also be published and subsequently barred. Open attempts to be classed low, such as were common all the morning, are not thus serious. They are only funny.

Very soon, however, everything was running smoothly, and the boys were in the middle of as pretty a little tournament as ever was. The talk of the beginning died away or served only to point an occasional joke, and thus to keep things stirred up. The traps—standard, Keystone, bluerock, Ligowsky and Bandle clay-birds—all worked beautifully. Mr. Penrose, in charge of the Keystone traps, was soon raising his voice in his long, convulsive and despairing wail of "L-l-l-lost!" and everybody gradually began to feel as if there was a mighty good shooting match on hand.

Throughout the day the officers of the day have been to the last degree courteous and painstaking, and there has been an adherence to method and system greater than has been apparent at any shoot in the Western circuit. The result is highly pleasing. A tournament well and regularly run is a far different affair from a loose and slatternly one, as every shooter knows, and to-night those in charge here should be pleased and gratified.

There are some hasty souls to-night who would call this meet short of pronounced success because of the small attendance. It certainly is not yet what many said it would be, the greatest trap meet ever held in America. It is very far from that indeed. But to-morrow there will be more shooters here, and enough are assured to guarantee a practical working success already. At the next shoot, now that the ice has been broken and the experiment fully made, there will be a rallying around a standard still full high advanced in a truly praiseworthy course, and then the gradual growth through which alone can be built up an event which may really be the greatest in the circuit of the American trap. This meet is no failure. The Association is no failure. Let the boys stand by it. It will use them well.

There are only two criticisms which are just to-night as upon the management of this meet. One is that the squad system of firing at the inanimates traps was not adopted, and all the consequent delay of the old "one man up" method was therefore inflicted on the shooters. This, of course, is something not serious, and easily remediable. If the shoots fill more heavily, squads will probably be organized.

The second criticism is one which, frankly speaking, was very general among the less considerate shooters. It is that the management charged 5 cents apiece for targets. This, being 2 cents clear gain on every bird, since Mr. Bandle only charged the Association 3 cents, and being also in view of the widespread assertion of the Association that it not only did not care to make money, but had $20,000 to spend in keeping even, created a good deal of unfavorable talk, which caused the management to announce this evening that hereafter only 3 cents would be charged. The shooters should bear in mind that all the Association wished in charging 5 cents was to come somewhat nearer to covering the necessary expense. At best the loss would be several hundred dollars. Now it will be very much more to the Association. Shooters should not rob it for the earth. There is good money held up by the Association, and all that is needed is a good filling up of the entries.

In one respect Major Taylor has won the undying gratitude of a deserving class, and placed himself perpetually beneath the sheltering ægis of the press. Instead of the reporters being obliged to scramble and beg for the more or less imperfect records of less well conducted shoots, they were assured by Major Taylor that they need give themselves no concern, as he would hand each the score in full. Where other secretaries would busy themselves in finding excuses for not doing this, he simply went ahead and did. At ten o'clock to-night he was hard at work in his room, and later had finished not one, but four copies of the score besides Associated Press matter. A man like this is almost too good for a sinful world. If he ever runs for president he will be elected sure.

FOREST AND STREAM was the only sporting paper represented on the grounds to-day, and is indeed fast coming to be the only one much spoken of at these important shoots. The score:

Match No. 1, Class A, on 9 single standards, entrance $2:

Bandle	101111111—8	Coffin	100100110—4
Heikes	111111011—8	North	111101011—7 3
Taylor	111101111—8 0	Koehler	010110111—6 3
Jackson	001011111—8 0	Keenan	111111111—9
Benscotten	101111111—8 6	Chubb	111111111—9
Robinson	111111111—9	W C	101011110—6 3
Albee	111110111—8 6	Shorty	111111111—9
Dayton	001110011—6 3	Mosher	111011101—7 3
McMurchy	111111111—9	Stice	111111111—9
Sprigg	010110110—5	Budd	111111011—8 3
Paul	111101111—8 1	Hollister	111111111—9
White	011111111—8 3	Jones	111101000—5
Parmlee	111110110—7 3	Willard	001111111—7 1
Moore	101110110—6 3	Vincent	011011001—5
Waddell	101111111—8 0	McPhee	111111101—8 6
Evard	111010911—6 0	Sample	111111100—7 3
Goldrick	001101101—5		

Robinson, McMurchy, Keenan, Chubb, Shorty, Stice and Hollister divided first; Benscotten, Bandle, Albee and McPhee divided second with 6 each on shoot-off; Parmlee, North, Sample and Mosher divided third; Dayton, Moore, Koehler and W. C. divided fourth.

Match No. 2, Class B, 9 single bluerocks, entrance $2:

Robinson	000011111—5	W C	111111011—8 3
Goldrick	011111111—8 3	Holt	111111111—9
Albee	111110111—8 1	Strawn	111110111—8 2
Jackson	111111001—7 1	Koehler	110011101—6 3
Pumphrey	011111111—8 3	Smith	011110111—7 0
McPhee	111101110—7 0	Evard	101111101—7 2
Chubb	101110110—6 3	Coffin	111001101—6 0
Sample	110110101—6 3	Baker	111111111—9
Waddel	101111110—7 3	Jones	100001011—4
Vincent	101111111—8 3	Willard	111111111—9
Hollister	111111111—9	Cider	110111111—8 3
Dayton	110111111—8 1	Frank	001111111—7 3
Moore	101111111—8 3	Ross	110111101—7 2
Schatzman	110110100—5	Mosher	111110110—7 3
White	111111111—9		

Hollister, White, Holt, Willard, Baker ties on first; Goldrick, Pumphrey, Vincent, Moore, W. C., Cider second; Waddel, Frank, Mosher div. third; Chubb, Sample, Koehler div. fourth.

Match No. 3, Class C, 9 single Keystones, entrance $2:

Chubb	011111111—8	Baker	001111111—7 9
Holt	001101001—4	Shorty	110111101—7 3
Goldrick	011011110—6	Krebs	010111111—7 1
Jackson	111110011—7 9	Schatzman	011100111—6
Strawn	111111111—9	Maynard	111001001—5
Dayton	101111011—7 3	Mosher	111110101—7 2
Koehler	001111111—7 3	H Smith	101001111—6

Strawn won first; Chubb won second; Baker, Shorty and Jackson div. third.

Match No. 4, Class A, at 12 single clay birds:

McMurchy	110101111111—10	North	000101011110— 6
Taylor	101000011011— 6	Albee	111101101001— 8 0
Bandle	111101110110— 9	Moore	110001011101— 7
Stice	111111011111—11	Waddel	101110110011— 8 2
Budd	111001011111— 9	W C	000010011011— 5
Keenan	111101111100— 9	McPhee	111111011111—11
Heikes	011111111111—11	Jackson	101101001010— 6
Shaller	111010011110— 8 1	Merrick	101010110111— 8 2
Robinson	001000000101— 3	Goldrick	111010111111— 9
Parmlee	111111111100—10	Sample	010011011111— 8 3
Benscotten	111101111101—10	Mosher	110000111111— 8 6
Mills	111111w.	Willard	111011010111— 9
White	101011110110— 8 2	Ross	110111101111— 9
Paul	111011000100— 6	Hollister	111110111001— 9
Vincent	000011101100— 5	Shorty	111011111110—10
Coffin	111011110100— 8 4	Murphy	111110000001— 6
Everest	000101000000— 2	Koehler	010110011111— 8 3

Stice, Heikes and McPhee divided first, McMurchy, Parmlee, Benscotten, Ross and Shorty divided second, Bandle, Budd, Keenan, Goldrick, Willard and Hollister divided third, Mosher fourth money.

Match No. 5, Class B, at 12 single Ligowskys:

Cider	111111010110— 9 0	Boone	110011110101— 8 2
A B	011101111100— 9 3	Ross	110111101001— 8 3
Chubb	111111001111—10	Pumphrey	111111110111—11
Albee	001101001001— 5	Reif	101110011011— 8 1
Robinson	011101101111— 9 3	Bemis	011111100010— 7
Pine	101011101011— 8 1	Goldrick	101101011101— 8 3
T K	110001011111— 8	Vincent	100111111001— 8 0
Willard	001010101111— 7	Spangler	101101100101— 6
Hollister	001101111111— 9 3	Sample	111111111101—11
Willie	111010000010— 5	Coffin	110010000011— 7
Waddell	110110110110— 8 3	Holt	111111111010—10
Moore	110110110110— 8 3	Dayton	111110100111— 9 3
McPhee	110111111111—11	Jackson	111101011001— 8 0
Mustin	110001111111— 9 0	Strawn	111110111111—11
Baker	101111111111—11	Merrick	111010101111— 9 3
Evard	101101111101— 9 3	Shorty	111011111111—11
W C	110111111101—10	Mosher	111011111110—10

Waddell, McPhee, Baker, Pumphrey, Semple, Strawn and Shorty divide first; Chubb, W. C., Holt and Mosher divide second; A. B., Robinson, Hollister, Evard, Dayton and Merrick divide third; Moore, Ross and Goldsmith divide fourth.

Match No. 6, Class C, on 12 single standards, 23 entries:

Frank	110111110110— 9	Andrews	101001001111— 7
Boone	011100001101— 6	Jackson	111100001011— 6
Willis	110111111101—10	Coffin	001111000101— 6
Chubb	110111011111—10	Mosher	111110011111—10
Dayton	111001011001— 7	Holt	111111111101—11
Spangler	110111111111—11	Ned	011011111000— 7
Bill	101011101110— 8	Baker	011111111111—11
Modoc	100111111111—10	Smith	101010010101— 6
Goldrich	001111001111— 8	Shorty	111111111111—12
Reef	001010111101— 7	Fey	101011111001— 8
Koehler	011111001111— 9	Oscar	011010110101— 7
T K	111111010111—10		

Shorty first, Spangler, Holt and Baker divide second, Willis, Chubb, Modoc, T. K. and Mosher divide third, Frank and Koehler divide fourth.

Match No. 7, Class A, 10 single Keystones, entrance $2:

Heikes	111111111—10 6	Taylor	1011110101— 7 5
Benscoten	111111111—10 8	Willard	011111111— 9 0
Bandle	1101111111— 9 5	Hollister	111111111—10 4
Goldrick	1101111000— 6	Paul	111111111—10 7
McMurchy	1110101111— 8 4	Evard	1100011111— 7 3
North	1011101101— 7 1	Keenan	1011111111— 9 0
Pumphrey	1111111101— 9 0	Parmlee	1111111110— 9 1
Robinson	0111000100— 4	W C	1111111111—10 2
Chubb	1011101111— 8 3	Koehler	1100111111— 8 0
Vincent	1111100111— 8 2	Holt	1011101111— 8 5
Stice	1111111111—10 7	Budd	1111111111—10 10
Murphy	1110011111— 8 4		

Budd shot out and won first, Bandle shot out and won second, Holt shot out and won third, Taylor shot out and won fourth.

Match No. 8, Class B, on 10 single Peoria blackbirds:

Goldrick	1111101111 — 9 2	Hebbard	1100111 01— 7
Jackson	1101111001— 7	Evard	1111111111—10
Pumphrey	1111111111—10	Hilliard	1111111111—10
Chubb	1111121011— 9 4	Hollister	1101101111— 8 3
Robinson	1111111111—10	Frank	1011111110— 8 3
Albee	1111111111—10	Spangler	1010111011— 7
McPhee	1111111101— 9 4	Strawn	1111111010— 8 2
W C	1011111111— 9 6	White	0111111111— 9 6
Cider	1111011111— 9 6	Holt	1110111111— 9 6
Sample	1001111111— 8 3	T K	1111100111— 8 3
Waddel	1111111110— 9 5	Mosher	1111011111— 9 2
Moore	1111111111—10	Dayton	1111111111—10
Boone	1011100110— 6	Koehler	0000111w.
Vincent	1111111111—10	Ned	1111101111— 9 6
Coffin	1111111111—10	A B	1111111110— 9 6
Jones	1111101110— 8 0		

Pumphrey, Robinson, Albee, Moore, Vincent, Coffin, Evard, Willard and Dayton div. first, W. C., Cider, White, Holt, Ned and A. B. div. second, Sample, Hollister, Frank and T. K. div. third, Jackson, Hebbard and Spangler div. fourth.

Match No. 10, Class A, on 6 pair bluerocks:

Robinson	11 10 00 11 01 01— 7	Budd	10 11 11 11 11 11—11
Heikes	00 10 11 11 11 11— 9 4	Evard	10 01 01 01 11 11— 8 1
Benscotten	10 11 00 10 10 00— 5	North	00 11 10 10 11 11— 8 2

Stice, McMurchy, Moore, Budd and Hollister divided first; W. C., Willard and Pumphrey divided second; Heikes, Paul and Vincent third; North fourth.

A few sweepstakes were then shot, of which summaries are given below:

Sweep No. 1, 40 entries at 9 standards: First money Parmalee, second divided by Hollister, Dayton and A. B.; third divided by Merrick, Taylor, Pumphrey and Frank.

Sweep No. 2, 19 entries at 6 bluerocks: First divided by Ross, Goldrick and Dayton; second won by Pumphrey; third divided by Maynard and Baker.

Sweep No. 3, 6 bluerocks, one money: Money divided by Bill, Chubb and Merrick.

Wednesday, Second Day, June 12.

The weather was delightful throughout the day. The attendance held its own well, although a few shooters were forced to leave for their homes in the evening. The live bird match filled well, but as a specimen of sport it was simply a farce, for the birds were the rankest lot of squabs and duffers that any one ever had nerve enough to trap. In so short a race as 7 birds there were, of course, long lists of ties. The ties on 4 were shot out at inanimates. Ties on 7 were not decided until late in the evening. Everything passed pleasantly. It is a jolly crowd that is here. One or two of the shooters who declared they were going home unless they got back into Class C, are still lingering patiently about, like Mary's little lamb. Much of the earlier kick was made to test the management, and when the latter is found firm the objection will gradually die away. A number of notables were out at the grounds to-day, among others Messrs. Godheart, Rice and Ligowsky, of the Ligowsky Clay-Pigeon Co. Agents for the leading target, powder and ammunition companies are abundant. The score:

Match No. 1, Class A, on 9 single Bandle clay birds, entrance $2:

Bandle	111101111—8 3	Sample	011101001—5
Heikes	111111100—7 2	W C	100011001—4

Stice	1111111—7	9	Bing	0101110—4	3
Calhoon	0111010—4		Willie	0101111—5	
Merrick	0111111—6		Holt	1001101—4	2

Benscotten, Budd, McMurchy, W. C., Tucker, Bandle, Stice, Shorty and Baker divide first. Heikes, Parmalee, Dayton, Tee Kay, Merrick, Mosher, Moore, Evard, Hollister and Cider divide second. Modoc, White, North, Pumphrey and Willie divide third. Robinson and Bing divide fourth.

Thursday, Third Day, June 13.

There was a light warm rain this morning, but the afternoon cleared well and showed as pretty weather as one could ask. Some of the Indianapolis and Chicago boys had gone home, but the shoots filled with nearly the same numbers as before. By all odds this was the best day yet of the meet. The feeling was better than before, and things had settled down to a more regular and satisfactory basis. Several shooters who had been loud in their denunciation of the classification system had meekly accepted the inevitable, and were shooting regularly where they belonged. One or two more changes in classification were made, but there was little further confusion or dissatisfaction. The uneasy feeling usually attendant upon an experiment of any kind had largely worn off, and the atmosphere had cleared perceptibly. No event of any special interest transpired, and the shooting, although tiresomely and painfully slow, was nevertheless regular and generally pleasant. There should be at least double the number of birds trapped daily. At the announcement of the Ligowsky free bird shoot for to-morrow, $75 cash to be divided under the classification system, there was general applause, and an interesting event is expected. Good feeling prevails generally tonight. The score:

Match No. 2 (match No. 1 of programme not shot), Classes B and C, on 9 single Peorias, $2 entrance:

Robinson	010111111—7	4	Murphy	111101111—8	3
Chubb	111110111—8	3	Pickway	100001011—4	
McPhee	111111111—9	3	Albee	101111111—8	3
White	111111111—9	3	Victor	111111110—8	1

Robinson	101111101—7	0	Strawn	110111100—6	3
Rudolph	110100100—4		Holt	110111010—6	1
Tee Kay	101111111—8		White	011110101—6	0
Murphy	011111101—7	1	Baker	000011111—5	6
Chubb	011111110—7	3	W C	111011111—8	
Ross	010111111—7	3	Victor	000110000—2	
Modoc	001000101—3		Frank	101001001—4	
Pumphrey	011110011—6	0	Stubb	100001011—4	
McPhee	101111110—7	2	North	011101010—5	1

Merrick, Tee Kay and W. C div. first, Hayes, Chubb and Ross div. second, Strawn won third, Vincent won fourth.

Match No. 9, Class C, on 9 single Keystone targets, 14 entries, entrance $2:

Roberts	011010111—6	1	Watson	100011000—3	
King	011011111—7		Hayes	001001000—2	
Kushman	101111111—8		Jackson	111011111—8	
Jack	010101111—6	1	Magruder	111111010—7	
Maynard	110111111—8		Tee Kay	011101101—6	3
Forbes	110101001—5		Bruns	010111111—7	
Frank	101101011—6	2	Frank M	101111001—6	0

Kushman, Maynard and Jackson div. first, King, Magruder and Bruns div. second, Tee Kay won third.

Match No. 9, match brought forward from Wednesday), Class C, on 9 single bluerocks, $2 entrance:

Walters	111011011—7		Forbes	111011111—8	
Jackson	011110101—6		Hayes	001111011—6	
Cushman	111111011—8		Frank M	111111011—8	
Ross	111110011—7		Bruns	011111111—8	
King	111111101—8		Holt H C	111111111—9	
Watson C	111111001—7		Maynard	101111101—7	
Magruder	111101101—7				

H. C. Holt won first, Cushman, King, Forbes, Frank M., and Bruns div. second, Walters, Ross, C. Watson, Magruder and Maynard div. third.

But two sweeps were shot: Sweep No. 1, 44 entries, at $2, 9 Ligowskys: First money, Budd; second, Hayes, Albee, North, J. W., Benscotten, Magruder, Stice; third, Dayton, Holt, Chubb, Jokers, Bemis, Forbis, W. C.; fourth, Mosher, Tee Kay, Jackson, Taylor, Maynard, Rudolph, Vincent, Watson.

Sweep No. 2, 25 entries, at $2, 9 standards: First money, Bandle, Parmalee, McPhee; second, North, Pumphrey, Paul, White; third, Budd, McMurchy, Benscotten; fourth, Taylor.

Friday, Fourth Day, June 14.

Rain fell in the early morning, but the skies cleared enough to permit about three hours' shooting in the middle of the day. Nothing of special interest came up until the calling of what the boys facetiously termed the "base-ball match." This was a match arranged between a number of the shooters on exactly the same plan as a billiard tournament, one shooter being pitted against another in individual contest, and the winner of the greatest number of the several individual matches to be winner of the shoot. The entrance for this shoot was $2, and there were 15 entries.

As some of the races between the experts footed out 20 to 30 birds, it began to be apparent that the match would be a fairly interminable one. It was cut short in a singular way. At 1:30 a heavy wind storm struck the grounds, and a moment later everything lay in ruin and confusion. Out of eight tents only one was left standing—the headquarters tent of the Association, which was only kept up by the strenuous efforts of its occupants. The scorers' boxes were blown over, and a part of one cashier's funds went flitting down the breeze, he catching a $10 bill as it passed him in the air. Benches, boxes and seats were rolled and tumbled every way, and in the middle of the confusion the heavens opened and let down a deluge of rain, hail, a dull, soggy squash which drenched every shooter who had not gotten into one of the crowded sheds, or into the headquarters tent. From under the soaking canvas came shouts of laughter and cries of "don't touch the tent," as streams of water came pouring through and saturating the shooters who had sought refuge under the fallen walls. The wind rose to such a pitch as to be really serious, and then, after every one had been thoroughly wetted, the storm passed as quickly as it came, and before long the sun was shining on the wreck of what had been a flaunting white-walled city. The incident was a singular one, and made a text for many a jest among the huddled shooters, the irrepressibles, Tee Kay and Al Bandle, managing to keep the crowd in a roar.

The match that had been in progress was declared off, and the moneys were refunded. Having cleared nicely by this time the traps were set in for the Ligowsky free shoot, in which great interest was taken. The terms of this match, so generously offered by this well known company, were $25 each to A, B and C classes, to be shot for as one money, no entrance fee and birds free, the birds to be 15 singles and 5 pairs. After some little filibustering among the great unclassified, and a little judicious and prompt action on the part of the management, the respective classes fell amicably to shooting with results as shown below. It is really quite wonderful the progress that has been made during three days in this classification business, and it is fair to say that the American Association has solved the question as it has never been solved before and shown that classification is practical and will be popular when it has been more often seen in actual work. It is no longer the bugbear that it was here at the beginning of the week. The Association may therefore set aside the question of the unexpectedly light attendance, itself a fault of the shooters and not of the Association, and deem the present meet a success, in that it has accomplished its chief intention and put itself beyond all future imputation of being an experiment. The score:

Match No. 1, free for all class, on 10 single Ligowsky clay-birds, entrance $2:

Bandle	1111111100— 8	1	White	1111111111—10
Bemis	1111111111— 10		Benscotten	1111111011— 9	6
Heikes	1111111111— 10		Vincent	0111011111— 8	6
North	1111111101— 9	5	Sample	1011111111— 9	5
Mosher	1111011111— 9	1	McPhee	1111111111—10	
Hayes	0010111011— 7	4	Colo	1111001111— 8	4
Robinson	0111111101— 8	3	Jackson	1111101110— 8	0
Budd	0111001111— 7		Cushman	1111111111—10	
Parmalee	1111101111— 9	6	Murphy	1110111111— 9	6
Pumphrey	1111101011— 8	1	Baker	1110101111— 8	6
Stice	1111111100— 8	3	W C	1111111101— 8	0

First money, Heikes, Bemis, White, McPhee and Cushman; second money, Murphy, Parmalee and Benscotten; third money, Vincent and Baker; fourth money, Budd.

Match No. 2, free for all class, on 6 pairs standards, $2 entrance:

Heikes	10 10 11 11 11 11—10	5	North	11 11 10 10 11 11—10	5
Bandle	11 11 10 10 11 11—10	8	Benscotten	11 11 11 11 11 11—12	
Boyd	10 11 00 10 10 11— 5		Ross	11 11 10 10 10 10— 8	
Parmalee	11 11 01 11 11 10—10	8	J W	10 10 00 10 00 11— 5

Vincent	111111101111111—14		11 11 11 11 11—24
Mustin	101111111010011—11		10 11 11 11 10—19
Taylor	111111011111011—13		10 00 11 00 10—17
Baker	111110111011111—13		11 11 10 01 10—20
Pumphrey	100011101101110— 9		10 10 10 10 11—15

Vincent first.

But two sweeps were shot. Results below: Sweep No. 1, free for all, 30 entries, 9 single Keystone targets, entrance $1: Benscotten, Heikes, Parmalee and Stice first with 9 straight, North and McPhee second with 8, Richards, Strawn, Baker and Cole third, Mustin and Vincent fourth.

Sweep No. 2, free for all, 23 entries, 9 single standard targets, $2 entrance: Parmalee, Benscotten and Budd first with 9 straight, Bandle, Vincent, Tee Kay and Stice second with 8, Murphy third, McPhee and Pumphrey fourth

Saturday, Fifth Day, June 15.

Heavy rain fell during the morning, but it cleared shortly after noon. The only remaining tournament shoot was the Class A Ligowsky match. Great interest centered in the team match set for this afternoon by the contestants, in which Budd and Parmalee shot McMurchy and Bandle. This was a side match, but was really the best feature of the meet. The score:

Ligowsky Donation match, Class A, on 15 singles and 5 pair Ligowsky clay-birds:

Stice	111111111111111—15	10 11 11 10 10—22
Heikes	111111111111111—15	10 11 01 11 11—23
Bandle	111110011011011—11	11 01 11 11 10—19
McMurchy	111011101101111—12	10 01 10 11 11—19
Budd	111110011111111—13	11 11 11 11 11—23 6
Parmalee	011111101111111—13	11 11 11 11 11—23 9
Taylor	111101111111011—13	11 11 10 11 11—22
Benscotten	111111111011111—14	01 10 11 11 11—22
Paul	110111110111111—13	11 11 11 11 11—23 3

Parmalee first.

B and C sweepstakes, No. 1, 12 standards, entrance $2, 9 entries: first money on 12 straight, Strawn; second on 11, Bruns; third, Robinson.

The tournament was now practically at an end. Major Taylor announced that the three best averages for each class had been made up, but there being no surplus over the guarantee, no prizes could be offered for the same. The figures show plainly enough that certain shooters were not classed too low, the schedule being for A class, 85 to 100; for B class, 70 to 85; for C class, all below 70. The averages are as follows: Class A, Heikes first, 97; Stice and Benscotten tie on second, 94½; Budd and Parmalee tie on third, 91⅔. Class B, Ralston first, 97; Holt second, 94½; McPhee third, 89. Class C, Chubb and Baker tie on first, 94½; Mosher second, 86; Tee Kay third, 83⅓. Under such average score it may be imagined what chance the average shooter in the lower classes had, and how much poorer it would have been had classification not been attempted. The two top scores in B and C class certainly do not belong there, and probably will not appear there at the next Association meet.

The live bird traps were now put up for the team match mentioned.

Two-men team match, 50 live birds per man, $100 a side, Budd and Parmale vs. McMurchy and Bandle. The score:

C W Budd	1221210112— 9	McMurchy	2201202212— 8
	0121211122— 9		2102121110— 8
	2222101111— 9		1111111111—10
	1221221112—10		1212011112— 9
	2212111111—10		1111112211—10
	—		—
	47		45
F S Parmale	1212120210— 8	Al Bandle	1012222111— 9
	2002121110— 7		0222211212— 9
	1122022211— 9		1220012222— 8
	1112212212—10		2202202221— 8
	1102210122— 8		1120221111— 9
	—		—
	42—89		43—88

This match was a singularly close and exciting one, and it would be hard to pick four harder shooters at any tournament,

McMurchy has been troubled with the rheumatism, but shot in apparently good form. Parmalee cannot shoot live birds as he can targets. Waddell always the same, quiet, steady and gentlemanly. There is no more commendable a shooter at the public trap than Charlie Budd. Al Bandle, colossal in figure and good-natured, shot a hard race, as he is sure to do. Each man had his followers, and wagers were on side and individual issues. Rolla O. Heikes filled acceptably the position of referee, the match being shot under American Association rules. There was no demur to his decision except in one case. Parmalee grassed a left quartering bird. The referee announced "dead bird." The trapper started to gather the bird, which took wing and went out of bounds. There was no challenge, but the decision of the referee was changed to "lost bird." Under the strict rules of the Association this decision can only be warranted by supposing the case to be covered by that rule which says: "A bird once out of bounds shall be scored a lost bird." This is by ordinary trap usage thought to be intended to cover the case of a bird flying out of bounds and then returning and falling within bounds. It remains a question whether the opposite party did not forfeit its rights by neglecting to challenge the "dead bird" until after it had taken wing. An unchallenged bird does not have to be gathered to be scored. The result of the match, however, was not affected by this decision; in the latter Major Taylor and Mr. Tucker, of the Board, both concurred informally with Mr. Heikes.

The greater part of the crowd now went home. The tents and material began to disappear under the packer's orders. Frank Mosher, L. C. Boyd and A. M. Robinson shot a side match or two at 10 live birds, Mosher winning twice. Night approached and the end of the tournament was at hand.

In reviewing this, the first meet of the American Shooting Association, little remains to add to what has been already said. The meet has gathered moral strength every day, and to-day the American Shooting Association has cause to feel more confident than at any time before this. It has broken the ice and shown that it can swim. It has succeeded under not the easiest circumstances. It would have had a far larger attendance at Boston or New York, probably at any good Eastern point. Give honor to the Western shooters for making the first success of the Association. They have thrown themselves into the breach almost unsupported by Eastern shooters. I recall but one man here unofficially from the Eastern States. When the next meet comes off we will send men East from our country and show the people there that Western shooters are not afraid to go to shoots, and not afraid to shoot when they get there. A bigger home crowd might have turned out at Boston, but Cincinnati has done her part. Let us call this meet a plucky success, and claim all credit for the support of it. To the management who planned and conducted it the first and main credit of course belongs, and the thanks of all those who, unthankfully enough in some cases, have been the beneficiaries thereof. E. HOUGH.

MASSACHUSETTS ASSOCIATION.

THE tenth annual meeting of the Masschusetts Shooting Association was held on the 17th and 18th inst., at Clarendon Hills, Mass., on the Old Colony Road, Providence Division, six miles from Boston, under the management of the Jamaica Plain Gun Club. This is the youngest and one of the most progressive clubs in the Association, and the tournament was given to them as an incentive to still greater effort. It has for its officers: Pres., A. W. Rounds; Treas., C. H. Olmstead; Sec., J. R. Hanmer; Capt., H. A. Baker, and with their efficient aid, the members manage to have a lively club shoot every Thursday. The shooting grounds are located on the crest of a hill, entailing quite a climb when no vehicles are in readiness at the station, as was the case on Monday morning, when a number of would-be shooters gathered on the platform and unanimously growled for the rig which never, yes, finally did come, but was so small that several trips were necessary. Some of the waiters became disgusted, more perhaps on account of the arbitrary system of handicapping in vogue in the Association than because of the delay, and returned to Boston. The expert shots are handicapped in distance, they shooting at 21yds. to the amateurs' 18yds., and this they consider unfair. A more equitable system would be by classing all contestants as 70, 80 and 90 men, as in other State associations. However, those that remained got there after a while, some of us walking through the wet grass in the dripping woods.

The shooting commenced at 9 o'clock, but soon after the rain began to fall, and it came down in perfect torrents, interfering sadly with the comfort of all concerned. It seems to be only necessary now to announce a shoot to bring rain in abundance, and we offer this as a suggestion for farmers in a time of drought. Still it takes a great deal to discourage a band of shooters when their minds are made up for a session at the traps, and the regular programme consisting of ten regular events, besides a number of extra sweeps, was completed. The shooting was done from four sets of three traps each; they were in constant operation for the benefit of outsiders as well as members of the Association. At 1 o'clock an elegant lunch was served in a commodious building near the club house. For 75 cents one could eat his fill of salads, salmon, cold turkey and meats of all kinds, with a desert of strawberries and ice cream of all flavors—truly a luxurious meal and one not often to be procured on occasion of this kind. Notwithstanding the heavy showers, which held up somewhat toward noon, there were about fifty shooters present, and laughter and jollity were the order of the day. Perhaps the attendance was due to the fact that Monday was a legal holiday, the anniversary of the battle of Bunker Hill. In town, cannons were roaring out salutes, and at Clarendon Hill the four sets of traps at times equalled the cannon in noise. We give the scores of all the State events, and of six extra sweeps, which are fair samples of the rest.

Event No. 1, individual subscription match, 6 clay-pigeons, 50 cents, four moneys, ties miss and out:

Bradstreet	111111—6	Carpenter	111010—4 3
Wilbur	111111—6	White	111111—6
Herrick	101101—4 3	Schaeffer	110110—4 3
Chapin	011011—4 3	Chase	111101—5 3
Woodruff	110111—5 3	Sampson	111110—5 3
Ateo	111111—6 3	Lang	111111—6 5
Brown	101111—5 2	Hall	111111—6 2
Roxton	101100—3	Whalon	111111—6 6
Savage	111110—5 0	Bemers	111001—4 2
Ingersoll	100110—3	Whaland	010110—3
Loring	101011—4 0	Boothby	111111—6 3
Tisdale	111111—6 0	Russell	111111—6 0
Charles	110110—4 3	Spofford	111111—6 1
Baltor	110111—5 2	Eager	111111—6 6
Allen	111111—6 2	Tilton	111111—6 1
Sawyer	111111—6 2	Hutchinson	101111—5 3
Wetster	111101—5 0	Barney	011110—4 2
Melcher	011101—4 3		

Three men divided first, Messrs. Bradstreet, Whalon and Eager. Those who killed 3 straight in the ties of 5 and 4 divided second and third; fourth divided without a shoot-off.

Event No. 2, individual subscription match, 10 bluerocks, 50 cents, four moneys, ties miss and out:

Whalon	0011101101—6 3	Woodruff	1010010000—3
Bradstreet	1011110110—7 4	Chapin	1101110101—8
Lang	1101001110—6 2	Chase	1101011111—8
Sampson	1010110000—4	Schaefer	0110110111—7 3
Sawyer	1110110100—6 3	Wilber	1100101101—6 0
Tisdale	1111010010—6 1	Webster	0111100101—6 1
Keatim	0110011110—6 0	Allen	1000110101—5
Bolton	0111111111—9	Bartlett	1000111110—6 0
Atwell	1110111110—8	Himick	0110000101—4
Barney	1110010110—6 3	Brown	0110111101—7 4
Ingersoll	1111111101—9	Eager	0110101111—7 4
Savage	0111111111—9	Spofford	1110011111—8
Bowers	1100111110—6 1	Tilton	0100000110—3
Hutchinson	1101100010—5	Hall	0111010111—7 4
White	1010000101—4	Loring	0110101111—7 6
Russell	1111111010—8	W B Whalon	0110111103—6 2
Baker	1101101101—7 0	Carpenter	1111110011—8

First and second was divided without a shoot off. Third won by Loring; fourth divided by Whalon, Sawyer and Barney.

Event No. 3, grand championship contest, for the individual challenge gold badge of the association, at 15 bluerocks, entrance free, but optional sweepstakes, which was made 50 cents, and four divisions of money, ties miss and out:

Brown	100111010110001—8	Chase	111111011011110—12 3
Hutchinson	101001011101111—10	Spofford	111000010101101—8
Ingersoll	111111111100111—13 3	Woodruff	110011001011111—10
Savage	110101101110111—11	Atwell	111011011111011—12
Heimick	000111001111001—8	Charles	000101001111101—8
Wilber	100111010111101—10	Sawyer	010100010w
Russell	111011111011111—12 2	Loring	111011011111111—13 1
Bowen	111101101111101—12 0	J G Whalon	111000011010110—8
Barrett	111001111000011—9	Vickery	011111101101w
Bradstreet	100001110100111—8	Roxton	101011010111111—11
Tilton	100001100w	Keating	110111100010101—9
Allen	110101011111111—11	Hall	111111110111—13 3
Chapin	111101111001111—12 0	Perry	111111111110101—13 0
Lang	110110101110100—9	Lovejoy	10100000w
Bartlett	111110111110110—12 1	Faulkner	110111110111109—11

Eager	011111111111101—13 0	Knowles	111101111111111—14
Baxter	110110001111101—10	Crompton	100111111010010—9
Sampson	110110111111110—12 0	Swift	111111111111111—15
Tisdale	111111010111111—13 1	Bradbury	001010010010100—5
Schaeffer	110110110100111—10		

The medal and first money went to Swift, the only man to make a straight score. But one man, Knowles, fell into the 14 hole, and he took second alone. Third shot off and div. by Ingersoll and Hall; fourth shot off and won by Chase.

Event No. 4, individual subscription match, 10 clay-pigeons, straightaway, 50 cents, four moneys, ties miss and out:

Russell	1111111111—10	Schaefer	1111111111—10
J G Whalon	1100101111—7	Spofford	1011111111—9 0
Faulkner	1101011111—8	Boothby	1111111110—9 5
W B Whalon	1111011001—7	Hutchinson	1111111011—9 2
Bradbury	1001010 w—2	Eager	1111111111—9 4
Barrett	0111111001—3	Sampson	1011110111—8
Bartlett	0111111111—9 1	Chase	1111111111—10
Sawyer	1000010111—5	Baxter	0111001101—6
Savage	1110111111—9 6	Woodruff	1111111110—9 3
Barney	1111111111—10	Ingersoll	1111101111—9 6
Bradstreet	1110011111—8	Bowen	1111011111—9 5
Herrick	1111111110—9 4	Atwell	1101011110—7
Wilber	1111111111—10	Allen	1100111111—8
Lovejoy	1111110111—9 1	Roxton	1111111101—9 0
Lang	1111110111—9 2	Charles	0001101111—6
Loring	1101111111—9 5	Hall	1100011111—7
Tisdale	1110001100—5		

First, third and fourth div., second shot off and div. by Savage and Ingersoll after killing 6 tie birds.

Event No. 5, individual subscription match at 10 bluerocks, 50 cents, four moneys:

Spofford	1101111100—7 3	J G Whalon	1111111110—9
Russell	1101101110—7 3	Hall	0111101101—7 0
Sawyer	1100101011—5	F Swift	1110111001—7 0
Wilber	1100111101—7 1	Chase	1111100111—8
Sampson	1100111110—8	Allen	1001111101—7 1
Bradstreet	0111101011—7 0	Schaefer	1001111000w
Bradbury	0000101100—3	W B Whalon	0010011100—4
Lovejoy	0111111011—8	Barrett	1111110111—9
Faulkner	0001111110—6	Woodruff	1011001100—5
Hutchinson	0000011110—4	Chapin	1111111101—9
Ingersoll	1101111101—8	Atwell	1100111110—7 2
Charles	0111011010—6	Eager	0001101w
Bowers	1100010101—5	Tisdale	1110100001—5
Knowles	1111111111—10	Roxon	1111010010—6
Barney	1011010101—6	Cromton	1011111101—8
Savage	1110111111—9	Sanborn	0010111111—7

Knowles, being alone in the 10 hole, took first money; second and third div., fourth shot off and div. by Spofford and Russell.

Event No. 6, grand championship contest for the amateur gold badge of the Association, at 5 clay-pigeons and 5 bluerocks per man, open to any number of teams of five men from each club belonging to the association, entrance free, but optional sweepstakes, which were made 50 cents per man, three moneys:

Jamaica Plain Gun Club.		Brockton Gun Club.	
Roxton	01111 10111—8	Allen	11111 11001—8
Savage	01101 10111—7	Wilber	01011 11101—7
Ingersoll	11110 10111—8	Tisdale	10111 11111—9
Barrett	01101 11111—7	Hall	00101 11101—6
Chapin	11110 11110—7—37	Atwell	11110 11111—9—39
Lexington Gun Club.		Wellington Gun Club.	
Hutchinson	11101 10111—8	Chase	11111 10111—9
Vickery	11101 11101—8	Bradstreet	11111 01101—8
Tilton	11111 10110—8	Loring	11101 11001—7
Herrick	11110 11011—8	Sanborn	11101 11011—8
Shumway	01101 11101—7—39	Schaefer	11101 01111—8—40
Jamaica Plain Gun Club No 2.		Wellington Gun Club No. 2.	
Boothby	10100 10000—3	Melchor	11101 01110—7
Charles	11111 01001—7	Keating	11111 10101—8
Bradbury	00011 10001—4	Cowing	11110 11100—7
Woodruff	11101 10110—7	Warren	11011 01111—8
Baxter	01111 11000—6—27	Sawyer	11111 11111—10—40

The two Wellington teams finished with an equal score of 40 and divided first. Lexington and Brockton with 39 each divided second, and Jamaica Plain won third. In this event, an unfortunate decision of the judge on Herrick's last bird in the first five, put the Lexington club out of the tie for first. The bird flew very low and was well broken when almost down to the screen. The judge, however, failed to see it and refused to change his decision, much to the chagrin of the Lexingtons.

Event No. 7, individual match, 5 pairs bluerocks, 50 cents, 4 moneys, 15yds. rise for all guns:

Bradstreet	11 01 11 10 11—8	Ingersoll	00 11 11 10 00—5
Barney	01 11 10 11 10—7	Schaefer	00 11 00 00 10—3
Swift	10 10 10 11 10—6	Sawyer	10 11 10 11 10—7
Eager	11 10 00 01 10—5	Chase	01 11 11 10 10—7
Chapin	00 10 00 10 10—3	J G Whalon	10 10 10 10 00—4
Savage	10 00 00 00 00—1	Roxton	01 10 10 10 00—4
Woodruff	10 01 10 10 10—5	W B Whalon	00 01 00 00 10—2
Dickey	10 11 01 11 11—7	Spofford	00 10 10 00 00—2
Melchor	00 11 11 10 10—6	Barrett	10 00 10 11 10—5
Bowen	10 00 10 10 00—3	Bartlett	10 11 10 10 10—6

All ties divided.

Event No. 8, grand championship contest for the glass ball team gold badge of the Association, open to any number of teams of 5 men each belonging to the Association, entrance free:

Jamaica Plains Gun Club.		Mass. Rifle Association.	
Roxton	1110111111—9	Eager	1010011101—6
Savage	0000011110—4	Sampson	1101001100—5
Ingersoll	1111101011—8	Knowles	0110011111—7
Barrett	0101011111—7	Spofford	1101010000—4
Chapin	1111101110—8—36	Dickey	1011111111—9—31
Jamaica Plains Gun Club No. 2.		Wellington Gun Club.	
Brown	1111011111—9	Perry	1110111110—8
Charles	0111000011—5	Schaefer	1110010111—7
Bradbury	1111100011—7	Swift	1111110010—7
Woodruff	0011110111—7	Chase	1101111011—8
Baxter	0110011011—6—34	Snow	1010100011—5—35
Brockton Gun Club.		Wellington Gun Club No. 2.	
Tisdale	0111101100—6	Bradstreet	1111111111—10
Hall	0101111111—8	Warren	1101100000—4
Atwell	1101000010—5	Melchor	1010010000—4
Wilber	1111111100—8	Sanborn	1010000111—5
Bartlett	0011111111—8—36	Keating	0110010000—4—25

The Jamaica Plains team No 1 won the badge with a score of 36 out of 50.

Event No. 9, individual, at 5 pairs clay-pigeons, 50 cents, four moneys, 15yds. rise for all guns:

Warren	00 11 11 11 01—7	J G Whalon	11 10 10 11 00—6
Dickey	11 11 11 11 10—10	Charles	01 01 10 10 01—5
Bradstreet	10 11 10 11 11—8	Schaefer	00 11 00 11 00—5
W B Whalon	11 11 10 10 00—6	Herrick	11 10 11 10 10—7
Woodruff	11 10 00 01 10—5	Swift	11 11 11 11 01—9
Eager	11 11 11 11 10—10	Hutchinson	00 11 10 10 01—5
Bradbury	11 01 01 11 11—8	Chapin	10 11 01 10 10—6
Russell	11 00 11 11 10—7	Knowles	11 10 11 10 11—8
Barney	10 11 10 10 01—6	Chase	11 01 01 11 11—8
Perry	11 10 11 11 11—9	Boothby	00 10 01 10 10—4
Ingersoll	11 10 11 10 11—8		

All ties divided.

Event No. 10, individual, miss and out at bluerocks, 21yds. rise, 50 cents:

Boothby	10 —1	Eager	10 —1
Dickey	0 —0	Brown	0 —0
Barrett	0 —0	Nichols	10 —2
Knowles	111111—6	Swift	111111—6
Ingersoll	111110—5	Hutchinson	110 —2
Schaefer	10 —1	Chapin	111111—6
Savage	1110 —3	Baxter	110 —2

Knowles, Swift and Chapin divided.

Extra sweep No 1, at 6 clay birds, 25 cents, four moneys:

Allen	101110—4 0	Loring	011111—5
Chapin	101011—4 0	Atwell	011100—3 3
Sawyer	101111—5	Webster	111111—6
Herrick	111111—6	Boothby	111010—4 0
Bradstreet	111111—6	Baxter	111001—4 2
Roxton	110101—4 2	Carpenter	100011—3 3
Bartlett	111011—5	Charles	111111—6
Tisdale	101101—4 0	Ingersoll	010101—3 2
Melchor	000111—3 3	Wilbur	111111—6
Woodruff	110111—5	White	100111—4 3
Savage	101111—5	Keating	000111—3 0
Vickery	101001—3 2	Brown	101101—4 1

First and second div. without a shoot, other ties shot off, third won by White, fourth div. by Melchor, Atwell and Carpenter.

Extra sweep No. 2, 6 bluerocks, 25 cents, three moneys:

Roxton	101110—2	Tisdale	101111—5 3
Sawyer	101111—5 0	Charles	100111—4 1
Bradstreet	010101—3	Shaw	001101—3
Brown	001101—3	Wilber	100111—4 1
Ingersoll	111111—6	Keating	110101—4 1
Baxter	011111—5 0	Loring	001111—4 3
Woodruff	111101—5 0	White	101111—5 1
Webster	101111—5 0	Herrick	011101—4 2
Chapin	101011—4 2	Allen	110111—5 0
Bartlett	001010—2	Savage	011110—4 0
Atwell	001111—4 3		

First won by Ingersoll; second shot off and won by Tisdale; third shot off and won by Atwell and Loring.

Extra No. 3, 6 clays, 25 cents, four moneys:

Brown	111111—6	Tisdale	110111—5 0
Wilber	111011—5 2	Baxter	111111—6
Herrick	111111—6	White	010100—2
Savage	011110—4 3	Loring	111111—6
Atwell	110110—4 2	Roxton	111111—6
Ingersoll	101111—5 0	Keating	001011—3
Webster	101111—5 0	Bartlett	011011—4 2
Bradstreet	011101—4 0	Woodruff	011111—5 3
Allen	111111—6	Chapin	101011—4 1

First and fourth div., second shot off and won by Woodruff, third shot off and won by Savage.

Extra sweep No. 4, 6 straightaway bluerocks at 21yds., 25 cents, four moneys:

Whalon	111111—6 3	Loring	110111—5 5
Eager	111111—6 1	Melchor	111110—5 0
Chase	111111—6 1	Hall	111111—6 1
Leonard	011111—5 0	W B Whalon	111111—6 0
Woodruff	111101—5 1	Ingersoll	101011—4 1
Russell	111111—6 2	Tilton	101111—5 6
Barrett	111111—6 3	Charles	111001—4 4
Lang	011111—5 6	Boothby	011100—3 4
Bradstreet	111111—6 0	Chapin	011101—4 6
Carpenter	111101—5 5	Sampson	111111—6 0
Herrick	111111—6 3	Bradbury	011010—3 0
White	101110—4 3	Baxter	111111—6 2
Bartlett	111110—5 6	Clark	001001—2
Schaefer	011110—4 6	Gove	111000—3 0
Atwell	111101—5 1	S Gove	011001—3 5
McNutt	010001—2	Cilley	100001—2
Barney	11011—5 2	Savage	111111—6 1

All ties shot off. First div. by Whalon, Barrett and Herrick; second by Lang, Bartlett, Barney and Tilton; third by Schaefer and Chapin; fourth won by S. Gove.

Extra sweep No. 5, 6 straightaway clay-pigeons, 25 cents, four moneys:

Eager	101111—5 0	Chapin	110111—5 6
Roxton	111010—4 2	Bradstreet	010110—3 6
Russell	111110—5 6	Ingersoll	111101—5 6
Hall	101111—5 6	Spofford	111001—4 3
Boothby	111111—6 1	Gove	011011—4 3
Webster	111111—6 2	S Gove	100101—3 0
Baxter	011010—3 4	White	001010—2
Bradbury	001111—4 1	Hutchinson	101111—5 1
Loring	111111—6 3	Leonard	111011—5 5
Barrett	110111—5 0	Savage	100111—4 2
Schaefer	100011—3 4	Clark	010000—1
Lang	111111—6 3	Sanson	011111—5 0
Bowns	000100—1	Herrick	011101—4 1
Carpenter	110111—5 0	Melcher	100111—4 1
Woodruff	111011—4 1	Taylor	111111—6 2
Whalon	111111—6 1		

Loring and Lang divide first after a shoot off. Second shot off and div. by Russell, Hall, Chapin and Ingersoll. Third shot off and div. by Spofford and Gove. Fourth shot off and div. by Baxter and Schaefer.

Extra No. 6, at 3 pairs clay birds, 25 cents, 4 moneys:

Chapin	11 10 11—5 0	J Whalon	10 11 01—4 3
Bradstreet	11 11 10—5 1	Woodruff	01 01 11—4 3
Taylor	11 10 10—4 0	Hutchinson	11 11 11—6
Swift	01 11 11—5 1	Loring	10 11 10—4 1
Faulkner	00 01 01—2	Perry	11 11 10—5 2
Nichols	11 01 00—3 2	Roxton	10 00 01—2
Herrick	00 10 11—3 2	Leonard	11 00 00—2
Eager	10 11 01—4 1	Hanmer	10 11 11—5 0

Knowles	11 01 11—5 1	Savage	10 00 10—2
Sampson	01 11 10—4 4	Chase	11 01 00—3 0

First divided; other ties shot off; second divided by Webster and Perry; third divided by Atwell, Sampson and W. B. Whalon; fourth divided by Nichols, Herrick and Sawyer.

The annual meeting of the Association was held on Monday evening at Young's Hotel, for the election of officers and the transaction of other business. About twenty-five members were present, representing the following clubs: Lexington, Wellington, Mass. Rifle Association, Jamaica Plain and Brockton. The minutes of the previous meeting were read and approved, and the treasurer reported a balance on hand of $127.39, which report was accepted and placed on file. The Fall River Gun Club was reinstated on application. The officers of the Association since 1886 have been: Pres., H. W. Eager, Marlboro; 1st Vice-Pres., Alba Houghton; 2d Vice-Pres., J. Buffum; Sec., Chas. Hartwell, of Worcester; Treas., Albert Keating, and Board of Directors, W. H. Allen and J. S. Sawyer. Under the head of new business Mr. J. S. Sawyer broached the subject of classification, saying that under the present system of handicapping by distance the experts claimed to be practically out-classed, and he suggested that some change be made, closing by requesting the opinion and suggestions of the experts, those most interested.

A long informal discussion ensued, the general tenor of which was adverse to the welfare of the experts. However, in Mr. Tucker, of the Lexington Club, they found a champion, and he advised the Association to adopt some rule which would keep the experts in; if the present rule was so unjust to them he hoped that modifications would be made so that they would not be driven away from tournaments. The talk finally resulted in a motion by Capt. Sawyer that the American Shooting Association rules be adopted carrying with them their system of classification; motion seconded and carried.

Motion made that any member of any club belonging to the State Association, whether living in the State or not, should be allowed to shoot in the State events. Carried.

Moved to pay the secretary $10 as a slight recompense for his services. Carried.

The election of officers then followed. Mr. H. W. Eager was unanimously re-elected President; the vote for First Vice President was rather scattering, and as six votes were necessary to election another vote was taken, Mr. Eager suggesting that all who previously voted for themselves should agree on some one else. On the second ballot Capt. J. S. Sawyer, Cambridge, was elected. Second Vice-President, W. H. Allen, of Brockton. Secretary, Chas. Hartwell, of Gardner; Treasurer, Albert Keating, of Quincy. Directors, H. F. Amsden, of Boston and A. M. Tucker, Charlestown. On motion adjourned.

Tuesday, June 18.

The second day of the tournament opened bright and clear, although a strong east wind gave rise to the fear that more rain might fall. This fear was not realized, however, and the day passed very pleasantly. The wind did not interfere seriously with the flight of the birds, except on Nos. 1 and 2 sets of traps, and it blew right across these, hastening somewhat the flight of the quartering birds. The arrangements for transportation of shooters from the station to the grounds were very much improved, a large 'bus meeting every train and for 25 cents giving each passenger a comfortable and pleasant ride. Only a small number were present in the morning, but accessions to the ranks were frequent as each train arrived, and the later events were well filled. Some old-timers were present, among them D. A. Brown, J. N. Frye and Percy Aldrich, of the old Tremont shooting men. The latter is an old live-bird shot, and has taken part in many events all through the country. The members of the Jamaica Plain Club are workers, and no tedious waits occurred in running off the events. The programme called for ten regular sweeps, in addition to which many extra sweeps were shot, but of the latter we give only a few. Much interest centered in the individual badge contests, and Mr. F. J. C. Swift, of Falmouth, covered himself with glory by winning all three, also the Medal offered for best average in amateur events.

At 1 o'clock a second edition of Monday's elegant luncheon, but if anything more elaborate, was served, and its abundance and quality helped to put every one in good humor, and in this condition no kicking was heard, though truth to tell, no necessity for it existed. Two trophies, in the shape of watch charms, were donated by the Association for the best average on the two days, shooting at 50 clay-pigeons and 50 bluerocks each day, 200 birds in all, one for the experts and the other for the amateurs. They were won respectively by H. W. Eager and F. J. C. Swift.

Your correspondent wishes to thank Messrs. Chas. Olmsted, Dr. H. A. Baker, S. D. Charles, W. P. Robinson, J. R. Hanmer, H. F. Chapin, G. F. McCausland and C. F. Cilley of the Jamaica Plain Gun Club and H. W. Eager President, and Chas. Hartwell, Secretary of the State Association, for their kindness and aid in furnishing scores and other information.

Event No. 1, individual match, 10 clay-pigeons, 50 cents, four moneys:

Eager	1111011110— 8 3	Roxton	0111010011— 6
Ingersoll	1110111110— 8 2	Allen	1111010111— 8 0
Swift	1011101111— 8 2	Brown	1111110111— 9 2
Shaw	0111111011— 8 2	Chase	0101011111— 7
Atwell	1111011111— 9 2	Loring	1111101111— 9 1
Tisdale	1001111110— 7	Barney	1001101100— 5
Barrett	1110111111— 9 3	Woodruff	1011111110— 8 3
Hall	1111111110— 9 0	Baxter	1011101111— 8 0
Chapin	1111111111—10	Boothby	0001110100— 4
Taylor	1011011110— 9	Bradbury	1111000101— 6
Sawyer	01000w.		

Chapin wins first, second shot off and won by Barrett, third shot off and div. by Eager and Woodruff, fourth div. without a shoot.

Event No. 2, individual match, 10 bluerocks; 50 cents, 4 moneys:

Roxton	1111111101—9	Barney	1010001000— 3
Sawyer	000101 w.	Eager	1111111111—10
Allen	1111011101—8 2	Swift	1110101111— 8 3
Hall	1111110110—8 1	Barrett	1110111110— 8 1
Tisdale	1111010011—8 2	Chapin	1101011011— 7
Woodruff	1010101100—5	Brown	1010011010—5
Ingersoll	0101111000—5	Taylor	0001010010— 3
Chase	0100011101—5	Atwell	1110001100— 5

First won by Eager with the only straight score; second by Roxton; third shot off and won by Swift; fourth won by Chapin.

Event No. 3, grand championship contest for the Ligowsky gold badge and the individual clay-pigeon championship of the Association, at 15 clay-pigeons; entrance free, but optional sweepstakes which were made 50 cents; four moneys:

Chapin	111111111111011—14 6	Shaw	111111111110101—13
Bradbury	110001110000111— 9	Hall	011111111111111—14 0
Atwell	011110011111010—10	Chase	111110111111111—14 3
Eager	111111111010111—14 7	Allen	111101101111010—12
Swift	111111111010111—14 10	Woodruff	011110111110110—11
Boothby	010110100 w.	Tisdale	111010111111111—13
Roxton	111010011111111—12	Brown	001111110001111—11
Ingersoll	110110011000110— 9	Taylor	111001011001101— 9
Loring	111111111110—14 6	Baxter	101110001111010— 9
Barrett	101111111111111—14 9	Perry	111110111111111—14 2
Charles	111101010001111— 10	Swan	111111111110111—14 2

The tie on 14 for the badge and first money was shot off, and proved very interesting. They shot one round at 5 and six men staid in; on the second round of 5 all dropped out but Swift, and he won. Other ties divided.

Event No. 4, individual match, 3 pairs bluerocks, 50 cents, three moneys, ties div.:

Ingersoll	11 10 11—5	Chase	00 01 10—2
Perry	00 11 11—4	Eager	10 11 11—5
Woodruff	01 00 10—2	Atwell	01 10 11—4
Chapin	10 10 00—2	Roxton	10 10 10—3
Barrett	11 10 00—3	Swift	10 10 10—3
Sawyer	11 10 01—4		

Event No. 5, individual match, 10 bluerocks, 50 cents, four moneys:

Chapin	1111110101—8	Atwell	1010000111—5 0
Roxton	0001011011—5 2	Chase	0011010101—5 3
Perry	0101011111—7	Shaw	1110100110—6
Allen	0100010111—5 0	Barney	1101011110—7
Ingersoll	1111110011—8	Swan	0011011011—6
Sawyer	0111011111—8	Barrett	1111110001—7
Tisdale	1100110100—6		

All ties div. except for fourth, which was shot off and won by Chase.

Event No. 6, grand championship contest for the individual amateur challenge gold badge of the Association, at 8 clay-pigeons and 7 bluerocks, entrance free, but optional sweepstakes which was made 50 cents, four moneys:

	Clays.	Bluerocks.		Clays.	Bluerocks.
Roxton	10110111	1111010—11	Charles	11111110	1010101—11
Ingersoll	00101111	0101001— 7	Brown	11111011	0100111—11
Chase	11111100	1100011—10	Windhorn	11001110	0000111— 8
Hall	11101111	1111101—13	Bradbury	00011011	1000110— 7
Atwell	11010101	0111110—10	Manley	01110111	1101001—10
Sawyer	11100111	1101010—10	Baxter	11011010	1010111—10
Perry	11111111	1011101—13	Cilly	01011101	1111101—11
Barrett	11111101	0111111—13	Woodruff	11111011	0100011—10
Shaw	01010111	1001110— 9	Eager	01101011	0111111—11
Herrick	11010011	1110110—10	Law	11111111	0110011—12
Chapin	10111111	0011001—10	Stanton	11111111	1111111—15
Warren	01111111	1110111—13	H Swift	11111101	0110110—11
Swan	10100101	1100101— 8	Hammond	11000010	0011001— 6
Tisdale	11110110	0111110—11	F Swift	01111111	1111111—14

This being a badge for amateurs, Stanton as an expert could not take that, although he won first money with the only straight score, Swift with 14 won the badge and second money, third div. and fourth won by Law. The last named gentleman is an instance of the difficulties a man can overcome by perseverance. His right arm was injured some years ago and he shoots from the left shoulder, sighting with the right eye, as sight has gone from the left. This necessitates a wonderfully crooked stock, but the work accomplished is very effective.

No. 7, individual match, at 6 singles and 2 pairs bluerocks, 50 cents, 4 moneys:

Eager	1101011 11 10—7	Barrett	1110101 10 11—7
Swift	0101010 00 10—4	Chapin	1111111 10 00—7
Ingersoll	1111100 11 10—8	Atwell	1001011 11 00—5
Perry	1110111 00 00—5	Hammond	0000010 01 01—3
Warren	1110111 11 11—9	Roxton	1101101 11 11—8
Chase	0110111 10 10—6	Law	1000111 10 10—5
Swan	0111111 10 00—6	Stanton	1111011 11 00—8
Bradbury	1111111 11 10—9	Swift	1011101 00 11—6

Ties divided.

Event No. 8, grand championship contest at clay-pigeons for the team gold badge of the Association, open to any number of teams of 5 men from each club belonging to the Association, 10 live birds per man, 50 cents, four moneys:

Wellington Gun Club.		Jamaica Plain Gun Club.	
Perry	1011111111— 9 1	Roxton	1111111111—10 2
Sawyer	0111011111— 8 0	Bradbury	1110010111— 7
Warren	1111111111—10 2	Ingersoll	0111101111— 8 3
Chase	1101111111— 9 6	Chapin	1110111111— 9 3
Swift	1111111011— 9 6	Barrett	1111111111—10 0
	45		44

Jamaica Plain Gun Club No. 2.		Mass. Rifle Team.	
Shaw	0100111111— 7	Swift	1111011111— 9 6
Brown	1110101111— 8 3	Nichols	1111011111— 9 0
Woodruff	0111111011— 8 3	Eager	1111111111—10 2
Baxter	1110101111— 8 3	Strater	1111111111—10 5
Charles	1111100100— 6	Law	1111111110— 9 6
	35		47

The medal went to the Mass. Rifle Association team, but the ties for the money were shot off and won as follows: First won by Strater, second divided by Chase, H. Swift, Swift and Law, third divided by Ingersoll, Brown, Woodruff and Baxter, fourth div. by the 7 men.

Event No. 9, individual match, 50 cents, four moneys, at 10 bluerocks:

Roxton	1111011111—9	Stanton	1011111101— 8
Swan	1101010101—6	Warren	1011010101— 6
Nichols	0011111111—8	Barrett	1111011011— 8
H Swift	1111001101—7	Eager	1111111011— 9
F Swift	1101001101—6	Ingersoll	1110110011— 7
Perry	1000110111—6	Law	1111111111—10

All ties div.

Event No. 20, individual match, miss and out, at clay-pigeons, 21yds. rise, 50 cents: Chapin 4, Stanton 9, Ingersoll 8, F. Swift 0, Baxter 0, Roxton 3, Barrett 9, H. Swift 0, Law 1, Nichols 4, Eager 3, Perry 9. Ties on 9 div. the money.

Extra sweep No. 1, 6 bluerocks, 25 cents, four moneys:

Shaw	001111—4 2	Cobb	000000—0
Swift	101101—4 1	Tisdale	101000—2
Eager	111101—5 6	Loring	110111—5 2
Hall	011011—4 3	Bradbury	010013—3 0
Chapin	111111—6	Allen	100110—3 1
Woodruff	111000—3	Brown	100110—3 3
Barney	111010—4 3	Boothby	101010—3 1
Atwell	111011—5 0	Baxter	101101—4 1
Ingersoll	111011—5 5		

Chapin won first alone, second shot off and won by Eager, third shot off and div. by Hall and Barney, fourth shot off and won by Brown.

Extra No. 2, 6 clay-pigeons, 25 cents, 4 moneys:

Roxton	011100—3	Charles	010001—2
Eager	110111 5 6	Hartwell	110110—4 1
Woodruff	111110—5 4	Ingersoll	011111—5 0
Loring	111111—6	Chapin	111110—5 6
Tisdale	111011—5 4	Brown	011011—4 2
Barney	011111—5 3	Atwell	011111—5 0
Swift	011111—5 6	Shaw	111010—4 3
Hall	111100—4 0	Boothby	011010—3
Allen	111111—6	Bradbury	111010—4 2
Cobb	000011—1		

First and fourth divided, second shot off and divided by Eager, Swift and Chapin, third shot off and won by Shaw.

Extra No. 3, 6 straightaway clay-pigeons; 25 cents; 4 moneys:

Bowker	101111—5 3	Bradbury	111111—6
Taylor	111111—6	Loring	101011—4 5
Chapin	011111—5 3	Sawyer	100111—4 1
Boothby	001011—3 8	Chase	111111—6
Woodruff	111110—5 1	Baxter	111111—6
Roxton	101100—4 5	Swift	010011—3 9
Charles	000010—1	Barrett	111011—5 1
Brown	111101—5 0	Cobb	101111—5 0
Eager	101101—4 5	Hall	111000—3 9
Barney	101010—3 3	Cilley	110011—4 0
Allen	111001—4 1	Ingersoll	010111—4 1
Atwell	011111—5 3		

First divided; other ties shot off; second divided by Bowker, Chapin and Atwell; third divided by Roxton, Eager and Loring; fourth divided by Swift and Hall.

Extra No. 4, 6 bluerocks, 24yds. rise, Hurlingham rules, 25 cents, four moneys:

Eager	010111—4 0	Loring	111110—5 3
Boothby	101101—4 0	Chase	111111—6
Baxter	011111—5 3	Ingersoll	010111—4 1
Chapin	111111—6	Bradbury	101111—5 3
Barrett	011000—2	Taylor	100011—3
Barney	111101—5 1	Shaw	111111—6
Cilley	111111—6	Cobb	101111—5 3
Swift	111110—5 1		

First div., second shot off and div. by Baxter, Loring, Bradbury and Cobb, third shot off and won by Ingersoll, fourth won by Taylor.

Extra No. 5, at 6 straightaway clay-pigeons, 25 cents, four moneys:

Bradbury	011000—2	Baxter	000101—2
Warren	111111—6 4	Perry	101111—5 3
Chase	111111—6 1	Woodruff	111111—6 4
Herrick	111111—6 3	Lowell	111111—6 0
Cilley	111111—6 3	Sawyer	011111—5 2
Barrett	110111—5 3	Atwell	001011—3
Taylor	010111—4	Chapin	111111—6
Boothby	110111—5 0	Edgar	111001—4
Swan	111110—5 3	Swift	111110—5 3
Ingersoll	011110—4	Hall	111111—6 4
Windhorn	110101—4	Shaw	111111—6 1
Brown	110101—5 0		

First shot off and div. by Warren, Woodruff, Chapin and Hall; second shot off and div. by Barrett, Swan, Perry and Swift; third and fourth div. without a shoot.

Extra No. 6, at 6 bluerocks, 25 cents, four moneys:

Place	111011—5 3	Ingersoll	011000—2
Stanton	11111—6 5	Barrett	111111—6 4
Isham	101111—5 2	Shaw	111111—6 3
Bradbury	111011—5 0	Swan	111111—6 6
Law	111111—6 6	Warren	111111—6 6
Baxter	110001—3	Sawyer	001001—2
Eager	110111—5 6	Herrick	011110—4
H Swift	101111—5 6	Perry	101111—5 6

First shot off and divided by Law, Swan and Warren, second shot off and divided by Eager, H. Swift and Perry, third and fourth divided.

Extra No. 7, at 3 pairs clay-pigeons, 4 moneys:

Law	00 10 11—3 1	Warren	11 11 11—6
Eager	11 11 10—5 4	Isham	10 10 01—3 2
H Swift	10 11 00—3 1	Barrett	11 11 10—5 3
Perry	11 10 11—5 4	Brown	01 10 10—3 2
Stanton	11 11 11—6	Boothby	00 01 11—3 1
Bradbury	11 10 11—5 4	F Swift	10 10 11—4
Hammond	10 11 11—5 3	Woodruff	00 10 11—3 2
Ingersoll	11 11 11—6	Baxter	01 10 10—3 1
Shaw	01 11 10—4	Chase	11 01 10—4
Sawyer	11 11 11—6	Cilley	11 10 11—5 4
Swan	10 11 11—5 0		

First and third divided, second shot off and divided by Eager, Perry, Bradbury and Cilley, fourth shot off and divided by Isham Brown and Woodruff.

Extra sweep at 6 clay-pigeons, walk up match, 25 cents, four moneys:

Lowell	001110—3 1	Perry	0101011—3 2
Bradbury	001111—4 3	H Swift	1110011—4 0
Shaw	000001—1	Nichols	0111100—3 0
Cilley	000100—1	Law	1001111—4 2
Roxton	1100111—4 0	Hammond	0110111—4 2
Swift	1111001—4 1	Ingersoll	0110011—3 0
Stanton	111101—5	Boothby	1101111—5

The 5 men won first, second shot off and won by Bradbury, third shot off and won by Perry, fourth won by Shaw and Cilley, although they broke but 1 bird each.

Although the main events were finished soon after 4 o'clock, a number of the shooters could not tear themselves away, and remained until 6, shooting little sweeps of various kinds. The unanimous opinion of all the visitors was that the Jamaica Plain boys had run a very pleasant and successful State tournament.

FRANK MASON.

[A table showing guns and loading of twenty-eight of the contestants will be given next week.]

CLASSIFICATION.

Editor Forest and Stream:

In your issue of May 23, your correspondent in giving an account of the Iowa State shoot says, "The first thing to notice is the rapid tapering off in the number of shooters from first to last. It very soon became evident that a few men were safe to win the bulk of the money, and the weaker shooters gradually fell out. It is noticeably true here to-day, and never more so, that some system must be devised to equalize the expert with the amateur, if trap shoots are to be made a success." This fact has long been known, but so far no plan has been presented that seems to remedy the difficulty. I have carefully considered all communications that have appeared upon this subject, but none seems to be exactly the thing.

It is impossible to classify shooters, so all will stand upon an equal basis, as in any class there will be some vastly superior to some others. The man whose average is 70 per cent. stands a poor chance against another whose average is 85 per cent., and the 60 per cent. man stands in nearly the same relation to the 70 per cent. one. Again it is impossible to put every man exactly where he belongs, and some 75 or 80 per cent. man will manage to crawl into the 60 class. The system of classification after shooting, as for instance in a 9 bird match, entrance money divided into two equal parts, 50 per cent. to the 9s, 30 to 8s, 20 to 7s, 50 per cent. to 6s, 30 to 5s, 20 to 4s, thus giving the 6s two and one-half times as much as the 7s, cannot be satisfactory.

The plan I am about to propose I have never seen suggested, but it seems to me worthy of a trial. Have only one class, or in very large tournaments perhaps two, and the entrance money divided into four equal prizes. For instance, 50 entries at $1 each, the prizes would be $12.50 each. In a 10-bird match the 10s would tie for one money, 9s, 8s and 7s the other three. Then every man tying for a prize should be allowed to draw his proportional share of the prize for which he is tied, and those not wishing to do so can shoot off among themselves. This I consider fair for all, and the poorer shooters will stand some chance of getting part of their money back at least. This will still give the good shots some advantage, as the higher in the match they get the smaller number they would propably have in the tie. I recall an instance where a gentleman attended the World's tournament at Boston in 1887, intending to stay the five days. He entered nearly every match in the amateur class, largely composed of experts, during the first two days, and, though breaking 7, 8 or 9 in nearly every 10-bird match, was shot out on every tie, and did not win a cent. The result was, he became discouraged and returned home; whereas if he had been allowed to withdraw part of his money he would have remained during the rest of the tournament. No matter how enthusiastic a man may be, many cannot afford to always lose. When the Massachusetts State Association was formed, the attendance at their annual tournaments was from 75 to 100, but now, with more clubs and shooters, 30 or 40 is about the average attendance. I should like to see the management of some tournament try this plan, until something better is proposed, and see what the result would be.

A careful analysis of the manner in which the prizes were divided in the N. Y. State Association tournament more fully impresses me with the need of some change than ever before. In this case, instead of encouraging amateurs, I consider all the encouragement was given to the experts. In match No. 1 there were 72 entries, 9 in the 90 class, 23 in the 80 class and 40 in the 70 class. The 9 men in the 90 class, whose entry fees amounted to $36, received nearly the same amount in prizes as the 40 men in the 70 class, whose entries amounted to $160. The man who broke 8 birds in the 90 class received six times the amount of money the man who broke the same number in the 80 class, and double the amount of the man who had to break 12 straight in a tie in the 70 class. In this case every man in the 90 class won a prize without shooting a tie. In match No. 2 the number of entries had dropped to 56 (the 70 class losing 10), the same 9 in the 90 class, every man also won without shooting a tie, while only 10 men won in the 70 class after shooting splendidly in ties. In match No. 3 there were 11 in the 90 class, and every man won without shooting a tie. In match No. 4, 12 entries in the 90 class, every man won again without shooting a tie, while in the 70 class every man who won had to be an expert at the shooting. The 5th match was nearly a repetition of the rest, showing conclusively that for a man who could shoot any the 90 class was the place to win, and I am surprised that some of the 70 class did not request to be placed in the 90 class. I cannot see any justice in this manner of division of prizes, and though hardly a 70 class shooter myself, would much prefer taking my chances against 10 men in the 90 class than four times that number in the 70 class. If this plan continues, I can foresee a dropping off in the entries of the next tournament.

TRAP SHOOTER.

NEW YORK SUBURBAN SHOOTING GROUNDS.—Claremont, N. J., June 15.—Shoot for Lefever trophy, 25 birds, 25 cents entry, 5 traps, Keystone rules:

Hathaway	1111111010111100111101110—19
Quimby	1111001111101111111111111—22

Jersey	0111101101—7		

Ties on first shot off, miss and out, Quimby winning.

COLUMBIA, Pa.—Wrightsville, Pa.—On Friday afternoon, the 14th inst., several of the members of the Columbia Gun Club faced the traps to try their skill and endurance in a shoot at 100 standards from three traps. Some of the shooting was very good, but with exception of Mr. Krueger it was again proven that amateurs accustomed to shoot races cannot "hold out" in a long one. Mr. Krueger's score is a good one and he did not try his hardest to make a big score. At all times he shoots the same quick, automatic style, and pulverizes his birds with remarkable regularity. The following are the scores:

A C Krueger	1111111111111111100—18
	1111111111111111111—20
	1111111111111111111—20
	1110111101111111111—18
	0011111110111111111—17—93
W A Taylor	1110110011011111111—16
	1111110111110011011—16
	1111111001111000110—14
	1111110111111101111—18
	1111100000001100100— 9—73
J C Broome	1011111111111111111—19
	1110111101110110111—16
	1111001001111010111—14
	1110010010100110111—12
	1111100010111101011—14—77
W F Fendrich	1111110101101110001—15
	1110001111011111110—16
	1010111001111001111—15
	1101110111011010111—15
	1111011111101110101—15—74
T Crowninshield	1111110110001100111—14
	0001101111101111010—13
	0101111100110101100—11
	1111111011100111111—17
	1111101111010110111—16—71

	0110010000101101000— 8—47

BANNERMAN.

BLOOMING GROVE PARK.—The annual spring tournament of the Blooming Grove Park Association was held at the club house in Pike county, Pennsylvania, on the 30th and 31st of May. Owing to the fact that the 30th came on Thursday the attendance was not large, but the enthusiasm of the contestants fully compensated for the lack of numbers. The club has lately improved the shooting grounds, and with the present arrangement of underground cords it is impossible for the shooter to know which trap is to be sprung until it is actually thrown open. Five traps are used for live bird contests, and the arrangement of traps and facilities for springing them leave little to be desired. For clay-birds 3 traps were used; they were placed near each other, and with the trapper were completely hidden from view of the shooter by a shotproof screen. In clay-bird contests the use of the second barrel, if successful, counts one-half. Club rules governed all contests. In the rifle contests—shooting off-hand at 200yds., only hunting sights allowed—the scores made were not very good, owing to the fact that the rain came down in torrents and the wind blew in great gusts all the time, the best scores being 49 and 46, 10 shots decimal targets. There were handsome gold and silver medals for first and second prizes in each of the four contests.

Contest at 25 live birds:

R B Lawrence (30)	2211212111111112112121—25
S M Nash (28)	1220020100220201120200310—13
N S Smith (28)	2120020011222023201012020—16
Mr Engle (29)	1100112122001211121111111—21
E Youmans (28)	2111112000220212201211—18
Mr Evans (26)	2021212001222012112221120—20

Lawrence wins gold and Engle silver medal.

Contest at 25 clay-birds, second barrel counting one-half:

Mr Engle	1½ 1 1 1 1 1 ½ 0 1 0 0 1 1 1 ½1 1 1 1 1 1 0 1—19½
E Youmans	½ 1 1 ½1 1 1 ½½ 1 1 1 0 1 ½½½½1 0 1 0 1 1 1 0—18
Mr Evans	½½½ 0 1 0 0 0 0 1 0 0 1 0 0 0 0 0 0 0 0 1 ½ 0 0 0— 5½
R B Lawrence	1 1 1 1 1 1 1 1 1 1 ½1 1 1 1 1 1 1 1 1 1 1 1 1 1—24½
S M Nash	½½½½ 0 0 0 0 1 1 ½0 1 0 0 0 0 ½0 1 ½0 1 1 1 ½—10½
N S Smith	1 1 0 1 1 1 1 0 1 1 1 1 ½1 ½0 ½0 1 0 0 0 1—16½
D Bacon	0 0 0 0 0 1 1 0 0 0 0 0 0 0 0 0 0 1 0 1 0 1 0 1 1— 7

Lawrence wins gold and Engle silver medal.

HARRISBURG, Penn., June 13.—West End Social Gun Club of Harrisburg. Monthly club shoot at live birds for gold medal. Live pigeons, 3 ground traps, 21yds. rise, 80yds. boundary; old Long Island rules:

J Whiteman	0011010111—6	Geo Marshall	1100010110—5
Chas Belsford	0011111011—7	M H Brensinger	1101111111—9
W Schultz	1111001111—8	A W Zarker	0010111101—6
H B Shoop	1110111111—9	E Householder	1010001001—4
J Group	0110101011—6	A Miller	0101111110—7
J McKee	1110110111—8	A J Dull	0101010011—5
Jas Worden	0010110110—5	H Roat	0011001111—6

In the shoot-off Brensinger won, killing 5 birds to Shoop's 4. Winner holds the medal for one month, when it will be shot for again, and must be won three consecutive times to entitle winner to own it.—H. B.

JAMAICA, L. I., June 13.—The Acme Gun Club held its regular monthly shoot at Dexter to-day, ten members taking part. F. Kunzweller, 18yds., and M. Schottler, 18yds., tied on 14 each. In the shoot off the latter won with 8 out of 10, Kunzweller missing his seventh bird. In several sweepstakes which followed C. Wissel and M. Schottler won first, H. Menkel second, and third was divided.

BOSTON, June 12.—To-day's meeting at the range was exceedingly interesting, owing to the fact that the thirteenth and final competition for the Climax diamond badge was held, and the fourth contest in the 1889 gold coin and merchandise match took place. The weather conditions were fine, the attendance fair and the shooting good. At the close of to-day's competition for the diamond badge Messrs. Stanton, Wheeler and Choate were tied, each having won it four times during the series of 13 shoots. In the shoot-off at 10 clays and 10 standards Mr. Choate won, breaking 19 out of a possible 20 birds. The summary of to-day's sport is as follows: Climax diamond badge match, 20 clay-pigeons from 5 traps, and 20 standard targets from 3 traps:

	Clays.	Standards.
Choate	11111111111111111111—20	10111111111111111110—18—38
Eager	11101111011111111111—18	11111100101111111107—16—34
Nichols	10010110011011111111—14	11111111111011111111—19—33
Roxton	11111100111011111117—17	10111111101011101111—16—33
Perry	11110110101101101111—15	10101111111111111111—18—33
Wheeler	11011101101011111101—15	11111111011111101110—17—32
Knowles	11111111110011010110—15	11110111111101101110—17—32
Swift	01101111110111111111—17	10111110000111101111—15—32
Crown	10111011010111111116—16	11110111010110101101—15—31
Stanton	10001011001111110111—13	01101111111111111101—17—30
White	11110001101101011111—13	11110001111101011000—14—27
Bowker	11110010111010101000—11	01110110111111011111—16—27

Gold coin and merchandise match, 15 clay birds and 15 standard targets, 5 traps, Keystone squad system:

	Clays.	Standards.
Perry	11111111111110110—14	11111111111110—14—28
White	11111111111111—15	01011111111111—12—28
Wheeler	11111111111101—14	01011111111111—13—27
Choate	01111111111011—13	11101111011111—13—26

Crown	10111011111011—12	01001100111010— 8—20
Nilson	00101100101010— 7	01100110110111—10—17
Smythe	11000010000101— 5	11101011101111—12—17

The winners in the sweepstake events were as follows: Seven Keystone targets, Keystone system, Stanton first, 7; 6 standard targets, 3 traps, Boker and Stanton first, 4; 5 Keystone targets, Keystone system, Eager first, 5; 10 Keystone targets, Keystone system, Wheeler and Stanton first, 10; 5 Keystone targets, Choate first, 5; 5 clay-pigeons, Stanton, Knowles and Swift first, 5; 3 pairs clay-pigeons, Choate, Perry and Eager first, 6; 5 Keystone targets, Knowles, Stanton and Snow first, 5; 5 Keystone targets, Hosmer, Choate and Perry first, 5; 15 clay-pigeons, Keystone system, Knowles and White first, 15; 15 Keystone targets, Keystone system, Perry first, 14; 20 standard targets, 3 traps, Nichols first, 19; 20 clay-pigeons, 5 traps, Choate first, 20.

WELLINGTON, Mass., June 15.—None of the expert gunners were present at the grounds of the Wellington Club to-day, so the amateurs had the sport all to themselves. The experts are not satisfied with the new rules, and decline to take part in sweepstake matches unless they are allowed to stand at 18yds., the same distance as amateurs, when they use a 12-gauge gun. At 21yds. they are allowed to shoot a 10-gauge gun; but they are not satisfied with this and refuse to shoot until the rules are changed, and this is likely to be done at the meeting of the delegates, which takes place next week. To-day's shoot, however, had a large attendance, and was one of the pleasantest shoots of the season. In the merchandise badge match, Schaefer, Bradbury and Snow tied with 14 each, and in the shoot-off Bradbury won. The other scores in this match were as follows: Field, Bond and Chapin, 13 each; Bradstreet, Dill, Chase and Sanborn, 11 each; Melcher and Warren, 9 each; Cowee and Baxter, 8 each. In the pitcher match, at 8 clay-pigeons and 7 bluerocks, Schaefer won with 13. The other scores were as follows: Snow, Dill and Bradbury, 11 each; Warren and Bond, 10; Melcher, Chase, Chapin, Baxter and Bradstreet, 9; Short and Field, 8. The winners in the sweepstake matches were: 5 clay-pigeons, Lang and Chapin; 6 bluerocks, Chase and Melcher; 5 clay-pigeons, Lang; 6 bluerocks, Bradbury and Baxter; 6 bluerocks, Dill, Schaefer, Field and Chase; 8 clay-pigeons, Schaefer and Warren; 7 bluerocks, Dill, Schaefer, Bradstreet and Bradbury; 5 clay-pigeons, Bond, Snow and Chapin; 5 clay-pigeons, Snow, Melcher, Schaefer and Field; 5 clay-pigeons, Schaefer, Warren, Sanborn and Bradbury; 5 clay-pigeons, Schaefer, Bradstreet and Field; 6 bluerocks, Field, Bond and Chapin; 5 pairs bluerocks, Snow; 5 clay-pigeons, Field and Short; 6 clay-pigeons, Sanborn and Warren.

CARTHAGE, Ill., June 10.—The elements were favorable for a shoot of the Northwestern Gun Association at Carthage, Ill., today. A fair crowd of trap shots was present and a most enjoyable day was spent. Five traps and clay birds were used for all events. The scores made are as follows:

Shoot No. 1, 10 single clay-pigeons:

Tobie	0011001111— 6	Britenstein	0001111111—7
Working	1111111111—10	Worthen	1111111001—9
Scott	1101111110— 8	Brown	0001111111—7
Wright	1011111111— 9	Fletcher	1101111110—8
Bonecamp	1110111110— 8	Woodruff	0111110111—8

Working first, Wright and Scott second.

Shoot No. 2, 10 single clay-pigeons:

Boswell	1011111010— 7	Worthen	1111010110—7
Tobie	1111110111— 9	Britenstein	0011111111—8
Working	1111111011— 9	Brown	1111110001—7
Golm	1111111110—10	Fletcher	1100110001—5
Corbin	0000000011— 3	Woodruff	1110101101—7
Bonecamp	1011110110— 6		

Golm first, ties on 9 div. second.

Shoot No. 3, for silver cup, 15 singles and 5 pairs clay-pigeons:

Britenstein	111111111111111	11 11 11 01 10—23
Worthen	111111111011101	10 11 10 11 11—21
Tobie	111111111111111	11 11 11 11 11—25
Scott	111100111101111	11 11 01 00 10—18
Brown	010111000011111	11 00 10 11 11—16
Fletcher	111111111101111	10 11 11 11 11—23
Penoyer	111001111111111	11 11 00 10 10—19
Working	110111111111111	10 11 11 11 11—23
Smith	111110111111101	11 11 00 11 01—20
Corbin	000101110111110	01 01 00 11 11—16
Elder	110011001111111	01 11 01 11 01—19

Ed Smith	101001111011111	10 01 11 01 11—18
Rober	110111100110110	11 10 10 11 01—17

W. S. Tobie, of Augusta, won the trophy, second and third money was div. by those scoring 23 and 22 respectively.—UNSER FRITZ.

EATON, N. Y., June 15.—Eaton Sportsmen's Club. Shooting from 3 traps breaks up some of our boys. Match at 15 kingbirds, 3 traps, 18yds. rise, American Association rules; prize, badge:

Peet	011111111111100—12	Stone	100000110100100—5
Richardson	011111101110011—11	Ormsby	010000011000010—4
Bell	111000111011011—11	Short	100010000101111—7
Freyer	111010101100110— 9	Hamlin	000000101000000—2
Cole	110111001101001— 9	Curtis	011101110110010—9
Briggs	010011000111111— 8		

Peet thus won the badge for the second time in succession. He never shot from a trap until late last summer, and has a record of 49 out of 52 consecutive shots, making the last 30 straight. The Doctor objects to the present kind of targets, and wants some firm to make one about the size of a washtub and to rise from the ground at the rate of two miles per hour.

Match at 5 pairs, 16yds. rise:

Peet	11 10 11 11 11—9	Briggs	11 00 10 10 10—5
Curtis	11 11 11 10 00—7	Stone	10 10 11 00 11—6
Richardson	11 10 11 01 11—7	Bell	01 10 01 01 00—4
Cole	10 10 10 11 01—6		

NORTH SIDE GUN CLUB OF LONG ISLAND,—Woodside, June 11.—The third average shoot for the year shot on club grounds, Train's Meadows. Match at 7 live pigeons, 5 King's patent ground traps, handicap, 80yds. boundary, club rules, six money prizes:

Blanch	1111001—5	Chevallier	1111111—7
Manning	1111111—7	Walden	1011011—5
Lyon	1111010—5	Eberhardt	0111001—4
Barlow	0101111—5	Sauter	1011111—5
Siems	1111101—6	Freezer	1011100—4
Winholz	1111111—7	Skelton	1111011—6
Hill	1111011—6	B Hyatt	111 —3
Duryea	1111011—6	C E Smith	111 —3

ST. LOUIS, June 13.—The Lyon Gun Club, of this city, held its first medal shoot to-day and the scores made by those present are as follows: Persinger 15, Hammer 13, Herold 14, Schroeder 10, Isch 14, Baumann 12, Stute 10, Lewis 17, Baer 10, Westhus 17, Meyer 10, Koenig 12, Loehr 6, Grohe 5. Wohlstader 14, Jacobs 12, Buder 7, Niemann 0. On shoot off Westhus won the medal.—UNSER FRITZ.

WATSON'S PARK, Grand Crossing, Ill., June 13.—The Gun Clubs of Chicago. Match at 20 Keystones, 3 traps, 18yds. rise, shot under Illinois State rules. Prize, medal:

Wells	10111111101111110010—16	Shepard	11101011011110000011—12
Deiter	11000111111101000011—11	Young	10110001111010000010 - 9
Wilcox	10101011100011010101—12	Colcord	00000010111010011111—11
Rock	11101111111111101101—17	Smith	00101011111101010010—12
Mussoy	11100111110010010010—12	Guiteau	00100100001000010100— 5

Rock wins medal.

Match at 10 live pigeons, 5 traps, 30yds. rise, 80yds. boundary, shot under Illinois State rules. Prize, medal:

Deiter	1010111002—6	Mussey	1221111111—10
Shepard	2112020111—8	Buechner	1110222001— 7
Young	0111022202—7	Wells	0021101201— 6
Smith	0020211200—5	Rock	0111012011— 7
Guiteau	0022002211—6	Colcord	2122012121— 9
Wilcox	2222211010—8	Mussey won.—RAVELRIGG.	

BROOKLYN, June 13.—At the live-bird shoot of the Phœnix Gun Club at Dexter Park to-day some very good scores were made by the marksmen who went to the traps. All the members shoot at the same distance, 25yds. rise. D. Freligh, H. Chambers and D. Madison killed 14 each and missed 1, A. Botty, A. Rutan and J. Akhurst killed 13 each, and M. Brown, J. Long and W. Hughes 12 out of 15 each. Mr. A. Holtz, who is 77 years of age and was present at the shoot, delighted the marksmen by telling some interesting and marvellous shooting victories of the times when these boys were young.

WILMINGTON, Del., June 15.—A practice shoot was held on the grounds of the Wawaset Gun Club to-day, at Wilmington, Del. Owing to the high wind good scores were impossible, but the sport was thoroughly enjoyed:

W H Hartlove	1101101110011111—11	11 10 10 01 10—6
A B Mack	1011111101010—10	10 10 00 10 11—5
L Fox	1101111111100011—12	00 10 10 01 01—4
A H Stout	1010111011011—11	10 00 11 01 10—5
J K Woodward	0011010011110110— 8	11 11 00 11 11—8

A CHALLENGE.—New York, June 17.—*Editor Forest and Stream:* Mr. E. H. Fox, of the N. Y. Suburban and the Algonquin Gun Club, of this city, hereby manifests his desire to meet any of the big shooters of the Washington Heights Gun Club, also of this city, in a match at 100 Keystones or bluerocks, at any time, either on the grounds of N. Y. Suburban, Claremont, N. J., or on those of the Algonquin Gun Club; to be shot according to American Association rules or Keystone rules, loser to pay for the birds.—F.

TOWANDA, Pa., June 7.—At a meeting of the Towanda Rod and Gun Club the following officers were elected for the ensuing year; President, Henry Streeter; Vice-President, J. W. Snyder; Secretary and Treasurer, W. F. Dittrich. The club hold weekly shoots and are to give a tournament July 4.—W. F. DITTRICH.

MANHATTAN GUN CLUB.—Regular shoot at Woodside, June 12. Through unfavorable weather the attendance was small:

F J Lambrecht	0011111011111000010—11
M Lichtenberger	1010101111100111000—11
J W Bayer	1000011111111011111—14

NEWARK, N. J., June 15.—The West Side Gun Club has selected the following officers for the ensuing year: Casper Meesel, President; G. Bartholomew, Vice-President; Julius Gast, Treasurer; Wm. Buob, Secretary; Louis Schilling, Scorekeeper; Jacob Jacquin, Sergeant-at-arms.

YOUNGSTOWN, O., June 10.—The final shoot between the Niles and Youngstown gun clubs was held here this afternoon, resulting in a victory for the former by a score of 174 to 154, they also securing the medal, having won two of the three matches.

DR. CARVER is carting over to Germany a band of Indians, Texas steers, bronchos, greasers, cowboys and other paraphernalia of what is called the Carver Wild American Company (Limited).

WILLIMANTIC, Conn.—The Willimantic Rod and Gun Club will hold a tournament for State shooters only next Thursday, June 27.—J. H. Ross, Secretary.

LOWELL, Mass., has a tournament to-day and to-morrow.

ALGONQUIN GUN CLUB.—Now York, June 13.—The following scores were made in practice at Keystone targets by members of the club on their grounds at Weehawken, N. J., to-day: L. Brenner, 9 kills, 20 misses; Dr. G. G. Van Schaick, 27 kills, 18 misses; Joseph Hanna, 16 kills, 12 misses; C. Myers, 14 kills, 12 misses; Smith, 16 kills, 13 misses; P. Tomlin, 13 kills, 17 misses; F. Rinn, 0 kills, 21 misses; E. H. Fox, 50 kills, 7 misses. At doubles: E. H. Fox, 8 pairs, 10 kills; Dr. Naus, 4 pairs, 4 kills. A good deal of guying was indulged in at Mr. Rinn's expense, owing to his "brilliant" shooting to-day, and he has "thrown down the gauntlet" to Mr. Fox to shoot him a match at 15 live birds, loser to pay for the birds, Mr. Rinn to be given 3 birds and to be allowed to use his 10lbs., 10-bore, 32in. duck gun, while Mr. Fox will use his reliable little Daly hammerless 12-bore, 7lbs. 3½oz. and stand with Mr. Rinn at 25yds. rise, 80yds. boundary, gun below the elbow. The Algonquins have decided when practicable to hold live bird shoots monthly in future, alternating with "crockery" shoots on the first and last Thursday of each month.—E. H. F.

BOWMANVILLE, Ont., June 8.—The final shoot for the D. R. A. medal of the Bowmanville Rifle Association took place this afternoon. Extra good scores were made, the best two scores out of three matches to win. Sergt. King was the winner with 91 and 94 points, total 185 points. The match was shot with Snider rifles:

	200yds.	400yds.	500yds.	Total.
King	30	34	30	94
Russell	30	35	32	97
Sando	30	33	30	93
Curtis	28	32	32	92
Horsey	29	32	31	92
Berch	32	33	26	91
Morris	30	31	25	86
Mitchell	30	31	21	82
Prout	29	24	25	78
Young	26	24	25	75

Yachting.

31. Pleon, Open.
31. Hull, Ladies' Day.

SEAWANHAKA CORINTHIAN Y. C. JUNE 15-17.

ALTHOUGH the small number of entries and the many changes of the weather conspired to rob the annual race of the Seawanhaka Corinthian Y. C. of its usual interest, there was at the same time plenty to repay the spectators on the club steamer Taurus and the judges' boat Dalzell. The main interest centered on the small boats, the honors of the day going to the new keels Minerva of the forties and Kathleen of the thirties, each outsailing her class by miles. In the larger classes there was so much fluking that the results were of little importance, but in the smaller the race was exciting during the greater part of the day. Grayling did not turn up this year, though usually in this race, but her place was taken by Mayflower, her first race under schooner rig. As Mr. Burgess was at the wheel, there was every promise of an exciting race between her and Sea Fox, steered by Mr. Tams, but the many flukes made the final result very unsatisfactory. In the 70ft. class both Katrina and Titania were out, preferring no doubt to wait until Tuesday for the trial that has been watched for as anxiously almost as a Cup race by the friends of the two. Shamrock and Bedouin made a good race at times, but as in the schooner class the flukes made the ending very tame. Gracie was not really in it with the others all day, doing no better than on Thursday. The 61ft. class, Hildegarde and Mischief, the latter with a new owner but her old single jib, and the 53ft. class, Clara with nothing but Roamer against her, attracted little attention.

The great feature of the day was the racing of the forties, five coming to the line. Nymph and Banshee were handled by their regular Corinthian crews, Gorilla and Maraquita were handicapped by lack of practice, their crews being hastily got together. Liris was out of it after her disaster of Thursday, and her crew apparently booked for berths on the club steamer; but at the last moment Mr. Tweed very kindly placed his new forty at their disposal, and they went aboard her for the first time on the morning of the race. Though Minerva has never yet raced, Captain Chas. Barr had her in perfect form, everything in readiness. She is certainly the most perfect boat of the fleet in all her fittings and appointments, and it is doubtful whether there are any two boats in the country kept in better shape than Minerva and her larger sister Clara are by the Barr brothers.

This year some material changes have been made in the Seawanhaka rules, professionals being allowed for the first time in the classes under 53ft., while the allowance of crew has been changed from one man to every 5ft. of length on deck to one man for every 4ft. of waterline. This latter change was made as a matter of justice to the plumb-stemmed boats as compared with the latest long-nosed clippers. The allowance of one paid hand to a forty or thirty is in no way an abandonment of the Corinthian principles which have made the Seawanhaka Club famous, but is a change made necessary by the difficulty of finding enough amateurs to man the fleet, and also of getting them together for sufficient drill before the June regatta. The full programme of the two races, the annual and the special, was given in the FOREST AND STREAM of May 30, so we need not give space to it here. The course was from Buoy 18, off Owl's Head, around Southwest Spit, and then around Sandy Hook Lightship and return, finishing off Buoy 15, outside the Narrows, the 40ft. class turning the Scotland instead of Sandy Hook, while the smaller boats turned Buoy 5, off the point of the Hook. The starters were:

SCHOONERS—90FT. CLASS.

Sea Fox—Owner, A. Cass Canfield; helmsman, J. F. Tams; crew, A. Cass Canfield, Wm. Foulke, S. Nicholson Kane.

Mayflower—Owner, F. Townshend Underhill; helmsman, Edward Burgess; crew, ——.

SLOOPS AND CUTTERS—70FT. CLASS.

Gracie—Owner, J. P. Earle; helmsman, Robt. Centre; crew, ——.

Bedouin—Owner and helmsman, Archibald Rogers; crew, Herman Livingston, A. Van Rensselaer, David Paton, C. C. Deming, J. Coleman Drayton, J. P. Kingsford, Frank Denning, G. C. Hoyt and H. P. Rogers.

Shamrock—Owner and helmsman, J. Rogers Maxwell; crew, ——.

61FT. CLASS.

Mischief—Owner and helmsman, Geo. Work; crew, W. G. Morse, Geo. Stow, J. Foulke and A. Hopkins.

Hildegarde—Owner and helmsman, J. C. Bergen; crew, L. Marcellus, F. B. Martin, J. B. McCue, A. J. Romer, S. M. Sheldon and Clinton James.

53FT. CLASS.

Clara—Owner and helmsman, J. C. Barron; crew, Gouverneur Morris, J. M. Mitchell, H. L. Sprague, W. R. Thomas, A. Russell and J. C. Smith.

Roamer—Owner, R. R. Williams; helmsman, F. C. Swan; crew, Wm. Howard, T. V. Cox, R. R. Williams, T. Hayden, J. L. Kennedy, J. L. Fisher, C. T. Pierce, F. L. Davis, C. Lindsay and J. J. Mackay.

40FT. CLASS.

Gorilla—Owner, R. P. Carroll; helmsman, W. B. Duncan, Jr.; crew, R. P. Carroll, R. N. Ellis, T. Hitchcock, J. Wright, E. C. Center, M. Wainright and A. Roosevelt.

Nymph—Owner, F. W. Flint; helmsman, E. A. Willard; crew, F. W. Flint, G. M. Baretto, F. L. Anthony, O. Sanderson, F. B. Brown, J. V. Wilson, George Murray, L. Jacobs and E. M. Willard, Jr.

Banshee—Owner, P. S. Pearsall; helmsman, A. B. Alley; crew, R. C. Cornell, H. A. Sanderson, A. B. Simonds, F. M. Simonds, C. N. W. Eidlitz, A. R. Walker, R. R. Trimble, W. P. Jenkins, J. M. Woodbury and P. S. Pearsall.

Maraquita—Owner, A. Belmont, Jr.; helmsman, R. Doremus; crew, A. C. Tower, A. C. Hodges, H. C. Mortimer, C. L. Perkins, Robert Perkins, Frederick Smith and C. O. Iselin.

Minerva—Owner, C. H. Tweed; helmsman, J. F. Lovejoy; crew, E. M. Padelford, Wm. Gardner, P. K. Hills, W. P. Stephens, Harold Forwood, C. C. Munroe and Allen Ames.

85FT. CLASS.

Volusia—Owner and helmsman, Thornton Smith; crew, Theodore Ledyard, D. Scofield and W. Hewitt, Jr.

Beatrice—Owner and helmsman, C. A. Post; crew, J. L. Ward, G. B. Post, W. H. Plummer, H. Borrome and Valentine Mott, Jr.

Kathleen—Owner and helmsman, William Whitlock; crew, T. C. Zerega, W. C. Brown, F. Meeker, W. T. Wintringham, W. C. Carr, H. C. Ward and F. C. Simonds.

Saracen—Owner and helmsman, W. P. Fowle; crew, Arthur D. Foss, George Newbold, Everett Paine, Arthur Wood, F. M. Wood.

Elf—Owner and helmsman, W. M. Wilkinson; crew, F. M. Proctor, H. B. Roberts, G. Ackerman and T. Aivrick.

Kangaroo—Owner and helmsman, F. Beames; G. W. Clarke, H. W. Walter, C. E. Cornell, A. G. Gray and S. B. Hazard.

The wind was moderate coming in the Narrows and over the Clifton Hills, being southwest, in the Lower Bay, as on Thursday. As usual the race committee were on time, and at 11:05 the start for the larger classes was given, Sea Fox leading over the line on starboard tack, with Mr. Tams at the wheel, being timed 48s. after the gun. Mayflower was less alert and crossed nearly 2m. later. Bedouin and Shamrock took their time, while Gracie was astern of the two. In the 30ft. class an additional prize of $100 was offered by Mr. Whitlock on condition that the start be made from one gun, so the class was timed in the usual way for the club prize, but the time was taken from the gun for the Whitlock prize. Under the circumstances it would hardly have done for Kathleen to have been late, and Mr. Whitlock took her over the line in very fine style within 2ls. after the whistle. Elf was not far astern, but Saracen was handicapped. The forties did not make a brilliant start, Gorilla undertook to shift jibs at the last moment, the maneuver being clumsily executed, so was late at the line, Minerva was delayed by an incipient mutiny on the part of her steward, who declined to go below decks, and crossed just on the last signal, and Banshee barely missed a handicap, being but 15s. ahead of the whistle. The start was timed:

Sea Fox	11 05 48	Mischief	11 13 05
Mayflower	11 07 08	Clara	11 13 36
Bedouin	11 03 26	Banshee	11 14 50
Shamrock	11 09 18	Minerva	11 15 00
Gracie	11 10 10	Nymph	11 15 00
Kathleen	11 12 21	Maraquita	11 15 00
Beatrice	11 12 29	Volusia	11 15 00
Elf	11 12 36	Saracen	11 15 00
Kangaroo	11 12 42	Gorilla	11 15 00
Roamer	11 12 48	Hildegarde	11 15 00

Gracie, Gorilla, Hildegarde, Minerva, Volusia and Saracen were handicapped.

Bedouin and Elf carried clubtopsails, the rest being either restricted to or contented with jibheaders, save Saracen, with a small sprittopsail. Sea Fox led through the Narrows, getting more breeze outside, the fleet being jammed on starboard tack for Buoy 10, with a strong lee-going tide, only a couple of hours of the ebb being gone. The first to come to grief was Maraquita, among the laggards, her jib going into the water, but she repaired damages and continued. Kathleen was well ahead of her class from the start and gaining steadily. The leading forties, Banshee and Minerva, started but 15s. apart, the little Scotch keel astern. As they worked down she weathered out on Banshee, and by the time the forts were reached she was on the latter's weather beam and dropping her steadily. Nymph was well astern, while Gorilla dropped to leeward at an amazing rate, both Minerva and Banshee holding on well to the west side of the Narrows,

Banshee set a small jibtopsail about Buoy 15, which helped her a little, but Minerva continued to gain, dropping her class steadily, both in footing and holding on. She carried only lower sails and jibheader. Sea Fox down by Buoy 9 was holding her own, while Bedouin was leading Shamrock. Gracie, Hildegarde and Mischief were not far apart, the latter to leeward, then came Clara. Her only rival, Roamer, was safely beaten already, having dropped astern and to leeward of Minerva before the upper island was reached. After Banshee and Minerva came Kathleen and then the rear guard, widely scattered over the mouth of the Narrows. Gorilla far to leeward, and Nymph, Maraquita and Saracen still inside the forts. The big boats made Buoy 10 on the first tack from the start. Sea Fox set spinaker to starboard, having gained on Mayflower, the latter parting her bar bobstay in the turnbuckle. The two ends were fished up, a strap put on each and the two brought together by a tackle while the boat was off wind from Buoy 10 to Buoy 5, a balloon maintopmaststaysail being set with no headsails until the damage was repaired. Minerva led Banshee, each making a short tack to the weather mark, then she set a silk balloon foresail and jibtopsail, running very fast for the open sea beyond the point of the Hook. The times at Buoy 10 were:

Sea Fox	12 11 36	Shamrock	12 25 08
Bedouin	12 23 00	Gracie	12 29 42
Mayflower	12 23 50		

Outside there was a strong breeze and lumpy water at least for the smaller boats. Sea Fox led around Sandy Hook Lightship, the times being:

Sea Fox	1 12 15	Shamrock	1 17 44
Mayflower	1 13 04	Gracie	1 24 10
Bedouin	1 16 08		

Shamrock was third at the mark, but Mayflower turned just inside of her. As they came in with sheets eased for a broad reach Sea Fox passed Minerva about a mile from the Scotland, the little ship pitching rather heavily at times, there being some deep holes in the water. She was going under easy canvas, lower sails and jibheader, with the race safe in hand. Banshee had chased her out from Buoy 10, but in spite of a balloon jibtopsail she failed to lessen Minerva's lead. Banshee had her staysail set but jib partially stowed, the sail going in the water at times. Perhaps Minerva's crew were a little cautious as they came near the spot where misfortune overtook them on Thursday, and as she felt the sea the large jibtopsail was stowed. Banshee, however, with more valor than discretion, stuck to her balloon until near Buoy 5, when the big sail pulled the topmast off at the cap and spoiled her chances. She cleared the wreck and bore away up the Swash, leaving Minerva about to round the mark. Over went the boom within 20ft. of the huge leaden hull of the lightship, and sheets were well eased off for the reach to Buoy 5. About three-quarters of a mile from the mark Maraquita was passed, bound out. The four were timed:

Minerva	1 35 20	Nymph	1 44 00
Gorilla	1 44 00	Maraquita	1 46 31

Nymph had lowered jiptopsail and did not set it again.

Thus far the wind had been pretty steady, but as the leaders had passed out by the Hook about noon there was visible a thunder storm over the city, with every prospect of a squall down the bay. Though it did not strike until the leaders were at the finish, it played havoc with the wind for three hours, giving the luck now to one boat and then to another in a manner which it is difficult to describe closely. Bedouin had beaten Shamrock until they came in the Hook, but a sudden shift of wind to the north put Shamrock to windward, while a similar fluke robbed Sea Fox of her weather berth and set her to leeward of Mayflower. The forties caught the wind ahead just outside Buoy 5, Minerva still holding her lead. She came by the wind and stood in very fast, considering the very strong ebb tide off the Hook, and when once fairly inside picked up still better on her class, the others being then at a disadvantage by having the wind ahead instead of on the quarter when they were in the strongest tide. Gracie was ahead of Minerva as the latter came for Buoy 8½, the wind then being very light. The forty ran up astern and then weathered out on Gracie's beam, sailing there until very close to the buoy, when a coaster lumbered along, covering the mark and forcing Gracie to bear away. Minerva luffed out and went under the co-ster's stern, just squeezing by the mark, after which she left the big sloop for the day.

Shamrock was now leading boat, well up the bay, the wind being very light from the north, varying constantly in direction, while the sky was very threatening. Mayflower was second, in the center of the bay, but Sea Fox was becalmed far to the westward, near the old quarantine anchorage. Bedouin was well up the bay bucking the last of the ebb tide with little wind. By the time that Minerva had passed Buoy 10 Sea Fox was standing up the channel on starboard tack. The little boat gradually overhauled her and finally passed her to windward.

Elf was now coming up from Buoy 10, still carrying clubtopsail. She had been well up in Sandy Hook Bay for a time. Kathleen was about five miles ahead, being the first boat to finish. The clouds had been growing darker in the north, the wind being from that quarter, but when the leaders were near home the wind struck them from astern for a short time. Bedouin and Minerva set spinakers to starboard and moved ahead for a few minutes, when the wind dropped again and then the squall broke from over the Staten Island hills, hitting pretty heavily at first. The rain poured down for a short time and then stopped, but the wind, again quite light, held ahead. Shamrock lowered her mainsail, but set it after the squall was over. Minerva walked on up, passing to windward of Bedouin and finished fourth boat of the fleet. After leading all her own class and being passed outside by the larger craft she had overtaken everything but Mayflower and Shamrock, besides beating her class almost out of sight. Of course there was some terrible fluking among the big fellows, but at no time during the day did Minerva stop, she went very fast when it blew the hardest, and when the wind fell and came in all directions she still fanned along, passing everything in her course. The sail home, from the time she passed Buoy 5, was most tedious and trying, being a continual shifting of light sails, but even with her small rig she traveled very fast. Both Sea Fox and Bedouin were in hard luck, and suffered badly from the shifts of wind. While the wind held true in the first part of the race each beat her opponent. Hildegarde outsailed Mischief and Clara's antagonist withdrew. Volusia beat Beatrice very badly, while Marguerite took second honors in the 30ft. class, and Elf among the thirties. Both Minerva and Kathleen outsailed their classes fairly and decisively, and won by a large margin besides that due to any possible flukes. Mr. Burgess turned a handspring as Mayflower finished. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—90FT. CLASS.				
Mayflower	11 07 09	4 50 56	5 43 47	
Sea Fox	11 05 48	5 06 45	6 00 07	Allows.

Elf	11 12 26	5 16 38	6 02 02	6 01 11
Kathleen	11 12 21	4 47 03	5 34 42	Allows.

SPECIAL RACE, JUNE 17.

The courses and conditions for the special race on Monday for the 40, 35 and 30ft. classes were the same as on Saturday, except that professional crews and clubtopsails were allowed, the helmsman being an amateur. The prizes were $150 for five starters in the 40ft. class and $75 for each of the other classes, to be increased to $100 if five started. The starters were Minerva, steered by Mr. J. Beavor-Webb; Maraquita, steered by Mr. Fred Swift; Tomahawk, steered by Mr. E. D. Morgan; Gorilla, steered by Mr. ——, and Nymph, steered by Mr E. A. Willard, in the 40ft. class. Banshee was unable to get a new topmast in time. Volusia and Beatrice started in the 35ft. class, the latter steered by her owner, Mr. C. A. Post; and in the 30ft. class were Kathleen, steered by Mr. Whitlock, with a Corinthian crew; Saracen, steered by Mr. Fowle, also with a Corinthian crew from Boston; Elf and the new Tomboy, steered by Mr. Archibald Rogers, with part of Bedouin's crew under Captain Pittuck. The wind was very fresh from the west in the morning, with every promise of a fine race, the day being clear and pleasant. In spite of the fine entry list, no one was on hand to witness the race save a few on the judges' boat. Chispa was out with the fleet all day, Fortuna, Dauntless and Sea Fox were down in the afternoon, with the steamer Sentinel, but there was no trouble over the club steamer or a host of attending boats to mar the racing. The fleet maneuvered in a group to the northwest of the line off buoy 18, the forties under jibheaders, and in some cases with baby jibtopsails set, the two 35ft. boats under single reefs, Volusia with topmast housed and reef in, while of the thirties only Elf showed a topmast set up. The whistle blew at exactly 11 A. M., the start for the forties being given at 11:05. Minerva went over the line first, on starboard tack, with Maraquita close at her heels, the latter luffing out on Minerva immediately after crossing, but at once falling back to her weather quarters. Tomahawk and Gorilla crossed close together, Nymph being alone. This order was held to the outer mark, Minerva and Maraquita close together, Tomahawk and Gorilla near each other but astern of the leaders, while Nymph sailed alone some little distance from the pair, the only exception being near buoy 5, where Gorilla passed Tomahawk for a short time. Tomboy led the small craft, with Volusia, Saracen, Beatrice, Kathleen and Elf in order, the latter being handicapped 18 seconds. The times were:

Minerva	11 06 10	Volusia	11 12 37
Maraquita	11 06 16	Saracen	11 12 52
Tomahawk	11 07 12	Beatrice	11 13 06
Gorilla	11 07 50	Kathleen	11 13 22
Nymph	11 08 58	Elf	11 15 18
Tomboy	11 11 47		

As the leaders passed out the Narrows they all heeled very heavily, Tomahawk being almost flat at times, and Nymph lying down as she caught the puffs close in under Fort Wadsworth. The order and relative positions continued the same during the whole distance to the Southwest Spit, all holding the one tack, but jammed on the wind to make the buoy with the strong leegoing tide. Maraquita hung obstinately on to Minerva, the two leaving Tomahawk a little, while she in turn was gaining a little on Gorilla, but at no time was the distance from the first to the last boat over half a mile. A similar contest was going on with the smaller boats, Tomboy still holding her lead, with Saracen, Beatrice, Kathleen, Volusia and Elf in order. The two 35ft. boats, both centerboard craft, evidently had no business with such boats as Kathleen and Saracen, both keels, while Gorilla and Nymph were unable to hold their keel rivals. Down the Bay a curious craft was overhauled, a good looking chunk of a catboat with a square yard on her mast, her skipper being a resident of Sailor's Snug Harbor. Her squaresail was stowed as she was bound down with the yachts, and the spectators missed the sight of her off the wind.

The fight thus far had been a most exciting and interesting one. Such a picked fleet is rarely brought together as that in the 40 and 30ft. classes, new craft, the work of several rival designers, and with nothing lacking to make each the winner if possible. The job lot assortment of craft of all sizes and degrees of excellence that ornament the average club regatta was replaced by as fine a fleet of evenly matched boats as is not often seen. With the racers was the cruiser Chispa towing a boat, but near enough to see what was going on. The times at buoy 10 were:

Minerva	12 29 45	Gorilla	12 32 15
Maraquita	12 30 18	Nymph	12 33 35
Tomahawk	12 31 13		

Minerva set a balloon jibtopsail at the turn after mastheading spinaker in stops and lowering it again; but Maraquita shot out her extension boom to starboard and soon had spinaker drawing. She ran up on Minerva, but the latter turned to and soon set a silk spinaker which held her well ahead. Nymph had lost steadily from the start, and was some distance astern of the rest. The little fellows were left as the tug ran out with the forties, and were not seen until well on the way home. The wind had fallen some when the fleet passed out the Hook, being timed at buoy 5:

Minerva	12 46 31	Gorilla	12 48 50
Maraquita	12 46 57	Nymph	12 51 03
Tomahawk	12 48 38		

Gorilla had created a slight diversion by going past Tomahawk's weather, but soon slid back to fourth place. Minerva took in her jibheader and set a clubtopsail after taking in spinaker, and led the procession out to the Scotland, making a close turn as she luffed round. Maraquita had been very well handled all day, but she lost a little on this turn, not tacking as soon as Minerva. The two stood out on port tack for buoy 5, thus running into the strongest of the ebb tide, but when Tomahawk and Gorilla rounded together they held starboard tack, standing in down the Jersey beach toward the Highlands. Nymph had been very badly outsailed thus far, being now 5m. astern of Minerva. The times were:

Minerva	1 14 20	Gorilla	1 19 25
Maraquita	1 15 01	Nymph	1 26 10
Tomahawk	1 19 16		

The wind was moderate, all but Minerva being content with jibheaders, but at 1:45 Maraquita clewed up hers and went on starboard tack, leaving Minerva for the day, and in a very few minutes she had dropped far astern. At 2 P. M. Minerva was off the point of the Hook, but in a terrible seagoing tide, and it was evident that Tomahawk and Gorilla, now stealing along under the beach in the slack tide, had made a very great gain on her and were the leading boats, Nymph was far astern and inshore of Minerva, and Maraquita was now the last of the fleet. Tomahawk and Gorilla worked the Hook as closely as they could, shaving under the beach and out to weather buoy 5 and then slipping in again out of the tide, while Minerva, still on her first leg from the Lightship, was standing over toward the Swash, with the tide setting her off. Tomahawk worked in for the Spit with a good lead, and after a time Minerva got inside the Hook and passed to windward of Gorilla. Maraquita and Nymph were a long distance astern, not having turned buoy 5 yet. The customary afternoon squall was now visible in the north, but the wind still held to the west.

The little fellows were soon reaching in from the Spit, under jibtopsails and balloon foresails, Kathleen with a fine lead. All had sent up topmasts, and Tomboy and Elf had clubtopsails aloft. The squall struck heavily as Kathleen passed Hoffman Island, but she carried through it, only lowering her large jibtopsail for a few minutes. The rain poured down for a few minutes, after which it cleared for a time, and she crossed the line. Immediately after a second and heavier squall struck in, knocking off the boats that were about

REGATTA COURSES, NEW YORK BAY.

New York Y. C. starts at Buoy 15.
Seawanhaka C. Y. C. starts at Buoy 18.
Corinthian Y. C. starts at Buoy 15.
Atlantic Y. C. starts at Bay Ridge, above Buoy 18.

Finish for all at Buoy 15. The outer mark of the new outside course of the New York Y. C. is S.W. by W. of Sandy Hook Lightship, near the shore at the lowest point shown on the chart.

to finish. For a time it was a very pretty sight to see them lying almost flat on the water, Volusia having a good deal more wind than she wanted. Saracen screwed across the line, but Tomboy and Elf were headed by a shift of wind and had to make several tacks to weather. The wind now fell, and when Beatrice came up she managed to reach almost to the stern of the tug, and then drifted astern, going rapidly down with the tide until she took the ground of the West Bank, over a mile below the finish, coming off later without injury.

The first of the forties, Tomahawk, showed up in the rain and mist at 4 P. M., but after making up to within 1½ miles of the line she drifted astern. With her were Gorilla and Minerva, the other two not being visible at all. For three dreary hours the tug drifted about the Bay in a strong ebb tide and no wind, Gorilla getting over near Coney Island, Tomahawk well out in the center of the Bay, and Minerva finally coming close along the West Bank in the wake of Nymph, which vessel had managed to crawl up from the rear to the head of the fleet, crossing the line first at 7:15 P. M. with the aid of a light breeze from the east. Tomahawk threw away her chance by holding out in the strongest tide, and it was a close thing between her and Minerva for second, the little Scotchman being ahead. Gorilla failed to make the finish, being on the other side of the Bay, while Maraquita was barely visible astern when the tug left for home. The full times were:

SLOOPS AND CUTTERS—40FT. CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Nymph	11.08.58	7 15 36	8 06 38	8 04 16
Minerva	11.06.10	7 19 47	8 13 37	8 10 16
Tomahawk	11.07.12	7 22 28	8 15 16	8 15 16
Gorilla	11.07.10	Did not finish.		
Maraquita	11.06.16	Not timed.		

SLOOPS—35FT. CLASS.

Volusia	11.12.37	3 37 35	4 24 58	4 24 58
Beatrice	11.13.06	Did not finish.		

SLOOPS—30FT. CLASS.

Kathleen	11.13.29	3 18 00	4 04 38	4 04 38
Saracen	11.12.52	3 24 59	4 12 07	Not meas.
Tomboy	11.11.47	3 29 32	4 17 45	4 13 52
Elf	11.15.18	3 41 25	4 26 25	4 25 43

In spite of its lame conclusion the race was a fair and thorough test of the boats out to the Scotland, Minerva outsailing all the rest, with Maraquita a good second. Coming in, the race was lost to Minerva through Mr. Webb's lack of knowledge as to the tides off the Hook, and on the other hand Nymph's victory was due to some very clever work on the part of Mr. Willard in cheating the tide from the Lightship up to buoy 5. The tug took Beatrice, Nymph and Minerva in tow for Staten Island.

KATRINA AND TITANIA, JUNE 18.

Although there is little chance that either side will withdraw from its position and that there will be a race for the America's Cup this year, it is still probable that Lord Dunraven will bring Valkyrie across to race for the Prince Cup and in private matches. In view of this the races set for this week between Katrina and Titania assume almost the aspect of trial races, as there is no room left now for doubt as to the superiority of the two in most weather over Bedouin and Shamrock. The present matches, were made last winter as the result of a challenge from Messrs. Auchincloss, owners of Katrina, an agreement being then drawn up to sail three races on June 18, 20 and 22, unless the New York Y. C. regatta was set for one of these dates, the courses to be 12 miles to windward and return from the Scotland Lightship; the outer course of the New York Y. C., from Buoy 10 around the Sandy Hook Lightship and Shrewsbury Rocks; and finally over the inside course. The time limit was set at 6½ hours, the races being under the rules and regatta committee of the club, 70 be for repairs was allowed in case of accident, the prize was to be $150 on each race, neither was to haul out after the first race and no limits were placed on sails or crew. Messrs. Robert Centre and Gouverneur Kortwright were named as judges. Both boats were most carefully prepared during the winter, lying side by side in Piepgrass's yard, Katrina under the supervision of Mr. A. Cary Smith and Capt. Berry, and Titania under Capt. Haff with a picked crew from Volunteer's old one. The hulls were scraped and painted, Katrina's with the same cement as Thistle, while the spars and sails were thoroughly overhauled, Titania having a new boom 5ft. longer than the old one, with a complete new outfit of sails, probably the best suit seen on a yacht in a long time, the mainsail in particular being a very fine piece of work from Wilson & Griffin's loft.

In length and sail area the two differ so little that the allowance for 24 knots is but 14s. in favor of Katrina, she being a few inches under 70ft., while Titania is very close to the limit of the class. The former, with clipper stem and black topsides, resembles Thistle very closely, while Titania, white, with a plumb stem, has more of the sheer plan of Mayflower. Titania's victory over Shamrock, followed by Katrina's three successful races with the same boat, and then by her performance with Grayling and Sea Fox in the New York regatta, from which Titania dropped out after parting her bobstay, have tended to heighten the interest in the first meeting of the two famous craft. Both have been busy for the last few days in painting bottom and making the final preparations, and by Tuesday morning, when the markboat, Volunteer, sent a tow line to each off Bay Ridge, they were apparently in as perfect condition as is possible.

The day was fair and warm, but with a strong N.E. breeze tumbling up the white caps in the Upper Bay and driving in a very respectable sea outside the Narrows; while off the Hook there was more sea than has been seen in any of the Cup races since '85. The flagship Electra was kindly placed at the disposal of the regatta committee by Com. Gerry, and after some rolling and one or two nearly successful attempts to stand on one end in going at a lively gait over the bar, dropped anchor off the Scotland at 11:45. The tug Volunteer was lettering out very slowly with the two yachts in tow, each dipping her bowsprit under. Palmer stood in from seaward to meet them, under staysail, foresail and reefed mainsail, with topmasts housed, and the plucky little Oneida followed in Electra's wake. The only other vessel was the tug Dalzell, with some members of the New York Y. C. on board.

There was ample warning as to the weather all the morning but boats came down with topmasts on end, bowsprits run out and no reefs in their mainsails, so that over an hour was wasted while they housed topmasts, filled in bowsprits, turned in reefs and came for the line under No. 3 jibs, staysails and double-reefed mainsails. Katrina had three reefs down and Titania but two. Katrina's canvas seemed perfect, but Titania's reefed mainsail showed a tight leech, while her staysail was long on the stay, and did not sit properly. A little after 1 P. M. Katrina, steered by Capt. Berry, and with her owners and Mr. Smith on board, came down from the windward, Titania soon following, and at 1:20 the preparatory was given. The course was E. by N., 12 knots, and the Volunteer was already pegging away in the wind's eye to mark the turn. Katrina stood off shore, outside the Lightship, Electra lying to the north of the ship, while Titania was inside of the Electra, nearer to Sandy Hook.

The start was given at 1:30, Katrina coming from beyond the lee of the Lightship, where she tacked and rounded under its stern, crossing the south end of the line on starboard tack at 1:30:37. Her clean, lossy hull, with the lead-colored bottom and sharp ends, seemed to leap from wave to wave as she settled down to her work, the decks awash with spray. Titania was slow in starting, reaching along the line from north to south, then tacking and crossing the line just where Katrina had, being timed at 1:33:53. Mr. Burgess was on board, with Capt. Haff at the wheel. The first leg took them a little to the westward of the big hotel at Rockaway, or about 4½ points from the course.

The first ten minutes served to show that Titania was outpointing Katrina, the latter carrying a very strong weather helm, the triple reefed mainsail being too small for the large No. 3 jib, though there was some doubt as to the footing, but in a little while it was evident that the white boat was well ahead of her rival, having made up the three minutes lost at the start. Katrina fell steadily to leeward, while Titania rode the seas and worked out all the time. About 2 P. M. Katrina luffed up sharply as though about to tack, but after a little paid away and resumed her course, though doing worse than before. At 2:30 she tacked off shore, Titania at once following, and the former's great gain became apparent.

The race was hers beyond question; it was simply the last Volunteer-Thistle race over again. Katrina held on until 2:50, when she luffed to shake out a reef. After the reef points were cast off, and as they were about to cast off the clew, she jumped heavily into a sea and broke her boom short off, giving up the race at once. Titania still continued, the wind being a trifle lighter, and at 2:56 she went on starboard tack inshore again, heading for Long Beach Hotel. She stood on for nearly an hour, making a little more to windward than was really necessary, and coming down with sheets eased for the tug, where Electra and Oneida were also waiting. She turned at 4:13, starting sheet and booming out her staysail to port, then sending up the topmast a little until her jibheader could be set over the double-reefed mainsail. Under this comfortable rig she ran quickly home, jibing near the finish and standing on up the Swash, traveling at a great rate. Mr. Burgess turned a double handspring as she was timed at 5:31, having made the course in 3.57.07. The beat out, 12 knots, was made in 2h. 40m. or at the rate of 4½ knots per hour, while the run in was made in 1h. 18m., or at the rate of 9 knots per hour in a heavy sea and under double-reefed mainsail and working topsail. Katrina had been taken in tow by the Dalzell and lay at her moorings off Bay Ridge as the Electra passed up, her main boom lying on the deck. A new one will be fitted in time for a race on Saturday, but no race will be sailed to-day.

NEW YORK Y. C. ANNUAL REGATTA, JUNE 13.

IN spite of good weather and some exciting brushes at times the annual regatta of the New York Y. C. can hardly be called a success; the fleet, in point of numbers, was in no way as imposing as the importance of the occasion warranted, while the two most interesting events, the meeting between all the seventies and the first real race of the new forties, were completely spoiled by a series of mishaps. Of the two-stickers only half a dozen came to the line, Palmer, one of the handsomest and most imposing of the schooner fleet since her alterations of two years ago, with Dauntless only against her to make a battle in the keel class; Sea Fox and Grayling in the next class, Marguerite being classed with them for lack of a competitor of her own class; and last Agnes and Azalea in the fifth class. Miranda will not fit out this season, Mr. Hill being abroad; Montauk, though under way on Thursday, is long since out of all racing; and Sachem, only a short time since considered the second, if not the first of her class, was content to abandon the course with boats at davits in company with Mayflower. There are many who believe that Sachem can give her time to Grayling, with equal handling, and who would like to see the matter fought to a finish, but the "improvements" made in Sachem last winter, heavy mahogany, with elaborate carvings, even in the cabin ceiling, have done little to improve her speed. Her old cabin, plain pine and clean paint, was not only neat and shipshape, but light as well, and if she could not beat Grayling then she certainly will not now with her elaborate furnishing.

If Sachem was fast as a schooner Mayflower should be still faster under the same rig. The two models are nearly identical, the after bodies being built from the same moulds, but Sachem was made longer about the fore chains, being intended for the schooner rig from the first, while Mayflower was to carry but a single stick. Sachem's keel was cut away as much as possible on account of the shoalness of her home waters, while Mayflower had a very decided keel, afterward deepened by the addition of lead. Besides this she had originally more lead outside than Sachem, and has had the benefit of thorough trial and many minor improvements in the hands of Messrs. Paine and Burgess. Now that she too has donned the rig of a schooner she should do even better than her sister, and if well raced will no doubt help Sea Fox to hurry Grayling more than Sachem alone ever did. This race was the first that Sea Fox has sailed since her huge mainmast was reduced some 6ft. after the New York Y. C. cruise last year, and though she looks less rakish than of old she seems to travel as fast, or may be that the red parasol, which was visible on deck all day, has brought a change of luck. Although not a winner she sailed well and pushed Grayling hard all day, but the white schooner has a confirmed habit of winning that it will take a very fast boat and a very bright skipper to break her of. Marguerite was hardly in it with the other two all day, and did little to retrieve the record she made last year in the same race. In the fifth class only Agnes and Azalea entered, the former practically having a walk-over from Buoy 10, as Azalea fouled the buoy and was consequently out of the race, though she continued on the course.

The 70ft. class, or Class 3 by the New York rules, has lately assumed a more prominent position than it has held in the past four years, owing to the disappearance of its rival, the 90ft. class, and also to the coming races between its members and Valkyrie for the Paine Cup and private stakes, if not for the America's Cup. This is the first occasion that all of the class have met since 1887, and the turnout was very good, including Katrina, Shamrock, Bedouin, Titania, Gracie and Fanny. The three newer boats have already come in for considerable mention this year; Bedouin, however, has not yet raced. She is in the same trim as of old, the projected changes in the way of more outside lead and larger sails not having been made, and without them she is hardly good for more than third place in the class. Where she would be if sparred and ballasted in modern style, with all lead on keel instead of a third of it inside and on top of a big keel and keelson, is a very interesting question in view of her excellent record in the past. Katrina re-enters the race after a season of retirement with a new lead keel, a ton of 14 tons in the shape of a keel some 20in. deep, while her keel and gunboards are also new, and some changes have been made in the board. Both she and Fanny showed commendable spirit in facing such modern flyers as Titania and Katrina, but their place beside these boats was clearly shown on Thursday, when they served as whippers in of the fleet down to leeward. There was nothing especially exciting in the meeting of Hildegarde and Whileaway, though they had a private match to themselves; and in the next class it was a foregone conclusion that Clara would beat Bertie. However, the latter deserves credit for going in to make a race.

There is something instructive to those who extol the merits of mere size, and ridicule the idea of sport in any other than the largest class of schooners and sloops, in the fact that the whole interest of the greatest of the spring regattas is centered in the 70 and 40ft. classes, the latter a size that the New York Y. C. hardly recognizes. Though only five of the big fleet of forties came to the line, there were four new boats among them, two of which at least have attracted special attention. Mr. Burgess has had such a monopoly of the class for a whole season that the interest has not been as keen as it might be; but this year he will have several rivals, two of them being new men. In the present race besides his last year's boat, Nymph, in pretty good shape after a season's trial, he had two new craft, both keels, neither of which have been seen before. The steel Tomahawk has been sailing about the Sound for several weeks, stretching sails and testing gear, so that she went into the race in good condition. Maraquita, too, has been afloat for six weeks and has made the trip from Boston, so that Capt. Harry Haff, Jr., had her in fair form. Both are handsome boats of the latest type and carry all that craft of their length should risk. They are both white and similar in appearance beam on, the Tomahawk being 1½ft. narrower than Maraquita. Against the three Burgess boats were the new Smith boat, Gorilla, and the Gardner boat, Liris. Gorilla has been sailing for about a week and was in fair shape, though under all the disadvantages incident to a new boat; still she had good sails and all gear working properly. Her rig is larger than any of the Burgess boats, but even it was outdone by the Gardner craft Liris.

The latter boat has been greatly delayed, and when she was docked on Monday night she looked little like racing within three days. In spite of the delay in painting and bending sails that was caused by the continued rain, her energetic skipper, Captain Sloan, who has yet his laurels to win on this side of the water, hurried the work as much as possible, the mainsail was bent Wednesday night, part of the gear rove off, and a couple of hours before the start on Thursday morning she was under way down the Bay for a trial trip from Bay Ridge to Buoy 15, before starting in the race. Her windlass was still in the Custom House, head sheets were rove off while she was under way, the No. 1 jib was left behind, so No. 3 was set, and much of the gear was only rove off as it was needed. The silk club topsail was sent up, but as the halliards were not properly bent it was replaced by a jibheader, the wind, fairly strong from S.W., promising to freshen when outside the forts. Captain Sloan had never been over the course or sailed in the Bay, while his crew was a scratch one of amateurs and professionals. The rigging was partially set up while under way, and all was made as snug as possible in the short beat down to the line.

The course was from Buoy 15, just outside the Narrows, down the channel, turning buoys 10 and 8½, and out around the Sandy Hook Lightship, returning over the same course, 31 knots, only the forties turning the Scotland Lightship instead of Sandy Hook, cutting about 6 knots off of the distance. The full list of starters was:

FIRST CLASS KEEL SCHOONERS.

	Cor'd length.	Owners.	Allowance.
Dauntless	112.85	C. H. Colt	Allows.
Palmer	104.17	R. Stuyvesant	3 53

THIRD CLASS SCHOONERS.

Sea Fox	90.79	A. Cass Canfield	Allows.
Grayling	85.21	L. A. Fish	2 53

FOURTH CLASS SCHOONERS.

Marguerite	83.37	W. F. Burden	3 53

FIFTH CLASS SCHOONERS.

Azalea	62.12	E. Biunt	Allows.
Agnes	57.66	J. N. Winslow	4 08

THIRD CLASS SLOOPS AND CUTTERS.

Titania	74.30	C. Oliver Iselin	Allows.
Katrina	73.85	Auchincloss Bros.	0 19
Bedouin	72.15	Arch. Rogers	1 28
Gracie	71.94	J. P. Earle	1 37
Shamrock	71.63	E. Maxwell	1 51
Fanny	68.80	T. P. Fiske	3 54

FOURTH CLASS SLOOPS AND CUTTERS.

Hildegarde	63.75	J. C. Bergen	Allows.
Whilaway	57.59	G. F. Randolph	5 41

FIFTH CLASS SLOOPS AND CUTTERS.

Clara	54.28	J. C. Barton	Allows.
Bertie	52.08	Fred Gallatin	2 26

SEVENTH CLASS SLOOPS AND CUTTERS.

Liris		Samuel Mather et al.	Allows.
Nymph	44.55	F. W. Flint	. .
Gorilla		R. P. Carroll	. .
Tomahawk		E. D. Morgan	. .
Maraquita		Aug. Belmont, Jr.	. .

The start was ordered at 11 A. M., and before that hour the flagship, the handsome Electra, with Com. Gerry and a large party of distinguished guests on board, and with the regatta committee, Messrs. S. Nicholson Kane, Wm. E. Iselin and Chester Griswold on the bridge, anchored to the east of the buoy. After a little delay caused by the non-arrival of the club steamer, the gun was given at 11:14 for the preparatory. The wind was then moderate from S.W., with a strong ebb tide that made it a jam on the wind to weather buoy 10, some 6 miles down.

The sight from the Staten Island hills was a beautiful one, the sky clear and blue, the waters flashing in the sun, while the glossy black hulls, with here and there a bright strip of copper gleaming beneath them, shot rapidly about. The most noticeable feature, however, was the array of snowy canvas, out of all proportion to the tiny hulls beneath: Titania's glistening sails, Katrina's big clubtopsail above an acre of lower canvas, while the forties looked fully as large as Mischief and Hildegarde, in fact the new boats carry a sail plan in excess of Clara, though 13ft. shorter.

For once there were no laggards, every boat in the fleet was on the alert, and within the last minute seven or eight boats were making for the line. Capt. Sloan was bent on showing them an old country start, and though he had hardly held the tiller of his new craft for an hour, he spun her in and out among the larger craft, placing her close by buoy 15 in the last half minute, running along the line and going over on starboard tack as the smoke came from the gun. Captain Barr was not far away, and Clara was timed only 20 seconds after Liris, and then came the big ones, Sea Fox and Grayling but 10 seconds apart, then Katrina, Titania, with the rest strung out. Eighteen of the fleet crossed within the first four minutes, and no one was handicapped. Gorilla and Nymph were last. The times of the start were:

Liris	11 24 09	Azalea	11 27 15
Clara	11 24 38	Whileaway	11 27 18
Sea Fox	11 24 47	Marguerite	11 27 30
Grayling	11 24 57	Tomahawk	11 27 34
Katrina	11 24 57	Agnes	11 27 45
Titania	11 25 22	Dauntless	11 27 47
Fanny	11 25 59	Bertie	11 27 47
Gracie	11 26 09	Shamrock	11 28 48
Maraquita	11 26 52	Palmer	11 29 51
Hildegarde	11 27 00	Gorilla	11 30 55
Bedouin	11 27 13	Nymph	11 31 16

Hardly had she crossed the line when a loud report from Titania told that something had parted, and she bore away quickly to save her bowsprit, the bobstay having given way. Fortunately the stick held, but she was out of the race, all hands turning to and rigging a preventer, after which the second jib was set, and she jogged easily down the Swash to watch the race. Katrina was deprived of her chief rival, but she did not propose to give the *pas* to anything with two sticks in, no matter how large, and she flew along in front of the fleet, with Sea Fox and Grayling chasing her, the latter to leeward of her black rival. Clara and Liris held together very evenly for a long distance; Bedouin and Shamrock, both of whom had been in the middle of the fleet at the start, finally working up and robbing the two small fellows of fourth place, the honors of which they had about equally divided, Clara being the weather boat. Astern of the two came Hildegarde, pointing for Liris's weather, but her skipper would have none of it, out she luffed and the big sloop dropped back and took the leeward side, Palmer had started over 3m. astern of Dauntless, but before buoy 10 was sighted she had beaten that famous racer for the day. Well to leeward of the fleet were Gracie, Fanny, Azalea and Marguerite. Liris held a very good place for the first five miles, but as Captain Sloan was entirely ignorant of the course and tide she got into the strong ebb about the head of the Swash at a time when the wind fell very light, and so had to tack for the mark, the rest of the class gaining several minutes on her. The times at buoy 10 were:

Sea Fox	12 13 05	Gorilla	12 31 02
Grayling	12 13 35	Nymph	12 31 28
Katrina	12 13 50	Dauntless	12 33 07
Bedouin	12 18 10	Tomahawk	12 33 07
Shamrock	12 19 20	Maraquita	12 40 25
Clara	12 24 28	Whilcaway	12 41 15
Hildegarde	12 24 47	Marguerite	12 43 15
Gracie	12 26 35	Fanny	12 43 50
Bertie	12 26 35	Agnes	12 44 15
Palmer	12 27 15	Azalea	12 47 20
Liris	12 29 35		

Azalea fouled the buoy in trying to tack around it, but she did not mind a little thing like that and kept on her course with racing flag flying.

The breeze was very light now, and when sheets were slacked to port there was not enough weight in it to swing the booms off, Spinakers were now set to starboard, the tide helping the fleet, Sea Fox was leading with Grayling next, but Katrina was close to the pair, while Bedouin and Shamrock were doing better. The main fleet of the forties caught Liris at the turn, Gorilla and Nymph being the nearest to her with Maraquita some distance astern and Tomahawk between her and Nymph. Drifting out to Buoy 5 the latter boats closed up, and when off the point of the Hook all were close together. Liris had reset her clubtopsail and set a beautiful silk spinaker at Buoy 10, while Maraquita had a wonderful spinaker boom, which shot out of itself like the Japanese fishing rods which are extended by blowing in one end.

While the tiny fleet were drifting off the point of the Hook in apparent security, the huge Dauntless, worthy of her name and reputation, lumbered down squarely on top of the lot, every kite on board set and drawing. Maraquita's extension boom collapsed much faster than it had been shot out, as the "famous racer" wheared her and blanketed and fouled Tomahawk, the little fellow being saved from injury by the exertions of her crew, and then bore down on Liris, the latter luffing out across her. Finally she cleared the fleet and went serenely on her way, regardless of the anathemas heaped on her by the small fry.

The large boats outside the Hook had some wind now, and Grayling at last caught and passed Sea Fox. Bedouin and Shamrock indulged in the luxury of a luffing match, which landed the cutter hard on the Oil Spot, just outside Sandy Hook, where she lay for an hour, finally towing off when the tide made. The forties took the wind after Dauntless left them, Liris, the only one that started with a jibheader, having set her silk clubtopsail some time before. Tomahawk had now come up to her, and started to cross her bow from the leeward, but she more than met her match, and after a short struggle was well content to drop back. Nymph by this time was nearly abeam of Liris, but to leeward several lengths; Maraquita was directly astern of Liris, heeling heavily and dipping her bow in; Tomahawk was to leeward of Maraquita, also listing well down, while Gorilla was the last of the five. The struggle for the time was between Liris, the leader, and Nymph, just on her lee beam, and a beautiful fight it was, all five staggering under lofty spars and marvelous clubtopsails. Suddenly there came two reports from Liris, the topmast went out of her and immediately after the lower mast went about 20ft. above the deck, sails and spars going clear to leeward, and fortunately hurting no one. As she righted two of her Corinthian crew, Messrs. Duncan and Hills, went overboard to windward, canoe fashion, the former hanging on to a line. Mr. Hills swam clear of the boat and was soon left 50yds. astern, as she carried her way in spite of the wreck. Maraquita passed close to him and threw a life preserver, and in a few minutes the thirty, Saracen, which had been out all day following the race, dropped her boat and set him on board his ship. After the wreck was cleared a tug took Liris in tow for Bay Ridge. The immediate cause of the wreck was the failure of the weather spreader, a piece of steel tubing, which bent into almost a U shape. The lower mast would in all probability have stood had the shrouds been properly set up. The most dangerous of her rivals being out of it, Gorilla began to push the Burgess boats very hard, but while all the glasses in the fleet were turned on Liris, and before it was known just how serious her trouble was, Gorilla's topmast went over the side, also through the failure of a spreader. She turned to at once to clear the wreck, giving up the race and starting for home under lower canvas. The others were timed at the Scotland thus:

Nymph	1 29 57	Tomahawk	1 31 36
Maraquita	1 31 30		

Meanwhile the large craft had turned the Sandy Hook mark, the times being:

Grayling	1 19 30	Katrina	1 22 42
Sea Fox	1 21 30	Shamrock	1 31 15

Katrina had gained 5m. on Shamrock since they were timed at Buoy 10, while Grayling had made 2½m. on Sea Fox. The

fleet reached in with a moderate breeze, the leaders meeting the forties at Buoy 5, where they were timed:

Nymph	2 04 10	Maraquita	2 08 05
Grayling	2 05 00	Tomahawk	2 08 22
Sea Fox	2 06 05	Katrina	2 09 23

When on the wind inside the Hook Katrina took the lead, Sea Fox making up a little on Grayling. The following times were taken at Buoy 10, but are not absolutely correct, owing to the position of the boats:

Katrina	2 33 18	Shamrock	2 39 53
Grayling	2 33 57	Tomahawk	2 41 04
Sea Fox	2 35 26	Maraquita	2 42 14
Nymph	2 36 35		

On the last leg of six miles there was a very pretty struggle between Katrina, Sea Fox and Grayling. Coming near buoy 9 which was to be left on the weather side, Grayling, the leeward boat, held her luff, forcing the other two on the buoy. Sea Fox barely succeeded in establishing an overlap on Katrina in time to hail for water, Katrina in turn hailing Grayling. Sea Fox bore away on Katrina, her headsails touching the sloop, and the latter had to bear off so far that her boom jibed, swinging aboard of Sea Fox. As Grayling gave them room the pair separated, Sea Fox running to windward of Katrina and then taking a lead of Grayling, which she held to the finish, though losing on corrected time. Tomahawk and Maraquita wasted a good deal of time in useless luffing matches inside the Hook, while Nymph wisely went on her way, beating them very badly. The official summary is:

FIRST CLASS KEEL SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Dauntless	11 27 47	3 33 00	4 05 13	4 05 13
Palmer	11 29 51	3 27 50	3 58 05	3 54 48

THIRD CLASS SCHOONERS.

Sea Fox	11 24 47	3 16 57	3 52 10	3 52 10
Grayling	11 24 57	3 17 46	3 52 49	3 49 56

FOURTH CLASS SCHOONERS.

Marguerite	11 27 30	3 39 26	4 11 56	4 08 03

FIFTH CLASS SCHOONERS.

Azalea	11 27 15	3 57 06	4 29 51	4 29 51
Agnes	11 27 45	4 03 50	4 36 05	4 31 57

THIRD CLASS SLOOPS AND CUTTERS.

Titania	11 25 22	Disabled.		
Katrina	11 24 57	3 19 15	3 64 18	3 53 59
Bedouin	11 27 13	Grounded.		
Gracie	11 26 09	3 41 25	4 15 16	4 13 39
Shamrock	11 28 48	3 26 45	3 57 57	3 56 06
Fanny	11 25 59	3 41 05	4 15 06	4 11 12

FOURTH CLASS SLOOPS AND CUTTERS.

Hildegarde	11 27 00	3 44 58	4 17 58	4 17 58
Whileaway	11 27 18	3 57 03	4 25 45	4 24 04

FIFTH CLASS SLOOPS AND CUTTERS.

Clara	11 24 38	3 51 06	4 26 28	4 26 28
Bertie	11 27 47	4 08 07	4 40 20	4 37 54

SEVENTH CLASS SLOOPS AND CUTTERS.

Nymph	11 31 16	3 36 38	4 05 22	. . . .
Gorilla	11 30 55	Lost topmast.		
Tomahawk	11 27 34	3 40 10	4 12 36	. . . .
Maraquita	11 29 52	3 41 44	4 14 52	. . . .
Liris	11 24 09	Dismasted.		

Winners—Schooners, Class I.: Palmer beats Dauntless 10m. 25s.
Schooners, Class III.: Grayling beats Sea Fox 2m. 14s.
Schooners, Class V.: Agnes.
Sloops, Class III.: Katrina beats Shamrock 3m. 7s.
Sloops, Class IV.: Hildegarde beats Whileaway 6m. 6s.
Sloops, Class V.: Clara beats Bertie 11m. 26s.
Sloops, Class VII.: Nymph wins, Tomahawk second. Tomahawk and Maraquita not measured.

NOW FOR A SPARMAKER'S TRUST.

THE chances are that the present season will prove to all the necessity of a change in the rules which will encourage, or at least permit a reduction of the outrageous sail plans now carried on all racing craft; but in the meantime there is a bounteous harvest ahead for the sparmakers; and now, if ever, is the time for the successful organization of a sparmakers' trust. The winds thus far have not been specially heavy, but the list of casualties is something unusual in the ordinary run of the spring racing. Titania has carried away the end of her bowsprit, Gorilla and Banshee have both lost a topmast, while Liris has already spoiled a topmast, lower mast and topsailyard, and Katrina a boom. Kathleen's bowsprit we do not include, as it went in a collision. This is but the beginning, and while we do not wish to prophesy evil we look for more masts to go before the question of supremacy is decided in the 70, 40 and 30ft. classes, to say nothing of smaller spars. The fact is that the whole fleet is and must be, grossly over-rigged, the only hope for better things which we have thus far been able to discover being in the performance of little Minerva on Saturday in which perfection of form, a reasonable amount of power for the length, and a moderate sail plan won from the larger and more heavily rigged boats in both light and strong winds. If Minerva can repeat her performance throughout the season, or even make a good record in her class, she will do much to prove the practicability of a desirable type of racing yacht under the present rules. If she fails, the other hope is that the two most powerful boats in the class, Liris and Gorilla, may beat the less extreme class, such as Nymph, Verena and Maraquita. In this event the only way to beat them in turn the following season will be to outbuild them, and in the case of Liris at least this cannot safely be done, as she has all the power and sail that is practicable on 40ft. In such a case it is likely that a change of the rule will be welcomed by all, and we shall see the present limits to length thrown down, and a much wider choice of dimensions offered to the designer than he has ever before enjoyed. The spar makers are not the only ones who come in for a prosperous season, the shipsmiths share it with them, as the gear is strained to an extent that has never before been seen. One curious incidental effect is likely to be noticed this year, the appetites of the spectators are apt to be whetted to such a degree that they will not be satisfied by the ordinary brushes and incidents of the old regattas, with perhaps a broken topmast thrown in by way of a *bonne bouche;* but nothing less than a total wreck will prove acceptable.

GIVE THE LITTLE FELLOWS A CHANCE.

SOME flagrant instances of the disregard of the moral as well as well as the legal rights of the owners of the smaller craft have occurred during the late races, the worst being the conduct of the big Dauntless, 112ft. l.w.l., in running in among the 40ft. class while the latter had no steerage way, there being very little wind, and that all killed by Dauntless's kites. The fact that she, too, was in the race is no excuse for spoiling the sport and imperilling the safety of the small boats. In the Atlantic Y. C. race on Tuesday the large schooner Fearless failed to give way when on the port tack and took the bowsprit out of Kathleen, a 30ft. boat, also in the race and then leading her class. The man on the bowsprit end, Mr. Brown, had a very narrow escape from serious injury. The names of these boats suggest the query whether they would be equally dauntless and fearless were the positions reversed, and they smaller instead of much larger than the other boats. On Wednesday of last week the schooner Social, while becalmed, was run into by the steamer Long Branch, with an excursion barge in tow, in Flushing Bay. We do not know who is to blame in this case, but as the yacht is reported as in stays and becalmed, it was the steamer's duty to keep clear.

RHODE ISLAND Y. C.—June regatta, June 13:

CLASS 1.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Millie	44.10	12 22 35	2 37 54	2 15 19	2 15 19
Peri	38.09	12 23 55	2 42 25	2 18 30	2 11 28
Mabelle Swift	40.09	12 21 04	2 50 08	2 29 04	2 24 42

CLASS 2.

Diamond	26.02	12 25 54	3 09 24	2 43 50	2 43 20
Mascot	26.05	12 26 02	3 15 27	2 49 25	2 49 25

CLASS 3.

Rowena	28.11	12 31 42	4 23 00	. . . .	. . . .
Louise	27.00	12 31 40	3 16 44	2 45 04	2 41 24

Jaunty	17.05	12 41 59	2 28 36	1 46 27	1 45 57

Winners of prizes—Class 1: Peri first, Millie second. Class 2: Diamond first. Class 3: Louise first, Faust second. Class 4: Edna first. Class 5: Vera first, Jaunty second, Vision third.

BROOKLYN Y. C. ANNUAL REGATTA, JUNE 15.—The annual regatta of the Brooklyn Y. C. was sailed on June 15 on the Lower Bay, the courses being: For Class 1, cabin sloops, 25ft. and under, from the club house in Gravesend Bay around Southwest Spit Buoy and return; Class B, cats from 20 to 25ft., around Buoy 7 on the West Bank, and Class C, cats under 20ft., around Buoys 11 and 15. The wind was S.W., with a squall from the north late in the day. The times were:

CLASS B—CATS BETWEEN 20 AND 25FT.

	Start.	Finish.	Elapsed.
Siren	12 51 52	Not timed.	
Homing	12 51 15	Not timed.	
Manhattan	12 51 52	5 05 55	4 14 03
Josephine	12 52 04	5 35 18	4 43 14

CLASS 1—CABIN SLOOPS 25FT. AND UNER.

Union	12 53 04	Not timed.	
Rhada	12 53 34	Not timed.	
Vida	12 52 14	5 49 07	4 56 53
Irene	12 52 43	Not timed.	

Carrie won in Class C.

THE MERLE.—Oswego, June 11.—*Editor Forest and Stream:* To correct wrong impression conveyed by a sensational article going the rounds of the daily press yesterday regarding Merle having been driven ashore during the storm of Sunday last, I would say that while at anchor off Pleasant Point, a resort some ten miles below here, and after the heaviest of the storm was over, by the parting of what has proved to be a very poor chain cable the Merle was forced into shoal water and grounded before sufficient canvas could be made to insure way enough to stay her. She was released without injury and at regular moorings off our club house by 10 P. M. Sunday. I trust if any mention is made of the matter in the FOREST AND STREAM you will state the facts as above. The Merle will no doubt be delivered to her new owners within a few days.—ALLEN AMES, Owner of Merle.

THE WRECK OF THE MALTA.—*Editor Forest and Stream:* The cabin yacht Malta, reported in your issue of June 6 as capsized, was an old yawl 22ft. long raised on, purchased by some boys for $28. She did not capsize, but dragged her anchor and went ashore and broke up. Be gentle with the miserable "centerboarders" and let them die a natural death. They have sins enough to answer for without being belied.—R. G. W. [Our information was taken from a local paper, in which it was stated that the yacht capsized. Our correspondent being on the ground, is probably better posted.]

VOLUNTEER.—The New York *Sun* of Sunday last under the heading "The Volunteer Crippled, she is Warped and Bulged, and will not Race for the Cup," published a sensational story to the effect that Volunteer is in such a condition that it would not be possible to race, and that Gen. Paine will not sell her or allow her to be used in the defense of the Cup. The whole story is evidently a malicious fabrication, as Volunteer is in better condition for racing to-day than two years since. Capt. Haff has worked constantly to perfect her bottom, and it is now in good condition for painting, which it was not when she raced Thistle.

ATLANTIC Y. C.—The annual regatta of the Atlantic Y. C. will be resailed on June 21.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

JUNE.

22. N. Y. C. C. Annual, Staten Island. 29. Corinthian Mosquito Fleet, Larchmont.

Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

TORONTO C. C. NOTES.

Editor Forest and Stream:

In casting about me for the wherewithal to put into the annual spring notes, methought some of your readers might appreciate a peep at some sketches which Mr. J. D. Kelly, our club artist, hung on the bulletin board a few weeks ago, to the amusement of many and the confusion of one or two. The artist has taken for his first general sketch a short peep into the locker room just at the time when the spring swapping of canoes, etc., is going on. Novice No. 1 proudly picks up his new purchase as he hands over the necessary funds, while the chap who sold her can scarcely repress the diabolical grin which gradually illuminates his countenance as he counts the stamps and pictures to himself the novice out for his first cruise, counting stars through the chinks in the sides of his new purchase which has been warranted sound in wind, limb and feature. The open canoe paddler, as he slobs on the fresh spring coloring is no doubt calculating the cost of a lazy-back, carpet and rep cushions, for has he not all winter been yarning to his numerous lady friends about the pleasures of canoeing in an open craft with a lady friend, going over to Hanlan's Island in the evening to listen to the regimental bands playing the sweetest of airs, and then the quiet walk home in the twilight with his best girl, but anon a cloud passes over his brow as he suddenly remembers that the price of McConkey's ice cream is now up to twenty cents a dish and he'll have to pass that blessed place every time with his lady friend whose capacity has never been gauged short of two dishes. We leave him figuring whether he hadn't better take a street car every night, when they'll be whisked up town before his friend has time to make alluring remarks about the heat, etc.

No. 3 is a different sort of a chap, who never thinks of the other sex (unless he wants a button sewed on or a new flag made), but as he yanks up the sail for the forty-seventh time he reaches the conclusion that she ought to put his new Orion up into about first place.

Sketch No. 2 pictures the canoeist as he is "abroad," *i. e.* when he has his shoes on together with the rest of his clothing. The sketch of the chap seated in the stern is a very good picure of our genial vice-commodore, D. B. Jacques, who gathers his charming lady friends around him each Saturday, and by example and precept tries to make the younger members look after their lady friends. (The point of the sketch is seen when it is remembered that Hyla's craft barely holds himself, and he is never found in young ladies' company if he could get out of it by running half a mile or so.)

No. 3, the racer, sometimes called the skinflint, the skipper of which it strikes me would look better with a little more breadth fast under his belt. The thing flapping around at the end of the string is not a baby rattle or a pair of eyeglasses, but a large combination tool knife which the skipper is addicted to carrying *à la* Baden-Powell. I do not know whether the artist intended any reflection to be cast on those feet when he placed them outside the canoe or not, but there'll be a row if any one intimates that they won't go inside a 30in. craft. Some A. C. A. members will now be able to see why Mac is sometimes a vigorous kicker, but what is a fellow to do when he is endowed with 14 or 15in. of feet? Use 'em by kicking occasionally, or hang 'em up to get rusty? The lines of the canoe are taken directly from the original.

In No. 4 old A. C. A. members will all recognize No. 66, Vice-Com. Tyson of the Northern Division. As he complacently sits on the spot where man was intended to sit and views with much satisfaction the two bags filled with his never-to-be-left-behind-in-a-cruise companions, his mind must wander back to the old times when he was a novice at Crosbyside and knocked around with a ring and pin lateen; and, by the way, he has knocked about at the general A. C. A. or Divison meet every year since and though he has "evoluted" from the ring and pin, he still sticks to his early love, the good old Isabel. The inquiring novice always asks the skipper what he carries in those two bags, but he never does it a second time, because by the time Isabel has finished expatiating on the great advantage of carrying prunes the aforesaid novice is wishing he hadn't opened such a cumbersome question, and tries to head him off by remarking how nice the Isabel looks with her new gear and fresh coat of varnish.

No. 5 is the photographer of the club, but which one I am unable to determine, as he got his head under the rag before I had my eye on him. Messrs. Hugh Neilson, I. L. Kerr, I. E. Brown and Mr. Matheson may all be seen shooting around with their tripods at almost any of the club cruises.

Immediately above is Johnson trying the standing-up position in the 20in. Maggie. He thinks he can shake more speed out of her in that position; but if there is no rule against that kind of thing, some of us think there ought to be; it's wusser 'n standing sails.

The chap whom Johnson is heading for is Secretary-Treasurer Weston, he who in a gentle voice, like Neidé of old, remarks "Have I got your dollar?" but unlike Neidé the beggar is not satisfied with a dollar, but takes about a whole year's salary from some of us before we get a receipt in full.

Mr. Secretary can always be recognized as soon as his head looms up on the horizon, as he is usually accompanied by his full grown whiskers and great big pipe, the capacity of the bowl of which has caused many a smoker of fine cut to grunt as he noticed the quantity of Pace's best it took to fill it.

No. 8 is not a sketch of the village blacksmith, nor of an umbrella mender either for that matter, but is a good cut of Mr. A. M. Rice who, when not dickering in real estate, is continually being imposed upon by his friends, who want little brass fixings made, etc., etc. Diana is credited with having more ideas of brass fixings floating around in his upper works than any ten members around the club.

No. 9, the skipper of the Ce-ce-be, is the gymnast of the club. Mr. A. H. Mason, who is alwas called upon to do the antics on regatta day. One of the best antics done by him last year was keeping his canoe right side up with care and winning the Orilla cup when fourteen of us were swimming around after hatches, paddles etc., and like the dove of old, hunting for a dry and steady spot whereon to set our feet.

Mr. Henry Wright, in No. 10, is not addicted to wearing the airy costume except on very special occasions, St. Patrick's Day etc., but though he lays aside the kilts he always carries the accent of his fathers around with him, and is ready to embrace at any time any chap who can work off about half a dozen words of "Ga-a-lic" or says he has lately been to the land o' oatmeal and scons. Henry's hobby is single-blade paddling and bull pups.

Last but not least (if you measure him long ways) comes Rear Com. A. Shaw, who by his intimate friends is called "The Chief

This very appropriate name has been given him on account of his ability in handling that well-known canoeists' dish, ham and eggs. (He probably won't now regret the enormous quantity I once ate when he innocently offered to fill me with breakfast. It is a year or two ago, but I can almost taste the sweet flavor of it in my mouth, once tasted never to be forgotten.) The Chief was always a handy fellow to have around; as a small boy his brothers used to utilize him when they went on foraging parties to the pantry for reaching the jam off the top shelf, and up to date he has the record of being the only man who can stand in his canoe and monkey with his topmast.

Canoeing! Yes, canoeing is booming in Toronto. The membership of the club is now up in the nineties and still coming in, while one of the rowing clubs has forty odd canoes in its racks, and the yacht club is full of 'em.

One of the latest craft to arrive is the 30ft. open canoe to hold 16 paddlers; she looks well, all keeping stroke, and shoots along at a great rate. Vice-Commodore Jacques is captain of her crew, which number from 1 to 16, the writer, on account of the size of his feet, is last on the list, so as he can kick the small boy who tries to hang on, I guess.

The Boreas has changed hands, did you say? She is still in the club, though, while Mr. Neilson knocks around the Muskoka lakes with a craft large enough to hold wife and family.

Among the new craft which are expected to be speedy is a new Hyla from the Ontario Canoe Co., and one of the same model for W. Smith. The secretary now sails last year's Hyla. Mr. Wilton Morse now spins around in the '88 Mac under the name of Gwen, while her former owner is getting a new article from Wm. English, of Peterboro. W. A. Leys has disposed of the Dawn to Colin Fraser, Northern Division purser, who is re-rigging her. Leys has dropped sailing for a season, and comes out as a single-blade paddler in a new open canoe built by Geo. Warria, the shell builder, 16×30×12, and weighs 25lbs. The first sailing race of the season comes off June 15. A committee will handicap all who can hoist a rag. MAC.

TORONTO, June 7.

CORINTHIAN MOSQUITO FLEET, JUNE 8-10.

THE first regatta of the Corinthian Mosquito Fleet was sailed off Horseshoe Cove, Larchmont, on June 8, with an extremely light air, though at no time did the wind drop out. There were fifteen entries received by letter, but light wind and various reasons prevented several from being present. The course for cutters was from starting line—between a stakeboat and the flagship Hyacinth—to Gangway Buoy and return, distance seven miles (short enough for a good breeze, but too long for the breeze that was blowing, for they did not finish until after dark). The course for other classes was a triangle formed by Flagship No. 2, spar buoy on Hen and Chickens Reef and a stakeboat off New Rochelle, sailed twice over, distance five miles. The starters for Gangway Buoy were cutters Nanita and Roamer, sloop Ianthe, chased fifteen minutes later by the schooner or yawl Unique, who was delayed in coming from Greenwich by the light wind. The Unique raced for fastest time over the course. The starters were:

	L.W.L.
Roamer, cutter (winner)	18.00
Nanita, cutter	18.02
Ianthe, sloop	18.10
Unique, yawl	18.09
Lestris, yawl (winner)	13.08
Waif, yawl	12.09
Gnat, yawl	14.07
Viterse (winner)	15.00
Alpha	16.08
Qui Vive, canoe (winner)	16.00
Fish, sharpie	13.00

The special regatta of the Corinthian Mosquito Fleet on June 10 for the two cups presented by the Larchmont Y. C. was sailed in a steady sailing breeze from S.S.W. over a triangular course formed by striped spar buoy No. 2, off Larchmont, spar buoy No. 2, on Hen and Chickens, and black spar off Constable Point, twice round, making total distance 5 miles.

Mr. Osgood, of the steam yacht Norwal, very graciously tendered his naphtha launch to Mr. Augustus Monroe and Mr. Russel Henderson, who kindly officiated as regatta committee for the Mosquito Fleet.

Although the fleet numbers 20 boats only 7 started in this race. The interest of the day was in the yawl class, Lestris, Waif and Gnat, as the other four did not class and only raced for fastest time over the course, which was easily won by cat Belle, outsailing everything. The Lestris was sailed by Com. Thornton Smith, her sails being handled by her owner, Dr. Ledyard. The Waif was sailed by her owner, L. D. Huntington, Jr., and the Gnat by her owner, Vice-Com. Clapham. The Lestris chased the Waif once and a half around and gained enough down the wind with spinakers out to starboard on the second leg to establish an overlap just at the turn of the black buoy. This gave the Lestris a lead, which back on the wind, with both men lying flat on deck, she increased, so making one shore hitch to cross to two tacks of the Waif, and finally winning.

	Start.	Finish.
Lestris, yawl, Dr. T. Ledyard (allows 30s.)	1 32 00	3 34 38
Waif, yawl, L. D. Huntington, Jr.	1 32 00	3 56 52
Gnat, yawl, Vice-Com. Clapham	1 32 00	3 40 19
Belle, cat, J. M. Williams	1 32 00	3 09 03¾
Unique, yawl, F. B. Jones	1 32 00	Broke down.
Surprise, cat, Mr. Murray	1 32 00	Didn't finish.
Surf, J. & M., Wm. Hicks	1 32 00	3 28 44

IANTHE C. C. SPRING REGATTA, JUNE 8.

WHEN the hour arrived for the first event of the spring regatta of the Ianthe C. C. on June 8, Mr. W. R. Burling in the Clara R. and Mr. W. J. Stewart in the Scoot were awaiting the starting signal for Class I., paddling, which was won by Mr. Burling. Prize, a canoe lantern.

The sailing races were next in order but had to be postponed on account of the absence of that most important factor, wind. Class IV., paddling, record event, was won by B. Fredricks in the canoe Bachelor with L. B. Palmer in Neola a close second. Prize a camp table set in case.

The junior honors in paddling Class IV. were contested by O. T. Conner of the Ianthe and F. A. Phillips of the Brooklyn C. C. Phillips led more than half the distance, but was passed by Conner, who won by three lengths. Prize, a book.

The starters in the standing paddling race were C. V. Schuyler of the Arlington C. C. in Atalanta, W. P. Dodge of the Ianthes, canoe Ianthe, B. Fredericks, Ianthe, canoe Bachelor, and O. T. Conner, Ianthe, canoe Anita. The race was a close one, the contestants finishing in the order named. The prize was a tobacco pouch.

One of the most interesting events was the tandem paddling, in which four crews started. They were T. Collins and W. Collins of Bayonne Rowing and Athletic Club, Canoe Water Witch; W. J. Stewart and L. B. Palmer of the Ianthe, canoe Neola; W. R. Burling and J. Duguid, canoe Nilo; B. Fredricks and O. T. Conner, canoe Bachelor. After an exciting race the Collins Brothers won with the other crews close behind in the order named. Two handsome silk flags were the prizes.

A tug of war in canoes was the next event, and created considerable enthusiasm. The contestants were all members of the Ianthe C. C. Burling and Duguid in the Nilo drew Fredericks and Conner in the Bachelor about 15ft. in one minute. A folding anchor and a canoe lantern were the prizes.

By this time the wind made its appearance, though in a very uncertain quantity, and the sailing record and sailing juniors were started together with the following entries: P. F. Hogan, Brooklyn C. C., in canoe Wind; F. A. Phillips, Brooklyn C. C., canoe Cyrus, which is an improved Eclipse; G. P. Douglass, Ianthe C. C., canoe Nenemooska; L. B. Palmer, Ianthe C. C., canoe Nipsic; W. P. Dodge, B. Fredericks and J. T. Conner, Ianthe C. C., and F. McLees, Rutherford C. C. There seemed to be some affiliation between the canoe Wind and the wind itself, perhaps they were sweethearts, but Hogan seemed to woo them both very successfully, for he came in first, with Douglass not far behind. Phillips soon came along and took the junior prize, a handsome banner. Hogan and Douglass took first and second prize flags for the record race respectively. The unset sailing race was won by Palmer with Hogan a close second. The evening was spent merrily with supper, songs, etc.

ANSWERS TO CORRESPONDENTS.

V. A. N.—The law was that of Wisconsin.

F. C. C.—The fishing in Lake George is chiefly for lake trout and black bass.

H. P., Hokendauqua, Pa.—Bird-lime is made by boiling down linseed oil. It can be used for the capture of English sparrows.

C. G., Rye, New York.—Will you advise me where I can procure some mallard eggs? Ans. Write to Mr. Fred Mather, Cold Spring Harbor, N. Y.

Here is an item from the Hartford *Times*, which shows how the dog law works: "It is a serious matter to befriend a dog in New Haven, especially if the friendless brute takes a notion to follow its benefactor. Michael H. Reilly, a jeweler who recently moved to town and lives on Lafayette street, several days ago threw a piece of meat to a wandering dog. Since then he has several times tried to drive the dog away. On Monday he was charged in the City Court with keeping an unregistered dog. He told this story and put on a witness to corroborate. Judge Pickett said he was within the law and fined Reilly $1. The latter appealed."

The little five-year-old son of H. C. Shaw of Gray's River was missed from his home a few days ago and could not be found. Just as his parents were becoming alarmed he came toddling in with a string of forty-eight fine trout which he had caught in Crooked Creek.—*Vancouver (Washington Territory) Independent.*

THE NEW CATALOGUE of sporting goods and articles for in and outdoor pastimes, issued by Messrs. Peck & Snyder, is in many respects a remarkable volume. It contains descriptions of all sorts of implements and toys, and everything from a bicycle to a base ball bat, from a fishrod to a toy fire engine, is figured in it. Parents and guardians are recommended not to let the youngsters get hold of this book unless they are prepared to be teased to death. Price 25 cents.

BEECHAM'S PILLS act like magic on a weak stomach.—*Adv.*

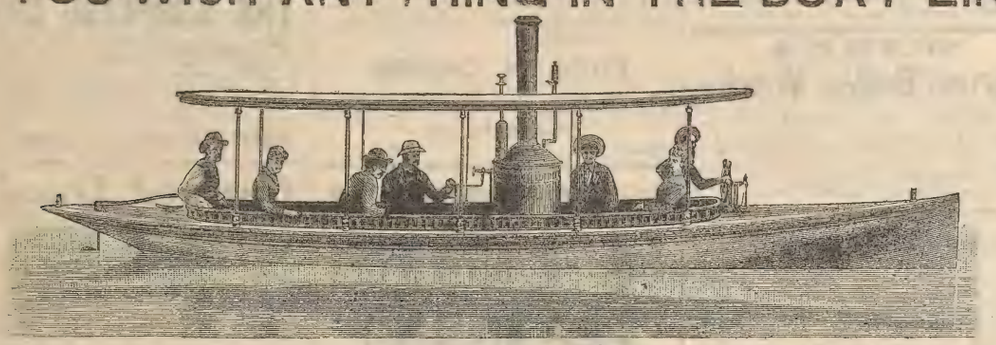
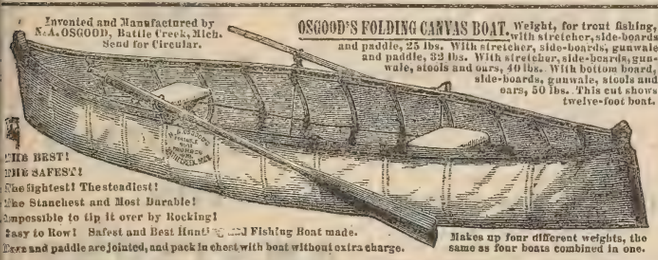
Yacht and Boat Builders, etc.

THE ONLY NAPHTHA LAUNCH.

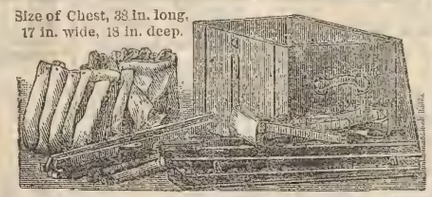


300 Already in Use Without a Single Accident.

The only launch built that does not require a Licensed Engineer. We have built more Naphtha Launches during the past three years than all the other launch builders in the United States combined, thus proving the popularity of Naphtha as a motive power. Forty-two of the leading yachts carry them as tenders. Fifty launches from 18 to 50ft. on exhibition, furnished and ready for immediate delivery. Send 5-cent stamp for new illustrated catalogue and read the many testimonials.



TAKE SIXTH AV. L ROAD. **GAS ENGINE & POWER CO.,** Morris Dock, New York City, One Station above High Bridge.



IF YOU WISH ANYTHING IN THE BOAT LINE

It will pay you to correspond with us, as we build the greatest number and variety of boats of any one in the country. Small Launches of every description, burning coal, wood or oil. No licensed engineer required. We carry a stock of from 500 to 1000 boats, from a canoe to a steam launch. Send 15 cents in stamps or silver for the finest boat catalogue ever published. Over 150 illustrations.

R. J. DOUGLAS CO., Waukegan, Ill., U. S. A.

The above is a view of the Boat in its compact form, showing Boat folded, Bottom-Board, Camp-Stools, Gunwale, Stretcher, and Packing Chest. Oars and Paddles are jointed and packed with Boat in Chest.

THOS. H. CHUBB,

The Fishing Rod Manufacturer,

Post Mills, Vt.

(Mention this paper).

No Chemicals.

W. BAKER & CO.'S

Breakfast Cocoa

Is Absolutely Pure,

and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ABOUT GLOVES.

When you are buying **gloves,** kid or dogskin, for driving or street wear, remember that there is such a thing as a price that is too **cheap.** It is best to pay a fair price and get good gloves like **Hutchinson's.** They are made from selected stock in the best manner and are warranted to be the most serviceable made. If you want to know more about gloves in general and Hutchinson's gloves in particular, enclose stamp for the book "ABOUT GLOVES." No matter where you live or what you do it will interest you. It gives a history of gloves and illustrations of their use, prices of the different styles and qualities, directions for measurement and ordering, also testimonials from those who **know the value** of Hutchinson's gloves. **Established 1862.**

ANSWERS TO CORRESPONDENTS.

THE CONTRADICTORY CROW.

THERE have been protracted newspaper discussions of the good and bad qualities of the crow; and every once in a while the bird is up for discussion in county farmers' societies and State legislatures. The Maine Legislature gave a long hearing to the crow's friends and enemies last winter, and finally passed a bounty law, which is reported to be now effecting a decided decrease in the ranks. The question of the crow's comparative usefulness and destructiveness is one that requires a more careful and comprehensive examination than is within the compass of any individual or local society; and the topic has with reason been taken up by the Division of Economic Ornithology and Mammalogy of the National Department of Agriculture. In the annual report for 1888, which is now before us, Mr. Walter B. Barrows gives the results of the investigation so far as it has gone. The data acquired are as yet insufficient for determining beyond dispute whether the crows should be considered destructive vermin and destroyed, or whether they should be protected.

Friends of the crow claim for it that it destroys insects and field mice and eats carrion. These points are conceded in its favor. The charges against it are that it destroys young grain, particularly Indian corn, on first coming up, the ripe and ripening corn and other grain, various other vegetable products, the eggs and young of poultry, and the eggs and young of wild birds.

To determine what consideration should be given to these various contentions the Department has undertaken the task of a systematic examination of a large number of stomachs; and from various parts of the country the material has been sent in for this purpose; but the examination has not yet progressed so far as to afford ultimate conclusions.

One of the most interesting discoveries brought out by this dissection of crows' stomachs is that of the birds' agency in distributing noxious seeds. The berries of the poison sumach and the poison ivy are greedily consumed by them. Stomachs of crows taken in every month from September to March, and coming from different localities from Massachusetts to Florida, were found to contain sumach and ivy seeds, in proportions which lead to the conclusion that the consumption must be enormous. The berries of both species cling to the stem throughout the winter, and it is thought that their dissemination by the crows must be carried on even when the ground is covered with snow.

It is a well known fact that certain seeds germinate more rapidly for having passed through the digestive organs of birds and other animals. To determine whether this was true of the poison ivy and sumach seeds eaten by the crows, experiments were made with seeds taken from the great roost in the Arlington national cemetery. These were found to have preserved their vitality and to germinate more quickly than seeds taken from the vine. This furnishes a new count in the indictment against the crow, that he is spreading broadcast the seeds of these vegetable pests.

The conclusions drawn by the Division from the study of the crow question so far as it has been carried are these:

I. Crows seriously damage the corn crop and injure other grain crops usually to a less extent.

II. They damage other farm crops to some extent, frequently doing much mischief.

III. They are very destructive to the eggs and young of domesticated fowl.

IV. They do incalculable damage to the eggs and young of native birds.

V. They do much harm by the distribution of seeds of poison ivy, poison sumach, and perhaps other noxious plants.

VI. They do much harm by the destruction of beneficial insects.

VII. They do much good by the destruction of injurious insects.

VIII. They are largely beneficial through their destruction of mice and other rodents.

IX. They are valuable occasionally as scavengers.

To this it is added that "the careful examination of large numbers of stomachs, and the critical study of the insect food of the crow, may change materially the present aspect of the question; but so far as the facts at present known enable a judgment to be formed the harm which crows do appears to far outweigh the good."

PHASES OF GAME LEGISLATION.

WE report in another column the county ordinance adopted by the Oneida county, N. Y., supervisors forbidding the exportation of game killed in that county. A bill to this effect was passed by the last Legislature, but Governor Hill vetoed it. The New York law gives county supervisors power to increase the protection of game within their jurisdiction, and the Utica Fish and Game Protective Association have thus secured by local enactment what they failed to obtain at Albany. The intent of the new regulation is to shut off the marketing of game birds taken in Oneida county. Other counties have like laws with a like purpose, and in several instances the results have shown that the end is attained.

As an example of the evil we adverted to last week, the damming of rivers and streams without provision for the ascent of fish to their spawning beds, take the Hudson River. In the dams at Mechanicsville and Northumberland there should be fishways for the salmon. A bill to provide for their erection, in the last Legislature, failed to reach Governor Hill, and all because of party politics.

The notion is continually cropping up that the solution of game protection in this country is to be found in national legislation. State laws have in many respects proved defective and worthless; and the feeling appears to be to appeal to the general Government for a national law supposed to be more potent, because it is national, perhaps. We question whether any help is to come from Washington, even if Congress could constitutionally legislate on the subject. If we cannot enforce State laws, we could not enforce national laws. Advocates of game bills in Congress are on the wrong track.

Another favorite panacea with some is the national sportsmen's convention scheme, which means that delegates from different States are to come together, hold a meeting and pass resolutions. The resolutions have been adopted and promulgated more than once already, and that has been the end of it. And it will be the end of other national conventions and other sets of resolutions.

As a matter of fact if game is protected it must be protected by the earnest purposes and the active efforts of home men and measures. The State game and fish protector system, with wardens or protectors in each district, county or town, is the machinery which has been proved and is proving itself effective. We should look to perfecting this system, and to building up local public sentiment for its support, rather than to boom national conventions which can never do any more than to resolve, or than to besiege Congress for national legislation.

SNAP SHOTS.

IT is not a creditable picture; it is in truth a disgusting one, which our Macon, Ga., correspondent draws of the fishing practiced in that vicinity; and the more speedily the residents there take measures to abate their heathenish ways the better for the fish and for their own manhood. Georgia is the most progressive State of the South; her material resources are developing with great strides; her people are prosperous; but no people can afford to squander such a natural source of wealth as is contained in Georgia waters; it is folly, and folly on a tremendous scale. With respect to caring for her food fish supply Georgia is sadly behind the times. When the State comes to repair these wasted resources it will be found necessary to expend large sums of money in restocking waters which ought have been kept well stocked at nominal cost if the natural supply had been drawn on with discretion. This is the hard common sense aspect of the fish question; there is no angler's sentiment about it; but it appears to be a phase of common sense which can be learned only after foolish wastefulness has made its acquirement an expensive educational process.

These Georgia fishing methods remind us of a story "Al Fresco" told us last spring of a fisherman in the North Carolina mountains who set out for a record. He was an angler from town, that is to say he had all the outer appurtenances that go to make an angler—rod, reel, fly-book, creel, and dress the latest style of angling suits. He made his way to a remote stream, famed for its trout, followed it up until he came to a dam, paid the miller a generous price to draw the water out of the dam, and then literally scooped up the big fish, and on his return went among decent people bragging of his prodigious feat.

The Forest and Stream Publishing Company will publish in a short time a new work entitled "Log Cabins, How to Build and Furnish Them." This book is by a well-known architect, Mr. W. S. Wicks, of Buffalo, and will prove a very useful aid to the camper and outer. Its directions are so plain and simple that any one who can use an axe can follow them, and it is profusely illustrated with plans and elevations of camps and cottages, and with designs for furniture and interior fittings. With this book before him the man or boy who finds himself in the timber can erect for himself a shelter either as simple as a bough house or as elaborate as an Adirondack cottage. This work cannot fail to add very materially to the comfort of those who spend their vacations in the woods, beyond the so-called comforts of civilization.

Surely anglers of the better class are careless of their duty, when the press publish without a protest records of fish caught by the hundred whose average weight is only an ounce or two. There are plenty of men who are willing to catch and count fingerlings, but if the officers of the law did their part toward enforcing the statutes of New York State they ought to be afraid to boast of such catches. Each decent angler ought to do his part toward impressing those with whom he comes in contact with the criminality of taking these baby trout.

Captain Moses Harris, until within a short time in charge of the Yellowstone Park, has reached Fort Custer with his command.

We are desirous of obtaining a copy of the volume index for the following volumes of FOREST AND STREAM: 2, 3, 5, 6, 7, 8, 10, 13 and 15.

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[*By a Staff Correspondent.*]

IV.—HISTORY OF WATER SEALING IN BRITISH COLUMBIA.

FROM time immemorial the Indians of the British Columbia coast have hunted the fur seal, but the number killed by them in any one season was comparatively small. Their method was to go out from the coast in large canoes and kill the seals by spearing them, and this method readily procured for them enough fur to supply their wants. About ten years ago the demand for skins induced a few whites to go off in small vessels and seal along the coast, but they never made large catches. A year or two later, however, the trade began to grow.

No account was made of this industry in any of the Canadian Fishery Reports up to the year 1876, but in that year Mr. A. C. Anderson, then Inspector of Fisheries for British Columbia, stated in his report that the Barclay Sound and Clayoquot Indians killed about 2,600 seal. In 1877 his statistical returns, taken from the Custom House reports of exports, gave the catch as 5,700 skins, valued at $25,650. In 1878 his figures show an increase to 9,592 valued at $43,168.50, and in 1879 the fur seal catch had increased to 12,500 skins, valued at $100,000.

His report of 1880 goes more into detail, and we learn that there were engaged in the pursuit of the fur seal 7 vessels, registering 260 tons, employing 27 sailors, 186 hunters and 93 canoes. For that year the catch was 13,600 skins, valued at $163,200.

In 1881 the number of vessels had increased to 10, registering 483 tons. They employed 46 sailors, 292 hunters and 146 canoes, but, owing to the very boisterous season, the catch was not nearly so good in proportion as the preceding year, and amounted to only 13,541 skins, valued at $162,492.

In 1882 the fleet numbered 13 sail, aggregating 775 tons. The number of sailors was 52, of hunters 400, using 200 cedar canoes, and the return of sealskins was 17,700, which were worth $10 each or $177,000 in all.

The season of 1883 was an unsuccessful one. The weather was very tempestuous, and the vessels which sailed for the sealing grounds accomplished but little. Ten schooners of 565 tons burden, employing 40 sailors, 296 hunters and 148 cedar canoes, were in the fishery, but their catch was only 9,195 skins, valued at $91,950.

The report of 1884, when Mr. George Pittendrigh was Inspector of Fisheries, is very brief and rather vague. From it we learn that 10 schooners, registering 575 tons, were engaged in the trade. They employed 40 sailors and 296 hunters, with 148 canoes, and the catch of "fur and hair seals" is valued at $156,419, nothing being said about the number of skins. Except for what are apparently typographical errors, the figures for the next year are the same; *i. e.*, 10 schooners, of 575 tons burden, manned by 40 sailors and 296 hunters, who used 140 canoes. The catch, as given, is valued at $150,019. These reports of Mr. Pittendrigh would seem to be of no value whatever, as they bear every evidence of being "made up" from Mr. Anderson's last report.

In 1886, as we learn from the very excellent and detailed report of Mr. Thomas Mowat, the present energetic and successful Inspector of Fisheries for British Columbia, the number of vessels employed in hunting the fur seal was 20, of which two were steamers. Their aggregate tonnage was 1,216, and they employed 79 sailors, 380 hunters, 29 boats and 146 canoes. Their catch was 35,907 seals, to which must be added the 3,000 estimated as having been taken by the Indians along the coast, making a total of 38,907 seal skins, valued at $339,070.

The report for 1887 gives 22 British Columbia and Canadian schooners as employed, registering 1,529 tons. They were manned by 408 sailors and hunters, and carried 50 boats and 131 canoes. The seals taken are divided as follows: Captured by Indians on the coast of British Columbia, 3,500 skins; captured on the coast of British Columbia and Oregon by the sealing fleet, 8,584 skins; captured in Behring Sea, 21,716 skins; making a total of 33,800 seals, valued at $236,600. Among the 22 vessels mentioned are two owned and manned wholly by Indians. The number includes three Canadian schooners seized by the United States revenue cutter in the Bering Sea in 1886, and two lost on the coast of British Columbia in 1887. About 23 American schooners were sealing in the Bering Sea in 1887, but their catch is not known.

A comparison of the British Columbia reports, as given above, shows that the earlier sealing fleets, at least up to 1884, were manned wholly by native hunters, while Mr. Mowat's figures indicate that within three years a great hange has taken place in the methods of the seal fishery, nd the Indian hunters have been to a large extent replaced by white men.

Water sealing, as already described, is carried on along the coast of British Columbia and the Bering Sea, but in these last named waters the seals are on their breeding ground and thus stationary. From these breeding grounds as a center they scatter out in all directions in search of food, and then return again to the islands. The sealers know where the animals are, and are thus much more certain of securing them than while they are migrating.

On the Pribyloff Islands there are perhaps four or five million seals, of which nine-tenths require food and plenty of it at frequent intervals. It is evident that no supply of fish sufficient to feed this multitude can be had in the immediate neighborhood, and consequently the animals make journeys of from one to two hundred miles to reach their feeding grounds. After the seals have reached the island and have taken possession of their "hauling grounds" the sealing vessels hover about the island, seldom coming within sight of land, and endeavoring to keep on the feeding grounds, where, as has been said, they find the seals asleep. Most of the schooners seized during 1886 and '87 were taken at a distance of 60 or 70 miles from land, and so, by the law of nations, without the jurisdiction of the United States. The schooner Onward was seized in lat. 55° 24′ N., long. 168° 17′ W., and the Carolina and Thornton in about lat. 55° 50′ N., long. 168° 53′ W. These three were taken Aug. 1, 1886. The schooner Grace, when taken in July, 1887, was in lat. 55° 09′ N., long. 169° 35′ W.

V.—WATER SEALING A DANGER TO OUR SEAL FISHERIES.

On their larger breeding grounds the fur seals are found in such enormous numbers that a thoughtless person might imagine that they could never all be killed off. Such statements have been made about other animals which seemed even more numerous and had even a wider distribution than the species in question. A case in point which will readily suggest itself to almost every mind is that of the buffalo, which once ranged from Mexico to the Arctic circle in such numbers as to blacken the prairie, and which is now practically extinct. Among birds the passenger pigeon was formerly notable for the vast numbers of its flocks, while at present it is rather a rare bird in the Eastern States. Indeed, it seems as if those species which are particularly numerous and gregarious are especially exposed to danger of extinction.

It must be remembered that the seals, whether on the land or in the water, are peculiarly defenseless, and fall an easy prey to man. Moreover they are not without their natural enemies, of which a small whale known as the "killer" is the most important and destructive. The Indians along the coast have learned the value of pelts, and the destruction which they cause must not be overlooked. As an instance of this I may mention that at one killing in Unalashka Harbor in September, 1886, the Indians secured 1,500 seals. Heavy gales had prevailed for some little time previous, and the seals having come into the harbor for shelter, the natives killed them and the Alaska Commercial Company purchased them. The result of the observations on the Pribyloff Islands by Captain Bryant go to show that during their absence from the islands at least 60 per cent. of the seals under one year old are destroyed, and during the second year about 15 per cent. more. From this time on until they attain maturity the loss is much less, but amounts to 10 per cent. more, so that only about 10 or 15 per cent. of the pups born ultimately become breeders.

In 1867, when Alaska passed into the hands of the United States, its seal fisheries were the only property of any value known to exist in the new possessions. That these were very important was known, and the question as to what should be done with them soon presented itself. During the first three years of the United States possession the seals were without protection, and in this short time over 410,000 were killed. The history of the extermination of the fur seals on other breeding grounds was well known, and it became evident that if the fisheries were to be of any permanent value, the killing of the seals must be regulated by law. In order to protect them, not as a measure of philanthropy, but because they were at that time the only thing of value in Alaska, Congress passed, in the year 1870, the Act which has resulted in the increase of the seals up to the present time, while the revenue derived from the lease amounts to over $300,000 per annum, or more than 4 per cent. on the sum paid Russia for the Territory of Alaska. It was manifestly impracticable for the Government to go into the fur trade, and the Act provided for the leasing of the right to these fisheries for a term of years to responsible parties who should pay to the Government an annual rental, and whose interest it should be to treat these fisheries in such a way as to make them as productive as possible. In a very short time after the passage of this Act the seal islands were leased to the Alaska Commercial Company.

The cry of monopoly is frequently heard against this corporation, and the word is one which appeals strongly to popular prejudice. There is in this case a certain justice in the cry. The company is a monopoly, but from the very circumstances of the case it could be nothing else. The United States had but one sealing ground to lease, and could only lease it to one party. It is of course possible to conceive that it might have leased the Island of St. George to one individual or set of individuals, and the Island of St. Paul to another person or association, but even if this had been done, it would not have been long before these two persons or companies would have come together and united their fortunes, either by forming a third corporation, or by some pooling arrangement, by which neither could interfere with the other, and the two should control the fur seal market. That this would have been done is just as sure as that men are human. If each island in Alaska were a fur seal breeding ground, and each could have been leased to a different individual or firm, there would have been some hope of avoiding a monopoly, but nature has arranged that there should be but two on which the seals choose to breed, and hence the present situation.

It is an undeniable fact that the Alaska Commercial Co. has made itself unnecessarily unpopular with trappers and traders on the Northwest Coast. It has carried things with a high hand. Having secured immensely valuable franchises from the Government, and perhaps having what is vulgarly called a "pull" at Washington, it has extended its operation, and has endeavored to secure to itself the whole Alaska fur trade. It has threatened where it might have persuaded, has driven where it might have led, has struck with a club where a gentle push would have served its purpose, and so has attained an unpopularity—not to say hatred—which is, perhaps, on the whole, not undeserved. It has not been politic. Now, within a year of the expiration of its lease, arise these complications which cannot fail to bring its course of action, its deserved unpopularity, prominently before the public.

Since the lease of the Pribyloff Islands to the Alaska Commercial Company by the United States, owner and tenant have protected the fur seal upon their breeding grounds, and so far as possible elsewhere; but if the business of water sealing increases in the future as it has in the past, protection on the breeding ground will not be enough. In legitimate land sealing, by which is meant that carried on under lease from the Government, only the "bachelor," or non-breeding male, seals are killed, and of these only a certain number—*i. e.*, 90,000 annually from the Island of St. Paul and 10,000 annually from the Island of St. George. In water sealing, however, every animal met with—be it male or female, old or young—is killed. On the British Columbia coast it is stated that some males are taken in water sealing, though the proportion of males to females is very small; while in the Bering Sea, the seals captured are almost all females. Mr. Thomas Mowat, Inspector of Fisheries for British Columbia, says of the catch of 1885-86: "The greatest number were killed in Behring Sea, and were nearly all cow or female seals." Experienced sealing captains give it as their opinion that at least 75 per cent. of the catch are female seals.

In 1887 the British Columbia sealing fleet took 33,800 seals, and it is fair to assume that the fleet from the United States ports, which numbered about as many vessels, took an equal number, so that in all 70,000 seals may have been killed, of which at least 50,000 would have been females. Of these females perhaps one quarter or 12,500 were killed on their journey northward toward their breeding ground, at which time they are pregnant, so that this represents the death of 25,000 seals. Each one of the females taken in the Bering Sea during the months of June, July and August is the mother of a pup, and the killing of this mother is followed by the death by starvation of the pup. The strong, rapidly-growing young must nurse at frequent intervals or die.

It does not therefore seem unreasonable or unfair to assume that the taking of over 50,000 cow seals in this manner really represents a loss of 100,000 seals, of which 75,000 would be females. This is a very serious drain upon our breeding stock, and can scarcely fail to affect it, no matter how carefully the seals may be protected while on the breeding ground.

Up to the present time the seal fisheries have furnished to the United States almost the only revenue that it has derived from Alaska, and although the rapid development of that Territory gives promise that it will at no distant day be a valuable possession from its other resources, still it must be the policy of the Government to protect the seal fishery by every means in their power, and if this is to be done some check must be put on water sealing.

G. B. G.

[TO BE CONTINUED.]

The Sportsman Tourist.

TO ALLAGUASH LAKE AND BEYOND.

NEARLY one-half the great State of Maine is to-day an unbroken forest. Of that vast tract of wilderness, of which the boundary line between Maine and Canada may be called the center, some 16,000 square miles are in the State, and are sufficient to make a square 127 miles on either side, and one-tenth greater than the States of Massachusetts, Connecticut and Rhode Island combined.

Two successive summer cruises in the Moose River country, west of Moosehead Lake, had created a desire to see more of this great forest, and to gain a personal knowledge of the remoter regions of the Penobscot and St. John valleys. Such a journey as would enable a sportsman to penetrate to the heart of so wild and extensive a region required careful preparation. In fact, all the spare hours for many weeks had been devoted to getting together a suitable outfit and seeking information about the country to be visited. The time chosen was about the middle of September last, and arrangements were made for four weeks' absence from home. The party consisted of a sportsman of long varied experience and no little skill, a veteran of the war; the writer, less experienced and far less skillful, but willing to learn, and two guides.

The pleasure seekers of our party left Boston by the 7 P. M. train on the Boston & Maine R. R. It is an easy way to go hunting and fishing—resting at ease in a luxurious sleeper while nearing your camp at a speed of forty miles an hour. The afternoon of the next day, as the steamer bearing us from Greenville to the Northeast Carry touched at Kineo, well-remembered voices greeted us, for there were our guides, Will Redman and Fred Henderson of Moose River, who had come by appointment. These men knew nothing of the country to be traversed, yet we preferred their known skill and faithfulness without knowledge of the region to the chances of taking guides who were strangers. At 5 P. M. we landed at the Northeast Carry, passing the night at the Winnegarnock House on the Moosehead Lake shore. This is a fairly comfortable house, which might be improved in some particulars.

The Northeast Carry from Moosehead Lake to the Penobscot River is about one and a half miles in length, there being a good road all the way. At the Penobscot termination there is also a tavern said not to be as well kept as the Winnegarnock. At either end of this carry teams are ready at all times to take canoes and baggage across at a charge of one dollar for each canoe and its load. At one time the competition to secure this business brought on a very angry controversy in which shotguns and rifles were used as arguments. Now the matter has been aimcably adjusted and each teamster totes whatever comes to his end of the carry, and takes no business from the other end. It would seem as if the man on the banks of the Penobscot had the best of the argument, as sportsmen usually go in heavily loaded and come out with empty canoes.

At an early hour our effects were moved across the carry, and canoes were afloat on the Penobscot. The name signifies Rocky River, and in a dry season is appropriate, but so frequent and copious had been the rains in the summer and fall, it flowed a full strong river, bearing our canoes well above its rocky bed.

Our outfit consisted of two canvas canoes made by our guide Redman and both nearly new, two tents, three pair of heavy wool blankets, one large rubber camp blanket, cooking utensils, two .44 rifles, one shotgun, ammunition, three fly-rods, three waterproof canvas packs, stout shoes, rubber sporting boots, overcoats, waterproof coats and a complete change of woolen clothing for each sportsman, such few personal effects as guides carry for their own use, and innumerable small articles likely to be needed in camp and in travel. In the commisary department were the supplies on which four men lived twenty-two days, leaving rations sufficient for two days more. In nearly all notes of extensive journeys in the Maine woods, it may be noted that a giving out of provisions has either shortened the stay or caused hardship to the travelers. The following list will suggest that ample precautions were taken to avoid any such disaster in the present instance. When we left Chesuncook, where our pork and potatoes were purchased, we carried:

25lbs. self-raising flour.	1½ bushels potatoes.
10lbs. self-raising buckwheat.	10lbs. cheese.
10lbs. oatmeal.	25lbs. granulated sugar.
15lbs. cornmeal.	15lbs. maple sugar.
20lbs. hardtack.	12lbs. butter in glass fruit jars.
2qts. beans.	6lbs. coffee.
2lbs. rice.	1½lbs. tea.
20lbs. salt pork.	8 cans condensed milk.
20lbs. bacon.	

There were about 320lbs. of provisions in all. These, with the exception of the pork and potatoes, had been selected with care and shipped by freight to Greenville, foot of Moosehead Lake, in advance.

From Northeast Carry to Chesuncook it is called 18 miles. There are no clearings along the river, yet it is a much-traveled water route, canoes with sportsmen and bateaux with lumbermen and supplies being frequently met. One may travel an equal distance on many of the roads through the rural districts of Massachusetts and Connecticut and meet not half so many people. Eighty canoes and sportsmen were reported as in the country to which the Penobscot is the highway at one time last September.

At Chesuncook is a woods hotel kept by Mr. and Mrs. Hilton. It is a model of its kind, and to find such excellent accommodations in so remote a place was a pleasant surprise. The house is two story, painted white, with a veranda running half-way around. The view from the front is very fine, looking across Chesuncook Lake away to bold and massive Katahdin. This mountain, the highest in Maine, rises 5,385ft. above the sea level. As the bird flies it is 23 miles from Chesuncook, but even at that distance its sides of bare rock seem majestic in their proportions, and the scars of great land slides that have furrowed its ravines are distinctly seen.

After a very comfortable night at Chesuncook, with heavily laden canoes we left to follow Umbazookin's Stream to Mud Pond Carry, and thence to Chamberlain Lake. Umbazookin's Stream is winding, and in places so shallow that we were obliged to wade and drag the canoes. At such places the channel is easily followed by the marks of paint on the rocks where canoes have scraped. At Mud Pond Carry a man named Smith has erected a log house, where he lives during the late summer and early fall. He keeps two ancient and sorry looking horses, and enjoys a monopoly of the business of "toting" across the carry. The distance is about 1¼ miles, and the road, at first rough and muddy, grows worse as Mud Pond is approached. In places the mud and water were so deep as to cover the body of the sled on which our outfit was dragged across, and it wet the bottoms of our provision boxes. No serious damage was done, and only two hours were lost in the transfer, whereas had we been obliged to flounder through the mud, "sacking" all our effects on our backs, two days would hardly have sufficed for the laborious task.

Mr. Smith had been at the carry since Aug. 10—about six weeks—during which time ten parties of sportsmen had crossed going north. While passing this carry a heavy rain storm commenced, continuing into the night. From Mud Pond Carry, across Mud Lake and down Mud Stream to Chamberlain Lake is two miles. The stream is shallow and rock bedded, so the guides waded most of the way leading the canoes. Chamberlain Lake is fifteen miles long by three or four wide. Some 300 acres of land have been cleared on the northern shore, where hay, potatoes and beans are raised for the use of lumber crews, and many oxen are pastured through the summer. Wet, cold and hungry, we were glad to avail ourselves of the shelter afforded by a trapper's hut, across the lake from Chamberlain farm, about two miles from the mouth of Mud Stream.

Our shelter was about 8ft.×10ft. in dimensions, made of logs neatly dovetailed. A couch of split logs was built along one side and covered with dry hemlock boughs, a single 7×9 pane window admitted a dim light, and splits made a water-tight roof. A dilapidated cooking stove, which had doubtless outserved its usefulness in some settlement and been brought here with great labor, filled a considerable part of this little cabin. By the side of the stove was plenty of dry wood with pots and pans, with a single caribou horn hung against the wall. As the door was opened, probably for the first time in many months, a strong musty odor made the place seem unwholesome, but a hot fire in the stove soon changed the air and rapidly dried our wet clothing and provisions.

From this point our course lay along the southern shores of Chamberlain Lake to its western end, where Allaguash Stream enters, thence up the stream to its extreme headwaters. At the mouth of Ellis Stream, Chamberlain Lake, two Bangor gentlemen were camped with Indian guides. These were the last sportsmen we met till Chesuncook Lake was reached coming out three weeks later. Slowly we worked up Allaguash Stream, having often to unload and lift over obstructions or make short carries of a few yards around rocks and falls until late in the afternoon we came to falls about 20ft. in height at the foot of a small pond. Below the falls is a magnificent pool, wide and deep, rimmed by rocks, sheltered by forests, resounding always to the roar of the falls. Here, while we cast our flies on the fruitful waters the guides made camp. To this camp there came a trapper who had been exploring the country above. In crossing Allaguash Lake that day his canoe had swamped—his clothing and provisions were all wet, matches ruined and pipe lost. We gave the man matches, pipe and tobacco, fed him of our abundant fare and played the good Samaritan generally, in return for which he gave us much information of the region north of Allaguash Lake.

From this camp we pushed on the next morning up the stream to Allaguash Lake, which was reached about noon. The character of the stream changes from the falls. It flows wide, swift and shallow, but less broken or obstructed. Often the guides waded, dragging their canoes, and again hard poling made slow progress. To lighten the canoes my companion and I waded the stream or pushed our way through the cedar swamp. Of all forest travel I have seen this was the worst. The great trees had fallen in every direction, their roots standing high in air. With climbing over, crawling under and going around our progress was indeed slow. From the stream, the swift current and uncertain footing drove us to the forest, then the almost impassable way and close air made the stream again seem preferable, so now wading, now beating through the swamp, we tried to keep up with the canoes.

One glance over the white-capped surface of the lake dispelled all hope of proceeding further that day, so casting our flies in a pool below the outlet and along the swift current of the stream below, a dozen trout were quickly taken; and establishing camp in the thick woods far enough back from the lake to be sheltered from the wind we rested for the afternoon and night. At earliest dawn of the morning our camp was stirring. Canoes were quickly launched on the now tranquil surface, and while the mists of the night yet hung over the water, strong strokes of the paddle were sending us across the lake to camp near the inlet of Allaguash Stream. This beautiful clear water lake covers twelve square miles, being nearly square, with many coves. Here, on a beautiful green poplar-covered point we selected our camp site. Along the point for forty rods was a fine sand beach, adding greatly to the attractions of the site. A camp had at some time been established here and paths bushed out to the water on both sides of the point. Our first work was to clear away the undergrowth, widen the paths, build a table and generally put the camp in order.

This place was our headquarters for two weeks. From the beach Allaguash Lake stretched away an easy road for the canoes convenient at hand. From here we made excursions to the surrounding region, and hunted partridges in the woods and loons and ducks on the lake. Just above our camp the stream poured its strong volume into the lake, and the trout gathered to feed in the incoming waters. The size of these trout was remarkable, the quality excellent. Of the first ten speckled trout taken here, the smallest weighed 1¼lbs., the largest was 20in. long, weighing 3¾lbs. The usual size was 18in. long, weight 2½lbs. My companion, shortly after our arrival, was playing one of these 2-pound trout and had it nearly tame enough for the net, when another fish caught one of the flies and started a fresh excitement. These fish were finally both brought to net, the second being a lake trout of about 1½lbs. This gave us the idea of baiting a place so as always to have plenty of lakers. Just where the lake deepened and the current from the stream was not yet wholly lost, we marked a spot by a stake, and here daily fed our gathering school with all the refuse food from the camp. Thereafter we had no difficulty in getting all the lake trout we wanted. The usual size weighed about 3lbs., the largest 4½lbs. Only two were taken with the fly, the others with small fish and pieces of chub for bait. The lake trout when hooked always sought bottom, and usually managed to twist the leader around their tails. This kind of fishing was severe work for our light split-bamboo fly-rods, and finally ruined them. One cusk was caught here and five whitefish, the latter with flies. The whitefish were excellent eating, and between the lake trout and speckled trout we had no choice. That there might be excuse for taking more fish than our table required, the guides built a smokehouse, where they smoked a few fish which we brought home. In the coves of the lake where the water was shallow and the large fish did not go, as also up Allaguash Stream for a mile, many small trout could be caught.

Frequently our little party divided, each man with his guide, going off to spend the day as best suited his fancy or desire, to become familiar with the surrounding country. Back in camp again at evening after the bountiful supper was over, and the great camp-fire brightly burning, resting under the shelter of the tent, in the light of blazing pine and birch, we enjoyed the campers' social hour. At such times the conversation turns mostly to subjects of the woods, and serves to portray the hardships, pleasure and humor of life in the wilderness. Said Redman, "I have seen many times of suffering from cold and hunger, been often in positions of danger in my canoe and on the lumber drive, but only once did I think my time had come. I was away back alone one winter, trapping on the head streams of the West Branch, when at a point fifteen miles from any house, in making a sable trap my knife slipped and cut a gash in my arm, going almost to the bone. The blood started in such a stream as when a deer's throat is cut. I did not know how to stop it, and if it was not stopped quickly I knew I should die. Well, I found when I doubled up my arm the wound closed and the bleeding stopped, so I took my rifle by the barrel with the stock over my shoulder so as to keep the wounded arm bent, and I never changed it till I reached the house late that night. I tell you boys, that was a long trail and I kind of lost my head along toward the last, and did not go straight, and sometimes I had to stop and lean against a tree till I could get more strength, but I thought of the folks at home, how they would be looking for me to come out of the woods pretty soon, and I hung to the rifle and got through."

Said Henderson, "A party comes to Moose River every year from down in Connecticut. They hire a lot of guides and leave a mess of money with our folks. They never kill any thing of much account, but we look out to take along plenty to eat, and always have a good time. This year they came in July, and started up the river. My man had been there about twenty times and knew all about the country. He kept telling the others what big trout they would get at Adean Falls, but when we reached there none of them could catch any. My man caught a shiner, and he was fishing with that hooked on a fly, yet there did not seem to be any trout around. He had a new split-bamboo rod, reel and line. The trimmings of the rod were silver-plated, and it was as pretty a rig as ever went along in my canoe. After he had tried the shiner a while, he laid the rod down on the rocks to light a cigar. Well, the wind blew a little fresh up the stream, so he stepped back behind a big rock. When he had his cigar going good he went to take up the rod, but there wasn't any rod there; it was away down the stream, just going over the last fall into Adean Lake. Some big trout had come along, taken that shiner, line, rod and all, and the whole rig is somewhere in Adean Lake now. My man was trying to fix it up with the others not to say anything at home about how he lost his rod. They were a temperance party; did not any of them ever drink anything; but he divided up all the cigars he had, agreed to do all the cooking for the party and not fish any more with bait, and they all promised to keep still."

In his book "Paddle and Portage," an account of a trip from Moosehead Lake to Caribou by way of the Penobscot, Allaguash and Arrostock rivers, Mr. Steele makes extended mention of his Indian guide John Nickolas. This man was known as one of most intelligent of the Oldtown Indians, and was wonderfully expert in woodcraft. Three or four years since he was at the house at the Penobscot end of the Northwest Carry. Here he quarreled over a game of cards. Heated by whisky and gambling, maddened by bitter words he left the house. In the darkness of the night he stealthily sought a window from which he could look in on the man against whom his Indian nature was filled with hatred. From his place in the darkness, unseen and his presence unsuspected, he fired through the glass, killed the man, and fled. Soon his canoe was on the waters of the Penobscot, and he fled away to the great northern wilderness where no officers of the law could ever find him. From that time to this day John Nickolas has never been seen in the settlements.

Yet the settlers say each fall his two sons go down the Penobscot and north with two canoes loaded with provisions, and in a few weeks return with a great quantity of furs, carrying to their father a year's supply of provisions and bringing out his year's catch of furs. The woodsmen believe that it is somewhere on a tributary of the St. John River that the Indian lives his isolated life. The loneliness of its solitude is broken only by the coming of his faithful boys once a year. Long winters the old man passes alone, many miles from human habitation, fearing the sight of man more than any beast of the forest, the memory of his crime always with him, and naught to look forward to but death. What secrets of the wilderness may he not have discovered in these years of exile in its remotest parts?

When the camp-fire was burning low, the pipes gone out, each rolled his blanket about him and slept. While we sleep a little deer comes along the sandy beach; daintily he steps, until coming to the path that leads to our tent he smells the fire, then he quickly springs back and away to safer grounds. Then a fox picks his way down the shore looking for his late supper. He, too, sniffs the tainted air and is away. After them a mink both bold and sly approaches the camp. He cares not for the smell of fire, but proceeds to examine the state of the camp's larder. First he finds a plump partridge ready dressed for the broiler, a fine spotted trout of 2lbs. weight also, and a lake trout to match, with six small trout to suit a dainty taste. One by one he drags all these to the water and floats them away to some secure retreat of his own. We knew all this, for each had registered his name and action on the smooth sands of the beach. For the morrow's breakfast a smoked fish took the place of fried trout and broiled partridge, and the cook thereafter stored his game on the top of the smoke house.

Natural History.

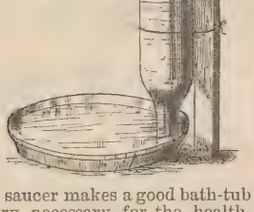
RAISING CANARY BIRDS.

CANARIES can be bred to greater advantage in a room of moderate size than in ordinary breeding cages, which are too small, not allowing space for flight and exercise, without which strong and healthy birds cannot be raised. Room breeding also offers pleasant, profitable and attractive employment for both young and old, and birds thus raised are more sprightly and tuneful than those raised in small cages.

In selecting the breeding room choose one near the top floor of the dwelling facing the south, if possible, though any light, quiet and airy room will suit the purpose. The walls and ceiling should be kept well whitewashed and great care taken to keep out rats and vermin of all kinds.

The frames of the windows on the outward sides should be covered with wire netting, the mesh of which must be small that the birds cannot get their heads between the wires, as in such event, in the struggle to get free they would be likely to injure, perhaps strangle themselves. To admit proper ventilation and air in fine and warm weather, cords and pulleys should be attached to the window sashes, so as to raise or lower them at will. A table or shelf should be placed within easy reach of the

door of the breeding room on which to place the food, etc., to avoid as much as possible disturbing the birds when setting on the nests. Use nest boxes made of tin with small holes in the bottoms (these may be found at the bird stores). Sew together several layers of linen cloth to fit the bottom of the nest box, and fasten in place so the birds may not become entangled; do not use cotton as this is more likely to harbor vermin. Frames should be made in which the nest boxes should be hung; for size and form see accompanying illustration. The frames should be made of smooth planed boards, one-quarter inch thick, open back and front, top and bottom boarded, the top or roof to incline forward with a pitch so steep as not to allow the birds to rest on it, and thus prevent the females being disturbed when nesting. A perch should be placed across each frame a short distance in front of the nest boxes (see illustration), two of which, one on each side, should be firmly hung inside the frames. The frames should be hung by hooks one on each side and fastened to the wall (so as not to shake or sway, as this might cause the female to leave her eggs unhatched), about five feet from the floor, so as to be easily reached. Deer's hair, which should be well scalded to cleanse it



from vermin, placed in the breeding room will be used by the birds to form a soft inside lining for their nests.

Select your birds for breeding from those which are strong and healthy, be sure the males are good singers, with soft, sweet and long notes; the young birds will be more likely to be good songsters, as the young male birds when in the nest obtain their first and most lasting impression of melody, the parent male bird being then full of vivacity and brilliancy of song. As you select your birds in pairs for mating, do not turn them loose at once in the breeding room, but place two cages side by side on the wall, one fitted up as a breeding cage, the other a plain cage. Put the female in the breeding cage and the male bird in the other cage and let them remain separated; in seven to ten days they will show a desire to get together by endeavors to get through the bars or wires of the cage; then put the male bird with the female. The eggs will be generally hatched in twelve to fifteen days; after the young birds are fully fledged turn the young and the old birds loose in the breeding room, and the old mated birds will almost always year after year thereafter seek each other as mates. As pair after pair are selected to breed from, mate them in the manner described, the object of thus mating them before letting them fly in the breeding room is to prevent the males from fighting each other for the mastery.

Place a supply always of coarse sand or fine gravel on the table in flat or shallow dishes, as all seed-eating birds require it to enable them to digest seed food. Swinging perches suspended from the ceiling (by fine wire) hanging down to within about five feet above the floor, will add to the health and sprightliness of the birds. A further attractive feature is a leafless tree, the bark of which is smooth, placed at each window. This is to be firmly planted in a box or tub containing earth. Tubers of the Madeira vine if planted thickly in the earth, will in a short time send up vigorous shoots, which should be trained or led to the branches of the tree by means of cords.

Keep the earth in the tub constantly moist (not wet), bore a draining hole in the bottom of the tub to carry off moisture. Such a bird-tree will remain in constant verdure all the year round. The birds will greatly enjoy such a tree, when the sun shines on it; after they have been bathing they will fly on its branches to bask in its rays to dry and arrange their plumage and practice their songs. The beautiful and graceful foliage and sweet smelling odor of the flowers of the vine will greatly enliven the room. The general food should be rape seed with a small quantity of hemp and canary seed occasionally added. When the old birds are feeding the young in the nest, soaked stale wheat bread free from soda or grease mixed with grated hard-boiled eggs, ground hemp seed, and a small quantity of maw meal, and now and again soaked stale wheat bread alone or soaked biscuit or crackers alone. But great care should be taken that no sour bread is fed to the birds. A moderate amount of green vegetable food should be fed all the year round.

A drinking fountain should be provided, in which the water should always be kept fresh and clean. Such a fountain can be found at the fancy poultry dealers, or a good substitute may be made by a bottle filled with water being turned upside down in a flower-pot saucer—a flat

disk or such a saucer makes a good bath-tub for the birds, this being very necessary for the health of the birds. Several pieces of cuttlefish bone should be hung up in the room convenient for the birds to reach for shell material, and to assist digestion of seed-eating birds. These complete the most requisite features of the breeding room, in which more young to the pairs of old birds may be raised than in cages, as breeding can be continued all the year round successfully. UNCLE JOE.

GAME IN THE CITY.

NEW YORK, June 24.—*Editor Forest and Stream:* Having occasion to make some offsets on a little rill skirting the outer cliffs of Hamilton Grange in the Twelfth Ward of New York city, much to my astonishment we there, among the underbrush, at the rear of a sauce or truck garden on St. Nicholas avenue, ran into five woodcock, the two parent birds with three young flight birds. They seemed to be citizens as they did not, to all appearance, seem greatly disturbed by our sudden break in on their city seclusion, as their flight was but a short distance away.

On the same day, Saturday, June 15, we returned by way of the open cross field, on the Morris and Watts homestead. We had but entered the field on the Seventh avenue side, when a salute well known to our ears was heard. It was "Bob White" in his clear, never-to-be-mistaken clarion note of the cock bird that greeted us. By call we lured him clear over the fields to Mr. Morris's stables, and to his overseer's lodge midway of the estate. CANONICUS.

SPIDER BITES.—Your article on spider bites reminds me of a conversation held many years ago with Dr. J. L. S. Thompson, now dead, of Lancaster, Mass. He had been bitten by a black spider while pruning fruit trees. At the same time, in the town of Boylston, seven miles distant, there was a similar case, of which the Doctor daily received reports while treating his own wound. He recovered, but the other man died. In reply to my questions he said: "I poulticed and kept poulticing. Most people don't know how to do this; they make a poultice about as big as a quarter of a dollar and let it stay. I made a bag full and shoved my hand right into it, and changed it often. I thought that as long as I could keep the swelling below the elbow I shouldn't despair. I did eep it so and recovered."—KELPIE.

Game Bag and Gun.

WAS IT A FRUITLESS HUNT?

HAVING been born with the hunting instinct largely developed, and with an intense love of wild life, it has always seemed strange to me that there could be any persons who did not love the streams and the woods. With me it has always been not so much a question of game or fish when I had the opportunity for an outing as it was the real pleasure of being near "to nature's heart;" and, in fact, there have been many times when this communion with nature has been so close and enjoyable that I was glad when no game came in my way in that I had not shed the blood of these beautiful creatures. When I do kill either fish, flesh or fowl I always want it to be under the excitement of the chase, and then that it shall not linger in its death. The last winter, like many in past years, brought me an invitation from a party of friends, who, like myself, are closely confined at sedentary work during the whole year, to join them on their hunting ground for a week after deer and turkeys. It did not seem much like hunting to leave this city by the inland seas and take a train toward the south through such an old settled section as that which lies south of Pittsburgh, Pa.; but there are great sections of as wild land lying within a hundred miles of that thriving city as one will find anywhere, and there is a sufficient supply of large game still making these mountain fastnesses their home to make hunting enjoyable.

If one must have some place where the game is so plenty that he can find it every time he goes into the woods he must seek it in some other section; but if he will be satisfied if he gets a chance at a deer, or a turkey once a day, or it may be not oftener than once in two, or three days, then he will find no place within easier reach than these mountains. If he is seeking health and recreation as much as he is game, and is in a condition to enjoy the grandeur of nature in its more rugged moods, then he will be suited here. There is no other hunting grounds which will so soon blow the dust of the city office out of his lungs, as hunting over these mountains where nature has done her best to set the land on edge so as to give as much feeding ground as possible within a given horizontal space. If he gets out early in the morning and works at it all day long, it will not take many days to take all the old, dead man out of him, and, if his appetite does not come to him so as to make him ashamed to look the cook in the face, then he is a hopeless case, and should never undertake a hunting trip among these rugged mountains.

Our party consisted of one from Nebraska, who had come all that distance to have a run over these mountains where he had hunted so many years; one from Pittsburgh, who had been his hunting companion for many years, and this writer. You know that any one passing from the eastern to the western part of Pennsylvania must cross the Allegheny Mountains. If you go by train on the Pennsylvania Railroad you will see some of the grandest scenery; but, except from Altoona to the summit tunnel, the grade is so easy and the road bed so perfect that you will scarcely know that you are passing this great barrier. If you will take that branch of the Baltimore and Ohio road which connects Pittsburgh with Cumberland, Md., you will have entirely a different experience. Here nature has put on her more rugged dress. After leaving Pittsburgh about two hours your train begins the ascent, following the Youghiogheny River. With this rapid mountain stream rushing over the rocks and plunging over falls on the right, while the mountains towered hundreds of feet high on either hand, winding in and out, our train does not slacken its speed, but runs as if it had a mission on hand and was in a hurry to complete its task. This river is full of fish, and you may know from the fact that it is pure mountain water that bass which live in it are of the gamiest and the best. One never wearies of a ride through such scenery as this. It is always changing and has a decided tonic effect on the traveler. It was over this route that our journey took us on this trip. I had never been so far into the mountains in this direction, so greatly enjoyed the trip.

We were fairly wild with delight when we alighted from the train to see that there was sufficient snow to track by, and we knew that there would be still more when we had made the ten miles' journey which lay before us. We hired a man to drive us out, and after waiting a long time a boy drove up with a pair of old crow-baits hitched to a high spring wagon, and we started. We told him he would have to drive fast to make up for the time we had lost while waiting, and while he stood up and thrashed the horses we held on to the seat to keep from being thrown out, for the road was tremendously rough. The scenery was beautiful. The road wound along the side of a beautiful wide stream of the clearest water, while the high hills rose on each side. We did not intend to go directly to the house where we expected to stay; so when we came to the foot of the mountain where we intended to hunt, we left the baggage and struck up the mountainside. It was stiff work for a beginning, and made the sweat pour off as if we were being boiled. After a while we reached the summit of the ridge, but without seeing any signs of game. After consultation, we started on a six miles' tramp which would bring us to a town where we could stay all night. In all this tramp we did not see a sign, although my companion had shot many deer on this ground in former years. About dark we entered the village, and were not sorry to sit down to a good square meal. The next morning we were up before daylight, and after a good breakfast were off, perched high on another spring wagon. If any of you have never ridden over these mountain roads at break-neck speed, seated some seven or eight feet from the ground, there is a rich experience yet in store for you. On our way we picked up our baggage where we had left it the day before, and then went on till we came to the foot of another mountain. Sending the baggage on to our stopping place by the wagon, we struck into the hunting ground.

We had not gone far until we heard the *put, put,* of a turkey, and heard some others flying. Immediately deploying into a skirmish line we began advancing. We knew from the noise that it was a heavy gobbler running up the hill so that he could get high enough to fly across the hollow. The hunter who was in advance saw him and gave him a Winchester shot. Up he went, and when he was high enough for me to shoot over the other man's head I let drive at him. Then the third man let drive at him, then the first one again, then I the second time, when he went out of sight. The first shot had gone through him, and my last shot had hit him, but he sailed off and we did not get him. We sent another man whom we met to look for him, and we went on after deer. We found a yesterday's track and followed it about four miles, until it went across the State line into Maryland, when we gave it up. Turning toward home we hunted the whole mountain, but did not find any more signs. When we got to the house we learned that the law in Maryland, just across the line, forbade the shooting of deer for five years, and as the deer were constantly hunted on this side they had all taken refuge over there.

Well, we had such a supper as does not often fall to the lot of hunters, and the amount of it we consumed would have astonished the natives if they had not fed hunters before. So we gathered around the fire and listened to hunting stories and ate apples until bedtime.

As hunting seemed useless under the circumstances, and as the next day was Thanksgiving we concluded to try the turkeys on the way down toward the station and then go home. As my back had gone lame the day before and I felt it in my bones that there would not be any use in hunting I concluded to go with the baggage and let the others take the tramp. When the time came to start, the team was hitched to an old sled. If it had been torture to ride up in the wagon you can imagine what a delightful time we had in a sled when it was on bare ground half the time and on the stones nearly all the other half. To help matters, when about half way we found that the snow had all melted, and we had to go so slow that we feared we would miss the train. One would stand up and try to coax the slow farm horses to get us there, while the others held on and laughed and hallooed. It was a merry ride, and we "got there all the same." To close the expedition we had the grand ride through the mountain scenery and arrived in the city after dark, well satisfied with our fruitless hunt. HOMERUS.

CLEVELAND, Ohio.

A LUCKLESS EXPEDITION.

NOT a great while ago my friend Crickett, of "Saints' Rest"—a decided misnomer, I am sorry to say—expressed himself as certain, from what he regarded as reliable information, that ducks could be killed by the score at a place called Cedar Island, near the mouth of the Santee. He was extremely desirous that Teceel, Mud and myself should go with him to that modern paradise, and assured us we could get all the shooting we desired. Our former visit to that section not having proved very satisfactory, we were quite anxious to go to the Eldorado of his fancy, and have several golden days of excellent sport, supplying ourselves with all the game we wanted and then distributing to such of our friends as relished the flavor of the mallard and the teal. It is true, it was rather late in the season, but he thought we could get some ducks and as many of those fat shad which come into Wingaw Bay on their way to the spawning grounds as our appetites would demand. On Monday, the 25th of February, we met at Wadesboro, with nearly a thousand loaded shells, ready to try our guns on the swift-flying game. Our trunks contained our clothing and blankets, a small quantity of well-roasted Java, some granulated sugar and a nice lot of potted meats and some cured boiled ham.

At 2:35 P. M. we took the train for Lane's on the N. E. Railroad, arriving there at 7:30. At Florence we were met by our friend, A. L. G., of Philadelphia, who had been invited by me to be a participant in the joys of our visit.

On Tuesday morning it was raining, with the wind from the southeast—a sign not very agreeable to any living thing except waterfowl. Owing to the stormy condition of the weather our captain deemed it unadvisable to go out to sea and then enter the bar off Santee, and proposed to take an inland passage which would require some time for its accomplishment, on account of the tortuous course of the creeks which we would navigate. He thought we would reach Cedar Island on Wednesday late in the day. But alas! after traveling for miles the recession of the tide caused us to ground when within a quarter of a mile, "as a crow flies," of Wingaw Bay. The following morning we were "winding our slow length along" in that detestably crooked Mosquito Creek, whose sinuous channel would show all the curved lines known to mensuration, and when night came on we were not more than a half mile from the point where we entered it. Our friend G. became utterly disgusted with the prospects, and when, on Thursday morning, we reached the bridge on the road leading from the mainland to Santee Island, he had his luggage put on shore, and in a few hours he was on the steamer Planter on his way back to Georgetown, a disappointed though much wiser man.

Soon after G. left us, we started forward, and when Thursday night came, we had reached a dike built by the Federal Government, at which a canal starts. It being a convenient place for anchorage we hauled up. Crickett and Teceel got in a boat and started off for ducks, which we could see flying about some ponds near the old Ford plantation. Mud and I concluded to take our chances on the banks of the creek. Soon we heard the booming of guns, and when the boatmen returned at night they had seven ducks, all teals but one. I shot twice and ought to have killed both times, but only saw that I had robbed one of them of a few feathers. Mud did not shoot.

The following morning, the tide being favorable, we hoisted sail, and sped down the canal at a good pace, until it joined another of those crooked curves. And then it was slow, slower, slowest. At about 12 A. M. on Friday, we entered the north branch of the Santee and turned the prow to Cedar Island. After going over a mile, we grounded on the sands, where the yacht was forced to remain until the incoming waters would float her. Our eager sportsmen got out the small boats and were rowed to the island. Crickett did his own rowing, and on our passage through the creeks he worked harder than a boat hand, and but for him I am not sure that we would not, even now, be in that hateful lagoon. On the shore we were met by Mr. Willetts, who had charge of the property. He kindly showed us the ponds which the ducks frequented at an earlier period of the season. At them we waited for several hours. Mud killed two coots, and a small duck, with a spoonbill. Crickett and Teceel shot several times at long range and

I did not shoot at all. And this was our experience at Cedar Island, and our reward for all the labors of our voyage from home! Ehew!

On Saturday morning we concluded to meet the perils of the sea by going over the bar and trying our little craft on the rugged waters of the Atlantic. A few hours upon the "briny deep," and our course was directed to the Pee Dee bar, over which we passed in safety. That night we spent at anchor on Wingaw Bay, and Sunday morning at 10 we were at Georgetown.

The following day at 7:20 we were off for Lane's, and at night took supper at home. Our only trophies were a pair of shad each, which we bought just before leaving. The only consolation we had was that we wasted but little ammunition.

Now, if any of your correspondents can report a more luckless hunt I should like to hear from him.

At the proper time there are many ducks in the marshes near Georgetown, and a sportsman who can stand a rough life, and is willing to work and undergo physical labor, can get as much game as he can eat and a good quantity for the gratification of others. For my part, I prefer to go into the fields with my dog, where I can always get a dozen birds and sleep at night on a bed. WELLS.

SMALL-CALIBER RIFLES.

Editor Forest and Stream:

In your edition of May 9 I notice a letter from "Lyman Sight," regarding the loading of the .32-40 shell. I had the same trouble with the factory shell with the large bullet, and after experimenting with the round ball hit on the following. I bought from the Winchester Arms Co. some of the small bullets they use in their extra short .32cal. rim-fire cartridges, and by using a cotton cloth patch I forced the ball into its socket in the shell, where it is firmly set. I used the full charge of powder, which I think gives a very straight trajectory. Let "Lyman Sight" try my plan and let me know his experience, and at the same time I should like to hear from any one else interested in the .32-40 shell. J. B. M.

RICHMOND, Va.,

ONEIDA COUNTY LAW.

THE Supervisors of Oneida county, N. Y., have adopted a law as follows:

"SECTION 1. That the lawful season for killing partridges and woodcock within the county of Oneida, shall be only from sunrise of the first day of September till sunset of the thirtieth day of November in each year hereafter. Whoever shall kill or hunt any partridges (otherwise known as ruffed grouse) or any woodcock at any other time than during the above specified lawful season aforesaid, shall forfeit a penalty of $25, and $25 additional for each bird killed of either of said species.

"Whoever shall sell or expose for sale or purchase or have in possession, in Oneida county, any of said birds at any other time than during the lawful season aforesaid, shall forfeit $25 for each bird; except they may be possessed, sold or purchased during the fifteen days next following the close of the lawful season for killing aforesaid; provided the seller or possessor proves such birds to have been lawfully killed during the lawful season aforesaid.

"SEC. 2. It shall not be lawful for any person to sell, carry or transport beyond the border limits of Oneida county, any partridge or any woodcock that had been taken, captured or killed within the limits of Oneida county. Whoever violates this provision shall forfeit $25 for each bird of either of said species."

Copies of this law for posting may be had free of charge by applying to John D. Collins, Secretary Utica Fish and Game Protective Association, Utica.

GAME LAWS AT ALBANY.

[*Special Correspondence Forest and Stream.*]

ALBANY, N. Y., June 21.—The Governor has disposed of several of the fish and game bills left with him by the Legislature. Those which he signed are as follows: Chap. 512 for the protection of fish in Lake Ontario adjoining Cayuga county; Chap. 497, amending Sec. 640 of the Penal Code in regard to the stealing of fish; Chap. 534, for the building of a fishway in the Delaware River, at Lackawaxen, the State of Pensylvania to spend an equal amount; Chap. 539, amending the game laws in regard to hunting at night; Chap. 550, regulating fishing in Glen Lake; Chap. 556, for the protection of fish in Owasco Lake, Cayuga Lake, Seneca River, etc. The Governor refused to sign the following: For the construction of a fishway in the Chenango River at Chenango Forks; for the protection of shad and game fish in the Delaware River; amending the game laws relating to fishing in Lake George; amending the act for the construction of fishways in the Oswego and Seneca rivers; providing for the construction of a fishway in Cattaraugus Creek; for the incorporation of icthyological societies, and for the construction of a fishway in the Hudson River at Mechanicsville and Northumberland.

Sea and River Fishing.

FISHING NEAR NEW YORK.

IX.—UNCLASSIFIED RESORTS.

THERE are a few fishing resorts near New York which may be deserving of mention, but which are not capable of classification under any particular head. For instance, there is sometimes excellent fishing for striped bass up the Hudson River. In Croton Bay, near Sing Sing, and along the shore below Sing Sing are some favorite places in both spring and fall, the latter being by all odds the best time, however. There is also good fishing for white perch, which are small, but a good pan fish. For the latter I have found angle worms to be a most taking bait, although they will bite on sandworms, shrimp and sometimes shedder crabs. Sing Sing is reached by the Hudson River Railroad from Grand Central Depot, fare (one way) 60 cents. Boats can be hired at two or three different places at $1 a day; guide, extra, $2 a day. No bait can be had where the boats are hired.

At Tarrytown (same route, fare one way 50 cents) striped bass may be caught in the Hudson River, but they are not so plenty as at Sing Sing. Or, rather, they are probably as plenty, but there are few earnest striped bass anglers at Tarrytown, and hence the good places have not been discovered and the habits of the fish are not well known. The Pocantico River empties into the Hudson just above Tarrytown, and its waters contain pickerel, perch, black bass, sunfish and catfish. There is fair sport for black bass in this river, using small frogs, crawfish and minnows as bait. Don't fish too near the bottom or catfish will take all your bait, and pickerel will probably bite oftener than bass, anyway. But with those baits you will not be bothered with the numerous little sunfish and perch, which will, however, consume all the worms you can provide them with before a bass gets a chance for a nibble. I have never seen flies used on this river, but I should think the bass would take them. The perch will take trout hackles readily. Tie three on the leader, with a buckshot on the tail fly, let the cast sink below the surface and draw slowly toward the boat or shore until you get a strike. The mouth of the Pocantico is a mile row from Tarrytown station up stream, and the river must be ascended for a mile or more to the fishing grounds. The sport here does not compare favorably, it must be remembered, with many more accessible fresh-water fishing resorts near New York. Boats are for hire at Tarrytown at $1 a day. Or, one can drive from Tarrytown to the best part of the river for fishing, near where the aqueduct crosses it, where there are one or two flat-bottomed, leaky boats which may be hired for a song.

Back of Jersey City there is sometimes good white perch fishing in the Hackensack River. There are boat houses where boats may be hired at from 50 cents to $1 a day at almost every bridge crossing the river from Jersey City over the "meadows." A few striped bass are taken here, too, sometimes, but seldom in plenty except when a "school" happens to run up. The best fishing on this river near by is obtained at Hackensack station or at Little Ferry station, three miles nearer New York. Take trains of the New York, Susquehanna & Western Railroad from the Pennsylvania Railroad station in Jersey City (Cortlandt or Desbrosses ferries), fare, round trip, to Hackensack, 50 cents. Trains leave New York week days at 4:30, 6:40, 8:30, 9:30, 10:30 A. M.; returning, leave Hackensack at 3:15, 3:57, 5:24, 6:38, 7:50, 8:42 P. M. Sunday trains from New York at 8 and 10 A. M.; from Hackensack at 6:24, 7:50 and 9:58 P. M. Good fishing may be had for white perch in the river near either Hackensack or Little Ferry stations. Boats may be hired at either place at from 50 cents to $1 a day. Shrimp are the only bait to be depended upon at the grounds. Sandworms and shedder crabs must be brought from New York. Striped bass are not plenty, except when a school runs up.

At Newark Bay Light, situated at the junction of Newark Bay with the Kill von Kull, there is good sport for striped bass in season, early spring and during late August and September. On two sides of the lighthouse there are numerous rocks, and very large fish are sometimes caught. This fishing ground is perhaps best reached by Staten Island Rapid Transit railroad to Port Richmond (fare from New York, foot of Whitehall street, 20 cents round trip). Boats may be hired at Port Richmond at from 75 cents to $1 a day. Bring your own bait. Or, go to Bergen Point on the Central Railroad of New Jersey, from the foot of Liberty street, fare, round trip, 30 cents, and walk down the track from the station a half mile to the Newark Bay drawbridge, where boats may be hired at $1 a day, and bait may be obtained at the Bay View Fishermen's Cottage. Or, horsecars may be taken from Bergen Point station to the shore of the Kill von Kull, where there are two or three places at which boats may be had at $3 a day. Bait is sometimes to be had at these resorts, but it is safer to bring your own. A few weakfish, sometimes striped bass, and an occasional bluefish (snappers) are caught in the vicinity, angling from the drawbridge over the bay being quite successful for tomcods, flounders, porgies and occasionally some of the larger varieties.

Black bass fishing may be had at Milton Pond, 1½ miles north of Rahway, if the angler follows directions closely. The pond is formed for mill dam purposes, and is mostly overgrown with weeds and a thick scum in summer. Where there are spots free from this growth cast your minnow (minnows may be caught in the brook below the pond), and if you fail to get a strike walk up the shore to the head of the pond. Fish there and where there are deep holes further up stream in the inlet to the pond. I have taken three large bass here between 5 and 6 o'clock of a June afternoon, and I have known of catches of as high as ten in a day. Most of the bass are of good size. Rahway is reached by the Pennsylvania Railroad, foot of either Desbrosses or Cortlandt streets; round trip fare, 65 cents; conveyance to pond, 50 cents for each person. There is only one boat on the pond, but a boat is almost useless in midsummer.

Greenwood Lake is the great black bass resort of New Yorkers. It is on the New York & Greenwood Lake Railroad, from foot of Chambers or Twenty-third streets (round trip fare, $1.85). It is not a place, however, for a "one-day" man to go, as it cannot be reached by rail before 10 o'clock in the forenoon, and the angler must leave for home at 5:40 in the afternoon. A day's trip would be expensive, too, as a stranger would require a guide to get any sport at all, which would cost him $2.25.

Lake Hopatcong, another black bass paradise, is not a "one-day" man's resort, for the same reasons as are given for Greenwood Lake. It is in Morris county, N. J., and is reached by the Delaware, Lackawanna and Western and by the Central Railroad of New Jersey. The round trip fare is $3.50, either route.

Shepherd Pond, five miles from Suffern station, on the New York, Lake Erie and Western Railroad, is a good place for black bass. Fare (round trip) to Suffern is $1.85, and conveyance to and from the pond $2.50 more. Guides must be hired if good fishing is to be had, at $2 a day additional. This may be made a one-day trip, but it would be a costly one. Ramapo Pond and Mahwah Creek are nearer Suffern than Shepherd Pond, but the fishing in the near-by places is not so good as in Shepherd Pond.

Croton Lake, reached by the New York and Northern Railroad from the terminus of the Sixth avenue Elevated Railroad at 155th street, is a fair place to go for black bass. The round trip fare is $1.55. The lake is near the railroad station, and there are places where boats may be hired and bait purchased at very reasonable price. Unfortunately the lake also swarms with catfish, pickerel, perch and sunfish, and they are better biters than the lordly bass. Trains may be taken from 155th street at 7 and 9:15 A. M.; returning, leaving Croton Lake at 4:13 and 9:20 P. M. Sundays, from 155th street at 7:30 and 9:10 A. M.; from Croton Lake at 5:37 and 9:20 P. M.

There is fair bass fishing in the Raritan River near Bound Brook and Somerville, N. J., on the line of the Central Railroad of New Jersey (foot of Liberty street). The round-trip fare is $1.30 to Bound Brook; Somerville is five miles further from New York. Bound Brook is the most convenient station to the river. Boats may be hired at 50 cents a day, and a guide for $1 extra. Bait may be procured on the ground. A good day's fishing may be had by taking the 4 A. M. train (5 A. M. Sundays), and returning on the train that leaves Bound Brook at 8:15 week days and 9:04 Sundays.

The writer hopes in a few weeks to make a thorough exploration of lakes Hopatcong and Greenwood, with a view of giving FOREST AND STREAM readers such information as will enable them to get good fishing at these beautiful lakes without the expense attending the hiring of local guides, and at as low a rate of cost in every way as possible. Very likely, too, articles will be published dealing in detail with the resorts at Barnegat, Great South Bay and other famous places for sportsmen further from New York than the resorts mentioned in this series.

SENECA.

PENNSYLVANIA TROUT STREAMS.

Editor Forest and Stream:

In your issue of April 18, "E. E. C.," of Mt. Pleasant, Pa., asks for information concerning fly-fishing for trout in the small streams of the Laurel Hill and Allegheny Mountains. It matters little what bait is used in Westmoreland county, as the streams are pretty well depopulated, and to catch a 10-inch trout in any of them is bordering on the miraculous. Occasionally, however, a fly-fisherman will happen along, and casting his flies over the head of the worm-angler will land some very fine trout. Let "E. E. C." get a congenial friend, a buckboard, a 7×9 wedge tent, a selection of trout and bass flies, a good rod and 50ft. of line, a pair of blankets, two weeks' provisions, and hie himself eastward a few miles. Let him rig up his rod at Jones's Mill Run, attach a red-ibis, a black-gnat or a white-miller to a 3ft. mist-colored leader, and carefully cast it into one of the numerous nice pools, and if he will keep out of sight of the fish I will guarantee him a handsome trout.

In these streams will be encountered places where for a hundred yards the alders or laurels grow so thickly that to cast a fly is impossible, but with 50ft. of line they may be thoroughly fished. Slip quietly in at the upper end of the growth, let out all the line, and the fly will float down until suddenly a big fellow jumps out from his lair and he is yours.

On those small streams I use but one fly, instead of the conventional three, on account of the numerous bushes, and after fishing all over that section of Pennsylvania I found the three flies above mentioned the most killing; in the morning the red-ibis, toward noon the black-gnat, and the white-miller in the evening. The streams throughout Pennsylvania, particularly west of the Alleghenies, are fished to death, and the trout are very wary. Occasionally the angler's ingenuity will be called into requisition, as the fish will refuse all bait offered them. At one time I stood behind a rock at a nice pool and made cast after cast, changing flies every few minutes until a dozen different kinds were tried. Finally I observed a green bug wending his way slowly along the rock, and withdrawing my line, I removed the fly, put on a sprout hook and impaled his bugship. Gently dropping it in the pool, swish went the water, and in a moment an 18in. trout was in my creel! I tramped three miles to the nearest house, secured some green peafowl feathers, returned to the pool and extemporized some flies; and before sundown I had fifteen of the finest trout I ever saw in the State.

After fishing Jones's Mill Run, Mr. C. and his friend may go on to Laurel Creek, another good stream. A day or two here and they go a few miles further to Somerset, where a pleasant night may be spent, for this town has become quite a summer resort, and jolly times can be had there. Next morning they strike for Shade Furnace, via Stoystown. At the latter place or a few miles below, the bass flies will come into requisition, as the Quemahoning is an excellent stream for this kind of fish. If they will not rise to a fly, catch a few minnows and try them. But the objective point is the Big Fire Creek, on Clear Shade, where, a short distance below the bridge, he should pitch his tent and prepare for a week's sport, for sport he will find in abundance. Two years ago the writer, in making this trip, encountered a young Johnstown physician and party encamped at this point, and aside from being a jolly crowd they had the finest lot of trout packed away in crocks that I ever beheld. The country is wild, rugged, picturesque in the extreme, many miles from a settlement, and if one seeks seclusion, recreation and fine trout, there is the place to go.

If Mr. C. will think for a moment he will readily understand the cause of the difference in the color of trout. For instance, if he is fishing on a stream with a sandy bottom, exposed to the rays of the sun, the fish will be light in color; but let him penetrate deeply into the forest, where the stream is densely shaded, he will find fish almost black. PACIFIC.

MONTEREY, Cal.

Editor Forest and Stream:

Cumberland Valley, Pa., extending from the Susquehanna to the Potomac, has many streams abounding in trout. The most noted is Big Spring, near Newville, a tributary of the Conodoguinet. It is a large open stream, where the angler can cast his fly with success, and a great many fish of fair size are taken every season. In this county of Franklin there are a large number of streams containing speckled trout. Birch Run, a branch of the Conococheague, in the South Mountain, has probably more trout than any other creek in the county, but they are small in size. I have frequently taken in from five to six hours' time from four to five dozen trout, and a few years ago took seven dozen in one day. A party of three from this place took ninety in one day. This stream is wild and rugged and there is much underbrush, making it difficult to cast a fly; better success is to be had using worms for bait. Aughwick in the west and Trout Run in the north, both in the North Mountain, have many trout. Falling Spring, rising three miles east of Chambersburg, contains trout of large size. This stream was stocked some five years ago with California or rainbow trout, received from the U. S. Fish Commission, and now we catch many of this variety. One taken a couple of weeks ago measured 18in. in length and weighed 2lbs. 9oz. It was taken at the spring's confluence with the Conococheague. AUGS. DUNCAN.

CHAMBERSBURG, Pa., June 13.

RUTLAND, Vt., June 20.—The first annual banquet of the Rutland Fish and Game Club, held at the Berwick House, last evening, was a most happy gathering of the local anglers and guests from abroad. The Rutland Club has done excellent work in stocking streams and enforcing the laws; and now they have proved that they know how to enjoy themselves around the mahogany as well. —F.

THE PIKE-PERCH.

THE number of pike-perch annually hatched by artificial methods is enormous. Not many years ago the treatment of adhesive eggs was one of the great difficulties of fisheulture. We have not at hand a description of the apparatus used by Muller and Brown in 1857, when they conveyed 20.000,000 eggs of the pike-perch from Lake Ontario to Lake Saltonstall, Connecticut, and we do not know whether any of the eggs were hatched; but it was formerly the practice to allow the eggs to adhere to glass plates, which they did by means of a sticky envelope covering the shell. It was in this way that Livingston Stone hatched some of the eggs of the Cold Spring trout ponds, in Charlestown, New Hampshire, many years ago. It is astonishing to note the radical changes which take place in the handling of eggs. A few years ago it was believed to be necessary to let adhesive eggs stick naturally to glass surfaces, or to threads which were suspended in jars or boxes. We have recently learned from Mr. C. V. Osborn, President of the Ohio Fish Commission, that his men, at the expense of a great deal of time and trouble, wash off the sticky substance from the pike-perch eggs, and then place them in jars to be hatched in the way followed in hatching the eggs of shad, whitefish and other common species. The Ohio Commissioners distributed 60,000,000 fry of the pike-perch in all parts of the State last year. Canada put out 25,000,000 fry from the hatchery at Sandwich, Ontario, and the total number of young planted to date by the Dominion is 172,135,900. Pennsylvania distributed 12,000,000 in its eastern waters recently, as stated in FOREST AND STREAM of May 23. The U. S. Fish Commission has distributed about 60,000.000 up to the present time, having just begun the work. As this is one of the finest food and game fishes of the United States, we dwell with considerable gratification upon the enormous results of its artificial propagation.

Anglers are, of course, aware that we have two well marked species of pike-perch, or wall-eye pike, in our waters, and each of these has two or more varieties differing in size and coloration. The choicest of the number is the large golden species inhabiting the Great Lake region, extending northward into British America to an unknown distance, but placed at 58° north latitude by Richardson. It is said to range southwestward to Arkansas, and in Atlantic streams it is recorded as far south as Georgia. The blue pike is the variety *salmoneum* of Ohio and Kansas; the distribution of both varieties is insufficiently known. The form best known to anglers and fishculturists is *Stizostedion vitreum*, variety *vitreum*. This is credited with a maximum weight of about 50lbs. according to Genio C. Scott, but the average weight as found in the markets is under 5lbs.

The pike-perch has received a bewildering number of names. In the Eastern States it is the perch-pike, pike-perch, Susquehanna salmon, glass-eye and wall-eyed pike. In the Great Lake region it is called blue pike, yellow pike, green pike and grass pike. It is the jack of the Ohio Valley and western North Carolina; the pickerel in Lake Erie and Canada; white salmon and sometimes jack salmon at the falls of the Ohio. The Cree Indians call it the okow, and the French Canadians doré or picarél. It is the horn fish of the fur traders of British America.

The spawning season occurs in April and May, and, in Pennsylvania, continues until June. Favorite places are sandbars over which the water is shallow. The period of incubation depends upon the temperature, varying from about a fortnight to one month. The eggs vary from about 17 to 25 in 1in., and the number in a single female has been estimated at from 200,000 to 300,000. In a state of nature the eggs are subject to very serious dangers, and a very small percentage of them are hatched out; storms drive them up on to the lake shores, and many species of fishes devour them on the spawning beds.

The rate of growth must be rapid, for we captured many of the young last summer for the Fish Commission aquaria at the Cincinnati Exposition, and the smallest of them in July were not less than 4in. long and some were 6in.

The colors change remarkably with age. The young are banded very much like the kingfish of the coast, not closely resembling the parent in pattern of coloration. The eye of the living fish is like a glowing emerald. The flesh of the pike-perch is firm and white, flaky and well flavored. Commercially, the species ranks very high in the Great Lake region, being next to the whitefish in importance.

This fish feeds on the bottom, its food consisting of other fishes, and it is not very particular what species it devours. Some people charge it with destroying its own young; minnows, however, are readily accepted as bait. It prefers clear and rapid waters, and lurks under submerged logs and rocks, from which it can readily dart upon its living prey.

In the Susquehanna it is angled for and readily taken by using live bait—minnows representing numerous genera of the family *Cyprinidæ*, but particularly such as are more or less transparent, with silvery sides. The fallfish or dace, the corporal, roach, and species of the genera *Luxilus* and *Hybognathus* are freely used. The artificial fly can be employed to great advantage also, particularly in cold weather in the vicinity of dams. On some parts of the Susquehanna, between Columbia and Harrisburg, the pike-perch is frequently caught by trolling with the spoon, the tackle being the same as that used in trolling for bass. The favorite fishing grounds of the lower Susquehanna are reached by the Columbia and Port Deposit Railroad. Fite's Eddy is one of the best places; Washington, three miles below Columbia, is another good location. The species is well distributed throughout the river and its larger tributaries, the Juniata and North Branch being especially noted.

In fishing for the pike-perch it is to be remembered that the species is a bottom fish, and the angler must keep his bait near the bottom. The tackle generally used for black bass is suitable for the pike-perch, and it is desirable sometimes to use a float. In the Ohio River Dr. Henshall has been informed that fishing with hook and line is excellent from Marietta to Pittsburg. In this region the fish is called salmon. Mr. Goode says there is no better fishing anywhere for this species than may be found in Lake Pepin and other waters near Lake City, Minnesota. Winter fishing through the ice with live-minnow bait is very successful on Lake Pepin. As in the case with the shad and other anadromous fishes, the important fishery for the pike-perch occurs during the spawning season only, and like the shad the fish is in its best condition at that time.

The pike-perch has a near relative in American waters known as the sauger, *Stizostedion canadense*, which runs into several varieties, but none of them grow very large and all of them are inferior to the *S. vitreum*. In Europe there are several species of pike-perch, the one most nearly resembling our large species being the zander of the large rivers of the continent. This species, also, prefers clear, deep, flowing water, and is generally found in the depths. It spawns at the same season as our own pike-perch in shallow spots abounding with aquatic plants except in Swedish lakes, where it spawns in deep water. The zander is said to reach a length of 3 to 4ft. and a weight of 25 to 30lbs. In the German markets, however, specimens of over four pounds in weight are rare. The species can be caught with the bait from June until September, its favorite food is the gudgeon (*Gobio fluviatilis*) but, like its American relative, it will also take insect larvæ, crayfish, worms and other invertebrates.

THE LAKE ELLERSLIE FISHING CLUB.

"I CAUGHT fourteen bream on silver-doctor and professor in the middle of last winter," said Al. Spotswood, "I had to fish through the ice, and the fish took the fly right at the bottom."

"Alex. Jeffrey has often caught birds on a fly," said George Williams, gravely.

"Wasn't it you that caught a blacksnake on a fly once, Al?" asked W. K. Massie of Mr. Spotswood.

"Yes," replied the latter, "I was fishing out at the reservoir, and had out a pretty long line. The snake took the fly in good shape, and played well, but I finally landed him."

"I caught a goose on a fly once," mused Mr. Massie, "but I don't remember that I ever caught anything else, except fish."

I preserved a respectful silence, for I could think of nothing but Kit North's story in the "Noctes Ambrosianæ," of how he once cast a fly so far and so lightly that it took life and wings and flew off across the mountains. I was afraid the other fish story tellers would recognize this story, because it was evident that there was assembled in the little office a number of old hands, so that nothing but a gilt-edged yarn would go.

The rich Kentucky sun shone warmly through the window, and silence and drowsiness fell upon the party, as each waited for the other to set a pattern.

"You people must sort of—that is, occasionally—you know—" I ventured at length, diffidently.

"Oh, yes, we fish with the fly a little," said somebody, "we have a club. There are about 200 of us. We fish out at the reservoir. It's only about four miles. Come on and go out."

It being at length established that these gentlemen usually caught something else besides birds, geese and snakes, the remaining preliminaries for a fishing trip were rapidly concluded. This was the first introduction of the Lake Ellerslie Fishing Club, of Lexington, Ky., and it marked one more of the constant surprises which Kentucky had in store; for in this organization I found the strongest fly-fishing club I ever happened to meet, was treated to some genuine sport at the fly, and saw once more a proof of the growing hold that sports of the wood and stream are gaining upon the very best social element all over the land.

Lake Ellerslie Club is but a few years old, but a glance at the list of its members will show any Lexington man, at least, that its social and financial status is quite above any question; while it requires but a very slight investigation of its piscatorial resources to remove any remaining doubt about its worthiness to receive the seal of absolute approval as a fishing club of the very first water. Its membership is made up exclusively of Lexington gentlemen, and its lists are always full. Shares were originally sold at $30 each, but now they cannot be bought at $100. There is too high an appreciation of the privilege of taking a half hour's ride any evening, and having an hour's sport with a fly-rod at a spot where one is almost sure to kill a creel full of bream, bass and other game fish.

The fishing grounds of the club lie in a spot naturally quiet and beautiful, and which, for a wonder, has been rendered rather more pleasant than less so by the administrations of man. The lake, or "Reservoir," as it is commonly called, because of the location there of the city water works, is a winding sheet of water which covers rather more than eighty acres of land. At its lower end it is fenced with a strong stone dam; midway it is crossed by Lexington turnpike, the viaduct being a heavy stone culvert. The arm of the lake to the left of the culvert as you go out is called "Tracey-side." About half way between the culvert and the dam, to the right hand, stands the engine house of the water works, which is a sort of rendezvous for the fishing parties, although there is no regular club house. There could hardly be said to be any need for the latter. To reach the engine house you pass through a big Kentucky gate, and roll over a short turn of road at the top of a well-sodded bank. To your left lies a deep arm of the lake with rocky bank, and just off here you can catch croppies all day long if you care to use bait. At the engine house there is a little bridge which runs out to the well-tank. The water is deep under this bridge, and the way the croppies bite there is a caution. This bridge is a favorite place for parties having ladies among the number. The latter may step from their carriages, walk a few steps over the springy turf, step upon the planks of the bridge, lean over the handrail, and fish in a delightful style, whose luxuriousness and ease is hardly consistent with its actual results. There is no necessity for elaborate special costumes, nor for specially negligent ones. I saw a number of ladies dressed in tasteful street costumes, who were fishing from this delectable little bridge, and they caught between two or three hundred fish, too. With its setting of quiet green and sunset gold, the picture afforded by the little bridge was a singularly pleasant and unique one; and I give my word there was a fish in the air all the time.

This extreme plentifulness of the fish supply is due to two causes. In the first place, the lake is a natural home for fish, being fed by cold "spring branches" and by springs of its own. It is from 12 to 20ft. deep in places, and has acreage enough and natural food enough to sustain a vast amount of fish life. In the second place, the waters have been stocked repeatedly, abundantly, and, above all, intelligently. The stocking was begun by the late Gen. Wm. C. Preston, who owned the surrounding land, and who, as I understand it, originally leased the fishing privileges to the club. Since taking possession, the club has annually stocked the waters. They were heavily planted two years ago, some of the young fish being obtained from the Fish Commissioners, but the great bulk of them being native fishes obtained from Kentucky streams. This is the most sensible method of stocking any waters; that is to say, with fishes native to that locality. They are the ones sure to thrive. In this case, the plant consisted largely of bream, croppies (called "new lights" in that country), sunfish, goggle-eyes, perch and bass. Some carp had also been planted before the club took possession, and it is said that two or three dozen mascallonge were once planted, of which one was recently taken, 28in. in length. The planting of carp cannot be of any possible benefit to a fishing club, and may be a detriment, if the carp do feed upon the spawn of other fishes, as it is very probable they do. It would be well for the club not to put in any more carp, and, better yet, never to dream of putting another mascallonge into their lake. The latter fish grows with such rapidity, and is so unspeakably voracious, that it is certain to spoil infinitely more good sport than it can ever afford. No bream or perch ever grows so large that a full-grown mascallonge cannot swallow him at a gulp, and it takes a good many such gulps to satisfy one of these long-faced pirates. If the Lake Ellerslie men do not make away with the mascallonge they have put into their waters, it is only a question of time until the lake has but a single fish, and that will be a mascallonge that will crawl out at night and steal sheep. Eighty acres is not water enough for mascallonge and little fishes to occupy together, except in so close a personal relation as would hardly please the latter. Much better, though not especially desirable, are the catfish, which formed a small per cent. of the total plant put in. These have been heard from, but not in numbers sufficient to show them troublesome.

The efficiency of the measures of the club in stocking their preserve may be seen from the estimate that 400,000 fish are annually taken out by the members of the club, the majority being killed with the fly. I do not think this current estimate can be very largely in excess. I am satisfied that I saw 1,000 fish taken by anglers within the range of vision on one evening I fished at this lake, and there were numbers of fishers further down the lake. It is nothing for an angler to take a creelful in an evening's fishing, and that would commonly mean forty to fifty fish, as the catch runs small. The excellence and ease of such fishing attracts a large turnout on almost every pleasant evening of the fishing season; and as the season begins in April and continues until late in the fall it may be imagined what is the total number of fish taken.

The commonest fish in the Reservoir is the croppy, or "new light." This fish was unknown in Kentucky until the building of the "Toledo Canal," which connected northern Ohio waters with the channel of the Ohio River. From the latter stream the fish worked up the Kentucky tributaries, and first became noticeably numerous at about the time of the first appearance of the religious followers of Alexander Campbell, who were called Campbellites, or sometimes, after their own professions and semi-contemptuously, "New Lights." The sectarians and the fish caught the name at the same time, and for the latter it has clung tenaciously even till now, and is indeed almost the only name understood for that fish in the country which I visited. I am told that this fish attains a weight of four pounds or more in the south. I never saw one anything like so large as that. The size most common at Lake Ellerslie was a trifle larger than one's hand; the average weight would therefore run between a quarter and a half of a pound, and be closer to the former, perhaps. This would indicate the prevalence of the plant of a certain year, possibly that of two years ago. The fish taken are larger this year than last, and in a few years more the sport at this preserve on these fish will be grand, as they will then be large enough to afford more play. We found the croppies here the free biters that they usually are. Mr. Williams, Mr. Massie and myself fished leisurely through the day, and when we came to string up our fish at night we found the string so long that none of us could lift it clear of the ground. "We'd have had a pretty nice string," said Mr. Williams as he tugged up the bank, "but when I was putting on that last lot the string broke, and I lost fifty or sixty new lights and bream."

Small minnows are readily taken by the croppies here during the day, and they often rise to the fly during the day, although the fly is then more apt to attract the sunfish and black perch. In the evening we found them rising to the fly as readily as trout, and on the light tackle used at these waters the sport was exceedingly fine. Although the new light cannot be said to be a very long fighter, it certainly rises gamely and strikes in earnest. Sometimes two or three are taken at a cast. We found professor about the best fly for steady work on the new lights, or at least the one most in use. Brown-hackle, Seth-Green and coachman were favorites next in order, and flies allied to those models were taken almost equally well. I presume I was the first to try Parmachene-belle on Lake Ellerslie. This, it will be remembered, is well hackled out with scarlet, the hackles also blending in with the white wings. My specimens came near being scarlet and white hackles, with coachman as stretcher, brown-hackle first dropper and Parmachene-belle as top dropper. I killed five new lights out of six on the belle, the other one taking the hackle. It was about half an hour before sundown. A few moments later the bream began to monopolize things, and these seemed to take to the old reliable coachman, perhaps because it was growing darker. I left a few of the Parmachene-belle with my friends, and Mr. Massie wrote, under date of May 23:

"The daisy red and white fly left us by yourself while here on the following day attracted a 2-pound bass, which was enjoyed, broiled, the next morning for breakfast. * * * Al Spotswood caught a 13½-pound catfish this morning. If George writes and tells you it was 18, you can strike the proper average."

Mr. Massie does not state whether or not Mr. Spotswood took his catfish on the fly, but I am satisfied that a man who would catch a blacksnake on a fly would not hesitate to catch a catfish in the same manner. As to the bass, they were not rising much to the fly at the time of my visit, but soon began to rise more readily.

Mr. George Williams wrote under the same date as that of Mr. Massie's letter:

"The fly sent down by you, marked '?' is the best killer I ever saw. They have begun to bite in earnest now, and the sport is great. Massie yesterday took one bass of 2¼lbs., and one of 1¾, besides 64 of the large-sized bream. Spotswood took one 3lbs. bass and one 2¼lbs. and also this morning took a 13¾lb. catfish on his fly-rod."

There would seem to be a conspiracy about that catfish. The similarity of accounts rendered is too startling. But more about the bass! Under date of May 29 Mr. Massie writes again and says:

"We went out to the lake again Monday, and I landed a bass 18¼in. long, weighing 3¼lbs. He had a new light 9in. long in his mouth when caught. He took the brown fly with green body, which we thought would be a good one, when you were here. This is my best black bass this season."

I am glad to make these little excerpts from the letters, as they serve to show something more of the quality of the fishing and of the sort of tackle best suited for it. I think the fly referred to last above is the same as the one marked "?". I did not know the name of it, but my recollection is that it was not very dissimilar to the Cock-a-Bonddhu pattern. Doubtless most Western fly-fishers for bass have found a soft brown wing and peacock body usually good. From what I know of the tackle used by the gentlemen referred to, it is evident that the bass mentioned were taken on very light fly-rods, on single leaders, and hooks not larger than No. 8. This is pretty fine fishing. On account of the bream, which do not have so large a mouth as the croppies, a No. 10 hook is really preferred to the No. 8 by the Lake Ellerslie anglers.

It is the bream, after all, which makes the fishing of Lake Ellerslie Club what it is. This fish, I presume, is not known in the North, and more's the pity. It is abundant throughout the South, and I have taken it in numbers in the Osage Nation of the Indian Territory. It is a stout, sturdy little fish, and ounce for ounce is gamier than the bass, and out of sight a better riser to the fly. The Lake Ellerslie bream rarely reach half a pound, speaking of the catch of this year, but a fish of that weight will strike a fly so fiercely and make so strong and stubborn a run, that the angler who strikes one is almost forced to think he has hung a pound bass at least. Bream fishing is next to trout fishing when the fly only is used, and it must be a pretty good trout that makes as hard a struggle as these little fellows. Like all of the perch family, these fish seem to lie in schools, and when they begin to bite the fun is fast and furious. The best time for them is just before sundown, and there is usually half or three-quarters of an hour each day when they rise beautifully. Almost the only difficulty about the Lake Ellerslie fishing is due to the heavy banks of moss and water vegetation which accumulates along the edges in the shallower water. A heavy rain is said to beat this down and cause it to disappear. The bream lie at the edge of this moss, working in toward evening. They are very shy, and the angler must wade very carefully or he will frighten them all away. It takes a long cast to reach them from the shore, yet Mr. Spotswood, who may once more be referred to as one of the most persistent and successful anglers of the club, said that it was better to fish from the shore, as wading out was almost sure to scare out the largest fish. His creel always seemed to support his theory.

The favorite flies for the bream seemed to be No 10, professor, Seth-Green, grizzly-king, brown-hackle, black-gnat and coachman; and doubtless some of the later flies the boys have got on, of which the prevailing pattern is peacock body and brown wings, and green and silver body to brown wings have been found equally good. White-miller is readily taken at dusk, but should not be much better than coachman, or, indeed, than professor, grizzly-king or any of the models with white or mallard wings.

Besides the fishes already mentioned there are said to be suckers and redhorse of large size in this wonderfully populous sheet of water. While we were fishing at the rocky bend of the lake near the gate a fish nearly 3ft. long broke water. It was thought to be either a redhorse or a carp. There are also a few pike in the lake, which fact is much to be regretted.

It may easily be seen that Lake Ellerslie Club is by no means playing at fishing, but actually enjoying sport such as is met but rarely under the most favorable natural conditions. Lexington is certainly a town blessed of the gods, and in nothing more than in this quiet and lovely sheet of water, lying fairly at the edge of town, and assuring so large a number of its people a breath of good fresh air and a touch of genuine nature. Often as the drive is made out, between the oak-sown fields of green, and over a road which edges some of the grand old Kentucky places whose homes seem, in their dignified simplicity, to be almost a part of the wide earth and of the spreading trees, the prospect grows in charm, and finds no anti-climax in the easy-lying lake, and in the gentle dropping down of the soft southern twilight; and when night has quite tucked in the landscape with her dusky curtains, and pinned all neatly with her diamond stars; or when the great luminous southern moon has swam calmly up and smiled beneficently on the earth, what pure delight to ride slowly home, under the great elms and oaks, which by this time are whispering to each other as trees only do at night. Why, bliss—I don't know where it lives if it isn't in Lexington.

The courtesy and hospitality of the Lake Ellerslie Club are something not to be discussed, but to be accepted silently and as a matter of course. The club is in Kentucky. The gentlemen who own the preserve make a great pretense of rigidly reserving its privileges; but, bless you, if a fairly plausible tramp, the raggedest and most pitiable fellow on earth, were to go down there and say, "Here, I haven't had any fishing for so long I forget how it goes," they would say, "My dear sir, go right ahead: the lake belongs to you, and may you catch every fish that swims in it!" They know how to live in Kentucky; because they know what life means, and recognize that it holds some motives and some factors besides those most prominent in the commercial world. They hold somewhat of which we lack in the North. I cannot say one word in disparagement of Northern sportsmen, as noble men as any; but I must say that any Northern sportsman has not finished his education of the forest and the stream until he has visited this land of Kentucky; for every true Kentuckian is both a gentleman and a sportsman, and Kentucky is full of true Kentuckians.

The following is the list of Lake Ellerslie Club, for which this paper is indebted to the courtesy of Mr. W. S. Cramer, the obliging and efficient superintendent of the club: Pres., Dr. J. W. Whitney; Vice-Pres., Major H. B. McClellan; Treas., Mr. C. H. Voorhies; Sec., Mr. Theo. Lewis; Directors, Dr. J. W. Whitney, Col. John R. Allen, Mr. Theo. Lewis, Mr. C. H. Voorhies, Mr. J. R. Norton, Mr. W. S. McChesney, Jr., Gen. Jas. F. Robinson, Major J. H. McClellan, Mr. D. D. Bell. Members, Messrs. John Anderson, John R. Anderson, R. F. Anderson, J. E. Anderson, D. D. Bell, W. O. Bullock, C. J. Bronston, W. H. Boswell, O. Lee Bradley, W. D. Bryant, J. L. Barkley, J. M. Bell, J. H. Bryan, T. E. Baird, Wm. Bruce, John S. Clark, B. F. Carpenter, T. J. Cassell, T. H. Cassell, J. E. HOUGH.

175 MONROE STREET, CHICAGO, June 3.

WORSE THAN THE HEATHEN.

MACON, Ga.—*Editor Forest and Stream:* Your correspondent asks why bass do not take the fly here. It must be because he has not made the proper advances. They take the fly for others from April to November, October being the best month.

We have only the large-mouthed bass, and my experience with them is that more can be caught anywhere on live bait and trolls than with the fly. Besides the bass the bream, white perch and red-breasted perch will take the fly, but only in the spring and fall. The small-mouthed bass is abundant in north Georgia, and his habits are the same as elsewhere. Brook trout will also take the fly in north Georgia if 125 to a rod in one day is any indication.

The great mistake that our local anglers make in their efforts at fly-fishing are the following: First, there is an abiding belief that if the water is too clear fish will not bite. The truth is that our waters are seldom clear enough to afford good fly-fishing. Second, that if the wind is blowing at all it is a misfortune; the reverse being the fact. Third, the selection of flies and tackle is usually poor, and very few can handle what they have. The use of rod and reel is a new departure here, and five years ago this tackle could not be had in the city. Fishing is not good enough to draw visiting anglers. Consequently our local men are only just emerging from the rut that they have been in for generations.

The above is simply an introduction to what is of more importance to our anglers than whether bass will take the fly or not. If things go on as they are at present, in a few years there will be not a fish here to rise to Gabriel's horn, much less to a fly.

If there is a law of any description in this State to protect fish I plead ignorance of it. Ninety-five per cent. of the fish are taken from their beds. I do not now refer to the market-fishers, but to all of our anglers. No fishing party thinks of starting out except in the bedding season, and usually then after having located a bed. What cannot be taken by hook and line are then seined or shot, if the water is low enough, and if not dynamite is freely used.

Fyke-nets are put in all streams that are small enough; gill-nets in all ponds; trot-lines, gourds and tin cans are available at all times. I know of 1,700 brook trout being taken from one stream in a day last October by one party of seiners. A friend just returned from a fishing trip informs me that they located the red-breasted perch bed in such shallow water that the fish would not bite, but that bushels of them were killed with shotguns. Our fishing streams and ponds are all small. The fish cannot "stand the racket". Were it not for an occasional inaccessible swamp they would would have been exterminated by this time.

What I say of fish is true in regard to game. I have seen quail on a hotel table in May of this year. Most of the deer are killed in May and June. A friend of mine, who probably kills more deer than any man in the State, told me in conversation not long since that in dressing does he had often seen the fawn sufficiently developed to stand up after the doe was opened—propagation of deer by Cæsarian section. Most turkeys are killed in April and May. The same holds true of squirrels. This is not half. I could give page after page of the same description.

In rather a rambling life I have never seen even among savages the utter disregard for natural laws and animal life that exists in middle Georgia. The consequence is that in a thinly settled country that should abound in game hunting is comparatively poor.

I hope that your circulation is large enough in this State to help us out a little. There have been several spasmodic efforts at protection, but thus far with no result. We have a few men who are ready and anxious to change the existing condition of affairs, so give us what help you can.

BREAM.

THE AMPHION FISHING CLUB, at Goose Creek, mentioned in last week's paper on "Fishing Near New York," is made up of Brooklyn business men, not of New Yorkers.

ELMIRA, N. Y., June 23.—The Anglers' Club will make an excursion about July 20 to Bala, Simcoe county, Ontario, which reports say is an excellent point for black bass and muscalonge fishing.—FIN.

CHICAGO AND THE WEST.

CHICAGO, June 18.—Everybody who goes out brings back fish. Messrs. Burton and Gillespie caught seventy odd black bass, wall-eyed pike and silver bass at Lake Winnebago last Saturday. They report the fishing all that could be asked, and the accommodations good at $2 50 per day.

Fox Lake is affording good sport. The inexhaustible breeding grounds of Grass Lake keep the whole chain supplied. There have been numbers of 3 and 4-pound bass taken at Fox Lake and the lakes adjoining this spring.

Mr. Fred C. Donald is trying to get a friend or so to go with him down to Cedar Lake on the C. & A. road. He is the general passenger agent of that road, and the boys won't believe his fish stories.

I have as yet heard nothing from the Gammon party who went up after mascallonge, but they should be back soon.

Mr. John Soderberg, of Blomgren Bros., is at Silver Lake for a week or so, and is having all the sport in the world. The Wisconsin lakes have a great many happy visitors right now.

In a late Cincinnati trip I went across the river into Kentucky, and in the course of a five-mile drive saw several artificial ponds said to be abundantly stocked with game fish. This is very common in Kentucky. There is hardly a pond of any size, in some parts of the State, which has not been well planted, and some of these ponds, being of natural beauty of surroundings, offer very pleasant and successful sport. The fish most planted in the farm ponds are carp and "new-lights" (croppies). It doesn't take a very large pond for the fish in that country of springs and living water.

June 19.—Mr. Robert S. Day, a prominent attorney of Pittsburgh, Pa., is in the city to-day and is outfitting heavily for the Lake Superior country, where he will fish for some time. The Lake Superior waters are attracting a great many anglers now. An English party numbering several gentlemen and led by Mr. M. C. Inglis, have been stopping at the Palmer House here for several days purchasing outfit for a trip to Superior. They start to-day on the steamer Taylor, which they have chartered for the cruise. A part of their outfit was 1,500 heavy rifle cartridges. It is not plain what they wish of these at this season of the year, unless they deliberately and Englishly intend to break the game laws.

Mr. J. M. Clark, of the Wilkinson Company, last Monday brought in six black bass whose aggregate weight was 23½lbs. The fish were caught in one day's fishing at Loon Lake, a few miles above Lake Villa, on the Wisconsin Central. The entire catch was eleven bass, all taken by bait-casting, of course; but following the growing custom of a few of our crack anglers, Mr. Clark returned to the water all the bass weighing less than 3lbs. When I think of such fishing as we are having out here right along, and thinking nothing of it, and then reflect on the poor people who live anywhere else but here, I just feel sorry for them. Chicago is the greatest single sporting city in America.

I think Mr. Hearth is wrong when he claims his 10lbs. 3oz. bass is the largest bass ever authentically recorded. He offers a fine Meek reel for anybody who will bring in a larger one, and some day he will just about lose his reel. Mr. Hearth insists that his bass is a small-mouth.

E. HOUGH.

KEEPING LIVE BAIT.

Editor Forest and Stream:

We in New England have but a short season in which to use the artificial fly in taking the noble black bass. The time is near at hand when we must use the minnow in casting or for live bait in still-fishing. I have particular reference to northern New England.

In past years I have been much troubled to keep the delicate minnow alive during the day. To learn the trade, I obtained two small thermometers. With one I took the temperature of the water from which the minnows were taken. I took into the bucket some of the same water with the minnows, and put in new mown grass to prevent the swash and injury of the fish. Then placing the bucket having the minnows and grass in my carriage, and also a few small pieces of ice rolled in a thick cloth, I started on a drive of three miles to Long Pond for black bass. If the second thermometer told me the atmosphere was cooler than the water where I had taken the minnows I had no further care of them till the end of the drive. There I took out the grass, put into the bucket fresh water, and with all the requisites in the boat started on my excursion for black bass. If the atmosphere grew warmer I put into the bucket a small piece of the ice to keep the temperature of the water the same as it was in the morning. Occasionally I took from the bucket some of the water and poured in some fresh from the pond which was of the right temperature, and aerated the water.

The first thing in this whole business is temperature, the second is aeration, perhaps the third is to prevent swash and injury to the little fry.

When one has become accustomed to the thing, thermometers are not needed, the hand is sufficient. But a change of 5° or 10° of temperature is sure death to the bait.

I do not use a bucket with an inner wire one. I much prefer, when I wish for a bait to take him out with a miniature dip net about as large as the hand, and not to harm all the minnows in the tank by pulling them out of water. By practicing the method I have described I did not lose one minnow in thirty in nine hours' use.

If the temperature is observed minnows can be kept in an air-tight can for a week or longer. It is useless to deny it. I have assisted in the experiment and watched them from day to day, and know it is so. But temperature must be kept uniform as in the method I have spoken of in an open can.

Last August I explored in Kennebec county, Maine, for crawfish, and am certain they may be found in localities not before reported. They are another good bait for black bass. The greed of anglers is fast extinguishing the beautiful trout of Maine, but in the water sheds of the Kennebec and Androscoggin Rivers the brave black bass and the toothsome white perch will fully fill their place.

LATE SPAWNING TROUT.

IN your paper of May 16 are some of my reminiscenses of trout fishing, in which occur several typographical errors, by one of which I am made to say that I have "griddled" trout. This may be true, but the word intended was guddled. It is, I think, of north country origin, and signifies the taking of trout by the hand. Perhaps the present generation doesn't know the process; if so, never mind.

I set out to write about late spawning trout, and desire that you will continue to call the attention of your influential readers to the fact that these fishes spawn, in some cases, much later than we have been led to suppose. For instance, I yesterday (June 18) fished for a short time in a brook, where I took three trout. Of these, two contained spawn. It has happened this season that I have spent more time in trouting than for many—perhaps twenty—years previously. My catches have not been large, though often satisfactory. The fact is, I have been studying the orooks and the trout. Of these I could doubtless have taken more elsewhere.

I began my fishing about the middle of May, and I believe that fully one-half my trout taken since that time have contained spawn, more or less developed. Further, there is a farmer of my acquaintance, who has never shown any interest in the preservation or propagation of fish. He said to me (with no previous conversation on my part to lead up to the subject), that he thought our trout season opened too early, for the reason that a member of his family had taken about eighty during May, of which more than one-half contained spawn.

In this State the season closes Sept. 1. Is the law based upon a thorough study of the habits of Michigan trout, or on observations made elsewhere? Perhaps our trout season should be moved ahead a couple of months, and from the limited acquaintanc I have made with the habits of these fish, I judge that it is a subject which demands the attention of our Fish Commission.

While upon this subject, I wish somebody who knows would tell me why it is that June is the month when the brook trout are the most easily taken along the shores of Torch Lake. Is it because they visit the brooks to deposit their spawn? One person lately caught 294 at one outing, and I think in one day. About eighty of these were taken in one place, when they stopped biting. Had they not so done, I suppose that he would have taken 2,940, or more if possible. It looks as if a limit should be established to the number of trout one person may take in a day.

Your readers need not get excited and think of doing the same thing, for the case was exceptional, and the man the best fisherman I know; but I believe the fact is as stated and offer no further comments, except to say that the trout were all of moderate size.

One of the worst features of trout fishing in this region is that so little attention is paid to the six-inch law. Pity it is that people will persist in carrying home poor little trout of three or four inches in length, with no excuse except that they are trout!

Let the honorable anglers of Michigan bestir themselves in these matters. There is still trout fishing in this State for us; if we do our duty, not otherwise, there may be some left for our grandchildren. KELPIE.

CENTRAL LAKE, Mich., June 19.

THE COWPASTURE RIVER.—This river of Virginia is a small stream, and not of much importance to any one but sportsmen, but though small it is nevertheless very pretty and picturesque, and is for its size as good a place for black bass, pike, etc., as any in Virginia. The principal part of this river for fishing flows through Bath county, and passing through that county joins the Jackson, a stream of about the same magnitude, at Clifton Forge, forming with this river the James. It is of the same order as the latter river, consisting of deep pools and lakes, which are alternated by shallows and rapids, so that one can have ample opportunities both for bait and fly-fishing, and boats can always be obtained if necessary. There are plenty of black bass, sunperch and pike, and any one going out for a day ought, if he is anything of a fisherman, and will take a little trouble, to get a very well-filled basket. There is plenty of accommodation along the river, a great many farmers having farms in the valley who are always hospitable to strangers. There are also some very convenient spots for camping on its banks, and any one going there and taking a little trouble will be sure to get good sport worth it.—C. H. H. RUMBOLD.

THE EUTOPIA AND TROUT LAKE FISH AND GAME ASSOCIATION, is the name under which a company of anglers have organized in this city and have acquired about 1,200 acres of land near St. George, Charlotte county, N. B. The property includes the two lakes from which the name of the association is taken, a brook connecting the lakes, and good surrounding camping ground. The officers of the association are: John W. Handren of the New York Yacht Club, President; Dr. Benjamin F. Vosburgh, Vice-President; Julian H. Barclay, Treasurer; Thos. McGrath, Secretary; James E. Lynott of New Brunswick, Assistant Treasurer and Secretary, and the following Directors: John W. Handren, Benjamin F. Vosburgh, Julian H. Barclay, Peter Reid, James E. Lynott, Albert Darling, William S. Macfarlane, H. P. De Graaf and Fred. Bredel.

MOOSE POND TROUT.—Mr. Dayton Ball, of Albany, on June 11 and 12 took in Moose Pond, in the Adirondacks, a string of trout which weighed respectively, 4lbs. 13oz., 3lbs., 2lbs. 9oz., 2lbs. 7oz., 2lbs. 7oz , 2lbs. 4oz., 2lbs. 1oz., two 2lbs., 1lb. 9oz., 1lb. 8oz., 1lb. 7oz., and several smaller ones.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

Fishculture.

DELAWARE RIVER BLACK BASS.

Editor Forest and Stream:

The recurring outcry against black bass by certain fishermen along the upper Delaware recalls the protest made against the stocking of that river with these excellent fish, some 18 or 20 years ago. New Jersey had just appointed her first Fish Commissioner, Dr. J. H. Slack, and he took the ground that the bass would extirpate the shad. He was fortified in his expressions by most of the New Jersey papers which took part in the discussion. Hon. Edward J. Reeder, of Easton, Pa., one of the Fish Commissioners of that State, and in most respects the most efficient one the State has ever had, championed the cause of the bass, and for the time there was a lively newspaper scrimmage between him and Dr. Slack. Both were able writers, and the Doctor had the advantage of being a practical fishculturist, but he came out second best in the controversy.

I was at that time interested in fishculture in New Jersey, and became interested in the black bass. In those days trout culture was the only variety of fishculture carried on in this country, and most of those then engaged in the business supposed it possible to stock most waters in the country with that peerless fish. It is not surprising then that most of the practical fishculturists looked with disfavor upon the introduction of an inferior variety of fish. I was myself one of the few trout culturists who became early convinced of the futility of stocking any except the purest of waters with trout, and consequently saw the propriety of thoroughly testing other varieties, which gave promise of success. In due time I took charge of the stocking of a large portion of the waters of southern New Jersey with black bass. I went to Harper's Ferry for our initial stock, but subsequently obtained fingerling stock from the Delaware, mostly between Trenton and Easton. These were obtainable only by hook and line. I sometimes had as many as thirty persons at one time fishing for them, and these were mostly regular fishermen and their families. I followed up this matter regularly during the proper season for three years. I repeatedly asked the old fishermen if they considered the bass destructive of shad. In every instance I found that they had originally been prejudiced against the bass, mainly for the reason that Dr. Slack, a reputable fishculturist and a Fish Commissioner, had pronounced against them. In every instance, however, which I can now recall, these fishermen had changed their minds radically upon the subject. The oldest and most successful shad fisherman of them all assured me that he had dressed hundreds of bass, and had found in all but two young shad in their stomachs. Most, and I think all of the others had found none.

It seems to me that a new generation of fishermen are now occupying the old places, and have not yet learned by experience what they will surely learn in time, that the black bass in no wise interferes with the shad. All old shad fishermen well know that in all shad streams there are only about three good annual runs of shad in each ten years. This has certainly been the case for the past fifty years, and will doubtless continue to be the rule rather than the exception, regardless of any and all stocking operations, whether with shad or other varieties; for it is a fact that these developments are not confined to shad, or even anadromous fishes, for they have existed in our great lakes as far back as improved methods of capture have been in vogue along their shores, enabling old fishermen to study with better judgment the phenomena of fluctuating plentitude and scarcity which develops from year to year in all waters.

This season, for about ten days, there was an oldtime catch of whitefish along the southern shores of Lake Erie, caused, as the old fishermen say, by certain movements of the ice. Those who have the handling of heavy fishcultural appropriations are quick to take the credit for this plentitude, by reason, as they allege, of their whitefish hatchery operations, but they are suspiciously silent regarding the still greater plenitude of perch and other varieties which have not received the benefit of amateur fishculture at public expense.

It seems to me that those fishermen of the sporting class, especially those who are amateur quill-drivers, are more prolific in these chimerical reasons for ever-recurring seasons of scarcity of favorite varieties of food, and especially game fishes, than all other classes who impart their opinions upon the subject. MILTON P. PEIRCE.

COLUMBUS, Ohio.

A LESSON IN TROUT CULTURE.

WE glean the following interesting notes from a report of operations at the Wytheville Station, Virginia, from Jan. 1, 1885, to June 30, 1887, by Marshall McDonald.

The distribution of trout fry having proved a failure, Commissioner McDonald has made a change in the methods of handling the young trout, and instead of planting the fry they are kept at the station in ponds until 5 or 6 inches long, when they are able to take care of themselves. The Commissioner states that the natural trout stream of the station was stocked for several years in succession with fry of both the Eastern brook trout and the California or rainbow trout without any appreciable results following, while the 400 fingerlings, from 4 to 5 inches in length, planted in August, 1886, in the same stream, were found to have attained a length of 7 to 8 inches during the ensuing fall and winter, and he concludes as follows:

"The important lesson to be drawn from these experiments is that in stocking streams infested by small predaceous fish we can only assure success by stocking with trout of sufficient size to dominate the water. Under the circumstances indicated experience shows that several hundred yearling trout are sufficient to stock a stream presenting suitable habitat. On the other hand, we can rarely expect success in stocking such waters with any number of fry, however great. It may be assumed as a rule that a pair of yearling trout are fully the equivalent of several thousand fry in stocking streams presenting the conditions to be found in the trout regions of Pennsylvania, Maryland, Virginia and States further to the south."

CONNECTICUT COMMISSION.—Hartford, June 1.—New Fish Commissioners have just been appointed by Governor Bulkeley and confirmed by the Senate. Judge Pike, of Middletown, resigned in January, and the present Commissioners are: Wm. M. Hudson, Hartford; James A. Bill, Lyme; Robert B. Chalkir, Saybrook. A new law has been enacted which divorces the Shell Fish Commissioners from the Fish Commissioners, and the Governor has appointed the following gentlemen to act as Shell Fish Commissioners from the dates named: Wm. M. Hudson, for four years from July 1, 1889; George C. Waldo, of Bridgeport, for two years from July 1, 1889; Bryant A. Treat, of Wallingford, for the term commencing August 26, 1890, to July 1, 1891. The Hon. James A. Bill remains in office until Aug. 26, 1890.—H.

A WYOMING HATCHERY.—J. C. Barr and L. E. Martin have lately constructed a fish hatchery on the Colorado Colony Ditch Company's ranch, near Big Horn, and will stock it this season with mountain trout. The pond, or artificial lake, is supplied with water by a large spring. The depth in some places will be as great as 12ft. They intend putting in rowboats in the near future.—*Sheridan (Wyo.) Enterprise.*

FIXTURES.

DOG SHOWS.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. G. W. MacCuaig, Secretary.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville; N.Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 24.—Fall meet of the National Coursing Club at Hutchinson, Kan., M. E. Allison, Manager.

THE HISTORY OF PATSY.

Editor Forest and Stream:

E. O. Damon recently sent the following letter to the *Shooting Times*, London, and the editor, a well-known thief, who has been barred from the English Kennel Club, and is seldom recognized by honest people, printed the stuff:

DEAR SIR—It may be of interest to some of your readers to hear a word or two from over the sea about dogs and doggy men in your midst, and how we confiding Yankees go over to you for our stock, and put out our money for our favorites. How we sometimes get "left," to use a slang, is, for me, a sufferer, to tell; many of us have not the moral courage to come out in public and admit the fact, as was the case with the owner of a great red dog sent out several years ago by a prominent member of the Irish Setter Club. I am just in receipt of word of the arrival out of another Irish setter, which came with great recommend, but proves very disappointing. Not at all as written of, and a veritable third-rater. Well, being a lover of, and having always shot over an Irish setter, I last year decided to import a dog of this breed, and knowing the uncertainty of getting a high-class dog, I went to Mr. C. H. Mason, of New York, and asked him if he could procure for me a dog that would be of quality to attract in the stud; or to sum up, I required a high-class Irish setter and asked for his price, or rather the probable cost of such an animal. He told me that such an animal could be had for $250, but advised me to pay $500 and bring out a "crack." To this I assented, and told him to go ahead and see what could be had. Mason said he would go to England for the dog, through his buyer. This was in June. In September I received a letter from him, in which he described two Irish dogs, one "Patsy," relating to which I write now. On Sept. 19, 1888, he wrote to me as follows:

"My buyer knows of but two dogs that would be likely to suit me, an under-sized dog, and this is his only failing. Wants a little more size for a dog, but for general formation, coat, color, tail, etc., grand. Owner does not care to sell, but my buyer thinks he can get him for £100, rather more than the price I told you or likely to be asked for a good one." He goes on to say: "My man says he is a very true made one and full of quality."

On Nov. 20 Mason again wrote to me relative to this dog. "My buyer says, with reference to his head, 'I consider it a most typical one, good expression, etc., for shape, true form, feet and legs, and movement, you can't have any better. His price will be £100. I am quite sure he is a 'hot un,' and if you want him remit at once.'"

To any man the impression of this dog would be that he was an undersized dog, but made up very true in outline, a fair head and all the points so requisite in a high-class Irish dog.

After cautioning Mr. Mason as to his being sure of the dog's quality, I order, of course, basing my order upon his opinion of the dog and his confidence in his buyer.

Nov. 20 the dog comes, and with a record and flourish jumps into print in the Dec. 13 issue of FOREST AND STREAM over the name of C. H. Mason, a writing up that attracts the fancy and scares to death several of our prize winners. At the New York show Patsy is the center of attraction to a trembling few, but they soon take heart, and one after another says: "Is this the dog described in the article by Mason?" and as our favorite fancier said: "The most misleading description of a dog I ever read," a dog, as the —— reporter said in his report, "with very little to commend him."

An examination of the dog shows him to be very short on legs, short and thick-set neck, ears short and set high, head that would be poor for a bitch, no stop or occiput at all, nose very snipy and straight stifles, a type of dog the exact contrary of such dogs as Tim, Elcho, Jr., or Kenmore—a type of dog that several of our best fanciers who were waiting to breed to some new blood, on examination, said: "You could not give his services to me." Such is the dog sent over at a cost of $550, and which took months of time to find, a dog from the poultry show at Strabane, and offered to our breeders as a dog of such "typical head and fine formation;" a dog that the Rev. R. O'Callaghan advised me not to breed to, and which at the New York show takes a very highly commended!

Now, how are we who try to improve our dogs to go to work to bring out a dog of worth? I draw this conclusion—either a red in Ireland amounts to nothing or there are no good reds there, or those who advertise in our papers as buyers are swindlers. I have not written this to get drawn into a discussion, but simply to show how imposed upon I have been, and to save some others from a like fate. The above is no distortion of facts, as all our best fanciers can testify to who have seen this Strabane wonder, and which Mason advised me to let stand in this country upon his Strabane record, though he did think I might show him at New Bedford, as he judged there.

If Patsy was the right dog in Ireland, then our Yankee knack has helped give us a class of reds far superior to this type of a dog; but no more Irish dogs for me through the agency of Mason, Blank & Co. So I say another one sold; who will have the next?

E. O. DAMON.

It seems strange that a man with such rigid notions of honest dealings as E. O. Damon should have sent his communications to such a notorious bad character as "Wildfowler." Damon is an old reader of FOREST AND STREAM; he has read it for years, and it is not at all likely that he just happened to miss the numbers that contained the articles and correspondence headed "'Wildfowler's' Thievery." I leave your readers to judge for themselves why the letter was sent to a rogue. My own idea is that Damon felt that as he had a very poor case he had better rely on thieves to magnify and distort the facts until they should succeed in making a mountain of a mole hill. No sooner had the leading man in "'Wildfowler's' Thievery" printed the letter than that sickening creature Huscroft, who has recently been evolved from office boy to "special commissioner," dispatched it to his congenial associate in Chicago; and with a loud blast of trumpets the "History of Patsy" was given to the American fancy. Mean, sneakish insinuations and half lies were tacked on to Damon's already untrustworthy letter. One would have thought that "Salisbury's Pedigree" would have been sufficient to teach these perverters of truth

lesson; but their pigheadedness knows no bounds, and they persist in running their heads against a stone wall, to find that their rascality is only equalled by their surprising asininity. It does not perhaps seem charitable when one sees an idiot bucking his skull against a granite pavement to kick him from behind; but there are times when this must be done, if only to prevent the fool from pounding himself to jelly, and to impress upon him that his brains are not located just where he supposes.

Now that the Chicago manipulator, the wildfowling thief and the pudding-headed special commissioner have finished with the "History (perverted) of Patsy," I will give to the American dog fancy full and correct particulars regarding the purchase, and will then leave the vicious schemers to extricate themselves from the dilemma as best they can. To show how bad a dog he bought and how much he knew about Irish setters, Damon has been airing his views in a strangely contradictory fashion. To strengthen (as he supposed) his case, he quoted from my private letters. Damon must know that it is now my privilege to quote from his letters to myself and to others.

These letters clearly prove that Damon is scarcely the sort of person one expects to pose as a martyr or complain of unfair treatment; and they prove beyond the question of a doubt that his opinion, if he has one, is valueless. On May 25, 1888, Damon wrote me that he had always taken a keen interest in my articles on dogs because they showed me to be a "rare authority," and because they were "convincing and treating of facts." I propose to make this letter just as convincing and boiling over with "facts" as the ones that won Damon's heart.

Damon wanted a "good reliable stud dog, one and a half or two years old, of fine color and coat, of the best of breeding and strain;" and because of my "splendid knowledge and experience" he thought I could "best advise him." After telling me how many years he had owned Irish setters and how much he knew about them, Damon concluded by asking if I would undertake to "bring out for me such an animal, and at the same time hold yourself in the position of guaranteeing me what I want." Soon after writing me his letter Damon called on me, and I distinctly told him that I would write to my buyer, do my best for him, but that as I could not select the dog I would guarantee nothing. On May 31 Damon wrote to remind me that "the first requirements must be speed, nose, style, and field work combined," and concluded by stating that he did not wish a dog "related to the Glencho strain." He tacked on the following P. S.: "I believe there is no duty on an animal for breeding purposes."

Soon after receiving this letter I wrote to Mr. Wm. Graham of Belfast, Ireland, asking him to find for me a well bred, young, good-looking and promising field dog. Mr. Graham has seen all the best setters from old Palmerston down, he is an excellent judge, I have known him nearly twenty years and he has always done the fair and square thing in his dealings with me and with a large circle of my friends. I would write him again to-day for another dog if I needed one. On Sept. 6, Mr. Graham wrote me he had his eye on two dogs that might suit me. He said: "The best I know of for all-around quality is one Patsy belonging to Dr. Boyd, born Aug. 20, 1885, by Frisco ex Nellie IX. I consider Nellie one of the best bitches we have, but now getting into years, and one of the best brood bitches as most of her stock all possess quality. The dog belonging to Wilson that won second at Barn Elms and what Wilson considers the best dog in England is out of her. I purchased him for Wilson and I don't think he would sell him, but Patsy and Wilson's dogs are very different animals. Patsy is a small dog, a very true made one full of quality, wants a little more size for a dog, but for general formation, coat, color, tail, etc., grand." Of the other dog Mr. Graham said: "Wilson's dog, second at London, Barn Elms, was born May 2, 1886, is a large dog possesssing lots of quality, grand coat and color, but has always been thin in condition. It would take a good price to purchase. The dogs I mention I consider the best I know. I bid once £50 for the dam Nellie IX. and could have given more, but Wright wanted £100 at that time. I have described these two dogs Patsy and Malt as being good ones of different types, or rather the same type, but Patsy is small for a dog; the other is a fine large dog and if in good condition I think a warm member. It is condition that has kept him back." On receipt of this letter I wrote to Damon and quoted from Mr. Graham's letter. I told him I thought the smaller dog would suit him better, but advised going slow until I heard from Mr. Graham the exact weight of Patsy. On Sept. 20 Damon replied as follows: "I am not averse to a dog a shade undersize, indeed I prefer a dog not too large and coarse. The dog you mention first (Patsy) would seem to fill the bill, if the English idea of color is as we like, and I should say that if this very important point in a red dog is right, try and buy the first-named dog. I notice you make no mention of the dog's winnings. Were they all upon the bench or part field trials, and has the dog ever been bred? You of course are well aware that a critical lover of this dog will at once select Chief as the proper-colored type, and with this color and a fine, close coat so much the better. A dog tending toward a light shade, so common, I would not have in my kennel." I immediately wrote Mr. Graham to send me the exact weight of Patsy, and to give me other information in regard to coat, color, etc. Oct. 5 Mr. Graham replied as follows: "I inclose you letter from the owner of Patsy and the particulars you ask for. For shape, make and true form, with feet, legs and movements, you can't have better, and all in proportion; the only thing I see about him is I would prefer him a larger dog. As for coat and color he has a beautiful coat. His color is remarkably good and sound all through. He has a perfect tail, can't put it wrong, and shows himself well. If he were larger he would be the best I have ever seen, I think. He is of Lady Clare's type. I would not say he was best in England, but I don't know one I could say was better. I don't believe there are any can beat him, and then it is a matter of opinion. I am only giving you my ideas, and would not advise you in any way."

Here is the letter from the owner of Patsy to Mr. Graham. It gives the dog's exact weight and contains other information asked in my last to Mr. Graham:

LIFFORD, COUNTY DONEGAL, Oct. 3, 1888.—DEAR SIR: Patsy weighs 3 stone 5lbs. He has only had two bitches. The pups are not more than 3moe. old in one case, and the second has not had them yet, I think, so cannot give any idea of what his stock may be like. He was never shown except twice in Strabane, once in Armagh and in Kells: got first and special everywhere except Armagh, and I think I could explain why he was beaten there; he has in all these shows beaten dogs and bitches that have been exhibited in Dublin and London. He has been shot over both last year and this for three weeks each season on grouse, for the time I have been at him, he is as good a dog as ever was on a mountain, and he is so wise and sensible that with regular work I believe he would be second to no dog living, and his temper is perfect. I don't mean you to understand that at the present moment he is a perfect trained dog, but he is *perfectly* steady on his birds, down to shot and wing, and roads very well. His price will be £100; he never was so strong looking as he is at present. Yours truly, J. C. BOYD.

Extracts from these two letters were sent to Damon, who on Oct. 30 sent a draft for $500, and the dog was bought.

When Damon received his dog he wrote me that he could win his way into the champion class at New York, but would have to stop at New York because in his opinion Tim would beat Patsy in the champion class. This letter startled me and I wrote Damon that I understood he had bought the dog for stud and field purposes rather than for the purpose of beating Tim. Nov. 30 he wrote back that he "did not intend to vacillate." In this letter he expressed his opinion of Patsy as follows: "He grows upon me the more I see him, and if I could put him up say two inches higher I would not want another change. I think he is remarkably strong in character and formation of this breed and I feel that as a stud dog I shall be *perfectly satisfied*. I shall put him on birds to-day and give him a trial, reporting to you. I will add my best thanks for your interest and pains. In disposition Patsy's better does not live, of any breed." The next day, Dec. 1, Damon sent me this letter: "I put Patsy on to our ruffed grouse yesterday—our wildest and most wary game bird. He is fast, has an exquisite nose, covers his ground thoroughly, roads beautifully and is remarkably steady and on his points, also to gun or wing. A few days in my handling and he will adapt himself to our rough country. I would put special stress upon his steadiness in the field and his qualities as a stud dog. He will soon learn our covers and prove all the gentleman claimed." Dec. 10 Damon wrote: "Will you write me a brief covering in a few words Patsy's make up, his disposition and level-headedness, which are two of his finest qualities, his breeding and strong formation as a stud dog in character. I want such a heading to start off in my circular. I have had a great many inquiries as to his qualities and believe he will be of great value in improving this variety of our sporting dogs. You, of course, know our reds have deteriorated the past five years instead of improving, and our stock has sadly needed new blood."

Dec. 13 Damon wrote a letter to Mr. F. H. Perry of Des Moines, Iowa. He said: "Patsy is very strong in the four great requisites for a stud dog, viz., disposition, breeding, color and true formation. His disposition is the sweetest I ever saw in an Irish dog, and he is remarkably steady on his birds and very level-headed, is well broken, drops to shot and wing, and is very fast, with plenty of style and dash. His color is not surpassed by any of our crack dogs, and I have seen them all. His coat is flat and straight, beautiful flag and feather, nice expression and typical head. In improving these dogs, as he must, I shall be repaid. My dogs are all of high order, field broken goods, and with the highest bench form. I send you a photo of Patsy. It is not good of him, but shows you his form and make-up. He stands forward better naturally, and has much more animation. If your bitch is a nice one you will get a rare selection of puppies from Patsy."

Dec. 14 Damon wrote me: "I am in receipt of FOREST AND STREAM containing your criticism on Patsy. You are absolutely correct in every feature but one, and in that you are a trifle off, though it is a trivial matter; that is, as to the color of eyes. Few would call his eye light; however, it don't matter much. I have had a long letter from O'Callaghan, the Irish setter breeder. He evidently thinks all Irish dogs are n. g. except his strain." Dec. 24 Damon wrote me: "Frisco is the sire of Aveline, the bitch that in the open class field trials beat all comers; also he is the sire of Ormoy, Shandon, Droheda, all winners at Barn Elms and Brighton this year. Consequently my Patsy is half brother to all these noted dogs. I must say that I am exceedingly pleased to find his breeding such." A similar letter was sent to Mr. Perry the same day, and Dec. 29 Damon wrote Mr. Perry to this tune: "If you decide to buy a fine Irish dog you must make up your mind to go down into your pocket if you wish to secure anything of high class and merit. As I have had years of experience in importing poultry, pigeons and more lately dogs, I may be able to give you advice."

Dec. 30 Mr. Perry was treated to another lengthy epistle, from which I quote the following as bearing on this case: "In regard to the matter of selling Patsy, I cannot entertain it for a moment. His strain breed truer than any strain in England, as is shown by his half brothers and sisters winning all the prizes at Barn Elms in July, and at the great national dog show just over in Birmingham. If you have the —— puppies you have not the true type of Irish setter. I have seen —— and examined him carefully. If you will read the work of Mason, 'Our Prize Dogs,' you will see that of nearly all the dogs from —— that he criticises he says in almost every case 'bad in tail' and also in head. It is just this class of dogs that has thrown our red dogs into contempt. Unreliable stock never did breed true typed and formed dogs; it never will. It is very easy to spend a few years in breeding and throw the time away; a man can start right and accomplish much."

Jan. 7, 1889, Damon wrote: "Dr. Jarvis is somewhat worked up, wants to stop over and see my dogs." The same day he wrote Mr. Perry: "I should like you to see Patsy and —— side by side. Patsy beats him in every feature but one and that is size; he is about 5lbs. larger. Patsy's great beauty is in skull, eyes and expression, as plain and evident in its exquisite breeding as can be; even a man who never saw a dog would notice it."

Jan. 11 Damon wrote me: "I have decided not to show Patsy at all. I believe it would kill him for the stud. A breeder of red dogs came 100 miles to see him this week, and was not at all favorably disposed to him. I do not see how your buyer could have sent a dog *dwarfed*. I feel that we made a great mistake—much too small and weedy."

On the very same day, E. O. Damon, the dog-buying martyr and paragon of honesty and all purity, wrote to Mr. Perry as follows: "Since my two imported bitches, received from England this week, have been served by Patsy, I have thought over the matter of your asking a price on this dog. Would you entertain taking him at the actual cost? He is here safe, and Mr. Mason's criticism is a sufficient guarantee of his worth. If I should sell I should have to import again; but this I would do if I could see my dog in your hands, where he could do much good in the West for this grand breed. Having these imported bitches now in heat and served by Patsy, puts a different light on the matter. A dog the worth of Patsy must in your country do much to improve the breed, and he would soon pay his cost. Your bitch is of the best possible breeding, and I would not put a dog to her that I could not follow straight in the E. K. C. S. Book. I have been looking into the different strains very carefully, and the great trouble I find is in getting a strain of pedigree and purity. By commencing in the right way you can save time. I would not sell Patsy to any Eastern party. In your country it would not make any difference. A letter received yesterday from England lays a great deal of stress on the blood and Patsy's sire Frisco, and he has bred many dogs that to-day in England cannot be bought at any price. Now, I cannot advise you to breed to or to buy Darby II., from the fact that, while his blood is said to be good, and while many of his sires can be found in the E. K. C. S. Book, *some cannot*, and so a doubt is thrown upon his worth, which I am frank to tell you of. Such a dog should *never* be bred to so fine a bred bitch as your Nino. Many fanciers would tell you that Darby II. was the *best*. While he is a fair dog, his pedigree goes back to local dogs, dogs not to be found in the E. K. C. S. Book. In the North of Ireland perhaps good, but not good enough to import, and so I say, let him alone. Should you entertain my suggestion, I will give you a point on Patsy that is not public, but which you can quickly substantiate—a matter which would give additional worth to the dog. I cannot buy Darby II. or advise you. Let me hear from you, and please do not at this stage say anything of my considering a sale." Does any man in the dog fancy require further evidence of the shaky character of Damon? If he does, let him read on:

Jan. 16 Damon wrote to me: "You must remember that your buyer did not mention a word as to Patsy being so short or low down on his legs, and right here you as well as I was awfully deceived. Had he been up on his legs, that *first requisite* of the Irish dog, with heavier bone, would have put a very different phase upon his merits. A short limb, light bone, with straight stifles ruins him in my eyes. I am not at all fault-finding with your efforts. Your efforts I appreciate fully. You did your best, no doubt, but Patsy would fill the bill of a novice selection. I hate the sight of the little fellow."

As soon as Damon had concluded this letter he sat down and wrote to Mr. Perry: "If you wish to negotiate for Patsy I am free to tell you his cost, but it is to go no further, and you can prove this by writing to Mr. Mason. Patsy cost me $530, and at this price, $530, cash, I will sell him. Such a dog as Patsy would soon pay for himself, and I have now the promise of several bitches for his services. If I sold him I should breed one of my bitches again to him. He is so well calculated to nick well with her. If you are looking for a dog of this breed it is a chance not often to be had." Jan. 21 Damon sent the following to Mr. Perry: "Have your favor, and in reply, if you wish to purchase Patsy you can do so at my price, already given you, the actual cost of the dog. I should not offer Patsy to you on any terms were he not sound, and I will say that the dog does not stand with a hardier constitution or in better health. His coat is bright and fine, nose cold as can be, and in perfect condition; not a blemish can be found. As to showing Patsy, I always hate to put so valuable a dog into the show room, and I don't think I should do so, certainly not until I had bred him. Patsy is wonderfully like the dog Chief. Chief a trifle heavier, but not a whit better in coat or color or style. He shows very strongly, and it takes a great one to beat him. The dangers of show rooms are many—diseases, fire and the thief. Unless you care for the dog yourself, I have another man from the West anxious for a price on him, but I cannot give it, you have the first chance. He would not be a loss to you and would surely make his mark." Damon was in too big a hurry to wait for an answer to this letter, and so the next day, Jan. 22, he sent Mr. Perry another. Here it is: "I wrote you somewhat hastily last night. It seems to me the amount is so small that if you really care for Patsy you could arrange it without much trouble. There is a great demand for dogs in the West, and a dog of Patsy's breeding and quality would very soon bring in quite an income. One party wrote me he could have sold a great many Irish puppies had he had them to spare. You could breed him to your bitch, then select one of the finest and breed to the sire, or a son to a mother, and then mate a dog to a bitch out of each breeding together. This is the way the finest dogs are produced and you soon get a strain with very strong formation in every breeding. The oldest and most successful breeders in Europe breed in this way, men that are always at the front. I have just received a photo of the bitch Mollie, owned by Dr. Nichols, of Troy, N. Y., a bitch that has won all around East. She has fine head and nose and neck, but all other parts—back, loin, feet, legs, tail and chest very deficient, and this called one of our cracks. Patsy excels in all these parts, and as a stud dog he will give our reds a great boom. He is so steady that in your country he would prove a good field dog. He has a beautiful motion and is of tremendous power and speed. If I were you and wanted such an animal it's a chance too good to let go." Mr. Perry began to fight shy of Damon and he put the letter aside for further consideration. Feb. 1 Damon wrote him: "Have heard nothing from you relative to Patsy. Did the price scare you?" Mr. Perry did not answer and so Patsy was entered for the New York show.

Patsy got a vhc. under Mr. Wenzel, and because he did not take first Damon became very sore. He met a generous sympathizer in a New Hampshire man, and before he went home he swore vengeance and sent me a very polite note. Here is a taste of it: "Two days spent here have at least given me an insight into this swindle of a Patsy business. I would at least like the pleasure of showing up your buyer in the English papers, and I ask you for his address. He is a d—d trickster. I would like to ask if you have no redress from a buyer in such a clear case of beating a man as this. Your way was to have returned the dog. Five hundred dollars loss is no worse than this typical dog—a miserable apology. Can you take the dog off my hands at any price?" Feb. 23 I replied to this letter: "I am in receipt of yours of the 18th and 20th inst. Mr. Wm. Graham purchased Patsy for me, and I have always found him straightforward and thoroughly reliable. He wrote me and I wrote you that he considered the dog too small, giving at the same time his exact weight. The dog you said was large enough and instructed me to buy him. You ask if you can have redress. How could I suggest sending the dog back after you had written me that you were much pleased with him, and after having expressed this opinion in some of the sporting papers as well? I judged from what you said to me and from your correspondence that you were an old admirer and breeder of Irish setters who knew what was what. Your letters to me go to show that your opinion of a dog is influenced by what first one man and then another has to say about him. I presume —— and one or two others actually succeeded in making you believe that Patsy was not only a duffer but a mongrel as well, whereas any man who knows an Irish setter must admit that the dog is a good little one."

Feb. 25 Damon sent me a long, rambling and contradictory letter, such as only Damon can write. He bestowed his blessing on Mr Graham, dubbed him a trickster for sending a little dog instead of a big one, and wound up by leaving nothing of Patsy but the claws. About the same time he wrote to Mr. Graham and informed him that he had been swindled by a "party in New York." Then he went to work and sent Mr. Perry a few lines. The letter was dated March 4, and in it Damon (remember he is not a trickster) said: "He is a dog which impresses fanciers differently. One don't know enough of the breed to appreciate his strong points, and the next man who sees him is all carried away with him. No doubt the very unfair criticism in a Chicago paper's report of New York show will be answered. In FOREST AND STREAM's report of the show Mr Mason says, 'Patsy, vhc., best in class barring his size.' Now it is true Mr. Mason imported this dog; it is also true he would not make such an opinion unless he had in the dog sufficient quality to warrant it. Now you must also remember it would be a very difficult thing for any *imported dog in the stud at $25* to have gone into the ring at New York and won. It is unfair to exhibitors for a judge owning dogs in the stud to pass upon that breed of dog. Mr. S. T. Hammond, the veteran, was much interested in Patsy. He examined him critically and his opinion was this: 'I much prefer him to Dick Swiveller, and he will breed grandly with Elcho bitches.' I said, 'Why do you like him?' His reply was, 'He is a dog of much stronger character, better coat and color, and he is put together like iron.' Such an opinion from such a man is doing the dog justice. I shall show in Boston, probably, and his standing will be differently placed." Notice the mean and cowardly stab at Mr. Wenzel, who judged at New York. Damon imputes that he gave Patsy only a vhc. card because he owns two stud dogs, Chief and Tim. Is any further evidence of the character of this man required to show that anything he says or does with respect to Irish setters must be regarded with suspicion by honest people?

March 4 and 5 Damon sent me two letters, from which I will quote: "I am anxious to see if the dog really has quality enough to call forth a line in his defense." In the letter of the 5th he said: "As a judge Max Wenzel is a farce. Do you consider Desmond inferior to Patsy, and by that I mean, judging these two dogs together, could you honorably give Patsy the first place?" In reply to these two last letters I said: "Yours of the 4th and 5th inst. at hand. Let me ask you as a favor not to write first one thing and then another about the same dog. Your statements are so wholly

contradictory that really I cannot follow you. In one of your letters you gave me to understand that Mr. Hammond had told you that Patsy was worthless. When I asked Mr. Hammond what he thought of the dog he at once replied that he was the best in the class, barring his size. You, as well as I, know that Mr. Hammond would never say one thing to you and another to me; he is not a man of that kind. I shall not be called upon to judge Patsy and Desmond so long as the first named is owned by you. But without seeing the two dogs together it strikes me that Patsy is the better."

Do not forget that Damon in his letter dated March 4 and addressed to Mr. Perry, gave Mr. Hammond's opinion of Patsy. He was trying to sell the dog. Now read this from a letter to me and dated March 11: "Mr. Hammond's opinion to me was that Patsy would breed well with Glencho bitches, other than this his opinion was not expressed, but it was very easy to see what he thought." On the very same day that Damon wrote me the above he penned the following to Mr. Perry: "I have decided to breed him to my O'Callaghan bitch Winnie II., winner of second at New York. I believe there is more good in this dog than credit has been given him and I think you would say the same if you could see him. In the opinion of such a veteran dog man as Mr. S. T. Hammond I must have great confidence, and he said 'best in his class and I would prefer breeding him to any dog I ever saw.' If you like and can pay express charges both ways, if you do not want to keep him I will send him to you on approval at price I gave you. I believe you would buy the dog."

If Mr. Hammond did not express an opinion, then Damon concocted the opinion quoted in his letters to Mr. Perry; and in view of these and other facts he has had the brazen impudence to impute dishonest motives to men who would sooner cut off the right hand than they would stoop to such trickery. A nice character this Damon. Experience had taught me that it was no easy matter to guess what Major Hammond was thinking about, and so on March 15 I wrote Damon to discontinue his correspondence or support his statements with something more substantial than Damon's word. He replied to my letter next day, March 16, that he was sorry his opinion annoyed me. Of Patsy he said: "If this dog is as represented then I can't tell white from black. Had you written me on receipt of the dog that you were disappointed in him, that he was not as represented, and was not the dog you ordered, it would have been more manly than to try to make me accept a 'duffer' as a good one. Graham knew the dog was not first-class and so did you when you received him. It's more my opinion than lack of opinion that now annoys you. I mail you fac-simile of our typical headed Irish setter first at the Strabane *chicken show*."

How is it that it was not manly in me to ship the dog to Damon after he had been bought and paid for and yet it was quite the proper thing for Damon to try and palm off on to Mr. Perry a dog he considered a "duffer" "not as represented" and "not as ordered." Damon cannot squirm out of this, neither will the public do as the A.K.C. did in the Seitner case, viz.: acquit him because he intended to write what he did not write and did not intend to write what he did write.

March 18 I sent Damon this letter: "Yours of the 16th with photograph of Patsy at hand. The portrait shows him to be exactly what he is—a good little dog, and neither Dr. Jarvis nor anybody else can alter my opinion of him. As to your opinion annoying me, it can never do that; but I would like you when you write me to confine yourself to facts instead of bringing accusations which you are unable to support by evidence of any kind. The letters that I sent my buyer are there to prove that I did my best to get a good dog for you; and because in your opinion I failed to do this is no reason why you should make unwarrantable statements, such as for instance accusing me of 'dividing' with my buyer, and so on. You say that your having changed your opinion annoys me. This is a mistake. You so often change it that I would not be a bit surprised to find you next week saying that Patsy is the best dog of his breed that ever lived. When I received the dog I wrote you my candid opinion of him, and that opinion I now reiterate. There are very few dogs of Patsy's inches that can beat him, but of course a larger dog of equally good formation would go ahead of him. If you had had an opinion of your own and had known what you wanted you would have said that the dog was too small. My buyer sent you his exact weight and I wrote you exactly what he said. You replied that the dog was large enough. You now try to make it appear that it was my duty to tell you the dog was too small. If the dog had been too large it would have been the same thing. I think before you buy another you should make up your mind what you want. But even if you did this a man could not please you, because as soon as you saw the dog or somebody told you he was a 'duffer' you would want another of entirely different type."

March 19 Damon sent Mr. Perry another letter. I do not find in it that he told Mr. Perry that Patsy was a "duffer," "not as represented" and "not as ordered." Neither do I find that Damon told Mr. Perry that Damon was unmanly in trying to palm off a "duffer," which it was his duty to have done seeing he believed Patsy a "duffer." Damon said: "I have had him on grouse this spring, and he is all that is claimed; fast, a keen worker and very staunch and readily handled. On quail and chickens he will prove a grand one. I shall show Patsy at Boston with my Winnie II., second at New York. After the Boston show you can have him if you choose. He is very much more of a dog than you imagine, and at my price is *the cheapest dog I ever saw*. I feel confident could you see him you would take him. Kate IX. whelped Sunday night eight puppies by him, four dogs and four bitches, a nice lot and very even. Mason says he considers Patsy a better dog than Desmond II., second at New York and first at Troy. In condition and soundness Patsy has not an out. He is an all day dog and of great value: for his field quality alone he is worth my price."

Does this last letter prove that in Damon's opinion Damon bought a "duffer," or does it prove that he bought a good, honest dog? There is a deliberate falsehood in the letter that must not be overlooked. It is where Damon says: "Mason says he considers Patsy a better dog than Desmond." If readers will refer to my reply (given above) to Damon's letters of March 4 and 5 they will notice that I wrote, "without seeing the dogs together it strikes me that Patsy is the better." Very different from saying "Patsy is a better dog than Desmond." But then Damon is a "gentleman;" he is above trickery of any kind; he does not believe in it; and when he discovers anything of the sort he "brings pressure" to suppress it. Wonderful man! Great genius! Sweet chicken! How few possess thy virtues!

Mr. Perry bought Patsy and a few days later the dog was sent to the Boston show, where I gave him vhc. in a strong class. Damon looked daggers when I took down his number. He had written Mr. Perry that Patsy would do better at Boston than he did at New York and the decision made him wild. To think that I ordered a dog in England for him and gave it only vhc. put me on a level with all the tricksters in dogdom. That was not all. My decisions were not correct, and on April 8, Damon wrote Mr. Perry: "I received Patsy back from Boston in good shape to-day. He was given vhc. at Boston, but dogs won first over him not worth a fig in the field. Of the four dogs placed over him I would prefer only one to Patsy and that was Desmond II. In general outline Desmond is not so good a dog as Patsy. Winnie II., my O'Callaghan bitch, won third." Please remember that Kenmore was third at Boston. In Damon's last letter we have proof that he considers Patsy a better dog than Kenmore and Sunset, the first and third prize winners at Boston.

April 15 Damon wrote Mr. Perry again: "I must say that my O'Callaghan bitch Winnie II. is now in heat and I am anxious to try the experiment of an inbreed with Patsy. She will surely take this week and that will settle the service I am entitled to. Patsy is beginning to shed his coat, but you can see how good he is in this respect. His superior in coat and color and tail and feet and chest does not stand. My eight puppies out of Kate IX. by him are four weeks old yesterday. The strongest, smartest puppies I ever saw, with splendid bone and powerful limb." Here we have proof that Damon's first litter of puppies by Patsy were the strongest and smartest this great man had ever seen. April 20 Damon wrote Mr. Perry: "Your card at hand. Patsy goes on Monday. He is a dog that will always mind the voice and a blow would break his heart. Did you ever see finer feet on a dog? His pups have the same shaped feet."

April 23 Damon wrote Mr. Perry: "I gave Patsy his last run, fed him and saw him off in good shape last night. I put him into the box with regret, for I had become attached to the little fellow. I don't know but I have made an error in selling the dog, but it is too late now." Jan. 16 Damon "hates the sight of the little fellow," but three months later he discovers his error, becomes attached to the dog and puts him "into the box with regret."

But, alas for poor Patsy! the unseen power that controls the erratic movements of Damon's uneasy brain stirred up that grand and wondrous composition to further efforts, and early in June Damon describes Patsy in a city contemporary as a dog with "ears and nose so snipy as to fit a fox better than an Irish setter." In regard to the dog's stud qualities he says: "As to the stud properties of Patsy others may risk them, but none for me." Possibly the fact of the dog with the snipy ears having sired the smartest puppies Damon had ever seen induced him not to breed to such an animal again. Shades of O'Callaghan and Old Kingdom make room for O. Damon, of Northampton. The printed letter, from which I have just quoted, contains also a statement to the effect that Mr. Wenzel gave Patsy a vhc. card at New York because I had previously told him the dog was a good one.

Damon's last to me contained the startling news that neither Patsy nor his pedigree had been received by Damon. To this I replied April 27 as follows: "In the letter before me you say that you have neither received Patsy nor his pedigree. In a previous communication you state that you have received Patsy, by Frisco out of Nellie IX., and that you are much pleased with him. In another letter you say your dog Patsy is half brother to some of the best field and show dogs in England. A correspondence such as you indulge in is fit only for the columns of the *Shooting Times*."

I have already shown (see Damon's letter of Jan. 11 to Mr. Perry) that when Damon wished to sell Patsy to Mr. Perry he wrote that his other dog, Darby II., "should never be bred to so fine a bred bitch as your Nino." Now, let us see what Damon wrote of Darby II. as soon as he had succeeded in selling Patsy to Mr. Perry. The very honorable gentleman sent this letter to the Chicago paper that has for special commissioner in England that novice and ignoramus, Huscroft: "I must, through the pages of the ———, let the lovers of red dogs know of my recent importation, per City of Rome, of the red Irish setter Darby II., first in local class of twenty-nine entries at Cork in July last, and second in the open class at the same show, when he, at fourteen months old, crowded Killarney Chieftain for first, but lost, owing to age and condition favoring Killarney Chieftain. He is bred from a field dog of well-known ability, and is a grandson of that old grand one champion Palmerston and Quail (8,289), while upon the dam's side he is a grandson of that well-known dog Cocknere [should be Cockshure], a sire of many good ones afield as well as upon the bench. This young dog will be of great worth to our red setters, and will, another year, be an easy winner. In coat and color I have not seen his equal this year. He is a most valuable addition to my kennel, and very different from my last importation in type and character." In these Darby II. letters there is further proof that E. O. Damon will stoop to any contemptible device in order to carry his ends.

Damon's last freak was to write to Dr. Boyd, from whom Patsy was purchased, to ascertain if as much as £50 had been paid for the dog. He had previously sent an insulting letter to Mr. Graham, and so when Dr. Boyd wrote and asked Mr. Graham if there would be any objection to his giving Damon the exact price, Mr. Graham replied that he had sold the dog to me and not to Damon, and that it was none of Damon's business. In order to prove that Patsy was not picked up on the streets of Lifford, as Damon has insinuated, I print Dr. Boyd's reply to Mr. Graham, and at the same time I ask Dr. Boyd's pardon for making it public property:

LIFFORD, County Donegal, March 26, 1889.—*Dear Sir:* Inclosed you have letters returned as requested. You are the party I had the transaction with, so will certainly do as you desire, but I cannot see what objection there is to saying I got far more than £50 for him. This answer would, I think, make him (Damon) more satisfied, knowing there had been a big price paid for him at this side, and it would stop his writing to me, as I would state, without Mr. Mason's or your permission, I would not tell the exact price. But you are the best judge. Will I even say that I had written you after receiving his letter and that you wished price kept secret? Please let me know this, but indeed my idea would be to let him know you had paid me the big price. Yours truly, J. C. BOYD."

Looking over Damon's letters to the press and to private individuals I find: 1. That when Damon wished to make himself heard he wrote to a paper edited by a thief. 2. That Damon complained of getting "left," and then tried the experiment on Mr. Perry. 3. That an examination of Patsy showed Damon that the dog was the exact contrary of such dogs as Tim, Elcho, Jr., and Kenmore, but that a later examination showed him to be a better dog than Kenmore. 4. That Damon wanted a "good, reliable stud dog, one and a half or two years old, of the best of breeding and strain," and a dog whose first points must be "speed, nose, style and field work combined." 5. That Damon bought what after seeing him he pronounced a splendid field dog, a superbly bred dog, a dog that sired the best puppies he had ever seen and a dog that in looks surpassed Kenmore and was defeated at New York only, he claims, because the judge owned two stud dogs and did not wish to hurt his business by bringing into prominence a dog advertised at a low fee. 6. That Damon considered Mr. Graham a scoundrel for shipping a dog that was "dwarfed," notwithstanding the fact that Mr. Graham had previously sent the exact weight of the dog. 7. That Damon considered me a scoundrel for not returning the dog after I had seen for myself that he was the exact weight that was given to Damon and approved by him. 8. That Damon charged Mr. Wenzel with pegging back Patsy in order that Mr. Wenzel's pocket might not be a sufferer. 9. That Damon accused Mr. Wenzel of giving Patsy more than he was entitled to because of my having told Mr. Wenzel that Patsy was a "good little one." 10. That Mr. Graham and myself were scoundrels for palming off on Damon a "duffer." 11. That Damon was a scoundrel for palming off on Mr. Perry a dog that in his opinion was a "duffer," not "as represented" and "not as ordered." 12. That Darby II. was not fit to breed to until Damon had sold Patsy. 13. That Darby II. was a corker as soon as Damon had disposed of Patsy. 14. That Damon hated the sight of the little "duffer." 15. That Damon parted from the little fellow with regret. 16. That Patsy is "wonderfully like the dog Chief." 18. That Graham does not know a sporting dog. 19. That Patsy "shows very strongly and it takes a great one to beat him." 20. That Damon did not receive Patsy. 21. That Damon sold and shipped to Mr. Perry a dog that Damon never received. 22. That Damon is not responsible for his actions.

If E. O. Damon has been egged on in his foolishness by the Chicago trickster, and I am told that he has, it will be well for him in the future to remember that once upon a time a man named Balaam owned a long-eared quadruped that was stopped. CHAS. H. MASON.

Thanks to Mr. Mahew for having tried to show Damon the folly of his ways, and to Mr. Perry for having sent me copies of Damon's letters. C. H. M.

PATSY.

THE Irish setter dog Patsy is the subject of a long communication in our columns this week. We give a portrait of the dog sent to us by Mr. Damon who wrote of it: "It is taken from a photo and is an exact likeness, no exaggeration whatever, and the fancy see him just as he is if his superb color could be shown. In a letter dated Dec. 3, Mr. Damon writes: "Patsy will make his mark in the stud and as new blood he will be in demand, being splendidly bred and never beaten. I have coming out a grand bitch selected with special reference to breeding to this dog. * * * Patsy is the most level-headed and obedient dog and has more sense than any other Irish dog I ever saw. Mr. Mason can give you a better idea in his writing up than I can. But he is no duffer I can assure you. In coat and color he has no superior in the country." Following is the description of the dog by Mr. Mason which was published in our issue of Dec. 13, 1888:

"A few days ago I had the pleasure of giving Patsy, Mr. E. O. Damon's recently imported Irish setter, a careful examination. As this young dog is almost certain to make a mark, especially in the stud, I will give your readers a brief description of him. Skull well formed; muzzle somewhat too light; ears set a trifle high; eyes a shade too light in color, but well set and with fine expression; a head full of quality and character, but rather effeminate; neck better than average and would be improved by less bulk and by a little more length; shoulders beautifully laid on; chest very nearly perfect; back firm as a rock and truly formed; loin symmetrical and strong; hindquarters showing much strength; tail of correct length, beautifully fringed and always well carried; stands on a superb set of legs and feet; coat and color perfect; feather of best quality and sufficiently abundant. A graceful, stylish and easy-moving dog whose most prominent defect is a lack of size. His late owner considers him one of the most promising field dogs he has ever owned—fast, stylish, and steady to wing and shot. Mr. Damon says: 'He is fast, covers his ground thoroughly, carries a high head, has an exquisite nose, and is remarkably steady on his points, also to gun and wing.' We want some new Irish blood in this country, and as Patsy is well bred (Frisco—Nellie IX.) and possesses those great stud essentials, bone and substance combined with quality, it is almost certain that he will be heard of in the near future."

Of this description Mr. Damon wrote us Dec. 14: "Mr. Mason's criticism of my dog is *absolutely correct*. A breeder can read it and know just what sort of a dog he is."

Mr. Damon has since published statements that are directly the opposite of his opinions as given above. For an analysis of the reasons and motives that brought about this radical change, the reader is referred to the communication of Mr. Mason in another column. What Mr. Damon really thinks of Patsy is something that we defy any one to find out from his contradictory statements. It is perhaps true that he considered the dog to be just what he wrote when he was trying to sell him to Mr. Perry, and that he was not trying to palm off on that gentleman what he thought was a rank duffer. That is the most charitable view to take of it, and surely this is a case where we should exercise all the charity we have to spare.

DOG TALK.

THE *Fanciers' Gazette* proves that dogs reason as follows: "A young man who lived in a cottage in Yorkshire had a splendid mastiff dog, called Ponto, who was allowed to roam about just as he pleased all over the house. His favorite place, however, was in the study under his master's writing table. When Mr. D——s was away from home, as was often the case, Ponto, much to his disgust, was chained up in the yard. From this treatment he did all he could to keep away. On one occasion his master went for a few days' visit to a neighbor, leaving the usual orders about the dog. In vain, however, did the servants search high and low for Ponto; nowhere was he to be found, and they gave up the search in despair. In the evening, when the two maid servants were sitting quietly at work in the kitchen, they suddenly heard the small handbell in the study ring violently. They started up in alarm, and each wanted the other to go and see what was the matter; but neither of them dared, and they sat still and frightened. Presently the bell pealed again, and, curiosity proving greater than their fears, they went to the parlor door. There they paused again, but hearing the bell once more, they turned the handle, and peeped in. What was their surprise to find Ponto sitting on his haunches, with the bell in his mouth! He had evidently seen his master use the bell to summon attendance, and finding himself shut in, he thought he would try if a little bell-ringing on his own account would not get him out of his prison."

At a recent meeting of the committee of the English Kennel Club, Mr. J. Sidney Turner gave notice that he would propose the following new rule at the special general meeting to be held at Olympia, July 10: That any person who shall knowingly exhibit a dog which has suffered from distemper at any time within the previous two months of the show at which it is exhibited, shall be debarred from again exhibiting for such period as the Kennel Club committee shall decide.

We have received notice from Mr. Chas. Deckleman, Brooklyn, N. Y., stating that the Brooklyn Kennel Club will hold a dog show in that city, Sept. 7 to 11. We shall probably be able to give further particulars next week.

We have received a list of the nominations for the second annual Derby of the Southern Field Trial Club, 51 in all, 42 setters and 9 pointers. The list will be published next week.

Mr. H. H. Briggs, kennel editor of the *Breeder and Sportsman*, has been appointed to judge all classes at the dog show held at Los Angeles, Cal., this week.

We are informed that the National Coursing Association contemplate holding meetings next fall at some of the important Southern cities.

Mr. E. H. Morris has been arrested upon the charge of evading the duties on a dog recently imported by him. We are informed by the best of authority that the prosecution is malicious, and that Mr. Morris has the requisite consular certificate for every dog imported by him.

The St. Bernard Club of Switzerland will hold an international show at Berne, July 12 to 14.

The California Kennel Club propose holding a dog show at San Francisco, next October.

THE POINTER CLUB.—New York, June 24.—*Editor Forest and Stream:* There will be a meeting of the executive committee of the Pointer Club of America, at 44 Broadway, New York city, in the rooms of the A. K. C., at 12 M. Monday, July 1.—GEO. W. LARUE, Sec'y and Treas.

PATSY.

BREAKING A BEAGLE.

THE other day I took a beagle puppy to a gentleman of color, who had the reputation of having the best rabbit dogs in the country, for the purpose of having him broken.

"That's a mighty purty hound," said he, "but I'm afeard he won't stand the racket of my system of breaking."

"Why not?" asked I.

"'Cause," he replied, "he's fat and slick and delicate lookin', I'm afeard he'd die before he'd be broke. My plan is awful simple, but it never fails. I don't feed my hounds, and they have got to ketch rabbits or starve to death. Now do you want to leave him?"

I concluded I did not care to subject my Rowett to so Spartan a method of breaking, so I put him in the wagon and drove home. S. REICNAF.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Irex. Irish terrier bitch, whelped March 26, 1889, by champion Dennis out of Sandycroft Vim, by V. M. Haldeman, Milford, Del., to H. W. Bloomfield, Philadelphia, Pa.

Gipsy Queen. Irish terrier bitch, whelped March 26, 1889, by champion Dennis out of Sandycroft Vim, by V. M. Haldeman, Milford, Del., to J. G. Tomson, Philadelphia, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

JAMES, Norwich, Conn.—1. How can I reduce corpulency in a bull-terrier? He is allowed but little exercise outside his own yard, he being anxious to fight every dog he meets; also has a funny cough. 2. Would it be possible for you to advise the kind of dog to get for a loving companion and a faithful friend? I do not need a hunting dog nor a ferocious watchdog. I'd like a dog who will become attached to me, and one I can train to mind only his owner. Ans. 1. Limit the food. Give no starches or fats and but little meat. Exercise regularly and keep the bowels freely open with syrup of buckthorn in teaspoonful doses, compound cathartic pills or oil. All the symptoms are due to obesity. 2. A well-bred collie or greyhound will probably suit you.

B. G.—My pointer dog's eyes are each morning filled with a yellow pus. They have troubled him at intervals since last fall, but are now worse than ever. I had a doctor look at them and he said the lids were granulated, but his medicine did no good. Can you prescribe? Ans. If the lids are granulated use bluestone, with which you may lightly touch the lids. It is more likely to be a digestive difficulty. Give 5 grains of quinine twice daily in pills. Keep bowels open and put 5 drops of Fowler's solution of arsenic in the food night and morning.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

Rifle and Trap Shooting

RANGE AND GALLERY.

THE INDIANAPOLIS TOURNAMENT.

INDIANAPOLIS, June 19.—The biennial meet of the Western Shooting League had an auspicious opening in this city today. In the morning the visiting clubs, which included societies from Cincinnati, Chicago, St. Louis, South St. Louis, Belleville, Peru, Ill., Monroe, Wis., Cleveland, Joliet, Elgin, Highland, Peoria, Milwaukee and Omaha, were escorted to the Schuetzen Park by the local bands, and there were interesting addresses and great enthusiasm when President Knelf, of the Chicago Association, produced the League flag, which will remain here for two years.

Individual shooting was the order of the day and the list of prizes called for a silver goblet to all making 35 bullseyes, range 625ft., off-hand (4in. center), and a medal to every 15 shots center. H. F. Peppenbriuk, James Braun and L. F. Zelring, Joliet; Ed. Burgan, Davenport; S. Merrier, Milwaukee, and G. Rupperuter, St. Louis, were awarded goblets. Altogether 11,147 shots were fired and there were 815 centers. Rifles from .32 to .40cal. were used.

June 20.—The present one is proving the most successful meet ever held by the Western Shooting Band. To-day 31,100 shots were fired, and there were 35 winners of medals, one being awarded for ever 15 centers, and 32 goblets were also claimed, one being awarded for every 32 centers. Emil Berg, of Davenport, made 209 out of a possible 250 on the King's target in 10 shots, and Louis Knaebel, of Highland, 71 out of a possible 75 on the Union target.

The winners of goblets included John Spilter, Joliet; H. Bonner, Peoria; A. L. Roberts, Joliet; R. Unzicher, Peru, Ill.; Dr. Julius Merckle, Chicago; John Breelow, Davenport; Jacob Karlein, Jr., Monroe, Wis.; P. A. Scheitt, Joliet; Ed. Rugger, Monroe; Ed. Thliepapa, Chicago; Val. Linck, Peru, Ill.; G. W. Spongler, Monroe; G. M. Cook, Davenport; Hy Hoehn, Monroe; Wm. Hazenzohl, Cincinnati; Otto Lauer, Peru, Ill.; Francis Folger, Dubuque; M. N. Peotke, Chicago; Jos. Kutsch, Dubuque; F. Toggenberger, Chicago; Franz Londi, St. Louis; C. Schotte, Chicago; Emil Berg, Davenport; C. W. Ranzow, Davenport; H. H. Neiman, Cincinnati, Wm. Tell, South St. Louis; Dr. E. A. Hodges, Indianapolis; P. Klauer, Dubuque; Capt. M. Gindele, Cincinnati; G. W. Knarzer, Indianapolis; H. Thorwart, Chicago; Otto Raef, Chicago; D. Schneidewind, Belleville.

June 21.—The principal event of to-day in connection with the Western Shooting Association Festival was the team shooting, in which 13 clubs entered. Joliet won first prize; score 1,173. Monroe (Wis.) second, 1,156, and Chicago third, 1,131. Cincinnati stood seventh in the match with a score of 1,108, being beaten by Milwaukee Peru (Ill.), and Davenport, as well as the prize winners. Omaha came last with 873. Nieman, of Chicago, won the team medal, scoring 197, and Gindele was second with 4 points less, and Hazenthal third.

First prizes during the day for individual shooting were awarded to M. Grau, Chicago; F. Merz, Indianapolis; A. Woerner, Indianapolis; M. Haier, St. Louis; J. Hof, St. Louis; J. F. Speth, Cincinnati; L. Knoebel, Highland, Ill.; S. Stamson, Chicago; Ed Richter, Milwaukee; Frank Maus, Indianapolis; E. Braumbach, Cincinnati, and M. Theurer, Highland, Ill. The highest scores in the team shooting were made by C. Linke, of Peru, Ill., 318, and D. Schneidwis, same place, 319.

June 22.—The Western Shooting League closed its meeting today with the awarding of prizes and a festival. The next meeting will be held in St. Louis. The principal awards were: Man target No. 1, William Hassenzahl, Cincinnati, $25; man target No. 2, George Knarzer, Indianapolis, $15; stich target, F. Knappe, St. Louis, $40; King target, J. Braun, Joliet, Ill., $75 gold medal, laurel wreath and $15 in cash; Union target, Louis Knoebel, Highland, Ill., $100; People's target No. 1, C. Schmidt, Milwaukee, $25; People's target No. 2, A. Drube, Cincinnati, $6 50; center shots, John Braun, Joliet, Ill., $20; practice target prizes, free-for-all, amounting to $1,500, were awarded. The total value of the prizes which were distributed to several hundred winners in small sums was about $8,000.

BOSTON, June 22.—The regular weekly shoot was held to-day. The weather conditions were bad, there being a strong 9 o'clock wind. Mr. Hill won the champion gold medal, and Mr. Munroe the gold medal in the 20-shot rest match. On account of the celebration at Woburn, it is expected that the regular Fourth of July rifle shoot at Walnut Hill will be omitted. The trap-shooters will hold their matches and sweep shoot next Wednesday. Following are to-day's scores:

20-Shot Rest Match.

J B Munroe	11	11	10	11	9	11	11	12	11	10

UNSER FRITZ.

CREEDMOOR.—The Creedmoor rifle range has finally come under the entire control of the New York State authorities, Governor Hill having signed the bill which brings about that result, and hereafter the officers of the National Rifle Association will have nothing to do with the range except to go there to shoot. The Association will still have the use of the range, the same as heretofore, and the members will not be encumbered with the bother of running it. On the other hand, they will no longer have the place under their control, but must be subject to the orders of the State authorities.

TORONTO, June 21.—A number of gentlemen met in the Walker House to-night to take preliminary steps toward the formation of a Small-bore Rifle Association. A committee consisting of Dr. Powell (chairman) and Messrs. J. I. Hall, E. P. McNeil, W. R. Hughes, Fred Maughan and Thomas Anderson were appointed to draft a constitution and rules, which will be submitted to a meeting to be held soon. A large number signified their intention of becoming members.

PENNSYLVANIA MARKSMEN.—The company rifle contests for the Singerly gold, silver and bronze medals for teams of 4 men each who never were entered in a rifle contest, took place at the Hartranft Rifle Range, at Frankford, the 21st inst. Shooting commenced promptly at 9:30 A. M., and all teams not on the range were debarred from competition. Major H. A. Shenton, of Sixth Regt., N. G. P., was detailed to look after the matches. The City Troop team held their average through the contest and came out a good winner with the combined scores at 200yds. 80 points, and 500yds. 81 points. The scores made by the teams were as follows—conditions of match: Four men to constitute each team, who were never in a contest, and had qualified as marksmen on or before June 18, 5 shots at 200 and 500yds. each, possible 50:

City Troop Team.	200	500	Co. F, Second Regiment.	200	500
Sergt C T Cresswell	19	23—42	Sergt R Keeley	18	16—34
Pvt D S B Chew	22	18—40	Corp Smith	14	06—14
Pvt R E Glendenning	19	21—40	Sergt Bugler	22	19—41
Pvt L Barry	20	19—39	Pvt Franks	19	19—38
	80	81 161		73	54 127

Pvt G S Bennett	21	12—33	Pvt Honey	19	17—36
Corp G P Jones	18	18—36	Corp McKnight	11	9—20
Corp N Leaf	19	17—36	Capt Gillespie	13	13—26
	71	63 134		61	54 115

Battery A.—Sergt. Robbins 28, Corp. C. Carpenter 20, Priv. C. Harvey 25, Sergt. R. W. Mott 34; total 107.

General Geo. R. Snowden and Major C. H. Townsend visited the range during the day, and after the match qualified as marksmen for 1889 as follows:

	200	500
Gen Snowden	33343—17	34542—18—35
Major Townsend	44344—19	40034—11—30

Protests were promptly entered against Lieut. Deane and Priv. W. W. Abbott, Co. D, First Regiment, and Sergt. Tobold and Sergt. Mehard, Co. C, First Regiment, on account of being members of previous (winning) brigade and regimental matches. Major Shenton very promptly decided to allow the protest, and the above named officer and enlisted men's scores were promptly thrown out and disqualified their respective teams from the match. First prize, City Troop Team, gold buttons; second prize, Co. I, Sixth Regiment team, silver buttons; third prize, Co. F, Second Regiment team, bronze buttons. This class of shooting was for the purpose of bringing out new men.

June 23.—The first class regimental match for the Potter trophy ("The Last Cartridge") and the gold medal with ruby bullseyes, offered by Mr. W. M. Singerly, took place this afternoon at the Hartranft Rifle Range; the conditions of the match were for teams of four, with one reserve, from any regiment, battalion or independent organization, 7 shots per man at 200, 500, 600yds., Creedmoor rules. The team from the City Troop was the winner of the trophy for the second time, as the following scores will show:

City Troop Team.	200	500	600		6th Regiment Team.	200	500	600

The second class regimental match at 200 and 500yds. for the Wm. M. Singerly badge for those who never won in a brigade or regimental match was also shot. Only four teams were present, First Regiment, Sixth Regiment, City Troop and Battery A. The team from the Third Regiment was only represented by three men. The conditions of the match were 7 shots at 200 and 500yds., four men to each team. The city troop proved themselves victors of this match by the score of 223. Appended are the official scores of the teams:

City Troop Team.	200	500		Sixth Regiment Team.	200	500	
Sergt C T Cresswell	27	32	—59	Capt S M Paxson	24	19	—43

SAN FRANCISCO, June 16.—The annual prize shoot of the Germanic Schuetzen Club attracted a very large number of marksmen to Harbor View to-day. There were so many skilled rifle-winders around that locomotion in the shooting room was well-nigh impossible. There were two distinct shoots—for honorary members and all comers. The former was the most important, as the best shots in the club took part. The competition was very close and did not finish until nearly 6 o'clock. A 25-ring target was used, the first prize going to the member scoring highest out of a possible 75 points: Geo. Heim 62, A. Rahwyler 61, J. Utschig 60, A. Utschig 59, J. Dombien 58, J. Young 57, F. Remi 57, B. Voermohle 56, L. Klotz 55, F. C. Muller 54, V. Schmidt 54, H. E. Rapcke 52, H. A. Kurlfincke 52, E. Struber 52, H. Enger 49, C. Adams 49, H. Hieth 48, Dr. Riehl 47, C. Heith 46, H. Zecher 46, L. Schmidt 44, R. Wieland 43, F. Schumann 43, G. H. Babrs 42, F. Krug 40, W. Glindemann 40, H. Platt 39, Holsmuller 39, C. Rapp 39, J. H. Fisher 38, Dr. Miffen 36, L. Bendt 36, J. Grafe 36, F. Hiltzz 36, H. Kohler 35, A. Mocker 35, A. Hauser 34, M. Reubold 33, R. Faller 32, J. Wolf 32, Farrenkopf 32, F. Hensel 30, J. Straub 29.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

WORCESTER, Mass., June 21.—At this week's meet of the Worcester Sportsmen's Club, at Coal Mine Brook Range, the classification series of shoots was resumed. In the classification each man had a possible 30, and in the prize a possible 10 birds. The first score in Class A: W. R. Dean 22, G. J. Rugg 28, E. T. Smith 27, Geo. Sampson 26, A. R. Bowdish 23, M. D. Gilman 25, H. D. Jourdon 25, E. S. Knowles 22. Class B: E. F. Swan 17, C. R. B. Claflin 17, Dr. Bowers 20, A. L. Gilman 20, C. R. Holman 16, F. Vernon 12, C. Forehand 11, A. B. Franklin 20, F. Forehand 16, C. Henry 15.

LOWELL ROD AND GUN CLUB.

HEREWITH are the scores of a two days' tournament given by the above club on their grounds at Tewksbury, June 20 and 21. A provision in the programme that experts should stand at 21yds., and amateurs at 18yds., undoubtedly accounts for the slim attendance.

Thursday, June 20.

Event No. 1, 6 blackbirds, 50 cents, three moneys:

Crown	111101—5	Torry	111101—5
Hartford	011110—4	Nelson	100001—2
Knowles	101111—5	Walton	011000—3

Ties divided.

No. 2, 6 clays, 25 cents, four moneys:

Downs	010100—2	Nelson	011000—2
Bates	111001—4	Maynard	100101—3
Crown	101101—4	Walton	110100—3
Hartford	101011—4	Torry	111101—5
Knowles	111111—6	Perham	000111—3
Colt	111110—5	Townsend	001111—4

Ties divided except for second, which was shot off and won by Bates.

No. 3, 3 pairs clays, 50 cents, three moneys:

Knowles	01 11 11—5	Downs	11 11 11—6
Rule	01 01 11—3	Lovejoy	01 11 00—3
Crown	10 11 11—5	Torry	11 01 11—5
Bates	11 01 11—5	Hartford	11 01 11—5
Perham	00 01 11—3	Townsend	10 10 10—3

First was won by Downs, second shot off and div. by Knowles and Bates, third shot off and div. by Rule and Lovejoy.

No. 4, 8 clays, 75 cents, four moneys:

Crown	01111101—6	Nelson	11010000—3
Torry	01001111—5	Colt	11101101—6
Bates	11111111—8	Hartford	10100101—4
Downs	10100100—3	Gregg	10000011—3
Lovejoy	11011010—5	Knowles	11111110—7
Perham	11111111—8	Townsend	10000000—1
Rule	11001010—4	All ties div.	

No. 5, 6 blackbirds, 50 cents, four moneys:

Perham	011011—4	Knowles	101111—5
Rule	111101—5	Walton	000100—1
Bates	111111—6	Nelson	110110—4
Downs	101011—4	Torry	100111—4
Crown	110111—5	Hartford	000100—1
Lovejoy	111111—6		

First div., other ties shot off, second div. by Rule and Knowles, third won by Torry, fourth by Hartford.

No. 6, 20 clays, $2, four moneys:

Knowles	01111111111111111111—19	Dutch	11001101111111111110—16
Bates	11110111111110111110—17	Perham	01010101011000111010—10
Crown	11101001111010111114	Downs	11111111111111111111—20
Rule	11010110111011111114	Torry	01110100011011010111—12
Lovejoy	00101100111011001111—12	Gregg	10000011110101011011—11

Downs first, Knowles second, Bates third, Dutch fourth.

No. 7, 6 blackbirds, 25 cents, 4 moneys:

Crown	011100—3	Knowles	111111—6
Bates	101111—5	Nelson	111011—5
Rule	010101—3	Prescott	010110—3
Gregg	110311—4	Maynard	001001—2
Downs	110010—3	Lovejoy	101010—3

All ties divided except for fourth, which was shot off and won by Rule.

No. 8, 3 pairs clays, 25 cents, 4 moneys:

Crown	11 10 11—5	Torry	01 11 01—4
Rule	11 01 11—5	Gregg	11 11 11—6
Knowles	10 01 11—4	Lovejoy	01 11 01—4
Bates	01 01 11—4	Derby	00 11 00—2
Nelson	01 11 00—3	Maynard	00 00 11—2
Downs	10 11 11—5	Frost	11 11 10—5

First won by Gregg, second shot off and divided by Frost and Rule, third shot off and divided by Bates and Nelson, fourth won by Nelson.

No. 9, 10 clays, $1, 4 moneys:

Knowles	1101111101—8	Frost	1010010111—6
Bates	1111111011—9	Derby	1111110011—8
Crown	0001111010—5	Gregg	1000110011—5
Rule	1011111101—8	Perham	1101010111—7
Lovejoy	1101010111—7	Torry	1001110001—5
Downs	1011011111—8		

Bates won first, second shot off and divided by Knowles and Downs, third divided, fourth won by Frost.

No. 10, 8 straightaway clays, 75 cents, 4 moneys:

Bates	11111111—8	Frost	00111111—6
Downs	11111111—8	Derby	10111101—6
Torry	11111111—8	Crown	10111010—5
Lovejoy	11111111—8	Rule	01100111—5
Knowles	11101111—7	Gregg	11110001—5
Perham	00111111—6	Nelson	10011100—4

First shot off and won by Downs, second and third divided, fourth shot off and won by Crown.

No. 11, 6 singles and 3 pairs blackbirds, $1, 4 moneys:

Frost	010011 10 11—6	Rule	101110 11 11—8
Lovejoy	111110 11 01—8	Crown	011101 11 11—8
Perham	101011 00 00—4	Downs	111010 01 01—6
Young	111110 01 01—7	Derby	101000 01 00—3
Knowles	111111 01 11—9	Gregg	110000 11 11—6
Bates	110111 01 01—7		

First won by Knowles, second shot off and won by Crown, third divided, fourth shot off and won by Frost.

No. 12, 3 pairs clays, 50 cents, 4 moneys:

Downs	11 10 10—4	Gregg	11 10 10—4
Perham	00 01 11—3	Crown	00 11 10—3
Wheeler	10 11 11—4	Lovejoy	01 01 00—2
Knowles	11 10 00—3	Piper	10 01 01—3
Bates	10 10 10—3	Rule	11 11 11—6
Frost	10 00 10—2		

Rule won first, second shot off and divided by Downs and Gregg, third shot off and divided by Perham and Bates, fourth won by Frost.

No. 13, teams of two at 10 clays per man, $2, four moneys:

Knowles	1111101110—8	Little	1110011111—8
Bales	1101111101—8—16	Perham	1111111110—9—17
Frost	1111101111—9	Crown	1010100111—6
Downs	1110101111—8—17	Rule	1001101010—5—11
Lovejoy	1011011010—6	Ties divided.	
Derby	1001010111—6—12		

No. 14, 6 clays, 25 cents, four moneys:

Little	100101—3	Gregg	010010—2
Bates	111111—6	Rule	111111—6
Knowles	000111—3	Torry	111111—6
Crown	110011—4	Frost	111011—5
Piper	111011—5	Perham	100111—4
Downs	010110—3	Lovejoy	110111—5

Ties divided.

No. 15, 6 blackbirds, 25 cents; four moneys:

Bates	111110—5	Piper	110111—5
Wheeler	011101—4	Knowles	111101—5
Crown	010010—2	Gregg	110111—5
Frost	111111—6	Lovejoy	001110—3
Downs	101101—4	Rule	110111—5
Perham	101010—3	Little	001111—4
Nelson	110010—3		

Frost won first; second shot off and div. by Bates and Rule; third shot off and won by Little; fourth div.

No. 16, 3 pairs clays, 25 cents; four moneys:

Gregg	11 10 01—3	Bates	11 10 10—4
Frost	10 11 10—4	Perham	10 00 00—1
Downs	11 01 11—5	Piper	11 00 00—2
Wheeler	11 00 10—3	Knowles	10 10 11—4
Crown	10 10 01—3	Rule	11 10 01—4
Nelson	10 00 00—1	Lovejoy	11 11 00—4

Downs first; second shot off and won by Bates; third shot off and div. by Crown and Wheeler; fourth won by Piper.

Friday, June 21.

For the second day of the tournament only seven shooters appeared up to 2 o'clock, and at that time none of the programme events had been shot. A few sweeps were indulged in, of which we give scores.

Extra, 3 pairs clays, 25 cents, three moneys: Downs 5, Crown 3, Hartford 3, Bates 5, Frank 4, Perham 5, Knowles 3. On shoot-off: Perham first, Frank second, Knowles third.

Extra, 6 clays, same conditions: Frank 2, Crown 5, Perham 5, Bates 5, Knowles 6, Hartford 6, Downs 4. First div., Bates second on shoot-off, Downs third.

Extra, same conditions: Lovejoy 2, Knowles 4, Perham 5, Bates 3, Downs 6, Frank 5, Hartford 5, Crown 4. Downs first, second div., third shot off and won by Knowles.

Dinner match, teams of 4, at 7 clays each: Bates 5, Downs 6, Perham 5, Hartford 6; total 22. Knowles 7, Lovejoy 3, Frank 6, Crown 6; total 22. On shoot-off, Bates's team 34, Knowles's team 32.

Extra, 6 clays, 25 cents, three moneys: Frank 3, Bates 4, Knowles 6, Downs 3, Perham 3, Hartford 3, Crown 2. Knowles and Perham first, Bates second, Frank third on shoot-off.

Extra, same conditions: Knowles 4, Bates 5, Lovejoy 4, Downs 4, Hartford 6, Perham 5, Crown 4, Frank 5. Hartford first, second div., third won by Knowles on shoot-off.

Extra, Keystone system, at 6 clays, 25 cents, three moneys: Knowles 6, Frank 4, Crown 2, Hartford 6, Bates 6, Colt 5, Gregg 4, Perham 5, Downs 5. Knowles and Hartford div. first after shoot-off, Perham won second and Frank third on shoot-off.

ESSEX GUN CLUB.

THE annual reunion of the Essex Gun Club took place as previously promised on Thursday last, on the grounds of the Jersey City Heights Gun Club at Marion, and was a very successful, aye, felicitous affair. On the very many occasions of this character on these well-known grounds it has rarely been equalled and never excelled in all the various elements of the make up successfully carried out for a royal good time. In the first place it is a grand club, comprising some of the finest fellows as well as crack shots of the State. The weather was in every respect superb, the birds the best lot decidedly we ever saw together in the month of June, the shooting excellent, the dinner, furnished by Morrow & Day of Jersey City, can be mentioned only in the highest terms, and was served by his corps of darky waiters in true Delmonico style. The feeling throughout the entire day was one of great enjoyment. We arrived on the scene quite late, and found that three sweepstakes at bluerocks had taken place, and there was a sweep at 10 live birds each man in progress, with that genial writer and good all-around sportsman rollicking Jake Pentz referee and scorer. It did us good once more to get our legs under the table and pen it in hand alongside of this old timer. It was years ago when we reported matches side by side in the days before Bogardus and Carver; Jake, I think, even antedating or being cotemporary with King and Jack Taylor and Billy Seeds in their closely-contested matches.

Jake promised me to extend the usual courtesies and send me the previous scores, which he didn't. He sent the clay saucer contests, but the main sweep on live birds you will have to go without. Perhaps he thought I got it elsewhere. Did he? Following are the scores at the earthen disks. Then came the dinner, after which the main contest, the feature of the occasion, the club match between members, 16 men on a side, for the birds, the dinners and a good time. Mr. Hayes, the gentlemanly jeweler more than once crowned king of rifle shots at Schuetzen Park, a good shot with single ball or scatter gun, captained one team, while Frank Stewart, noisy, hilarious Frank of Gull Island reminiscences, did the same for the other 16 men. Two setters, Old South Paw's celebrated Duke and a small black bitch and a good one, did the retrieving. As we said, they were a good lot of birds with some very tough ones, and Al's jaw dropped quite often to see them scale the fence. As the birds cost something like 60 to 65 cents per pair, and they were put up of course at the regular price, 40 cents per pair, Al's only way to save himself would be by sending the dead birds to market. We fear Old South Paw didn't get very rich over the transaction, but he likes the fun, and is ever ready to do his share for the pleasure of sportsmen both of his own and visiting clubs shooting on these grounds. Long may he wave.

There were some excellent shots made with some unaccountable bad misses. We were indeed glad to see that old veteran of more than fifty years at the traps, Old Reliable No. 1 Uncle Billy Hughes, once more at the score. It is more than a year since the old man had touched a trigger, and few that saw him a year ago or less even thought to see him ever again a contestant in the fields he loves so well. But the rare old fellow is all right again, as his score will show, and his many friends—for who has more than Uncle Wm. Hughes—are rejoiced accordingly. The following is the score in full:

First event, 10 bluerocks, 4 moneys:

Quimby	1101110000—5	Whitehead	1101111111—9
Hunt	1111110011—9	Thomas	0110111011—7
Kinsey	1111100000—5	Heritage	1101000010—4
Breintnall	1111101111—9		

Second event, same:

Quimby	0111011000—5	Breintnall	1111011111— 9
Hunt	1011111111—9	Thomas	1111111111—10
Kinsey	0000000100—1	Heritage	1011100001— 5

Third event, 10 bluerocks, ties divided:

Hunt	1111111110—9	Quinlan	0100111010—4
Breintnall	1101111110—8	Kinsey	0000100001—2
Thomas	0111111111—9	Nichols	0111101111—8
O. Von L	1011110110—7	Heritage	1110110111 8
Carrington	0000000110—2	C M Hedden	0111111011—8

Club match for dinners, 16 men a side, 10 birds each, Hurlingham rule, handicap rises:

Capt. Stewart's Team. First Squad.		Capt. Hayes's Team. First Squad.	
Stewart (30)	1011111111— 6	F Class (30)	2112132211—10

AMERICAN SHOOTING ASSOCIATION.

REGARDING the Association's first tournament, recently held at Cincinnati, we hear the expression from many that it was a failure, and the conclusion is drawn that the Association will not prove to be what its projectors and the shooting fraternity in general hoped it would. The reason for this opinion seems to be solely because the attendance at the initial shoot did not come up to the expectations of those who thus prognosticate. This we believe to be an incorrect method of reasoning. It must not be forgotten that the plan of classification as adopted by the Association was practically a new and untried scheme, that is, untried so far as its rigid enforcement goes; for while a somewhat similar system has been in force at several large tournaments, the methods of securing shooters' records, and thereby classifying them, were not such as to inspire confidence among the weaker shots. The following explains the Association system:

Classification.—Sec. 1. Any shooter to become eligible to the tournaments given under the rules and management of the American Shooting Association must qualify by sending to the headquarters of the Association a certificate from the president or secretary of a regularly organized gun club, of which he is a member, giving, to the best of his knowledge and belief, what he considers the shooter's average on inanimate targets. These certificates will be used in making up a proper classification of the contestants. Blank forms will be sent to any one on application. If the scores made by any shooter give sufficient grounds for changing his classification, the Association reserves the right to make the change.

Sec. 2. The classification of shooters will be as follows:

Class A—To consist of all those whose average is 86 and over.

Class B—To consist of all those whose average is from 70 to 85 inclusive.

Class C—To consist of all those whose average is under 70.

This seems just, and if carried out and rigidly enforced, as all agree it was at Cincinnati, the Association will have accomplished much toward equalizing the chances of all contestants.

During a long term of years, while trap-shooting has been growing in popularity and the skill as well as the number of shooters has been steadily increasing, these medium and lowest class men have been learning the lesson of caution, aided by many bitter experiences of combines and pools worked on them by the experts, and where they formerly went in droves to the large shoots they now stay at home. This is not to be wondered at when one considers the rare occasions when any money in the sweeps falls to their lot, and it is not to be expected that they would at once unlearn this hard lesson and flock to the first shoot advertised to be given in such a way as to protect them. Just such bait has been offered them before, but although well baited the hook has been there and they have grown wary. As they see the practical working of classification as proposed by the Association, and if enforced as it was at Cincinnati, where some good shots were advanced from the lower classes on proof that their skill warranted it, they will be convinced that its influence is in their favor and will again attend the tournaments, knowing that their

interests are protected and a fair chance is afforded them to win among contestants of the same relative skill. Nothing that the Association has so far done warrants the belief that it is a failure, and the croakers should give it an opportunity to thoroughly test its efficacy before voicing that opinion. As we understood it the expectations were that some money would have to be donated by the Association at Cincinnati, but the result showed a much smaller loss than was calculated on. By a reference to the scores it is shown that over 100 shooters were in attendance during the four days, and this, while not phenomenal, is certainly a fair average for a first attempt. The next meeting at Boston will no doubt draw many who held off to see how things would work. Give the Association a chance!

SPRINGFIELD, N. J., June 22.—Two matches were shot on the Union Gun Club grounds here this afternoon, besides a number of sweepstakes and a team race to see who would set up the ice cream for the contestants. The day was all that could be desired, being quite cool with a moderate northwest breeze blowing directly across the traps. The first match was between M. F. Lindsley, of Hoboken, and C. H. Johnson, Jr., of Union, for $10 a side, American Association rules. Shooting commenced promptly at a quarter past three, and there was scarcely a second between shots. By four o'clock the match was finished, Johnson winning with a score of 94 breaks to Lindsley 76. All breaks were clean and not a scratch was scored. As soon as this match was finished Conover and Sickley promptly stepped to the score and kept up music, Conover winning by the score of 41 to Sickley's 37. The cream shoot was started immediately on the side traps, while sweepstakes were shot in front, and from then until dark there was nearly one incessant report of guns. Lindsley used a 12-gauge L. C. Smith hammerless, U. S. Climax shells loaded with 3drs. American wood powder, special trap, and 1¼oz. No. 7½ chilled shot. Johnson used a 12-gauge Lefever hammerless, U. S. Climax shells loaded with 2¾drs. of dead shot powder F.F.F.G. and 1⅛oz. No. 8½ chilled shot. Conover and Sickley both used 10-gauge Parkers, U. S. Climax shells loaded with 3½drs. dead shot F.F.F.G. and 1¼oz. No. 7 chilled shot. Following are the scores:

Match at 100 bluerocks, 3 screened traps, 16yds. rise, American Association rules, $10 prizes; Wm. Sigler referee, Dr. Conover scorer:

Johnson	1111111111111101111101111111111111111111111111
	1111111111111111101111011111111111101111111111—94

Van Schaick	1000100001— 3		

WELLINGTON, Mass., June 22.—There was a good attendance at the grounds of the Wellington Club to-day and some good scores were made in the several matches. In the match for a silver pitcher, at 7 bluerocks and 8 clay-pigeons, Choate and Bond tied with 14 each, and in the shoot off Bond won. The other scores in this match were as follows: Sanborn 12, Warren, Lang and Dill 11, Field, Chase and Baxter 10, Stone 9, Melcher 8. Bowker broke 14 in this match, but not being a member of the club his score does not count. In the merchandise badge match Bond was first with 14 out of 15. The other scores were: Dill 13, Choate Chase and Schaefer 12, Sanborn, Stone and Baxter 11, Bradstreet 10, Melcher 9, Cowee 8. The winners in the sweepstake matches were as follows: 5 clay-pigeons, Dill; 6 bluerocks, Bowker; 5 clay-pigeons, Choate, Dill, Chase and Chapin; 6 bluerocks, Chapin; 3 pairs clay-pigeons, Choate; 8 clay-pigeons, Choate; 7 bluerocks, Bowker; 5 clay-pigeons, Stone, Warren, Bond and Choate; 6 bluerocks, Warren, Choate, Bond and Bowker; 6 bluerocks, Land and Bond; 5 clay-pigeons, Dill, Baxter and Bowker; 5 clay-pigeons, Chase, Bond and Boker.

TORONTO.—The Stanley Gun Club's tournament, which commences on Dominion Day, July 1, on McDowall & Co.'s grounds, promises to be one of the big attractions of the day. The committee have received every encouragement, as almost every shooting club in Canada has signified its intention to take part in this big shoot. The St. Huberts, of Ottawa, will send 10 men and the Dominion Gun Club, of Montreal, 5 men, also clubs from as far west will do likewise. The prizes amount to over $500, of which $250 is in cash, also a silver cup, the balance in merchandise, prizes subscribed partly by friends of the club and merchants, some of which are excellent trophies.

WILMINGTON, Del., June 20.—Today was a great day for the sportsmen at Birmingham Park, near Wilmington, Del. The Wawaset Gun Club gave an excursion to the park, and the day was spent in clay-pigeon shooting. The sport was lively, and the large number of shooters that took part made it very interesting. The Wawaset Club had as their guests A. L. Lumb, William H. Wolstencroft and James Wolstencroft, of the North End Gun Club, of Philadelphia. These sportsmen took part in the shooting, and as can be seen from the scores, did some good work. The sweepstake shooting was at clay-pigeons, open to all comers. In the first match each man shot at 5 birds:

C Buckmaster	11100—3	G Miller	11111—5
G Huber	11111—5	F Ewing	00000—0
E Melchoir	11010—3	H Ewing	10101—3
W McKendrick	11111—5	R Miller	10111—4
W Buckmaster	00110—2	J Caldwell	00000—0
W H Hartlove	11110—4	C Salvador	10101—3
L Fox	11001—3	G Gill	11001—3
A Williamson	01000—1	J Jackson	11111—5
H Buckmaster	00011—2	W Burke	00011—3
J Ewing	01101—3	G Green	01010—2

First money divided between G. Huber, G. Miller and J. Jackson, second between Hartlove, R. Miller and Gill, C. Buckmaster won third by breaking 3 straight.

The second match was fairly well shot, McKendrick wianing first:

G Huber	11011—4	G Green	01011—3
F Gill	000	J Jackson	00111—3
E Melchoir	11110—4	C Buckmaster	11011—4
H Ewing	11011—4	F Ewing	11001—3
A Williamson	01101—3	R Miller	11101—4
W H Hartlove	01111—4	W Baker	11011—4
G Miller	00111—3	L Fox	10101—3
G Salvador	11011—4	J Ewing	11101—4
W McKendrick	11111—5	W Buckmaster	10101—3
G Smedley	10110—3	H Buckmaster	10110—3

Shoot off for second R. Miller and J. Ewing broke 3 straight and divided, L. Fox won third.

The third match showed a marked improvement in the shooting.

C Buckmaster	11101—4	G Lancaster	01101—3
W H Hartlove	11111—5	R Miller	11111—5
J Jackson	11110—4	W Buckmaster	11111—5
L Fox	11111—5	J Shaffer	01001—2
H Ewing	01111—4	E Melchor	11011—4
W Williamson	11110—4	G Huber	11111—5
F Gill	11111—5	J Ewing	11111—5
E Ewing	11110—4	W McKendrick	11111—5
E Baker	11100—3	G Miller	11111—5
William Ruth	01110—3	H Buckmaster	11111—5

First divided between Hartlove, Fox, Gill, W. Buckmaster, R. Miller and Huber; second between C. Buckmaster and F. Ewing; G. Lancaster third.

In the fourth match each man shot at 6 birds:

R Miller	111111—6	H Ewing	111110—5
J Ewing	111111—6	W McKendrick	101111—5
C Buckmaster	110111—5	C Salvadore	011010—3
J Jackson	111100—4	T Smedley	101010—3
G Miller	111100—4	W Bacon	010101—3
A Williamson	111011—5	J Caldwell	001111—4
W H Hartlove	110111—5	W Buckmaster	101111—5
G Huber	110101—4	A B Mack	101101—4
J Schaffer	101001—3	S Fox	110111—5
E Melchoir	010101—3	H Buckmaster	010111—4
F Gill	101110—4	H Ewing	111011—5
E Boker	110011—4	G Grier	011111—5

First divided between R. Miller and J. Ewing; second between W. McKendrick and F. Ewing, each making 6 straight; third was divided between G. Huber and A. Mack, each making 3 straight.

In the fifth match the visitors from the North End Gun Club took part and did some creditable shooting:

W Yeardsley	11111—5	J Wolstencroft	11111—5
C Buckmaster	11111—5	A L Lumb	00111—3
J Ewing	11100—3	W Wolstencroft	11111—5
R Miller	11101—4	A B Mack	11011—4
H Ewing	01111—4	A F. Stout	11011—4
P Ambold	00011—2	J Shaffer	01110—3
G Nutter	11110—4	F Ewing	11011—4
W H Hartlove	12111—5	W McKendrick	11011—4
L Fox	11110—4	C O'Brien	10111—4
H Buckmaster	11111—5	R Baldwin	11111—5
G Huber	01111—4	W Ruth	01111—4

Hartlove won first money; second divided between A. H. Stout and W. McKendrick; third money awarded to Lamb.

The sixth match was quite exciting, and the scores were good:

H Buckmaster	11111—5	J Ewing	01111—4
W Yeardsley	00110—2	P Ambold	11011—4
W Wolstencroft	11111—5	A L Lumb	11010—3
G Huber	01110—3	L Fox	11111—5
F Ewing	11111—5	J Shaffer	11010—3
R Miller	11111—5	P McClusky	01010—2
J Wolstencroft	11111—5	C M Buckmaster	11011—4
I Elliot	11011—4	B Baldwin	11111—5
G Miller	11111—5	W H Hartlove	00111—3
A H Stout	11111—5	C Pyle	11111—5
W McKendrick	11100—3	H Ewing	11101—4

In the shoot-off H. Buckmaster, R. Miller, J. Wolstencroft and R. Baldwin each made three straight and divided. Second money was divided between W. Wolstencroft, I. Elliot, J. Ewing and H. Ewing. Third money was divided between W. McKendrick, A. L. Lumb and W. H. Hartlove.

In the seventh match each man shot at 6 birds:

I Elliott	111000—3	W McKendrick	111111—6
A L Lumb	111111—6	C Buckmaster	111110—5
A Stout	100100—2	L Fox	001110—3
G Miller	111111—6	G Huber	110011—4
A B Mack	111101—5	A Ewing	011111—5
R Miller	111101—5	W Yeardsley	110011—4
R Baldwin	110011—4	H Buckmaster	111001—4
J Ewing	111111—6	F Ewing	110111—5
J Shaffer	110100—3	W H Hartlove	100111—5
J Wolstencroft	111111—6	G Green	100101—3
P Ambold	011101—4		

First divided between A. L. Lumb, G. Miller and W. McKendrick; second divided between A. A. Mack, R. Miller and C. M. Buckmaster; third divided between G. Huber, W. H. Hartlove and R. Baldwin.

The eighth and last match was decidedly the most interesting contest during the afternoon. Each man shot at 6 birds:

W Wolstencroft	111110—5	A L Lumb	111111—6
R Miller	111111—6	A B Mack	111111—6
J Wolstencroft	111111—6	W DuPont	101011—4
G Miller	111111—6	J Schaffer	010011—3
P Ambold	001110—3	F Ewing	110110—4
G Huber	111101—5	R Baldwin	111111—6
J Ewing	111111—6	H Ewing	111111—6
W Hartlove	111111—6	W McKendrick	111110—5
I Elliott	111111—6	G Green	111111—6
A H Stout	111111—6		

In shoot-off R. Miller made 10 straight, J. Wolstencroft 12 straight, G. Miller 12 straight and A. L. Lumb 12 straight; they then divided. Second divided between W. Wolstencroft, G. Huber, I. Elliott and W. McKendrick.

ST. LOUIS, Mo., June 16.—Riverside Gun Club:

Meusch	1100010101110111111—13	E Predock	0110110001010011110—11

Sch'mburg	0000000001110000100— 4		

Bright first medal, Eikhoff second medal, Meier third medal.

EAST AND WEST TEAMS.—Mr. H. A. Penrose, of the Keystone Mfg. Co. speaks of a match now pending to be shot at that Company's annual tournament at Corry, Pa. which should prove of interest. It is a six-man team shoot between the East and West. Mr. Dickey of Boston will captain the Eastern team, which will probably consist of Perry, Eager and Stanton of Boston, McMurchy of Syracuse, and Whitney of Phelps, N. Y. The Western team will be led by C. W. Budd of Des Moines, Iowa, J. R. Stice of Jacksonville, Ill., F. S. Parmalee of Omaha, Al. Bandle of Cincinnati, R. O. Heikes and one other will probably constitute the Western team. The above named men will probably constitute the two teams but as yet it is not a dead certainty.

DIVIDING THE POT.—New Haven, Conn.—There should be some way by which all contestants can have a fair distribution of the money in the pure. For example in all 10 bird races or over have an equal division of the purse in two parts, each part or half to be div. into 60 and 40 per cent, and all ties to div. If a shooter kills 7 birds out of 10 he is entitled to a share of 40 per cent. fourth money, which is the same as the second money. I am well aware that it is a difficult problem to solve whereby all trapshooters will be satisfied and make money. That will probably never be done.—MEDIUM TRAP SHOT.

WINSTON VS. ELLIOTT.—Kansas City, Mo., June 19.—First of a series of four matches for $250 a side, between J. L. Winston, of St. Louis, and J. A. R. Elliott, of this city. Mr. Elliott, who furnished the birds himself, took particular pains to select the 200 which were required for the march from 2,000 which he has on hand. Hurlingham rules, modified to use 10-gauge gun and allowing 2yds. for the 12-gauge:

J L Winston	1121211222—10	J A R Elliott	2212110112— 9
	0012011121— 7		1111101222— 9
	1111121221—10		2211012250— 8
	0111222211— 9		1210111222— 9
	1201122121— 9		1202102202— 7
	2102221221— 9		1011111111— 9
	1111111111—10		1121212121—10
	1111111111—10		1122222112—10
	2111112212—10		2212121112—10
	2202211121— 9—93		1111210111— 9—90

Summary: Winston, right quarterers 13, incomers 29, left quarterers 7, tailers 19, right crossers 13, left crossers 19. Elliott, right quarterers 14, incomers 27, left quarterers 7, tailers 24, right crossers 13, left crossers 15. Winston used second barrel 33 times, Elliott 36 times.

Second match, June 20.—At the conclusion of the match Winston requested that the tie be postponed to allow of his supplying himself with suitable shells, but Elliott insisted upon its being settled immediately. The conditions were 100 Ligowsky clay-pigeons for $250 a side, American Shooting Association rules to govern:

J L Winston	1111011100— 7	J A R Elliott	1111101111—9
	0110111011— 7		1011111111—9
	1110001111— 7		1110111101—8
	0111111111— 8		1111100110—7
	1110111001— 7		1110110111—8
	1111011111— 9		0111111001—7
	1111111111—10		1111011101—8
	1111111111—10		1110101111—8
	0111111111— 9		1110111111—9
	0100110111— 6—80		1101011101—7—80

Tie score:

Winston	1111101111111011111011101—21
Elliott	0111111111111010011110111—20

Third match, June 21.—Conditions: 50 pairs Ligowsky clay birds. American Association rules, for $250 a side:

J A Elliott	11 11 00 01 11— 7	J Winston	11 11 11 10 01— 8
	10 11 11 11 10 - 8		11 11 11 11 00 - 6
	11 11 11 01 11— 9		10 10 10 11 01— 6
	01 11 11 11 11— 9		11 01 10 11 01— 7
	11 11 11 00 10 - 7		01 10 00 10 11— 5
	01 10 11 10 01— 6		01 11 11 00 11— 7
	10 11 10 11 11— 7		11 01 00 11 11— 7
	11 00 01 10 00— 5		11 11 11 10 01— 8
	11 11 11 11 10— 9		10 11 11 11 11— 9
	11 11 11 11 11—10—77		11 10 01 11 11— 8—71

Fourth match, June 22.—Conditions: 50 pairs live pigeons, modified Hurlingham rules, for $250 a side:

J Winston	11 11 00 00 00— 4	J A Elliott	11 01 01 10 11— 7
	00 00 10 10 11— 4		10 00 11 11 00— 5
	01 00 01 10 00— 3		00 11 00 11 00— 4
	00 11 00 11 01— 5		11 00 11 00 10— 5
	11 01 10 00 11— 5		00 11 00 10 01— 4
	11 11 11 11 10— 9		11 10 10 11 10— 7
	11 11 01 11 10— 8		11 11 11 10 11— 9
	11 11 11 11 11—10		10 00 01 10 01— 4
	11 11 01 11 11— 9		11 01 01 01 01— 6
	11 11 10 11 00— 7—64		10 01 11 10 11— 7—57

o denotes dead out of bounds.—UNSER FRITZ.

MINNEAPOLIS, June 21.—The Minneapolis Gun Club held their regular monthly all-day tournament yesterday, and in spite of a drizzling rain which commenced in the morning and lasted all day a fair number of shooters put in an appearance, and some good scores were made considering the circumstances. Following are the scores:

Event No. 1, 10 singles: Ensign 7, Dalton 9, Bennett 6, Webley 8, Lawrence 7, Jones 9, Murphy 8, Chantler 9, Warwick 6, Cutter 10, Osmer 7. Cutter first, Chantler second on shoot-off, Webley and Murphy third, Ensign fourth on shoot-off.

Event No. 2, 5 singles and 5 pairs: Dalton 4, Bennett 9, Warwick 9, Webley 8, Murphy 8, Ensign 5, Chantler 9, Osmer 9, Jones 7, Lawrence 6, Cutter 8. Bennett, Chantler and Osmer first, Webley, Murphy and Cutter second, Jones third, Lawrence fourth.

Event No. 3, 15 singles: Warwick 13, Dalton 11, Webley 13, Murphy 11, Bennett 12, Jones 13, Osmer 14, Chantler 10 Lawrence 10, Ensign 6, Cutter 15, Pratt 11. Cutter first, Osmer second, Webley and Jones third on shoot-off, Bennett fourth.

Sweep, two miss and out, 21yds., entrance $1: Chantler 5, Dalton 4, Lawrence 0, Bennett 5, Murphy 0, Balsom 9, Ensign 10, Warwick 2, Webley 1, Stokes 6, Walker 0, Jones 1, Cutter 8.

Event No. 4, 4 singles and 3 pairs: Webley 8, Dalton 10, Chantler 8, Bennett 10, Murphy 6, Balsom 7, Walker 9, Jones 5, Osmer 9, Warwick 9, Ensign 4, Pratt 5, Lawrence 5, Stokes 8, Cutter 8. Dalton and Bennett first, Walker, Osmer, and Warwick second, Chandler third on shoot-off, Balsom fourth.

Event No. 5, 10 singles: Ensign 5, Lawrence 8, Pratt 6, Jones 8, Balsom 9, Bennett 7, Chantler 9, Osmer 8, Walker 6, Webley 9, Warwick 8, Dalton 7, Murphy 10, Cutter 9. Murphy first, Balsom second on shoot-off, Osmer third on shoot-off, Bennett fourth on shoot-off.

Event No. 6, 10 singles and 5 pairs, club badge shoot: Shott 14, Daly 14, Webley 12, Balsom 16, Chantler 15, Bennett 14, Walker 17, Osmer 17, Dalton 16, Jones 17, Warwick 14, Lawrence 8, Ensign 12, Marshall 12, Murphy 17, Stokes 14, Christenson 16, Pratt 16, Boardman 12, Cutter 16, Brady 9. Cutter senior badge, Murphy junior badge, Shott amateur badge. Walker, Osmer, Jones and Murphy first, Balsom and Christenson second on shoot-off, Chandler third, Warwick and Stokes fourth on shoot-off. Cutter won first average, $10; Osmer second average, $7.50; Chantler and Murphy third average, $5; Jones fourth average, $2.50.

Tribune badge shoot, 9 singles and three pairs; entrance $1.50:

Ensign (24yds.)	011011010	11 00 10— 8	
Warwick (24)	100100110	00 11 10— 7

*Walker (18)	111001100	10 01 10— 8	

*Visitors. Webley wins badge. Balsom first, Chantler second, Osmer third on shoot off, Webley fourth. The conditions of the *Tribune* badge are that the member winning at 18yds. shall be handicapped 3yds., and if he wins at this distance to a still further handicap of 3yds., which is the extreme limit, and the shooter winning it the greatest number of times during the season which closes Sept. 1 becomes his personal property.—L. H.

MONTREAL, June 20.—During the week mysterious white missives have been traveling about this city, and upon inquiry they proved to be invitations to a yachting, fishing and gunning excursion on Lake St. Louis. A party of 18 went down and at 2:30 P. M., the yacht Issheactual was moored to the landing stage and the sporting paraphernalia and its owners were soon safely aboard. Then began what was a novelty to at least most of the participants, a shooting match at Peoria blackbirds from a yacht's deck. Everything considered the shooting was first-rate. A trap was placed in the bow of the boat, while the shooter stood abaft the cabin. The direction of the trap was changed after each shot and as on the outward trip, the sun was directly in the shooter's eyes, shooting was by no means an easy task. Add to this the uneven rise and fall of the yacht and the scores are explained. On the return trip another match was indulged in but was cut short by a squall, which had the effect of making the cabin the unanimous choice of the contestants. Following are the scores: Report of yacht shoot, June 20, 1889, en route from Valois to Chateauguay and return:

PHILADELPHIA, June 21.—A very interesting team shoot took place to-day between the Wayne boys, of Nicetown, and Wingohocking, of Germantown, on the former's grounds. The match to a certain extent was sadly interfered with by rain, which at times came down in torrents, and made it so black that good scores were very difficult. The conditions were 25 single clays, 18yds. rise. The Wingocs provided a nice luncheon, to which full justice was done:

HUTCHINSON GUN CLUB.—Hutchinson, Kas., June 10.—The Hutchinson Gun Club met at their grounds yesterday afternoon and participated in the regular monthly contest for the medal. The scores were not up to the average. The boys were throwing the birds from the last notch. Medal shoot, 15 singles and 5 pairs of doubles:

Burslem	11011 011111111	11 10 10 00 10—18	
Young	10101111110101	10 11 11 01 01—17	
George	01010111100101	10 10 11 11 11—17	
Allen	10111101010111	11 10 11 10 00—17	
Miss and Out	10110111010111	11 01 10 10 01—16	
Chamberlain	11011011010100	10 10 10 01 10—13	

Burslem won the medal. Sweepstakes, 12 single bluerocks:

Young	111111111011—11	Allen	110111111110—10
George	001111111111—10		

Sweepstakes, 5 doubles:

George	11 10 11 11 11— 9	Allen	01 10 01 10 11— 6
Young	11 11 11 11 10— 9	Chamberlain	01 10 01 11 10— 6
Burslem	01 11 11 11 01— 8		

Sweepstakes, 12 single bluerocks:

Allen	111111111011—11	George	101111011000— 6
Chamberlain	011101111101— 9	Burslem	000111011000— 5
Young	011111001111— 9		

Nine single bluerocks:

Allen	011011111— 7	Young	011110010— 5
George	100011110l— 6	Chamberlain	001111001— 6

June 13.—Yesterday afternoon four members of the Lyons Gun Club met a team from the Hutchinson Club in a shoot at 25 bluerocks per man. The Lyons boys seemed to be out of luck, none of them shooting in their usual form. It is a well-known fact to the shooters of Western Kansas that the visiting team is composed of men who seldom fall below 20 in a shoot at the above targets and in a similar match. The score:

Hutchinson Team.	
J S George	1111111110101111111011—22
Will Allen	1111011111101111101111—21
E H Young	0111111100111111101101l1—20
Fred Burslem	1000101011101111100110l0—15—78
Lyons Team.	
J A Bavington	0001100111011001100100111—15
J M Swisher	0100001101000101000100l0— 8
Robert Dinsmore	1111110101001010100001l1—15
J L Weight	0001101111010110101101—15—53

Twelve single bluerocks:

Allen	111100111111—10	Wright	000101111101—7
Bavington	011110101011— 9	Chamberlain	101100101011—7
Burslem	011111010l— 9	Taylor	010101101101—7
Young	111010110011— 8	Dinsmore	100101001010—5
George	101101110101— 8	Swisher	101001011000—5

Three pairs of doubles:

Wright	11 11 10—5	Bavington	01 10 10—3
Allen	11 11 10—5	Dinsmore	10 10 10—3
George	11 11 10—5	Chamberlain	01 10 10—3
Swisher	10 10 11—4	Burslem	11 00 10—3

SHADY.

COMPTON HILL GUN CLUB.—St. Louis, June 22.—Shoot for medals, 25 single Keystones:

W Field	1111100011111001011101101—18

Steffen	0111000010— 4		

Three moneys, all ties were div.—UNSER FRITZ.

SOUTH MANCHESTER, Conn., June 20.—The Manchester Gun Club had a fine day for their tournament to-day, and everything was satisfactory to the 35 shooters present. Below we give the scores of the winners of the various events:

Five clays; Watkins, Woodford and Brown 5, Risley, Treat, Whittesly and Latham 4, Cartwright 3, White, Hyde and Cheney 2.

Five Keystones: Risley, Yerrington and Vibberts 5, Woodford 4, Webb and Shewry 3, Latham 1.

Ten clays: Yerrington and Woodford 10, Vibberts, Webb, Sterry, Goodwin and Brown 9, Willey, Olcott and Whittesly 8, Smith, Dunham, Baldwin, Golden, Cartwright and Hyde 7.

Five pairs Keystones: Smith 10, Risley and Whittesly 9, Webb 8, Watkins, Vibberts and Shewry 7.

Ten clays: Sterry 10, Vibberts, Yerrington and Olcott 9, Willey, Baldwin and Whittesly 8, Watkins, Smith and Melrose 7.

Fifteen Keystones: Sterry 15, Risley, Willey and Whittesly 13, Yerrington, Douglas, Woodford, Webb and Smith 12, Dunham 11.

Four pairs clays: Goodwin 8, Watkins, Smith and Baldwin 7, Sterry, Risley and Sign 6, Whittesly 4.

Seven Keystones: Willey, Baldwin and Risley 7, Olcott, Whittelsey and Brown 6, Sterry, Yerrington and Sign 5, Ross, Keeney and Goodwin 4.

Fifteen clays: Yerrington and Sign 15, Whittelsy and Sterry 13, Watkins, Smith and Dunham 12, Golden and Baldwin 11.

Three pairs Keystones: Sign 6, Whittelsy and Olcott 5, Ross 4, White and Risly 3. Ten clays, Sterry, Olcott and Sign 10, Woodford and Willey 9, Yerrington 8, Watkins 7. Ten Keystones, Sterry and Olcott 10, Willey 9, Smith, Baldwin and Webb 8, Golden and Yerrington 7. Seven Keystones: Watkins 7, Yerrington 6, Sign 5, Douglas 4. Ten Keystones: Willey and Yerrington 10, Sterry and Douglas 9, W. C. Cheny 8, Watkins 7. Ten Keystones: Yerrington and Whittelsy 10, Watkins and Sterry 9, Willey 8. Seven Keystones: Sterry 6, Olcott 5, Shewry 4. Five Keystones, Olcott 5, Watkins 4, Willey 3.—W.

WILLIMANTIC, Conn., June 18.—Sixth merchandise shoot of the Willimantic Rod and Gun Club, 15 bluerocks from 5 traps and 10 clays from three traps, national rules; 18yds.: Dunham 20, Ross 11, Webb 21, Baldwin 11, Macfarlane 19, Johnson 13, Thompson, Alpaugh 12, Larrabee 11, Beebe 7, Crane 15, Smith 17, Alford 6, Taft 14.

MISSOURI—ILLINOIS.—Chicago, Ill., June 19.—There are now on foot negotiations which are likely to result in the most important live-bird match shot anywhere in America in recent years. A number of Missouri gentlemen have sent in to Mr. R. B. Organ a challenge for a match on the following terms: Ten Missouri shooters to shoot against ten Illinois shooters, at 100 live birds per man and $1,000 a side, the match to be shot at Kansas City, St. Louis or Chicago, a city purse and the gate money to be added to the stakes, winning team to take $1,500 and a certain amount, to be determined, of all remainder to be divided into 40, 30, 20 and 10 per cent. for the four men making the highest scores. Signed to the challenge are such names of Missouri shooters as J. E. Riley, J. N. R. Elliot, P. D. Watson, J. H. McGee, J. W. and W. M. Anderson, Paul Francke, Caldwell and Cottrell. Our boys recognize that they would have hard work with these men, but they are doing their best to scratch up a team of ten, and will doubtless have nerve enough to tackle the job. Mr. Organ is collecting lists of votes among Chicago shooters to try to determine the Chicago team. Prominent among his lists are John, George, Henry and Abe Kleinman, J. R. Stice, Powers, Billy Payson, Billy Mussey, Charley Willard, Thos. Laflin, R. B. Organ, M. J. Eich and W. E. Phillips; it is probable the ten names will be chosen from that list. It is not probable that this match will be shot before November or December, as it is resolved that none but good strong birds shall be used. Modified Hurlingham rules are suggested by Missouri, and modified Illinois rules by Illinois. It will be agreed that no bird shall be scored lost through any technicality. This will be a gentlemen's match throughout and the greatest of the kind ever known in this country—if it goes. It will probably be shot in Kansas City. That city will add $2,000 to the purse and turn in at least $1,000 more at the gate. There will be two or three car loads go down from here. The match will probably be a question of $5,000, and side wagers will doubtless cause very large amounts of money to change hands, if Chicago men can be found to stand against the confident Missourians. Mr. Riley writes to-day that the Missouri men want to make the match and has instructed Chicago to draw on him for $250 forfeit as soon as the terms are closed. It is much to be hoped that this match will be brought off.—E. HOUGH.

KEYSTONE TRAPS.—In our reports of the Iowa and Illinois State tournament the term "blackbirds" was used merely to designate the difference between live-bird traps and those for inanimate targets. Keystone traps were used to the general satisfaction of all concerned.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Yachting.

FIXTURES.

JUNE.

29. Corinthian, Marblehead.
29. Beverly, Mon. Beach, 1st Open
29. Cor. Mosquito Fleet, Larch.
29. Hull, Club Cruise.
29. Yonkers Cor., Yonkers.
29. St. Lawrence, Montreal.
30-July 1. St. Lawrence, Cruise, Montreal.

JULY.

1. Oyster Bay, 40ft. Special.
1. Seawanhaka, Cruise, Oyster Bay.
1-2. Miramichi, Annual Cruise.
4. Larchmont, Annual.
4. Beverly, Mon Beach, 1st Buz. Bay.
4. Beverly, Marbleh'd, 1st Cup.
4. Hyde Park, Annual, Chicago.
4. Buffalo, Open, Buffalo.
4. Detroit, Cruise, St. Clair.
4. Cedar Pt., Special, Bridgep't.
4. Quaker City Cor., Marcus H'k
5. Dorchester, Open, Club.
5. Hull, 76th Regatta.
6. Beverly, Marbleh'd, 2d Cham
6. Sippican, Annual, Marion.
6. Great Head, 1st Cham.
6. Hamilton, 20ft. Class.
6. Larchmont, 40ft. Class.
6. St. Lawrence, Montreal.
6. So. Boston, Mass., 1st Cup, City Point.
8. Inter-Lake Y. R. A. Meet, Lake Erie.
8. American, 1st Cham.

31. West Lynn, 2d Cham., Lynn.
31. So. Boston, Mass., Cham. Sail off, City Point.

NO CUP RACE THIS YEAR.

A MEETING of the Royal Yacht Squadron was held on Tuesday, at which it was decided that the club would not in any way recognize the validity of the "New Deed of Gift," and consequently that negociations for a mutual agreement are off. Lord Dunraven will probably bring the boat out, starting next month and arriving early in August, to race with the 70ft. class.

Valkyrie has sailed in several races lately, but in such light and fluky weather that it is extremely difficult to form any opinion from them. One of the best of the English writers, Mr. Harry Horn, in a long letter to the New York *World*, indulges in the interesting but futile amusement of "drawing a line" through Valkyrie, Thistle, Irex and Yarana, with the idea of gauging the former's performance with American boats. His opinion is that Valkyrie is a better boat in light weather and smooth water than Thistle, though like her, deficient in lateral resistance. Mr. Horn looks to the meeting of Valkyrie and Stranger at Liverpool this week to give a correct gauge between her and American boats, and says, "Probably Valkyrie will be found fully equal to giving Stranger upward of half an hour on a 40 mile course in a moderate breeze, and more than that in light winds." We can say, after seeing a good deal of sailing in this country between Stranger and her class, that if Valkyrie cannot give Stranger at least an hour and a quarter over a 40 mile course in a moderate breeze, and even more in stronger winds, she had best stay at home, as Stranger would never have been in it with Titania or Katrina in the matches of last week. The *Field* of June 15 deals out some hard facts in the following words:

"We believe a communication has been received by the Royal Yacht Squadron from the New York Y. C., announcing its intention to adhere to the proviso that, in case of a race for the America Cup, the winning club must adopt the 'counterfeit deed,'

This is no more than might have been expected, looking to the fact that the men who are responsible for the condemned 'new deed' are practically those who govern the New York Y. C. at the present time, and, as a sequence, have the management of the challenges for the America Cup. What amuses us in connection with this matter is the fact that when the much-paraded 'surviving donor' came forward in 1870, in the full possession of his faculties, and interpreted the original deed that 'match' meant boat against boat, he was laughed to scorn by the then managing committee of the New York Y. C., and told they could only interpret the deed by the letter, and that he had no power to interpret in a way which the other five donors might not have accepted as their real meaning. And now we have a committee of the club getting this complacent, but really shrewd 'surviving donor' to alter the most precise and specific terms of the original deed in a manner which sets us wondering if the sense of fairness among American sportsmen is not confined to a very small number.

"It is perhaps necessary to repeat that Englishmen regard this so-called new deed as inimical to sport, because it so handicaps the challenging yacht that her chance of winning is a remote one. Secondly, the chances are that in the impending races the Valkyrie will be defeated, and that the Cup will be confirmed in the possession of the New York Y. C. forever. There might be no objection to this, except for the fact that there will always be men rash enough to challenge for the Cup, and by so doing give the holders of it an opportunity of securing an easy victory, and the consequent boast of superiority. We contend that this is a mean, unsportsmanlike and contemptible position for the holders of the Cup to occupy. We should, indeed, exceedingly regret, if the Valkyrie were fortunate enough to win the Cup, that it came to England to be held under such terms as are stipulated for in the 'new deed of gift'."

HINDSIGHT VS. FORESIGHT.

THE warnings against too much power, too large sails and too great beam which we have preached to deaf ears for a very long time, are apt to be generally heeded before many more races are sailed this year. A look at Tomahawk and Maraquita, to say nothing of the moderately sparred Nymph at times, in the late races, is enough to convince any one that our boats are grossly overdone in the matter of sail, without waiting for the additional evidence of Liris and Gorilla when they are in shape. We welcome the first convert to our views, the designer of the new Helen, Alice and Chrystal, and only wish for his sake that he had learned the lesson earlier, and in season to profit by it. In the Boston *Herald* of June 23 Mr. McVey says:

"Coming to the forties, the lesson already learned is that all the American forties of this year are oversparred and have too much sailspread. They are simply overpowered, else why should fairly beamed boats, with deep draught for their length, and heavily weighted lead keels, careen and put rails under in a whole sail breeze? The boats with large beam, like the Maraquita, cannot carry their sail, and the Helen, with weights lower than on any other 40, is not able to stand up and carry her present canvas as she should, and her designer frankly admits it.

"As against our hard-bilged, wide-beamed boats and large sail plans is the Scotch cutter Minerva, with practically no bilge, and very little initial stability. She sails faster than any of the forties which have met her, is stiffer, and carries a jibheaded topsail and lower sails in a breeze better than the Maraquita does her lower sails alone. At first glance it would seem that the Minerva was a stiffer boat than any of our forties, but the fact is that she has a smaller sail plan — one just suited to her. Were the spar and sail plan of the Maraquita, Helen or Tomahawk put on the Minerva she would heel to an extreme angle, and would not be able to lug the big sail spreads of our boats. In comparing these forties 'science' gets a black eye, and the designers have simply been reaching in the dark.

"If science actually controlled, the mistake of oversparring and disproportionate sail spreads would not have been made.

"There are many things to be found out by practical experience, and the only way to develop a boat's best points is to keep experimenting with her after she is fitted out. The only big, powerful boat thus far which has been successful is the 30-footer Kathleen, designed by Mr. William Gardner, and she seems to be able to get along fairly well. Designers and owners have learned much thus far, and possibly, excepting the case of Mr. Burgess, all have found out that the forties will do better with less sail area and lighter spars. The Nymph and Verena have less sail area than the other Burgess forties of this year, and, as for that matter, of any of the Burgess forties except Baboon and Xara, and they go faster. As previously stated in these columns, the performances of the 40-footers will settle the question of sail area, and the time is not far distant when the knife of the sailmaker will be put into the sails of some of the forties, and the clubs will be spared the trouble of making rules to govern the big sail spreads. When the spars and sails are reduced on the American forties, so that they can go along and carry their canvas, their speed will be increased, and then the Minerva may not win her races so easily."

It is rather hard to blame "science" for the fact that American yachtsmen have persisted in building big boats, and relying mainly on brute force and huge sails rather than perfection of form to win races. Perhaps Mr. Fife's "science" is of a different kind from theirs. No doubt Minerva would heel as badly as the rest were she overloaded with 500 or 600ft. of sail, but on the other hand, what would Maraquita or Tomahawk do with 2,700ft. in place of 3,400. Both are likely to be improved by a moderate reduction, but it is not likely that either could be driven by Minerva's sail plan.

After her victories over the crack Boston boats it is drawing it rather mildly to say that Kathleen "seems to be able to get along fairly well." The impression here is that she has about wiped up the 30ft. class, even allowing a "scientific" margin for the lack of local knowledge on the part of Saracen and Elf. Tom Boy, a later Burgess boat, certainly suffered nothing in this respect with Mr. Burgess and Capt. Pettick aboard, but she was very badly beaten.

A BAD WEEK FOR RULE O' THUMB.

ONE side result of the late races which has not attracted much attention in the midst of more important events is the defeat of Anaconda by Clara. After Clara and Cinderella made the 53ft. class famous in 1886-7, Anaconda, modeled by Mr. Philip Ellsworth in connection with Mr. John Prague, was built for the latter, to beat both the narrow cutter and the wide compromise. She was of the old type made famous by Fanita, Crocodile, Gleam, Elephant and Kangaroo, with beam, light draft, sloop rig and inside ballast. Her two meetings with Cinderella at Larchmont are still fresh in the memory, she being outsailed in light weather and giving up the race in a stiff blow, her opponent going over the course with Mr. C. S. Lee at the wheel, the last race he ever sailed. Anaconda and Clara have never met until this season, the first occasion being in the opening sail of the Atlantic Y. C. on May 30. Clara beat Anaconda very neatly then, but as no prizes were given and it was not a record race it did not attract much attention. Anaconda failed to show at the line in the Corinthian race, but she was on hand on Friday in the Atlantic Y. C., and Clara was ready to meet her. In a fair race of 16 knots to the Scotland from Bay Ridge, Clara, narrow and deep, with 21 long tons of lead on keel, beat Anaconda, wide and shoal, with all ballast inside, by 3min. 4sec. This was surely bad enough, but at the same time the little Fife 40, Minerva, 15ft. shorter than Anaconda, beat her by 4min. elapsed time in the same distance. The two were not timed at the Sandy Hook mark, but at the finish Clara led by 7min. 49sec., so that Anaconda had barely held her off the wind. The allowance under Atlantic Y. C. rules is 30sec. in favor of the wide boat, the waterline lengths being the same, so Clara wins by over 7min. corrected time. An amusing instance of the defeat of the old boats by the new is found in the case of Kathleen and Kangaroo, the latter, with her sister Arab, being very badly beaten by the new Gardner clipper. The day after the first Seawanhaka race Kangaroo was hailed oy a passing boat, "Getting ready for to-morrow?" The answer came back quickly, "No, getting over yesterday."

SOME OTHER MAN.—The London *Daily Telegraph* of June 7 contains the following interesting item of news: "Among the passengers by the Germanic, which arrived at Queenstown from New York yesterday, was Mr. George Shepherd Page, commodore of the New York Y. C. Mr. Page hopes to complete arrangements with Lord Dunraven connected with the race for the America Cup." There are traditions of individual members of the New York Y. C. who have promoted themselves to the rank of commodore in European hotel registers before now, but the above is probably a blunder on the part of the *Telegraph*. Mr. George Shepard Page is a well-known Wall street man, and goes as Commissioner from New Jersey to the Paris Exhibition. Commodore Gerry still reigns supreme, and disclaims any knowledge of Mr. Page and his mission.

CAPSIZE ON LAKE MINNETONKA.—On June 21 a centerboard sloop capsized on Lake Minnetonka, near Minneapolis, and nearly drowned a party of four ladies, as well as their escorts all hands being in the water for an hour.

TITANIA-KATRINA, JUNE 21, 22.

IN consequence of the mishap to Katrina's boom on Tuesday the race of Thursday was put off for another day, a new boom being made in the meanwhile from a spare one of Mayflower's, a dry and tough stick of white pine. All was ready by Friday morning, and at 11 A. M. the gun was fired from the flagship Electra, anchored off Buoy 10, the two yachts being near the line. The course was the new outside one of the New York Y. C., from Buoy 10 around Buoy 5 and the Sandy Hook Lightship, thence around a mark boat off the Shrewsbury Rocks, and home over the same course to Buoy 10. The wind was fresh from S.S.E., making a beat out to the Lightship, a close reach to the Shrewsbury Rocks, a reach in to the Lightship and run in with the wind on the port quarter to Buoy 5. The distance was thirty-two knots, the allowance being 19s. in favor of Katrina. When the start was given at 11:10 both yachts had clubtopsails and baby jibtopsails aft, and were lying above the line, neither anxious to start. The interval, 5m., was wasted, the pair watching each other; but when the handicap gun fired Titania made a rush for the line on port tack, going over with 13s. handicap, while Katrina followed with 52s. against her, Titania thus gaining 39s. at the start.

The pair stood in close under the point of the Hook, then went on starboard tack, Titania all the time gaining to windward. When Buoy 5 was reached she was close aboard it, but Katrina had fallen off some distance. Beating out to the Sandy Hook Lightship Titania continued to gain rapidly, until at the turn she was 6m. ahead, the times being:

Titania ..... 1 08 25 Katrina..... 1 14 26

The next was a close reach of 6 miles, Titania carrying the same canvas, but Katrina shifted to a larger jibtopsail, which she would have been better without, the wind meanwhile freshening and holding well ahead. The times at the mark were:

Titania..... 1 49 47 Katrina 1 57 27

Thus Titania had gained 1m. 49s. in the 6-mile reach.

Going back the wind was a little freer and Titania carried a larger jibtopsail. Katrina set a balloon jibtopsail and managed to hold her, the times at the Lightship being:

Titania ..... 2 31 45 Katrina..... 2 39 01

Grayling, in the Atlantic Y. C. race, had turned the Sandy Hook Lightship just ahead of Titania, and the pair ran in together. Katrina had carried her balloon jibtopsail in from the outer mark, but Titania only set hers at the Lightship, carrying it about half way to the Hook and then setting an intermediate one. She and Grayling held very close company up to buoy 5. At the buoy Titania took in her jibtopsail, but Katrina carried her ballooner in to the finish. From the Lightship in the pair were about even. Titania finished ahead by 7m., the full times being.

	Start.	Finish.	Elapsed.	Corrected.
Titania.....	11 15 00	5 21 45	4 06 45	4 06 45
Katrina.....	11 15 00	3 29 03	4 14 03	4 13 44

Titania beats Katrina 6m. 59s. after allowing her 19s.

Off the wind the two had sailed very evenly, but in the real test to windward, with the same wind and water, Titania had shown a marked superiority to her black rival. Considerable money changed hands on the result, and Katrina's chances were generally considered hopeless for the third and final race.

The last race was sailed on Saturday, the weather being fair and warm, with a clear sky, a perfect day for a trip over the old New York Y. C. course, the sea being perfectly smooth. This time, however, the wind had shifted, being N.W., of moderate strength. Both yachts carried jibheaders, the clubs being lashed on deck all day, though they could easily have been carried. When the gun fired at 11 A. M. both yachts were in the Narrows, Titania standing across on starboard tack, with Katrina a little to the north on port tack. Katrina tacked to windward of Titania, but the latter paid off and came for the line, luffing up as she neared, and then breaking out a large jibtopsail and balloon foresail as she bore away across it at 11:04:02, with Katrina only some 400ft. astern, timed at 11:04:24. On the reach to Buoy 10—some six knots—Katrina held her rival very closely, the gain or loss being a matter of seconds. The official times at Buoy 10 were:

Titania..... 11 40 19 Katrina..... 11 40 46

Both turned with spinaker booms ready lowered to port, Titania having an extension boom. Katrina sheeted her jibtopsail quickly as soon as it jibed, but Titania had hers foul of the stay for some little time. Now followed the most amusing piece of work that has been seen this season, or in fact for many seasons; Titania, instead of holding her course about E. by S. for Buoy 5, luffed sharp up and stood to N.E., out over the Southwest Spit and direct for the Romer Beacon. Katrina followed in the absurd game, and soon the two were heading directly north for the Narrows with Buoy 5 astern. Titania gained on Katrina, but this of course only made Katrina's latter the longer of the two to the true course. The jibtopsail sheets were flowed on both, the sails threatening each moment to pull the topmasts out, but still the luffing continued. Katrina ended it after about 13m. by bearing sharply off and starting sheet, setting spinaker to port, Titania at once following. Some time had been wasted by this foolish manœuver, but Katrina had gained a little on her rival and was now nearer the next mark, the Scotland Lightship. They ran out very evenly with a good breeze and smooth water, Katrina holding her own off the wind. At 12:50 when the flagship was off the mark, both spinnakers came in, jibtopsails having previously been stowed, and at 12:53:52 Katrina, having jibed just above the mark, luffed round and stood for the Highlands on starboard tack. The times

SEAWANHAKA C. Y. C. CRUISE.

FLAGSHIP SEA FOX. S. C. Y. C., NEW YORK HARBOR, June 17, 1889.

General Orders No. 1.

THE vessels of the fleet will rendezvous in Oyster Bay harbor for the squadron cruise on Monday, July 1.

Captains will report on board the flagship at 9 o'clock P. M.

The squadron while there will be the guests of the Oyster Bay Y. C.

The Oyster Bay Y. C. offers a cup of the value of $200, to be raced for by yachts in the 40ft. class over a 25-mile course in Long Island Sound, open to yachts of this class belonging to any club. To be raced for on Monday, July 1, starting at 11 o'clock A. M. Entries should be made to Mr. Francis T. Underhill, chairman of the regatta committee, Oyster Bay, L. I.

On Tuesday, July 2, at 12 o'clock, a breakfast and lawn party in honor of the club will be given by Fleet Surgeon and Mrs. J. West Roosevelt, at their country seat, Waldeck.

The same evening the captains of the squadron and their guests are invited to a ball given by Captain and Mrs. Francis T. Underhill, at their country seat, Ontare.

While at Oyster Bay, mail matter, telegrams, etc., addressed care of Com. John A. Weeks, Jr., Oyster Bay, L. I., will be delivered to the vessels of the squadron.

Trains leave Long Island City for Oyster Bay direct, via Locust Valley.

The entrance to the harbor will be marked on the starboard hand by red flags and on the port hand by blue flags at the 14ft. low-water mark.

On Wednesday, the 3d, the squadron, on signal from the flagship, will proceed to Larchmont and remain there over the 4th, on the invitation of the Larchmont Y. C., which extends the hospitalities of the club house and anchorage during the stay of the squadron.

On the morning of the 5th the squadron will proceed to the eastward, making such ports of call as the captains may decide, and the vessels of the squadron which intend to continue the cruise around the cape will take their departure from Vineyard Haven for Marblehead in accordance with the invitation of the Eastern Y. C., already accepted, to visit their harbor and to take part in their regatta on Monday, July 15. The Eastern Y. C., besides their regular prizes, offers a special prize for yachts in the 50ft. class provided they are represented in the squadron of the S. C. Y. C. Commodore Henry S. Hovey, of the Eastern Y. C., offers a special prize, of the value of $200, to be raced for by the 40ft. class, on Saturday, July 13.

Mrs. A. Cass Canfield has presented the club with cups of the value of $500 to be sailed for at Marblehead. The conditions governing these cups will be published in a subsequent order.

Captain Royal Phelps Carroll, of the Gorilla, offers a prize to be raced for by the 40ft. class, at Bar Harbor. Value of prize, $200 if five start, $150 if three start.

A member of the club offers first and second prizes in money to the sailing masters of the yachts declared to be in the best order by judges to be appointed by the commodore, the details governing the competition for which will be announced at the first meeting of the captains.

Rowing and sailing races by the boats belonging to the vessels of the squadron, and swimming races for members of the crews will take place during the cruise.

The attention of captains is called to the routine and signal code, changes in each of which have been made since last season.

Captains intending to join the squadron are requested to notify the fleet captain at the club house, 7 East Thirty-second street, at as early a date as possible.

By order of the commodore. J. F. TAMS, Fleet Captain.

ATLANTIC Y. C. JUNE 21.

THE postponed race of the Atlantic Y. C. was sailed on June 21 over the regular course and in a moderate southeast wind but with few starters. The only interest was in the 53, 40 and 25ft. classes, where the keel boats in each case beat their centerboard rivals; Clara for the first time getting alongside of Anaconda and giving her a decisive beating. Sea Fox did not turn up in the large schooner class, Fearless was absent, and as Stella was on the beach there was no competitor for Nymph, Mr. Alley of the Banshee being called away by business. In order to make a race in the 40ft. class the judges steamed over to Staten Island and invited an entry from Minerva, she going in with a hastily made up crew and under charge of her mate, Capt. Barr being ashore. Wona has been fitted with a long topmast, so that she can sail under Atlantic Y. C. rules, with working topsail, and she started. Kathleen did not enter, some changes and repairs being needed before she starts on a cruise. The courses were the same as in the previous race, Iro in the club house to the finish off Buoy 15, the classes above VI. going around Sandy Hook, class VI. and VII. around the Scotland, and the smaller boats around a markboat off Buoy 8.

The start was made at 11:25, the wind being southeast and the tide nearly up, the yachts being timed:

Cavalier	11 27 12	Nymph	11 34 13
Azalea	11 27 40	Mistral	11 34 14
Athlon	11 28 36	Beatrice	11 34 52
Grayling	11 28 43	Ilderan	11 35 04
Hildegarde	11 30 40	Nomad	11 36 05
Minerva	11 31 35	Frolic	11 37 56
Clara	11 32 00	Wona	11 38 48
Anaconda	11 32 11	Mouette	11 45 12
Hypatia	11 33 23		

Hildegarde was handicapped 20 seconds and Mouette 4.52.

Clara led Anaconda over the line, the latter trying to blanket her but failing. In the Narrows Clara tacked across Anaconda's bow, and the latter was left for the rest of the day. The beat down to the Scotland was devoid of any special interest owing to the number of walkovers and the great lead of Clara and Minerva, in their classes. The times at the Lightship were:

Grayling	2 09 00	Minerva	2 43 35
Hildegarde	2 27 45	Anaconda	2 48 05
Clara	2 39 50	Nymph	2 50 50
Athlon	2 41 50	Azalea	2 55 30

Hildegarde had left Athlon, Clara had beaten Anaconda by over 3 minutes, while even little Minerva had beaten Anaconda by 4 minutes 30 seconds even time. Minerva had beaten Nymph over 4 minutes. The next class was not timed. Minerva and Nymph set spinakers for home, but the others continued around the sandy Hook Lightship. Minerva gained on Nymph steadily all the way in, but at the finish her skipper mistook the line, and with spinaker and balloon jibtopsail set bore away to leeward of the judges' boat, evidently intending to finish where the race started. She was hailed from the tug, and seeing her mistake jibed hastily over, carrying away the topmast in doing so. She crossed the line, however, with a safe lead over Nymph, in spite of the wreck. The full times were:

SCHOONERS—CLASS I.

	Start.	Finish.	Elapsed.	Corrected.
Grayling	11 28 43	4 00 13	4 31 30	4 31 30
CLASS II.				
Cavalier	11 27 12	5 43 32	6 16 20	6 16 20
CLASS III.				
Azalea	11 27 40	5 18 07	5 50 27	5 50 27
SLOOPS—CLASS III.				
Hildegarde	11 30 20	4 25 54	5 12 34	5 12 34
Athlon	11 28 36	Did not finish.		
CLASS IV.				
Clara	11 32 00	4 40 21	5 08 21	5 08 21
Anaconda	11 32 11	4 48 10	5 15 59	5 15 29
CLASS VI.				
Minerva	11 31 35	3 59 49	4 28 14	Not
Nymph	11 34 11	4 06 46	4 32 35	measured.
CLASS VII.				
Mistral	11 34 13	4 50 01	5 15 48	5 15 48
Hypatia	11 33 23	4 51 13	5 17 50	5 17 44
Beatrice	11 34 52	5 34 20	5 59 28	. . . .
Nomad	11 36 05	Did not finish.		
Ilderan	11 35 04	5 42 08	6 07 04	. . . .
CLASS IX.				
Wona	11 38 48	3 56 21	4 17 33	4 16 32
Frolic	11 37 56	3 59 40	4 21 44	4 21 44
Mouette	11 40 20	Did not finish.		

Grayling, Cavalier, Azalea and Hildegarde have a walkover in their respective classes. Clara beats Anaconda 7m. 8s., Minerva beats Nymph 4m. 21s. actual time, Mistral beats Hypatia by 1m. 53s., and Wona beats Frolic 5m. 12s. Minerva is not measured by the Atlantic rule, but she and Nymph are nearly of the same length. The regatta committee included Messrs. Chas. T. Pierce, Lucius M. Sheldon, Jr., and Henry B. Howell. G. W. McNulty, W. W. Beebe and H. J. Gielow were the judges.

DETROIT Y.C.—This club was unlucky in the choice of weather for the first pennant race, as there was no wind on May 30, nor again on June 17, to which date the race was postponed. The second attempt proving a failure another trial was set for Monday of this week.

COLUMBIA Y. C. REGATTA, JUNE 18.—The twenty-second annual regatta of the Columbia Y. C. was sailed on the Hudson River, in a strong northeast blow, resulting in several minor casualties in addition to the loss of a man from one of the yachts. The course for classes A to F was from the club house, off Eighty-sixth street, New York, around a markboat off the house of the new Corinthian Y. C., at Yonkers; class G sailing around a markboat off Fort Lee. Eighteen yachts were entered and at 11:22 the start was made, the first half of the race being a hard beat up river. When rounding the mark at Yonkers one of the crew of the Henry Gray, in class D, cabin cats, was washed overboard and drowned before help could reach him, though several yachts came to his rescue and a boat was lowered from the guests' steamer, Cygnus. The lost man was Mr. Henry Renouf, of Brooklyn, a druggist, a fair swimmer but not a yachtsman. It is stated that he came to the club house to sail with Mr. W. F. Everett, on the Gertrude, but as she was not on hand he went with Geo. C. Everett, in the Henry Gray. At the turn he was lying to windward, but as the boat heeled after jibing he slid off to leeward, and being weighted down with a heavy waterproof coat and wet clothing was unable to support himself long. The tiller of the Gray twisted off at the jibe, so that she could not put about and pick him up. Lines were thrown from the Gray and another boat, but missed him. The Gray continued home but did not cross the finish line, her antagonist, Brunhilde, having a walkover. The full times were:

CLASS A—CABIN SLOOPS OVER 30FT.

	Start.	Finish.	Elapsed.
Hazel	11 22 57	2 57 44	3 34 47
Mergus	11 23 50	2 39 30	3 16 38
Agnes	11 25 05	2 52 21	3 27 16
CLASS B—CABIN SLOOPS BETWEEN 26 AND 30FT.			
Venture	11 21 45	3 03 45	3 31 00
Julian	11 25 39	Disqualified.	
Vixen	11 24 35	Withdrew.	
CLASS C—CABIN SLOOPS UNDER 26FT.			
Flirt	11 27 16	4 04 50	4 37 54
Weary Wish	11 24 37	4 03 30	4 39 53
CLASS D—CABIN CATS.			
Brunhilde	11 29 05	3 03 03	3 33 58
Henry Gray	11 29 36	Withdrew.	
CLASS E—OPEN YACHTS OVER 22FT.			
Martha Munn	11 36 00	Withdrew.	
Columbia	11 29 24	3 21 23	3 51 59
CLASS F—OPEN YACHTS BETWEEN 18 AND 22FT.			
Mystic	11 27 34	3 56 40	4 29 06
Gertrude	11 28 39	4 06 10	4 37 31
Miriam	11 27 02	4 06 30	4 29 28
Henry Fisher	11 27 57	3 22 06	3 53 09
CLASS G—OPEN YACHTS UNDER 18FT.			
Carrie E	11 31 00	2 43 51	3 12 51
Helen	11 29 36	Upset.	
Viola	11 34 16	Disabled.	

Helen capsized, Vixen lost her rudder head, Viola sprung her mast, Weary wish was protested by Flirt for a wrong turn of the mark. The judges were Com. A. J. Prime, Yonkers C. Y. C.; Com. Henry Andrus, Manhattan Y. C., and Mr. Chas. E. Simms, Jr. The iron steamboat Cygnus carried the club members and their guests.

PAVONIA Y. C. ANNUAL REGATTA, June 24.—The Pavonia Y. C. sailed its twentieth annual regatta on June 24, the course for classes C and E being from Liberty Island around Buoy 13, all the other classes rounding Fort Lafayette and Buoy 18. The times were:

CLASS C.

Hoodoo	11 46 30	4 14 00	4 22 30	4 22 30

The judges were Com. A. J. Prime, Yonkers Cor. Y. C.; Edward R. Wilson, Hudson River Y. C.; and Charles H. Southworth. The iron steamer Cygnus carried the friends of the club over the course.

NEWARK BAY Y. C.—The second annual regatta of the young Newark Bay Y. C. was unfortunately spoiled in spite of the efforts of the club by the heavy squall of June 17, which gave such trouble to yachts large and small about New York. Before the first mark of the 10-mile triangular course on Newark Bay was reached the squall burst, disabling some of the fleet, while the calm which followed prevented others from finishing. The times were:

CLASS I.—JIB AND MAINSAIL, 20FT. AND UNDER.

Snag, J. E. Robinson	12.00	1 24 20	0 56 55

Winner of first prize in Class 1, Skipper; Class 2, Grace. Judges: James Bertram, F. T. Merry and James Bragdon.

NEW HAVEN Y. C. ANNUAL REGATTA.—The annual regatta of the New Haven Y. C. was sailed on June 18 in a strong E. wind with a good sea, the course being 30 miles on Long Island Sound. Only 6 yachts covered the course, the other 10 of the starters turning back as soon as the open water was sighted. The winners and their corrected times were as follows: Division C, Class 2, Flora, 4h. 8m. 2s.; Division C, Class 3, Sea Belle, 4h. 7m. 46s.; Division C, Class 4, Stranger, 4h. 17m. 2is. The other boats going the full course were Mariota, Vixen and Acme. Dare Devil capsized, her crew being rescued by a tug, Mariota lost her jib and Gypsy broke her rudder.

HARLEM Y. C. ANNUAL REGATTA, JUNE 17.—The Harlem Y. C. sailed its annual regatta on June 17 with a fine fleet of twenty-three starters, the course being for the five larger classes from College Point to Sands Point Buoy and return, 18 miles, and for the two smallest classes from the same starting point to and around Gangway Buoy and return, 16 miles. The wind was strong S.W. until late in the afternoon, when a heavy squall struck in from N.W. Besides some small accidents to sticks and gear the Lettie ran on a rock off the Stepping Stones and stove in her bow, sinking quickly. Her crew of eight men was rescued by the light keeper. The times were:

CLASS A—CABIN SLOOP YACHTS 30FT. OVER ALL.

The judges were Capt. Joe Ellsworth, George Parkhill, Columbia Y. C.; G. A. Wright, Yorkville Y. C.; Capt. P. Grace, Harlem Y. C.

DORCHESTER Y. C. ANNUAL REGATTA, JUNE 17.—Though the entries in the annual open regatta of the Dorchester Y. C. were this year hardly up to the mark in point of numbers, the race promised to be interesting owing to the presence of a class of large schooners, including Troubadour, Alert, Œnone and the new Merlin, and also from the debut of the new Burgess c.b. forty Verena, and the two McVey forties Alice and Helen, against the famous old Ellsworth flyer Fanita. Calms and fog, however, interfered to keep some of the yachts away, and to make the race less exciting than it should have been. The courses were, for special class, from starting line, leaving Graves whistling buoy on starboard, Harding's Ledge bell buoy (boat) on starboard, Graves Whistler on port, to and across starting line; for first, second and third classes, from line between judges' boat and flagboat, leaving Barrel buoy, one-half mile northeast of Windtrap Bar buoy on port, Graves Whistling buoy on port, to and across starting line, twenty miles; for fourth and fifth classes, from starting point, leaving Barrel buoy, one-half mile northeast of Winthrop Bar buoy on port, Graves Whistling buoy on port, to and across starting line, ten miles. After a heavy rain in the morning the race was started at 1:30 in a light N.W. wind. After a long chase Verena, Mr. J. A. Beebe's new 40-footer caught and passed Fanita, 5ft. longer on l.w.l. The two McVey boats made a poor showing, being unable to stand up under their enormous rigs, Alice giving up, while Helen, steered by her owner, held on and finished the race. Troubadour led Alert for a time, but the latter beat her badly when the windward work began. Magic dropped out and gave Shadow an easy victory. The new Cape Cod cat, Harbinger, built by Fred Hanley, sailed her first race, making good time and threatening to bring trouble to some of the 30ft. class when she comes alongside of them later on. The times were:

FIRST AND SECOND CLASS.

The regatta committee was L. M. Clark (chairman), Francis Gray, William B. McClellan, A. J. Clark and W. H. Wilkinson.

MONTGOMERY SAILING CLUB.—Fourth regatta, June 9. Course, Norristown to Indian Creek and return, 5 miles. Wind, fresh southwesterly. Summary:

	Length.	Corrected.
Playford, tuckup	15.00	1 11 20
Nellie, tuckup	15.00	1 11 44
J. S. Frith, tuckup	15.00	1 11 50
Volunteer, tuckup	15.00	1 12 30
J. S. Lever, tuckup	15.00	1 17 00
Igidious, tuckup	15.00	1 17 05
Pennsylvania, hiker	16.00	1 17 35
Iola, ducker	15.00	1 20 50
Stranger, sharpie	15.00	Withdrew.

It was mostly a reach both ways. Volunteer was overloaded with a crew of four men when she should have carried but three. Stranger had but two men aboard, and being nearly flat on the bottom she drifted off to leeward.

Fifth regatta, June 23. Wind, light westerly. Summary:

Playford	2 08 22	J. S. Frith	2 18 45
Volunteer	2 08 23	Igidious	2 19 10
Nellie	2 12 25	J. S. Lever	2 31 55
Starlight	2 17 30		

Gracie, Stranger, Pennsylvania, Josephine, Priscilla, Iola and Emma L. withdrew. It was a beat dead to windward to the buoy. After the first seven boats rounded the wind fell so light that the others could not stem the current. Judge, Wm. Alcorn.

MONATIQUOT Y. C, PENNANT REGATTA.—The pennant regatta of the Monatiquot Y. C. was sailed on June 20 in a strong S.W. wind, the first class sailing a 9-mile course and the third a 7-mile one. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Moondyne, A. J. Shaw	24.10½	1 32 39	1 03 38
Erin, John Cavanagh	26.11	1 31 09	1 04 04
THIRD CLASS.			
Rocket, H. M. Faxon	16.02	1 35 24	1 03 57
Diadem, L. A. Hayward	18.02	1 33 49	1 04 54

Erin and Moondyne each protested the other on the ground of improper measurement, the two being re-measured and Moondyne taking the prize. The judges were Henry Gardner, T. D. Bagley and C. G. Sheppard.

CAPE ANN Y. C. SWEEPSTAKES, JUNE 22.—The first sweepstakes of the Cape Ann Y. C., of Gloucester, was sailed on June 22 over a triangular course, the first leg to buoy off Eastern Point, thence to a buoy off Round Rock and return to judges' boat off Pavilion Beach and repeat, 8 miles, the wind being very strong from the west. Only 5 yachts started, and one of these, Alpine, capsized on the second leg. Maud went to her aid, rescuing her crew. Black Cloud lost her topmast and Evelyn shipped so much water as to be out of the race. The times were:

	Length.	Elapsed.	Corrected
Black Cloud, A Brown	23.10	1 25 25	0 58 43
Silver Cloud, J. McLaughlin	20.04	1 31 08	1 00 48

White Wings, Evelyn, Alpine and Maud S. did not finish. Judges—James Steele, Franklin Davis and W. E. Tucker.

GREAT HEAD Y. C. SWEEPSTAKES JUNE 15.—The first open sweepstakes regatta of the Great Head Y. C. was sailed on June 15 in a reefing breeze from S. W., the courses being 7½ miles for Classes 1 and 2, and 6 miles for Class 3. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Moondyne, Shaw Bros.	24.09	1 09 09	0 44 50
Posy, R. G. Hunt	22.02	1 12 13	0 45 39

E. A. C., G. H. Worcester	20.04	1 30 09	1 01 43
Kit, E. F. McMaugh	18.02	.....	.....

THIRD CLASS.

Modoc, D. W. Belcher	15.07	1 05 05	0 35 26
Psyche, Frank Gray	17.04	1 02 52	0 37 14
Rocket, H. M. Faxon	16.01	1 11 59	0 44 56
Flora Lee, Packard & Clover	16.08	1 12 36	0 46 14
Mabel, R. D. Ware	16.06	1 12 86	0 47 25
Sea Bright, M. M. Kallman	17.05	1 16 56	0 51 20
Enigma, J. F. Small	12.09	1 23 10	0 52 32
Scud, L. S. Meston	17.02	1 20 30	0 54 41
Topsy, Brad Huggand	14.04	Did not finish.	
Alpine, J. A. Stetson	17.10	Did not finish.	
Spirit, H. M. Wells	17.09	Did not finish.	

The prizes were awarded as follows: First Class—Moondyne, first prize, $20; Posy, second prize, $15; Black Cloud, third prize, $10. Second Class—Silver Cloud, first prize, $15; Eureka, second prize, $12; Diadem, third prize, $10. Third Class—Modoc, first prize, $15; Psyche, second prize, $10; Rocket, third prize, $5; Flora Lee, fourth prize, $3. The judges were: Messrs. Hutchinson, Bradshaw, Bicknall, Brown, Churchill, Mudge, Mitchell, Bond, Kiley and Turner, Jr.

HULL Y. C., June 22.—The first championship race of the Hull Y. C. was sailed on June 22, the classes being: First class, yachts 30ft. and over sailing length; second class, yachts 25ft. and less than 30ft.; third class, yachts 21ft. and less than 25ft.; fourth class, centerboard, jib and mainsail boats under 21ft.; fifth class, centerboard yachts 19ft. and less than 21ft., and all keel yachts less than 21ft.; sixth class, centerboard yachts under 19ft. The course for first and second classes was from starting line, leaving judges' yacht on starboard, through Hull Gut, leaving Toddy Rocks and Point Allerton Buoys on starboard, to Harding's Bell Buoy, leaving it on port; around Martin's Ledge Buoy, leaving it on port; then leaving Shag Rocks on starboard and Toddy Rocks Buoy on port, to starting line, eleven miles. For third class from starting line, leaving judges' yacht on port, around Black Brush Buoy No. 1, leaving it on starboard; Wreck Buoy off Peddock's Island on starboard; Wilson's Rock Buoy on starboard; Hunt's Ledge Buoy on starboard; Wilson's Rock Buoy on port, to starting line; nine miles. The course for the fourth, fifth and sixth classes was the regular No. 7 course; distance six miles. The new 28ft. cat, Harbinger, sailed her second race, making the pace for Magic, a larger boat and in the first class, and beating her badly. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Magic, E. C. Neal	31.00	2 02 51	1 33 55

SECOND CLASS.

Harbinger, J. Hooper	37.11	1 59 00	1 06 59

THIRD CLASS.

Posy, R. G. Hunt	22.02	1 53 08	1 31 53
Thelga, H. L. Johnson	22.01	1 55 41	1 37 22
Echo, Burwell & Isham	24.05	1 59 18	1 39 53

FOURTH CLASS.

Eureka, E. B. Rogers	20.06	1 24 00	1 00 57
Josephine, D. H. Follett	18.01	1 39 33	1 13 38

FIFTH CLASS.

Myrtle, R. C. Poor	19.02	1 23 03	1 04 15
Mable, F. H. Dunne	19.11	1 28 09	1 05 02
Vaga, H. W. Friend	18.02	1 37 38	1 12 51

SIXTH CLASS.

Wildfire, H. A. Keith	17.03	1 29 39	1 04 15
Rocket, H. M. Faxon	16.02	1 34 35	1 07 38

The winners of championship legs were: First class, Magic; second class, Harbinger; third class, Posy, centerboard; Thelga, keel; fourth class, Eureka; fifth class, Myrtle, centerboard; Vaga, keel; sixth class, Wildfire. The judges were: J. J. Souther, J. B. Forsyth, W. E. Sherriffs and W. A. Cary.

QUAKER CITY Y. C. ANNUAL REGATTA, JUNE 22.—The 14th annual regatta of the Quaker City Y. C. was sailed on June 22 over a 31-knot course on the Delaware River, with calms during the early part and strong breezes later, some of the boats losing their topmasts. The main interest was centered in the initial race of the new Burgess boat Nanon, the old Venitzia finally beating her. The start was made at 10 A. M. with a light S.W. wind and an ebb tide, but a squall came in shortly after the fleet was well under way, followed by a flat calm for a time, after which the wind freshened considerably. Nanon led on the way down, turning the lower mark, off Chester, with a lead of over 3m. Going home free the Venitzia caught and passed her, leading by 1½m. at the line. The times were:

SCHOONERS.

	Start.	Finish.
Helen	10 07 00	2 22 28

The judges were Com. John Shaw, John W. Sanborn and Chas. A. French.

LAUNCHES.—The new Morgan schooner Constellation was successfully launched at Piepgrass's yard, City Island, on June 20, being christened by Mrs. Morgan....The steam yacht Nashawena, built by Lawley for Mr. E. P. Boggs, from Mr. Burgess's design, was launched at South Boston on June 22, and Lotawana, Mr. Foster's new Burgess 40, was launched at the same place on June 24....Mr. David M. Little's steam launch, Elida, was launched at Salem on June 20....Osawa, Mr. Hildreth's 16ft. cutter for the Pleon Y. C., was launched at Williams's yard on June 22, and Borden launched a new boat, 15×6ft. 3in., for Mr. J. P. Bullard on the same day....The McVey boats, Alice, 40, and Chrystal, 30, have been tried, the former, like her sister Helen, proving over-sparred, so her rig will be reduced; Chrystal has had some lead shifted from the after to the fore end of the keel.... Lawley is at work on a 27ft. cutter, and a 30ft. compromise of the Nymph type.

BEVERLY Y. C.—The 141st. regatta, first championship, was sailed at Marblehead, June 22. The number of entries was small owing to the calm and dense fog which prevailed during the morning, but the boats that started had a very exciting race. An hour or so before the start the fog cleared off and a brisk westerly wind set in, which by 2 P. M. was blowing in hard puffs and increasing every minute. Owing to the absence of Saracen and Elf, only Beetle started in first class, carrying working topsail. In the second class the flagship Swordfish led off swinging a club topsail followed by Wraith under lower sails only. These classes had a reach to S.E. Pig Breaker, a run to Half Way Rock and a beat home, 10 nautical miles. They had all the wind they wanted, Wraith withdrawing, and the other two coming home with housed topmast, Swordfish being single-reefed, and beating the larger boat 10s. actual time. Third and fourth classes had a run to Bowditch's Ledge, a dead beat to Curtis Point and a reach home 7½ miles. The new cat Kiowa recently built by Dunn of Monument Beach, sailed her first race north of the Cape, her performance being watched with much interest. The well-known Wraith led off in third class, with Kiowa 5s. astern, Holden just behind the latter and Pixy a length or two in the rear. Dolphin and Psych, as usual were fighting it out in fourth class, the latter having a new and larger sail. Kiowa and Holden both passed Wraith, the former steadily spinning out a lead especially in the puffs, Psyche passing Dolphin and getting a small lead. The minute they hauled on the wind they met a little chop sea, and Kiowa at once began to run away from the others, badly outwinding them at the same time. As they got into smoother water under the shore, the others did better with her, though she continued to leave them steadily, carrying her sail well while all the rest had more wind than they wanted. Wraith caught and passed Holden, Dolphin did the same to Psyche, who was overpowered, looking as if she would capsize. Kiowa reached Curtis Point a good half mile dead to windward of the others, but had difficulty in finding the stakeboat and lost some time tacking round, hunting for it. Holden by this time was single-reefed, but even then could not carry her sail, and finally withdrew. Pixy was in the same fix. Wraith was the second boat round, but by this time was hull down as seen from the leader; she double-reefed her sail and then did better. Dolphin rounded a little ahead of Psyche, who capsized soon after rounding. Dolphin by this time being double-reefed turned back to assist Psyche, but seeing outsiders there ahead of her kept on and finished the course. Kiowa carried her whole sail very well, but in running off to buoy 7 was forced to slack down the peak in order to ease the strain on the tiller, after rounding hauling up a little, the entire crew could not get the peak up again. She lost a little from this, but having race well in hand took things easily. Time as follows:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Beetle, Chas. Guild	35.10	1 57 35	1 54 58

SECOND CLASS.

Swordfish, Com. Paine	31.07	1 57 25	1 51 40
Wraith, C. E. Hodges	26.03	Withdrew.	

THIRD CLASS—CATS.

Kiowa, W. A. and W. Lloyd Jeffries	29.04	1 22 45	1 11 30
Holden, Gordon Dexter	21.11	Withdrew.	
Pixy, F. W. Chandler	21.04	Withdrew.	

SLOOPS.

Wraith, H. P. Benson	22.03	1 29 47	1 18 25

FOURTH CLASS.

Dolphin, Poyal Robins	18.00	2 03 41	1 47 41
Psyche, Francis Gray	18.06	Capsized.	

Beetle, Swordfish, Kiowa, Wraith and Dolphin win prizes. Beetle, Swordfish, Kiowa and Dolphin win legs for pennants. Mr. P. Grant, Jr., acted as judge. The Cape boats did well this day. In the Hull Y. C. race Hanley's new Harbinger beat Magic, a boat 2ft. larger, over 20 minutes. Kiowa covered the course, including windward work, at the rate of 5½ knots an hour.—X. Y. Z.

SOUTHWARK Y. C. FIFTEENTH ANNUAL REGATTA, June 17.—Course, from Dickerson street Wharf to Chester Buoy and return to Greenwich Point, the club headquarters; distance, thirty-two miles; weather, cloudy; wind, strong S. W.; start on last quarter of flood:

SECOND CLASS.

	Length.	Start.	Finish.

Amanda	10 22 00	. . .
Okey Not	10 22 00	2 46 00
V. D. Dorp	10 22 00	Capsized.
J. J. Cooney	10 22 00	3 00 00
J. Nobre	10 22 00	. . .
Wm. Lougherty	10 22 00	. . .
C. Deputy	10 22 00	. . .
Jos. Jacobs	10 22 00	. . .

Winners: Class Two, James Irvin first, Maggie second; Class Three, Geo. Flick first, Myrtle second; Class Four, Oakey first, J. J. Cooney second. Regatta Committee: Julius Hoffman, ex-Com. Harry D. Basler, Jos. Stephens, F. Maxwell. Judges: M. Kraft, Sam Duckett, Thos. Troutt. The R. S. Patterson and Geo. Flick, third class yachts, are matched to sail on July 1 for $400. There will be great interest taken in the race, as the Flick, a Kensington yacht, has been overhauled and has new rigging. While this is the third season for the Patterson, she has sailed some close races with the Flick, but never been beaten.

AMERICAN Y. C. OF NEWBURYPORT.—The American Y.C. sailed its first championship regatta of the season on June 17 in a light north wind. Course No. 1 was sailed from the club house at McKay's wharf to a stakeboat 2½ miles off the bar and return. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Hazard, Pierce & Moody	23.02	2 32 42	2 32 42
White Cloud, Rodigrass Bros.	20.00	2 37 24	2 32 55
Vexer, P. J. Lowell	19.09	2 41 32	2 36 28
Budge, Durland & Rogers	19.01	2 42 45	2 36 35
Freak, W. L. Thompson	21.05	2 55 24	2 53 00

Puritan, Penniman		Not measured.	

Winner of first prize, Ariel; second, Madge.

EAST RIVER Y. C. ANNUAL REGATTA, JUNE 17.—The East River Y. C., of New York, sailed a very successful regatta on June 17, with 35 starters, the courses being from Hunt's Dock around Sand's Point Buoy and return, 20 miles, for Classes A to E, and around the Stepping Stones Light for Class F. The wind was strong S.W. all day. A heavy squall in the afternoon enlivened the race, carrying the topmast out of the Tregarthen and sweeping a man overboard from the Sadie, the Angler picking him up. The winners were: Class A, cabin sloops, Katie; corrected time, 2h. 45m. 10s. Class B, Maud M.; corrected, 2h. 45m. 20s., winning champion pennant. Sadie May won in Class C. Blizzard won in Class D, open jib and mainsail, against Eugene, her corrected time being 4h. 41m. 10s. Class E, catboats, was won by Ripple; corrected time, 3h. 11m. 37s.; and Class F, cats, by Aida; corrected time, 3h. 58m. 6s. The judges were Messrs. H. H. Holmes, Pavonia Y. C.; W. A. Deans, Columbia Y. C., and P. Lamb, East River Y. C.

WEST LYNN Y. C.—The first championship regatta of the West Lynn Y. C. was sailed on June 17, in a very light wind. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Lark, Sprowl & Co	22.08	1 36 30	1 15 18
Blanche, Wiley & Bessum	23.03	1 37 15	1 16 48
Nordeck, Howe & Rich	22.07	Did not finish.	
Ruth, Looney & Co	21.08	Did not finish.

SIXTH CLASS—CENTERBOARDS.

Dolphin, R. Robbins	17.07	1 38 50	1 23 40
Sapphire, C. S. Street	18.01	Not taken.	

Prizes were awarded to the Swordfish, Wraith, Wanda and Dolphin. The judges were John Paine, W. L. Smith and Wm. O. Taylor.

SAVIN HILL Y. C. FIRST CLUB REGATTA, June 8.—First Class, distance 7½ miles from starting line of club house, leave Half-tide Rock on port, Old Harbor Buoy (red) on port, Cow Pasture Buoy on starboard, stake boat at Harrison's Sq. on port, and repeat. Second Class, distance 6½ miles from starting line of club house, leave Half-tide Rock Buoy on port, Old Harbor Buoy (red) on port, Cow Pasture Buoy on starboard, stake boat at Harrison Sq. on port, and repeat, omitting Old Harbor Buoy. Weather, light rain; wind southwest, very light; tide, flood:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
White Fawn, W. C. Cherrington	25.1	1 35 45	1 12 47
Annie Maud, F. O. Vegelahn	23.3	1 53 00	1 27 26

SECOND CLASS.

Peri, Frank Driscoll	19 0	1 17 15	0 51 18
Nora, E. M. Dennie	16.9	1 24 30	0 56 02
Avis, J. H. Odell	18.9	1 39 00	1 12 47

Winners first prize—First Class, White Fawn; Second Class, Peri. But little excitement, and positions gained at the start were held throughout. Regatta committee, R. O Harding, T. Driscoll, L. T. Howard, W. Briggs, R. K. Rice. Judges, Lyman Spaulding, L. Howard, R. K. Rice.

MOSQUITO FLEET.—Open regatta, June 17; courses, Dorchester Bay, triangular; distance 5 miles; weather threatening; wind N. W., light:

FIRST CLASS.

	Length.	Corrected.
Minnie, Bertram Jackson	14.11	1 03 13
Skipper, J. Tufts, Jr.	14.11	1 09 31
Sprite, H. M. Wells	15.00	1 10 47
Enigma, J. F. Small	14.11	1 11 40
Nellie, J. O'Leary	14.11	1 16 10
Pink, Geo. Corbett	14.10	1 18 29

SECOND CLASS.

Baby, J. W. Bragdon	12.11	1 19 17
Bessie, C. W. Cherrington	12.00	1 24 30
Mascot, T. G. Read	12.02	1 33 50

Winners first prize, Minnie, Baby; second, Skipper, Bessie. Lucy, first class, carried away rudder just before crossing starting line and withdrew. Regatta committee, W. C. Cherrington, J. W. Bragdon, H. M. Wells, W. O. Elliot and A. O'Leary. Judges, J. P. Bullard, James Powers and James Bragdon.

ARAB AND GUIDE.—Only two yachts started in the Saturday race of the Atlantic Y. C. on June 22, which was sailed in a moderate N.W. wind over an 8 mile course from Bay Ridge around Buoy 15. Arab, Mr. Edward Fish, had lower sails and housed topmast, but Guide, Mr. Benj. Aborn, Jr., carried a single reef. Guide is a new boat, and has just been out at Wintringham's yard to have her inside iron replaced by the same weight of lead (2 tons) added to that already on her keel. Arab carries all her lead on the keel. The course was a reach out and back, Arab winning easily. The times were:

	Length.	Start.	Finish.	Elapsed.
Arab, B. Aborn, Jr.	28.09	4 23 44	6 02 52	1 38 08
Guide, Edward Fish	28.08	4 22 01	6 02 45	1 40 44

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS. } Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..W. R. Huntington..E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div. W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jerolemon St., Brooklyn.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

7-23. A. C. A. Meet, Sugar Island, St. Lawrence River.

SEPTEMBER.

7. Puritan, Record Races, No.5. 14. Ianthe, Annual, Newark.
7. Brooklyn, Annual, postponed.

THE ATLANTIC DIVISION MEET.

AFTER a thorough search for a suitable camp site the committee have settled on Cheesequake Creek as the only practicable location within convenient distance of Philadelphia and New York, and the Division meet will be held there, beginning on July 13 and continuing for one week. The camp is two miles from Perth Amboy across Raritan Bay, and one mile from South Amboy, the Long Branch R. R., used in common by the Pennsylvania R. R. and the New Jersey Central, passing just in the rear of the camp. Morgan's station is one quarter mile from the camp. Arrangements will be made with grocers and marketmen from Amboy to call at the camp every day. The camp ground will be on a hillside in a cedar grove, beneath which is a very fine beach of yellow sand. The courses will be laid out in full view of the bluff. Perth Amboy may be reached by steamer from New York, or by rail from any point. A circular giving full particulars of the camp and races will be sent out this week.

NEW YORK C. C.

THE annual spring regatta of the New York C. C. was held off the club house at Tompkinsville, Staten Island on June 22, the races being sailed in a strong northwest wind. The first race, unlimited sailing, had the following entries: Atom, C. B. Vaux; Vagabond, C. J. Stevens; Random, H. O. Bailey; Vitesse, James Guiler; Mayflower, J. R. Plummer; Sea Urchin, B. H. Nadal; Nancy, Dr. B. F. Curtis, and Outing, A. M. Johnson, of the N. Y. C. C.; Nipsic, C. V. Schuyler, of the Arlington C. C.; and Nadjy, W. S. Elliott, of the Crescents of Brooklyn.

The course was a triangle of 3 miles on the Bay, two rounds to be sailed. Atom, Random and Vagabond were the leading boats, several others capsizing or giving up. After sailing one round the contestants concluded that they had had enough, and declined a second, as there was a strong wind and heavy sea for canoe racing.

The next race, for limited sail and ballast, was sailed over a shorter course nearer shore. The entries were: Eclipse, R. W. Blake, Brooklyn C. C.; Vagabond, C. J. Stevens; Atom, C. B. Vaux: Gun, H. D. Ward; Vitesse, James Guiler; Nancy, Dr. B. F. Curtis; Alpha, E. Masten, of Yonkers; Mayflower, J. R. Plummer; Sea Urchin, B. F. Nadal; Outing, Mr. Johnson. Atom made an error at a turn and lost some time. Eclipse led and finally won, with Vagabond second. The finish was timed:

Eclipse	4 44 00	Vagabond	4 44 45
Atom	4 45 00	Gun	4 47 00
Vitesse	4 48 00	Nancy	4 50 00

The tandem paddling race, which followed, was won by F. B. and J. L. Collins, of the Bayonne Rowing and Athletic Association, in the Water Witch, from W. R. Burling and W. J. Stewart of New York, in the Nile.

C. V. Schuyler, in the canoe Surf, defeated W. J. Stewart, in the Water Witch in a paddling race. The upset race was declared off.

C. J. Stevens and H. O. Bailey were the only contestants for the club prize for the best rigged sails, but the judges were unable to decide between them.

Jon Guiler was awarded the prize for novices.

The judges were R. C. Burchard, H. J. Drake and W. W. Howard.

The Commodore's prize for sail rigging, consisting of two handsome silver match boxes properly inscribed, made to order by the Gorham Company, were awarded to Chas. J. Stevens and H. C. Bailey. Their work was so evenly excellent that the committee could not decide which was the superior workmanship.

THE A. C. A. YEAR BOOK.

WE have received from the publishers, the Nautical Publishing Co., of New York, a copy of the new A. C. A. Year Book for 1889, a neatly printed pamphlet of nearly a hundred pages, uniform in size with that of last year.

The A. C. A. Year Book, prior to 1888, was a small pamphlet containing the officers' and members' names, the constitution and by-laws, and a report of the regatta committee only. It was issued at a cost of $150, and issued free to every member. Secretary Mix last year issued a very handsome book, illustrated, containing much more matter than any former book, including a large colored map of Lake George. This book cost the A. C. A. less than those issued previously. The book cost nearly $500, and the advertising account helped greatly to give the Association a fine book for little money. Secretary Mix was assisted in the work by Mr. Vaux, who superintended the printing and make up. At the executive committee meeting last November two bids were received on the book for 1889, both offering to supply the work free to members. The contract was awarded to Mr. Dobbin, of the Peterboro *Review*. In February Mr. Dobbin requested the other bidder, the Nautical Publishing Co., to take the book off his hands. He found he could not make the advertising pay the cost of the work. The Nautical Pub. Co. agreed to do this, though three months less time was given them to work up the business.

The book has just been issued by them. The secretary, Mr. Hatton, and the Division Pursers have furnished the official matter, and Mr. Vaux, for the Nautical Publishing Company, has edited the book, arranged the matter and attended to the entire make-up. Though the contract only called for a book containing substantially the same matter as that of 1888, the publishers have given much more. The general and Division treasury reports appear for the first time. The regatta committee report is much fuller than ever before. The membership list is arranged in Divisions, also for the first time. The Division boundary lines are clearly described, and the records of the first two A. C. A. regattas, 1880 and 1881, never before reported in a year book, appear in this one. Portraits of all the commodores are also printed in the book. The book does great credit to Mr. Vaux, on whom the labor of editing and compiling fell, and who has worked hard and with good success, to make the present book a complete record of the A. C. A. up to date, and to supply the deficiencies in the previous editions. The club list, announced some time since by the Nautical Publishing Co., containing a full list of all canoe clubs, officers, etc., with signals in colors of all clubs, will be ready by July 10.

CORINTHIAN MOSQUITO FLEET.—The invitation for a special canoe race under the auspices of the Corinthian Mosquito Fleet having been accepted, notice is hereby given that the race between six especially noted canoeists will take place on June 29, off Larchmont. The start will be made at as nearly 10 o'clock as possible, and the course will be a triangular one and so marked that the race can be watched by spectators from the shore at Larchmont.—THEODORE LEDYARD, Sec'y.

EASTERN DIVISION MEET.

THE meet of the Eastern Division was held last week at Calla Shasta Grove, near Springfield, the wet weather and lack of wind interfering much with its success. The officers elected for 1890 were: Vice-Com., Dr. J. A. Gage, of Lowell, Mass.; Rear-Com., A. S. Putnam, of Worcester; Purser, Ralph Brazer, of Lowell; Executive Committee, E. C. Knappe, of Springfield. The paddling races resulted as follows:

First event—Classes A and B, decked, ½ mile straightaway: First, W. R. Heald, of Worcester, 4min.; second, A. S. Putnam, of Worcester, 4min. 2sec.

Second event—Class 1, any canoe, ½ mile straightaway: First, A. S. Putnam, 4min.; second, Emil C. Knappe, of Springfield, 4min. 8sec.

Third event—Tandem, open canoes, single blade, 1 mile with a turn: First, Putnam and Heald, of Worcester, 9min.; second, E. S. Towne and C. W. Dyer, of Holyoke, 9min. 13sec.

Fourth event—Hand paddling, 100yds.: First, Paul R. Hawkins, of Springfield, 40sec.; second, W. R. Heald, 43sec.

Fifth event—Tandem, decked canoes, 1 mile: First, Knappe and E. C. Sackett, of Springfield, 8min. 5sec.; second, B. L. Syms and L. F. Haywood, of Holyoke, 8min. 24sec.

Sixth event—Upset, 250yds.: First, L. H. Lamb, of Holyoke; second, Paul R. Hawkins.

Seventh event—Standing paddling, 300yds.: First, A. H. Lang, of Worcester, 2min.; second, L. H. Lamb, of Holyoke, 2min. 5sec.

NEWBURGH B. & C. A.—The spring regatta of the Newburgh Boat and Canoe Association was sailed on June 22 on the Hudson River. The first race was for class A, mainsail yachts. William T. Hilton entered and sailed the Annie V.; Beggs & Moore entered and Alderman B. B. Moore sailed the Annie, and J. C. Hall entered the Darshka. Only the first two started, the Annie V. at 3:36:50, and the Annie at 3:37. The course was three miles north and return. The Annie V. finished at 4:35 and the Annie at 4:32:15, thus being a good winner. In class B there were four starters, and only two that finished. The starters were N. S. Smith's Mabel, at 3:57:42; Commodore James T. Vandalfsen's Rambler, at 3:57:57; Grant E. Edgar, Jr.'s, Wenonah, at 3:53:1, and George W. Shaw's Bub, at 3:58:30. The Rambler came in 8s. ahead of the Wenonah, but the latter takes the prize on time allowance of 1m. and 15s.

The single paddling race, with decked sailing canoes, was a fine one. Three boats started—the Rat, paddled by Grant E. Edger, Jr.; the Whim, by Harry A. Marvel, and the Pixie, by F. B. Smith. They started at 5:41. The Pixie crossed the line first at 5:47:55, the Whim second at 5:47:58 and the Rat last at 5:48:04, the Pixie winning.

The tandem paddling race, with the same kind of canoes, brought out the Pixie, paddled by F. B. and N. S. Smith; the Whim, by H. A. Marvel and W. J. Leghorn, and the Iolas, by C. D. Robinson and Commodore Vandalfsen. They all got away at 6:15, and only the first two finished, the Pixie crossing the line five seconds ahead of the Whim and winning the race.

PEQUOT CANOE ASSOCIATION.—New Haven, June 24.—The Pequot Canoe Association has hired, for their annual meet in August, Roger's Island, one of the famous group of Thimble Islands, Stony Creek. Roger's Island contains 12 acres of ground, well adapted for the pitching of tents, and on the south side stands a large house and a storage building which can be used for sleeping accommodations, etc. The island has a good well of water, and good landing place on the north side toward Flying Point. This island will be the headquarters of this association from July 1 to Oct. 1, and during that period is open to all canoeists cruising along the sound. The association will gladly welcome such canoeists as may find their way to the Thimbles, and can promise them a good place to pitch their tents, a beautiful spot for canoeing and a hearty welcome. A launch will call at the island every morning and night to take passengers or bring out supplies. Roger's Island lies between Governor's Island and Pine Orchard, main shore, and will be easily found by any cruiser. The annual meet is from July 31 to Aug. 10.—F. P. LEWIS.

BROOKLYN C. C.—The regatta of the Brooklyn C. C. postponed from June 15 will be held on Sept. 7. Programme: 1. Unlimited sailing for seniors and juniors. 2. Club race (sailing), three canoes from same club to constitute a team. 3. Combined, three miles, start paddling, finish sailing. 4. Unclassified small boats, sneakboxes, cruisers, duckers, skiffs, etc. The Brooklyn tandem paddling race on June 15 was called during a heavy rain squall with three teams at the starting line of a mile and half course. Messrs. Quick and Simpson, Yonkers C. C., took the lead at the start and held it to the finish, closely pressed by Messrs. Reevs and Masten of the same club. The pace was too hot for Messrs. Collins Bros. of the N. J. R. & A. C., who were left nearly 100yds. astern. The sailing races were postponed because there was not wind enough to stem the tide.

A. C. A. PRIZE FLAGS.—It is desired that all A. C. A. members and clubs who wish to contribute prize flags for this year's races will kindly notify the Regatta Committee as soon as possible, that they may be assured of a sufficient number. The flags may be sent later to Edwin L. French, 224 Jersey street, Buffalo.

A. C. A. MEMBERSHIP.—Northern Division: R. J. Leckie, James Litster, Henry A. Sheward, Alfred Jephcott and Walter A. Smith, of Toronto. Central Division: Theo. K. Felch, Niven Hageman, Jamestown, N. Y. Atlantic Division: Richard Beyer, Julius Warnecke, New Jersey.

FOR A DISORDERED LIVER try BEECHAM'S PILLS.—*Adv.*

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

C. W. B., Ithaca, N. Y.—Selma is not registered.

L. G., Oswego.—Write to any of the gun dealers whose addresses are given in our advertising columns.

F. D.—1. Leather leggins are a protection against rattlesnakes. 2. The Pennsylvania trout season will close July 15.

ORTYX, St. Louis, Mo.—Please state when prairie chicken shooting opens in Illinois and whether any change has been made in the old law? Ans. Open season Sept. 1 to Nov. 1. See full law in our issue of June 13.

V. B. M., Raleigh, N. C.—We cannot direct you to a correspondent on the rifle question. There have been numerous articles in our pages on the subject. As a matter of fact, you will find any one of the several makes accurate shooters, if held right.

D. T. G., Binghamton, N. Y.—Yes, you will find muscalonge fishing at Rouse's Point, in Lake Champlain; and they may be trolled for with stout tackle, specially provided for this fish at the tackle stores. The colored plates may be had of Messrs. Abbey & Imbrie, No. 18 Vesey street, New York, at a cost of $1 each.

J. C. H., Rahway, N. J.—The bird called partridge in the Northeast, and pheasant in the South and some parts of the West, is the ruffed grouse (*Bonasa umbellus*). There is no pheasant indigenous to the U. S. The American partridges (*Odonto phorinæ*), represented in Eastern United States by our Bob White, is a large group, mainly Southern and Southwestern.

J. R. T., Norwich, Conn.—Last July I visited a small lake in a neighboring State that is well stocked with black bass, but had rather poor luck, as they would seldom take bait of any kind. Next month I propose to try them again with flies. Some fifteen years ago the outlet of the lake was raised and a large swamp was overflowed and now the water is discolored with the swamp water so the bottom cannot be seen where the water is more than six or eight feet deep. What flies shall I use? Ans. Use gray, brown and black hackles; also scarlet ibis. Live minnows or No. 4 spoon for trolling. Fresh-water shiners and small sunfish have also been used with good success. Keep boat about 40ft. from shore and cast in under overhanging bushes.

All who read with delight Mr. Robinson's capital book "Uncle Lisha's Shop," will be glad to renew acquaintance with many of the Green Mountain folks who used to assemble there of an evening and exchange gossip and tobacco. Sam Lovel, the born hunter and fisherman, plays a leading part in this continuation, Uncle Lisha having pulled up stakes and gone out West, where it seems he finds himself less contented than he and his friends had hoped. In his campings on Lake Champlain and elsewhere, Sam has for a companion the French-Canadian Antoine, whose capacity for shooting with the long bow was so frequently displayed in "Uncle Lisha's Shop." The two friends, however, get along very well together, and Mr. Robinson finds plenty of opportunity for charming bits of description of nature and natural phenomena, while his sportsmanlike enthusiasm puts life and interest, as well as versimilitude into all his accounts of hunting and fishing. It must be confessed that the dialect is often tough, that of Antoine being particularly hard to follow, and it is not always an offset to this difficulty to reflect that the reproduction is singularly faithful. Indeed, as regards much even of the old Vermont dialects, many readers may not only rejoice that its more pronounced kinds are extinct, but may wickedly wish that they had perished from the earth before Mr. Robinson got an opportunity to learn or to perpetuate them. Of course such ideas are not scientific or worthy of serious lovers of their own language, but they are at best human in their weakness, and they are to some extent supported by the consideration that what is written for amusement ought to be principally amusing. We mention these objections only because they are sure to be made by some unreasonable people. The fact remains that Mr. Robinson has written a series of very interesting, clever and even valuable sketches which take the reader back to the great period before the beginning of the railroad era, and into a village life which can no longer be studied, because it has ceased to exist in the region here exploited. Nor are there any of the queer people introduced whom we should not be sorry to have missed knowing, for there is a freshness, a quaintness encountered in even the brightest of what are called dialect stories. In the last chapter of "Sam Lovel's Camps" there is an indication of a half formed purpose to bring old Uncle Lisha back from the uncongenial West, and we hope Mr. Robinson will carry out that idea, and thus obtain the justification for a third instalment of his remarkably bright and interesting papers. —*New York Tribune.*

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ANSWERS TO CORRESPONDENTS.

LAKE GEORGE ISLAND CAMPS.

THE curious condition of affairs on certain of the Lake George islands was related in these columns some months ago. Years ago the Board of Land Commissioners appointed individuals as "custodians" of these islands, which were owned by the State of New York; and the "custodians," taking it for granted that they had what amounted to a lease in perpetuity, erected costly dwellings, laid out the grounds in elegant style, and established themselves as sole occupants of the public domain. After the Forest Commissioners came into existence the validity of the exclusive rights enjoyed by these island "custodians" was questioned, and the Attorney-General rendered an opinion, in which he set forth that the Board of Land Commissioners had had no authority to make the appointments, and the "custodians," therefore, had no special right to exclusive occupancy of the islands. The Forest Commissioners subsequently sought from the Legislature authority to lease the islands, thus to extricate the islanders from their predicament; but in this they failed.

It is now reported that the Commission has taken summary measures to open the islands to the public. They are [illegible]ring signs bearing the legend "STATE LANDS," which [illegible] to be posted on the Lake George islands owned by the [illegible]tate; and these signboards are to be taken as so many notices to the public that the islands are free to camping parties. It is intended and expected that the public will respond and plant itself down in a host of a thousand or more for summer sojourns on the inviting camp sites. When it comes to pitching his tent in the shade of the elegant villa of one of the "custodians," a person of delicacy may be deterred by a twinge of squeamishness, but no doubt there are scores and hundreds of people who hold to the opinion that the Lake George island "custodians" have had altogether too much of a good thing in the past and are deserving of no special consideration now that their term of high-toned exclusive squatting on public possessions has summarily come to an end. It is harsh, certainly, that these people who have made their homes on the islands should be intruded upon in this unpleasant fashion; but the State as surely owes it to its citizens that the public domain shall be preserved for public use. The "custodians" can afford to purchase dwelling sites elsewhere; the desirable camping ground owned by the State is all too restricted now, and the public interest imperatively demands that not a foot of it be surrendered, neither in Lake George nor in the Adirondacks.

HE HAS GAME GALORE.

THERE came into this office the other day a reader of the FOREST AND STREAM with a letter, which he had received from a friend in North Carolina. He brought it in because it contained a natural history note which it was thought might be of interest. And so it was; but there was that in the letter which was decidedly more interesting and significant than the note of nature—so significant that it deserves a place here. The letter ran thus:

——, NORTH CAROLINA, June 22, 1889.—*Friend Doc:* I will drop you a few lines as I have been thinking about you so often. First of all I will tell you about the crops. We are all done harvesting; the wheat is the best I ever saw, I think, in this country. I think I will have 250 bushels when threshed. We will start our thresher next week. Corn doesn't look so well; can't be a full crop made. There is plenty of fruit, some peaches ripe now.

Now for the crop you are interested in, the bird crop. I think that will be extra good. I found two nests while I was cutting wheat. George says there are half a dozen on my place; he looks after them more than I do. Well, Doc, I must tell you about a nest George found. He and I went to cutting wheat one morning early in the field below the barn. We had cut about fifty yards when a partridge flew up before us. We looked and found her nest with a great big snake lying coiled up in it with one egg in its mouth. George caught the snake by the tail and pulled it out of the nest and held it while I mashed its head with a rock. It dropped the egg alongside the nest, and I took a stick, pulled away and broke it and saw that she had been sitting some time. I was uneasy, fearing she would quit the nest. It was the snake that scared her off. So we went back that way about 10 o'clock, peeped in the nest, and found, to our surprise, that she was on and all right. George said: "We just got there in time to give that snake ——. I found one nest over on the big hill where I was cutting clover; the old bird was not on when I found it, but I made very little to do around the nest, went back about two hours later, found her on and all right. * * * Well, Doc, I get the paper regularly every week. * * * I take more interest in reading the papers than I used to; seems like I could not do without them now. I am very much obliged to you for sending them. * * * This leaves us all well; hoping this will find you well and enjoying the best kind of a time. From your true friend —— —— to Doctor ——.

Reading between the lines, we have here abundant evidence that one shooting man has found the solution of that vexing question so many are asking themselves, Where can I find a week or two of good shooting?

This New York physician has hit on the true and felicitous way of providing a game preserve for himself and has done it by no extraordinary measures, nor by any devices which are out of the reach of thousands of others. He has made friends of those among whom he has gone on shooting excursions; and this friendship is proving the happiest possible sort of game protective machinery. The friendship was won by the little courtesies which go to make up the amenities of life the world over. When the New York sportsman went shooting among the North Carolina farmers he made for himself a place in their hearts. While with them he showed an interest in the concerns of their daily life; on his return to the city he sent them newspapers, perhaps a package of tea by mail, or did some shopping favor in New York stores; and in one way and another, by acts slight and trivial in themselves but potent because of the spirit they manifested, he retained the regard and interest of his farmer friends.

On their part, too much cannot be done for him to protect the birds. On several adjoining farms he has virtually the exclusive shooting privileges. The nesting and hatching of the birds are now noted with eager interest by those who in former years paid no heed, unless it were to speculate on the forthcoming supply for their partridge nets. One of these farmers even went so far as to invite the doctor up to his farm to take some shots at a big bunch of quail he had been baiting for weeks preparatory to scooping them by wholesale into his net.

Thus at the simple cost of making himself agreeable, not a heavy addition to his other expenses while there, this New York physician has provided himself with a shooting preserve which promises to afford him the highest sport for many seasons to come. This shows, in the parlance of the day, the wisdom of "making onesel solid" with the farmers.

It need not be added that this friendship gives increased zest and pleasure to the city man's country excursions. It is one thing, when you reach your journey's end, to find a host all smiling and glad to see you for what profit he can make out of you while you stay, and quite another thing to feel that the hearty grasp of the hand has in it something of real pleasure at seeing once more the face of a friend. In looking over the shooting trips of the years that are past, do we not dwell with peculiar pleasure on those which have in them this element of friendly greeting and good will on the part of host, or boatman or guide?

THE PENOBSCOT SALMON FISHERMEN.

LAST winter when the subject of making a weekly close time for Penobscot River salmon netters was discussed in the Maine Legislature, a Belfast newspaper described it as a conflict of interests between hard-working fishermen and cigar-smoking, whisky-drinking anglers. If the Belfast journalist reflected public sentiment on fishing affairs in his State, it would be foolish for the sensible friends of fish protection to exert themselves in behalf of the salmon. But perhaps the editor displayed only his own personal bigotry and ignorance, and his misunderstanding of the merits of the question and of the character of salmon anglers.

The communication from a Bangor correspondent, telling of the salmon fishing there this season, is suggestive; and it brings up again the question of a weekly close season for the nets. The salmon fishing of the Penobscot is a restored industry. There was nothing of it, nobody made a rap at it, there were no salmon to net, until the State, through its Fish Commissioners, stocked the river a few years ago. The salmon run of to-day is entirely the product of the Commissioners' work. That work was done at public expense; it was not in any sense the result of private enterprise. The rewards, however, are being reaped by a class so limited in number as to partake of an exclusive and individual character.

The net fishermen of the Penobscot have made this season, one weir man over $2,000 profit, others over $1,200 each, and others less sums. These men have thus had created for them by expenditure out of the public treasury a paying industry. The State furnished the capital to supply the "raw material" for setting them up in business. As beneficiaries of the State these men ought surely to be ready to do their part to make the benefit permanent. If reason demands that for forty-eight hours in the week the gravid fish be allowed free passage up stream to their spawning grounds, the very least the fishermen can do is to give over for those forty-eight hours their netting. The netters, of all people in the whole State, ought to be first and most eager in providing for such a necessary close period.

More than this. As the net fishermen are the ones who draw from the salmon industry their thousands of dollars yearly, from them should come the funds required for artificial salmon culture to keep good the supply. The netters ought, out of the proceeds of their industry, to contribute whatever is needed for the continued restocking of the Penobscot. They ought to have enough gratitude to do this voluntarily, cheerfully, generously.

But they never will. Instead, they will net day and night, week in and week out. And whenever intelligent, public-spirited, economic measures are broached for compelling them to adopt more provident ways, these men, who are stuffing their pockets with the proceeds of Maine's salmon culture at State expense, will raise a howl about the unreasonable demands of rod fishermen and privileged classes. And what else could be expected from them, when Maine journalists, who set themselves up as finger-posts to point out the way the public should follow, display their own want of intelligence by bespattering salmon anglers as whisky-drinking dudes.

HUCKLEBERRY RUN.

IN the good old days Huckleberry Run was one of the most attractive bits of ground that it ever fell to my lot to discover. Nearly a half century has passed since I first saw it. I had been having a glorious run with the hounds and had kept pretty well up with them, but reynard had found it too hot for him and had taken a course that had led straight away, and I was completely thrown out. Gaining the top of a hill, I listened to the glorious music of the eager dogs until they were nearly out of hearing, when I discovered that they were bearing to the right, and I started down the slope to head them off. Coming to a large patch of alders at the head of quite a valley, I saw within their depths the welcome sparkle of water. My long tramp through the snow had made me thirsty, and I was soon at full length beside one of the loveliest springs that I ever beheld. The basin was about the size and depth of a large washtub, with a mossy rim, from which the snow had melted. The bottom was of pure white sand, through which the sparkling waters bubbled in mimic fountains, filling the basin and overflowing, forming a goodly stream that meandered in eccentric curves and abrupt turns through the valley below. Already half in love with the spot, I turned back above the spring and took a long look at the beautiful valley, beautiful even in its mantle of snow and with its wealth of trees and shrubbery stripped of their glory by the chill blasts of winter; beautiful in its harmony of outline, with its wooded slopes and gracefully curved knolls, around which the little brook, with its fringe of spreading alders and drooping willows, wound in loving embrace, ever trilling a gladsome song that even its icy fetters could not hush.

So fascinated was I with the loveliness and quiet beauty of the peaceful valley that the heretofore all-absorbing interest in the excitement of the chase was completely driven from my thoughts. Wandering down the glade in a half dreamy state, picturing to myself the glories that would come in spring time to crown with regal splendors this very queen of happy valleys, I was suddenly brought back to earth by the tumultuous roar of quick-beating pinions as a covey of grouse rose at my feet and sought refuge in a coppice of white-armed birches that covered a gentle slope on the opposite side of the run. This was in the callow days when the possession of a gun was but a dream. Yet the sound of the whirring wings was as sweetest music to my ear, striking a chord that through all the years has never ceased to vibrate with a tuneful harmony that the cares and strife of a busy world have never stilled.

When next I saw the charming spot the grass was green on the beautiful slopes, the early flowers were blooming everywhere, and the melody of countless songsters filled the air with a harmony that lute and lyre and sounding brass can never hope to rival. Sauntering through the wooded aisles or stretched at length in the bright sunshine, ever greedily drinking in the beauties of the lovely valley, the partial enchantment that stole upon me on that bright winter day when first I gazed upon the scene was now complete and I was the willing captive and ardent worshipper of the woodland spirit that ruled so fair a realm. My boyish love strengthened with the years, and very many of the happiest hours of my life were passed in the beautiful spot I had learned to love so well. Often would I with pliant rod steal along the banks of the sparkling brook and entice from its many inviting pools the gamy trout, and when the crisp October days were come what glorious sport it was to roam with dog and gun through this very home of the shy woodcock and lordly grouse! What days of delight were those! What treasures were then laid up in memory's storehouse to cheer and brighten lonely hours, when health and worldly things all went wrong.

Much I owe to the memory of the dearly-loved spot. Alas! the beauties of the once lovely valley are now but a memory. The dainty woodland sprite that once presided over the fairy realm has sorrowfully taken her departure and the spirit of "improvement" now reigns supreme; cold and darksome granite walls imprison the once free-flowing spring, and its bright waters are forced to crawl through the confines of a narrow tube. The willows and spreading alders that graced the banks of the sparkling brook have given place to a rank growth of grass, while the brook itself is but a straight and narrow ditch of mud and slime. Unsightly, half-decayed stumps are all that remain of the magnificent forest, waving corn disfigures the gentle slope where stood the white-armed birches, and sordid potatoes flaunt their ugly leaves over the grave of the sweet-scented flowers. The soft whistle of the woodcock and the love call of the grouse will be heard in their once happy home nevermore. The wondrous picture of nature's fair handwork has been disfigured beyond recognition; the beauties of the fondly remembered spot have been ruthlessly blotted out, and my heart is filled with sorrow as for the loss of a dearly loved one.

Alas! that my eyes should have beheld the ruin wrought to embitter the fondly cherished memory of the beautiful valley with the knowledge of its utter desolation.

SHADOW.

THE FUR FISHERIES OF THE NORTH-WEST SEAS.

[By a Staff Correspondent.]

VI.—SEA OTTER HUNTING.

ANOTHER fur-bearing mammal found in these waters is the sea otter, whose pelt is even more beautiful and more valuable than that of the fur seal. Except in its marine life the habits of this animal in no respect resemble those of the seals. Unlike them, it is of a shy and solitary nature and is never found in large companies.

The home of the sea otter is in the North Pacific Ocean. On the American coast it is found as far south as Lower California, while on the Asiatic side its range extends south to beyond Japan. Its center of abundance, however, is along the coasts of British Columbia and Alaska, the Aleutian Islands, the coast of Kamtchatka and the Kurile Islands. The great value of the sea otter's fur has led to its constant pursuit, and though formerly it was abundant, it is now extremely rare. Good skins bring from one to five hundred dollars each, and it is not strange that the sea otter is being rapidly exterminated.

Up to the latter part of the last century the sea otter was found in great numbers in the waters of Alaska. During the first year of the occupation of the Island of St. Paul two Russian sailors killed there no less than 5,000 of these animals. Barranov, in 1840, took to the Ohkotsk from Alaska 15,000 skins, which we may assume to have been the catch for the year of the Russian-American Fur Company. The destruction of the sea otter by wholesale had then gone on for twenty years, and their numbers were decreasing very rapidly, so rapidly that twenty years later the whole catch reported from the Aleutian Islands was but fifteen skins. As the animals had become so scarce, it was no longer worth while to hunt them, and the result was an increase in numbers, but about the time of the cession of Alaska to the United States the pursuit of the sea otter was renewed more vigorously than ever.

The Indians were accustomed to take these animals in three ways: (1) by spearing; (2) by clubbing, and (3) by means of nets. To these the white men have added a fourth, surf shooting, and on the Asiatic coast they have adopted the tactics of the Indians when spearing, but use the rifle instead of the spear.

When a party of Indians started out to spear sea otter, they first elected a leader who should have control of the hunt. Then 15 or 20 canoes, each holding two men, set out for a ground where the animals were likely to be found, and paddled slowly along in a long line. As soon as an otter was seen the nearest canoe paddled toward it, and, even if unable to approach near enough to spear it, caused it to dive, and then swiftly moving forward stopped over the place where it had disappeared. The other canoes then scattered out about this first one as a center, and watched for the appearance of the animal. As soon as it was seen the nearest canoe made for it, and the animal was forced to dive again. This was repeated as quickly as possible, the object being to keep the otter almost constantly under water, and to give it no time to recover its breath. The dives became shorter and shorter, and at last the exhausted animal was unable to dive at all and was readily speared.

Clubbing used to be practiced during stormy weather in winter. At such times the otter seeks shelter from the gale among the kelp beds on a few outlying rocks near the Islands of Saanach. The hunters creep upon them from the leeward, the sound of their approach being drowned by the roaring of the wind and the flapping of the kelp leaves, and kill the animals with short, heavy clubs. Mr. Elliott mentions a case where two Aleut brothers killed in this way 78 otters in an hour and a half.

The nets used on the western Aleutian Islands, where alone this method of taking the sea otter is practiced, are from 15 to 20ft. long and from 6 to 10ft. wide, with coarse meshes. They are spread on the kelp beds to which the otters resort, and the animals becoming entangled in them when they come out of the waters to rest on the kelp, fall an easy prey to the hunters who are watching near by.

On the coast of Asia, among the Kurile Islands, the otters are hunted by white men somewhat after the Indian method. Three boats start out from the vessel and row along parallel to the coast and about half a mile apart. If an otter is discovered asleep, the boat nearest to it tries to approach close enough to shoot it with the rifle. If, however, it dives before a shot can be had, the boat rows forward and stops over the point where the animal disappeared. The other boats approach it, and stop so that each one is at the angle of an equilateral triangle whose sides are about half a mile long. At the instant that the otter appears, one or more shots are fired at it to make it dive again, and the boat stations itself over the spot where it went down. In this way the chase is kept up until the animal is tired out and it is possible to shoot it.

Often the course of the otter under water may be traced by means of the bubbles which rise from it, and sometimes, the hunters tell me, the animal can be seen darting about under the water in most erratic fashion, for it would appear that they do not always attempt to escape by swimming straight away, but dive for concealment only.

It is only within seven or eight years that the sea otter has been hunted north of Yetorup Island, but of late years they have been found much further north, and there are some on the north side of Copper Island of the Komandorski Group. The whole business of hunting sea otter by white men on the Asiatic coast is said to have been practiced for a few years only. A man named Kimley, who was the first to systematically hunt these animals there, is said to have secured, by shooting them, 480 otters in one season, 1873 or 1874.

Surf shooting is practiced in Oregon and Washington Territory, but chiefly in the vicinity of, and to the north of, Gray's Harbor. Formerly all the shooting was done from the beach or from the bluffs, but as the otter became scarcer, increasingly wary, and so more difficult to obtain, other methods had to be adopted.

The sea otter shooters of this coast devised the plan of building scaffolds in the water out beyond the surf, from which to shoot. At the lowest tides in the spring they plant firmly in the sand three or four long poles so that they shall form the angles of a triangle or of a square. These are braced by means of slats nailed from one to the other, which also form a ladder by which to ascend, and at the top of the poles a platform is built with sides and a roof, forming a sufficiently comfortable house, 40ft. above the water's surface. These shooting scaffolds, or as they are called locally, "derricks," give the otter shooter great advantage. In distance he gains from 400 to 500ft., while the elevation above the water greatly extends both his range of view and that of his rifle. In fair weather the shooter goes to his "derrick" before daylight in the morning and returns at night to the shore, but sometimes, when the tide is high and a heavy surf is rolling, it may be impossible for him to get to it for a week at a time, or he may be unable to reach the beach for the same period.

The skill attained by these men in rifle shooting is something almost beyond belief. It will be readily understood that the head of the sea otter—the only part that is seen above the water—is a very small mark, certainly not more than three or four inches in diameter, and yet it is said these shooters not infrequently kill at a distance of a thousand yards. Most of their shots are made at 200yds. and over. They use heavy Sharp's rifles fitted with teloscopic sights, and shoot always from a rest. When the sea otter is killed it sinks at once, and it may be several days or a week before it rises to the surface and is brought by wind and current into shore. The hunters employ Indians to patrol the beach and secure the dead animals, and in occasional instances where the otter does not sink dogs are employed to bring it to land. Owing to its exclusively marine habits and its great wariness, we may assume that it will be many years before the last sea otter shall have been killed, but it must always be a very rare animal.

VII.—CAN THE FUR SEAL BE EFFICIENTLY PROTECTED?

That the fur seal fisheries of the Northwest seas ought to be protected is a proposition so plain as hardly to be disputed by any citizen of the United States. It is not a question of sentiment, but one of business. An annual revenue of over $300,000 would be lost to this Government if the seal should be exterminated or greatly reduced in numbers, and such an income will hardly be relinquished without an effort to retain it. If these valuable possessions are to be preserved in their present condition, the taking of seals except upon the land must be put an end to. Numereus as these animals are on the Pribyloff Islands, they will certainly disappear unless protected. The estimates by Capt. Bryant, already referred to, show that of the young seals born each summer only from 10 to 15 per cent. survive to become adults; and if to the destruction caused by their natural enemies we add the slaughter of the females which takes place in water sealing, it can readily be understood that before long the number of young produced each year will begin to diminish, and that a time will come when our seal fisheries will dwindle away and become valueless.

If only males were killed on the water, comparatively little harm to the fishery would ensue, because there are always many more males on the islands than are needed for breeding purposes. The slaughter of such males might in time reduce the number of "bachelor" seal fit for killing, but it would not affect the breeding stock, which the destruction of these females does in the most serious way.

It seems, therefore, that it must be the policy of the United States to protect these seal fisheries by every means in its power. The wisdom of the system of supervision practiced while the seals are at the island has been abundantly proved, but some method should be devised to protect them, so far as possible, at all times and wherever they may be.

In the Pacific Ocean outside the three-mile limit the United States has only those general rights which are common to all nations, and an attempt to preserve the seals on the high seas could not be successfully made, except, perhaps, as a matter of treaty, an agreement to which all maritime powers should assent. In the Bering Sea it has been claimed by our Government that the limit of jurisdiction is not quite the same.

One thing which seems clear is that the only special rights in these waters possessed by the United States are those which she acquired from Russia at the time of the treaty by which Alaska was ceded. What these special rights—if any—are, it is not my purpose to attempt to show, but there are some historical facts bearing upon this point which are of interest. In September of the year 1821, Russia, by an imperial ukase, laid claim to the whole of the North Pacific Ocean, from Bering Straits south from the parallel of 51 degrees north latitude, and to the pursuits of commerce, whaling and fishing, and all other industry in these waters, and forbade "all foreign vessels not only to land on the coast and islands belonging to Russia, as stated above, but also to approach them within less than 100 Italian miles." At this time the coasts washed by this part of the North Pacific were for the most part Russian territory, and her claim seems to have been made on the ground that the waters named constituted a shut sea (*mer fermée*). The position of Russia was disputed by Mr. Adams, and after much negotiation, a convention was concluded between the United States and that country, and was ratified in Washington, January, 1825, by which it was agreed that the respective citizens or subjects of the high contracting powers should neither be disturbed nor restrained either in navigation or in fishing or in the power of resorting to points not already occupied for the purpose of trading with the natives, save under certain conditions, which relate chiefly to illicit traffic in spirituous liquors, firearms, etc. In February of the same year (1825) a treaty essentially similar in character was entered into between Russia and Great Britain.

If the claim made by Russia in 1821 had been confined to the waters of Bering's Sea, it may perhaps be doubted whether any nation would have attempted to controvert it, since a fairly good showing might have been made that these waters, under the conditions then existing, were in fact a shut sea. But Russia attempted to grasp too much, and invited an attack upon her position.

By the treaty of March 30, 1867, Russia ceded to the United States all her possessions on the North American continent. The western boundary of Alaska as defined by that treaty is as follows:

"The western limit within which the Territories and Dominions conveyed are contained passes through a point in Behring's Strait, on the parallel of 65° 30′ north latitude at its intersection by the meridian which passes midway between the Island of Krusenstern, or Ignalook, and the Island of Ratmanoff, or Noonarbook, and proceeds due north, without limitation, into the same Frozen Ocean. The same western limit, beginning at the same initial point, proceeds then in a straight course, nearly southwest, through Behring's Strait and Behring's Sea, so as to pass midway between the northwest point of the Island of St. Lawrence and the southeast point of Cape Chukotski to the meridian of 172°

west longitude; thence from the intersection of that meridian in a southwesterly direction, so as to pass midway between the Island of Otton and the Copper Island of the Komandorski couplet or group, in the North Pacific Ocean, to the meridian of 193° west longitude, so as to include in the Territory conveyed the whole of the Aleutian Islands east of that meridian."

The United States Treasury Department in a letter written by Mr. H. F. French, Acting Secretary, took the ground in 1881 that all water within the boundary as thus defined belonged to the United States. After referring to the definition of the boundary given above, Mr. French says: "All the waters within that boundary to the western end of the Aleutian Archipelago and chain of islands are considered as comprised within the waters of Alaska Territory;" and further, "all the penalties prescribed by law against the killing of fur-bearing animals would therefore attach against any violation of law within the limits before described." In March, 1886, Hon. Daniel Manning, Secretary of the Treasury, again called the attention of the Collector of Customs at San Francisco to this subject, and confirmed the construction placed by the Department on the extent of the United States jurisdiction in these waters.

A result of Mr. Manning's letter was the seizure of several Canadian sealing schooners. Their captains were arrested and in several cases taken to Sitka, tried, convicted, fined and imprisoned, while their cargoes were confiscated.

On the trial of the master and mate of the schooner Thornton in August, 1886, held at Sitka, Alaska, before the United States Court, Judge Dawson presiding, is reported to have repeated the language used by Mr. French: "All waters within the boundary set forth in this treaty to the western end of the Aleutian Archipelago and chain of islands are to be considered as comprised within the waters of Alaska, and all penalties prescribed by law for the killing of fur-bearing animals must, therefore, attach against any violation of law within the limits before described."

The Canadian Government protested against the seizure of the sealing schooners by the United States revenue cutters, the imprisonment and fining of the masters and the confiscation of property, and the rights of the matter have never yet been determined.

In seizing the Canadian fishing schooners in 1886 and 1887, although they were captured at a distance of 60 or 70 miles from land, the Government acted as if these waters belonged to the United States. It protected its tenant, the Alaska Commercial Company, and enforced the law as laid down in the Revised Statutes. The interest of the United States in the open waters of Bering Sea is limited to the seal fishery, and it is to be hoped that the Government will insist upon protecting these valuable interests. If this is not done we must submit to see an important source of revenue taken from us, a possession of great value made worthless, our seal fisheries destroyed, and a valuable mammal exterminated.

G. B. G.

The Sportsman Tourist.

TO ALLAGUASH LAKE AND BEYOND.

[*Concluded from Page 466.*]

NEAR the southern extremity of Allaguash Lake, from the summit of a steep hill some 500ft. above the lake, we looked over the country to the east, south and west for a great distance. Below lay the forest, tinted with autumn colors, the red, yellow and brown of the hardwood trees blending with the light green of the poplar and darker shades of hemlock. So thickly are the treetops crowding to the light in these wild woods no breaks appear, and as with a great carpet of rich pattern are the hills and valleys spread. Eighteen lakes may be plainly seen, and in all the vast expanse only one house, that at Chamberlain Lake. To the east looms majestic Katahdin, his crest white with snow, south far away is Kineo marking the center of Moosehead Lake; west are the mountains whose waters are gathered by the little streams that form the West Branch of the Penobscot. All these may the eye compass in the clear autumn air. Men follow the water courses and trails, and camp beside the larger lakes and grounds, yet much of the surface of this wilderness through swamp and on mountain is never trodden save by the wild animals that roam at will. Who can doubt that somewhere in these wilds are ponds to which the moose and deer come to slake their thirst, where no rifle's sharp report has ever echoed along the shore, where trout in generous plenty live in waters never rippled by the sportsman's fly?

The maps show two small ponds due north from Allaguash Lake, the nearest apparently one-half mile distant, the other just beyond and pouring its waters into the first. We devoted a day to visiting these ponds. After going a short distance into the woods, keeping a north course by compas, we found a spotted line, which we followed till it crossed the stream flowing from the nearest pond. Here we left the line and followed the stream to the pond, a distance from Allaguash Lake of two or three miles. The appearance of the shores indicated that it had been a favorite resort for moose and caribou during the warm weather. On one side of the pond was a small open bog much cut up by caribou, and lying just off this bog in the woods was a dead caribou calf. A bullet hole through the shoulder told the cause of her death. This was evidently the work of our trapper guest. As none of the meat had been taken it seemed apparent that the wretch had killed the beautiful young creature in pure wantonness. Truly we entertained no angel unawares at our camp that night on the banks of the Allaguash. When we first looked out on this pond many black ducks were feeding in groups over its shallow parts. They were wild and suspicious, as if accustomed to the sight of hunters. The black ducks are just as wild in the remotest of Maine lakes as along our settled coast. Not so with the partridges (ruffed grouse). The partridge in the wilderness is entirely different from his kindred in Massachusetts or Connecticut. As found in the backwoods of Maine he is very tame, rarely flying away when flushed, but seeking the first convenient log or tree, where a few feet from the ground he feels secure in allowing the hunter to approach within 30 or 40ft. Should the first shot fail to secure him, a second can usually be fired before he is alarmed. We secured many partridges with our .44 rifles, very few once seen escaping us; nor did it seem a difficult matter with the help of the exellent Lyman sights to shoot so as to hit the head or neck only.

From the first pond north of Allaguash Lake the second lies nearer east than north, and the two are not connected, and while the waters of one flow south to the lake, the other finds its outlet in Allaguash Stream two miles above the lake.

The almost continuous rain caused us to stop longer at Allaguash Lake than we would otherwise, our intention being to camp yet further to the northwest. The open game season was close at hand, and our vacation was more than half passed, when on the morning of the first pleasant day for over a week we left our comfortable camp and sought the head of Allaguash Stream. A party had camped two miles above the lake, and the stream was cleared to that point, but beyond driftwood frequently obstructed the passage of the canoes, and the axes our guides carried were brought into use. As at noon we ate our lunch of raw bacon and hardtack, with water from the stream as our drink, we felt like true explorers, for we had left behind us the last signs of civilization, and the empty tin can and the discarded whisky bottle of the camper were seen no more. For half a day we worked steadily up stream to a distance of about five miles above the lake, where leaving the canoes we started through the woods by compass to Mud Ponds, the head of the main stream. The maps show the distance we had to tramp as two miles, yet only after four hours of continuous walking did we reach the ponds. The lower Mud Pond, and the only one shown on any maps I have seen, is a sheet of shallow water covering about a thousand acres. Grass and lily pads show over nearly the entire surface. Along one side is a large open bog, then nearly flowed out by the high water. Some rods from the pond a trapper had at some time made his headquarters and cleared a little space for wood. A ruined dam at the outlet of the pond showed the work of pine loggers thirty-five or forty years ago. There was good pine all through this Allaguash region, but when that was gone the loggers left the country and have never returned. Nor are they likely to do so unless it be to get the cedar from the swamps, or the white wood from the dryer lands, for there is little valuable hemlock in this vicinity. Thoreau, writing about the Maine woods in 1853, said: "The pine supply of the Penobscot comes chiefly from the head of the Allaguash, the region of Chamberlain Lake and the East Branch." He mentions that a Bangor lumberman told him the best log his firm secured the year before scaled 4,500ft., and was worth $90 in the boom at Bangor. This valuable lumber was eagerly sought, and many sections of Maine now deserted were once populous with lumbermen.

Forty years ago there were few caribou and no red deer in the region of which I write, but moose were very numerous. The Maine law at that time prohibited foreigners from killing moose at any time, confined the white American to certain seasons and allowed an Indian to kill them at all times. I believe the great decrease in the number of moose is due more to the Indians and the foolish sentimental policy of the Maine lawmakers than to any other cause. Thoreau says his Indian guide had killed ten moose in a day; that three Indians camped up the Northeast Carry had the skins of twenty-two moose they had killed in two months' hunting, and which they sold for $2.25 each. An old man whom we met at Chesuncook said he once counted between there and the Northeast Carry the carcasses of sixteen moose in the river, where they had been left by a party of Indian skin hunters. These facts not only show how plenty these now rare animals were, but also where they have gone. The few moose yet in Maine's woods bring no inconsiderable money annually to the State. I have been told of one man who has spent $5,000 in Maine trying to kill a moose, and he has neither secured the moose nor given up the task. It would be greatly to the benefit of hunters who wish to call moose if the law was changed so as to make September an open month, for only during the September moon is there a reasonable prospect of success in calling. It was once my pleasure to meet a sportsman just in from moose calling. His Indian had called a moose to the water, but was unable to get him to come out of the bushes, and a shot into the shadows was unsuccessful. Said the hunter: "I have never seen any sporting to compare with this. I could hear the moose coming for an hour, and when he came down off the hills to the water, I could think of nothing but a locomotive off the track and running through the woods. I have killed no moose, but that experience was worth all this trip cost me. It fairly made my hair stand on end to hear that moose come. Yes, sir; it was worth $150 of any man's money."

In the pond by which we were camped the moose had left their tracks everywhere and the lily roots they had torn up covered the water mingled with the leaves of the lilies yet growing. The caribou had worn away all the small growth in the woods around the pond. In the warm days of July and August this must be a gathering place for the game from all the surrounding hills.

We had no canoes with us here and so we constructed a raft the frame of which was the gate from the old dam. The morning after our arrival at Mud Pond, having constructed our raft we poled away to the northern end. In all this long trip until now we had seen no large game—tracks everywhere, the creatures that made them nowhere; but there on the north shore stood a great caribou buck. How foolish it now seemed to have left our canoes behind. With a canoe the chances of getting this goodly buck with his wide-spreading antlers would have been good, but he would not let the clumsy, slow-going raft with four men so plainly in sight approach near enough to give us any chance to kill him. His size we shall never know, his track was the size of the crown of a man's hat. By the time we had informed ourselves by what path the caribou had come and gone and caught a few trout, three animals came into the water away at the end of the pond from which we had that morning come, we never were near enough to tell what they were, but two deer came to the water soon after, and these were probably of the same herd. Our investigations that day showed us another pond connected with the one we were on, by a stream some 40 or 50 rods long. As our maps did not indicate any such body of water, we were particularly anxious to explore it. To enable us to do this, our guides went the following day to the camp at Allaguash Lake for more provisions. Thus my companion and myself were left for one day to our own resources for amusement.

The day was pleasant, and our plan was to watch for game at the northern end of the pond where we had seen the caribou. My companion was to look for animals coming to the water, while I went into the woods and watched some caribou paths. As I left my friend he asked when I would be ready to go back to camp, to which I replied at 4 o'clock. It was then 7:30. Having selected a suitable place I sat down with my back to a tree and my rifle in hand. The little red squirrels were the only creatures stirring, and these heartily resented the unwonted intrusion, coming close to me and scolding in noisy chatter. As the day wore on even these hid away, and the occasional quack of a duck on the pond was the only sound to break the stillness of a calm day in these remote forests. As hour succeeded hour I became more and more tired of this kind of hunting, began to consider if this was really the way to have a good time after all, and if the caribou had not deserted these paths for the season, so that I might wait till next summer before one came along. Yet I was ashamed to show myself to my friend, for had I not said I would stay till 4 o'clock. So about 1 o'clock I went around through the woods, keeping out of his sight, to the newly discovered pond. Coming quietly to its shore I looked out over its surface, and there, within three or four rods, was a flock of twenty-eight sheldrakes fishing. First they all went out a little way from the shore and formed a line, open enough to allow each duck to flap his wings without striking any other duck, so the line extended 75yds. or more. Then all together they beat the water with their wings, making a great commotion, driving the little fish before them toward the shore and into shallow water. Having reached a place where the water was sufficiently shallow to suit them they all went to fishing with great energy, not neglecting the vocal accompaniments of the sport. Again and again did they form their line with military precision and advance on the schools of little fishes. A welcome call from my companion, who said he knew when he had enough, relieved me from any embarrassment in making my appearance, and I gladly joined him in a return to camp.

The next day we constructed a raft on the Upper Pond and poled the whole length from end to end. It is a beautiful, deep, clear water pond, crescent-shaped, about two miles long by one-half mile wide, fed by five little streams. This is the head of the Allaguash, for just over a low and narrow dividing ridge lies Chemquasabamticook Lake, whose waters flow north.

The trout had gone to their spawning beds, but we caught enough sterile fish for our dinner, and I do not doubt in summer each little stream has gathered about its cool waters as they enter the pond a school of large trout. At the upper end of this pond we fired at a caribou at a distance of 400yds. without effect.

I hope to go again to the head of the Allaguash. I shall tarry not for the comforts of Chesuncook Hotel, linger not amid the delights of Allaguash Lake, but push with utmost haste to Mud Ponds, and no matter how great the labor my canoe shall be taken to the journey's end. In a fair state of the water this journey should be accomplished and a canoe afloat on Mud Pond in five days from Boston. The lower pond is the place for game and the upper is the ideal home of the trout.

The end of our journey was reached, so we turned our faces homeward, and a day's travel brought us again to Allaguash Lake. In our investigations of the country about the lake a family of beavers had been found and left undisturbed to be trapped on our return from Mud Ponds. We had only two nights in which to keep the traps set and caught no beaver, so had to be content with what might be learned of their habits. This family, according to our guides, consisted of two old and two young beavers. Their home was in an open bog, through which a stream from the hills sought the lake by a dozen channels. These channels they had closed by little dams a few feet in length and 2ft. high. The structures were insignificant compared to the beaver dams on rapid watercourses. A gentleman, who is a careful observer of the ways of animals, and whose business as prospector for minerals has many times placed him in positions to observe the beaver, tells this story:

A party of miners built a dam and dug a channel to conduct the waters of Rapid Creek in the Black Hills across a bend, so as to enable them to wash out the bed of a portion of the creek for gold. For many successive nights the beavers put a dam across this canal and the miners tore it out each morning. The beavers' way of making a dam, as shown by their work in this canal and on the creek, was to place a row of small trees or bushes across the current, the butts fastened in the ground and the tops lying up stream in the water. These tops catch first floating sticks, and gradually as they fill up leaves and any small particles floating with the current. The more compact the mass becomes the harder are the butts crowded into the earth and the firmer becomes the dam. Beavers are now becoming scarce in Maine, where eight or ten years ago they were very numerous. When Mr. Steele made his Aroostook trip his guides caught fourteen beavers while his party were going down the river. The Indian, John Nickolas, went back to the same country later that season and caught seventy-nine more. Redman, our guide, told of once leaving twenty-five families undisturbed around the headwaters of the West Branch when his season's trapping was over. Then the families were large, containing often seven or eight or even a dozen individuals, living boldly on streams of considerable size. Now they are in small families and oftenest found in some little stream or hid away in some bog like those we discovered.

From Allaguash Lake we carried three miles to Round Pond on Corcomgomoc waters. Allaguash Lake is much more easily reached by this route than by the one we took going in; in fact, Allaguash Stream from Chamberlain Lake will not float a canoe in a dry or even in an average season.

At Round Pond is a camping place where several parties had stopped during the last summer. The camp register—a board nailed to a tree—indicated the presence of ladies and children, while the children's play-house with its dried mosses and wild flowers was a pleasant reminder of happy childhood. Some of these campers may be pleased to know that in the frosty October evening and morning of our camping here we fed liberally their school of tame chubs gathered about the wharf. With a delight like that of children did we two gray-headed men feed these eager little fishes, for the heart grows young in these old woods. It was our last night in camp;

a comfortable camp and a glorious fire we had that night. The nights were getting cold, ice formed in the dishes, every morning we awoke chilled and shivering, of twenty-two days in the woods only five had been free from rain or snow, clothing and blankets were nearly always damp, the ground very wet and streams at nearly freshet height. From Round Pond we ran to Chesuncook, only taking the canoes once or twice from the water. Stopping one night at Chesuncook, we paddled from there to the Northeast Carry the following day, through a country white with snow.

Then we returned to our homes to pick up again the many threads of which each busy man weaves the fabric of his life. Finer and stronger will this fabric be for the days passed in mountain, lake and stream—more patient the worker, more cheerful the toil for the hope of many other like happy days to come. F. T.

Providence, Rhode Island.

TROUTING ON THE SOUTH BOARDMAN.

I'd rather win the river's prize
Than scenes of gay resort;
To me this trout of varied dyes
Is richer than a court.

THERE is a charm in trouting that leads the ardent devotee of the rod into close and intimate communion with nature. As he wades the winding brook and gracefully circles his feathery lure upon the crystal waters, new beauties unfold themselves on every side. At his very feet the crimson-tipped flowers peep out of the waving grasses, overhead a bluebird or oriole delights with its sweet notes; beyond an aroused squirrel retreats into leafy haunt with frightened alacrity; here and there the swallow and the trout spring for the bright May fly: in the bright glades "the gaudy insects sparkle like animated gems in the sunbeams"; the twittering water birds are on the flowers and leaves of the lily; the dense and shady woods with their mossy fountains and green retreats woo him to ease and dreamy indolence. How musical to his ears, when again aroused to enthusiasm, as he threads his way, is the "familiar tinkling of the cow bells" and the hammered notes of the mottled woodpecker from the hollow tree! How sweetly is he lulled as he hears

The waters leap and gush
O'er channeled rock and broken bush.

Here is a trout to his creel, there a sylvan poem to his eye; and thus alternating, he concludes his sport in the calm and balmy evening amid sweet carols from bush and brake, fully realizing those pastoral scenes

"Of fair, sunny glades, where the buttercup springs;
Of cool, gushing fountains; of rose-tinted wings;
Of birds, bees and blossoms, all beautiful things,
Whose brightness rejoices the earth."

The "gentle art" amid such surroundings has been pronounced by Sir Henry Wotton to be "a rest to the mind, a cheerer of the spirits, a diverter of sadness, a calmer of unquiet thoughts, a moderator of passions, a procurer of contentedness."

While indulging in such pleasing meditations of "the contemplative man's recreation," a genuine disciple of the Guild set forth in glowing terms the enticing sport to be had with the dappled beauties on the South Boardman, a stream which empties into Lake Michigan at Grand Traverse. I was a luxurious idler at the time the golden visions of the trout beautiful were so deftly painted, and the contagion was so great then that the next train north from Grand Rapids found me aboard, fully prepared to sport in the swift waters of the famous river. At Walton, which place I reached about 5 P. M., I changed cars for Mayfield, my destination, which I reached in about half an hour. The landlord of the tavern was there to give me cordial welcome, and doubtless figured out then how many ducats I would be worth to him. Of course the fame of the great trout stream of Michigan lost nothing of its prestige with him, for he surfeited me with trout stories of such startling magnitude that I began to think that I had at last reached the anglers' paradise. I noticed, however, that he frequently interlarded his recitals with the significant little word "if," which prefaced the conditions of weather and water. This was the loophole for all escapes in case of failure to practically substantiate his questionable mathematics. He was, however, an excellent trouter and equally as good hunter, and apparently very agreeable and accommodating.

I made all arrangements before retiring that night for the trip to the South Boardman early the next morning. I was to take team, boat and guide, and by going about due east some five miles or more, would strike the stream so as to have seven miles of fishing, more than was necessary, particularly when one had to wade the greater part of it. The trout romances of the landlord and an angler from Chicago, who happened to be a guest at the house at this time, were so deeply impressed upon my mind when I courted sleep that night that I was kept in a very pleasant frame of mind, when I had once soared into dreamland, by capturing speckled beauties of great game qualities and unusual weight. A five-pounder was a trivial affair, and when at last I had hung a jeweled beauty which I was sure was a ten-pounder, and which was giving me most earnest play, a loud knocking at my door aroused me, and dissipated all prospects of my ever saving that magnificent trout. "Half-past four" was the unwelcome cry, and in response with an "all right," I hastily rose, quickly dressed, and was soon down-stairs enjoying my matutinal meal. There, also, was the Chicago angler, who had regaled me the evening before with such seductive fairy tales of the fin, dressed as if for an outing. On inquiring of him if he, too, were off for the home of the trout, and where, he very calmly replied that he intended to accompany me. This was pleasant of the self-invited, even though it were cheeky, from the fact that it would not only reduce my expenses for the trip one-half, but give me a genial companion, as I thought, and one whose only fault I then supposed was the possession of a too lively imagination when he indulged in his favorite theme, the trout.

We were about to start when the landlord came out, rifle in hand, and joined us, saying he would go down the road with us and see if he could not secure a little game. On asking what kind of game he was after he replied, "mountain sheep." This, to the initiated, means deer, and as it was then the close season for the antlered breed I gave him to understand distinctly that he was about to violate a law sacred to every genuine sportsman, and hoped he would acquiesce in it. He laughed and replied that he only wanted a little wild meat for immediate use, and presumed no one would object to it, as long as he did not slay for the market. The farmers in that neighborhood, he further stated, always took the liberty of killing a deer when they felt their larder needed some choice meat. As he was not inclined to heed my admonition, he got in the wagon and we started off at a lively gait, and were soon going through the deep, sunless forest which prevailed nearly the entire distance, only a slight clearing here and there being seen. It was a good hard road all the way, and as it was in the month of June, nature was in its most regal dress, the birds in full plumage and voice, and the flowers and ferns and mosses along the route highly attractive. The sun, which was scarcely an hour high, was rapidly painting the tree tops in rich and varied colors of crimson and gold as we ascended the top of a high hill. The long bright rays at this altitude seemed to give us a cheerful morning salutation. They flashed with radiant vigor upon the tall, scarlet maples, now they pierced between clumps of pine, making their black edges flush and glow, then boldly strike the spreading branches of some stately elms, and again in brilliant ripples of warm waves dash into the bushes and brakes of the lovely glades, while on the roadside the impudent sparrows and pretty robins bathed in its glowing beams. On high the lyric lark sang his native hymn as if to add to the charm of the sylvan scene with which we were environed, and which was still further beautified by the fleecy clouds that lazily drifted above in the dome of blue. These were our pleasing accompaniments as we sought the crystal stream for our tranquil pleasures.

The landlord would ask every now and then to have the team stopped that he might look for deer tracks, until finally I got provoked, and gave him notice in plain Saxon that, as I had engaged the entire outfit for my trouting trip, I proposed without further delay to keep on to my destination. After that, if he was disposed, he could pursue his lawless course to his heart's content. My associate had little to say to this, though I noticed he was only too eager to always please and always agree with the poaching landlord. They appeared to be old acquaintances, and I presume this accounted for it. An hour's drive and we stopped at a deserted lumberman's camp, which overlooked the flowing Boardman, and here made our preparation for the fishing. I saw that the river was quite high from recent rains, and this condition I have always found unfavorable for good trouting. The stream, which was here about fifty feet wide, has a strong current and flows entirely through a bed of sand, is always clear, and when in proper stage of water, with favorable weather, is considered one of the best trout streams in Michigan, if not the best. Lately, however, the industrious lumbermen have invaded these regions, and are now annually using the stream for lumbering, and this alone has militated very much against its piscatorial pleasures. All fallen timber is cleared from the stream in the early spring, and thus the shady retreats in which the trout like to gather and disport are destroyed, and consequently they seek other waters, or go into the impenetrable jungles near the sources of the stream. Still, when the spring drive of logs is over the river affords considerable sport to trouters, of which there are about fifty every season.

I was quite ardent for the sport before me and in a twinkle had my pole and line adjusted, and then getting into a pair of rubber wading trousers, placing my creel over my shoulder, and strapping on bait box, and hooking my landing net in my belt, was all ready to step into the swift-flowing current. The guide and the landlord slid the boat, which was a clumsy scow, down the hill into the river. All being ready the guide was directed to take the boat about a mile down the stream, and there anchor it, and then as he was prepared for fishing, to go ahead with his trouting, and we would overtake him with the boat, and take it on another mile, and thus alternating so as always to have new grounds.

My companion, who was familiarly called Fred by the landlord, advised me to use bait, declaring that it was entirely too late in the season to expect trout to rise to any fly, no matter how perfect or seductive its appearance. I was satisfied he was correct, but still my rule was always to first use the feathery lure and then, if I found the trout would not rise to it, I was content to take rank as a contemptible bait-fisher, despite the success of the great elect whose only heaven is the fly artificial. Fishing with the worm is a branch of the angler's art which has only of late years been properly calculated and which by many good sportsmen is as yet but imperfectly understood. It is no uncommon thing even at present, to meet with veteran fishers who, forming their ideas from bait-fishing in flooded streams, sneer at worm fishing as utterly beneath the notice of the practical angler.

An entertaining writer says, "To each one of our angling brethren who is a proficient in this art, and who, therefore, knows its difficulty, we say, never argue with any fly-fisher who despises the worm-fisher's craft, but ask him to accompany you to a well-fished stream for a day's sport on a warm and sunny day. He will request you to lend him a few worms before you have fished an hour, when he sees your basket beginning to fill. Give them to him and leave him to his devices—the trout will be in little danger. Do not press the contrast between your well-filled creel and his empty one on your homeward route; human nature is human nature, and he will be in no humor for joking for that evening at least. You may, however, recur to the subject when you meet a few days after, and you will find him prepared to admit that clear-water worm-fishing is a worthy branch of the angler's art." Even the poet Gay comes to the rescue of the much-abused user of the "barn yard hackle," and thus advises in flowing verse how to select the contemptuous worm. He says:

"You must not every worm promiscuous use,
Judgment will tell the proper bait to choose;
The worm that draws a long, immod'rate size
The trout abhors, and the rank morsel flies;
And if too small, the naked frauds in sight,
And fear forb'ds while danger does invite.
Those baits will best reward the fisher's pains
Whose polish'd tails a shining yellow stains.
Cleanse them from filth, to give a tempting gloss,
Cherish the sully'd reptile then with moss;
Amid the verdant bed they twine, they toil,
And from their bodies wipe their native soil."

Fred suggested that I take one side of the river and he the other, and I told him to select his side. He took the right-hand side, and I, of course, the left, and we then waded in and commenced the sport. He caught the first trout, the second and the third, and yet I held on to my flies, which I had changed two or three times and without getting a single rise. Bait-fishing stock was soon above premium with me, and when I saw his fourth trout go into his creel, I waded ashore and prepared my line for bait-fishing. I was soon ready, and when I reached a very inviting spot I was compensated with an 8-inch trout. I cut off a fin of this trout and used it in place of the worm, and soon ascertained that it doubly discounted the worm, as it was far more attractive, and yet had sufficient meat upon it to make it a choice morsel for the greedy trout. I had tried it on other occasions and found that it always worked to a charm. When I came up to Fred I discovered that he also was skittering a fin, and had been since the capture of his first trout. He said if I would cover the barb of the hook with a piece of worm, that it would still further improve the killing qualities of the fin. I tried the plan, and found that it worked admirably. Fred showed me a beautifully spotted trout of over a pound weight he had taken, and yet I had not even a half-pounder as a solace. I, however, had high hopes of coming out all right on the homestretch, and was not at all disheartened at the good start he had over me. He was evidently a splendid trouter, much better than myself, I thought, and fished with an untiring energy that I was unable to equal. He had no "wading trousers," and the water was so cold that it turned his lips to a purple hue. He, however, endeavored to keep up a good circulation by occasional visits of the flask to his lips, which I began to think would soon exhaust its contents, as his drafts were quite copious indeed. It was evident to me that he had the best side of the stream, for all the deep water and choice places were apparently there. I saw that I was to be largely outnumbered in trophies unless I changed my tactics; so I concluded to let him get well ahead of me, and then take his side when I came to inviting pools. He was fishing quite fast, and tarried but little to coax the dotted beauties from their deep bowers. I found that my new scheme worked advantageously, for the first inviting place on his side that I fished yielded me a pounder that gave me delightful sport.

A short distance beyond this there was a prostrate tree in the water with some alder bushes and willows on the bank, throwing their shadows o'er the stream, and where some unseen warblers were making the woods vocal with their sweet melody. It was a charming spot, and just the place to harbor a trout or two. I approached it with cautious steps, and when at the proper distance dropped my attractive bait gently on the shady water, and after letting it sink a trifle made the fin quiver to fine advantage. It had made but a few tremors before I saw a gleam of silver, then a sudden and vicious bite followed, and as the wrist responded I was hung to a lovely darling, and then the circus commenced:

"He darts away; my reel runs off,
Around, around it goes.
I give him line, he carries off,
My pulse excited glows.
What sport can equal joys like this!
My rod now bends in two;
Will such a hook
Withstand the brook?
Will this my line prove true?

"Now 'tis out, 'tis full at strain,
I fear 'twill scarcely stand;
The topmost joint is bent in twain,
It shakes my nervous hand.
It slackens now, he's tired out,
I wind my well-tried reel,
And gently strain
My line again,
Till trouty's strength I feel."

Like a warrior bold he fights and will not yield a craven foe. Away he goes like a speeding arrow for the tangled brush, but at the risk of line or rod I head him off, and draw him near the bank where I proposed to conquer him if possible. Again he make a rush for the coveted brush, but is adroitly baffled. He is now struggling in his death throes, but once more he makes a desperate effort for liberty; it fails, and his strength is now fast running out. I draw his head above the flowing current, and for the first time I have a good view of his large proportions. His size fills me with glowing pride, and with great care I persevere for the supremacy, and finally am rejoiced to see him turn up a dotted side to the glinting sun as an acknowledgment of the triumph of the skillful angler. I gently glide him into the net, and carefully take him ashore, where I feast my eyes on the noble prize. In the bright sun his graceful symmetry enveloped in his sparkling coat of stained crimson is outlined in full perfection, completing as lovely a picture of the genuine *Salmo fontinalis*, the enameled idol of the icy brook, as gladdened eyes of angler ever beheld. The scales register him a three-pounder.

Time must not be lost in gloating over such a handsome prize, for there are other worlds to conquer if I desired to be crowned with the laurel before the day's happy work is over. I try the same place again, and secure two more of little less than a half pound each. The pool is now completely stripped of its dappled beauties, and I hasten along, drinking in the glories of the charming scenery, and enjoying the linnet's note and the blackbird's song that sound in the tangled brakes. I am now getting my full share of trout and think I can compare my spoils quite favorably with my industrious companion's. The boat is just ahead with Fred patiently waiting for me. I hasten forward, get aboard and we are off floating at the rate of six miles or more an hour. A keen lookout has to be constantly kept at the serpentine curves of the river for fear of suddenly running into the trees that have fallen into the stream. Fred steers while I have my hand on anchor ready to drop at a moment's notice, for should we accidentally strike one of the prostrate trees it would be an upturned boat, and probably a drowned angler, for once entangled in the interlacing branches under water, escape in the swift current is not easy I assure you. I hove the anchor but once, barely escaping the dangerous branches. At such places we would get into the water and pull the boat around and then float ahead. We soon overhauled the guide, went a mile beyond him, then anchored and commenced the angle again. I repeated the same methods

as above, that is allowing Fred to go well ahead and then fishing in his wake.

The trout evidently were not much on the feed that morning, for it took careful work to capture what we did. I lagged not in the pleasant pursuit, and fish as earnestly as ever. On I went, passing lonely stretches of wood and river scenery with the reward of an occasional trout, until finally circling around a sharp bend I saw immediately in front of me such a dark and lovely pool, so enchantingly embowered in shade from overhanging trees, lapping bushes and waving grasses, in which the violets and primroses "blushed and bloomed," that I felt assured it was where the trout grow golden. It seemed a burning shame to offer the lovely princelings of the brook in such a charming retreat anything but an artistic fly of pre-eminent perfection, and I must confess that I felt a tinge of regret when I sent my meaty fin as the decoy to tempt him from his aqueous realm of beauty. I was heartless, and for the time being lost to all the poetry of angling, and like a sturdy baiter sent the fin into the shady pool; it no sooner struck the water than it was greedily seized, and then a struggling trout was repenting his hasty action. He was soon encircled by the net and then gently placed in the creel. He was little less than a half-pounder, but a royal beauty. Again my quivering bait was moving in the water, and another trout of about the same size was captured. This I repeated until I had caught two more, and then the sport was over at this ideal pool. I wondered if Fred had had any luck here, for he was a capital angler, though I thought he fished over the choice places entirely too fast. I have always found that slow and careful trouting in good waters yields the amplest returns.

Again I am on the tramp, and after about an hour's fishing the guide overtook us, and we concluded as it was near noon to take lunch. Selecting a shady grove for our banquet grounds, the guide started a fire and made some coffee, and then we feasted right royally from the lunch basket, which contained a good variety of toothsome edibles. We here compared our catches, and ascertained that the guide had the largest number, while Fred and I were about equal, though I had the prize trout of the morning victims. I congratulated the guide on his catch, and remarked that they would greatly assist me in making out a nice lot for some of my friends at Grand Rapids. He very coolly and, as I thought, somewhat defiantly told me that he was fishing for the house. I fired up at this, and warmly told him that he could then look to the house for his pay. This somewhat confused him, and, altering his tone, he mildly stated that he would speak to the landlord about it. This is something akin to the methods that prevail with the skippers of the fishing yachts at Nantucket, who charge you $8 or $10 per day, and then in addition claim the fish as their perquisite. It is really a compound double discounting contract, "heads I win, tails you lose." I had got indignant over the system at the island, but when I found that it also prevailed in this "neck of the woods" I was assuredly hot in the collar. A distinguished friend of mine, high in the councils of the State, had the same experience as I had, and he, too, kicked on principle. So will any one who is not entirely a cheerful idiot. It is the coercive measure that pinches, not greed for the fish at all. ALEX. STARBUCK.

[TO BE CONCLUDED NEXT WEEK.]

AN EPISODE OF THE WAR.

MEMORY oftentimes presents most striking exhibitions of latent retentive power. Incidents that transpired years ago, and had no special significance to leave behind them lasting impressions, flash from its secret chambers, and as vividly as if it were but yesterday that they took place, they pass like a panorama before our mental vision. During the great civil war, when powerful armies and mighty naval vessels covered the land and the sea, scarcely a day closed that was not fraught with military achievements or disasters to either one or the other contending forces. Now and then a thrilling incident produced a profound impression of exultation or depression in the public mind, but time and the multitudinous and multifarious affairs of life crowded it, as was supposed, out of memory. But years later a casual remark, or a transaction that may have some indirect connection with it, releases from the invisible cells of the mind the long-forgotten event, and it is pictured before us as clearly and vividly as when we read the graphic account of it so long ago.

A check from the U. S. Treasury was recently sent to a business friend. It was to settle for salvage to the captors of a vessel that made a voyage noted for a thrilling digression from the even tenor of the ways of an unwarlike merchantman.

Twenty-six years ago the harbor of New York betokened warlike times. Men-of-war were almost daily arriving from the Southern coast for repairs or supplies, while others, full-manned, were sailing out of the harbor to take a part in the conflict that was raging a few hundred miles away. On the stretch between the Narrows and Sandy Hook the taut and ship-shape schooner Flora, with her wings spread to a clear and strong northwesterly wind, dashed on to the ocean. As she cleared the land and entered on the bosom of the Atlantic, the wind freshened and sent her on at a swinging pace. Around her bows the yeasty sea boiled and sputtered, and as the misty spray flew over her forecastle it glistened and glittered in the sunlight like a shower of diamonds. As the sun, looking like a big red ball, sunk below the horizon, scores of lights on vessels bound in and out danced up and down to the motion of the brisk sea that the stiff breeze had raised, and as the gloom increased the hull of the Flora grew fainter and fainter until it disappeared in the Charybdis of darkness. The next view we have of her is "running down the Trades." Here the sky is almost cloudless, the wind balmy, and the stars of great brilliancy. The splendor of the Southern Cross, each star in which is like a Kohinoor magnified a thousand fold, is beyond the power of description. The crew of the Flora, in the dog watch, told over and over again to one another tales of the perils they had passed through, of funny escapades in foreign ports, and of the gorgeous sweethearts they had left, tearful and inconsolable, when they sailed away from port. They also sang those weird and plaintive songs of the ocean that have been handed down by successive generations of the toilers of the sea.

After rounding a stormy cape, drenched with the icy spray, the warm and peaceful bosom of old ocean in the Trades is a blessed relief to poor Jack, and none can appreciate it more than he. The Flora was rolling lazily from port to starboard, and as the breeze was not strong enough to keep her sails full they flapped spitefully. The man at the wheel was powerfully affected by the calm and somnolency of the scene, as the "bobbing" of his head suspiciously indicated. "Sail-ho!" came in loud and startling tones from a sailor on the topgallant forecastle. Away off on the verge of the horizon the dark hull of a vessel appears, and as she draws nearer to the Flora a long, filmy streak, stretching far astern, reveals that she is a steamer. At the first cry of "Sail-ho!" all hands came on deck, for it was at a time when danger lurked on the ocean. Confederate cruisers were scouring the seas, and many a peaceful merchantman had been captured. The dark hull came on; a thick cloud of smoke poured out of the funnel, and it was evident she was being driven hard to come up with the Flora. They were helpless to escape. The wind was almost a dead calm, and the anxious faces of those on board as they peered over the rail evidenced their deep interest in the actions of the strange steamer. Their fears were heightened and their nerves strung up to the greatest tension by a puff of smoke from her port bow, which was followed by a report and the dropping of a shot into the sea a short distance astern of the Flora. Now the ensign is run up to the schooner's main truck, and she is hove to. Shortly after the steamer is seen to be heavily armed, and her flag, which had been raised some time before, is recognized as the Confederate colors.

An unexpected object sometimes overpowers the mind, but men who have been accustomed to face sudden danger recover rapidly from the momentary stupefaction; and thus it was with the crew of the Flora, and they philosophically awaited their inevitable fate. She steamed close to the doomed vessel, and trained her guns on her. Five or six armed boats put off and boarded the Flora. As she was unarmed it would have been vain to offer resistance, and soon all were prisoners of war.

A prize crew was put aboard the captured schooner, and all of her crew except the mate and colored cook were transported to the steamer. Then, we apprehend, the officer in charge of the prize received orders to proceed to some port, and there to deliver her to the naval authorities. They soon parted, and it is quite natural to suppose that the prize crew looked forward with exultation to making a triumphal entry into port. The thought of how they would be feted and lionized by the citizens and fair ones made the hearts of all beat faster. But, alas, there is nothing certain in this world but a few feet of ground to receive our earthly clay, and to the prize crew on the Flora a cruel fate denied them even this; for, one dark night, the mate and colored cook successfully planned and carried out the destruction of their enemies, and the eternal and silent graveyard of the deep received their bodies. Instead of honors and glory their requiem was sung by the feathery inhabitants of the air over the lonely ocean.

The mind recoils from such an act of butchery, but war commends any deed that will circumvent and defeat an enemy. EDWARD MANNING.

MONTCLAIR, N. J.

Natural History.

CRAWFISH AND SNAKES.

I RECENTLY observed a very cunning and ingenious trick of the crawfish (or crayfish) for catching flies, the recital of which may prove of interest to your naturalist readers. The crawfish, as he is called in these parts, is a kind of fresh-water lobster, which is very abundant in this region, and is still more so further south. He reaches a maximum length of some 6 or 8in., and seems to prefer muddy, stagnant ponds. He is much esteemed as food by some, especially the Creoles of Louisiana, and is, indeed, of more delicate flavor than the salt-water shrimp.

The trick to which I alluded was this: Sitting on the bank of a muddy pond, or "borrow pit," over the surface of which many small flies were swarming about, I observed that the crawfish came to the surface near the water's edge, and turning over on the side, the tail probably touching bottom, with claws and legs "sprudling" about in the water, they assumed the exact semblance of dead creatures floating on the water. In a few seconds flies would alight on the apparently dead crawfish, and as soon as one got into the proper position there was a sudden and instantaneous flip, when fish and flies would disappear together under the water. In a few seconds more he would again appear on the surface and go through the same maneuver with same result. There were, perhaps, two or three dozen of them in sight at the same time, and all industriously engaged in the fly-catching game.

Speaking of their prevalence, I have seen them in countless multitudes in the swamps of Louisiana after the subsidence of an overflow of the Mississippi River, crawling through the still muddy woods, seeking relief from the dearth of water, and piling up in shady places to die in such numbers as to produce a very offensive stench to the passengers on a slowly moving railway train. I have seen old crawfish crawling through the swamps with great masses of young ones clinging to certain feathery appendages under the tail of the parent.

Speaking of snakes, which, by the way, we were not speaking of, but I nearly always wind up on snakes, I have now two live rattlers in a box, which were recently caught for me in a canebrake by a negro. His method of capture was to place a forked stick over the snake's neck, then grasping the neck with his hand he permitted the reptile to coil around his arm, when, unwinding it with the other hand, he dropped it tail foremost into a box. The larger of these is a little over 3ft. long, the other a little less.

Having given much attention to the subject of snakes, as being of practical importance to a constant wanderer in swamps and brake, I have concluded that the rattlesnake is the only dangerous species we have, and they are not numerous. The cottonmouth moccasin, which is very abundant in the Mississippi bottoms, bears a most villainous reputation, which he does not deserve. He has plenty of venom, but never attains great length, and his fangs are comparatively short. But above all, he is indisposed to bite. I have teased and worried a good many specimens to induce them to show fight, but while they exhibit anger by puffing up the body and in other ways, I have never succeeded in making one strike at a stick, and he is always ready to escape at the first opening that presents itself.

A short time since, in stepping over a log, I discovered that my foot was coming down on a coiled cottonmouth. By an extra effort I cleared the snake but stepped pretty near him. He made no motion, and when I touched his head with a stick he darted off and escaped. I never kill them, because they appear to be harmless to man. Nearly all of my associates "kill every snake they see," and when questioned for a reason have no better one than "I have no use for a snake." It is difficult to persuade them of the needless cruelty and positive harm of indiscriminate snake killing.

I once had a pretty garter snake crawl up my pants leg, thereby giving suggestion of the appropriateness of his name. He went as high as my knee, when, grasping my leg a little above with my two hands, a kick or two brought him out, and we parted good friends.

CLARKSDALE, Miss. COAHOMA.

ECONOMIC ORNITHOLOGY.

THE annual report of the Department of Agriculture for 1888 includes the report of Dr. C. Hart Merriam, the ornithologist and mammalogist of the Department. This covers sixty pages and is full of matter of great interest to all persons who pay any attention to natural history, and especially to all farmers. It contains, too, much matter which the sportsman may read with pleasure and profit.

Congress has defined the scope of the work of this Division as "the promotion of economic ornithology and mammalogy, an investigation of the food habits, distribution and migrations of North American birds and mammals, in relation to agriculture, horticulture and forestry." The Division is a bureau of investigation, and the facts which it collects are published in the form of special reports and bulletins. One of these, on Bird Migration in the Mississippi Valley, was issued last November, and impressed all who examined it with the magnitude and the importance of the work being carried on under Dr. Merriam's charge.

The more important divisions of the report now before us are a statement of the work done in 1888, some remarks on the Geographical Distribution of Species, special reports on Introduced Pheasants, The Mink, The Sparrow Hawk, The Short-Eared Owl, The Food of Crows, and The Rosebreasted Grosbeak as an Enemy of the Potato Bug. Of these the investigation into the food habits of the crow is much the longest, though it would be hard to say which of all these interesting papers is the most important. As might be imagined, they are all written from the farmers' standpoint, and the question of food and whether the animal is useful or injurious to the agriculturist are the ones to be determined.

The facts brought out by Dr. Merriam's visit to Oregon about the Asiatic pheasants introduced on the Pacific coast are of great interest to sportsmen.

The work being carried on by this division of the Agricultural Department is of very great importance and ought to be undertaken on a much larger scale than is at present possible. Limited appropriations and a small force hamper the chief of the division and delay work that is of the greatest importance to the tillers of the soil all over the country.

NORTH AMERICAN BIRDS.*

IN this publication we have what has long been called for, a popular and interesting natural history of North American birds, written simply, but in a very pleasing style, and illustrated by colored lithographs after the best artists, and in the highest style of art.

Prof. Nehrling is no compiler; his acquaintance with the birds described has been made in the field, where he has devoted himself to loving observation of their varying characters and habits, and being possessed of a happy literary style, charming in its easy simplicity, his descriptions cannot fail to be popular with young people, whom it is the author's object to inspire with a tender regard for the feathered minstrels of the grove. The work does not profess to be strictly scientific, and is not to be reviewed from a scientific standpoint. It is intended rather for the intelligent friend of nature, but at the same time, so far as we can judge from the single part which is before us, the author deserves great praise for the excellence of his biographies so far as they go.

The plates are good examples of the lithographer's skill, and will be useful to the class for which the book is intended.

The nomenclature employed in the book is old, but this is easily understood when we are told that when the A. O. U. Code and Check List appeared a large number of the plates had been already printed, and a great part of the manuscript of the work had been handed in. The work will not include descriptions of all North American birds, but will run to number 393 of the Smithsonian List of 1884.

It is high time that a popular attractive work on North American ornithology should be published, and very much is added to the attractiveness of this work by its illustrations.

The book is being published in twelve parts, each part with three colored plates, and forty-eight pages of descriptive text, the size is imperial octavo, the reading matter is printed from large new type on finest book paper, red-line edition, and a single glance at the first part is sufficient to satisfy one that no expense has been spared to get up the work in the highest style of art. The price of each part is $1, and the work will not be complete until the fall of 1890.

So far as can be judged from the part which has already appeared there is no other popular work on the subject of nearly equal merit, nor, indeed, comparable with it, and we confidently predict for it a fair measure of its deserved popularity.

*North American Birds, by H. Nehrling, with thirty-six colored plates after water-color paintings by Prof. Robert Ridgway, Smithsonian Institution, Washington, D. C.; Prof. A. Goering, Leipzig, and Gustav Muetzel, Berlin. Milwaukee, Wis.: Geo. Brumden.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

WILD PETS.

II.—ANOTHER TAME MOUNTAIN SHEEP.

HOT SULPHUR SPRINGS, Col.—I was much interested in "G. B. G.'s" history of Seep in your issue of June 6; also in the incidental mention of other domesticated mountain sheep. Thinking additional notes on the subject might possess some interest I offer the following:

Some years ago I heard of a pet sheep near Fort Collins, this State. Being on somewhat familiar terms with the veteran showman, P. T. Barnum, I wrote him to inquire if he would like to secure it. Being answered in the affirmative, I sent and got it, and after a short time forwarded it by express to Mr. Barnum. It traveled with his "Greatest Show on Earth" for two or three seasons, and was finally burned with his museum and menagerie on Broadway. During its life Mr. B. wrote me two or three times about it, and again after its death. He seemed to think it one of the most interesting animals in his collection. It was a female, and during the short time I had it in possession I learned to think it the most interesting pet I had ever owned.

Last year one was raised by a family living four miles up Grand River from this place. In the fall it was sold to an Eastern gentleman who came out for a hunt. The price was $40. The purchaser went further West hunting, and about the time of his return to claim his purchase and take it home the animal died, from what cause I never learned.

Mountain sheep were not uncommon pets in the early years of Colorado's settlement. I know that I have frequently seen them, but cannot now recall other particular instances.

One or more sheep were killed near here last winter in violation of the State law for their protection. Neighbors charge the offense to a young man who has left the country, but there is grave suspicion that some people yet here have got "some of the hog," if they did not actually do the killing. W. N. BYERS.

NEW BIRDS AND MAMMALS.

NUMBERS of the Bulletin of the American Museum of Natural History issued during the month of June contain some interesting papers on new South American birds by Mr. J. A. Allen, and on new mammals by Mr. Frank M. Chapman.

Mr. Allen's examination of South American birds in the collection of the Museum has resulted in the discovery of a number of new species and in the reference to their proper zoological position of a number of species which have been erroneously placed by other ornithologists. Among the new species described by Mr. Allen are: *Thryothurus macrurus, T. longipes, Platyrhynchus bifasciatus, P. insularis, Euscarthus ochropterus* and *Sublegatus virescens.* There are interesting notes on a dozen other species of birds.

Another paper of great interest to ornithologists from Mr. Allen's pen treats of the South American bird *Cyclorhis* and its near allies, and is illustrated by figures of the heads of three species, *C. viridis, C. ochrocephala* and *C. guianensis.*

Mr. Chapman's investigations in Florida have resulted in the collection of some very interesting material. In the paper before us he describes two apparently new species of the genus *Hesperomys*, under the names *H. floridanus* and *H. niveiventris*, and a new subspecies of *Sigmodon hispidus* under the name *S. h. lateralis.* Mr. Chapman made some interesting observations on the habits of the rare *Neofiber alleni*, the round-tailed muskrat, of which so little is known. This species was found abundant in eastern Florida, opposite Micco. Mr. Chapman's account of the habits of this species, so far as he observed them, is very interesting. He is led to believe that the food of *Neofiber* is largely vegetable, and that, while it is very much at home in the water, it is much less aquatic in habit than the muskrat.

BULLFROGS AS FISH EATERS.—Constantine, Mich., June 20.—*Editor Forest and Stream:* In a late issue a correspondent states that bullfrogs do not have a taste for fish, but take almost anything else. I once had an experience which makes me think that bullfrogs have a decided taste for fish. A companion and I were fishing for blue-gill sunfish at a lake near here, and whenever we caught a fish we threw it about 15ft. behind us into a shallow spring water surrounded by tall grass and sufficiently inclosed to prevent the fish from escaping. After fishing in this way for some time, and after having caught several dozen fish we heard an unusual commotion among the fish we had caught and a great splashing in the pool, and upon investigating, we found a monstrous bullfrog—his size certainly entitled him to that name—sitting in the pool swallowing a blue-gill as broad as my hand, not including the thumb; and before we could make him vacate he snapped up and swallowed another sunfish fully as large and swallowed that too, all but a little of the tail, which protruded from his mouth. After we had thumped him with a board, but failing to make him disgorge any of his thievings, he escaped with enormous leaps and disappeared in the lake. I do not know whether he swallowed more, but I saw him swallow those two, and he did it with decided relish, if we could judge from his countenance, which was a very open one during the process; at least he enjoyed it more than we did.—S. J. H.

LIFE IN THE SEA SANDS.—Philadelphia.—A stranger to the beach would think there would be little or no animal life in the apparently barren sand, especially along the surf; but one with investigating habits will soon learn that in the surf and sand there is almost a mass of such life. Prominent are the surf bugs and sand crabs; further out the common crab and sand eel. What they live on is not so apparent. It is such that drum and some other fish come to feed on along the beach. On the flood tide the sand bugs come out of the sand in the wave on shore, and may be scooped up with shrimp nets in large numbers, and when the wave recedes they may be seen in schools settling in the loose sands, making a ripple, as though they were pieces of broken shell. Surf bugs and sand crabs are good bait for sheepshead, especially when fishing for small fish, which so quickly devour the soft bait. How far north and south surf bugs are found I cannot answer. I have not seen them north of New Jersey nor south of Cape Charles.—P.

RANGE OF THE TURKEY BUZZARD.—Owego, N. Y.—*Editor Forest and Stream:* In your last issue "Big Reel" wishes to know the range of the turkey buzzard. In August, 1887, a gentleman told me that his son had killed what the neighborhood called a turkey buzzard, and if I would come to the house I might have it. On arriving at the house I found it true. The bird had been around the vicinity for several days, and the neighbors thinking it some kind of an eagle tried to kill it. Finally, one day it sailed over the house and alighted in the woods, and the boy taking the gun went in pursuit and succeeded in getting a shot. The bird was undoubtedly a turkey buzzard, and measured 6ft. from tip to tip. Owego is about in latitude 42° N.—I. A LORING.

THE HOOP SNAKE is still found in the columns of country papers. The Highland, N. Y. *Democrat*, of June 22, reported that "as Mr. Jim Head was walking along the road near the home of John Hedden, he was attacked by a hoop snake, which encircled his leg around his boot, which luckily proved a shield against his deadly weapon, and by the aid of assistance he was finally released." Our offer of a reward for a specimen of genuine hoop snake still holds good.

Game Bag and Gun.

NEW YORK WILDFOWL LAW.

THE wildfowl law, Section 4, Chap. 534 of the Laws of 1879, was amended by the last Legislature to read: § 4. No person shall kill or expose for sale or have in his or her possession after the same has been killed, any wild duck, goose or brant, in any of the waters of this State, between the first day of May and the first day of September, except that in the waters of Long Island none of said birds shall be killed between the first day of May and the first day of October. * * * And any person found between sunset and sunrise on the water with a gun and lantern, in the act of attempting to pursue, fire at or kill any such birds, shall be deemed guilty of a violation of this section.

JAMES RIVER TALES.—III.

AFTER SUMMER DUCKS.

A SMALL yellow flame struggling to force its light through a badly neglected chimney, threw a sort of twilight uncertainty upon the usual bric-a-brac of a country newspaper office, the dim light seeming to add several inches to the height of a gigantic stalk of corn in one corner of the room and elongating the premium spear of wheat hanging from the ceiling, both duly commented upon in the local columns of a previous edition of the Claremont *Herald*. The hour was 4 o'clock of a September morning. Jim and the Old Man were making ready for summer ducks, and Dan stood near the door watching the preparations, all anxiety to be off, yet half fearing he would be left. Jim takes a Parker in each hand, the Old Man shoulders the oars, and with Dan prancing around us, barking his delight, we are off down the road to Chipoax Creek.

The air is damp with a heavy fog that has settled low upon the earth, the long grass hanging over the narrow road being as wet as from a rain. The birds are not yet awake. Even that early riser, the thrush, has not opened his eyes. We tread single file the winding path that leads from the road down the wooded river bank to the boat.

Dan takes his position in the bow. It is my turn at the oars, and off she slides into the water. The fog seems to have grown denser. It is impossible to distinguish objects over a dozen boat lengths away. Five, ten, fifteen minutes are ticked off by the dip of the oars, and still the fog hangs about us like a Hading veil, denying even a glimpse of the shore, for which we were steering.

"Say, Old Man, how's this," cries Jim, pointing to a stake we have almost collided with. I feel the inclination to say something, the first letter of which is damn, for I recognize our starting point. We have made a circuit. Jim produces a small compass attached to a watch chain, we take our bearings carefully and try again. This time the trees come out of the fog to meet us, for we have made the opposite shore. The boat glides on just out of reach of the overhanging bushes. A great blue crane flops out of a tree above us, and with a harsh cry that startles Dan disappears in the fog.

Easy now. Here is the first narrow stream leading up through the marsh. We change positions, Jim moving up to the bow with his gun, while I settle in the stern to paddle. The first bend, and no ducks. The stream is now scarcely wider than the boat. Water bushes are bent aside to enable us to pass, taking care not to disturb an ugly-looking wasp nest with its wicked owners asleep on the outside. I give the boat a shove around the next turn. Up rise several ducks. Bang! bang! goes Jim's Parker. A clean miss with the first barrel, but the second drops its victim all in a heap, as limp as a wet dish rag. Another comes out of the wild rice at my very elbow. The paddle slips into the water as I reach for my gun, and down comes Mr. Duck with a splash. Dan is overboard attending to business, and quickly retrieves the fellow. Nice fat fellows they are. Here comes a straggler returning through the mist. Jim has his eye upon him and makes a very creditable kill. Dan splashes off through the weeds and water and retrieves, with the duck held firmly in his mouth. He climbs into the boat, and with muddy feet and dripping hide carefully squats upon the middle seat, where somebody will have to sit at the oars. Dan never neglected to place one or more of his feet on that seat every time he entered the boat, provided they were wet or muddy. Jim and I argued with him earnestly and often against this weakness, and now and then with the broad end of the paddle, but all to no purpose. So after a bit I would laugh when it came Jim's time to occupy the muddy seat, and Jim would giggle when I had to make a blotter of myself.

Back down the stream we turn to the left and add another duck to our string. The fog is lifting now, a light breeze swaying the rice and cattails. The blackbirds are awake, clattering over their breakfast and making sociable visits from one flock to another. Clear as a tinkling bell comes the *pink, pink*, of the reed birds. A tall crane stands out in the water across the creek foraging for his morning lunch. I produce my pipe and light up, while Jim makes himself useful at the oars. Half a mile up the creek we strike the mouth of another stream that zig-zags across the marsh. I take the post of honor this time. We are not fairly into the stream before a plump-looking duck comes out of the rushes, but drops back as the smoke curls away from my gun. Quiet now, for a loud word would frighten the ducks that are probably feeding under that clump of water bushes ahead, whereas they will not often take wing at the report of a gun unless very near them. We approach with great caution, for this is one of our favorite spots, though the ducks have a trick of going out on the wrong side of the bushes—undoubtedly the right side for them. The bushes being so high that the ducks are out of range before they show above them.

We try a new dodge this time on the feathered innocents. Jim steps out upon the marsh while I proceed with the boat. If they only come this way, well and good. But no, the fates are against us. Out they go as the boat jars the bushes, but further up than usual, and only one, most likely a youngster, falls a victim by separating from the flock.

We have time for one more stream ere the tide lowers. I give Jim the bow, and tell him to shoot straight and take his time about it, for this is the boss stream of the creek. He stands up in the narrow bow ready for action, the hammers of his Parker lying back like the ears of a horse about to bite. Dod blast it! Dan is in that seat again; but this is not the place or time to rebuke him, for the stream is deep and the boat unsteady. I paddle noiselessly around the bend. The expectation becomes almost painful. With fluttering of wings up rise two beauties. Jim swings his gun and leans to one side. Dan thinks it a good time to get off that seat, and does it so expeditiously that with the report of the gun both Jim and the ducks disappear, he having lost his balance by the recoil of the gun and Dan's untimely move. He clutches frantically at the air, but it availed him not. There is a resounding splash, and Jim's feet are hanging on the edge of the boat, while his body is in the water. He holds the gun at arm's length above the water, the muzzle wobbling suggestively in a line with my head, as he endeavors to dislodge his feet. I think, good Lord, if he should pull that trigger, and forget to offer him any assistance in my anxiety to get out of range of that gun barrel. But in less time than it has taken to tell it Jim is on his feet in water up to his middle, indulging in such roars of laughter as to nearly frighten the ducks into spasms, and sending them scurrying out of the creek as if the devil himself was chasing them. You may be sure I laughed with him. It makes me smile to this day when I think of Jim hanging by his heels, head down, in that little creek.

This mishap spoiled our shooting, but we succeeded in stopping a couple of ducks as they passed out. Putting up a small sail we sped down the Chipoax and Lorne, fairly well satisfied with our bag of seven ducks.

To me Chipoax Creek was a joy forever, and really possessed no mean beauties when viewed at high water. It swept in graceful curves through the green marsh, its course as crooked a as blacksnake's track, now running under a steep bank from which the trees reached down their branches as if to drink, and further on its waters playing about the trunks of huge cypress trees standing well out from the shore. But when the tide went out how marked the change! I have seen the very walls of its muddy channel laid bare, while on either side great slimy flats would come out of the water, their glistening surface broken here and there with decaying snags and dotted with little patches of tangled grass. But it is not my desire, oh, Chipoax! to revile you because your waters leave you uncovered, for many is the time that you have floated my boat and offered up your treasures with unstinted hand. Long may your tides flow in and out and your channel remain unchoked by débris of the sea. OLD MAN.

THE OZARK MOUNTAINS.

THE items in recent numbers of FOREST AND STREAM about the Ozarks have interested me very much. I was in Taney and Christian counties, Missouri, for two weeks during last November, stopping at Forsyth for three or four days and at Ozark for nearly two weeks. Although business engagements prevented any personal experiences with a gun in that country I made diligent inquiry of people well posted.

The truth is I never saw a country where game of certain sorts was so abundant. The flocks of quail were so numerous and so tame that they ran along in the roadway and cocked their eyes up at me as I sat on a horse as chickens might do in a barnyard. The natives thought them rather too small to bother with—very good eating of course and worth killing if a man could bunch 'em and shoot twelve or fifteen at a shot; but as for wasting a whole charge of powder and shot on one quail was sheer extravagance.

In a ride from Chadwick to Forsyth five deer were started on the oak ridges—three in one bunch and two in another. The native who was with me said that my luck in this case was exceptional. He rode over the route very often without seeing even one. However, deer are sufficiently numerous to warrant the assertion that no sportsman need spend a week on White River without getting a handsome head to mount. Deer may be either stalked or driven to water by the native dogs.

Turkeys, the natives said, were so thick as to be a nuisance. They scratched up their corn in springtime and picked it down when the ears became sufficiently matured. Messrs. Al. Spaulding and Charley Blood, two traveling salesmen driving over a route 650 miles long out of Springfield, Mo., told me they frequently saw flocks of from 20 to 50 turkeys along their route and that they never drove over it without seeing turkeys.

Bears abound in the caves along White River and its branches. The natives butcher them for their pelts by going into the caves during cold storms and shooting or stabbing the sleeping brutes. At least that is the story they told me, but it seemed to me it was rather a low down way of shooting even a bear. The natives wouldn't kill each other in such fashion. Taney and Christian counties were the home of the Bald Knobbers. In their fights with one another the Knobbers and the militia always jumped out into the clearing and went at it man fashion. If a man who can shoot will go down in Taney county to the Arkansas line he will surely get a bearskin as well as a buck's head for trophies in the course of two weeks' time.

I do not think there is a panther in the country. I heard of a few wolves, and saw one wildcat pelt. The possum and the coon and dogs and natives who can ap-

preciate the sport which these animals afford can be found in their glory.

It was singular, but I did not see a partridge (grouse), nor did I see a man who had seen any. I cannot believe that they do not exist there. It is a land that produces nuts and berries in the utmost profusion.

Of course, wildfowl shooting is good in the season. When the geese and ducks come south in the fall the waters of White River are covered with them.

If I could go there for sport I would go in October or not later than November. I would carry a Winchester for large game, a shotgun for feathers and a .22cal. rifle for fun. If a man could not supply a hearty appetite with enough game with the aid of the little rifle he ought to go hungry; and he would not need to take an unfair advantage of the game either.

To reach the Ozarks from New York take the Pennsylvania road to Springfield, Mo. It will cost a little over $40 including palace car and meals to ride there. A spur of the 'Frisco road runs down into Taney county. The fare is a dollar, I think. Thereafter one can either hire a guide with dogs, team and camping outfit for, say, $3, or he can take up quarters at some tavern. A pleasant trip would include a stop at Ozark, Christian county, at Mrs. Wrightsman's hotel; another at Forsyth, Taney county, at the Hilsabeck House; another at Vivian's, in Bakersfield, Ozark county. Mrs. Wrightsman and Mrs. Vivian are model cooks—serve food that a Northern man can relish. Vivian is a sportsman of the native sort, and a right good fellow.

I have forgotten to mention the fish. I saw some big channel catfish, one weighed over 40lbs. I was told of others weighing over 75. I was told there were no trout there. This seems to have been an error from what you have printed. The water was clear and beautiful in the streams, but it did not taste just right to me. I believed those who said there were no trout—the taste of the water made me do so. Possibly the fault was in myself.

I can heartily recommend the readers of the FOREST AND STREAM to try a trip to the Ozarks. It is a most beautiful country, and the climate in the fall can be described in no better way than by the word delicious.

JOHN R. SPEARS.

PATTERN AND PENETRATION TESTS.

Editor Forest and Stream:

Your journal is entitled to the thanks of shotgun men who like trap practice for the exhaustive gun trial you have begun. But the task will prove a lengthy one. Much time, good judgment, technical knowledge and powder and shot will be required if the experiments are carried to any satisfactory conclusion. But the points which recommend this trial to trap-shooters lies in the hope that that trial may demonstrate what should be the method of handicapping guns, so as to put the handlers on an equality with each other, so far as guns of different weight and caliber are in question. Handicapping by caliber will, I believe, be found to be wrong. Other things being equal, weight, which largely if not wholly governs charges, will be found to be the factor to be taken into account in the greatest degree, as applying to guns alone, leaving the handler out of question. I believe that the tests for killing power will show strongly in favor of heavy guns, without reference to bore. That is, the actual killing power of two guns of equal weight but of different caliber will be found to differ but little when each gun is loaded to bring out its best capacities. If your trial is carried out with the fullness and accuracy of detail that characterized the rifle trial conducted by FOREST AND STREAM, and the problems presented well worked out, it will be a great contribution to the science of gunnery as applied to shotguns. I confidently predict that at its conclusion this trial will lead to radical changes in the present general method of equalizing guns at the traps, and that method adopted by the National Association in particular. NOR'EAST.

AUBURN, Me.

Editor Forest and Stream:

I have been a subscriber and constant reader of the FOREST AND STREAM for the last four years, and I consider it good authority on all matters pertaining to guns and gunning. I read your articles on trajectories and learned a great deal that was useful to me, and I expect to learn a great deal more from your test of shotguns. The questions as to charges and weights of guns as laid down by J. J. M. are questions that have troubled me for a long time, and it affords me pleasure to know that so able authority as the FOREST AND STREAM has undertaken the solution of them, for I know that it will benefit hundreds of gunners who now carry guns, some too heavy and some too light, some too large in bore and some too small for the purpose. N.

POTTSVILLE, Pa.

Editor Forest and Stream:

In your tests it might be well to see whether a recoil pad lessens penetration; also, how much more 1oz. of chilled shot will penetrate than 1¼oz., same load of powder—say 3¼ drams dead shot; how much more a gun will penetrate when the stock is placed against a post. This point may show shooters the importance of holding a gun very hard against the shoulder. H.

PHILADELPHIA.

Editor Forest and Stream:

My suggestions for the shotgun trials are as follows: First—Will a gun barrel shoot as hard when well greased as it will when dirty with soft powder? Second—Will a rubber recoil pad weaken penetration? Third—Is there any difference of account between a 26 and a 30in. barrel? W.

NEWARK, N. J.

Editor Forest and Stream:

In describing the guns tested at Claremont the make of barrel and kind of choke is not given. Barrels are of two kinds, English and Belgian, and the advocates of the former claim for them greater penetration because of their being made of a harder metal and consequently possessing greater elasticity. In this trial of penetration the make of barrel, *i. e.*, whether English or Belgian, should be declared. It was required to be declared in the trial conducted by the *London Field* in 1879.

In respect to declaring the kind of choke I have this to say. While the contest was between cylinders and chokes it was sufficient merely to state that the particular barrel was choked, but now with cylinders practically out of the race and the contest left to the different chokes, the kind of choke should be given; and the declared pattern should also be taken as it was in 1879. In the latter trial, recoil, depending as it does on the boring of the gun as well as on the amount of charge and nature of explosive, was a prominent factor in the test. I don't see it mentioned here.

In an article entitled "Pattern and Penetration Tests," published Feb. 21, 1889, you stated that the gun's pedigree would be taken with description of barrels, whether choked and how and of what material.

Certainly in a gun's pedigree so important a matter as the parentage of its barrels should not be omitted; and your correspondent J. J. M., whose interesting letter you published with that article, will be disappointed unless the kind of choke is declared, for he hoped to see the relative merits of the recess and muzzle choke determined.

ROCHESTER, N. Y. R.

THE ARKANSAS GAME LAW.

LITTLE ROCK, Ark., June 24.—*Editor Forest and Stream:* I see in your last issue a letter from Mr. S. D. Barnes, of Bald Knob, about the Arkansas game law, which deserves some attention. I agree with him that changing the open season for deer from September to August was a step in the wrong direction, but it is due to the demands of the farming element, whose interests seems to be so dear to his soul. I am well versed in the history of game legislation in this State, having had the matter largely in charge. I know that we had to accept this change or a repeal of the whole law because the farmers deluged the Legislature with petitions, alleging that August was the only time they had to hunt deer, having their crops laid by and nothing else to do. So we had to take the change and make the best of a bad bargain.

But Mr. Barnes's wrath seems to be chiefly poured out on the non-export law. I drew the law and think I knew what I was doing when I saw it through. I was after just such gentlemen as Mr. Barnes speaks of, who combine pleasure and profit and supplied the Memphis market with our game until venison and wild turkeys were quoted "lower than beef and poultry." And the law will accomplish that result, as it puts too heavy a penalty on the railroads for carrying the game to make it profitable to haul it out. Mr. Barnes's friends may have to go to work for a living instead of camping out and killing everything they can see for six or seven months of the year and selling it for less than the value of the hides.

I do not know Mr. Barnes, but judge from his letter he is in sympathy with the market-hunters. I have seen a good deal of the market-hunter and he does not appeal to my sympathy at all. I have seen in the heat of summer the market-hunter's camp surrounded with spoiled game. I have seen a barrel of prairie chicken eggs. I have seen fish hauled out with seines and left to rot for want of ice. And I have seen the prairie chicken completely annihilated in this State by the market-hunter. If the law makes some of these gentlemen go to work it will accomplish that much good.

The law does not prevent Mr. Barnes or any one else from killing a deer in the open season for his own use or to sell in Little Rock or Bald Knob. It does prevent his sending it to St. Louis or Memphis, and it does prevent the hundreds of professional hunters who camp in our woods all the year round and violate our game laws from carrying their game to market, and as the profit of the business is gone I hope it will stop.

Mr Barnes also pours out his wrath in a mighty flood on a law that would prevent his going camp-hunting anywhere but in his own county.

I do not suppose the idea of reading the acts of the Legislature ever entered Mr. Barnes's head. If he had done so he would have found that there is no such law on the book. Such a bill was introduced at the instance of the farmers, who claimed that hunting parties started damaging fires, but it never passed. So Mr. Barnes need not hire his ranch in any county, but can go and hunt like a gentleman wherever he pleases; but I fear me the occupation of the pot-hunter is gone until they can work up enough influence to repeal the law. J. M. ROSE.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 27.—I know of three woodcock nests within ten miles of Chicago; but alas! so do certain other parties, and doubtless within the next two weeks the young birds will all have been illegally and legally slain. Hardly a woodcock in this vicinity ever sees the light of the legal opening day of the season.

The upland plover (Bartram's tatler) breeds abundantly near this city, and there are now a great many of the birds about on the prairies, although it would be a shame to think of shooting them now. "Italian Joe," the best plover shooter in Chicago, says he could kill fifty in any day, but he adds, "me no care-a for dem. No fetch-a much mun when-a sell." Italian Joe is one of my new friends. His specialty is plover, and he will not hunt snipe, ducks, chickens, or anything else except woodcock. I am going out after plover with him this fall and will see how he shoots them. He killed 9,000 one spring four years ago, and all within fifteen miles of Chicago. So goes the game. E. HOUGH.

RIFLES OF SMALL CALIBER.

Editor Forest and Stream:

Considerable has been said about the efficiency of the .22cal. rifle as a hunting implement as compared with other calibers. I think the general conclusion of all that has been written is that if the bullet is only put in the right place it will often do wonderful execution, and to further substantiate this I relate this true incident: Three years ago last winter two young boys by the name of Heaton went hunting in a marsh near Kalamazoo, in this State, taking with them a Flobert and a Ballard rifle, both using the ordinary .22cal. R. F. cartridge. While in the marsh the boys came across the track of a bear, and as they were lads of considerable grit they followed after bruin all the rest of the day, as long as they could see his track, and when they could follow it no longer they stayed all night at a farmhouse and started again on the trail as soon as it became light enough to see the next morning. They followed him the next day, getting sight of him several times. They got pretty close to him once in crossing a lake on the ice, but not near enough to commence hostilities, and he kept at a safe distance until he became tired and hungry, since he could not carry his dinner with him as the boys did, for one of them, when opportunity would offer, would go to some house, and getting a lunch would share with the other. In this way they followed the bear until he began climbing trees to get away from his pursuers, but he would slide and tumble to the ground on their approach and get away. At last he found a tree that apparently suited him so well that he thought he would not leave it, but he changed his mind after one discharge from the boys' guns, and coming to the ground charged on them, when the tiny ball from the Ballard rifle passed down the side of the bear's neck, and going on went through his heart, killing him almost instantly.

I don't want any one to think that Michiganders as a rule hunt the bear with a .22cal. rifle, neither would I advise any one to do so, but the fact remains that it has been done, and successfully, too, and that a .22cal. rifle of a good make is an effective and valuable weapon if properly handled. Now, I would like to know whether any one else in all these United States ever knew of any other bear or equally large animal being killed with only a small .22cal. rifle? S. J. H.

CONSTANTINE, Mich.

Sea and River Fishing.

PENNSYLVANIA FISH LAW.

FOLLOWING are extracts from the laws enacted by the last Legislature relating to game fishes:

SECTION 1. *Be it enacted, etc.* That hereafter no person or persons shall cast, draw, fasten, or otherwise make use of any seine, drift net, fyke net, or net or nets of any other description, or use any other appliance for the catching of fish, except rod, hook and line in the Delaware River. *Provided*, That this section shall not extend to shad fishing.

SEC. 5. It shall not be lawful to catch or kill, by any means whatever, any rock bass or any wall-eyed pike, otherwise called Susquehanna salmon (species recently introduced into the river Delaware), within two years of the passage of this act.

SEC. 6. No person shall, by any means or device whatsoever, catch or kill in the Delaware River any black bass, rock bass or wall-eyed pike, commonly known as Susquehanna salmon, between the first day of January and the thirtieth day of May in any year, nor shall catch or kill any of said species of fish at any other time during the year save with rod, hook and line.

An act similar to the above, applying to the Delaware River above Trenton Falls was enacted, to become operative whenever New Jersey shall enact a law of like tenor.

SEC. 1. *Be it enacted, etc.*, That hereafter no person or persons shall cast, draw, fasten or otherwise make use of any seine, drift-net, fyke-net, or net or nets of any other description, or use any other appliance for the catching of fish except rod, hook and line in any rivers, streams or waters of this Commonwealth. *Provided*, That this section shall not extend to shad, herring and sturgeon fishing. *Provided*, That the provisions of this act shall not apply in the open season to the catching of suckers, eels and catfish, in streams other than trout streams, partly or wholly included in the survey of farm lands owned by any citizen of this Commonwealth, but nothing contained therein shall permit fishing by seines at any time.

SEC. 4. No person shall catch or kill, in any of the rivers, waters or streams of this Commonwealth, any black bass or wall-eyed pike under 6in. in length, or any rock bass under 5in. in length, under a penalty of $10 for every fish so caught. But should any fish be taken of less size than the above, or should any wall-eyed pike or rock bass of any size be taken from waters in which they have been introduced within two years from the passage of this act, it shall be the duty of any one taking or capturing the same to return the fish immediately to the water from whence taken; and no person shall by any means or device whatsoever catch or kill, in any of the waters of this State, any pike or pickerel between the first day of December and the first day of June in any year.

SEC. 5. No person shall by any means or device whatsoever catch or kill any black bass, rock bass or wall-eyed pike, commonly known as Susquehanna salmon, between Jan. 1 and May 13 in any year, nor shall catch or kill any of said species of fish at any other time during the year, save with a rod, hook and line. *Provided*, That neither this nor any of the preceding sections of this act shall apply to fishing in the waters of Lake Erie.

SEC. 6. Nothing in this act shall be so construed as to prevent the catching of fish, other than game fish, by means of hand or cast nets for angling or scientific purposes, or the catching of game fish by order of any member of the State Fish Commission of this State for the purpose of stocking in other waters.

NEW CONNECTICUT LAWS.

THE following laws were enacted by the last Connecticut General Assembly and will go into operation Aug. 1:

Prohibiting fishing in Lake Kenosia, Danbury, from Nov. 15 to April 15, until 1894.

Prohibiting taking or selling any striped bass under ½lb.; penalty $10 for each fish.

Prohibiting fishing in Woodstock Lake, or in Little Pond, or in Little River, from the lake to the Putnam Water Company's dam, from Nov. 1 to April 1; maximum penalty $7. Repeals part of section 2,416 relating to these waters.

Repealing part of section 2,444 relating to fishing in the Ashland Cotton Company's reservoir and the Griswold Paper Company's reservoir, Griswold.

Only bona fide residents shall fish in Holly Pond, Stamford.

Prohibiting other than hook and line for catching fish in Doolittle, Benedict and Tobey ponds in Norfolk, and Lake Wangum in Canaan.

Providing for surrender of oyster grounds to the State by not only a grantee, but his "heirs or assigns."

Prohibiting fishing in Mudge, Beardsley or Indian ponds, in Sharon, from Feb. 1 to June 15; maximum penalty $30, or 20 days in jail. Lake Washinee, Salisbury, from July 1, 1889, to July 1, 1893; maximum penalty $7 fine or 30 days in jail; Long Pond or Round Lake, Salisbury, Nov. 1 to May 1, same penalty.

For the protection of seed oysters in Mianus River and Greenwich cove.

Regulating leasing of natural oyster and clam grounds in Branford.

Prohibiting fishing except by owners, in the West Thompson reservoir; penalty not less than $7 nor over $50, or 30 days in jail.

Reorganizing the Board of Shell Fish Commissioners and reducing expense of the commission.

Prohibiting the taking of black bass from May 1 to June 10, whether in ponds or running water.

THE ARKANSAS FISH LAW.

SECTION 1. That no person shall be allowed to place, erect or cause to be placed or erected, or maintained in any of the waters of this State or in front of the mouth of any stream, slough or bayou, any seine, net, gill net, trammel net, set net, bag weir, bush drag, any fish trap or dam, or any other device or obstruction, or by any such means to take or catch any fish in any of the waters of this State.

Provided that the prohibitions of this section shall not apply to waters wholly on the premises belonging to the person or persons using such devices, and provided further, that it may be lawful to use a very small seine not to exceed 15ft. in length for catching very small fish, usually called minnows, which may be thus caught to be used for bait or for stocking other waters with fish, but for no other purpose.

Provided further, that it shall not be unlawful for any person or persons to use a seine not exceeding 60ft. in length in any unnavigable stream or lake in this State to catch fish for family use or for picnics and for sale, nor shall it be unlawful for any person or persons to place traps in the unnavigable streams of this State, provided such traps do not obstruct the free passage of fish in ascending and descending such streams.

Any person who shall violate any of the provisions of this act shall on conviction be deemed guilty of a misdemeanor and shall be fined in any sum not less than $5 nor more than $200.

Approved March 26, 1889.

TROUT STREAMS OF SILVER BOW.

DIVIDE, Silver Bow County, Montana.—The country I am about to describe is little known and only to a few. It abounds in trout, sage hens, grouse, ducks, geese, a few swan, bears, moose, elk, deer and antelope, with also a few buffalo. It is very easily reached, and sport can commence the first day out and continue going in and out. The trip also can include a trip to the great National Park.

The best way to reach this hitherto unknown hunting and fishing locality is from Beaver Cañon, a small station on the Utah and Northern Railway, where a team can be secured, or the sportsman can take stage. The best plan is for three or four to go together and take their own camp outfit, making it as small and simple as possible.

The first day I went as far as Camas Meadows, distant from Beaver Cañon about eighteen miles. Camas Meadows is a valley about ten miles long, four or five miles wide; through it run four spring streams, about 10ft. wide, of bright, clear, cold water, and alive with trout running from 4oz. to a pound.

My first camp was on Indian Spring Creek, in a cabin built by Gen. Sheridan during one of his scouts after Indians. There I stayed eight or nine days, varying my sport with hunting and fishing alternately. The first day's fishing I captured 250 trout, using the fly. One great feature about the fishing here, and in all the streams throughout this part of the country, is that the brush interferes but very little, and that there is no swamp or marshy ground; the streams nearly all rising in one or two large springs.

Commencing at the springs to fish, the stream is a little wider than lower down; the trout are hard to capture, and it is only by keeping well out of sight that the fisher can hope to allure them from the bright, clear stream. Fishing on, going down, the stream winds through the most beautiful meadowland, running into large holes with riffles in between. Here the fishing is superb. I have taken 30, 40, and as high as 60 trout from one riffle. The other three streams are similar to the one described, all uniting together to form one stream called Camas. The fishing on the main stream is not quite so good as on the small streams, and I think the creek I camped on a little the best.

My next camp was on Sheridan Creek, about ten miles from Indian Springs. Here the fishing is better than at Indian Springs, the trout being larger as is the creek. Sheridan is about twenty miles long and heads in the mountains; the first six or seven miles of its course being small; about a mile before it comes out into the valley it is joined by the waters of a very large spring. This part of its course is very rapid, rushing over boulders into holes and strong riffles. The first day I fished from the spring down about a mile, taking about 60lbs. of trout, having among them several that would weigh nearly 3lbs. The next day I fished two miles down stream. Here the fishing is still better, the holes and riffles being larger and the trout larger and more plentiful. By going a short distance up the mountain here, elk, deer and bear are found plentiful; here is also good duck shooting.

Ten miles from Sheridan Creek comes Icehouse, formed by a large spring; the water in the creek is so cold that it is only used by the trout during spawning season. Three miles further is Shotgun Creek, formed by Sheridan, Willow and Icehouse creeks and one immense spring. Here is the home of Mr. Geo. Rae and Jas. Dalley, two hunters and fishermen. They have good accommodations and make the sportsman at home. Mr. Rae has put in a small dam across Shotgun, and here the trout are in such numbers that it is impossible to see the bottom. On Shotgun the fishing is very good; one can also get ducks, geese, and antelope, etc., the trout here run from ½ to 3lbs. Shotgun Creek is three miles long and about 300ft. wide; it empties into Snake River about one mile below the crossing and the Snake River Hotel; the hotel is kept by Messrs. Kountz & Caldwell, who are well acquainted with the best hunting and fishing grounds in the country. Here we are now on one of the finest trout streams in America, the river here is about 100yds. wide and just nicely fordable with a team. The river is bright and clear. Crossing you see trout darting about in every direction. Here I procured a boat, and putting in my camp outfit fished down the river about three miles and made camp at the head of some rapids in a beautiful grove of pines. In the morning the deer would come close to camp to drink. The woods here were full of squirrels, jumping and barking in every direction. The next day I was joined by two gentlemen from the hotel, and what sport we did have. Here the fish are very strong and fat, bringing into play all the skill the angler has got before they will succumb.

My next camp was about three miles above Snake River Hotel. Here the trout are very plentiful and yield all the sport a man wants. My next camp was ten miles from the hotel, at Mr. Geo. Rae's upper camp. Here I got one of Mr. Rae's boats, and would fish up to the spring. This spring almost makes the river, being about 100yds. wide and 3ft. deep, bright, pure water and alive with trout. Here I would fish during the forenoon, then drop slowly down stream fishing along, taking a trout almost every cast. One can form an idea of the numbers of trout here, passing over them in hundreds in schools; indeed, just before sundown they would keep the river in a continual boil, feeding on the black gnat.

The North Fork of Snake River heads in Henry Lake, a large sheet of water full of trout, situated in the most beautiful scenery, and running through a beautiful valley for ten miles until it joins the waters of the spring. Through this valley run six small spring streams. I fished in one of them a day, taking sixty trout averaging 3lbs. From Mr. Rae's upper camp ducks, geese, etc. are plentiful, with bear, elk, moose, deer and antelope. The hunter need never go a day without having plenty of sport.

Returning to Snake River Hotel, I took a trip to Highland Park. Here duck and geese are plentiful, affording the very best of sport. The fishing is very good. In fact, from the start and back, nowhere have I seen such a country for game and fish, and I have fished in Colorado, New York, Utah, Wyoming, Idaho and Montana, and in various parts of Europe.

The climate is very good in summer, not hot, with few or hardly any mosquitoes, nights cold. Trout keep good. I did not have any spoil, shipping twice a week from Beaver Cañon to my friends. Mr. Bassett runs a stage from Beaver Cañon, B. C., to the National Park, through the country I have described. The roads are very good, and accommodation can be got in Camas Meadows at Mr. Saml. Hancock's, whose wife is a most excellent cook. It is here that you can get trout cooked to perfection, and the best of milk, butter and home made bread. The next place is Mr. Geo. Rae's; next Snake River Hotel. But the best is to have your own outfit, which should include, if possible, a canvas boat for Snake River fishing; then the sportsman can move camp, go and come as he pleases.

Provisions can be bought in Beaver Cañon, but if the hunter or fisher wants anything extra he must bring it with him, and above all, plenty of good, fine fishing tackle. For all the trout are so plenty here, they are very dainty and will not jump at anything. T. T.

A RAINY DAY CONVENIENCE.

IT was our last day on the Greenbrier, the day broke gloomy and threatening and we staid around the camp until nearly 10 o'clock to give the weather a chance to do one thing or the other, until finally it appeared that it had decided to do neither, so Cooke and I put out for the Burnt Camp, determined not to lose the day's fishing, rain or no rain. The trout bit beautifully, and we were entering upon a fine morning's sport, when patter, patter, down came the rain on the leaves of the overarching trees and through the interstices of their branches into the water. Not wishing to get wet, we sought a partial shelter under the overhanging trunks and thick canopy of leaves of a couple of large trees.

"I'll tell you what, Charlie," said I, as I began to shiver as the rain continued steadily and the moisture slowly but surely found its way through my heavy flannel shirt, chilling my very vitals, "next year I am going to bring out a short cape made of heavy drilling, well oiled, to come down about to my waist and cover my arms; a rubber coat's too bulky and heavy and I don't care for my legs anyway; it will be light and not bulky and can be strapped or tied to the creel, and think what a convenience it would be to-day."

"It would that, it's a capital idea," said he, as he abandoned his tree in disgust and strode into the river again, making an experimental cast as he went, the experiment proving an immediate success. "You see, they bite right along, rain or no rain, and here we've not only lost an hour's fine fishing, but are wet and chilled and in no condition to fish any longer. The cape needn't be long," he continued, as he reeled in his line, while I gladly followed his example, "all a man needs is protection for his chest and vital organs, his legs are wet anyhow from wading. But," he continued, as we made our way back to camp through the drenched and dripping undergrowth, while the rain pattered continuously on the leaves above us, "the cape would be better if made of the oiled or rubber cloth sold in the hardware and harness stores for buggy tops, curtains, etc."

"I don't think so," I replied, "the rubber is hot and heavy, and as I have had considerable experience with the drillings in the shape of canoe aprons, tents, etc., I am confident it is the best material for the purpose."

"Well, I think I'll take the rubber cloth," he continued, as we reached the camp, and with it warmth, comfort and dry clothing.

The next summer found us in the mountains again, and this time our outfits were augmented by a cape of oiled drilling apiece. Charles had made and tried his cape of rubber cloth, and had promptly thrown it aside on seeing mine and had provided himself with one of drilling, like it. We had had a week's fishing in the Greenbrier, the water was unusually low, and the fishing consequently not as good as usual; the trout were small and shy and it persistently refused to rain, so we packed up one fine morning and started for fresh fishing waters.

We ascended to the very summit of the Alleghany Mountains, the backbone of the eastern half of the continent. A faint trail left the road and turned off into the trees and wound down a steep, dark defile; we climbed down out of the wagons and boldly followed it, the wagons bringing up the rear; down, down, a thousand feet or so below the lofty summit, the steep tree-clothed walls of the gorge towering above us and shrouding the place in a perpetual twilight. We pitched the camp on the banks of Deer Creek, whose brawling tide we had followed down almost from the summit of the mountains, on a small piece of comparatively level ground which we were fortunate enough to find; rigged up our tackle, strapped our water-proof capes to our creels—for the long-wished-for rain was close at hand, now that we did not want it—and went fishing. That was a weird, wild evening's sport we had. The creek was a study for an artist, and worth the visit just to see as it went brawling and tumbling down the mountain. It was a continuous cataract; there were no pools, except the short, deep holes of a few feet in extent between and among the rocks and ledges. It looked like going down stairs to look ahead, and the creek came piling down at you from among the treetops as you looked back, while a mist hung over its entire visible course like the spray from a cataract.

And the fishing? I took nine trout, all upward of 6in. in length, out of one small hole of a few feet in extent, without moving from my tracks; and that's the way the fishing was.

Presently the rain came down; so did the creek. Something broke loose somewhere above, and a big wall of water came roaring down the gulch and piling down that devil's stairway, and there was no more fishing, nor wading either.

But about the capes? It's remarkable how it takes the enthusiasm out of a man when he gets the seat of his trousers wet; and as the storm roared and howled, and the rain fell in torrents and whirled around us in great blinding sheets and the water streamed down in rivulets over our shoulders and ran off the edges of our capes, this very soon occurred, and in a few minutes our lower limbs were thoroughly drenched; but as we were perfectly dry and protected around the shoulders and body, we didn't much mind our wet legs. In an hour more we were all assembled in our tent again, and while Otey got us up a steaming hot supper under our fly adjoining, we doffed our wet fishing togs, including our capes, and it was found that, although we wore no coats, our flannel shirts under the capes were not even damp, and we unanimously voted the capes a brilliant success.

But the capes? Take 2yds. of heavy drilling, 28 or 30in. wide, cut into two pieces, each 1yd. long, sew together at the selvage, making one piece, 50 to 60in. wide; cut in circular form, making the cape long enough to come well down below the waist, and over the arms to the ends of the coat or shirt sleeves; leave out a little over one-third of the circle for the open front, cut to fit the neck closely, put in buttonholes and buttons down the front; oil heavily with boiled linseed oil with a little turpentine and Japan dryer in it. The neck may have three or four gores in it to insure a snugger fit, but they are not necessary. Make up the goods with the twilled side out. Total cost about 25 cents. Total worth inestimable.

STAUNTON, Va. F. R. WEBB.

CONNECTICUT TROUT STREAMS.

MIDDLETOWN, Conn., June 14.—*Editor Forest and Stream:* Trout fishing in this section of the State has been uncommonly good. Not only large catches have been made, but the fish are of good size and in excellent condition. This, I am credibly informed, has been the experience of sportsmen in other parts of the State; and it is universally believed to be the result of the work of the State Fish Commissioners, continued uninterruptedly for about ten years past.

Last week one of our best fishermen went a short distance from the city for about a half a day, and returned with such a beautiful string of trout as the following, each fish being carefully weighed:

One trout weighed	1¼	lbs.		=1¼lbs.
Three "	"	1	" each	=3 lbs.
Five "	"	¾	" "	=3¾lbs.
Six "	"	½	" "	=3 lbs.
Fifteen trout weighed a total of				11lbs.

The same gentleman has had good luck every time he has been out this season, and he says he has had many years of experience in trouting, but nothing like this.

Complaints, however, come from all parts of the State against the selfish opposition of riparian owners. Heretofore, with few exceptions, fishermen have been permitted to fish on any stream, private or public, so long as they did no damage to the premises. But now that streams have been so much improved through State liberality, the riparian owners find that they can make large profit out of them by leasing the rights of fishing to clubs and others, and so the public is excluded. The people's money paid for the fish, but the people cannot touch them.

These unjust claims have led to numberless disputes and some litigation, but so far without any legal results. The Hammonassett Fishing Club of New Haven quietly secured the exclusive right of fishing on the Hammonassett River—one of the best trout streams in the State—by leasing long stretches of the banks on either side, and posting notices against trespassing. This has naturally provoked a good deal of ill-feeling in this section. The Middlesex County Association for the Protection of Fish and Game, supported by many gentlemen of this city, had given particular attention to this stream, causing it to be thoroughly stocked by the State Commissioners, and protected at the expense of the association for several years. They looked forward to the time when the river would so abound in fish that the public would find abundant sport there. But the New Haven club claimed to monopolize the river and the people were excluded. After considerable correspondence between the club and the association, it was agreed to test the rights of the public as against the club by legal proceedings. Upon due notice to the club, agents of the association went upon the river and fished for trout, in the presence of the watchman of the club; and it was understood and expected that a suit for trespass would be brought by the club to test the rights of all parties. But no such suit was brought. This was in the summer of 1888. During the following winter John S. Beach, Esq., the counsel of the club, purchased or leased tracts of land on the bank of the river, which were most attractive to trout fishermen, and then brought a suit in equity against some of the gentlemen who had participated in the above-mentioned trespass, and prayed for the injunction to restrain them from committing trespass on his premises. This suit was promptly resisted. A motion was then made for a preliminary injunction pending the suit. Before this could be heard the suit was suddenly abandoned, and nothing further has been attempted.

There are serious legal questions involved in the matter. In most cases it is almost impossible to show that the riparian owners on streams stocked at State expense had done anything that affected their rights of property in the stream, or that would estop them from defending such rights against all trespassers. And even if it could be shown that they had solicited fry from the State and used it in stocking their private streams, it is claimed that it would not justify the people in trespassing on their premises to catch the fish. These and other points are involved in any lawsuit that may arise. Of course, the monopolists take the high ground that nothing the State can do can prejudice their rights of property. The statute in regard to private ponds is explicit. But not so in regard to private streams. All attempts to frame a law to meet the emergency, even for the future, have proved vain. Unless such a law can be framed, State aid must cease. The State cannot justly continue to spend the people's money for the benefit of a few private clubs or wealthy gentlemen. The opposition to a law upon the subject comes mainly from the farmers, and the prospect now of any relief for the people is far from encouraging.

*

Editor Forest and Stream:

We have near our village a beautiful sheet of water, Crystal Lake. Local sportsmen stocked it a number of years ago with black bass and landlocked salmon. Only two or three specimens of the latter have ever been taken. The last one, two years ago, weighed 4¼lbs. Yesterday Fred Close and Frank Talcott had the luck to capture one that promptly tipped the scales at 7¼lbs. It took 35 minutes to conquer it. All the old fishermen are wild, and some of them will no doubt postpone Maine trips and camp on Crystal Lake. Bass of 3 to 6lbs. are very plenty there, and for the benefit of bass haters I will say I never yet dissected one that showed any symptoms of having dined off either pickerel or perch.

The past season has been a very flattering one for trout. I never knew so many fine strings being taken of large trout.

Although very many of our streams are posted, yet there are plenty left just as good for all of us. C. W. C.

STAFFORD SPRINGS, Conn., June 28.

SOUTHERN MASSACHUSETTS LEAGUE.

Editor Forest and Stream:

The Southern Massachusetts Fish and Game League was organized in New Bedford in the autumn of last year. The objects of the association were fully set forth in a circular letter, a copy of which was sent to you.

For several years we have seen that many of the valuable food fishes of our sea coast were becoming fewer in number and of diminished size. We have attributed this to the increasing number and effectiveness of the apparatus used for catching them, and chiefly fixed or stationary engines for their wholesale capture.

Several times many of us have united our efforts to obtain protective legislation, but hitherto without much success.

During the session of the Legislature now just brought to a close, the League made another attempt and again without avail.

We were met as heretofore by a combination of several interests, backed up by any amount of money, and sustained by a committee chosen specially to look out for and protect those interests. These interests, as some of your readers may not know, are the trappers themselves, the several twine and seine manufacturers, the cod and mackerel fishermen, the railroad corporations as carriers of freight, the Board of Trade of the City of Gloucester, the marketmen of the cities, and a powerful organization having for its object the defeat of any restrictive legislation.

We are, however, neither disheartened nor discouraged. We are more and more convinced each year that as to certain kinds of fish, their exhaustion is not only possible, but probable from these destructive methods of fishing. Moreover, we are satisfied that we are instructing the people, and there is a growing public sentiment in our favor, which if we keep up, will eventually give us the advantage.

I shall have time now to speak of only one species of fish, the tautog or blackfish of New York.

The upper part of Buzzard's Bay seems to be the nursery of these fish. The returns from about seventy-five pounds and weirs all around the bay, and also in Vineyard Sound for 1888, gave a catch of about 63,000 of these fish, while on the neck of land on the east side of the Acushnet River, in a length of only about three miles, twenty-four traps or pounds took 50,000 of them.

While we believe that this stationary apparatus and indeed all the wholesale enginery for catching fish is destructive, the tautog in our waters have suffered to a greater extent than any of the other kinds.

As the setting of pounds is by law permitted only to such as have licenses granted to them by the Selectmen of towns, and as we believe no such licenses will be granted next year in Fairhaven, none of those twenty-four traps will be set, and consequently we shall have the chance hitherto refused to us to see whether our waters will not be repeopled.

We shall watch the effect with much interest, for upon it will depend all our theories as to the connection between fixed apparatus for catching fish and their increase or decrease in numbers and size.

Aside from the possible exhaustion of the fisheries, the traps and weirs do an almost incalculable injury by hindering the proper and natural distribution of the fishes during the season. Early in the year immense numbers of fish are taken in a very short time, so that the waters are depleted for most of the summer and autumn, the markets are glutted so that it hardly pays to ship them, and multitudes are dragged upon the shore to waste, or at the best to be spread upon the land as manure. Late in the season, consequently, no fish can be found either for food or for sport.

It has been reported to us that great quantities of scup (or porgie) have been taken to the westward of us in the pounds, and thousands of barrels of them have been yarded up for a market. None have come yet into this vicinity, as, but for this, it seems to us they would have done, as they used to do years ago.

Only a few bluefish have yet been caught with the hook and line, and these only in the upper waters of the bay.

We shall try to keep ourselves posted as to all the facts of value to the fishermen, as well those who fish for food as those who fish for sport. And I shall be pleased if anything I can say shall be of interest to you or to your many readers, or shall add anything to the stock of information upon a subject so important, and upon which so few people seem to have any reliable information at all.

NEW BEDFORD, June 8.

INCIDENTS IN MY HUNTING LIFE.

IV.—REELING IN A TROUT.

IN the spring of 1857 a party from Bethel started for the Rangeley Lakes on a fishing tramp. They were Rev. Zenas Thompson, the veteran bear killer, and Josiah Brown—both of whom have since gone to the happy hunting grounds beyond—and the third Joseph Twitchell. Arriving at Upton at the foot of Umbagog Lake early in the afternoon, they added to their company the writer, as guide, commissary, cook, boatman and companion. All things being ready we started up the lake in a row-boat. We had hard pulling, for the wind was ahead and blew hard, and we had to hug the western shore and followed near the land to the extreme end of North Bay, and so on up the East Arm. When we arrived at the carry landing it was about dark. But we were all so anxious to get to Mollychunkemunk Lake that night, to get the morning fishing, that we decided to cross the five miles as best we could that night. We got on very well until the last mile was reached, then it was pitch dark, and with only a spotted or blazed line through thick woods over rough ground to travel. However, we managed—one of us holding on to a spotted tree, while another went ahead and found another spot, and so on—to grope our way slowly along, and about midnight arrived at Middle Dam, where we found a small board camp just large enough for our party. We soon had a generous fire burning and cooked our tea and lay down for the rest of the night on our sweet balsam bed. We were awakened during the night by some animal jumping on to our camp, but we were so tired out by our last night tramp that we didn't scare worth a cent, and early in the morning we started for the dam, some quarter of a mile away, to try trout fishing.

Previous to starting, Zenas had instructed Joseph in the art of landing trout with the nice slender rods and reels which Joseph had never used nor even seen before. Zenas told him he must gradually reel the fish in after striking him, and at the same time call for the guide to help land him.

Joseph went down upon the apron at the foot of the dam and the rest of us tried our luck above the dam. Joseph had not been there long before we heard a great outcry above the roaring of the waters a-calling for help. Climbing quickly upon the dam, we discovered the cause of the alarm, for there was Joseph crying out at the top of voice, "Come quick! I've got him all reeled up."

And, sure enough, there he was with a five or six-pound trout reeled up within three feet of the end of the rod, jumping and threshing, first down to the bottom of the white water as it rushed through the dam, then up and out into the air above; and Joseph puffing and blowing and holding on and singing out, "Come quick, or I shall lose him." This was more than we could bear; we fairly roared with laughter before we could go to his assistance.

This was Joseph's first large trout; and he thought he was following out the minute directions of Mr. Thompson as he reeled him up solid. But Joseph saved his fish by the assistance of the guide, and he doubtless remembers this and many other comical instances of his first trip to the lakes, when the only road in was an Indian trail and blazed trees.

At that time it was not much labor to get all we wanted; and after cooking in various ways and eating all we could of the delicious red-meated beauties, we brought away all we could take care of; and treated our friends not only with a nice mess of trout, but also with the amusing story of "reeling him up."

J. G. R.

BETHEL, Me.

BOSTON ANGLERS BACK FROM MAINE.

THE trouting parties are about all in, and now the situation is left to the tourist and the vacationist. With the fishing tackle people, trout baskets and lunch baskets, with cheap rods and lines, sell better than the really practical tackle of earlier in the season; all of which shows that the real season, when the sportsmen themselves are abroad, is about over. Still the tackle people note an excellent trade in salmon tackle, indicating that the salmon rivers are to be visited as usual, though the success of last season, except at Bangor, was not inspiriting. But, curious enough, this year Bangor is a failure. The salmon have not put in an appearance, not even in the nets and traps further down the river. The fishdealers complain that there is a dearth of Penobscot salmon. One of the wise ones (?) ventures the theory that the scarcity of salmon is largely due to the great numbers taken by the United States Commission at Orland for breeding purposes. "The taking of these salmon should be stopped," he says. He reminds one of the boy who objected to the throwing away of so much wheat in spring time for seed, only that every salmon taken for breeding purposes is carefully put back into the river again.

One of the latest of the sporting parties with rod and reel from among Boston merchants was that of H. B. Moore, of J. E. Soper & Co., which party has just returned from a five-days' fishing excursion to Moosehead. Harry has usually been to Richardson Lake, but this year he was persuaded to try Moosehead. His party was made up of Calvin Austin, general freight agent of the Boston & Bangor Steamship Company; H. M. Stephenson, architect of Pemberton Square; G. C. Moore, woolen manufacturer, North Chelmsford, Mass., and last, but not least, G. R. Moore, his father. The party found the fishing excellent, the largest trout taken being 3¼lbs., a good one for Moosehead. But Harry shows some marks of other bites than trout. The black flies took up the situation about the last day of the excursion and the boys were literally driven out of the woods. The best of fly preventives was of a good deal of service, but nothing could more than make life endurable.

The full list of the names of the Kineo Club members, who took part in the annual excursion to Moosehead Lake this year and not previously mentioned in the FOREST AND STREAM was: J. B. Thomas, Jr., president of the Standard Sugar Refinery; C. E. Lauriat, of Estes & Lauriat; J. F. Nickerson, of J. F. Nickerson & Co.; J. P. Woodbury, H. R. Beal, of Miner, Beal & Hackett, and J. W. Sanborn, of Crockett Bros. & Sanborn. Frank Wise, of Fisher & Wise, was a guest of the club during the trip. Mr. Nickerson caught the largest trout, a fine one, weighing 4¼lbs. Mr. Thomas says that the fishing was all that could be asked for by reasonable men, and the Kineo Club is made up of reasonable men that are satisfied with a reasonable number of trout. The party fished less than usual, really, spending only a few hours of each day on the water. Mr. Thomas also noticed a growing tendency among members of the club to fish with the fly only. Some of the members trolled, it is true, but generally they dropped the minnow and took up the fly after trolling awhile.

By the way, Harry Moore, mentioned above, is the gentleman who brought that moose story out of the woods, published in FOREST AND STREAM last winter—the one where the teamster ran the moose down on the glare ice, till, in attempting to turn his sharp-shod team, the sled slewed, striking the legs of the moose in such a manner that he fell on to a sharp short stake in the sled and was pinned there, handsomely loaded and ready to be hauled home. Another story—a fish story—was told on 'Change the day Harry got home from Moosehead, though he will not vouch for its truth. A boy was fishing a stream and catching trout quite rapidly. He got excited and threw his trout up the bank and behind some brush as fast as he caught them. They bit rapidly, till finally the boy threw out an eel. This he threw up among the trout till he had fish enough, and thought he would gather them up and go home. He stepped behind the brush, alder stringer in hand, when behold the eel had got ahead of him. He had tried to crawl down the throat of every trout in the pile, but instead had passed out through the gill of each trout and into the mouth of another, till every trout was strung, and the boy had only to tie a knot in the head and tail of the eel, when his fish were ready to take home.

SPECIAL.

GEORGE FOWLER, formerly proprietor of Bartlett's, in the Adirondacks, now owned by the Saranac Club, died June 26th, after a lingering illness.

THE PENOBSCOT SALMON.

BANGOR, Me., June 22.—*Editor Forest and Stream:* This is an off year. But forty-nine salmon have been landed to date (the last one was taken June 15), against 140 last year. There are some salmon jumping daily, but they refuse all flies offered. They are dark-colored fish, which tends to show they have been in fresh water a long time; no bright fish from the sea are seen, although the bay fishermen twenty and thirty miles below us are still taking them in large numbers. Our Commissioners attribute the cause of the fish refusing to come into fresh water to the impurity of the water when low in the river, caused by waste from the pulp mills and tanneries on the river above us. When the water is high it must be purer.

We suffered a great loss this season to our fishing (it happened early in the season, when we look for the best fishing and the gamiest fish) by the washing of the bank at Great Works at end of dam, which caused the water to be so muddy for a month that a fly could not be seen by a fish in a foot of water.

What we need most, in my opinion, which is indorsed by all resident and visiting sportsmen, is a weekly close time on the weirs and nets on the river and bay. There are several hundreds of them now in operation from April 1 to July 15, continuously fishing; and one man alone tells me he has taken nearly 300 salmon this season. If we could have his catch alone at the Bangor pool each season it would be satisfactory, and make grand sport, and would bring thousands of dollars into the State. I am pleased to know that the citizens are becoming enlightened on this subject, and are talking freely of helping the matter through. I also believe it would be for the benefit of the weir and net fishermen to have it a law and enforce it, and I will guarantee that their average catch will be greater by allowing more fish to go to their natural spawning beds each year, as it is a certainty that that is the object of the fish when entering our river; and I will furthermore guarantee that all the fish taken with a fly will not equal the amount taken by single weirs.

We owe a great deal of gratitude to our Fish and Game Commissioners, Hon. E. M. Stilwell of Bangor and Hon. Henry O. Stanley of Dixfield, for their persistent endeavors to keep our river stocked each year by artificial breeding, besides the large amount of other waters in the State to be looked after; and were it not for their noble work I think the Penobscot River salmon would be a thing of the past. But they are now heavily handicapped in their work by small appropriations from the State, with greater demands elsewhere; and there is a large increase of weirs and nets in the river below us. We are in hopes that steps will be taken for strict legislation on this important matter.

There is a move being made now in different parts of this State to form fish and game protective societies, which is a move in the right direction, as the wardens get so little for their services that they have as a rule lost all interest, and the Commissioners are powerless, not having the means necessary to overcome the lawlessness, but as there are a few of us old fellows left we will do the best we can.

BANGOR.

PACIFIC SALMON IN PENNSYLVANIA.

SUNBURY, Pa., June 23.—*Editor Forest and Stream:* I had intended writing you earlier, and giving a more full description than I gave Prof. T. H. Bean of a genuine McCloud River salmon (*Salmo quinnat*) found dead after the recent flood on the shore of the Susquehanna River at this point. He, or she, was a magnificent specimen, 38in. in length and 10¾in. broad from dorsal to belly, and estimated to weigh from 20 to 25lbs.; undoubtedly the result of the millions of fry planted in this river during the "seventies," when, as no results had been observable, the efforts, of which we hoped great things in the possibility of being able to adopt the Pacific species in our more southern rivers of the Atlantic coast, was abandoned. The fish was in fine condition physically, but considerably decomposed when discovered, so that no accurate weight could be obtained. It was an object of great interest to fishermen and others, and was viewed by great numbers of people after my identification.

Mr. Blackford may possibly remember that about 1880 I spent an hour or so at his Fulton Market on my way home to Pennsylvania, and among other things of interest inquired about the California salmon which he was introducing refrigerated. He said he had none then, but was expecting a consignment in connection with a firm in Philadelphia, and that more than likely it might be at the Dock Street Market on my arrival there. This proved to be the fact, as they were in the act of breaking the package just as I stepped foot in the market. I then took note of the features of the *quinnat*, distinguishing it from the *salar*, the larger head and jaws, coarser scales, larger dorsal and adipose fins, forked tail and greater depth for length, etc. This magnificent fellow had all these characteristics.

I have been quite familiar with the Atlantic *Salmo salar* from a boy, when it was customary twice or thrice a week in the "thirties" to sit down to dinner at the old Merchant's Exchange in State street, Boston, to a fine boiled "Merrimac;" may that time come again! The notable thing about this fish is that it is the only adult specimen, so far as I know, killed, captured, or taken by any device in any Atlantic coast river out of all the millions of fry which have been planted. Others may have been taken but not identified, which would seem probable under the circumstances.

A. F. CLAPP.

THE TAUTOG RECORD.—Newport, R. I., June 23.—*Editor Forest and Stream:* I notice in your issue of June 20 mention of a tautog weighing 14lbs, thought to be the largest taken in American waters. Sept. 14, 1882 I took one on Smith's Ledge, in the Seconet River, weighing 15½lbs.; I refer for proof of same to David Brown, of South Portsmouth, R. I. May 17, 1885, at Long Rock, East River, R. I., I took a tautog of 14¼lbs., reference, Wm. Gifford, South Portsmouth; Oct. 21, 1885, at Clay Ledge, East River, one of 14¼lbs., reference, Chas. M. Hughes, South Portsmouth; Sept. 10, 1887, one of 14lbs. 2oz., at Mack Rogers Ledge, off Seaconet Point, reference, I. J. Barker, South Portsmouth. My friends claim for me that I can show a record of large tautog that cannot be beaten in this State, nor, in fact, on the coast. I have followed tautog fishing since I was five years old, thirty-five years in connection with sea bass fishing, and have caught many large fish, but these given are the largest. —WM. M. HUGHES.

PENNSYLVANIA STREAMS AND FLOODS

DANSVILLE, N. Y., June 23.—*Editor Forest and Stream:* In your issue of the 20th inst. I noticed a short "snap shot" regarding the late floods in Pennsylvania, and the havoc wrought in the trout-bearing tributaries of the Susquehanna. It is too true, as I learned by bitter experience.

It was my fortune to be just nicely started on my annual fishing trip along the Loyal Sock Creek and tributaries in Sullivan county, Pa., when the floods struck us and effectually housed us for nearly a week. We had just returned to the cottoge after a very indifferent day's sport on Bear Creek, when the rain began to fall, and although we had a very pleasant time sitting by the back log smoking our pipes, reading, telling stories and mending the fire, we got no fishing, and were forced to see our vacation slip away unprofitably.

At last came the faint rumors of the terrible things going on down in the valleys, so we resolved to start for home the moment we were fairly sure of getting through. This gave us one more day, and the rain having ceased we decided to try the trout once more in spite of high water.

We found the stream very high, with riparian evidence of a tremendous flow of water. Old landmarks and holes, cherished and loved through many years of happy contact, were totally obliterated. The whole character of the run was changed, and we almost felt as if we were working new water. One fine pool in which my companion had fished for the last twenty-five years was totally annihilated, and his expressions of regret were as keen as if he had lost an old tried friend. But though other things had changed, the trout were still there, and at 3 o'clock we had seventy-five.

The next morning we started for home, very regretfully, we had been beaten out of our sport, but the lesson of the flood from an angler's standpoint was, that while the streams were badly torn up the trout still remained, and one of the least of the evils of the great flood of 1889 was the injury done to the game fish of the Susquehanna and its branches. H. W. DELONG.

Editor Forest and Stream:

Believing that you would be interested in learning how the flood affected the trout streams in the Juniata Valley, I send you a description of one of the best as I found it on fishing it on the 24th of June. Big Run is, or has been, one of the finest trout streams in the county. In addition to its having a good natural supply I have stocked it with trout fry supplied by the State hatchery. This stream had fine pools along its entire length, but on fishing it in company with my son Charles, I was hardly able to recognize the stream. In many places the channel has been entirely changed, and in others there are two or three channels. Up in the mountain the bed of the stream in many places is cut down to the rock, the pools washed away and the harbors destroyed. We caught no trout except near the mouth of the stream, where it flows through meadows and low lands. These were fair-sized trout—another illustration of the "survival of the fittest." I fear nearly all of the small trout have been destroyed. We caught twenty-two in all, the largest about 12in., the smallest 8in.; my son, who is an ardent trout fisher, catching nearly all of them.

I confess that after seeing the destruction of this once beautiful stream I had little heart to fish. I have been told by parties who visited the other streams in our county that they are similarly washed, particularly on the east side of the Juniata River. The flood in the Juniata does not seem to have affected the black bass; some very fine strings have been caught since the river has fallen. SANCHO PANZA.

MIFFLINTOWN, Pa., June 29.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 25.—Even at the risk of the imputation of being thought tedious, I must once more repeat the old assertion that Chicago is a city blessed of the gods, and the only true dwelling place for any sportsman of this country. This proposition, more especially as applied to the angling interests, I had intended deliberately to set about proving by means of a series of trips into our northern fishing country. Lack of time has thus far prevented that, and gradually the proposition is proving itself, through just such hasty confirmations as a chance trip or so and a few odd bits of news may offer. Perhaps the note or two sent in earlier in regard to mascallonge fishing may have sufficed to show the certainty of success and the amount of it which meets the angler for that great fish in certain waters north of here. The season has been a prolific one, and the great streams and lakes, fished for the past five years so dangerously close and hard, seem not depleted, but still abounding, and indicative of the rare plenty which they may always offer under any intelligent treatment. The mascallonge season is now practically over, and will not begin again until the first sharp frosts of autumn has cut down the lake growth.

Bass fishing was never better in the waters adjacent to Chicago than it is this spring. I simply dare not tell all I know, or hunt up all I might find about the excellence of the black bass angling north of here this season, for it would hardly be believed. The angling referred to is black bass fishing of the very highest grade, not for ½lb. or 1lb. bass, but for the veterans of 3 and 4lbs. weight. The bass angler of Chicago, I am proud to say, is ranked not by count but weight. The fisherman here who returns laden with a long string of small bass is simply laughed at or treated with silent contempt. It is the glory and the subject of rivalry with our anglers to bring in a few bass, the largest and best specimens possible, and to return all below the standard to the water. The standard is placed at 3lbs. by a sort of tacit agreement. The cracks will not bring in anything of less weight than that. I do not know of any other city where this custom prevails or could well prevail, but it is good commentary on our angling and our anglers. Moreover, it is the starting point of a very good sentiment on angling matters in general, and the growth of such sentiment will be all against the old fish butchery.

The fishing clubs have their quarters full. Fox Lake fairly hums with its summer social life. The magnificent Mineola club house is completed, and a grand place it is. It is brilliantly lighted with gas from one end to the other every night, and to the belated boat coming in across the lake it presents a gorgeous and magnificent spectacle. Within, the club house is finished and furnished elegantly. The floors are of hard wood, bordered in red wood, and all else is on the same scale. It is the most luxurious sportsmen's home near Chicago.

Ed. Howard, of Fox Lake, has added another hotel to his bluff possessions, and is now about the busiest man on the lake. The summer cottages are now pretty much all full. Mr. John Wilkinson and the other Crabapple Islanders are mostly at home on the island nowadays. Lippincott's holds its quorum, and so do all the other resorts. The two Mason cottages near Lippincott's burned down two weeks ago, the occupants barely getting out alive in the night.

Fishing at Fox Lake for the past week has been only fair, the catch running much to pickerel and small bass. Above Fox Lake, on the same system of lakes, the records are simply marvelous, and as I said, I should hardly dare repeat them. E. HOUGH.

HELL GATE CAMP.

HELL GATE, Wentworth's Location, N. H., June 22. —We left Boston June 1, tarried in Colebrook a week, and meanwhile visited the Diamond Ponds to try our luck with fly and bait. The weather was most unfavorable, and very little success rewarded our efforts. Monday, the 10th, we left Colebrook for Wentworth's Location and Bennett's. The heavy rains had made the roads almost impassable, and when we arrived at Wentworth's we found the Diamond so swollen that we were obliged to make a detour and be ferried across the Magalloway, opposite Bennett's.

John being a model Boniface we concluded to remain with him until the water in the Diamond subsided sufficiently to permit our fishing on the Rips. On the 12th a party of seven gentlemen from Laconia, N. H., joined us, and on the 13th we had some very good fishing, though the water was still high. A member of our party succeeded in bringing to net a 3½-pounder, which proved to be the largest fish of the day. That night we had a severe shower, and this spoiled fishing there for a week at least.

On the 17th, the river having flattened out somewhat, we made an early start for Hell Gate camp. The day proved all that could be desired, and we arrived at Amasa's about 5 P. M. Since then the weather has been beautiful, the river has fallen to almost its normal level, and we have had some grand sport with the fly. If one can judge at all by appearances the river never was so full of trout as it is this season, which may be accounted for in a manner from the fact of the partial destruction of the old dam at Bennett's by the lumbermen last winter.

Let me give you an illustration of how numerous the trout are here. There are ten people here in camp now, and yesterday three of us went up the river two miles and fished only in the best places on our return. On arriving at camp we had 93 fish which weighed 28lbs. I should say that not more than one in five which we hooked were put into our baskets. An hour's float down the river any evening just at sunset will fill a ten-pound basket with fish from ¼ to 1lb. in weight.

Amasa also counts upon a very successful season for deer. Last winter there was but very little snow here, and no crusts, consequently hunting by that method was a signal failure, and absolutely no deer were killed here. As a result, Amasa has counted thirteen deer in one day within a mile and a half of camp, something unprecedented in his experience here. He has already booked a number of parties for this season, and holds himself in readiness to give all who may visit him a true backwoods welcome and plenty of sport. Since our arrival here Messrs. Adams and Kidder, of Plymouth, N. H., have put in their appearance, bent on tickling the palates of some of the trout. J. W. B.

THE HARVEST FISH.

THIS pretty and excellent food fish is now at its best, and I think it the equal of any pan fish on the market. Its small size is against it, so far as demand goes, but it has few troublesome bones and flesh so attractive that when once one makes its acquaintance there is no doubt about an increased demand on the dealer, who, here in Washington, calls them "butter fish," having in mind the *Stromateus triacanthus*, which is somewhat similar in appearance.

The harvest fish (*Stromateus alepidotus*) in general appearance resembles the short or ovate pompano, being slightly shorter and deeper. Its cousin of the Pacific coast, *S. simillimus*, is known as California pompano, and is highly prized as food. In general color the harvest fish is silvery, turning to a more or less golden yellow on lower portion of body. Its name is derived from the fact that it usually makes its appearance about harvest time. Out of the half dozen individuals examined by the writer on June 21 but two were females full of spawn, which would have been deposited early in July. They were slightly larger than the males, measuring 7in. in length by 4in. in depth. The recorded range of this species is from New York to South America. It is often abundant in the Chesapeake, at its mouth, and is taken in trap nets, pounds, etc. In New York it is said to command a good price, while here in Washington it retails at a low price. have seen a dozen sold for twenty-five cents. BAB.

WASHINGTON, D. C., June 24.

BLANCHE LAKE BASS.

BATTLE CREEK, Minn., June 20.—*Editor Forest and Stream:* In looking over your paper I find under head "Chicago and the West," an account of an angler taking sixty-five black bass out of Twin Lakes in one day, the catch weighing 125lbs. Now let me give you an account of a catch that was made in what is known as Blanche Lake, about four miles north of this village. A party consisting of H. S. Townes, of Petersburg, Va., W. M. Anderson, of Duluth, Minn., and O. Albertson, a merchant of this place, went out one evening the first of the week and caught thirty black bass, twenty-seven walleyed pike and between forty and fifty rock bass and pickerel. The last two named varieties were thrown back into the lake, as it is not the custom here to save any fish but the black bass and pike at this season of the year. Fifteen of the black bass weighed 59lbs., the thirty black bass weighed 83lbs., the twenty-seven pike weighed 63lbs. The catch was made in about three hours. Blanche Lake and one near to it known as Lost Lake are full of bass, and during the month of September a catch like the one above referred to will be no uncommon occurrence. B. STRAIN.

THE GRAND ISLE SEINERS.—Sorrell and Mitchell, the men caught illegally fishing on Grand Isle and sent to the House of Correction for over two years, were brought before Judge Powers at Middlebury last Friday on a writ of habeas corpus, and discharged. Nobody pretended that they were not guilty, or that their sentence was other than that imperatively required by the law under which they were convicted, but they got off on a legal technicality. W. C. Hodgkins, the justice before whom they were tried, was either ignorant of what a legal commitment was or else purposely made the mittimus imperfect, it reading that they were committed "for the crime of illegal fishing," when it should have read that they were committed for the crime of illegal fishing with a seine. On this technicality they were discharged, and it reminds people of something that happened in Washington County Court when Judge Asahel Peck was on the bench. Henry Welcome stole a team from Bruce & Ladd, of Waterbury. He was arrested and indicted by the Grand Jury of Washington County Court, M. E. Smilie being then State's Attorney, and upon trial his counsel raised the point that the indictment was not good because it set up that Welcome stole a horse from Bruce & Ladd, instead of saying that he stole it from H. M. Bruce and Daniel Ladd, who comprised the firm of Bruce & Ladd. Upon this technicality Welcome was discharged by Judge Peck, and in six weeks from the time of such discharge he murdered old man Russell, of Hinesburg, a classmate and close personal friend of the judge, who said up to the time of his death that discharging Welcome on that technicality was the greatest mistake of his life. It is to be hoped that before any more criminals are arraigned before Justice W. C. Hodgkins, of Grand Isle, he will make himself sufficiently conversant with the law to perform his duties in a legal manner.—*Montpelier (Vt.) Argus and Patriot.*

BLUEFISHING AT FIRE ISLAND.—The great South Bay is now full of bluefish, which run about 2½lbs. each, and great catches are being made of these excellent fish. Mr. Sammis's hotel on Fire Island is most conveniently located for this fishing, and no more comfortable place can be found, in our opinion, for spending the Fourth of July or a summer Sunday. Good fishing, good fare and cool breezes; what could be more attractive on these hot days?

TOWANDA, Pa., June 30.—Two different parties, consisting of two persons each, one fishing on Bowman's Creek (Wyoming county), the other in the Loyal Sock and smaller streams in the vicinity of Laporte (Sullivan county), this State, brought in respectively 20 and 16lbs. of brook trout.—SUSQUEHANNA.

TROUT IN CATSKILL CREEK.—Cairo, N. Y., June 22.—It is estimated that not less than one hundred and fifty pounds of trout have been taken from the "Deep Hole" in the Catskill Creek, near this village, and there are many more trout left.

Log Cabins.

LOG CABINS: How to Build and Furnish Them. By William S. Wickes. Illustrated. Price $1.50. Published this day by the Forest and Stream Publishing Company.

AMERICA'S FASTEST RAILWAY TRAIN, AND THE GREAT RECORD IT HAS MADE.—The "two-hour train" which leaves the Reading Railroad station at Ninth and Green for New York at 7:30 A. M., is the fastest scheduled railway train in the United States. In addition to this distinction, it has made a record for precision and regularity of movement which high authorities declare to be without precedent in the history of railroads. From January 1 to June 1 this train made 150 trips—that is, a trip every day except Sunday—and in the five months it reached its destination behind time on only nine occasions, and in these instances the maximum variation from the time-table was but a few minutes. On the remaining 121 trips it arrived on schedule time to the second, averaging 94 per cent. of absolute promptness. This unparalleled showing demonstrates that the Reading Railroad not only possesses a magnificent and completely-equipped line between Philadelphia and New York, but also that it is managed with rare ability and with close regard to the requirements of the traveling public.—*Philadelphia Times.*—*Adv.*

Fisheulture.

THE CALEDONIA HATCHERY.

STATISTICS of the fish and eggs shipped and fish turned loose from the Caledonia State Fish Hatchery and Hudson River for the season commencing Jan. 28 and ending June 24, 1889:

Whitefish fry deposited in Lake Ontario	1,900,000
Frost fish fry deposited in Hemlock Lake	80,000
Salmon trout fry	1,501,000
Salmon trout eggs	750,000
Brook trout fry	1,525,500
Brook trout eggs	100,000
Brook trout yearlings	335
Brown or German trout fry	521,000
Brown or German trout eggs	188,000
Brown or German trout yearlings	175
California trout fry	738,000
California trout eggs	125,000
California trout yearlings	150
Hybrids, ½ brook and ½ salmon trout from 4 to 6 years old	200
Shipment of shrimp	30,000
Shipment of German carp	23
Shipment of bullheads	20
Shad fry deposited in Hudson River	6,033,200
Total	13,492,603

MONROE A. GREEN, Supt.

SAWDUST IN TROUT STREAMS.

Editor Forest and Stream.

A week ago I suggested an itinerary for a short fishing trip through a small portion of western Pennsylvania, ending at Clear Shade in Cambria county. I might have advised the sportsman to cross a hill to Piney Run, two or three miles from Shade, where for ten years I caught some magnificent trout; but several years ago a sawmill was built on that stream, and the trout gradually diminished both in size and numbers until fishermen ceased visiting the stream entirely. We, of course, attributed the death of the trout to the sawdust, and I have yet to see a good trout stream with a sawmill in it. Follow up the streams and the argument, as does "Piscator," and we find that after Piney Run empties its waters into Clear Shade the trout in the latter stream are comparatively scarce, while above this point they are in abundance. Following the stream and its accessories on down until it empties into the Stonycreek, we

find that the sawdust from away up in the mountains does not affect the bass in this latter stream, from the fact that there is a large volume of water, the creek covers twenty times as much ground as does little Piney Run, the sawdust lodges here and there and finally becomes lost, or appears in such infinitesimal quantities that its effect is lost. So it is at Johnstown, Pa., the junction of the Stonycreek and the Conemaugh. Twenty years ago we caught bass, perch, pike and various other fishes below that town, but since the location of wire mills, discharging their thousands of gallons of vitriol into the stream, there is not a fish taken within twenty miles of it worth mentioning. So it is everywhere. If there is sufficient water in a stream to counteract the effect of sawdust the fish in that stream will not suffer; but take a small mountain brook plentifully stocked with trout, turn loose upon it a double-geared sawmill, and in a year the bottom of all the pools will be covered 2ft. deep with sawdust, the "riffles" will be running thick with the stuff, and my word for it there will be no trout there. PACIFIC.

SACRAMENTO, Cal., May 5

VERMONT STREAM STOCKING.—A Roxbury correspondent of the Montpelier *Argus and Patriot* writes: No one who has never seen it demonstrated can tell how fast trout will breed and grow in a mountain stream. Charles Lougee owns and tries to protect the brook through his meadow. There are already thousands of trout in his brook about 3in. in length, where there were few last summer. Mr. Lougee will take great pleasure in his experiment, and it is to be hoped people will respect his rights and the law. In former days there was not a trout in this brook above the falls at L. Webb's, and one of the early settlers carried a few above the falls, intending at some future day to enjoy the sport of catching them. In three years the brook was full of the speckled fellows, and a hunter from Warren, who accidentally found it out, caught 75 pounds in one day, from its source to where Webb's steam mill is. This so angered the old pioneer that he never cast a hook in the stream.

The Kennel.

FIXTURES

DOG SHOWS.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.
Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.
Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.
Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.
Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 26 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.
Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.
Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.
Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

DOG LICENSE LAWS.

[*Continued from page 450.*]

WE continue below the publication of our reports on the laws relating to dogs in towns, and the methods adopted to reduce the number of vagrant curs. The information has been secured by correspondence with the mayors or presiding officers of the several places named, and the reports were all made in 1888:

Iowa.

Council Bluffs.—The city has an ordinance imposing a tax of $1.25 for male and $2.50 for female dogs, if license is not paid they are to be destroyed, but not poisoned. This ordinance is not generally enforced for the reason that there is a State law, making a double taxation as it were. The State law is "that the assessor shall list each dog over three months old, and owner, the board of supervisors shall levy a tax of 50 cents for male and $1 for female dogs, which tax shall constitute a special fund to compensate any one for loss occasioned by dogs killing or injuring sheep or any other domestic animal, provided the damage cannot be collected from the owner of the dog." The following is a copy of the provisions of the city ordinance: "The owners of dogs are required to register the names, breed, sex and age of each dog, and the owner's place of residence, and shall pay to the clerk the sum of $1.25 for each male and $2.50 for female dog. If this tax is not paid they are to be impounded and offered for sale for not less than the tax imposed; if not sold they are to be destroyed (not poisoned) by the city marshall, who receives a fee of $1 for doing so.—M. F. ROHRER, Mayor.

Des Moines.—The tax on each dog is $1, on each bitch $3, which is due June 1, and on each dog or bitch is put a metal check with the number of the receipt given by the collector. Any dog found running at large without a check is taken up and put in the pound, and if not claimed within forty-eight hours killed. Also the mayor can upon reasonable apprehension of danger issue a proclamation prohibiting dogs from running at large not securely muzzled, they shall be slain by any person and the owner or keeper shall be subject to a fine of not less than $25. The collector shall keep a record showing the name of each person from whom he shall have collected a dog tax, the number of receipt and check. Dogs found for the current year 800.—I. A. HAMMER, City Clerk.

Le Mars.—Our city imposes a tax of $1 on male dogs and $3 on females. The State also taxes 50 cents per head. The marshall usually shoots dogs on which no license is paid. We have no pound or other provision for unlicensed dogs. —M. A. MOORE, Mayor.

Marshalltown.—We have no license on dogs in our city. We have a State tax on dogs, 50 cents on males and $1 on females; but there is no provision made for destroying them in case it is not paid.—NELSON AMES, Mayor.

Indiana.

Peru.—Our city taxes dogs $1 per head and bitches $3 per head. Dogs are loosely and carelessly assessed, not one in five being returned for taxation. Those that are returned are paid for at the rates above; those that are not enjoy the freedom of the city the same as those that are paid for, and suffer no penalties either of life or impounding. The intention of the law is to tax all dogs at the above rates. No dogs are killed nor impounded for non-payment of taxes.—JOHN A. GRAHAM, Mayor.

Richmond.—We have no dog tax in our city.—JAMES W. MOORE, Mayor.

Michigan.

Coldwater.—As a city we do not impose any license on dogs, but have an ordinance providing for muzzling during certain seasons of the year, a violation of which renders the unfortunate cur liable to be shot by the marshal. They are seldom shot, however. Dogs are liable to be taxed under State laws, but if enumerated and assessed, the tax is not usually collected in cities, as it all goes to sheep fund, if any have been killed, which seldom happens, as no sheep are owned in cities. The consequence is, that the tax of $1 on male and $3 on female dogs is usually not paid; anything remaining goes to school fund.—B. H. CALKINS, Mayor.

Flint.—No tax is imposed on dogs, nor are there any city ordinances restraining their freedom.

Saginaw.—We do not tax dogs; had a dog tax some six years ago, but abolished it again. We shoot stray dogs and vicious ones also.—WM. BINDER, Controller.

Kalamazoo.—Our city imposes no license on dogs. There is nothing done in the matter of disposing of stray or unlicensed dogs, and they are never impounded, and in fact the dogs have it very much their own way.—CHAUNCEY STRONG, City Clerk.

East Saginaw.—There is no ordinance in regard to the licensing of dogs in the city, but there is no penalty if tax is not paid and the law is not enforced.—FERD. A. ASHLEY, City Clerk.

Marshall.—Our license for dogs is $1. In case of failure to pay same, they are impounded and killed with strychnine. During the present year we have impounded and destroyed six dogs only.—F. R. AMLAR, Recorder.

Grand Rapids.—The tax on dogs in this city is for males $1, and for females $2. Dogs are required to wear the license tag, and any dog found loose without it is impounded, and may be redeemed by the owner on production of evidence that the dog is duly licensed and payment of $1 pound fee and 20 cts. a day for keep. The dog is slain if not redeemed. Violations of the ordinance are punishable with fine which may extend to $500 or with imprisonment which may extend to a year. The funds raised from this source are devoted primarily to compensating sheep owners for injuries inflicted by dogs.—John J. BELKNAP, City Clerk.

Charlotte.—The tax on dogs in our city and State is $1 on each dog, and all dogs not muzzled during what is termed dog days, the marshals are required to shoot, but this part of the law in not enforced very strictly.—E. SHEPHERD, Mayor.

Indiana.

New Albany.—The city does not collect any tax or license on dogs, but the county does. The tax on male dogs is $1, and on female $2. We have no dog pound. The dogs run at large without muzzles. During the summer months a great many dogs are poisoned by citizens, but there is no protection for dogs whatever. The tax collected is for the purpose of paying for sheep that are killed by dogs. We have a few very valuable dogs in this city, but their owners have no recourse if any of these dogs are killed. During the summer months they have to keep them muzzled or confined to keep them from being poisoned or killed.—JOHN J. RICHARDS, Mayor.

Fort Wayne.—The tax in this city is, dogs $2, bitches $5. We have no pound or register for dogs.—W. N. ROCKHILL, City Clerk.

South Bend.—We require a license of $1 for male and $2 for female dogs. We have no dog pound. We require all dogs running at large to be muzzled between Aug. 1 and Sept. 1, and all dogs found without being properly muzzled on the streets between those dates are killed by the police.—Wm. H. LONGLEY, Mayor.

Evansville.—We issued 2,000 dog licenses including females. The dogs are taxed $1, females $2. We have no dog pound; those few that escape taxes are let roam unless very worthless, when our policemen shoot them. I don't suppose there is more than one dog shot in twelve months in this city.—J. H. DANNETTELL, Mayor.

Valparaiso.—Our city imposes a tax of $1 on dogs and $2 on bitches. Dogs running at large unlawfully are destroyed by marshal and police. Number of dogs assessed in 1888 was 118, bitches 13.—T. G. LYTLE, Mayor.

Illinois.

Freeport.—Mayor A. Bergman, of Freeport, reports that the license fee in that city is $1; that unlicensed and stray dogs are impounded and killed if not redeemed in three days.

Bloomington.—We have a dog tax which is assessed for by the regular assessor of the township of $1 for each dog. In addition to this we have an ordinance requiring dogs to be muzzled from June 1 to Oct. 1; it also provides that dogs that are not muzzled shall be shot. We have not killed any dogs. This same subject we are giving attention to. It is dangerous to shoot the dogs in the street. We believe the system of impounding to be the best, and satisfying, as it gives people time to get their dogs and muzzle them before they are destroyed.—J. R. MASON, Mayor.

Rock Island.—The municipal tax on dogs is $1 per head. Every owner is required yearly on June 1 to take out stamped metallic check and place it on the dog, and by the number of the check the dog and owner are registered in a book kept for that purpose, all dogs not registered within one month are required to be shot on sight by the police. The tax collected for the last fiscal year was $317, dogs killed 157. In case of existence of hydrophobia, or supposed danger from this source, by proclamation from the Mayor, all dogs, registered or not, may be ordered to be muzzled or chained to prevent running at large, and all dogs (registered or not) found running at large during the time limited by proclamation are to be shot on sight if unmuzzled. No provision exists for impounding dogs.—VIRGIL M. BLANDING, Mayor.

Aurora.—This city for the year ending June 30, 1889 licensed 450 dogs at $2 each and caused 100 to be destroyed. The license rate this year has been reduced to $1 and the number of license issued to date is 460. All dogs running at large must be muzzled from June 1 to Oct. 1. We impound all dogs for four days after they are caught before destroying them if no one redeems within that time.—GEO. MEREDITH, Mayor.

Cairo.—The license fee imposed in this city on dogs is $2 annually. Unlicensed and stray dogs are impounded and destroyed. During the year 350 were impounded, and 67 killed, rest redeemed.

Joliet.—Dog tax, $2 per annum, payable July 1; owners are arrested and fined $5 and costs for not taking license. Warrants are issued by police magistrate upon presentation of name of dog owner by any one, usually by the police. After July 10 unlicensed dogs are shot on sight without further notice. Dog must wear tag furnished by the city. We collect tax on 500 dogs and kill about sixty. No pound. To be served with a warrant is to be fined, whether the party has a dog or not; so people are careful about harboring anybody's dog.—J. D. PAIGE, Mayor.

Ottawa.—The Mayor reports that the license tax in that city is 75 cents per year, that unlicensed dogs are destroyed, and that 150 were destroyed the past year.

Lincoln.—Our city does not impose a tax on dogs. Stray dogs are destroyed on the streets. Under our city laws, the Mayor can have all dogs either muzzled or destroyed when he thinks it is necessary.—C. M. KNAPP, Mayor.

Rockford.—We have no pound. For about sixty days, during dog days, Mayor gives authority for police to shoot all dogs running at large not muzzled and unrestrained.—H. C. SCOVILL, Mayor.

Springfield.—The license fee on male dogs is $1, on females $3. Stray dogs or dogs running at large are impounded in the dog pound. After three days' detention if not redeemed by the owner they are destroyed. The redemption fee is the same as the license fee.—CHAS. E. HOY, Mayor.

Minnesota.

St. Cloud.—We tax dogs $1 for males and $3 for females. The method of collecting is simply a notification to the parties owning the dogs. Our ordinance provides for a fine to any one who will keep an unlicensed dog; also that such unlicensed dog shall be destroyed. We have no pound to dipose of them. If they are not licensed they are destroyed by the police; that is, they are supposed to be. I must admit, however, that several dogs slip through without the owners paying the license.—WM. WESTERMAN.

Minneapolis.—The license on dogs in this city is males $1.20 and females $2.20. They are impounded if found unlicensed, and at the end of three days if not called for by owner are killed.—CHAS. C. AMES, Mayor's Sec'y.

Duluth.—The tax on each male dog is $1 and on each female dog $5. We have no pound. Owners are required to see that their dogs are licensed and in default are liable to a fine. The police are instructed to kill all unlicensed dogs and receive a fee of $1 for each dog killed.—J. B. SUTPHIN, Mayor.

St. Paul.—The license is $2 for males, $4 for females. Stray, unlicensed dogs are captured, taken to the pound, held for twenty-four hours; at the end of which time, if not redeemed, they are destroyed by being put into a cage and drowned. The season for taking the census and capturing stray dogs is not yet over. Up to date there have been about 2,800 male dog licenses issued, and about 200 female dog licenses issued; about 700 dogs have been captured and destroyed.—THOS. A. PRENDERGAST, City Clerk.

Red Wing.—Our dogs are at present made personal property. Owners are taxed as for other personal property, but we find that it does not work well, as many having dogs do not list them, necessarily we have a great many dogs running at large. The subject is now in the hands of Committee of Council and City Attorney to draft a license. Have no fixed method of disposing of stray or lost dogs.—W. E. HAWKINS, Mayor.

Fairbault.—Fairbault collects a license of $3 for females, $1 for males. We have an ordinance by which all dogs can be impounded if the license is not paid, and killed after a certain time if not reclaimed. It has been the custom here to make all pay license who own them or harbor them on July 1. We do not have many to prosecute. There have been no dogs in pound for this year.—JOSEPH C. MOLD.

Dakota.

Huron.—Our dog license is male $1, female $2. We keep them in pound twenty-four hours, and if not claimed and license paid they are destroyed. We keep no record of those destroyed.—H. J. RICE, Mayor.

MASTIFF PEDICREES IN THE A. K. C. S. BOOK.

Editor Forest and Stream:

As long as the A. K. R. was in the way I refrained from commenting on the above for obvious reasons. It is now time they were shown up. The strong plea for "an official stud book, sir," was that it would be so much more accurate than a private one, it would be "watched and guarded," it would be of exact accuracy, etc., etc. How has this turned out? Let us see. I do not go back of Vol. V., which is the latest.

8790, Busker, and 8829, Thor. One of these was a thoroughbred boarhound, shown at New York in 1888, I think it was Thor, but am not certain. Anyhow, there is no excuse for this, for I myself pointed the matter out to the secretary of the A. K. C, and if the liberty of changing an owner's views as to paternity may be arrogated to itself by "the official" (see further on), surely they can correct an evident error in a show entry. 8787, "Beau, by imported Colonel ex imported Joan." This may be all right, but as a pedigree is worthless, as nobody knows who "imported Colonel" or "imported Joan" are. 8802, Gilliard. Rajah is said to be by Druid ex Queen! What a "guardian" that didn't know that the great mastiff sire Rajah was by Griffin ex Phillis! 8811, Lord Brougham, is that pedigree that was made so notorious as a fraud. In 8814 we have Bosco II., should be Bosco III. (a trifling error). 8817 is very doubtful. Norah is said to be by Green's Monarch ex Phyon. Now Phyon is the way the E.K.C.S. Book gives Capt. Cautley's Phryne, dam of Mr. Exley's Venus, who was dam of that crack Bosco and also of Hero II. Norah was owned by Mr. James McNamee, and was entered at the New York show of 1883 or 1884 without pedigree; she was bred to Hero II. when Mr. Jas. Watson owned him, and the visit is noted in the A.K.R. as without pedigree; while it may be correct, I am strongly of the belief that the pedigree of Hero II.'s dam has been given to the bitch he was mated with. 8852 and 8853 are the old frauds, with Ben Lomond, "Masson's Salsbury," etc., same as 8811. 8861, Venus III., says that there was a Princess Royal who was by The Emperor ex Countess, by Sultan. This Countess is dam of The Emperor. Did The Emperor ever serve his dam? Chaucer, by Orlando ex Ilford Cambria, is probably all right, as there was such a litter.

After this time the committee of the Clique Club number one undertook charge of mastiff pedigrees. Let us see how much their "watching" is worth, and how they "guarded" the sheep. 9097, Ferdinand, is probably all right, except that Quaker and Quakeress are converted into "Ornaker" and "Ornakeress," probably due to bad handwriting. This pedigree comes from Mr. E. Delafield Smith and Mr. Heinzeman, and that insures its correctness as far as they furnished it. 9700, Lord Galt. Green's Monarch is said to be by Lion out of Lufra. Thunder and lightning! What mastiff man didn't know that Green's Monarch was by Nichols's (and Wynn's) Hercules out of Green's Nelly? 9702, Orion. Beau is said to be by Young Prince out of Merlin. This is utterly inexcusable, for (as I will show later on) "the official, sir!" takes the choicest flunky care to always give the pedigree of Crown Prince as by Young Prince out of Merlin; Beau was by Nichols's Prince (sire of Creole) out of Belle. 10,577, Wacouta Rose. In this the sire of Crown Prince is given as Young Prince. Now you might as well try to persuade Wacouta that "the official, sir!" was infallible, as that Young Prince was sire of Crown Prince; he has read the evidence on the matter, and knows that, although it is not positive that The Emperor was the sire, it is positive that Young Prince was not. About this there is no manner of question in England, and I defy "the official, sir!" or the committe of the clique club to produce a mastiff man in England, of reputation and knowledge, who will say that he believes Young Prince got the litter out of Merlin. The evidence was overwhelming that, be the sire who he may, he certainly was not Young Prince. The entry was made in the stud book by Wm. Burnell, and so stood (although questioned) until it was shown to be false by Bur-

nell's repeated admissions to the most reputable men. Yet on the bare record in the English Kennel Club Stud Book, "the official, sir!" with the flunkiness so well depicted in a late number of the London *Stock-Keeper*, arrogates to itself the right to upset the convictions of the owners of dogs who send entries to its "watched and guarded" columns! Has an owner any rights against flunkyism? If I remember aright, Elm Place Jumbo was entered in "the official" (Vol. IV.) and (by accident, I presume) Crown Prince was stated to be by The Emperor, and in a tabulated pedigree (I think of the same dog) this was changed to Young Prince!

11,579, Brenda Secunda, is said to be by Turk out of Brenda, Brenda, by Nichols's Quaker out of his Venus! Great snakes! Venus, a bitch that was whelped about twenty years since being the dam of one now living! The Brenda, dam of Brenda Secunda and Idalia, is 12,159 E.K.C.S.B., while Nichols's Brenda was 2,359. 11,771, Ilford Comedy, is correctly given as out of Idalia (littersister to Brenda Secunda), who is by Turk out of Brenda, by Nero out of Princess. 11,731, Lord Raglan, is correctly given as by Crown Prince out of The Lady Rowena, while in 11,797, Wambda, Lord Raglan is said to be by Crown Prince out of Idalia! Now remember that "the committee of the American Mastiff Club, sir!" are credited with having examined the pedigrees after number 9,697 as well as the profound master of mastiff pedigrees, who kindly vouchsafed Dr. Thompson the news that Hero III. was "no mastiff." Are we to understand that "the committee" were such gross blunderers as to pass 11,731 all right and not to note that 11,797 contradicted it? Or are we to believe that the elegant heading as to "examined by," etc., is simply another piece of the delicate casuistry so characteristic of No. 44 Broadway?

Now do not forget that it was constantly heralded abroad that the "official stud book, sir!" was going to be above all errors of dog owners; it was going to insure absolute correctness. When it was picked up for the insertion of those world-famed frauds as to "Lord Brougham," etc., it shifted the responsibility from its own lazy shoulders to those of the committees of specialist clubs, and the result has been that the specialty guardians of the sacred flock have let in more ravening wolves than did the Olympus of 44 Broadway! It is the old story clear through, beginning with "Construction" and ending with ..... (fill in each fellow to suit himself).

Blunder, flounder, arrogate to yourself everything, ride right over the plainest rights of everybody, and when you are brought to book for it, whimper, "Mistakes always will happen in new bodies, we will be good boys after this, and never, no never, no never, do it again." Bah! Do you take us for fools? W. WADE.

HULTON, Pa., June 27.

SOUTHERN FIELD TRIAL CLUB DERBY.

MARIETTA, Ga., June 22.—*Editor Forest and Stream:* The second annual Derby of the Southern Field Trial Club closed June 1 with fifty-one nominations—forty-two setters and nine pointers. I herewith inclose you a list of them. All were whelped in 1888. T. M. BRUMBY, Sec'y.

SETTERS.

ALICE (P. Lorrillard, Jr.), lemon and white bitch, August (Cassio—Allie James).

AMORET (P. Lorillard, Jr.), black and white bitch, August (Cassio—Allie James).

ANNIE F. (Memphis & Avent Kennels), black and white bitch, January (Roderigo—Juno A.).

BESSIE M. (G. Metzger), liver, white and tan bitch, March (Count Noble—Fate Gladstone).

BLUE WINGS (E. Dexter), black, white and tan dog, April (Count Noble—Belle of Piedmont).

CLOCHETTE (P. Lorillard, Jr.), black, white and tan bitch, February (Roderigo—Lavalette).

COUNT V. (J. I. Case, Jr.), blue belton dog, May (King Noble—Queen Vashti).

CRAFT (Crawford & Starr), black, white and tan dog, July (Ben Hill—Tchula).

CRINE (Crawford & Starr), black, white and tan dog, May (Goldstone—Lady C.).

DAD WILSON, JR. (J. Shelley Hudson), black, white and tan dog, April (Dad Wilson—Lit).

DAD WILSON'S BOY (J. Shelley Hudson), black, white and tan dog, July (Dad Wilson—Dolly S.).

DAN GLADSTONE (W. T. Coppidge), black, white and tan dog, March (Gladstone's Boy—Flame).

DEE (J. J. Case, Jr.), black, white and tan bitch, July (King Noble—Elsie Belton).

FANNIE (Dr. J. N. Maclin), black, white and tan bitch, March (Gladstone's Boy—Flame).

FRED GATES (Hamilton & Jackson), black and white dog, July (Bob Gates—Lilly B.).

GATH'S HOPE II. (Dudley & Fisher), lemon and white dog, (Gath's Hope—Daisy F.).

HARRY C. (Memphis and Avent Kennels), black, white and tan dog, June (Roderigo—Countess House).

HOPE'S RAY (D. E. Rose), black, white and tan dog, January (Gath's Hope—Lady May).

JIM PHELAN (West Tennessee Kennels), lemon and white dog, June (Bob Gates—Nannie Gladstone).

JOLLY GATH (C. F. Ramney), black, white and tan dog, July (Young Gath—Jolly Flirt).

LADY NOVICE (Joseph Lewis), black, white and tan bitch, April (Paul Gladstone—Dashing Novice).

LETTY LYNN (Memphis & Avent Kennels), black, white and tan bitch, June (Roderigo—Countess House).

MISS PAGE (J. McAllister), white and lemon bitch, March (Gath's Hope—Daisy F.).

NANNIE B. (J. I. Case, Jr.), lemon belton bitch, May (King Noble—Queen Vashti).

NANON (West Tennessee Kennels), black, white and tan bitch, January (Ben Hill—Mary).

NED CLEARY (J. Shelley Hudson), lemon and white dog, April (Dad Wilson—Lit).

NOBLE GLADSTONE (J. R. Henricks), black, white and tan dog, February (Count Noble—Countess Gladstone).

NOBLESSE GLADSTONE (J. R. Henricks), black, white and tan bitch, February (Count Noble—Countess Gladstone).

PAUL DOMBEY (Memphis & Avent Kennels), black, white and tan dog, January (Roderigo—Juno A.).

PAUL NOVICE (J. O'H. Denny), black, white and tan dog, April (Paul Gladstone—Dashing Novice).

PATTI GLADSTONE (A. Smithnight), black, white and tan bitch, March (Jim Gladstone—Sparkle).

QUADROON (P. Lorillard, Jr.), liver, white and tan bitch, February (Roderigo—Lavalette).

ROD'S ROWDY (Memphis & Avent Kennels), black, white and tan dog, January (Roderigo—Juno A.).

ROYAL C. (Memphis & Avent Kennels), black, white and tan dog, June (Roderigo—Countess House).

RUTH (W. C. Sherrood), black, white and tan bitch, June (Bob Gates—Nannie Gladstone).

SAM B. (J. I. Case, Jr.), lemon belton dog, March (King Noble—Cricket).

SIMONDES (Rose & Madison), black, white and tan dog, March (Gath's Hope—Gladys).

SPORT (R. S. Day), black and white dog, May (pedigree not given).

TENNESSEE LIVY (West Tennessee Kennels) blue belton bitch, June (Gath's Mark—Ida S.).

U. S. SAM (Memphis & Avent Kennels), black, white and tan dog, January (Roderigo—Juno A.).

WHITE WINGS (W. C. Sherrood), lemon and white bitch, June (Bob Gates—Nannie Gladstone).

ZULU (J. I. Case, Jr.), black, white and tan dog, March (King Noble—Nellie Belton).

POINTERS.

BESSIE WYANETT (J. F. Isgrigg), liver and white bitch, May (Trinket's Bang—Nellie Bow).

BLOOMO III. (D. W. Oyster), liver and white bitch, May (Lad of Bow—Bloomo).

LADY HESSEN (Thos Bond), liver and white bitch, January (Duke of Hessen—Lemon).

LENA G. (J. F. Gill), liver and white bitch, May (Graphic—Don's Dot).

MEALLY VI. (West Tennessee Kennels), liver and white bitch, May (Graphic—Meally).

RIP RAP (E. Dexter), white and black dog, May (King of Kent—Hops).

TEMPEST (Graphic Kennels), liver and white dog, April (Beppo III.—Lass of Bow).

TRANSIT (Thos. Blythe), liver and white dog, April (Beppo III.—Lass of Bow).

TRIBULATION (West Tennessee Kennels), liver and white dog, April (Beppo III.—Lass of Bow).

"PRINCE GHARLIE."*

In Memoriam.

UPON the restless, busy town
The gracious twilight settles down,
And harsher sounds of garish day
Fade, like an echo, far away.

Within my quiet room I sit
(Freshly my friendly pipe alit),
And suffer thoughts to freely roam
Like birdlings from their leafy home.

From past to future, sad to gay,
Like sunset bright, like smoke wreath gray;
From dusty street to shady lane,
From breezy hill to sunny plain

They flit, but chiefly do they trend
To where some spreading branches bend
Above a form whose sepulture
They seem to bless and make secure.

A little mound it is, but wet
With tears of deep, sincere regret:
A little mound beneath which lies
A friend whose virtue never dies.

Fidelity, and love, and trust
There rest, while mingles with the dust
His graceful form, so dear to me—
Forever now a memory!

My friend—a dog—lies there, and small
The tribute though I give, 'tis all
That any friend may claim, I ween,
Whose love hath been oasis green

In life, whose thorny ways stretch on
Through scenes by hard experience won,
And cheered by few with faith like thine,
Now lying low, like withered vine.

Prince Charlie, though the cynic sneer,
The friends who loved thee love thee here,
And in their faithful hearts thy name
Shall ever tenderest tribute claim.

Soft western winds sing in the leaves,
Over the friend my true heart grieves,
A gentle requiem, for his life
Was gentle and with goodness rife.

JUNE 21. O. W. R.

*Died, on June 20, Prince Charlie, a beautiful Yorkshire Skye terrier, belonging to Mrs. E. V. Pierce, Billerica, Mass., of old age.

DOG TALK.

WE clip the following from the Philadelphia *Press*:

A peculiar dog suit was heard before Magistrate Clarke, June 19. On the affidavit of Charles Rafferty a writ was issued for the arrest of Joseph Farrow, of 3112 Spring Garden street, on a charge of "trover and conversion," the property being a shepherd dog which had been lost on June 13, and which Farrow had in a stable at the above address. Half an hour later Farrow and the dog were brought before Magistrate Clarke. Rafferty testified that he had lost the dog on the afternoon of the 19th while in a shop at Forty-first and Haverford streets, and had traced the dog to the drove-yard, where he had been using him for sheep driving for the past eighteen months.

Sunday, the 16th, he heard that a young man had such a dog, and on going to him learned that he had taken the dog to Dr. Hextamer M. Perry, of Thirty-fifth and Hamilton streets, who claimed it and gave him 50 cents for his trouble. At Dr. Perry's Rafferty was told that the dog had been sent away, but that if he called the following afternoon at 3 o'clock he would have him for Rafferty to see. Rafferty kept the appointment, but there was no dog on hand, and he was then told to go to 3112 Spring Garden street and ask for Joe Farrow, who would show him the dog. Then Farrow demanded $15 before the dog would be given up.

Harry Laird, who had taken the dog to Dr. Perry, swore that he did so as it looked something like dogs he owned, and when he asked Dr. Perry if he had lost a dog he said he had. When the dog was shown he claimed it was Ben Nevis, but a person with him said it was not that dog, whereupon Perry said it was Ben Nevis, Jr., and gave him 50 cents for his trouble.

Mr. James Watson, of Germantown, the last witness, said that the dog was his property, but had been used by Rafferty for the past eighteen months for sheep-driving. That on being informed by Rafferty of the whereabouts of the dog he called on Farrow, when the price had been raised to $18, with the statement that he (Farrow) had paid Dr. Perry $10 for the dog. Mr. Watson told Farrow that as the dog was not Dr. Perry's to sell he must look to that person for a return of the $10, but that he would pay any reasonable sum as a return for the expenses. An offer of $5 was made but refused, though Farrow came down to $8 before Mr. Watson left.

Magistrate Clarke then called upon Farrow to tell his story, and he asserted that he bought the dog the evening of the 13th from Dr. Perry for $10.

"You told my brother this morning you gave $4 for the dog," interrupted Rafferty. "I know I did, and I did give $4 and more that. I gave Dr. Perry $10 for the dog."

"You swear that?" said Magistrate Clarke. "Yes, sir."

"Well, we'll attend to that presently. What do you propose doing with the dog?" "I'll give it up. I don't want to take a dog that doesn't belong to me."

"Mr. Watson, take your dog," said the magistrate. He suggested that Mr. Watson could have a warrant for the arrest of Dr. Perry on the evidence given, but Mr. Watson didn't "care about going so far."

We are informed that Mr. John Borland, of Boston, Mass., has imported from England a good Skye terrier dog.

The Canadian Kennel Club will hold their inaugural field trials at Chatham, Ont., beginning Nov. 11. There will be a Derby and an All-Aged Stake. The address of the secretary is C. A. Stone, London, Ont.

The Farmers' Lancaster County Fair Association will hold a dog show in connection with their annual fair to be held at Lancaster, Pa., Sept. 9 to 13.

There were 90 entries at the dog show held at Los Angeles, Cal., last week. A list of the awards will be published next week.

Mr. P. Lorillard, Jr., has purchased of Mr. J. Shelley Hudson the well-known English setter dog Sportsman.

NEW YORK DOG TAX LAW.—Attorney-General's Office, Albany, N. Y., June 17, 1889.—To the Secretary of State: Dear Sir—The communication of George Barber, Esq., assessor, East Poestenkill, directed to the Secretary of State and referred by you to the Attorney-General, has been duly received. The information which he seeks has reference to the construction to be placed upon Chapter 466, Laws of 1889, entitled "An act to amend Title 17 of Chapter 20 of Part 1 of the Revised Statutes, entitled 'of dogs.'" This act was passed June 13, 1889. It amends Sections 1 and 13 of the above title of the Revised Statutes. A brief examination of this amendatory act shows that the material amendments to the Revised Statutes may be summarized as follows: (*a*) The counties of Kings and Erie are added to the county of New York, as excepted from the provisions of the Revised Statutes. (*b*) It increases the tax upon a dog other than a bitch from 50 cents to $1. (*c*) It exempts all dogs under four months old from any tax. (*d*) It provides for the registry of every other dog, annually, on or before the first day of May, by the owner or harborer thereof, in a book kept for that purpose, in the office of the clerk of the city, village or town in which such dog shall be owned or harbored, and the owner shall cause such dog to wear around his neck a collar which shall be distinctly marked with its owner's name and registered number; and said clerk shall, on or before the first day of June, furnish to the assessors of the town, etc., wherein such dog is owned or harbored, a list of parties or families owning or harboring such dogs so registered. (*e*) Penalties are then provided for the failure to register, number or license such dogs. (*f*) Provision is then made that any dog not registered or collared, as provided for in the act, may be lawfully killed by any constable, etc. (*g*) Provision is then made by way of amendment of the Revised Statutes for the payment for sheep killed, from the fund to be raised by said tax. (*h*) The act is not to apply to any dog owned or possessed by any person or association, etc., engaged in the business of breeding dogs, etc. (*i*) The amendatory act, it is provided, shall take effect immediately. It will be seen, therefore, that the only change in the amount of the tax provided for is in the addition of 50 cents for each dog other than a bitch. By the Revised Statutes, the assessors of towns, etc., are required to finish their assessment rolls by the first day in August in each year. So much of the act then, as provides for the assessment of the tax, is capable of enforcement the present year. So much of the act, however, as provides for the registering and collaring of dogs, must be done annually, by the first day of May, and so much of the act as provides for the furnishing of lists by the town clerk or village clerk, must be done by the first day of June. It is clear that these provisions of the act cannot take effect before the year 1890. No other construction can be given to these provisions of the act. It is a familiar rule in the construction of statutes that all laws are to be construed as furnishing a rule for future cases only, unless they contain language unequivocally and certainly embracing past transactions. Sanford & Bennett, 24 N. Y., 20; N. Y. and O. M. R. R. Co. agt. Van Horne, 57 N. Y., 478. Any other construction would contravene the express language of the provisions of this act, that it shall take effect immediately, which of itself excludes the idea that it should have any retrospective operation or effect. Matter of Mary E. Miller, 110 N. Y., 224. Very respectfully yours, CHAS. F. TABOR, Attorney-General.

AMERICAN PET DOG CLUB.—New York, June 27.—A special meeting of the American Pet Dog Club was held at 129 East Sixteenth street, New York, on Wednesday, June 26, at 4 o'clock P. M., with the president in the chair. Members present were Mrs. Chas. Wheatleigh, Mrs. Draper, Mrs. Fairchild, Mrs. Barnum, Mrs. Baldwin, Mrs. Cunningham, Mrs. Randolph, Miss Bannister and Mr. Wm. J. Fryer, Jr. The minutes of the preceding meeting were read and approved as read. Treasurer's report read, accepted and ordered on file. The committee on securing a hall reported that if not rented before Sept. 1 it could be secured by the club. Committee on by-laws reported several bids, and it was left to the president to decide. It was voted that application be made by this club for membership in the American Kennel Club; and that the club hold a show of pet dogs in October, exact dates and days to be duly announced in the papers. The annual election of trustees resulted in the re-election of Mrs. Wheatleigh, Mrs. Randolph, Miss Bannister and Mr. Fryer, and the election of Mrs. Fairchild to the existing vacancy.—MARION E. BANNISTER, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Monk o' Warwick. By Warwick Kennels, Bridgeport, Conn., for blue belton and tan English setter dog, whelped Feb. 10, 1889, by Warwick Albert (Royal Albert—Maida) out of Princess Belton (Yale Belton—Polly Blue).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie—Deoch. F. A. Douglass's (Chicago, Ill.) collie bitch Nellie to J. L. Lincoln, Jr.'s, Deoch (champion Scotilla—Bonnie Knowe), April 18.

Raspberry Girl—Glen Cairn. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Raspberry Girl (champion Rutland—Strawberry Girl) to Jas. Watson's Glen Cairn (Glenlivat—Nellie McGregor), March 29.

Vesta—Edwy. C. A. Altmansperger's (Minden, Ia.) mastiff bitch Vesta (Diavalo—Ashmont Madge) to Dr. G. B. Ayres's Edwy (champion Orlando—Countess of Woodlands), June 19.

Princess—Prince Barry. W. W. Judd's (Hartford, Conn.) St. Bernard bitch Princess (Monk Detrick—Nancy) to H. S. Pitkin's Prince Barry (champion Merchant Prince—Bernie V.), June 24.

Princess Belton—Warwick Albert. W. C. Russell's (Bridgeport, Conn.) English setter bitch Princess Belton (Yale Belton—Polly Blue) to Warwick Kennels' Warwick Albert (Royal Albert—Maida), June 26.

Bessie Noble—Ted Llewellin. Geo. Jarvis's (New York) English setter bitch Bessie Noble (Count Noble—champion Lady May) to Peet & Lyons's Ted Llewellin (Druid—Gussie), June 15.

Chautauqua Belle—Rock Belton. Peet & Lyons's (New York) English setter bitch Chautauqua Belle (Ted Llewellin—Marcella) to G. Jarvis's Rock Belton (Yale Belton—Princess Lilly), June 23.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dora. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Dora (Ringwood—Birdie), May 12, six (four dogs), by his Laick's Rattler (Chancellor—Careless).

Beauty. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Beauty (Hero—Snap), May 15, seven (one dog), by his Laick's Rattler (Chancellor—Careless).

Raspberry Girl. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Raspberry Girl (champion Rutland—Strawberry Girl), May 25, eight (four dogs), by Jas. Watson's Glen Cairn (Glenlivat—Nellie McGregor).

Maritana. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Maritana (Scott—Fly), May 7, nine (four dogs), by A. H. Megson's champion Caractacus (Cremorne—Barby Rose).

Dot Noble. D. E. Elder's (Bridgeport, Conn.) English setter bitch Dot Noble (Dashing Noble—Bessie Belton), May 29, seven (five dogs), by Warwick Kennels' Warwick Albert (Royal Albert—Maida).

Warwick Countess. Warwick Kennels' (Bridgeport, Conn.) English setter bitch Warwick Countess (Prince Phœbus—Rosey), Jan 21, nine (seven dogs), by their Warwick Albert (Royal Albert—Maida).

Queen V. A. D. Thayer's (Franklin, Mass.) Gordon setter bitch Queen V. (Gem—Rose), April 19, eight (four dogs), by G. E. Browne's Heather Jack (Argus II.—Jessica).

Lady Edith. J. H. Ackroyd's (Saylesville, R. I.) Irish setter bitch Lady Edith (champion Rory O'More—Lady Berkeley), June 26, eight (four dogs), by Max Wenzel's champion Tim (Biz—Hazel).

Moonshine. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Moonshine (The Moonstone—Meden), June 7, four (one dog), by A. Belmont, Jr.'s, Blemton Rubicon (Regent—Rachel).

Bowstring. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Bowstring (Resolute—Blemton Arrow), June 20, five (three dogs), by A. Belmont, Jr.'s, Bacchanal (The Belgravian—Bedlamite).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Raspberry Girl. Sable collie bitch, whelped Feb. 10, 1885, by champion Rutland out of Strawberry Girl, by W. R. Adamson, Bon Air, Va., to J. L. Lincoln, Jr., Chicago, Ill.

Pitts. Silver fawn pug dog, whelped May 23, 1889, by champion Kash out of Lady Thora, by Eberhart Pug Kennels, Cincinnati, O., to L. A. Readaseil, Baltimore, Md.

Whitney. Apricot fawn pug dog, whelped May 23, 1889, by Kash out of Lady Thora, by Eberhart Pug Kennels, Cincinnati, O., to W. A. Williams, Memphis, Tenn.

Dusky Daze. White and tan fox-terrier bitch, whelped March 14, 1888, by Dusky Trap out of Daze, by C. Rathbone, Albany, N. Y., to W. S. Applegate, New Albany, Ind.

DEATHS.

Daisy. Gordon setter bitch, whelped April 10, 1880, owned by A. B. King, Jr., Troy, N. Y.; poisoned.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. H., Erie, Pa.—I have an Irish setter pup, 11 months old, who is out of condition; nose dry and hot, scaling off and filling up; he sniffles a good deal; eye mattery; hair dry and bristling, stands up rough. I think he has had distemper. Veterinary doctor prescribed for distemper when he had no appetite, and he seemed to get better. What shall I give him? He will not go into water. Ans. Distemper. Give 5grs. quinine night and morning. Give teaspoon of whisky in water three times daily for a week. Keep him quarantined. Change bedding frequently and sprinkle carbolic solution in kennel.

A. C. C., Hartford, Conn.—I have a pointer dog troubled with weak eyes. His eyes run badly—something of a watery nature. What is the proper remedy? Ans. Sponge the eyes each day with borax and water. The trouble may be due to lack of exercise, improper feeding or digestive disturbance. These should be looked after. If digestion is poor, give Fowler's solution, 5 drops, night and morning, mixed with the food. Keep the bowels easy. Two or three compound cathartic pills at a dose will do this.

ATTENTION is called to the advertisement in another column of D. Finch, Ancram, N. Y., who offers some fine foxhound pups for sale.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

LONDON, June 29.—Several members of the English Volunteers met the American riflemen on their arrival here to-night. The men were weary after their long journey. Major Frost said, however, that they were in good health, and after two days' rest they would be ready to meet the team of Berkshire Volunteers on Tuesday. The interest of London centers in the match with the Honorable Artillery Company on July 6, when picked men have been arranged to meet them.

LONDON, July 1.—The Massachusetts rifle team was entertained by the Honorable Artillery Company yesterday. After a drive through Hyde Park and Kew Gardens they dined at the Star and Garter Hotel, Richmond. On returning they drove to Wimbledon Camp, where tents are already pitched and teams are practicing.

The team practiced in the morning at Muchead, near London, and in the afternoon shot its first match with a team from the Honorable Artillery Company for a prize offered by the company, and won easily by 54 points in the total. The shooting was at 200, 500 and 600yds. on the ranges at Nunhead, and the scores made were not on the whole very brilliant.

Each man had 7 shots at each range, besides 2 sighting shots; Wimbledon targets were used. At the 200yds. range the team shot in a standing position. At the other two in a prone position.

The Massachusetts team used Springfield rifles, as used in military competitions, with the regulation government ammunition, the rifles fitted with wind gauge and a perture sight, as allowed in competitions in the United States.

The Artillery boys had Martini-Henry rifles with open sights, and ammunition as issued for the volunteer service. Telescopes, spotting and coaching were allowed.

The day was a very fine for shooting, excepting for the fact that a trickish, changeable wind was blowing. While the 200yds. range was being shot it blew from the left, the rear, and at times shifted from all points between the rear and the left, and was often gusty.

The American team pronounced the range a poor one and shooting difficult, on account of the shifting and unsteadiness of the wind, which appeared to be due in large part to the topography of Irving and Imperfield surrounding the range.

After a lunch, which was tendered by the Americans to the Artillery men, the match began and lasted nearly four hours. At the 200yds. range shooting the Americans showed notably their superiority over their opponents in the standing posture. In their work at 500yds., reclining position, the Americans did still better shooting. At the 600yds. shoot, however, the home team wound up with a lead of 9 points over their Massachusetts opponents.

At the conclusion of the match Captain Stohwasser, in behalf of his team, congratulated the Americans on their success and expressed the hope that they might maintain it, and then, with the rest of his men, gave the H. A. C. a hearty cheer.

In response Captain Frost expressed thanks for such courteous greeting and good wishes, and said that he was somewhat chagrined at the shooting done by the Massachusetts team. It had, he thought, never struck such a poor range before. With a more decent range and a better day it might hope to do still better work. Then the Americans gave a rousing Massachusetts fire, consisting of three cheers, "M. I. V. I. M." repeated lustily thrice, and "Massachusetts" once. Both teams intermingled in groups and were then photographed. They concluded the day's pleasure with refection at the Artillery Company's headquarters. Following are the totals by the marksmen at each range:

Massachusetts Team.	200	500	600	Artillery Co. Team.	200	500	600
Bumstead	33	33	23	Gilbert	27	32	32
Huddleson	30	31	27	Rosenthal	24	29	30
M W Bull	28	31	29	Bateman	25	32	25
Merrill	30	32	25	Brooking	27	24	24
F R Bull	31	32	24	Ware	25	31	29
Farrow	31	30	26	Mundy	32	30	20
Doyle	28	35	23	Gibson	26	20	25
Hinman	30	27	26	Homer	24	31	25
Farnsworth	27	30	25	Parker	27	29	17
Edes	26	28	26	Payne	23	24	24
Johnston	31	30	19	Wood	30	30	30
Hussey	29	26	23	Angel	25	29	24
	354	365	290		315	341	305

The Massachusetts team will shoot a match with the Royal Berkshires at Churn to-morrow, and with the London Rifle Brigade at Rainham the next day.

LONDON, July 2.—The following memorial to the National Rifle Association, and the Council's reply thereto, have been published:

"The committee of the South London Rifle Club having arranged to shoot a match with the American team about to visit this country, and having elected them honorary members of the club during their stay here, respectfully request that they may be permitted to use their regulation Springfield rifles in the several M. B. L. competitions at Wimbledon, in which, as matters stand, they will be unable to fire a shot, because the 'Buffington' screw aperture rear sight, which in 1884 superceded the sliding wind gauge buckhorn sight adopted in 1879, is barred by the N. R. A. rules.

F. H. SHORT, Captain 3d West Kent,
Chairman of Committee.
"WILLIAM TUKE, Hon. Secretary."

From the Secretary, National Rifle Association, 12 Pall Mall East, London, S.W., to the Chairman of Committee of South London Rifle Club, Nunhead, S.E.

JUNE 11, 1889.—SIR—I am directed by the Council of the National Rifle Association to acknowledge the receipt of the Memorial from the South London Rifle Club, requesting that the members of the American Team, who have been elected Honorary Members of the Club, may be permitted to use their Regulation Springfield Rifle in the several M.B.L. Competitions at Wimbledon, in which, as matters stand, they will be unable to fire, because the "Buffington" screw aperture rearsight, which in 1884 superseded the sliding wind-gauge "buckhorn" sight adopted in 1879, is barred by the N. R. A. rules.

The Council desires me to state that, after a careful consideration of the request contained in the memorial, they decided that they could not have the pleasure of acceding to it, and the following resolution was passed:

"That the request of the South London Rifle Club be refused, as it is not advisable that the general regulations of the National Rifle Association respecting the sights of military breechloaders be departed from." I have the honor to be, sir, your obedient servant,

EDMOND ST. JOHN MILDMAY, Secretary N.R.A.

BOSTON, Mass., June 29.—The regular shoot of the Massachusetts Rifle Association was held to-day with a good attendance and some fine scores, especially those of Mr. Hill from Lawrence. The weather conditions were favorable, except the heat. Mr. Richardson won the gold champion medal and Mr. Francis won the gold medal in the 20-shot rest match. Following are the best scores made to-day:

WILMINGTON, Del., June 24.—There was a fair attendance at the regular weekly shooting at Healdmoor rifle range, Wilmington, Del., this afternoon. The weather was very favorable for target shooting, being just cloudy enough to prevent glaring light, and the wind very moderate. The shooting was generally close and even. A new feature of practical value and which afforded much amusement and rivalry to the competitors was the match with pocket revolvers. The second telegraph team match resulted in a victory for the Camden, Del., team by a narrow share of three points. The shooting of each team shows geat improvement, and as each side has now won a match the next match promises to be exciting. Following are the scores, standard American target, off-hand:

Pistol Match—50yds.

E J Darlington	10	8	8	8	10	8	6	9	6	7—80
J Evans	8	8	9	9	8	6	10	7	8	6—79
E Darlington	5	6	10	4	7	8	6	8	5	3—62
H Johnson	4	6	5	6	4	4	5	10	4	5—53
D Evans	1	8	5	9	5	7	2	6	4	3—51

Telegraph Team Match—200yds.—Camden, Del., Team.

UNSER FRITZ.

GUELPH, Ont., June 25.—At the regular practice of the Guelph Rifle Association to-day Mr. Geo. Sleeman made the following remarkable score, which is one of the best on record, using a Martini rifle:

200yds. ..... 3345555—30 600yds. ..... 2555555—32
500yds. ..... 5555555—35

Grand total, 97, out of a possible 105.

NEWARK, June 27.—The fifth match for the member's trophy was shot by the Newark Shooting Society to-day, under perfect conditions of weather and light. The match was won by Henry C. Koegel, who scored 225 points. Other scores were: H. Williams 215, S. Coppersmith 213, J. H. Huegel 195, F. A. Freiensehner 192, F. C. Dietz 191, G. D. Weigman 187, C. H. Contrell 186, W. Yauffman 186, S. H. Shackelford 187; the ten men aggregating 1,987 points, an average of 198 7/10. The expert match had another "off day," so far as entries were concerned, though some big scoring was made. H. Williams took first money with 67, and also secured three 66's, four 64's, a 62 and 61; J. Coppersmith was second with 66, also scoring 65, 65, 63, 62, 60; F. C. Campbell was third with 63, G. D. Weigman fourth with 62, also scoring 60 and 58, which gave him a bronze medal; fifth money went to W. Yauffman on 61, sixth to F. C. Dietz on 54, and seventh to F. A. Freiensehner on 53. The New Yorkers who were expected were conspicuous by their absence.

FOREIGN RIFLE NOTES.—The Swiss commission appointed to report upon the adoption of a new rifle had recommended the immediate re-equipment of the whole of the Federal troops with weapons after the pattern submitted by Col. Schmidt, of the Swiss Army.

A Frenchman, M. Bieunait, is said to have found the means of replacing the metal shell of cartridges by one of a vegetable composition, which will be entirely consumed in firing. This cartridge scarcely weighs one-half of a metal cartridge, the price is considerably less, and its use will do away with all the drawbacks attached to the extraction of the shell after each shot. As the metal shell, however, secures the closing of the gun, M. Bieunait has invented a new contrivance, which may be easily affixed to every gun at a small expense, and which would give to his vegetable shell the same advantage as possessed by those in use. The employment of these new cartridges would enable soldiers to carry twice the number now allowed, and thereby the difficult problem of the supply of ammunition in battle would be greatly simplified.

NEWARK, N. J.—The thirty-seventh annual festival of the Newark Shooting Society will be held at the Newark Shooting Park, Thursday, Friday and Saturday, July 4, 5 and 6, Schuetzen rules to govern. Hours of shooting: Thursday, 1 to 7 P. M.; Friday, 9 A. M. to 12:30 P. M., 1 to 7 P. M.; Saturday, 9 A. M. to 12:30 P. M., 1 to 6 P. M. Bullseye target will close at 4 P. M. on the last day. Officers for 1889: Pres., Henry W. Egner; Vice-Pres., William Hayes; Treas., Julius Stapff; Sec., C. H. Townsend. Shooting committee: August Bigerow, 1st shooting master; John Coppersmith, 2d shooting master; William Hayes, Albert Seitz, C. H. Townsend.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

NEW JERSEY STATE TOURNAMENT.

THE New Jersey State Association for the Protection of Fish and Game (so-called) met at theirrooms, Continental Hotel, Newark, on Tuesday last, Dr. Pindell, president, in the chair; Wm. Hayes secretary. Nineteen clubs were represented, besides a large gathering of sportsmen from different parts of the State, and much interest was shown. The conduct of the State shoot for 1889 was unanimously awarded to the Jersey City Heights Gun Club if they would accept the responsibility. At a meeting of the last-mentioned club at their rooms, Newark avenue, J. C. H., on Thursday last, it was resolved to accept the same, and the following committee on organization and running matters were appointed with full power to act: Chairman, Frederick Quimby; Milton Lindsley, Albert Heritage; with Wm. Hughes, George B. Eaton, J. J. Maher and Dr. F. Cummins sub-committee. Any clubs wishing to join the State Association can do so by applying to Wm. Hayes, Secretary, Broad street, Newark. There will be a four-day tournament, two days at clay (not graven) images and two days at live birds. Sweepstakes at times at both will be open to visiting sportsmen outside of the association prizes and badges.

One of the marked features of the occasion will be a 5 live bird shoot for old stagers only. No one less than 55 years will compete. The shooting to be old style and what we have always advocated, gun below elbow until the bird is on the wing. Only bona fide members of regular organized clubs of the association allowed to compete. Five prizes of $15 each have been so far guaranteed. This age limit we fear will bar out Uncle Billy Hughes, as he has recently renewed his age and is not now over 40. Also the field editor Jake P., he only calls now for about 35 or so, but we have a small matter of old to settle with Jake and we shall insist upon him being allowed in, and we propose to test his sight on the tubes and delicacy on the trigger. We know he used to shoot most as well as he writes, which is saying a good deal, and we rather hope when we come together at the score to warm him. Dare he accept the challenge? He may find besides "Jacobstaff" such old timers as Lamberson of Midway, Voorhees, Drs. Burdett and Pindell, Leddy, Bedle, Cassells, Heritage, Wm. Taylor, Wm. Hughes, C. M. Hedden and we don't know how many others. It will be a great affair and will rival all these other veteran associations of notoriety or rather associations of veterans like the firemen, Grand Army, etc. Why some of these are veterans of more than 50 years at the traps and they have not forgotten their cunning yet by any means.

The State tournament will take place on the grounds of the Jersey City Heights Gun Club, Marion, N. J., the week following the State fair at Waverly, probably the last week in September or first of October, due notice of which will be given.

JACOBSTAFF.

ONEIDA, N. Y., June 22.—Team match, 7 men each, 15 single kingbirds, 3 traps, and 3 men at doubles:

READING TOURNAMENT.—There will be at Reading, Pa., a four-days' tournament at live birds and inanimate targets at the new Agricultural Park, open to all, Oct. 15, 16, 17 and 18. Programme mailed later. The managers are Messrs. B. Fleishman, H. A. Penrose and J. Frank Kleinz, whose address is 600 South Delaware avenue, Philadelphia.

TOURNAMENT OF THE NORTHWEST.

TACOMA, Washington Territory, June 20.—*Editor Forest and Stream:* The great tournament of the Sportsmen's Association of the Northwest, held at Tacoma under the direction of the Tacoma Rifle, Rod and Gun Club, is over, and has been a great success. The weather was pleasant and attendance large. Every thing passed off pleasantly, and each member took it upon himself to make it pleasant for visiting sportsmen, of which there were a large number as follows: J. H. Foster, G. K. Streight and A. W. Du Bray ("Gaucho") of Walla Walla; G. W. Hugel, W. D. Close, H. W. Close, Geo. Reed, J. L. Field and H. O. Peters, Kalama; J. Dotoy and A. Cooper, Whatcom; J. West, S. T. Stine, J. R. McLaughlin, J. McNaught, J. C. Natrass, Jos. Hardy, H. W. Robertson, G. Kellogg and A. W. Hardy, Seattle; E. W. Moore, J. Evans, H. J. Hudson, Dr. Britton ("Partington"), J. W. Riley and Buel Lamberson, Portland, Oregon; J. I. Corwin, E. S. Parson ("Pistol Grip"), Frank Carter, C. H. Smith, Butte City, Montana; W. H. Skinner, St. Paul, Minn.; and others.

In the inanimate target shooting none of the scores were large, and if any Eastern sportsman in looking them over should think that if he had been there he would have had a "pudding" let me assure him of his mistake. There were as good shots here as will be found anywhere, as the scores at live pigeons (at 40 cents each) will show. The background for one unused to it was the worst possible, being of the heavy dark green of the immense fir forests. A trestle to convey water was also a prominent feature; and one man expressed the opinion of nearly all when he remarked, after missing a bluerock, "That trestle has cost me $40." Five unscreened traps were used, with unknown angles. There was no wind, and for live birds the conditions were favorable.

No 1, 10 single bluerocks, entrance $2.50, 40, 30, 20 and 10 per cent.:

Moore first, ties div.

At the annual meeting of the Association the following persons were elected to serve the ensuing year. The next tournament will be held in Portland: President, A. W. DuBray, Walla Walla, Vice-President, E. E. Ellis, Tacoma; Secretary-Treasurer, H. F. Hudson, Portland. Montana was admitted to the Association. A committee of one from each club was appointed to revise by-laws and constitution. WILLIAMS.

NORTH END VS. BALTIMORE.

FRANKFORD, Philadelphia, June 28.—To-day was field day for the members of the North End Gun Club, being the return match with the Baltimore Gun Club, a hitherto unbeaten organization. A short time ago they had the pleasure of hanging the North Enders up for 8 birds. To-day they were taken into camp, regaled with the best the market afforded and beaten to the tune of 16 birds, neither club shooting up to its average. The visiting team was met at Broad street station by a committee containing Capt. W. H. Pack, James Wolstencroft and A. L. Lumb. On reaching Frankford the visitors were seated in Mr. Gray's large, new coach and driven to the Messrs. Wolstencrofts' Mill. Here the visitors were invited to partake of dinner, which was laid in the large new stock room of the mill; covers were laid for seventy-five persons, and the way that lobster and chicken salad and more substantial comestibles, not forgetting the great American institutions, pie and ice cream, disappeared was a caution to doctors. The lady friends of the North End club came in for the highest kind of encomiums from all, and more especially from the visitors. After the good things had been disposed of the march was taken for the grounds, a short distance away, and shooting began at once. The match was for 25 single birds each, Keystone targets, National Association rules, teams of five and six men each:

North End Gun Club—No. 1 Team.

LANSDALE, Pa., June 22.—Appended is the score of a sociable team shoot at Lansdale Gun Club grounds, each man shot at 21 clay-pigeons:

Forest Gun Club.		Lansdale Gun Club.	
J Hallowell	12	L Swartz	15
F Ransley	14	J Henry	16
C Brelsford	15	J Zearfoss	8
F Robinson	17	H Lock	5
S Reed	9	H Zearfoss	5
O P Ely	12	G Young	8
L Redman	6	D Smith	7
Jas Mills	7	W Zearfoss	10
W Morrison	12	F Henry	11
H A Kemble	5	J M Boorse	9
D Ezra	9—118	J W White	10—104

THE GLOVERSVILLE (N. Y.) GUN CLUB will hold a tournament to-day.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

BOSTON, June 26.—There was a fair attendance of trap shots at the range to-day. The weather conditions were good and several clean scores were made. Among the visiting sportsmen present were Mr. Hall, of Chicago, who made his maiden attempt at trap-shooting, and, as will be seen by the scores below, did remarkably well for a new beginner; and Mr. Bowker, of the Natick Sportsman's Club, who, with a light 12-gauge gun, did some excellent work. The principal event was the fifth competition in the gold coin and merchandise match. The following is a summary of to-day's events:

Gold Coin and Merchandise Match.

Fifteen clay pigeons and 15 Keystone targets, five traps; Keystone squad system.

	Clays.	Keystones.
White	011111111111111—14	111101111111111—14—28
Swift	101111111111111—14	111111111111110—14—28
Stanton	111011111111111—14	111110111011110—13—27
Perry	111111111111111—15	111110110111011—12—27
Bowker	111110111110101—12	110111111111111—14—26
Choate	111101111111101—13	111110111111111—13—26
Hosmer	011111111111100—12	110110111111110—12—24
Wheeler	110111000101101—10	011111111011011—12—22
Nichols	101111101111011—12	110010101110101—9—21
Curtis	111100110111111—12	111100101100110—9—21
Knowles	111010111111100—10	011101101111100—10—20
Snow	101111011110111—12	011001110000111—8—20
Nelson	111001111111100—11	101000110001011—7—18
Hall	101011000110101—8	000001111001100—6—14

The winners in the sweepstake matches were as follows:

Five Keystone targets, Keystone system, Knowles 5; 10 Keystone targets, Keystone system, Swift 10; 7 clays, 5 traps, Swift, Bowker and Knowles 7; 10 standard targets, 3 traps, Stanton 9; 10 standard targets, 3 traps, Stanton, Bowker and Swift 9; 5 Keystone targets, Keystone system, Curtis and White 5; 15 clay birds, Keystone system, Stanton, Swift and White 14; 15 Keystone targets, Keystone system, Perry 15; 10 clay pigeons, Keystone system, Stanton, Bowker and White 10; 5 pair standard targets, Stanton and Perry 6; 5 Keystone targets, keystone system, Stanton, White and Choate 5; 10 clay birds, 5 traps, Keystone system, Perry 10; 5 pair clays, Perry 9; 10 bluerocks, 3 traps, Stanton.

The next shotgun competition at Walnut Hill will occur on Wednesday, July 10, when the sixth contest on the gold coin and merchandise match will take place, followed by the regular sweepstake shooting.

TORONTO, June 25.—The third championship match of the Off-Hand Rifle Association was shot over the different ranges to-day. The day was all that could be desired for fine shooting. Newton Brook, Scarboro' and Orillia made the three highest scores that have ever been made by any teams in the association. The marksmanship exhibited was indeed wonderful, and proves what perfection can be attained by practice. The score of each team is appended, and the total matches won and lost out of the three shot. It is but fair to mention that Alliston shot with only nine men, while all the rest had ten:

	Points.	Total won.	Total lost.
Orillia	791	28	2
Newton Brook	809	26	4
Scarboro'	792	25	5
Aurora	747	23	7
King City	736	16	14
Tottenham	723	15	15
Midland	697	12	18
Point Edward	653	9	21
Alliston	577	8	22
Gravenhurst		..	30
Bradford		..	30

The fourth match will be shot on July 9.

BROOKLYN, June 29.—The Crescent Gun Club held their third regular monthly shoot to-day at Dexter's Park, on the Jamaica Plank road. Only six members competed for the club badge and extra prizes. C. Hubbell and W. J. Bolton tied for the medal. On the shoot-off both again tied and divided the money, the tie to be shot off at the next shoot. In the first sweepstake shoot H. Skidmore took first money and W. Gilman second. Messrs. Hubbell, Scott and Bolton tied on the second and divided. The following is the score of shoot, 10 birds:

W Scott (25)	0000110010—4	W D Gilman (25)	0111010101—6
H Skidmore (24)	0101010111—6	C Hubbell (25)	1110010111—7
E Mathews (23)	0110101001—5	W J Bolton (25)	1100110111—7

Referee, Mr. W. Mills.

WORCESTER, Mass., June 28.—This week at the Coal Mine Brook Range of the Worcester Sportsmen's Club the members for the fourth time contested for the Norcross trophy, and in the shooting off of the ties E. T. Smith broke 10, G. J. Rugg 9 and Sampson withdrew before the first 5 balls were thrown. In the contest each man had a possible 50; the work of each man in detail follows:

E T Smith	26	M D Gilman	22
G J Rugg	26	W B Dean	22
G E Sampson	23	C Crompton	21
A R Bowdish	25	A G Larkin	21
W L Davis	25	H W Webber	21
A B Franklin	24	F Forehand	20
E F Swan	23	A L Gilman	19
C H Howe	23	C R Holman	19
E B Burbank	23	C R B Claflin	19
Dr Bowers	23	F M Harris	18
E S Knowles	22	C Forehand	17
C Johnson	22	F N Hale	12

The winners of the trophy thus far are as follows: First, M. D. Gilman, 28; second, E. T. Smith, 27; third, C. Crompton, 27; fourth, E. T. Smith, 26; tie score 10.

NORTHAMPTON, Mass.—The Northwood Gun Club of Florence had a poor attendance at its weekly shoot June 18. The Keystone traps and targets were used. The scores made were at 25 Keystone targets:

T T Cartwright	1101101010110110101010—15
F L Gaylor	0110111010100001101010101—13
S Foster	0110100011010001101100100—10

In a practice shoot: C. O Harris 15 out of 20, Gaylor 10 out of 15, Cartwright 9 out of 15. The attendance June 15 was a decided improvement, and some fair good shooting was done. Mr. C. N. Gaff and E. N. Foote, of the Northampton Gun Club, were visitors, but did not bring their shooting irons, so borrowed guns. Mr. Gaff used T. T. Cartwright's new Whitney hammerless, and did some good work. Mr. Foote used several strange guns, but there was no gun that would fit him, consequently his score was not up to his average. Match at 25 birds each:

L F Gaylor	1110011011110111011110010—15
T T Cartwright	0100101011111010111100010—14
F W Twiss	0011100100011001111101100—11

Practice:

C N Gaff	1110110111010 110 011 —15
E Abercrombie	1011111011 —8
S Foster	1111101001001111 —10
F Nuttleman	0110110111101110 —10
L F Gaylor	0110100111010010011101001111111—18
E P Fetkes	1010100110 —5
T T Cartwright	1000110F0001101011001110 —12
E Foote	1010111000010110001111 —10

The club will build a new club house; they will hold a small tournament July 4.—MEADOW CITY.

EATON, N. Y., June 29.—Eaton Gun Club practice at 9 kingbirds, three traps, 18yds. rise, American Association rules:

Peet	111111111—9	Fryer	101111001—6
Hall	011111111—8	Briggs	101001101—5
Richardson	110110111—7	Sackett	110110110—6
Bell	110110111—7	Curtiss	100100100—3
Atkins	001111111—7	Ormsby	100101001—4
Cole	101111101—7		

Match, Captains Peet and Richardson:

Peet	101111111111111—14	Richards'n	111011011010031—10
Cole	011100101111111—11	Hall	1141111011001—11
Atkins	111000110101011 9	Fryer	011111010111112
Briggs	111101100011001— 8	Sackett	011101111011111—11

UNSER FRITZ.

BOSTON GUN CLUB, June 29.—At the Boston Gun Club shooting tournament for the experts at Wellington to-day, the principal event was the 100 clay-pigeon championship, to the winner of which was given an elegant gold watch charm. This was taken by J. Knowles of the Lowell Rod and Gun Club, who also took the special prize of $5 given by the club for the best score over 90. Taking into consideration that of the 20 shooters contesting nearly all were the elite of the different clubs in Massachusetts. The Brockton, Wellington, Lowell, Natick, Worcester, Willimantic, Exeter, Massachusetts Rifle and Boston gun clubs were all represented. The winner was heartily congratulated by all the sportsmen present. The names of the leaders are given below in the respective sweeps: Initial sweep No. 1, set traps—Choate, North, Bartlett and Stanton. Initial sweep No. 2, set traps—Dickey, Eager, Smith, Spring, Bowker and Bartlett. Ten clays, Perry; 10 clays, Knowles; 10 clays, Knowles, Eager, Choate and Cooper; 10 clays, Knowles and Perry; 10 clays, Stanton, Smith, Eager and Choate; 10 clays, Roxton, Dickey, Eager and Perry; 10 clays, Allen, Stanton, Choate, Bartlett, Chase, Knowles and Dickey; 10 clays, Knowles, Dickey and Perry; 10 clays, Nichols; 10 clays, Perry and Nichols; 7 Peorias, Swift; 10 clays, Knowles; 7 Peorias, Stanton and Knowles; Eager-Dickey match, 25 clays. Eager 25 straight. Dickey 23 clays, Swift; 10 Peorias, Swift, Dickey and Nichols; 5 pair doubles, Perry and Choate; 10 Peorias, Swift, Stanton and Eager; 10 clays, Choate. Totals of scores in the 100 bird match: Knowles first, 92; Perry second, 91; Eager third, 87; Dickey, Choate and Bowker 86, Nichols 85, Stanton and Smith 83, Bartlett 80, Allen and Piper 77, Swift 73, Roxton 72, Spring 71, Wood 67. Chase, Cooper, North and Gerrish withdrew.

NEWARK, June 27.—The deciding match in the series between the South Side Gun Club, of this city, and the Union Gun Club, Springfield, took place on the grounds of the former club, and was a hotly contested affair. The teams comprised 12 men each, 25 clay birds each man, from 3 screened traps, under national rules. The local club was in fine shooting form, but could not cope successfully with the Unions, on whose team were J. and W. Wolstencroft and W. Morris Pack, three of the best shots in Philadelphia, and John Riggotts, of Rockaway. The result of the match was as follows: Union G. C.—E. D. Miller 23, Wm. Sigler 25, J. Wolstencroft 24, N. C. Conover 20, John Riggotts 18, W. Wolstencroft 24, W. M. Pack 20, R. E. Williams 22, M. F. Lindsley 21, C. H. Johnston, Jr., 22, E. Brantingham 23, R. Collins 22; total 264. South Side G. C.—Oswald Von Lengerke 22, A. Beilman 18, W. R. Hobart 21, H. R. Breintnall 20, L. Thomas 22, T. Dukes 19, A. White 23, A. Quad 24, C. M. Hedden 22, J. Beam 19, E. Geoffrey 23, Justus Von Lengerke 22; total 255. A number of sweeps followed, in the first of which Miller, W. M. Pack, Yeamans, J. Wolstencroft and Conover divided first money on 10 straight each; W. F. Quimby and A. Sickley divided second on 9 each; Johnson and Goesser divided third on 8 each, and fourth was split up between Geoffrey and W. H. Pack on 7 each. In the next sweep first was divided on 10 straight each by Miller, W. M. Pack and W. Wolstencroft; second went to Dukes on 9; third was divided by Sickley, Parliment and Beam on 8 each, Collins taking fourth alone on 7.

WELLINGTON, Mass., June 29.—There was a good attendance at the grounds of the Wellington Gun Club to-day and several clean scores were made in the sweepstake matches. In the silver pitcher match, at 8 clay-pigeons and 7 bluerocks, Dill won with 14. The other scores in this match were: Schaefer and Hutchingson 12, Bond, Field, Baxter, Warren and Tilton 11, Stone 10, Chase and Lang 9, Herrick, Cowee and Bradbury 8. In the merchandise badge match, Bradstreet won with a clean score of 15 clay-pigeons. The other scores were: Field 14, Warren, Lang and Chase 13, Schaefer, Bradbury, Hutchingson and Tilton 12, Snow and Melcher 11, Stone, Dill, Cowee and Bond 10, Baxter and Herrick 9. The winners in the sweepstake matches were as follows: 8 clay-pigeons, Hutchingson; 5 clay-pigeons, Warren and Hutchingson; 7 bluerocks, Dill; 5 clay-pigeons, Warren, Schaefer, Chase and Bradstreet; 5 clay-pigeons, Snow, Lang and Bradstreet; 5 clay-pigeons, Field and Bradstreet; 6 bluerocks, Baxter; 6 bluerocks, Warren; 6 clay-pigeons, Field, Warren and Bowker; 3 pairs bluerocks, Chase and Warren; 3 pairs clay-pigeons, Bradstreet; 10 clay-pigeons, Keystone match, Bond and Dill. The club held a meeting during the afternoon, and elected A. W. Gore treasurer of the club, vice C. B. Sanborn, resigned.

ALGONQUIN GUN CLUB.—New York, June 28.—The club celebrated its first regular monthly live bird shoot yesterday at its grounds, Weehawken, N. J. Preparations had been made for a large crowd but the crowd was absent owing no doubt to the late hour that the birds were procured and a short notice to the live bird shooters. A large number of birds of a mixed description were on hand, some good ones, with a few decidedly poor ones among them. The weather was warm and oppressive, with no breeze, but the shooting was very good taken as a whole. Dr. Booth of the Eureka Gun Club participated in the shoot. Mr. Baun of the *Times* officiated as scorer. Left barrel counted ½ bird, at 20 birds: Dr. Lordley 14, E. H. Fox 15, John Male 16, F. Rinn 15, J. Hanna 16, P. Tomlin 10½, D. Simpson 11, Dr. Booth 12, L. Brenner 13. F. Rinn and E. H. Fox shot their match on their first 15 birds. Rinn won killing 12½ to Fox's 11. Rinn shot a 10lb., 10-bore; Fox a 7¼lb., 12-bore; both at 25yds. rise, 80yds. boundary.—F.

VICTORIA, B. C., June 12, 1889.—*The U. S. Cartridge Co.*: GENTLEMEN—I have used your shells exclusively for the past two years, and in the last eighteen months in salt water shooting, which ruins a shell more than anything else, scarcely a day passing but with my shells were more or less wet. When I came out here I brought a box with me, and on one occasion when boat shooting it came on rough and we shipped considerable water, wetting guns and ammunition; after that mine were the only shells that could be fired. I gave all my unloaded ones to my friends and wrote for more, but my letter miscarried and I waited two months without them. During that time I used the few I had over and over, stiffening the mouth with mucilage. Some of them I fired seven and eight times, and they could have been fired again. Since that I have purchased some 2,000 for myself and friends, and have just got another 1,000. I see you advertise an illustrated catalogue. Please send me a couple. They will do you good. I use only Schultze powder, and have never had a miss or hang fire yet. Your shells I buy of J. Muckleston & Co. Yours truly, (Signed) JOHN C. CORNISH.—*Adv.*

JOE.—The minnow is often a successful bait, and you will do well to try it in this case.

G. D. S., London.—For the eggs address H. B. Bailey, No. 51 South street, New York.

P., Philadelphia.—We hear of rockfish or striped bass being caught by hook and line in the surf along the New Jersey coast weighing from 2 to 50lbs., but are not informed how such fishing is done. You would confer a favor on many friends of the sport by giving the required information, such as the season of the year, time of tide, whether high or low surf, the direction of the wind and formation of the beach where such fish would be likely to be found; the kind of bait used and whether bottom fishing or trolling is best. Is rock fishing like drum fishing in the surf, done in little gullies or little channels between the outer edge of the beach and inner bar, clam bait and sinker for bottom fishing with ordinary drum tackle? Casting into the gullies just outside the inner overfall in this way many drumfish are caught from May and October. About ¼ to ¾ flood tide, wind south or southwest and moderate surf is the best time to fish. Strong tackle of the best make is required for the capture of this fish. A stiff rod, not exceeding 9ft. in length, a reel holding about 200yds. of 18-thread Cuttyhunk line, No. 6 or 7 Sproat or 5 or 6 O'Shaughnessy hook, and a 2 or 3oz. sinker is needed as long casts are necessary. Fish from rocky ledges in deep water, high tide and a good-sized surf is best. Hip boots and a gaff are required. The best baits are shedder crabs, menhaden, squid, and lobsters. Trolling with spoons is a successful way to capture this fish also. The season is from the beginning of June until October; best in August, September and into October.

BOOKS RECEIVED.

ENGLISH, PAST AND PRESENT. By Richard Chenevix Trench, D.D., Archbishop of Dublin. The Humboldt Pub. Co., 28 Lafayette place, New York. This is another standard work added to the Humboldt Library Series—a work that has had a sale second only to "The Study of Words," by the same author. Twenty editions of the latter and thirteen of the former are the best evidences of the popularity of the works. A most interesting study, therefore, is the history of the English language past and present. This is Nos. 108 and 109 of the Humboldt Library.

A VERY GENEROUS CONCESSION.

ONE of the "generous concessions" that have been so generally lauded by the friends of the new deed of gift is the selection of outside courses and the inferred abandonment of the much-abused inside course. Much has been said about the spirit and liberality which the New York Y. C. has displayed in this matter, but unfortunately the exact truth has come out from no less a person than Mr. Geo. L. Schuyler, the "surviving donor," who certainly should know what he is talking of. In a late interview in the *Commercial Advertiser* Mr. Schuyler says: "The difficulty had to be met of a stretch at one point of the (New York) course where there was only about 18ft. of water, whereas the Volunteer draws 22ft. with her board down. This obstacle to boats of all sizes, and particularly of the large class being so rapidly developed of late years, might be much increased in the case of future holders of the Cup if the provision of the old deed requiring the club course to be used was in force. I therefore suggested that the deed be so altered as to make a series of three races in open water a condition of challenge races for the America's Cup." It thus appears that the change was made, not out of consideration for the 18ft. draft of the deep cutters, but for the 22ft. draft of the American "sloops." Mr. Schuyler's words make the meaning as plain as it can be made, he says, "In the case of future *holders* of the Cup," not holders and challengers, but only the New York Y. C., whose tenure of the Cup is practically made perpetual by the provisions and exactions of the last deed of gift. The true history of the adoption of outside courses is briefly this: For fifteen years, from the first Cup race in 1870, the inside course of the New York Y. C. has been objected to by challengers as unfit for an international race because of its shoal and tortuous nature and strong and complicated tides, giving advantage to the shoal boat and to the superior knowledge of the home pilots compared with foreign skippers. The concourse of attending steamers hinders the racers and brings a great risk of collision, the light and fluky winds make a fair test impossible, the odds being strongly in favor of home craft, built especially for this course, as against sea-going yachts, such as all challengers must be. Every challenger from the first has objected to the course, and many American yachtsmen have condemned it as unfit for any important match, but still the New York Y. C. has clung to it, and every contestant for the Cup has been obliged to sail at least one race over it. The advent of Puritan, Mayflower and Volunteer materially altered the hitherto existing conditions, instead of being shoaler than the British yachts these new craft actually required 8 to 9ft. more water; instead of being conspicuously best at reaching they proved to be superior to the British craft to windward, and in the case of the Volunteer and Thistle many conceded the inside race to Thistle, but expected Volunteer to defeat her outside the Hook. The Volunteer-Thistle race brought out very prominently two facts, first, that the strong point of the American type was to windward and its worst off the wind; second, the ill-timed grumbling of some of Thistle's adherents called attention to the crooked, shoal and complicated course over which many British races are sailed, a fact also emphasized by the Mayflower-Arrow controversy. Volunteer's gain to windward and comparatively poorer performance to leeward in the last race, together with the howl about four-sided courses which went up that same night, settled the matter, and within three days the work of changing the deed of gift, so as to shut out all inland courses, was well under way. There is no question of the propriety of the selection of three outside courses with the windward legs to be sailed first, or of the abandonment of the old inside course; the change should have been made ten years since; but it is entirely untrue to claim that the New York Y. C. was animated by any generous motive or any regard for the right of future challengers in making the change. It was purely a matter of self-interest, and the fact that at the same time it is a good thing for all parties who wish a fair race is merely accidental.

TIME ALLOWANCE IN THE CUP RACES.

A VERY good instance of the mixture of truth and falsehood that is brought forward to obscure the real issue in the discussion of the new deed of gift is shown in the reference which the daily papers have of late been making to the matter of time allowance. The two bare facts that America sailed without time allowance when she won the Cup, and Valkyrie will receive time allowance in racing against Volunteer for it, are brought into prominence to show that America was treated unfairly, while Valkyrie will be received in a very different manner. It is true that America sailed her great race without time allowance, but the reason was not because time allowance was denied her by the Royal Yacht Squadron, but because she being larger than nearly all her competitors, her owners refused to start unless the race was without time allowance. Of the 14 competitors the only ones she had to fear were the small cutters of less than half her tonnage, like Freak, Aurora, Volante and Arrow; the yachts of her own size or larger were such clumsy craft as the big bark Brilliant and the schooner Wyvern, inferior in every way to her. The only yacht which really covered the course and made any semblance of a race was the little cutter Aurora, 47 tons, which finished 18m. after the America and would have received about 7m. allowance from her by the time scale then used. So much for that end of the story; now for the other. The New York Y. C. proposes to meet a yacht 70ft. long, and in one class, by one 86ft. long and in a totally different class, giving an allowance which it has itself condemned as insufficient where the disparity of size is so great, and with the full knowledge that what it will dignify with the name of match is but a farce that can only have one ending. Within the past ten days American yachtsmen have seen some very fast sailing by home boats of Valkyrie's class; both Katrina and Shamrock are fast yachts, and Titania, thus far has given every evidence of being a good deal faster, in fact Valkyrie has but a small chance of winning from the best pair of the present seventies. At the same time no one supposes that in such races as the three between Titania and Katrina either boat could have won from Volunteer by the present allowances of the New York Y. C. It has not yet been done, nor is it likely to be. This same allowance, however, is all that Valkyrie will receive should she meet Volunteer in a race for the Cup. In a cup race the great point is that a boat shall win, if she is beaten it matters little whether it is by 5m. or 30m., she does not take the Cup or retain it as the case may be. The allowance which Valkyrie would receive from Volunteer would not give her even a fair fighting show to win the Cup, and while it might mitigate the extent of her defeat it would practically amount to no allowance at all, a fact very well known to those who have the matter in hand.

CEDAR POINT Y. C.—This prosperous little club, whose station is at Saugatuck, Conn., has now a membership of 40 and a fleet of 32 yachts. A good deal of racing is done in open boats, and the club has a number of fast craft from 20 to 24ft.

WAIT TILL THE WAR IS OVER.

THE Royal Yacht Squadron may congratulate itself on a brief respite before the impending storm breaks; for a week at least all such trivial matters as yacht racing must be laid aside before the great contest in which Boston as usual plays a prominent part. Yacht racing, in company with practical politics, science, art, the drama, the Johnstown disaster, the Samoa difficulty and other trivial matters, must wait a few days until it is known that John has knocked out Jakey, that Jakey has annihilated John, or what is more probable, that both are claiming a disputed victory and that neither has been hurt. When this is over the daily papers will attend to the case of the Royal Yacht Squadron, including Messrs. Dunraven, Watson, Grant and Yorke, and that anonymous old chestnut, the "prominent yachtsman who does not wish his name to be mentioned," will inform the world as to his views of the defense of the Cup. From all indications there will be the usual lack of logic or argument, and the stock phrases of "generous concessions," "winning from the fleet," "won without time allowance," "surviving donors," "duties of trustees," "emblem of the yachting supremacy of the world" and all the rest will be displayed in startling headlines and emphatic italics. An appeal to patriotism will be made which will satisfy the conscience of the average yachtsman for the time being, and the Cup will rest undisturbed for a while; but the day will surely come when American yachtsmen will realize the mistake that their representatives are now making for them, and when the America's Cup is again to be offered to the world on fair and sportsmanlike terms, as some at least of the five donors evidently intended that it shou.d.

DETROIT Y. C.

DETROIT, Mich., June 29.—I inclose herewith a report of the Detroit Y. C. regatta held on June 24. Also report of the match race sailed on June 26, between the fourth class yachts, Madaline, Day Dream and Aldina R. The rule of measurement here for time allowance is length on waterline, greatest beam, depth from inside of planking to deck at spar, which we call the gross measurement, classification is by length on waterline. The Aldina R. measuring 8ft. more than the Day Dream, and 1ft. more than the Madaline allows the Day Dream (on 15 miles, 7½ miles to windward and return) 90s. and also allows the Madaline 39s. The Day Dream thus wins by 39s. Another match is being arranged between these boats, to be sailed in Lake St. Clair in September. N. WOODS.

On the Marguerite were the regatta committee, consisting of Edward Bidigare, George S. Newberry, Al Brossy, Thomas F. Commerford, M. A. Kramer and Thomas Noble; judges, Louis Hilsendegen and Frank St. Aubin, and time keepers, Dr. Duff, Stewart and Thomas O'Neill.

The Madaline was the first to get over the line, closely followed by the Cyclone and Nellie M. Next came the Lulu B., and stringing after her came the Sylvia, Josephine, Let-Her-Be, Corsair, Aldina R. and others.

The Madaline struck a lively gait and pushed along the Canadian shore in a businesslike way. Near the foot of Belle Isle, however, the Corsair passed the Madaline, and started in with some fine walk-in-the-water tactics that were persevered in until the close of the race. It was a fine performance on the part of the Corsair. Very shortly after the start the wind became brisk from the northeast, and there were high anticipations of the race being finished in the limit of six hours.

The Lulu B. soon had everything her own way in her class, leaving the Josephine and the Sylvia in the rear, and the marine freak, the Krao, balked very badly at the starting post. The Cyclone and the Let Her Be immediately began laying plans for a hot struggle; while the Madaline and Aldina R., which are entered in the three-cornered race for Wednesday, also began to "lay" for one another. The Cyclone, under the red-shirted Carl Senweikart, began its usual tactics and hugged the Belle Isle shore in order to avoid the currents, while the Corsair, Let Her Be, Lulu B., Madaline and Aldina R. made short tacks on the Canadian side. At Le Boeuf's landing the Corsair was in the lead, with the Lulu B. coming after her very fast, and Let Her Be next. The Cyclone was on the Belle Isle shore and it was difficult to tell her exact position in the race, although it could be seen she was well up. The Madaline at this point had some advantage over the Aldina, but the latter was pegging along in a way that suggested trouble. After turning the head of the island the Cyclone struck over the still water on the American shore, while the others kept well together off the Canada side. Off the Peoria Gun Club house the positions as before noted were not changed.

The judges' boat then ran to the Grosse Pointe lightship and awaited the yachts. The Corsair and the Lulu were the first to appear, and they came along close together, making the prettiest sort of a race. It was hard to tell which would turn first, but the Corsair managed to pull away from her big contestant and turned the ship first at twenty minutes after 4 o'clock, the Lulu rounding a minute afterward. Both squared away, got out their spinnakers, and pointed for the foot of Campau avenue.

At thirty-four minutes after 4 the Aldina R. came flying around and was given the customary cannon toots, bell and cheers. Her rival, the Madaline, was nowhere in sight. Two more yachts were coming along very fast and making an elegant race. These were the Let Her Be and Cyclone. The Let Her Be skipped around first at thirty-six minutes after 4, and the Cyclone flew past two minutes later. The Cyclone got her spinaker out first, the Let Her Be crew being very tardy in this respect. The Cyclone also hung out a water sail and was evidently determined to beat her rival on the run before the wind if possible.

No boats being in sight the judges' boat steamed down to see the finish. The Lulu B. had succeeded in overhauling the plucky little Corsair. When the head of the island was reached the wind had almost died out and the race was a drifting match. After passing the head of the island the Corsair drew ahead of the Lulu, being assisted by the Josephine, which followed closely behind Lulu, taking her wind. Josephine finally desisted and Lulu came ahead, finishing first, about 6.04:00, outside of the time limit. However, if a boat in any class finished inside the limit, the regatta was a "go," and some of the other boats were relied on to get the race out of the difficulty.

Corsair was second in, 1m. later, Aldina R. third, Let Her Be fourth, and Cyclone fifth.

Nellie M., of Class F, the yachts in which were only required to go around Peach Island, finished first in her class at 3:53:00.

The starting and finishing time of the various yachts is as follows:

	Start.	Finish.	Elapsed.
CLASS B.			
Lulu B	12 00 12	6 C3 40	6 03 28
Josephine	12 04 12	" " "	" " "
Sylvia	12 03 02	" " "	" " "
Krao	12 00 00	" " "	" " "
CLASS C.			
Corsair	12 12 30	6 04 40	5 52 10
CLASS D.			
Aldina R	12 15 50	6 10 40	5 54 50
Madaline	11 57 05	" " "	" " "
CLASS E.			
Let Her Be	12 01 13	6 16 20	6 06 07
Cyclone	11 59 32	6 29 48	6 30 36
Olive	12 14 55	" " "	" " "
Ingomar	12 12 55	" " "	" " "
Virginia B	12 13 02	" " "	" " "
CLASS F.			
Nellie M	11 59 51	3 52 00	3 54 09

It will be observed from the above that the Corsair and Aldina R. sailed the race inside the time limit. It is claimed that nearly all the yachts are handicapped, and several protests have been entered, which will be considered by the regatta committee.

The *Free Press* thus reports the three-cornered race between the Madaline, Day Dream and Aldina R.:

Bang! goes the first gun. Ten minutes later another. The boats have five minutes to cross the line in. Look at them. The Aldina R. is the first, but the Day Dream is only a few seconds after her, closely followed by the Madaline. Now you'll see a race. Away they go on the starboard tack. Who's ahead? The Aldina R. But the Dream is right after her. They hold their relative positions. Now they're coming about in their course and heading for the stake boat. Who'll reach it first? The Aldina R.? It certainly looks as if she would. What's that? What are they doing on the Aldina R.? They are trying to put up their balloon jib. Now they're taking it in again. She's losing ground. See the Day Dream now. Where's the man who bet on the Aldina? He cannot be found. They are bearing down upon the stake boat. Day Dream reaches it first. Wasn't that a pretty turn she made? Could anything have been prettier? She gets around and heads for home, taking but a minute to run out her spinaker. But what's this? Who says the Aldina is not in the race? Look at her. See that turn! Wasn't it a dandy? She skimmed around the stake boat as if she had been on wheels. She heads for home. Out goes the spinaker. The Madaline turns next, not far behind. Now you'll see a race. The Aldina R. sails better before the wind than the Day Dream. She'll catch her before she goes a mile. See her crawl up. Isn't it a pretty sight? It's hard to tell who is ahead. It looks as if the Aldina was gaining. Yes, she is! The Day Dream is running well, though, and the Madaline is gaining on the leaders. On they go. The finish will be reached inside the limit. The Aldina R. is in the lead. The Day Dream is a close second. Look at her come! The wind is freshening somewhat. It's too late, though, the Aldina R. crosses the line first, Day Dream right on her heels. The Madaline gained considerable on the home stretch, and finished a good third. Shrieks from the boat whistles greeted each boat as they crossed the line. Who's the winner? Can't tell yet. The Day Dream is allowed time, but just how much is not known. Wait until the judges decide. The Day Dream wins by about nine seconds, allowing her half a minute. It was a gallant race, and no one need feel bad if he is a loser. A more exciting and closer race was never seen on these waters. The time is as follows;

	Start.	Turn.	Finish.	Elapsed.
Aldina R	12 34 47	3 31 26	4 49 24	4 14 37
Day Dream	12 35 42	3 29 03	4 50 40	4 14 58
Madaline	12 36 44	3 33 57	4 53 14	4 16 30

The judges were: Chas. B. Stevens for the Day Dream, C. M. Rousseau for the Aldina R., and Herman Deitz for the Madaline. Capt. Joe Nicholson was referee, and W. M. Bellman, of Toledo, time-keeper.

THE ROYAL YACHT SQUADRON AND THE NEW YORK Y. C.

AS yet nothing is known as to the recent action of the Royal Yacht Squadron except the bare fact that it has declined to accept the terms laid down by the New York Y. C., that the Cup in the future must be raced for under the third and last deed of gift, as told in the following cablegram received by Secretary J. V. S. Oddie:

Committee regret cannot confirm challenge. Letter follows. GRANT.

There has not yet been time since the meeting on June 25 for a letter from the R. Y. S., but one is likely to arrive this week, when all the details will be known. The fact that the decision of the R. Y. C. was immediately known in London and cabled to the American papers before any official notice was sent to the New York Y. C., and also that no immediate reply had been made to the letters of the latter, has given rise to a good deal of ill-feeling on the part of ex-Com. Smith and others of the New York Y. C., and it is charged that the R. Y. S. has treated them with great discourtesy.

If there was nothing particularly important at stake these questions of etiquette, when the R. Y. S. should have replied to the letters, whether they should have kept their decision secret from the public until it was announced to the New York Y. C., what were the exact relations between Messrs. Grant and Yorke, and others of like nature, might be worked up into issues, but they are very insignificant beside the important matters of principle involved, and may well afflict to the professors of etiquette and ornament to quarrel over. The vital points of the whole matter are in brief as follows: The new deed of gift, made nearly two years since, was a most important document to all clubs likely to be called on at any time to challenge in behalf of a member for the Cup. It was the duty of such clubs to acquaint themselves fully with its terms, and several British clubs did so, condemning them as unfair and unsportsmanlike. The Royal Yacht Squadron was not one of these, and it would appear that it gave little attention to the new deed itself, or to the very important resolution subsequently passed by the New York Y. C. It has been the custom in the past to forward copies of such documents as the deed and this resolution to all clubs likely to be interested, but we cannot say whether this was done in the present cases. Last March the Royal Yacht Squadron was called upon by one of its members to challenge in his behalf for the America's Cup under the offer made by the holders to accept a challenge on the same terms as the three previous races were sailed, and such a challenge was sent.

In the course of the following correspondence the fact was brought out very plainly that in challenging under this offer the R. Y. S. must bind itself to accept the new deed of gift for all future races, a point which it claims it had not understood before, which claim, considering the ignorance that prevails abroad concerning the many changes of the deed of gift, and the complicated nature of the resolution of May 17, 1888, to those not thoroughly familiar with the business of the previous races, is very probably true. When the full terms of the deed were finally made plain to the challengers they very properly refused to go further in the matter, and there it now rests. While the R. Y. S. cannot be blamed for refusing to accept the new deed now that it fully understands that it must do so in order to challenge, it has no one but itself to blame for the very unpleasant position in which it is placed. The new deed was published in the FOREST AND STREAM on November 3, 1887, with a thorough criticism of its good and bad points, many of its provisions being condemned as unfair. Our comments were quoted in the *Field* and in *Land and Water*, the leading points of the deed itself were published abroad, and were unfavorably criticised by yachtsmen, yacht clubs and the press. Under these circumstances the R. Y. S. should have been perfectly familiar with the terms, and should have declined to have anything whatever to do with a challenge until they had been modified. Such a course would have been dignified and consistent, and would have kept it out of its present position. The same applies to individual yachtsmen; it was the duty of an intending challenger to know what terms he was to race under, and to decline them if unfair. On the contrary, Lord Dunraven has rushed into the case in a reckless manner, and the R. Y. S. has backed him up without a proper understanding of what it was doing. For this it is to blame, but not for declining to enter into the bargain when it finally did understand the terms. However, it is apt to pay a pretty heavy penalty in the way of abuse; already its decision is ascribed here to the fact that Valkyrie has not proved as great a success as was expected, though as it has been a foregone conclusion from the first that she would be met and defeated by Volunteer, the fact that she was a little faster or slower is hardly of much importance, and had the terms been agreeable there is no doubt but that she would have raced for the Cup.

As bearing on this same question, we take the liberty of quoting from a private letter lately received. The writer is a yachtsman who has raced a good deal on both sides of the Atlantic in fast craft, and is fully conversant with the customs and usages of both nations, especially as concerns the Cup races. He says: "Lord Dunraven has a very good reputation as a sportsman, and I have no doubt that he went into the thing under a *bona fide* mistake as to the stipulation about the new deed of gift. You would be surprised at the ignorance which prevails in England on the subject; the truth is that very few people care much about it, and those who do, assume that the matter is as simple as an ordinary challenge cup race. They cannot understand why it should be treated as a national question by Americans, or why all this fuss should be made about conditions which seem to them out of place in a matter of sport, however necessary they might be if it were a question between two sharp men of business. It does seem a little childish to look upon the possible capture of the Cup as a grave national disaster, especially when we consider that American yachtsmen could get it back at any time by sending over a big schooner. It all comes down to this: Do the New York Y. C. want to have races for the Cup or do they not? If they do, they must impose conditions which give the challenger at least a chance, otherwise they will have no races; that is why I lament the issue of Lord Dunraven's challenge. His present policy is perfectly simple; he wants to race for the Cup without binding the R. Y. S. to accept the new deed of gift. If he wins the R. Y. S. will refuse to take the Cup under the new deed of gift. This is all very well if Valkyrie wins, but as the chances are about ten to one against her, I do not see that anything will be gained." The decision of the it. Y. S. probably settles the fate of cup racing for some years, as far as British yachtsmen are concerned, and the N. Y. Y. C. will have to look to Mr. Beeks or some one who is equally misinformed as to the fairness of the present conditions for its next challenge.

ATLANTIC Y. C. CRUISE.—The rendezvous of the fleet of the Atlantic Y. C. for its annual cruise will be at Whitestone, L. I., Saturday, July 13. The fleet will sail to New London on Monday, July 15, to Shelter Island on Tuesday, to Stonington on Wednesday, to Newport on Thursday, and on Friday to New Bedford, where further orders will be given. The run from New London to Shelter Island will be a special race, for which prizes will be given by Com. Jefferson Hogan. A prize will be given to the yacht of each class making the best average of runs from port to port during the entire cruise.

NEW YORK Y. C. CRUISE.—The rendezvous for the N. Y. Y. C. cruise will be, as usual, at New London, on Wednesday, Aug. 7, the future movements to be decided on at a meeting of captains on board the flagship Electra on the same evening. Com. Gerry has appointed Mr. Stephen Peabody, of last year's regatta committee, as fleet captain. The usual races will take place during the cruise, the Goelet cups probably being raced for on Friday, Aug. 9. The extent of the cruise is not yet determined, but it is possible that the fleet may go to Marblehead.

THE LUGGER PARADOX.

THE statement that there is a probability of the new lugger Paradox challenging for the America's Cup in the future is too absurd to be noticed by yachtsmen, but as it has been generally circulated by the daily papers the following account of the new boat and others of her rig may be interesting, as the rig is entirely unknown in America. The *Field* says:

"The sensation of the year, the great ocean-racing yacht Paradox—as the morning papers describe Mr. Popham's lugger—was launched on Saturday night after many delays. Her name has often been mentioned in connection with Lord Willoughby d'Eresby's lugger Panther, and those who deal in signs and omens and coincidences will be intensely interested to know that the two steamers which came into collision in sight of the Royal Thames steamer on May 25 have the uncommon names of Paradox and Panther. The Paradox was sunk, and if omens, like dreams, are reckoned contrariwise, the great ocean-racing yacht will never be sunk.

"The best known of Lord d'Eresby's luggers was, however, the New Moon; but he owned also the Leopard, 35 tons, built in 1855, and Panther, 100 tons, built in 1857—both as open boats. One would have thought that the unhandiness and inconvenience of the lugger rig were made sufficiently apparent by the Panther; but Lord d'Eresby appears to have imbibed very strongly the superstitious belief in the speed and seaworthiness of the lugger, which was and still is cherished on the east and south coast. The fabulous stories of the speed of luggers were regarded as truth, and it is still believed that the old Yarmouth yawls could reel off sixteen knots an hour with a free sheet. Mr. Folkard, indeed, in his 'Sailing Boats,' states that 'the Yarmouth beachmen, in 1851, sent the owners of the yacht America a challenge to race her in the German Ocean for £200. The owners replied that they could not race for a less stake than 1,000 guineas, which sum was a stake beyond the reach of the beachmen, therefore no race took place'—a very fortunate circumstance for the beachman, we should say. However this may be, Lord d'Eresby appears to have believed in all the good qualities claimed for the lugger, and crowned his experience of their good qualities by building the New Moon, of 209 tons, in 1859, by Mr. F. Tutt, of Hastings. The dimensions of this singular craft were as follows:

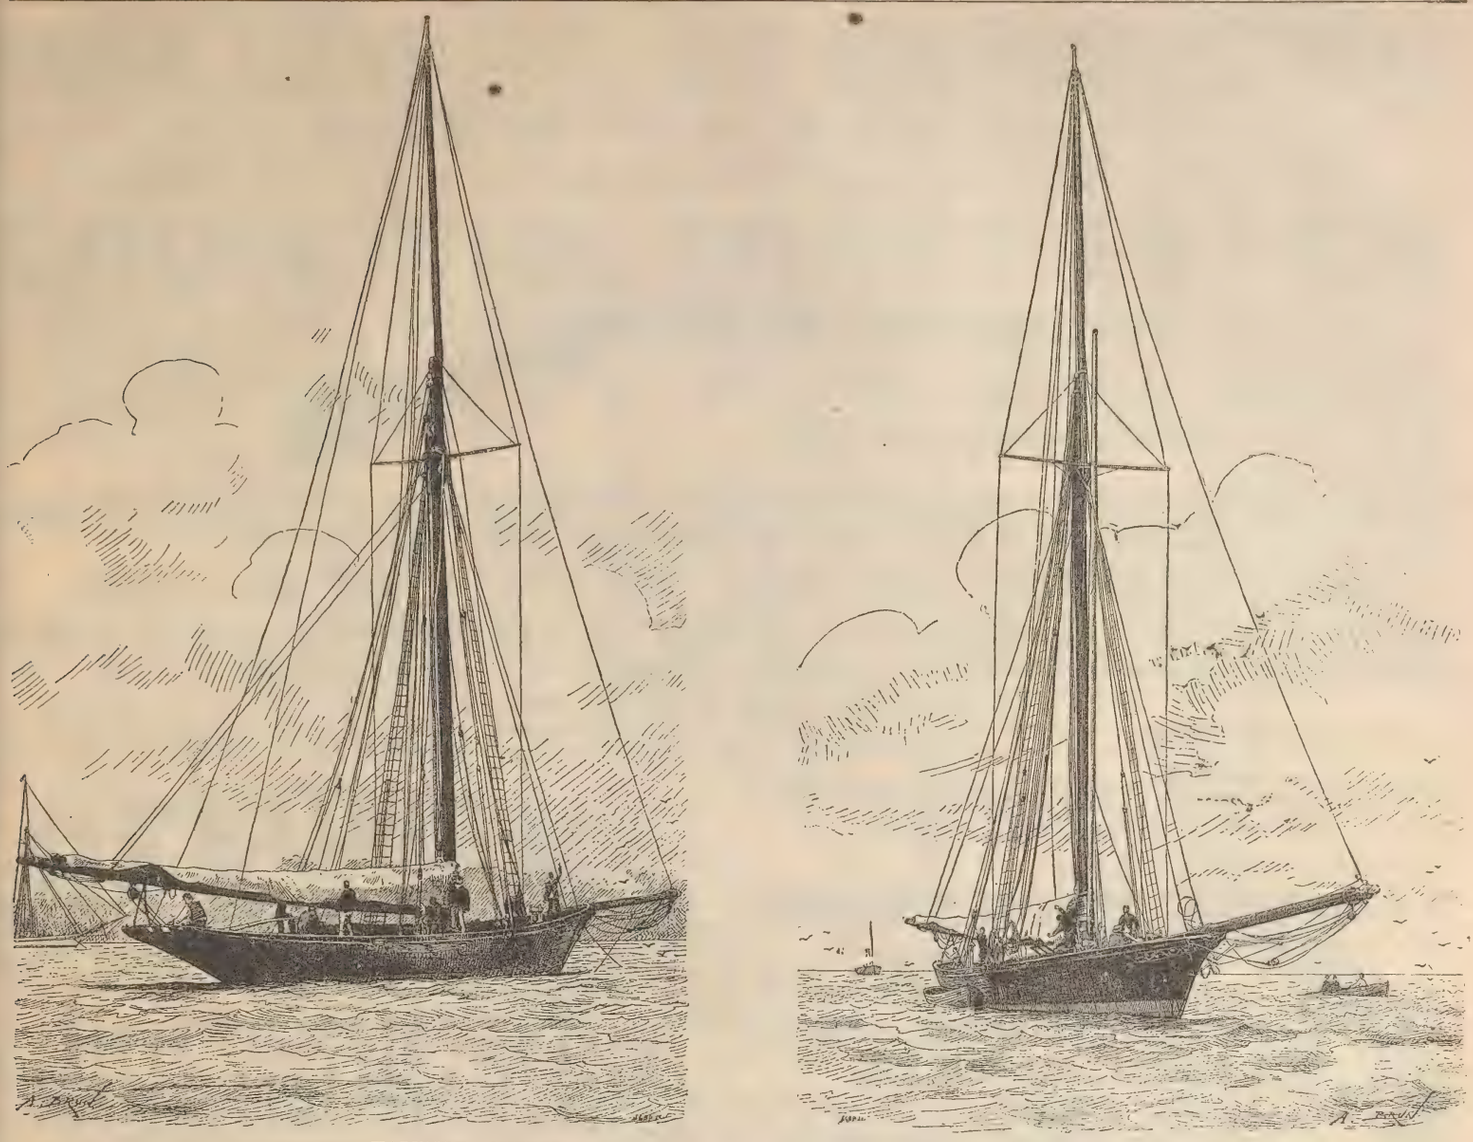
Length over all	134ft.
Length on load waterline	127ft.
Breadth, extreme	18ft. 5in.
Draft aft	12ft.
Draft, forward	8ft. 4in.
Mid-section, aft center of length of l.w.l	13ft.
Area of mid-section	88sq. ft.
Displacement	160 tons.
Center buoyancy, aft center of length of l.w.l.	5.7ft.
Ballast	75 tons.

"She was boxed up in airtight compartments forward for 29ft., and aft 18ft., and the center was fitted with cabins. The ballast had 'cork between all the joints in order to impart life to it.' She had a light frame, and her planking was only 1¼in. and 1⅛in. thick, clinker build. The bow was very long, and the entrance, owing to the small beam (seven beams for length), made a very fine angle—about 64½°—with the middle fore and aft line. She had three masts, and the main lug contained 900yds. of 18in. canvas—about 3,500sq. ft.

A craft like the New Moon ought to have some special attribute to justify her existence, and the New Moon was credited with phenomenal speed; 20 knots an hour were lightly spoken of as her rate off the wind. These exaggerations were, however, put to the test in 1895, when Lord d'Eresby started her in a match from the Thames round the Kentish Knock into Harwich. There was a strong northeast wind, and the yacht had a trying time of it beating back to the Knock Lightship, a distance of 42 miles. The start was made at 7 A. M., and the New Moon was entirely choked off by the long thrash to windward, the time of weathering the lightship being:

Alarm (schooner, 248 tons)	1 59 00	Christabel (cutter, 56 tons)	2 18 00
Xantna (yawl, 130 tons)	2 09 00	Marina (cutter, 65 tons)	2 30 00
Volante (cutter, 60 tons)	2 15 00	New Moon (lug, 209 tons)	2 35 00

"They had a beam wind into Harwich, the distance being 23 miles, and the New Moon passed in succession Marina, Christabel and Volante; she also gained 4m. on the Alarm and 9m. on the Xantha. The ebb tide was draining diagonally across this part of the course and helped them somewhat, the time of each on the 23 miles being:



New Moon	2 14 00	Xantha	2 25 00
Alarm	2 18 00	Volante	2 49 00

"In the same year the New Moon was started in a Royal Thames match from the Lower Hope to Ryde, and in a light, baffling wind she was figuratively 'lost.' In the following year, 1896, she was started in a Royal Thames match from the Nore to Dover, but, owing to a strong southeaster nearly dead on end from the Nore to the North Sand Head, she was again beaten off. The same year, in the Royal London match from the Lower Hope to Harwich, in a strong reaching wind, New Moon did the sixty miles in 5h. 26m., and Lulworth, cutter, and Christabel, cutter, in 5h. 47m. We do not think the New Moon ever sailed in any other match, and so far as any reliable record goes, her greatest speed with a reaching wind was under twelve knots an hour; whereas several schooners, yawls and cutters of not more than 100ft. length on load waterline have often exceeded twelve knots on a reach. We therefore cannot see that there is any proof of the lugsail rig having any special virtue for reaching, even when sailed with a long, lean boat-like hull such as New Moon's was. The 'great ocean-racing yacht' Paradox is much inferior in size to New Moon, being only 70ft. on the waterline, with a total sail area of about 6,200 sq. ft. Here is a record for the Paradox to beat: Last year, in a strong reaching wind, the Yara went round the Isle of Wight in 5h. 9m. This time has never been beaten over the same course except by Irex, whose record is 4h. 50m. 41s. We do not think any lugger-rigged yacht, no matter what her size, will rival these two achievements by modern cutters, and it is not likely that Paradox will justify her existence by match sailing."

AROUND CAPE COD.

ON June 20 both Saracen and Elf sailed from Bay Ridge to Marblehead. How much fun may be expected in a passage of this kind in a 30-footer is shown in the account of Saracen's trip to New York in a recent issue of the FOREST AND STREAM, and also in the following extracts from the logs of Shona and Pappoose, lately arrived at New York from Boston. Shona's log reads as follows: "Left Boston Saturday noon. June 8, wind southwest, drizzly rain; anchored at Hull at 1:30 P. M. Got under way again at 11:30 P. M., clearing weather, wind southwest. Minot's Light abeam at 1 P. M. Sunday. Laid three hours becalmed. At 4 A. M. wind came in south and backed to the southeast; hazy. At 7 A. M., wind came southwest, anchored under Highland Light at noon, wind blowing hard, weather hazy. Monday, June 10, wind southwest blowing hard; weather thick and hazy. 6 P. M., no change. Tuesday, 11th, fog lifted, wind west southwest. Got under way at 8 A. M., anchored under Monomoy Point at 7 P. M., weather thick. Wednesday, 12th, hazy, wind west southwest, got under way at 7 A. M., becalmed at 9 A. M. At 11 A. M. wind all around compass; fair tide; anchored in the Vineyard at 6 P. M. Thursday, 13th, wind southwest; under way at 11:30 A. M. Got as far as Cuttyhunk Island, but found the sea too heavy and put back into Quick's Holl; anchored at 4:20 P. M. Friday, 14th, wind southwest, hazy. Under way at 6 A. M.; anchored at Newport at 2 P. M. Saturday, 15th, wind northwest, under way at 8 A. M. in company with the Scotch cutter Maggie and N. L. Stebbins's Boston sloop Galatea. Beat out to Point Judith Light. Put in a reef and stood on an hour; sea getting too heavy, turned back at 2 P. M.; anchored at Newport at 4 P. M. Maggie and Galatea returned also. Sunday, 16th, wind southwest, heavy fog. Under way with Maggie and Galatea at 5 A. M. Went out to Brenton's Reef Lightship, laid off and on two hours. Wind hauled to the southward. Off Point Judith at noon. Anchored in New London 7:30 P. M. Maggie arrived an hour later. Monday, 17th, wind west and clear. Under way at 8:30 A. M.; took a heavy squall from northwest off Cornfield Lightship; laid our course under staysail and jib for two hours, blowing hard. Wind died out at 6 P. M. off Faulkner's Island Light. Midnight, wind came in northeast. Arrived at Whitestone Tuesday, 18th, at 9 A. M. Took tug and towed to Staten Island. Boat leaking badly."

Captain Nat Watson, of Papoose, tells the following story of her trip in a letter home: "We had a hard beat all the way from Nauset, Cape Cod, to New London. There was not a time we had the main sheet started or could lay our course. We left Boston at 5 o'clock Tuesday afternoon, wind light, southwest; passed Boston Light at 6 o'clock, Minot's at 7:10. At 9:30 it came in thick and foggy. Made the whistle on Race Point at midnight and Highland Light at 1:20. Fog lifted and wind freshened, still southwest. Nauset at 3:30. Wind hauled to the southward and got the tide ahead. Came on thick again and quite a sea on. Dead beat to Pollock Rip. Found ship all right. Wind hauled to westward. Had a strong head tide all the way to the Vineyard. Passed Handkerchief Lightship at 1:30 P. M. Wind west southwest strong. Cross Rip at 3:20. Anchored in the Vineyard at 5:45 P. M. Wednesday. Laid there all day Thursday, wind to

VALKYRE, CUTTER.—DESIGNED BY G. L. WATSON FOR THE EARL OF DUNRAVEN.

the westward. Everything that came over the shoals stopped there. Friday morning at 5:40 we started for New London, wind strong west northwest. Got to Quick's Holl, double reefed mainsail, set No. 2 jib and housed topmast. Had lots of wind and a hard beat. Wind getting to westward, went into Newport, arriving at 4:30 P. M. At 6:30 Saturday morning came out of Newport in a strong west northwest breeze, with reef in mainsail and topmast housed. Beat all the way to New London, where we arrived at 5:10 P. M. We have beat all the way here, and been under water all the time, but the Papoose is a little darling and stands up just as well under her new rig as she did before. I would like to have had some of the new 40's along with us."

Kathleen's turn will come next, as she is entered for the races at Marblehead on July 13.

STATEN ISLAND ATHLETIC CLUB REGATTA.

THE Yachting Department of the Staten Island Athletic Club, founded two years since, held its first regatta June 29, the courses being the Upper and Lower Bays, starting and finishing at the mouth of the Kill von Kull, opposite St. George. The larger yachts, in Class C, rounded Buoy 5, off Sandy Hook, the smaller ones rounding Buoy 16, off Coney Island. The wind was light S.E. and the tide just ebbing when the start was made at 11:49 A. M., the 15 starters going over in the following order: Æolus, R. K. McMurray; Shore House, Chas. T. Munn; Domino, J. S. Fearon; Playmate, J. W. Edwards; Mistral, A. W. Booth; Our Own, Messrs. Vreeland; Foam, C. F. Hicks; Ariel, T. A. E. Busteed, Dorothy, T. A. Millen; Forsythe, Alex Roe; Bon Ton, E. M. Post; Hope, H. W. Seguine; Just Woke Up, J. Phillips; Nadine, E. M. Felt, and Sea Gull, J. J. Taintor. The last four were handicapped.

Æolus made a very good start and held the lead for a time, but was finally passed by the others, the time at Buoy 5 being:

Mistral	2 21 30	Hope	2 28 00
Domino	2 25 00	Æolus	2 40 00

The small craft were timed at Buoy 16:

Our Own	1 14 00	Foam	1 21 30
Shore House	1 14 45	Dorothy	1 23 00
Bon Ton	1 17 00	Just Woke Up	1 23 50
Playmate	1 19 00	Sea Gull	1 24 30
Forsythe	1 20 30	Nadine	1 30 00

The return was before the wind. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS C—SLOOPS 40FT. AND UNDER 50FT.				
Domino	11 50 50	5 57 50	6 07 00	6 07 00
Æolus	11 49 10	5 56 50	6 07 40	6 07 30
Hope	11 55 00	5 50 00	5 55 00	5 48 01
Mistral	11 51 40	5 57 20	6 05 40	5 53 53
CLASS 2—SLOOPS 22 TO 30FT.				
Forsyth	11 54 00	3 04 00	3 10 00	3 10 00
Our Own	11 52 10	3 08 50	3 26 40	3 18 49
Just Woke Up	11 55 00	3 07 50	3 12 50	3 01 46
CLASS 5—CATS 25 TO 35FT.				
Nadine	11 55 00	3 23 00	3 28 00	3 28 00
Dorothy	11 53 50	3 24 10	3 30 20	3 25 28
Sea Gull	11 55 00	3 24 00	3 29 00	3 24 08
CLASS 6—CATS OVER 18 AND UNDER 22FT.				
Foam	11 52 20	3 23 30	3 31 10	3 31 10
Shore House	11 50 20	3 07 25	3 17 05	3 13 56
Playmate	11 51 10	3 07 50	3 16 40	3 12 57
Ariel	11 53 20	Not timed.		
Bon Ton	11 54 45	2 57 30	3 02 45	2 55 38

Hope beats Mistral 5m. 52s., Just Woke Up beats Forsyth 8m. 14s., Sea Gull beats Dorothy 1m. 20s. and Bon Ton beats Playmate 16m. 29s.

The regatta committee were: E. M. Post, chairman; F. Beams, George W. Clark, R. K. McMurray, Philip C. Süs, and W. Nephew King, Jr., referee.

CRUISING.—Gitana, Mr. W. F. Weld, arrived at Boston on June 24 from the Mediterranean....Brunhilde, Mr. J. J. Phelps, reached Valparaiso on May 13, after a voyage of thirty-seven days from Montevideo, on which she encountered heavy weather, losing her boats off Cape Horn,

SEAWANHAKA CORINTHIAN AT OYSTER BAY.

THE Seawanhaka Corinthian race for 40-footers at Oyster Bay last Monday, resulted in a victory for the Liris over her five competitors, Maraquita, Minerva, Banshee, Pappoose and Gorilla. The wind was blowing fresh from S.E. at the start, but hauled around to S. when the yachts finished the second leg of the course at Mattinecock Buoy. It was blowing nearly 20 knots an hour at the finish. The course was from Red Ground Buoy, inside Oyster Bay, northward to a buoy off Captain's Island, thence westward to Mattinecock Buoy, and home to the Ground Buoy, passing outside of the black buoy off Centre Island, a distance of 18½ miles in all. The starting gun was fired at noon and only five minutes was allowed to cross the starting line between the Ground Buoy and the western shore of Lloyd's Neck.

The Pappoose was first away, followed closely by the Maraquita, the rest crossing the line in this order, Liris, Gorilla, Banshee and Minerva. Spinakers were set for the run over the first leg on all except the Gorilla, whose spinaker was not broken out until after she had been passed by the Minerva off Lloyd's Neck. The Pappoose held her lead until within a mile of the buoy at Captain's Island, with the Maraquita astern and to the westward, the Liris being behind the Maraquita. Then came the Banshee. The Minerva and Gorilla were having it hammer and tongs for the last place, and were to the eastward.

Under the lee of Captain's Island the yachts found a northeast breeze. Taking in spinakers, they jibed all and made for the buoy on the starboard tack. Then the Liris picked up wonderfully and so did the Maraquita. The former was the first to reach the mark, jibing around it a few seconds ahead of the Pappoose, with the Maraquita a close third. The Banshee, as she felt the shift of the wind, held closer than was necessary, and soon found herself ahead and in the course of the Minerva. She turned the mark fourth, with the Minerva fifth and the Gorilla last.

Capt. Harry Hall was sailing the Maraquita, and he and Capt. Sloan made the race of the day. Before turning the first mark Capt. Sloan made a neat little move, which was greatly to his credit. Seeing the shift of wind and holding a position just astern of the Maraquita, he took in his spinaker, and at the first breath of the new current of air jibed over and passed speedily to windward of the Maraquita, going by her as though she were not moving.

From the first mark to Mattinecock Buoy and back to the Black Buoy off Center Island near the mouth of the bay the course gave two close reaches, the first being on the port and the latter on the starboard tack. The force of the northeast wind was not felt after the buoy at Captain's Island was well astern. The Maraquita, getting a better wind, outfooted the Boston sloop Pappoose on the sail to Mattinecock Buoy and passed her. Then the race resolved itself into a procession until the buoy off Center Island was reached. On the reach to Mattinecock Buoy the Liris increased her lead on the Maraquita to 1m. 40s. The order and time of rounding this mark were as follows: Liris, 1:40:50; Maraquita, 1:42:30; Pappoose, 1:43:50; Banshee, 1:45:55; Minerva, 1:47:32; Gorilla, 1:48:19.

After this the wind freshened to the finish, and there was afforded an excellent opportunity to observe how the new forties carry their sails. The Liris stood up as well as could be desired under working topsail and two working headsails. There was no evidence of over-sparring, unless it was in the case of the Gorilla. The Banshee sailed well, considering that she was designed as a cruising boat.

The Minerva, sailed by Capt. Barr, did not appear to as great advantage as in her previous races until she began the beat home from the black spar buoy, about two miles. Then she outpointed the Banshee and Pappoose and finished the race third, just behind the Maraquita. On this beat, too, the Banshee drew up on the Pappoose, having gained on her from a position a third of a mile astern at the Captain's Island mark to scarcely two lengths behind at the black buoy. The yachts passed this buoy in this order: Liris, 2:19:00; Maraquita, 2:23:50; Pappoose, 2:26:35; Banshee, 2:27:00; Minerva, 2:27:46; Gorilla, 2:29:35.

Sailing home on the last stretch of the course Liris continued to gain on the Maraquita, and crossed the line 5m. 43s. before her. Minerva finished third, but her liberal time allowance of 3m. 10⅘s. over the Liris, against the Maraquita's allowance of 1m. 8s., gave her second place in the corrected results. Banshee finished fourth, Pappoose fifth and Gorilla last. As the Pappoose will probably have to allow Gorilla it will put the Smith boat into fifth place.

On the whole, the race was a victory for William Gardner over three prominent designers, and this is somewhat remarkable from the fact that he is a new comer and the Liris is only his second boat. His Kathleen, launched this spring, which has beaten the Burgess thirties, is here, ready for her races on the cruise of the Seawanhaka Corinthian Y. C. The time taken in the race to-day was as follows:

	Start.	Finish.	Elapsed.	Corrected.
Liris	12 05 00	2 46 10	2 41 10	2 41 10
Maraquita	12 04 59	2 51 22½	2 46 53½	2 45 45½
Minerva	12 05 00	2 52 15	2 47 15	2 44 04½
Banshee	12 05 00	2 55 01¾	2 50 01¾	2 47 06¾
Pappoose	12 03 49	2 55 33½	2 51 44½	Not m'd
Gorilla	12 05 00	2 55 56	2 50 56	2 49 48

[Our own report of this race not having come to hand, we take the above from the *Times*.]

"NO CASE, ABUSE THE PLAINTIFF'S ATTORNEY."—The Boston *Herald* attacks Mr. Watson as follows in discussing the action of the R. Y. S.: "As has been stated in these columns, the chances are that there will be no race for the America Cup this year on account of the terms of the new deed of gift. It is a fair conclusion that Watson hoped to catch the Americans napping, and that they would be just childish enough to build a 70-footer to meet him; and all this in six months, which is too short a time in which to build a yacht and expect her to perform at her best. It was a sad bit of news for Watson that no new boat would be built to meet him, and that the Volunteer would be selected to meet the Valkyrie. He then knew well that the Valkyrie was 'out of it' with Volunteer, and the chestnut 'unfair deed of gift' was 'rung' up. Now the statement comes that the Valkyrie will not come over and sail for the Cup, but will come out and sail against our 70-footers. This would appear to indicate a generous spirit at first blush, but, on calmer consideration, it shows the work of a cunning, crafty yachtsman. It would be the proper thing for Watson to come over here and sail against 70-footers, some of which were designed and built some three years ago, while the Valkyrie is this year's product, and in her Watson has taken advantage and outbuilt our present 70-footers, though it is by no means certain that the English craft could outsail either the Titania or Katrina. Watson, all through his attempts to win the Cup, has adopted the sharp practice, and the American yachtsmen now look upon all his moves with suspicion. It is a clever thing to give up sailing for the America's Cup and race for another cup against 70-footers, each of whose designers, if given a chance, could build new boats which would outsail the present ones." It pains us to see such harsh and unkind criticism of one designer by another, even though the former is only a professional. The same flavor of malice, rather than fair and unbiassed criticism, has also been evident for some time past in the *Herald's* mention of Mr. Burgess and his boats, a tone very different from that employed a few years since by the same writer in regard both to Mr. Burgess and Mr. Watson. Can it be that professional jealousy is in any way responsible for the change?

ROYAL CANADIAN Y. C.—The events for the remainder of the season are: July 13, 25ft. class; July 27, 20ft. class; Aug. 24, skiff class; Aug. 31, 20ft. class; Sept. 14, 25ft. class; Sept. 21, cruising class (handicap cruising). In these races the following prizes are offered: In each cruising class race, first prize, $25; second, $15; third, $10. In each 25ft. class race, first prize, $25; second, $15; third, $10. In each 20ft. class race, first prize, $20; second, $12; third, $8. In each skiff class race, first prize, $12; second, $8; third, $5. In addition to the above money prizes, there are the six club cups to be sailed for, as follows: Prince of Wales cup, Sept. 7, all yachts over 30ft. l.w.l.; course, 30 miles. Lansdowne cup, Sept. 7, all yachts over 25ft, l.w.l. and under 40ft. l.w.l.; course, 15 miles. The Murray cup for yachts over 30ft. l.w.l. to 50ft. l.w.l.; the Lorne cup for yachts over 25ft. l.w.l. to 30ft. l.w.l.; the Cosgrove cup for yachts over 20ft. l.w.l. to 25ft. l.w.l., and the McGaw cup for yachts 20ft. l.w.l. and under, will be sailed for in the annual regatta of the L. Y. R. A.

PLEON Y. C., JUNE 26.—The Pleon Y. C. sailed its first pennant race of the season on June 26, in a strong, squally, southeast wind. No Name capsized on the jibe at a mark. The committee has decided to sail a series of five races for the Wood challenge cup, the first taking place on Wednesday, July 3. Summary:

	Length.	Elapsed.	Corrected.
SPECIAL CLASS.			
Don, Blancy & Stone		1 15 00	1 15 00
FIRST CLASS KEELS.			
Edith, S. W. Sleeper	15.11	1 05 00	1 02 35

Gypsy, C. M. Barker	15.01	1 22 30	1 20 05
FIRST CLASS CENTERBOARDS.			
Sapphire, C. S. Street	14.05	1 01 00	0 57 55
SECOND CLASS KEELS.			
Annie, F. L. Rhodes	11.06	0 56 30	0 52 45
Sparrowhawk, H. D. Jackson	11.09	0 59 18	0 55 55
No Name, F. S. Tucker	10.00	Capsized.	
SECOND CLASS CENTERBOARDS.			
Gem, J. T. Taylor	11.10	0 44 30	0 40 24
Reba, W. J. Palmer	12.09	0 45 00	0 43 09
Moni, J. W. Dunlap	12.07	0 48 06	0 45 18

Winners—Don, Edith, Sapphire, Annie, Gem.

EASTERN Y. C. CRUISE.—Com. Henry S. Hovey of the Eastern Y. C. has issued the following order for the annual cruise of that club: The Eastern yacht squadron will rendezvous at Marblehead for the annual cruise to the eastward on the afternoon of Monday, July 15, and captains will report on board the flagship for orders at 8:30 P. M. Geo. W. West, M.D., has received the appointment of fleet surgeon, and is hereby assigned to the flagship during the squadron cruise. The Seawanhaka Corinthian Y. C. have accepted an invitation from the Eastern Y. C. to extend their squadron cruise to Marblehead, to participate in the regattas of July 13 and 15, and the commodore desires that a large fleet of yachts will be anchored off the club station to receive them when they arrive.

BEVERLY Y. C.—The coming events of this club are as follows: July 4, Marblehead, 144th regatta, starting at noon. A cup costing $40, presented by members of the club, will be given in each class and each division of the third class. The 145d regatta will be sailed on the same day at Monument Beach, Cape Cod, open to club members only. On July 6 the second championship, 145th regatta, will be sailed at Marblehead, starting at 2 P. M., and on July 13 the 146th regatta at Monument Beach, second open sweepstakes.

CORINTHIAN Y. C. OF MARBLEHEAD.—The new club book of the Corinthian Y. C. of Marblehead shows a membership of 313 and a fleet of 144 yachts, a very rapid growth for a club but three years old. The club sailed nine regattas last year and has eight arranged for the present season, beside a series of cup races for the 40, 50 and 27ft. classes.

SOUTH BOSTON AND SAGAMORE CANOE MEET

Pettick's Island, Boston Harbor, June 15-17.

NOT since the time when the red or copper-colored savage paddled his own canoe over the waters of Massachusetts Bay has there been a canoe meet in Boston harbor until the meet held at Pettick's Island on June 15, 16 and 17. The meet was held under the auspices of the South Boston C. C., of Boston, and the Sagamore C. C., of Lynn.

It was a meet long to be remembered by those who participated in it, as at last Boston canoeists have bravely struck out for what they have been longing for in past years.

The meet was in every way a success, and it was a surprise to many of the leading canoeists to see that there was such a large number of canoeists about Boston and who would attend a meet. Saturday, with a good reefing S.W. wind, the canoeists commenced to gather upon the island. After establishing headquarters in an old house just above the beach, the tents commenced to loom up.

The threatening sky of the afternoon having been reinforced by a legion of heavy clouds, culminated in a sharp shower toward sundown, wetting the campers down a trifle. By nightfall about 100 canoes were snugly cradled on the mossy bank beside the tents. Next morning at an early hour more canoes hove in sight, together with friends who came by steamer. The island resembled in appearance a military camp, with its numerous tented dwellings, the canoes forming small avenues of themselves.

Shortly after noon mess the fleet assembled off the camp, a smart sailing breeze having succeeded the hot, calm morning. About fifty of the boys cruised to Downer's Landing, Weymouth, Back River and around Pettick's Island, returning before sundown, when all participated in athletic sports and entertaining the visitors.

In the evening the canoeists had a large bonfire on the island, and all the spare lumber, trees, etc., were confiscated by the volunteer wood gatherers. Gathering around the bonfire Chairman A. M. Bird addressed the canoeists and called upon the representatives of the clubs present at the meet. The response showed how strong the desire of local canoeists to hold a meet in Boston Harbor has been, and all protested that if the Eastern Division of the American Canoe Association would not select Boston Harbor for a meet in '90 that they would all co-operate and hold a meet next year that would last for either one or two weeks.

Afterward the boys sang songs and spun the usual yarns by the fireside, the occasion being brightened up by music, including a cornet solo by Mr. H. E. Jepson, and answering of calls by Bugler Jeremiah Connor.

As the hours flew by and at midnight the fire commenced to smoulder, the canoeists' next thoughts were of their beds, but before leaving the boys all arose and sang "Auld Lang Syne."

Monday morning the sun rose over the camp with a promise of good weather and plenty of wind, but when the reveille sounded from headquarters two hours later the canoeists turned out to find the rain falling fast. After breakfast the clouds broke up and the boats were made ready for the races of the day. At 10 o'clock the bugle sounded the "assembly" and the campers, clothed in oilskins, gathered about the beach near the finish line to witness the first event.

There were fully 1,000 spectators on the island, together with those who viewed the races from Hull. Fifteen minutes later the rain began again with redoubled energy, but the judges started the first event, Class 1, paddling, for any canoe. The course was half a mile straightaway, and as the spectators looked up the course through the downpour all that could be seen was a line of paddle blades flying aloft here and there. It was a close race throughout, there being 12 entries. C. F. Dodge, of the Puritan C. C., first in the Halcyon, and H. D. Murphy second in the Juanita; prize a hand-painted banner representing a paddling scene. The second event was started 50 minutes later with 16 entries. Class 2, paddling race, sailing canoes, one-half mile straightaway; no boats to be over 15ft. in length, under 26in. beam or less than 8in. depth. The first prize was a handsome silk banner, and the second a dozen photographs of the handsome man who won them. The race throughout was pretty close, all being well bunched together. J. W. Cartwright, Jr., of the Puritan C. C., in the Ibex finished first, crossing the line in 4m. 40s., with J. F. Lannon in Winona second, 4m. 42s.

The third race was an exciting contest, and would have proved of much more interest had there been a stronger breeze. It was a sailing and paddling race, twice round a triangular course, a distance of three miles, paddle one-half mile, sail one-half mile alternately, a total of 6 legs, half and half paddling and sailing. There were 15 entries, and soon after crossing the line the handsome man of the South Boston C. C., in race No. 2 who was in the Winona, broke his paddle and capsized while off the mark, several canoeists going to his rescue. John J. Martin, of the Marguerite, broke his rudder in fouling with another canoe and withdrew. The first prize, a banner, went to Chas. E. Whitten, of the Sagamore C. C., who crossed the line in the Elena M. in 27m. The second prize, a handsome engraved silver cup, was awarded to Joseph B. Centre, who crossed the line in the Wenuchus, time 29m.

The most interesting race followed; it was a sailing race throughout, over a triangular course covering a total distance of three miles. The conditions varied in that everything was left to starboard instead of to port, as in the other races. Although there were nearly forty entries, there were only fourteen starters. Again the rain set in, but the sailors were still undaunted and eager for the fray. The first round of the course showed J. A. Gage of the Vesper Club of Lowell to be leading in the Shallow. Closely pressing him came John Campbell of the Sagamore Club in the Ethel G., Walter Perkins of the Somerville in the Chrystal, C. E. Whitten in the Elena M.

But in the windward work on the second round Campbell pulled ahead, winning in 32m., Whitten second, 33m.; Perkins, Gage and Centre following in 34, 37 and 39m. respectively, Campbell taking a handsome silver cup and Whitten a silk banner.

In the upset race, sailing one half mile, half the course was sailed, and at a given signal canoes to be tipped till the top of the foremast touched the water. There being but two entries, C. E. Whitten of the Sagamore and John J. Martin of the South Boston, C. E. Whitten won the race and silk banner.

This ended the races of the day. It was a day in which plenty of sail was carried by the canoeists. Noticeable among the rigs was the famous standing rig. The hiking seat and plateboard predominated.

Several of the clubs present appeared in their uniforms: the Somerville Club with their red jersey, blue trousers and stockings looked quite neat; the Vesper men in their gray uniform and blue shirt, and the South Boston with their blue knee-breeches and stockings and white shirts all looked fine.

On Tuesday the last men left camp, and all but the photographers, who were handicapped by the bad weather, pronounced it a great success. JOHN J. MARTIN, Secretary of meet '89.

RED DRAGON C. C.—The first race for the Red Dragon C. C. trophy cup was held on June 26. Owing to the inclemency of the weather only three boats entered. The course was around Petty's Island about 5 miles, strong N. E. wind. Nacoochee was first over the course and led to the foot of the island where Cigarette took the lead, which she kept easily to the finish. The times were as follows. Start 4:06:00:

	Ft. Sail.	Finish.	Actual.
Cigarette, F. M. Moyes (Fly)	110	5 06 00	1 00 00

GEORGE MURRAY BARNEY.

WHEN the members of the A. C. A. come together next month for their yearly re-union there will be one familiar face missing from the group around the camp-fire: one canoe less among the leaders in the races, for death has been busy since last year, and has called away one who was loved and admired by all who knew him. George Murray Barney, the son of E. H. Barney of Springfield, Mass., was hardly less known than his father among canoeists far and near as a skillful and enthusiastic sailor while those who were privileged to know him more intimately recognized the same sterling qualities in the son which have won for the father the friendship and respect of a wide circle of canoeists. In the canoe club, on a cruise, or in camp he was always the genial, courteous gentleman, with a kind and pleasant word for all he met; always bright and cheerful in spite of the fate that hung over him. The consumptive tendencies inherited from his mother made him always delicate, and with little hope of long life, and this, in connection with his love of the open air, caused him to spend a great part of his time in hunting, fishing and canoeing, in the search for health which has at last proved fruitless. His death took place on May 29, at Pasadena, Cal., where he had spent the winter, his father being with him at the time; and on June 13, he was buried on the grounds of his father's estate at Springfield. In canoeing the father and son have worked together for the past five years, sailing the same boats and aiding each other in improving them; while in camp their relations were rather those of brothers than of father and son; the hearty enthusiasm of the elder making the disparity in years hardly apparent. Mr. Barney was born in New York in 1863, but spent the greater part of his life in Springfield. He was quite a skilful mechanic and invented several appliances in connection with his father's business. His success as an amateur photographer is known to most canoeists, and he was one of the organizers and an active member of the Springfield Camera Club.

EASTERN DIVISION MEET.

A COMPLETE report of all the races held at the Eastern Division meet at Calla Shasta Grove is printed below. An incomplete record appeared last week:

Paddling A and B, decked:
W. R. Heald, Narka
A. S. Putnam, Calla Shasta

The Fishing Rod Manufacturer,
Post Mills, Vt.
(Mention this paper).

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.
W. Baker & Co.'s Breakfast Cocoa
is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.
W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 11, 1889.

VOL. XXXII.—No. 25. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE CONEMAUGH FLOOD.

THE coroner's jury on which fell the duty of investigating the terrible floods in the Conemaugh Valley has given its verdict. It is reported to have found that the owners of the South Fork Fishing and Hunting Club were guilty of negligence in not making their dam secure. On the other hand it is stated, and, we think, has not been denied, that the members of the South Fork association employed the very best expert engineering talent that was to be had to make monthly examinations of the dam on their property, and carried out their recommendations.

During the first few weeks after the appalling catastrophe by which so many lives were lost, the public mind was so excited by the calamity, and so many wild reports concerning it were flying about, that it was impossible to form a calm judgment as to the causes of the occurrence, or to take an unprejudiced view of the responsibilities in the matter. Now that the excitement has died away, a good deal of definite and authoritative information is being made public, which throws light on the conditions which prevailed just previous to the disaster, and which enables us to say why the calamity took place.

The State weather service of Pennsylvania has recently published a topographical map, showing the amount of water which fell in all parts of the State during the two days which preceded the disaster. This map shows that the earlier statements as to the rainfall were not greatly exaggerated, and warrants the belief that even without the bursting of the South Fork Dam the floods of that memorable storm would have been very disastrous.

In the northwestern corner of the State and along its eastern border, the rainfall was less than one inch. A large area in the western portion of the State and a narrow strip west of the Delaware River region, the two aggregating perhaps 30 per cent. of the whole area of the State, received from one to four inches in these two days, while in the great central belt, comprising not far from 40 per cent. of the State, the rainfall was from four to eight inches. In the Conemaugh Valley and near Williamsport the deluge even exceeded eight inches.

It was never expected nor intended that the South Fork Dam would sustain such a pressure as was brought upon it by this unprecedented rain storm. The responsibility for its fall under such circumstances ought not to be placed on the owners of the dam. They appear to have taken all reasonable precautions to keep their dam safe. Neither can we call this disaster an act of God. The responsibility for this disaster should be placed just where it belongs, and that is on the people who have stripped the Allegheny Mountains of their timber. Steadily and without pause this work of devastation has gone on. Floods from melting snows and from spring rains, causing the streams to overflow their banks, and to work damage to the extent of millions of dollars, have not served to warn the public of the dangers to which certain communities were exposed through this greed for gain. At last came the flood which swept away Johnstown and destroyed in an hour thousands of lives and millions of property. Will this lesson teach the State of Pennsylvania and other States that some regard must be paid to nature's laws? It is to be feared that it will not.

The lumbermen will still be permitted to strip the mountains of their timber, and to prepare their rocky slopes to throw off the water which falls upon them just as a shingled roof sheds rain. A single calamity, no matter how overwhelming, will not teach the needed lesson, but when widespread disaster and suffering come, as come they must if the work of destruction is not checked, then here in America we will follow the example set us in the Old World, and care for our forests.

TO PLUNDER CAMPERS.

THERE is a class of land-sharks, growing in numbers and of greedy appetite, who appear to be possessed of the notion that they have a lien on the universe and a mortgage on all outdoors. They stake off so much of their claim as they can get some sort of title to, or as much territory as they can cover with their hirelings, and then proceed to lay tribute on intruders. Their particular prey is the camper, who pitches his tent on one of their lake shores or drops a worm into one of their brooks or follows the trail of game through some of their woods.

The time was when a man might go into the North Woods and camp out without peril of being made to stand and deliver, or of being hustled off by "Reserve" guardians. That time has not gone by for a still very large extent of territory, but all too much of the choicest area of the Adirondacks is coming into the possession of those whose sole aim is to exploit the natural wealth and do what they can in the way of plucking sportsmen.

To the Adirondack Reserve concern—already noticed in our columns as charging campers so much a night for the privilege of camping on the Au Sauble Lakes district, and which now proposes to charge $1.50 per day per rod for trout fishing—there must now be added, in the list of those who prey on sportsmen, the Northern Adirondack Railroad Company. This road in conjunction with lumber companies controls a large extent of country in the Northern Adirondacks, that district described in a communication printed on another page to-day. The railroad and the lumber concerns have published a notice in local papers setting aside all their territory with the waters therein as a private park for the propagation and protection of game and fish; and their plan is, as reported to us, to police this district and impose a camping license fee on all visitors who enter the territory by way of rival lines.

An Adirondack lumber company posing as having interest in game and fish protection is a spectacle for gods and men. As a cold fact, the lumbermen mean to get all the money they can out of their lands. To do this they are now disposing of the hemlock to tanneries, whose men by the hundred are cutting the trees and peeling the bark; and all the hardwood, big and little, is being worked up or is going into charcoal. They are, in short, as expeditiously as modern methods can hasten the work, skinning the lumber and reducing the territory to that briar-patch and brush condition which after fire has done its work will mean blackened desolation.

The hoplessness of the situation is that all these enterprises appear to be within the sanction of the law, and there is, therefore, apparently no redress.

SNAP SHOTS.

THOSE of our readers who have visited, or may intend to visit the Canadian Dominion, will be glad to learn something about a new book connected with that region. It is entitled "Historical and Sporting Notes on Quebec," and is from the pen of J. M. Le Moine. It contains a large amount of historical facts, within a small space, not easily accessible to the average tourist, and also an account of the sporting facilities of that portion of the Dominion lying between the city of Quebec and the headwaters of the famous Saguenay. It was in 1862 that Mr. Le Moine commenced his career as an author, and from that time to the present he has published not less than twenty-seven volumes connected with the history and scenery, the traditions and people of his native province, twelve of them in French. Taken together they form a fitting monument to the man who is to-day the leading and most successful author north of the St. Lawrence. One of the novelties connected with the volume here mentioned is that it is divided into two parts, and while the first is inscribed to Her Royal Highness, the Princess Louise, the second part is dedicated to the Yankee author, and long our correspondent, Charles Lanman.

At the last meeting of the Commission in charge of the National Zoölogical Park Mr. W. T. Hornaday was appointed superintendent of the new park. Ever since the project to establish a national zoölogical garden was first set on foot Mr. Hornaday has been extremely active in pushing it forward. He has been in charge of the collection of animals for some time on exhibition in the Smithsonian grounds, and has been signally successful in increasing their number and in making the limited funds at his command go as far as possible. Possessed of great energy and a large experience with animals, acquired in many quarters of the globe, Mr. Hornaday promises to make a very efficient superintendent. It is understood that the negotiations for the land along Rock Creek, where the park is to be located, are well advanced and that there is every prospect that before long the Government will be in a position to begin the work of preparing the park for its future inmates.

A butcher named Miller, employed by the man who has the contract for furnishing beef in the National Park, recently killed a bear which was prowling about the slaughter house at Norris Geyser Basin, and was promptly ordered out of the Park by Captain Boutelle, the Superintendent. Miller claimed that he shot the bear in self-defence, but Captain Boutelle declined to go into the merits of the case, saying that whether Miller was justified in killing the bear or not, he would have to go, as he had violated the rules of the Park. If the Superintendent listens to excuses for infractions of the regulations from one offender he will have to do the same for all others. We do not understand that the Superintendent's orders require him to hold court and try offenders. His duty is to enforce the regulations established by the Secretary of the Interior.

It appears to us that the Selectmen of Boxford, Mass., are making wholly needless pother about a dog case, which is said to perplex them. A statute provides remuneration to owners for damages inflicted by dogs on domestic animals. A mad dog in Boxford, it is said, bit another dog, which was valuable, and which died of the bite. The owner put in a bill for remuneration. The Selectmen hesitate to pay for the damages because they do not know whether a dog is to be classed with other domestic animals. As Massachusetts dog owners are required to pay a stiff tax on these animals there ought to be no question about their legal standing. Let the Boxford Selectmen pay up.

It was announced last week that a syndicate had purchased 390,000 acres of land in the Adirondacks, 306,000 acres of which were of virgin forest; and that this entire country was to be lumbered. The extent of this deal has drawn attention anew to the depletion of the Adirondack forest area, and the suggestion has been put forth that the Legislature should step in and prevent this syndicate from carrying out its plan. The only way in which that could be done would be for the State to buy the land; and it is not at all probable that it will do this.

We are desirous of obtaining a copy of the volume index for the following volumes of FOREST AND STREAM: 2, 3, 5, 6, 7, 8, 10, 13 and 15.

The Sportsman Tourist.

THE STRAITS OF GEORGIA.

AT this season of the year the wearied business man of the city is making preparations to leave the heat, dust and turmoil behind him and go where he can have pure air, rest and recreation.

The Straits of Georgia, between the northerly part of Vancouver Island and the mainland—with its thousands of islands and innumerable channels, arms and inlets, its bright, bracing atmosphere, clear transparent waters, grand scenery, with unrivaled attractions for those who are fond of sports with the rod and gun—is truly a fairy land, and in a short time will be the grand camping ground for Eastern tourists.

The waters there teem with water-fowl and trout, salmon, halibut, cod and other kinds of sea fish. On the islands and mainland are ruffed and blue grouse, two varieties of quail, blacktail deer, bears, lynx, coons, beavers, a few panthers, wolves and wolverines; and in some localities there are elk, caribou, silvertip or grizzly bear and bighorn sheep. On all of the high, grassy plots and bare spots, well up on the southern sides of the mountains, on the mainland near the inlets, that easiest kind of game to kill after you have reached their feeding grounds, the mountain goat, are found in large numbers.

The arms and inlets of this locality are quite narrow and are bordered on both sides with lofty and in many cases snow-capped mountains. The waters are deep and the shores indented with numerous bays, the ideal spot for the canoeist and sportsman—an inexhaustible field of exploration for those who are in search of beautiful nature in her noblest forms. In midday, from May 1 to Nov. 1, the temperature is from 60° to 65° or 70° in the shade, and at night it is cool enough to make a heavy blanket comfortable while sleeping. The rainfall is very light during these months and the days are usually cloudless.

For the benefit of those who wish to visit these waters and forests I will give a brief outline of a route for a two months' cruise with skiff or canoe. The expense for a party of four or five persons, from say New York and return, should not exceed $350 each. The route that I give is one of constant changing scenery of the most magificent kind in the world, over waters, as I have before stated, teeming with fish, bordered by forests full of game, etc. Buy return tickets via the C. P. R. from Montreal to Vancouver, B.C. This route will give 500 miles of mountain scenery, through the Rocky, Selkirk, gold-bearing and coast range of mountains. At Vancouver take the steamer Robert Dunsmuir on Monday, Thursday or Friday for Nanaimo on Vancouver Island. At Nanaimo we have always found a clean bed at the Central Hotel; there may be other clean beds in town, but we speak only from what we know, and while in that country we prefer to run no chances, and never camp on an old Indian camping ground—not if we know it.

There are two parties in Nanaimo who keep boats for hire. We recommend the one in the old boat house nearest the wharf. The owner of this place is a boat builder, and will rent out a good cedar skiff—or gig, as they are called there—complete with sail, etc., for $15 a month, or he will get you a Siwash canoe, which is a good seaworthy boat. Either of these craft will carry four men and camping outfit. This man will also get you a good boatman for $25 a month. We would advise the tourist to call on Mr. J. H. Please, hardware dealer, a courteous gentleman who will do all in his power to assist in making your outfit complete. Regarding outfit, take whatever eatables and fluids you fancy or desire, but bring with you a light, roomy tent or tents, heavy blankets, a sheet-iron stove, with furniture, two fishing rods, one a light fly-rod and the other a stiff one for trolling. The salmon are caught with a spoon bait or by spinning a minnow in the salt water, and grilse are taken in the streams with a spoon fly. Small dark-colored flies are of no use in these waters; also bring cod lines for deep sea fishing. Regarding guns for feathered game, I prefer the three barrel, for the hunter when after grouse is liable at any moment to meet large game, deer or black bear. Then bring a good rifle, say a .45-70, as you can get this ammunition at any trading post, and this size rifle is a powerful weapon—just the thing for the mountains, and in the cañons it is when backed by a good nerve, sure medicine for the "silver tip," though I would strongly advise the average tourist to hunt the grizzly with a big bear trap, *à la* Rainsford: (1.) Catch him, (2.) shoot him, (3.) brag about it through the press.

Now for the route. Leave Nanaimo for Jervis Inlet. There are two routes by which to reach this inlet; first, go across the strait nineteen miles to Trail Bay, where there is an easy trail of 1,100yds. into Porpoise Bay at the head of Seechelt Inlet, which runs into Jervis Inlet. The second route is via Agamemnon Channel, which is twenty-five miles from Nanaimo. I would advise tourists to get a small steamboat to take their outfit to either Trail Bay or to the Channel Islands at the mouth of Agamemnon Channel, though the party could in small boats run across to the mainland via Ballinas Islands to Lasquati Island, then past Texada Island to Thormanby Island to the mainland, then up the coast to Channel Islands, or down the coast to Trail Bay, then portage over into Porpoise Bay, then down Seechelt Inlet eight miles to the Salmon Arm, which is ten miles in length and comes into the inlet from the northeast. The scenery on this arm is fine, and good fishing can be had in the Clowham River, which comes into the head of the arm. A few miles further down the inlet is the Narrows Arm, which comes in from the north and is eight miles in length. The head of this arm closely resembles a human hand with the fingers, minus the thumb, outstretched. Tyoony River flows in at the third finger. Here is good fishing and shooting. The tide runs into this arm at about four miles an hour. Four miles further down the inlet are the rapids, which are best passed just as the tide begins to ebb. Then another five miles brings us to the upper end of Agamemnon Channel. Away to the right N. N. E. is the broad arm of Jervis Inlet. For the first fifteen miles it is called Prince of Wales Reach, then for the next ten miles it is Princess Royal Reach. Here to the right the bighorn sheep are found and goats are on all of the mountains. Then comes the Queen's Reach, with Princess Louise Inlet coming in from the right.

The scenery is here something grand to behold. At the head of Queen's Reach is Mount Victoria, 7,452 ft. above the surface of the water. Up the valley to the left of Mt. Victoria is a good game country, and to the left of this valley is Mt. Alfred, 8,456ft. high. The old Indian trail up this valley leads to Desolation Strait, two days' travel. You return through Prince of Wales Reach, then north of Nelson's Island into Malaspina Strait, then up the strait skirting the shores of the mainland for twenty-five miles to Point Sarah, then to the right southeast you are in Malaspina Inlet. Go up this inlet five miles, then to the left a couple of miles up Lancelot Inlet, and you are at Theodosia Arm, which comes in from E.N.E. There are very high falls up the stream that comes into the head of this arm.

Returning to Point Sarah, then on northeast two miles up Desolation Sound, with Redonda Islands and lofty mountains to the left, and we arrive at Forbes Bay, which is south of Mt. Denman, 6,600ft. high. Back from the bay and along the southern base of Mt. Denman is the home of the famed "silver tip" and other large game. Four miles from Forbes Bay brings us to Atwood Bay, and another mile to Brettell Point. Here we enter the waters of Toba Inlet, which extends back northeast some eighteen miles into the mainland. Eight miles up the inlet on the left is Salmon Bay, with Mt. Barner, 6,090ft, high, to the northeast. The eastern slope of this mountain is a good sheep ground, and the river flowing into the head of the inlet is full of trout and salmon.

In returning keep to the right past Brettell Point, through Pryce Channel, past Deer Channel, which comes in from the southwest around Raya Island and three miles north-northwest up Calm Channel to the right of Valdes Island, and we arrive at the celebrated Bute Inlet, which comes in from the north-northeast.

This inlet is nearly forty miles in length and hemmed in on both side by lofty and precipitous mountains. The highest are the Needle Mountains, which are on the east side of the inlet about twenty miles from its entrance. At the head of the inlet is Mt. Evans, 7,000ft. high. Homalko River flows into the head of the inlet, and like all other streams in that vicinity affords good fishing. Up this river is a famous country for bear, elk, caribou, deer, etc., with sheep and goat on Mt. Evans. Seven miles from the head of the inlet on the northwest side is Bear River and Bear Bay, with Mt. Smith at the back, 7,544ft. high. At the mouth of the inlet to the southwest is Valdes Island, which is twenty-five miles in length by ten in breadth. Elk are found in large numbers on this island.

There are hundreds of small islands between Valdes Island and the entrance to Bute and Toba Inlets. It would take years to explain them all. Gold, silver and copper ores are found on many if not all of these islands.

Going up the channel northwest from Bute Inlet to the end of Valdes Island, turn to the right into Frederick Arm, which is five miles long. At the head of this arm you can pass to the right into Estero Basin, where fine oysters are found at low tide in 8ft. of water. North of this basin, in the immediate vicinity, are excellent hunting grounds. For a hundred miles northwest from Frederick Arm it is a perfect maze of channels, inlets and arms, with thousands of islands. One of the largest inlets is Knight's Inlet, which is 60 miles long by 1¼ miles broad. The average width of the inlets already mentioned is about one mile, with deep water.

A few Siwash Indians are found in this locality. They are quiet, and good hunters and expert canoe men. In many places along the coast they will not venture far among the mountains unless they are accompanied by a white man, for fear that they will be destroyed by an evil spirit that roams in the mountains ready to make meat of any Siwash that he may find there unprotected by the white man. These Indians are quite different from the Indians of the plains; they closely resemble Japanese in general appearance, and as a class are inveterate thieves and cowards, and need to be watched, but not to be feared.

STANSTEAD.

HIGHGATE, Vt.

TROUTING ON THE SOUTH BOARDMAN.

[*Concluded from Page 489.*]

FRED, who was a gilt-edged *raconteur*, could take the most simple fact and after he had woven his web of fiction around it a few times, it would never be recognized as coming from its original sources. He stated that while trouting on one occasion a few years ago on Fox River in the Northern Peninsula of Michigan, he had an adventure that was as laughable as it was exciting.

I give his own language as near as possible: "I started one morning by myself from camp to try my luck with the rod. Making a short detour I struck the river so as to have about three miles of fishing. It was a cloudy and muggy day and I felt that I would catch all the trout I could carry. As soon as I waded in the stream the trout took my hook the moment it touched the water and I pulled them out right and left all the way down, not catching a single fish under a pound, and many as large as 4lbs. I filled my creel, all my pockets and several strings which I kept tied to my belt. I was really a walking trout preserve. Having about 100, and as I was no trout hog I concluded to go ashore and rest a while before returning to camp. Seeing an inviting stump alongside a heavy clump of bushes that cast a grateful shade, I approached it, and as I sat down upon it, it began to crumble as I thought from mere rottenness, and I therefore took a seat on the grass by its side. I had sat here but a moment or two before I got a frightened glimpse of a bear's head over my shoulder. It now struck me that I had sat upon a bear instead of a stump and I was so paralyzed with fear that I lost all strength and the cold perspiration freely oozed out from every pore. I expected every minute to feel his sharp claws searching my anatomy and the work of mastication commence. My whole life now flashed before me distinctly, and I began to wish I had never been other than a saint. The suspense was so great that I was fearful I would swoon, when all at once I felt the bear nosing around my creel. A happy thought at this auspicious moment flashed upon me like lightning. The bear fortunately was an epicurian and preferred trout to human flesh. Escape now seemed possible, and my strength of body and mind began to rapidly return. I now carefully took a 3lb. trout out of my pocket, as that was the handiest, and held it over my shoulder. The bear at once took it, and as he munched it purred like a contented cat well pleased with the *menu*. That trout soon disappeared and then I passed over another four-pounder."

"Another four-pounder, Fred?" and then I began to think of Falstaff and his men in buckram.

"Yes, another four-pounder," he answered, and then he glowered upon me with something of disdain in his expression.

"Well," he continued, "I fed that bear trout after trout, until feeling somewhat reassured I thought I would take a glance at the recipient of my bounty, so I slowly turned my head as he was feasting, and much to my amazement discovered that he was perfectly blind. I carefully arose now, and placing a dozen or two of trout at his feet, I gently walked off and stepping into the stream pursued my course to camp. I never told this strange adventure to my associate campers, for I was satisfied they would set me down as an ingenious liar."

"Why do you relate it now?"

This interrogation appeared to worry him, but after he had played battledore and shuttlecock with it for a while, he smiled upon me and said with great confidence, "because he wanted some gentleman aside from himself to have knowledge of such an exciting event that it might possibly form an interesting chapter in natural history."

With as much politeness as I possibly could, I hinted that he was simply on a blind lay, and bagged only blind game, and asked afterward if he ever caught a blind trout. At this the guide laughed, and Fred looked somewhat disconcerted, thinking doubtless and truthfully that we believed he was romancing. He, however, drew the long bow no more on that trip that we knew of, for his talk after this blind affair was more plausible.

The lunch being dispatched we sent the guide ahead with the boat, and wading into the stream commenced the work of enticing the trout. I let Fred get the advance of me some distance and then had both sides of the stream as before.

As I wound my joy-inspiring way along the river, I was ever alert for the radiant trout, and enticed many a one to my quivering bait and to my creel. I knew my companion would hang his banner on high if he badly defeated me, and therefore I worked with might and main, passing no tempting spot unfished that I thought contained the quarry. As I waded around a sloping bank, thick with sedate alders, my eyes were gladdened with a sight of a little boy and girl sitting on a log under the shade of a spreading oak. The girl had a bright and winsome look, with curls of gold and cheeks like apples, and wore a straw hat aslant on her yellow hair that gave her decidedly a prepossessing appearance. Her barefooted brother with his bright eyes, sunny face and rustic costume was as picturesque as a shepherd boy. The little people so attracted me that I waded ashore to have a chat with them. The boy eyed me keenly as I approached, and asked if I had many trout, and if I were fishing with a fly. I opened my basket and let the children take a peep at the golden-hued fish, and then confessed to the boy that I was one of those contemptible bait-fishermen. He then told me that he had some fifteen trout in his fish box, which was fastened in the water near by, and that he wished to dispose of them, but he said that he always had poor luck in selling to the bait-fishermen, as they always caught enough to satisfy themselves.

"You don't sell to fly-fishermen?" I inquired.

"Oh! yes, sir, quite frequently."

"And why to them?"

"Because at this season of the year they hardly catch any."

"I'm surprised that these high-art anglers would buy trout."

"They do, though, but they alway tell me not to give 'em away."

"Do you?"

"I can't, for I don't live in town. My home is down by the bridge."

"Do you ever sell any to bait-fishermen."

"Very seldom, they always have 'em."

Here the little girl quickly spoke up and said: "Last season he sold a lot to one."

"How was that?"

"Why, you see," said the lad, "there were two men trouting here. The first one that passed was fishing so hard that he paid no attention at all to us, only saying 'Good morning, children,' and then hurried on. After a while his partner came along, and as he passed close to me I asked him if he didn't want to buy some trout. At this he smiled and came ashore and inquired how many I had. I told him twenty-five. He laughed right out and said: 'Get 'em quick!' I pulled my box ashore, and as I put them in his basket he smiled and laughed all over saying: 'I'll snow him under now!' I didn't know what that meant then, but papa explained that he wanted to beat his partner. He never asked the price of 'em, but putting his hands in his pockets he drew out some money and gave me three dollars, and then tossed one to sis, saying, 'That's for you, little bright eyes,' and then he was gone like a flash, fishing as he went. Oh! he was such a handsome man. He had a gold chain around his neck and something on his little finger that sparkled like the sun. Papa said it was a diamond, and learned down at the tavern that he was a big banker from the East. Sis and I will never forget him."

"Did you ascertain whether he snowed his partner under?"

"Oh, yes; papa learned all about it, and said he beat him badly, and plagued him a great deal about it."

I was perfectly delighted with the conversation I had with the children, but as I was not in for the purchase of trout I told the little girl if she would give me a kiss I would give her a dollar. The little boy's eyes were all a sparkle at this, and turning quickly to his little sister he said:

"Sis, kiss the nice gentleman."

The little elfin then cheerfully got upon the outer end of the log near the water, and as she removed her straw hat her bright curls gracefully flowed over her nut brown shoulders, and the sun which struck this part of the oaken trunk bathed her head in crimson and gold, thus giving her the appearance of a "little fairy queen that gamboll'd on heaths and danced on ev'ry green." As I presented my bronzed and furrowed face with heavy beard and thick moustache, she bent forward and her sweet little innocent lips gave me a hearty kiss that I prized more highly than if it had been from the rosy mouth of maiden royal.

"Here's your dollar, sis, and one for you, bub," suiting

action to word, and then I bade them a hasty good-bye, and wading out into the cold water proceeded with my fishing lest I also should be "snowed under." I turned and looked back at them before I passed the bend just ahead of me that would shut them out from my view, and there I beheld them both standing on the log intently watching me, with the little girl gracefully wafting kisses, to which I sincerely responded, and then the little romance of the stream was ended, but not forgotten, for it will always live in delightful memory as one of my rarest pleasures of trouting on the Boardman.

"Ah!, what the world would be to us
If the children were no more.
We should dread the desert behind us,
More than the dark before."

In sweet succession came groves and meads, hill and dale, brush and brake, pool and shallow, banks of verdure and rippling rills until I again overtake Fred sitting like Patience on a monument in the stern of the boat awaiting my approach. He gently chided me for my delay, and insisted on hurrying along as we were sure of arriving late at the bridge where the team was to meet us for our return. His success this time had not been so good as mine, and when he looked into my creel he mournfully threw his hands up declaring that his catch would be sadly in the minority at the termination of the day's sport. With serious look I asked him if he had not lost time in looking for blind bear.

"See here," says he, "you appear to doubt that little incident of mine with the blind bear."

"Not at all, I am perfectly frozen to it."

The swift current soon brought us to the guide who instead of angling was sitting on the bank indolently smoking a pipe. We agreed to make but one more stop, as the sun was sinking fast and we had fully six miles of teaming from the bridge. We took the boat along about a mile, leaving the guide to pick it up from its final anchorage. I found the water quite deep at the last stretch of the river we were fishing, and the current so swift as to wash the sand from under my feet. The trout were evidently not now on the feed, as I caught but few. It being quite cloudy at this time I concluded I would discard the trout fin and put on some flies, and once more take rank as an artist of the angle. I selected a white-miller for the stretcher and a yellow-May for the dropper, and then commenced whipping the stream quite industriously. After numerous casts I secured a rise and a half-pound trout. Thus encouraged I kept on, and after fifteen minutes of steady work got another fine rise and swung a beauty to the lure that gave me a pleasant little play. He was a full pounder and highly improved the appearance of my basket. I was satisfied Fred was not doing much more with the bait, and so as an apology for stepping down into the ranks of the plebian-minded baiters, I stuck to the flies till the boat reached me, with only a record of three more, but had the satisfaction of knowing they were caught on high art principles.

I am an iconoclast as regards fly-fishing, not being yet confirmed after forty years angling in the belief that some special imitation is necessary for each day of the year or for every lake or stream. I could cite numerous examples of the most expert trout anglers, that go to prove beyond a doubt that such particularity as a theory is in a great measure a fallacy. Five years ago when trouting on the Nepigon I used a white-miller—an angler's delight between sunset and dark—in the middle of the day and under a bright and glaring sun, and caught trout till I was sated. W. M. Cameron, the second angler from the States who ever visited the same stream, and from whom "Cameron's Pool" is named thereon, had a similar experience; and so with Col. L. A. Harris, one of the Board of Commissioners of the National Soldiers' Home, and also H. C. Culbertson, one of the most expert trouters in the country and a veteran on that famous river. I give these names by permission, as I think such practical facts should be duly authenticated.

Last year while trouting on Duck Creek, in Michigan, in the month of July, and using bait, I found that in the middle of the day I was unable to secure a single bite. The guide suggested a change to a fly. I put one on, a brown-hackle, and the trout took it with avidity. Shortly after I had to resort to bait to secure them. Why this sudden change? At another time I made a fly from some coarse red flannel only, and a clumsy piece of fly architecture it was, and it proved a decidedly killing lure. Again I tied on my hook a piece of white linen cut from my pocket handkerchief, another clumsy affair, and it also proved an enticing decoy. And so I might continue *ad infinitum* with examples.

There is more, however, in the skillful fluttering of the fly than aught else, though I fully realize that certain conditions in fly-fishing should be strictly observed, and that it is always best to have the most perfect of flies and the very best of tackle. There are times, however, when it requires the most artistic casting, with perfection in feathery lure, to "superinduce widowhood and orphanage" among the brilliant tenants of the murmuring brook. Pennell, who is always practical, recommends but three flies for trout the entire year, a green, a yellow and a brown, the size of the fly alone being varied.

It was a mile yet to the bridge, but this was soon reached, and we found the driver with the team and wagon. The clumsy boat, though an excellent one for floating, was soon hoisted on to the bed of the wagon, and then after getting in, the team started off at a brisk pace, creating such a lively jolting as would have cured the worst case of dyspepsia extant. My clothes were perfectly dry when I pulled off my wading trousers, but Fred and the guide, who had turned up their noses at my dandy outfit, began to wish that they had also resorted to such a comfortable protection. They were wet up to their waists, and, with the cool air of the evening that was then setting in, they felt miserable, indeed. On a count being made of our tinny spoils, it was ascertained that I had 45, Fred 38 and the guide only 25. The latter had evidently idled his time away during the afternoon, pouting, doubtless, because I had expressed a desire for his trout. He was evidently a contemptible churl. Fred had, however, worked with unflagging industry, and was greatly surprised when he found I had so badly defeated him, not only in numbers but in choice and heavy trout. I again twitted him by telling him that he was too diligently looking for blind bear instead of tempting the trout. He laughed, but it did not well out freely from the heart. He was keenly cut and knew that I had him down fine, and that his corner on sightless bears had gone glimmering.

Our drive home was entirely through a wooded country that did not show a single field gleaming with Ceres' yellow sheaves. It was in its primitive aspect, with the exception of a few spots that had attracted the lumberman's axe. The soil was thin and sandy, and I doubt if a farmer could scratch a living from it by the most industrious toil. The deer at times freely ambled there; the common black bears frequented it; the partridge and woodcock haunted its thickets in great numbers; the song birds warbled from bush and brake the livelong day, while streams and rills ran through it in the sunlight like ribbons of silver.

After supper the guide came to me and said that I could have the trout that he had caught. I presume he had had a talk with the landlord, and that he very graciously condescended to let me have the fruits of my employé. It was in order to arise and embrace him as a "mossback" upon whom at last had dawned a vision of common sense and even-handed justice. The world does move, even in the wilds of Michigan, and there is yet hope that the reform may spread to other benighted regions. I gave instructions to have a few of the trout saved for my breakfast, and the remainder I had shipped to one of my friends in Grand Rapids. The next morning I concluded to start for the Lake Superior regions, and on calling for my bill was surprised to find that the landlord had charged me for the entire trip to the Boardman. I kicked savagely at this and demanded an explanation, wanting to know why my companion had not been charged with half of the bill, as he was not invited by me, and further, was an apparent stranger. He stated that he only sent him along to keep me company. Very kind and considerate of him, but I emphatically gave him to understand that the bill must be corrected. He then threw off a few dollars, being much less than half the expense of the trouting trip, and rather than fret myself into a feverish rage over it, I settled the remainder of the bill, satisfied that I had been imposed upon.

This was the key to the familiarity of the twain, and the supposition was that I was to pay for the entertainment that Fred had endeavored to give me in his elaborate narratives and his clever vocalism. No wonder blind bears are found in the verdant banks of trout streams, and that cheeky guides demand two dollars as a royalty for fishing for themselves. I tried hard to find the genial and festive Fred, the Ananias of the purling brook, that I might read the riot act to him, but he kept well out of sight until I had departed. Long may he wave.

After all these trivial annoyances had faded away, as they soon did, I fully realized that my trouting on the South Boardman had proven a pearl of pure delight. Its sunny brightness, its stirring pleasures and its clearness of glorious nature all appear again in dreamy reverie. There are the lovely haunts of the jeweled princes of the brook; the peaceful stretches of the dense woodland; the rippling water with its sleeping shadows; the waving grasses with their lovely flowers; the lively flutter and sweet melody of birds; the waving charms of hill and dale, dell and dingle; the dewy sweetness of forest fragrance; the beautiful skies with soft breezes; the sweet innocence of the pastoral children and all the charms that smite the simple heart. ALEX. STARBUCK.

TROUT AND BIG GAME IN COLORADO.

As the summer heat comes creeping upon us, it brings more forcibly to my memory the several vacation trips I have made to the grand trout streams of Colorado; and believing, as I do, that no part of this continent affords greater pleasure to the sportsman than can be found in the Rocky Mountains, I think a short account of my experience may be of interest to your numerous readers.

With the present railroad facilities, any parts of the Rocky Mountains are now as easy of access as are the vast prairies which we cross in our journey to these magnificent and wild mountain scenes.

Leaving Kansas City at 10 o'clock A. M., or Salina at 4:30 P. M., by the Union Pacific Railway, we are rolled across 639 miles of almost unbroken prairie. A long distance of this route on my first trip, in the summer of 1869, was covered with wild buffalo, and their dead carcasses strewed the country for hundreds of miles, many with not even their skins taken off—the noble game ruthlessly slaughtered for no other purpose than the insatiate desire for destruction of life. It was surely the work of butchers and not of sportsmen. The sight was enough to make a man sick at heart. But all this is past and beyond remedy.

With supper at Ellis, the half-way station from Kansas City, we find ourselves in the beautiful growing, thrifty city of Denver at 7 A. M. for breakfast; within an hour we can take our departure for almost any part of the Centennial State. On our last trip we chose the Denver & South Park Railroad and took tickets for Leadville, leaving Denver at 8 A. M., Aug. 2, arriving in Leadville at 6 P. M. the same day. This in many respects is the greatest mining camp (as it is called) in the State. It is really a well and substantially built city of about 20,000 inhabitants, situated near the summit of the snowy range at 10,200ft. elevation and but a few hundred feet below timber line and in some direction not more than six miles to the everlasting snows, it affords a fine cool bracing air, unsurpassed anywhere during the summer months. With its present railroad facilities, the Denver & South Park, the Rio Grande & Colorado Midland, running out in six directions, Leadville is one of the best points in the mountains in which to make headquarters for fishing and hunting. There are here several dealers who keep excellent stock of everything required by the sportsman. There is not an arttcle from a No. 12 fly-hook to a tent or a whole and complete camping outfit, even to pack animals, that cannot be had in Leadville, and of the best quality of goods and at reasonable prices.

We had a good night's sleep between blankets—which, by the way, are necessary to comfort every night of the year, as is also a fire morning and evening at this elevation. Our party consisted of my brother, A. D., and his family, who reside at Leadville, my wife, son and two daughters. We spent the first few days on the streams near the city. The headwaters of the Arkansas River pass just outside the city limits. Tennessee Creek, Lake Creek, Rock Creek, Half Moon and Twin Lakes, all are easy of access and can be reached within two hours. The fishing is fair in all these waters, and we are rewarded every day with trout. In these streams are found both the native Colorado and the eastern trout.

The best fishing, however, is found in the Eagle River and Frying Pan districts. These streams and their tributaries cannot be surpassed. Eagle River is reached by the Rio Grande R. R. From Leadville, after six or eight miles of high-up grade, we reach Tennessee Pass, and at once began the descent from the very headwaters of Eagle River. The road extends down the entire length of this magnificent stream, crossing and recrossing it to its confluence with the Grand River. Every few miles is a station, from many of which we could cast a fly into the stream from the depot platform, and trout are plentiful everywhere. From Red Cliff down the road has been open but a few seasons, and the stream has not yet been whipped to death.

One of the large tributaries, Gore Creek, enters Eagle one mile below the station of Minturn, and is most excellent fishing from source to mouth. On this creek we spent several days at two different times, and filled our creels each day to our perfect satisfaction, not with fingerlings but with large, gamy, fighting trout from 8oz. to 35oz. each, and we left several after hard, long tusseling that we estimated at not less than 7lbs. There is a wagon road extending up this creek about ten miles. From four miles up is a pack trail leading over to Piney Lake and Creek, a distance of six miles, and here the trout are said to be too plentiful for sport. We did not go over, but met a party of three who had been there for three days, and they had on their packs 1,300 trout and two deer. Elk, deer and small game are plenty in the upper Gore and Piney district, and occasionally a bear is found.

A few miles further down Eagle River is another tributary, Brush Creek. For this stream get off at Eagle station (Castle P. O.), which is one mile above its mouth. It takes its rise near the Mountain of the Holy Cross. The creek is equally as good as Gore, and we spent several days along the stream with great success, capturing as many fine trout as we could use and all any sportsman could desire. A few miles further down we reach the mouth of Gypsum Creek, and this, too, is alive with trout. We spent several days on the Eagle River between these and other stations with very good luck. While the fish are not quite so numerous in the river in July and first of August as in its tributaries, they are plentiful enough for good sport, and there are lots of whoppers there. We left many after a slight examination at the distance of the length of our rod and line, thinking them "too big to eat." We do not admit that a bigger trout swims than we can capture, but we did find some that were very "long-headed" and would take some undue advantage of us, and would say "good-by," just when we thought "we had 'em."

Our party on these trips consisted of my brother A. D., my son Oscar and the writer. We took no camping outfit, but went in light marching order, rubber coat and boots, haversack with one ration and our fishing tackle. We depended upon the ranchmen for lodging and most of our meals and occasionally for transportation, and we were never disappointed; we always found them ready and willing to give us the best they had, and to accommodate us in every way, and for a very reasonable consideration. Occasionally we were compelled to take a tramp of three or four miles, and sometimes to sleep in a stable or milk house or potato cellar or under a pine tree, but it was always the best the ranch afforded, and we were always served at the first table, and the fare was good enough for the most fastidious. In the menu of nearly every meal we had either fresh elk, deer, mountain grouse, or squirrels and trout, and we really enjoyed our sometimes crude accommodations much better than the more pretentious city hostelry, for we had every where many very enjoyable incidents, and around the hospitable fire in the log cabin of a frosty evening in August were many occurrences which are cherished in memory. Many of the stories by the mountaineers of their hunting and fishing experiences would be worth relating did space and time permit.

Should the sportsman be more ambitious and wish for wilder and less civilized sports than can be had on a trip of this description, he has but to go a few miles further down the Eagle to its confluence with the Grand River at Dotsero. From there he can procure a camping outfit, with packs and guide, and take the trail to the Flat Tops and Trapper's Lake, the head of White River, a distance of thirty miles, and then he reaches the wildest region of the entire Rocky Mountain district in the United States. Here is, undoubtedly, the sportsman's paradise—elk, deer, bear, trout and game of all kinds abound. But as this region has been well written up and described in late numbers of FOREST AND STREAM, we will pass it with this simple description of how to get there; and we leave the Eagle River district, feeling that we have given but a faint idea of its wonderful sources of pleasure to the sportsman and not attempting to give any description of the grand and magnificent scenery, which is beyond my power of pen description, but is to me a source of almost as much enjoyment as the grand sport of trout fishing.

To reach the Frying Pan and Roaring Fork region we take the Colorado Midland Railroad, running nearly due west from Leadville, climb Mount Massive to above timber line, and through the perpetual snows which can almost be reached through the car windows; are whirled through the great Hagerman tunnel; emerge on the other side and look down upon Lake Ivanhoe, hundreds of feet below us; and after a long winding and twisting descent reach the shore of this beautiful little sheet of water, set in a beautiful park high up on the mountain side. This is the head of Frying Pan Creek, which starts out as a little rill, but increases in size at almost every step by little tributaries and springs fed by the melting of the everlasting snows. It soon becomes a roaring, boiling, leaping stream with long riffles, deep clear holes, chiseled out of solid rock, with overhanging granite cliffs apparently ready to plunge into its crystal waters, constituting the *beau ideal* of a trout stream, that even to look upon quickens the heart beat of the fisherman and thrills him with pleasure. Nor will he be disappointed when he casts his fly upon its pure sparkling waters.

Soon after leaving the lake we reach Hell Gate. As we roll around a point on the side of the mountain a glance out of the car window shows us a scene awfully grand; looking down the cañon of the creek a mile below we see the winding track, looking like a faint trail, over which we are soon to pass, but not until we have traveled fourteen miles of iron rail, for this is the distance re-

quired to gain the direct distance of little more than one mile. The road now follows very closely the course of the beautiful Frying-Pan Creek, first on one side then the other, to its mouth at Aspen Junction, where it flows into the Roaring Fork. This is distant from Leadville about sixty-five miles, or four and one-half hours time. The stations from Lake Ivanhoe down are Sellers, Norrie, Lime Creek, Ruedi, Sloan and several other sidings; and from any of these points the fisherman can within a few steps reach this grand trout stream. At Norrie we are near the mouth of North Fork, and have here the advantage of the two streams, both of which are most excellent fishing. At Lime Creek is a small mining camp, and the creek of the same name enters the Frying-Pan at this place, and no better fishing could be desired than this tributary affords. It takes its rise from the Mountain of the Holy Cross and flows southwest, while Brush Creek heads but little distance from Lime Creek and flows north into Eagle River. Game is also plenty in this Frying-Pan district; we saw from the car window both deer and mountain sheep on our way over.

We spent several days at different points along this stream and its tributaries in the same manner as we had fished on the Eagle River and with about the same results, catching enough each day to perfectly satisfy ourselves. This, too, is a new section of country, opened but two seasons since the construction of the Midland Railroad. Prior to that it was only accessible in many parts by pack trails.

We made these various trips out from Leadville in from two to six days each, according to the locality we selected, and on our return to the city we usually spent from one to three days with our families and put in the time with short excursions to some of the many points of interest in the vicinity. One peculiarity of Leadville is the large number of spring wagons with canopy tops large and strong, which will accommodate from six to nine persons. These are very comfortable and well equipped with two or four horses and a careful driver, who will take parties to any point within a day's drive at reasonable prices. We made one trip to Mosquito Pass, eight miles distant, starting early in the morning and returning before dark, taking our wives and children, nine in the party. We had our picnic dinner on the snowdrift thousands of years old and it may never melt away. Another day we spent at Evergreen Lake, a beautiful place, with natural and artificial lakes, where the propagation and rearing of trout is made a business. The proprietors have expended about $10,000 in the plant and are apparently making a success of the enterprise.

Just above Evergreen, on Rock Creek, is the place where the Government is about to put in the largest fish hatchery in the United States, and a better place could not have been found. In going to and from this point we pass the fine soda and iron springs, the waters of which equal the renowned springs at Manitou. We also made a trip by rail to the hot springs and hot caves at Glenwood Springs. We made other visits to the large smelters and mines in the vicinity, all of which are very interesting. Thus we put in the entire month of August, long to be remembered with pleasure. July and August cover the best part of the fishing season, but the hunting season comes later.

During our entire stay of the hundreds of trout caught not a fish was wasted. On our trips we usually furnished our table with all that could be eaten, and had some to divide with our friends outside of the requirements of our own table.

We handled our fish in a different manner from most other fishermen we met. On our return from each outing, whether at noon or night, we dressed and cleaned the fish, leaving the heads on, and stringing them on a forked willow or birch stick, putting the largest on first, which prevents the crushing weight of the large upon the small ones. We then fasten the ends of the string (sticks) with a good strong loop and hang them up to thoroughly drain; and thus let them hang over night in the coolest place to be found on the north side of the cabin or tree. In the morning there will not be moisture enough about them to wet a paper. We then slip each string into a paper sack (with which we always provided ourselves in starting out), and tie the bag close above the fish and below the loop, thus they are protected from flies and dust; and left in a cool cellar or cave during the day and left out of doors during the night, they will keep in perfect condition for many days. In this way we always took them home in much better shape than when packed with grass in boxes, kegs or baskets.

I have fished in the New England brooks (that being my native home) and in the waters of many other States, and I have no hesitation in saying that Colorado surpasses any locality in which I ever cast a line. I have also fished in other parts of this State than that described in this sketch, but nowhere have I found as many points of interest so easily reached as from Leadville. O. F. S.

SALINA, Kansas.

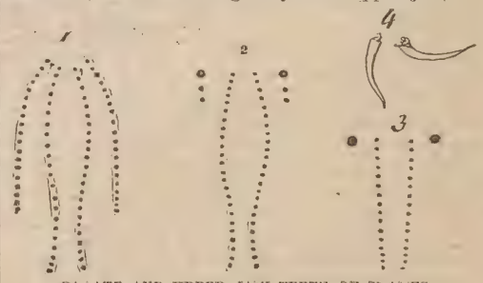
THE ST. REGIS DISTRICT.

MOIRA, Franklin County, N. Y., near the Adirondacks, June 17.—*Editor Forest and Stream:* Some ten years ago I wrote an article for the FOREST AND STREAM giving a description of that portion of the Adirondacks situated within the county of Franklin and known as the St. Regis District. Since that time, or within the last six years, as most of your readers know, great changes have taken place within the borders of this district. Especially is this the case in its northern and eastern parts. Where it was, at that time, an unbroken wilderness, are now several villages of considerable size. A number of large mills for manufacturing lumber have been erected on the streams, and a railroad is running through its whole length from north to south, which will soon be extended to Tupper's Lake, at the most southern limits of the county. Large numbers of Italian laborers are now at work grading the road bed above Brandon Station for that purpose. My object is to inform the reader what effect all this has had on the game or hunting and fishing in this district, and what prospect there is for sport at either still within its borders. In regard to the hunting, I can say that in most parts of the district, except in the immediate vicinity of the villages, it seems to remain about as good as it was before the lumbering operations commenced in the district.

Deer hunting has been as good and as many deer were killed in the district last season as in any season, I think, for the last ten years, and according to trustworthy reports the prospect is as good as ever for good hunting the coming season. A gentleman of this place who sold a large tract of the land in the district to the lumber companies went through on the line of the railroad to Tupper's Lake two weeks ago, and he saw twenty-three deer on the route and did not leave the line of the road. Bear also seem to be still plenty. They were seen quite frequently in different parts of the district this spring, and only a short time ago two were caught in traps in the township of Duane near Deer River in the eastern part of the district. Without doubt the number of deer in the Adirondacks has considerably fallen off in the past ten years, and the cause of their still being so plentiful here is that, as is well known by all experienced hunters, the deer, as well as bears and some other animals, are fond of frequenting the clearings or openings, where the heavy timber has been cleared away and the underbrush and bushes left standing, as it is in localities where lumbering operations have been carried on. These clearings, of which there are now large numbers within the district, are soon overgrown with shrubs and bushes, on which deer are fond of feeding, and, without doubt, many are drawn here on that account from other parts of the wilderness.

But the chance for sport at angling for trout, I am sorry to have to state, has, since I wrote the article mentioned above and since the lumbering operations commenced here six years ago, greatly diminished in many of the waters of this district, in those portions of it where the lumbering operations are being carried on, in the vicinity of the villages and mills along the streams, and near the lakes and ponds. Still, there are many waters in the western part of the district that are in territory not owned by the lumbering companies, of which I shall write further on, where the trout are as plentiful and as good sport can be had as ever. Several causes have led to the decrease of the trout and nearly ruined the sport at angling in the waters situated or running through the parts where the lumbering operations are carried on. First was the clearing of the streams of all obstructions for running logs, and cutting all bushes overhanging their banks, thereby destroying the shade and lurking places of the trout; second, the building of the mills near the heads of streams and allowing all the sawdust and other refuse from them to pass off in the water down the stream, killing or driving the trout below to other waters; and third, the indiscriminate fishing for trout at all times and in all seasons and by all methods, from the common hook and line to snares and gill-nets. The lumber companies have large numbers of laborers at their mills and villages, many of whom are in the habit of spending the Sundays in fishing, and they have never been in any way particular what method they practiced if they could only get the trout. Taking all these things together, is it a wonder that trout of any size have been nearly exterminated in these waters? The streams to which I refer here are the east and middle branches of the St. Regis and their tributaries, together with the ponds in their vicinity. Meacham Lake, out of which the east branch has its source, is not included in these waters; but owing to the judicious management of Mr. Fuller in yearly restocking it and preventing fishing in it out of season, the trout have increased rather than diminished in numbers in the lake.

In the western portion of the district there are still quite a number of ponds and streams in which the trout are as plentiful as ever, and where excellent sport can be had by the angler. These waters comprise the upper portion of the west branch of the St. Regis and Parishville rivers and their tributaries, and also several ponds of considerable size, among which are McDonald, Wolf, Train, Whitney, Long and Kavanaugh. It is to this portion of the district in which these waters are located to which I would now recommend the readers of FOREST AND STREAM who are in search of sport with rod and gun. This portion of the district is distant from any of the villages and from the line of the railroad, consequently it has been but comparatively little frequented as yet, and the streams are free from sawmills; and but very little lumbering in this section of the country has been done. The only hotel near where sportsmen can find accommodations is at the Blue Mountain House, at Blue Mountain, near the northeast corner of the part of the district to which I refer. The house is about six miles west from the village of Santa Clara, the nearest point on the railroad. There is a post office at the village and telegraph connections. A good wagon road leads to it from the Mountain House. The location is very healthy, and has on that account been much resorted to of late years by invalids or those troubled with pulmonary complaints. The charges here are very moderate compared to what they are in some of the other hotels in the Adirondack region. Mr. Henry Phelps, the proprietor, had erected last season at Wolf Pond a nice hunting camp for the accommodation of his sporting guests, the country around the pond being a noted hunting ground for deer. There is also excellent trout fishing in the outlet, which is joined near the pond by the outlet of Long Pond, two miles further to the east toward Buck Mountain, which form a junction near the pond, making together quite a large stream and forming the source of the Parishville River. He also has a camp built at Kavanaugh Pond, three miles west of the house on the opposite side of Blue Mountain. Boats are kept at these ponds and guides furnished to parties visiting them or other hunting and fishing localities in that region. Mr. Phelps is owner of a large tract of land around Blue Mountain and in this part of the district, so parties camping there need have no fear of being driven off or molested. I mention this, as I understand that the several lumber companies, with the railroad company, are about to form all the territory owned or controlled by them into a private park, and that it will all soon be posted and that no one will be allowed to camp on it without a permit from them. I have not recommended the Blue Mountain House on account of any interest I may have in it or its proprietor, but because it is the only establishment of the kind in that part of the district where sportsmen can find good accommodations. When I go to the woods I go independently; I have a full camping outfit of my own, and for the last five years, whenever I have been there, I have camped on the borders of some of the waters of the district, and generally through the entire season.



The portion of the district that I have attempted to describe is, I believe, the best hunting and fishing ground that there now is within its borders or in the northwestern portion of the Adirondacks. A. C.

Natural History.

SNAKES' WEAPONS.

THE mention of *crotalus* fangs by Mr. John C. Cahoon in FOREST AND STREAM of March 8, reminds me that an apology has been due from me ever since my hurried reply to "Coahoma" in FOREST AND STREAM of July 21, 1887. "Coahoma" was in doubt about a "black snake" which he had found on the banks of the Mississippi, and whether it was a venom one or not, and he did me the honor of consulting my opinion as to what it might be. That issue of FOREST AND STREAM reached me just as I was on the point of dispatching the obituary notice of a thirteen-year-old python (*Python sebæ*), and I hastily added in a P. S. a few words to "Coahoma." The subject then passed from my thoughts until it came back in print, when to my dismay I saw that I had made a very misleading statement in writing "If the snake had no teeth on the palate it was a venomous one!" Whereas I should have said upper jaw instead of palate. For in point of fact all snakes, whether venomous or not, have palate teeth, finely pointed and slanting backward in two rows toward the throat. The palate teeth are important aids to the snake in feeding, and without them the prey could not be firmly retained. I regret so careless an error on my part, and regret also my delay in acknowledging it. The readers of FOREST AND STREAM, who must have observed the mistake, have been too polite to call attention to it, and "Coahoma" again invites my opinion regarding the "immature" fangs which he has observed in a moccasin snake. But first let me entirely efface the effect of my late discrepancy and offer a little diagram of the three forms of dentition which prevail in the palate and upper jaws of snakes:

Fig. 1 represents the colubrine, or entirely harmless snakes, which have four rows of upper teeth, two on the palate and one in each jaw. Fig. 2 represents the venomous colubrines, such as the coral elaps of America and the cobra of India, with one or two simple teeth in addition to fixed fangs. Fig. 3 represents the vipers and the *Crotalidæ*, which have fangs only in the upper jaw, and

PALATE AND UPPER JAW TEETH OF SNAKES.

The larger dots represent the fangs.

[*From Fayrer's "Thanatophidia."*]

sufficiently terrible to do the work required of them. The palate teeth of these serpents are fewer, as will be seen. So that what I ought, and intended, to have said was that the absence of a row of simple teeth in the upper jaw of a snake would be a pretty sure proof of its being venomous.

Potent as are the viperine and crotalus fangs toxically, they are feeble mechanically, and easily come out, as from the force of the stroke. The other day, at the London Zoölogical Gardens, a very young viper (a puff adder from Africa) struck at one of the others of the same brood, and a fang was left sticking in the side of the head. It was with no fratricidal intention that the little viper attacked its brother (or sister), but in sheer stupidity, during feeding time. The young puff adder, hearing the keeper open the trap door whence came the food supplies, struck at the nearest living creature, which happened to be one of its own relations. Even in young vipers—and as "pit vipers" the rattlesnakes are included—the reserve fangs in various stages are found. Those ophiologists who have devoted careful attention to the development of the poison tooth are of opinion that the shedding and replacement of the functional fang is a regular process, and not that a secondary one is awaiting an accident, so to speak, to become functional. But when, by accident, the functional fang is lost, a longer period may elapse before it is replaced than if it were expelled by a mature secondary. Dr. Weir Mitchell has shown this. "A crop of young teeth, or of fangs, work their way into the intervals of the old ones and gradually expel these latter," writes another distinguished ophiologist. Occasionally the most advanced reserve fang is sufficiently forward even to inflict a wound, which accounts for the fact that sometimes the marks of two punctures are seen close together on one or both sides where the person has been bitten, proving that a secondary as well as the functional fang had inflicted a bite in that spot.

In the above diagram the two fangs (Fig. 4) above the viperine jaw are *Crotalus* fangs; one, folded back against the gum, is in its natural position when at rest; the other is as when brought down ready for use. It is interesting to observe the difference of form between a *Crotalus* and a viper fang. The close observer will detect a sort of double curve, or a slight recurve of the extreme point in a *Crotalus* fang, while the viper's is strictly crescent-shaped, a true segment of a circle. This double curve will be seen in most of the familiar American snakes, the moccasin, the black water viper and the copperhead, which, though not possessing a rattle, belong to the *Crotalidæ*. They have that curious pit—the *doubles narine* of the French ophiologist Duméril—in their cheek, and other rattlesnake characteristics. After once noting this peculiarity of the *Crotalus* fang, it is not difficult in a collection of mixed fangs, to separate them from the rest. Those in the diagram are perhaps a trifle too stout for their length. To represent the extreme fineness and exquisite finish of a serpent's poison tooth by pen and ink is impossible. The finest needle under a magnifier is coarse in comparison with it.

There is another feature in those members of the rattlesnake family which have no rattles, but which from the pit or fosse in the cheeks are called "pit vipers." And this is a spine at the end of the tail which brings me

easily to "Coahoma's" other inquiry regarding "the bristle-like sting" which he observed in another "black snake." The spine terminating the tail has given rise to the negro stories about the "stinging tail," which have prevailed ever since a snake so appendaged was first observed by a white inhabitant of America. We scarcely expected in these days of ophiological enlightenment to see those old myths cropping up again, because they have been repeatedly ventilated and refuted till they have become newspaper sensations and nothing more. Every known snake has been so thoroughly examined and dissected and described by the numerous herpetologists of America that any poison apparatus in the tail would have been discovered and made known long ago. With all deference therefore to "Coahoma's" friends of "undoubted veracity," one may be permitted to suggest that scientific eyes and trained observations are essential to a true comprehension of apparent facts in natural history. The argument "seeing is believing" will not hold good in all cases. To see is one thing, to comprehend what is seen is another thing. It is quite possible that an accidental wound may be inflicted by one of the snakes whose tail terminates in the sharp spine from the snake angrily flourishing its tail about. But an intentional wound must not be credited. The tail of a snake, like the tail of most animals, is expressive of its emotions. You will see the tail of snakes, and indeed of most reptiles, thrown about sometimes angrily, sometimes exploringly and sometimes to find a grasp for safety, especially when the head or the rest of the body is under constraint of any kind. Even those snakes that are not true constrictors use their tail as a means of support, a fulcrum, a balance, a mainstay. This is seen very much in those small and feeble little "blind worms" (*Anguis fragilis*) of Europe, several in Australia, and the *Typhlops lumbricalis* of the West Indies, which have the credit of two heads as well as a fearful tail. They are burrowing snakes, their tail terminating in a hardened point, sometimes a mere knob, but equally "dangerous" in negro estimation. Just one hundred and eighty-one years has the "thorn-tail" snake, which is the water viper (*Trigonocephalus piscivorus*), enjoyed the reputation of stinging persons and killing trees with its spiny tail! In 1707 Lawson, in his "History of Carolina," thus wrote of it: "Of the Horn Snake I never saw but two that I remember. They hiss exactly like a goose when anything approaches them. They strike at their Enemy with their Tail, and kill whatsoever they wound with it, which is armed at the End with a Horny Substance like a Cock's Spur. This is their Weapon. I have heard it credibly reported by those who said they were Eye-Witnesses that a small Locust Tree, about the Thickness of a Man's Arm, being struck by one of these snakes at Ten o'clock in the morning, then verdant and flourishing, at Four in the Afternoon was dead, and the Leaves dead and withered." This author, who set out on his travels in the new world in 1700, believed not only what he saw but what he heard; but he had no scientific knowledge to guide his observations. Let us hope that his marvelous tales will henceforth wither like his locust tree; though, to use the words of the venerated Owen, "it is far harder to kill an untruth than to establish a truth."

CATHERINE C. HOPLEY.

A FEW FACTS ABOUT LOONS.

THE loon, or great northern diver, is the first bird to migrate in the spring to the feeding grounds in the Rangeley Lakes, often alighting in a small open space of water near an inlet or outlet, and waiting there for the thawing away of the ice to give them more room. Once in a small space of open water, there they must stay until the ice thaws sufficient to give them a chance to rise, which requires at least one-eighth of a mile; first starting to fly they run on the water dipping with their wings a long way, less and less, and more and more taking the air, until they merely tip the end of their wings in water, making a mere line or mark as they go, until entirely free and fairly on the wing, yet still going horizontally and very near the surface for quite a distance, gradually rising from the earth until they reach an altitude out of range of firearms.

It is common for them to get up and move from one lake to another just before a storm, seldom at any other time, and at such times they make a peculiar noise or cry which one acquainted with them can easily distinguish as their flying note. They fly with much force and labor constantly with their wings, and when alighting splash down heavily into the water. They cannot arise from the land nor from any hard surface, only from a large space of water.

They can be easily shot when confined in one of these open spaces of water, but to shoot one in the open lake is considered a big thing to do. We well remember how we used to bang away at them in our Sandy River, then in Kennebec county, in our boy days, with an old flint-lock; and the loons seemed to consider it a pleasant excitement to dodge our charge at the flash of our priming, and we remember how our first percussion locks used to deceive them and knock them over. We could sometimes get one by covering the lock of our old flinters with our hats, so as to hide the flash.

All frequenters of our lakes understand the vocal music of the loon—sometimes rattling off their melody like the small arms of infantry in a battle, and at other times uttering extremely mournful notes, making the heart of the listener feel lonely and sad.

These sounds, or noises, are generally taken up by loons in different parts of the lake—all making the same kind of noise—making the loneliness of a night in the forest doubly lonely. One noise of the loon is very much like the cry of the bear, and is the frequent scare of novices and new comers in the lake country.

The breeding of the loon is very interesting, as they cannot walk on the land. Not having knee joints—only one joint in their legs, which may be called the grip joint—in order to approach the shore they help themselves with their wings. They sometimes lay their eggs on the bare sand, in some locality where escape by water is easy; sometimes make a sort of nest of sticks and coarse grasses on a hassock, sometimes on a point of land affording a view in different directions. They lay only two eggs, one male and the other female. These are about the size of a goose egg, blotched with black on a brown surface. As soon as hatched the little ones take to the water, and are capable of diving like the parent bird, but on the approach of danger they jump on their mother's back and hang to her while she dives and swims away, remaining a long time under water.

The loons have the faculty of sighting the direction a boat is going, then diving and going under water in an opposite direction, so when they come up you are not prepared for them, and they take breath and mark your locality and thus evade pursuit. They are half-amphibious, and can travel under water faster than on the surface. I once drove one up a brook and followed in my boat thinking I was sure of him, but near the headwater he turned, dove and passed under my boat so swiftly that I could only see a white streak of bubbles. I once caught one in a trap set near her nest, and concluded to drown her to ascertain the fact of her duration of life under water. I held her under thirty minutes by my watch before she stopped kicking.

I once saw what appeared like two men rowing a boat toward me as I stood on a sand beach at the end of a lake in the wilderness early one morning, and being alone and fifty miles, as I thought, from any human being, I watched the supposed boat with intense interest. They seemed to be rapidly approaching, but my eyes were diverted an instant from them by something else, and when I looked again the boat was not to be seen, but in place of it were two loons swimming along commonplace enough.

I accounted for the strange appearance as a mirage, the same way that ships were seen approaching Rhode Island in the time of the Revolution, but for a long time I could not relieve my mind from a strange presentment of some unknown danger.

The loons subsist entirely on fish, and are not very particular in their choice of kinds.

BETHEL, Maine.

FLORIDA CROCODILES AND BIRDS.

CHICAGO, Ill., June 27.—Dr. J. W. Velie, secretary of the Academy of Sciences of this city, to-day showed me some of the specimens collected by himself in his last winter's Florida trip. Of these he values most highly his crocodiles, of which he got twenty good specimens, bringing back fifteen skins, four skeletons and one live specimen. One mounted specimen, a very large crocodile, measures 14ft., and the work upon it is very good. Of course, every one will know that the crocodile is quite different from the alligator, and this difference was very readily marked by the slightest comparison of the specimens Dr. Velie has side by side. The crocodile is lighter and greener in color, has an altogether differently shaped head and snout, and a far more vicious display of teeth, and is altogether uglier, if possible, than the alligator. It is also more vicious, and drives the alligator out of its territory. The specimens were secured either with the Florida "grains" or with a harpoon invented by Dr. Velie, which has a pivoted barb. The big fellows made a long and hard fight.

Dr. Velie was on this trip at the extreme southern point of Florida, although he did not go off to the Keys. He says that the plumage birds which were formerly so plentiful in all that country are now practically exterminated, and he had the greatest difficulty in getting even a few miserable specimens. The reddish egret is now almost impossible to obtain there, and where he once knew thousands of pelicans he now saw not one. Mr. Batty and his sixty hired gunners for the feather market, and the others of the same ilk, have done their work well.

E. HOUGH.

FROGS' FOOD.—Westerly, R. I., July 1.—While out for a day's fishing for bass June 30 the weather became so unbearably hot and the fishing so poor that I turned my attention to some frogs whose sonorous calls suggested the prospects of an inviting breakfast at their expense. Several large ones were secured, and while dressing them I noticed the stomach of one considerably distended; upon opening it I uncoiled a striped snake measuring 17in. in length. The snake was divided in the middle and showed no signs of digestive action.—EDWIN R. LEWIS, M.D.....H. P. U. writes from Lake Charles, La.: "I can add another stone to the cairn of testimony as to the omnivorous appetite of the bullfrog. I shot one the other day, and picking him up, saw something worm-like hanging out of his mouth. Pulled it out, and found it to be the remains of a young moccasin snake, eight inches long. The head and neck were partially digested. Body about the size of an ordinary lead-pencil. It struck me that this was rather a reversal of the ordinary law of nature. I have often seen snakes eat frogs, but never expected to see the tables turned in this way."

Game Bag and Gun.

PATTERN AND PENETRATION TESTS.

Editor Forest and Stream:

I am more than glad to see that my old and trusty FOREST AND STREAM is to take hold of the shotgun question in its usual thorough fashion. You will prove much and little. You will knock to flinders the pet theories of many an old shotgun user, and you will not reach any fixed and definite conclusions as to load and weight of arm. Shotguns are much like human beings. What is one man's food is another man's poison. A charge which is in every way satisfactory in one gun is entirely out of place in another arm of the same caliber and perhaps of the same make. Why it is no arm maker can explain, and all that a buyer has to do is to try a gun, try another, and another, until he gets one out of which he can get good work, and then hold on to the weapon. He may use his fancy and his purse in getting this or that finish, but the shooting qualities can only be determined by trial, and it is this sort of trial which, I understand, FOREST AND STREAM has started on in this series of tests. I am glad you did not make it a tournament, with a set list of entries, a set time for starting and finishing, and a boiled down report with a bare backbone of facts. You give all the details and now it is in order for the friends of this or that gun to take up the facts as given and prove their preconceived notions, while such of us as have no favorite among the guns on the market will look over your series of reports, see the performances and the records as given, and pick out a proper weapon. In this way you are doing a great service for every gun holder and prospective gun holder. I am glad you are doing all your work in the open. I would not give a snap for those pretty targets sent out with new guns when the trials have been carried out in a garret range or in a long shed where queer conditions prevail.

I am glad that you have not allowed your judgment of a gun to be founded on a single shot and that the charges used are not given merely as stated by the gun man, but that the labor of analysis has been undertaken to complete the record. Permit me to suggest that you make at some time a more distinct trial of charges by taking a good standard gun and then going through the various charges of powder—black, wood and Schultze—and of the various brands, also with various weights and sizes of shot. No doubt to some of the gunmakers your tests will have a flavor of antiquity. They have been tried in private for the benefit of the makers, and they have too frequently good reason for keeping them private; but yours is the first public trial taken on a scheme broad enough to make your results standard for all time.

NICK.

NEW YORK, July 6.

Editor Forest and Stream:

The FOREST AND STREAM is a welcome visitor and grows better every week. The pattern and penetration tests will be appreciated by all lovers of the gun, and will be of great value in selecting a gun, as regards weight, bore, length of barrel, etc. However, I think that all the patterns should be made with the same make of shot, and, if possible, wads and powder of same kind. Unless this is done it will be hard to decide which is the best in penetration, as while the charges of shot can be easily counted, yet different makes of soft shot vary quite a little as to hardness, and would, therefore, vary in penetration. S.

WATERTOWN, N. Y.

HOLDING ON AND AHEAD.

Editor Forest and Stream:

"Ancient," in his interesting article on "Cross Shots," has, I believe, made a mistake regarding the velocity of shot. A duck flying 60 miles an honr is at the rate of 88ft. per second, and a cross shot fired at 40yds. distant, to hit that duck by aiming only 2yds.—6ft.—ahead, would need a velocity of 1,620ft. per second, 100ft. greater velocity per second than the .45-70 U. S. Gov. rifle cartridge has on a dry day.

With 4drs. ducking powder and 1¼oz. No. 6 shot, fired from a No. 10 chokebore gun the shot—so a chronograph says—will hardly attain a velocity of 900ft. a second, which would take it $\frac{4}{5}$ of a second to go 40yds., which would require the aim to kill that duck to be nearly 12ft. ahead.

Of course most of your readers who are wing shots know that a moist barrel gives a greater velocity to the projectile than a dry one, consequently the shot have a greater velocity in a damp atmosphere than in a dry one.

STANSTEAD.

["Ancient" does not assert that shot from an ordinary weapon has an initial velocity of 1,620ft. per second. He only assumed a rate of speed for illustration of the condition of cross shooting and in opposition to those who contend for centrifugal as well as projectile force as a factor in determining the line of the charge. "Stanstead" is approximately correct as to the rate of initial velocity.]

BEAR AND DEER IN NORTH CAROLINA.

BELVIDERE, N. C., July 4.—The boys have "opened the ball" by putting the brakes on one big old he bear. For several weeks the bears have been preying upon the farmers' pigs, and have been having it all their own way, owing to the fact that the boys were very busily engaged with farm work, and the swamps were very wet; but about a week since bruin became a little too high-toned, and thought he'd change his diet of pork for one of juicy beefsteak, so he killed a fine yearling, which, in the struggle, raised such a hullabaloo that the boys concluded to investigate. They hastily got together a crowd of dogs and went for the old "ragfoot." He was too independent to run very much, and they soon came upon him. But now came the trouble. The reeds and bushes were fully 10ft. high and as thick as wheat in a field, while the rain, which was falling at the time, made everything dripping wet, and as most of the crowd were armed with percussion guns (muzzleloaders), they found, upon attempting to shoot the bear, that their guns were as useless as so many sticks. Four of them attempted to shoot at once, but only one fired. This only wounded the old chap, and he moved off again with dogs and boys in pursuit. One daring fellow, John W., rushed up to the bear after following him nearly a mile and shoved his gun against the head of the ugly brute, pulled both triggers, and both barrels snapped. John was alone at the time, with the exception of the dogs, but he succeeded in turning the course of the game and drove him back, when he passed near a young man who carried a breechloader, which, when leveled, put a couple of loads of "buck and ball" through Mr. Bruin's corporosity, and forever quieted his longing for beef and pork. He weighed about 800lbs.

The asininity of our legislative Solons in removing the protecting law from our deer was fully demonstrated a few weeks since, when some dogs chased a fine doe into the river within gunshot of the town of Hertford, and a party of men went out with boats and deliberately knocked her on the head—"*à la* the Adirondack sportsman." A few days later a large buck went the same way and fared likewise. The doe was heavy with fawn. Had the law been on I could have given the "hunters" (God save the mark) a gentle reminder of the fact, by way of a heavy fine. But since there is no protection for deer east of the W. & W. Railroad they, like the "heathen Chinee," must go. The same Legislature tried hard to repeal the quail law, but I am happy to say there were enough sportsmen interested in the subject to stop the movement.

I am afraid that the present wet season will have a bad effect on the bird shooting next fall, as they are now nesting, but lots of old birds went over from last fall, and if no young ones are raised we will still have some shooting.

A. F. R.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

O'DONNELL'S NOTE.

BEING passionately fond of squirrel hunting, I made arrangements to camp out up in the wilds of Licking Creek for a two-weeks' hunt. The party consisted of Sheriff Shivery, Wm. Brown, Gus Wright, Henry Diem and myself. We had a large tent, 11x14ft., and plenty of provisions and ammunition, and for two weeks gave ourselves up to solid enjoyment, during which time we shot all the squirrels and ruffed grouse we could use in camp; and each one brought a mess home. My son Charles requested us to leave our tent, cooking untensils, etc., when we came home, as he and a few of his friends wanted to spend a week hunting after our return. We left everything in camp for them on our return, but when their party was ready to start all had backed out excepting Charley and Levi Goshen, who determined to go alone. After hunting three days, Goshen, who was tax collector, suddenly remembered that he had appointed Thursday to collect his tax, so he took his gun and hunted home, leaving Charley alone in camp. When Goshen told me on his return that Charley was in camp alone, I hired Ed. Gushart to go up and stay with him until I sent a team for the tent.

There was a teamster who hauled ties from up Licking Creek to the railroad, and Gushart made arrangements to go along with him as far as he went. About nine miles up Licking Creek lived John O'Donnell, who had a note due in the bank at Mifflin, and the cashier sent word by the teamster to O'Donnell that unless his note was paid that day it would go to protest. The teamster and Gushart started about 2 o'clock in the morning, and consequently arrived at O'Donnell's before daylight. When the teamster called O'Donnell, he was informed that he had started a short time before to go up the creek about two miles to salt some cattle—there were several hundred young cattle turned out to pasture, and it was O'Donnell's business to attend to them. When the teamster had driven about a mile he stopped his team and hallooed, something like this, "Ho! John, ho! John;" and about this time a large owl down along the creek answered, *Whoo! whoo!* The teamster being somewhat deaf, supposed it was O'Donnell, and at the top of his voice shouted, "Your note will go to protest if it is not paid to-day." Directly the owl answered as before, *Whoo! whoo! whoo!* In a still louder tone the teamster again shouted, "Your note is due and will go to protest unless you pay it to-day." Thereupon Gushart, nearly choking with laughter, told him he was talking to an owl, which so angered him that he replied, "Curse the owl, let O'Donnell attend to his own business," and drove on. And from that day to this, whenever I hear a large owl hoot, I think of the owl's note going to protest.

SANCHO PANZA.

MIFFLINTOWN, Pa.

A TUBE BULLET.—Mr. A. Weed, of Tarrytown, N. Y. has been flying in the face of tradition in the matter of rifle bullets, and has prepared a bolt bullet in which he leaves an opening down its entire length. He has made them of several calibers, .38, .40 and .45, and in each case the work has been of the best sort. The front of the bullet is cut square off, and the forward end slightly countersunk; an opening of about one-third the diameter is then carried down the center of the bolt, leaving a heavy tube of about the same weight as the ordinary bullet. When fired it is found to fly with a very low trajectory, and when hitting any hard substances, as a plank, the hole cut is clean and neat in outline, but when fired into a log, and the log is split for examination, the superior destructive powers of the new bullet are at once shown. It mushrooms, but even more than or as much as the hollow point bullet, and on game of a large sort it is claimed that the stopping power of the new bullet is unexcelled. Mr. Weed expresses a willingness to supply a few of these bullets, without cost, to the readers of the FOREST AND STREAM who may care to test them on game.

THE WOODCOCK'S WHISTLE.—Cookstown, Ont.—I was not aware, until seeing a printed note the other day, that it is a mooted question as to how the sharp whistle is made by the woodcock when he rises. I thought that it was understood by all woodcock shooters that this noise is made by the wings of the bird. If any one who doubts this will examine the russet woodcock he kills he will find three strong, narrow feathers on the outside of each wing. It is the rapid motion of these feathers through the air that produces the whistling noise when the woodcock rises. In proof of this let any sportsman interested in this question go out during the month of August, when these birds are moulting. Among some of the birds that he will flush a few will rise making no whistling noise at all; let him shoot these birds, and he will find on examining their wings that they have lost the three narrow feathers on the outside of each wing, which feathers have as yet not grown again.—H. B. N.

DEER IN THE ADIRONDACKS.—New York, July 3.—The Adirondack Preserve Association's headquarters are in Essex county. We are pleased to be able to inform you that from advices we get from our members who are now at the club house there are very good prospects for the coming deer season. It is an undoubted fact that this game has of late very much increased, and a letter from one of our members, received to-day, states that within the last two weeks seventeen have been seen in the day time, and in one case our member paddled up to within 20ft. of a fine buck on Mink Lake one afternoon. I mention this as evidence of our efforts in the carrying out of the provisions of the game laws of the State, and we feel very hopeful that with the continued assistance of the residents the old cry of "No deer in the Adirondacks," will not be heard. Our lakes show no diminution of trout, the largest taken this season was of 3¾lbs. in weight.—J. G. CASE, Secretary.

YELLOWSTONE NATIONAL PARK, July 1.—There are at this date a few over 150 tourists in the Park. Since June 1 the Transportation Company have carried nearly seven hundred people. Camping parties are coming in slowly. Traveling with teams, they spend much more time in the Park than the average tourist. Mr. Ed. Wilson, the Government scout, on a recent trip saw two bands of buffalo that together made seventy-five. With one of these bands he counted twelve young calves. No particular effort was made to count a larger number, as the buffalo were partly in the timber. Mr. Wilson was careful not to disturb them. They are on their summer range and where they are protected from hunters.—H.

THE LONG ISLAND SHORE BIRD SEASON opened yesterday.

Sea and River Fishing.

NEW YORK FISH LAWS.

THE last Legislature enacted laws, of which abstracts are given:

CHAP. 497.—Sec. 1. Section 640 of the Penal Code is hereby amended by inserting immediately after the eleventh subdivision thereof a new subdivision as follows: 12. Takes or attempts to take, without the consent of the owner of any lake or pond, any fish from the waters thereof, provided such lake or pond is so situated that fish cannot pass therein from the waters of any other lake, pond or stream, either public or owned by other persons; or, without the consent of the owner of any such lake or pond, places therein any piscivorous fish or any poison or other substance injurious to the health of fish, or lets the waters out of any such lake or pond, with intent to take fish therefrom or to harm fish therein.

CHAP. 512.—Sec. 1. It shall be unlawful for any person to kill, or catch any fish, except minnows, in that part of Lake Ontario commonly called Fair Haven Bay, or that part of Lake Ontario commonly called the pond, immediately east of Fair Haven Bay, which is hereby declared public waters, or in that part of Lake Ontario lying between the parallels of longitude formed by the east and west boundary lines of Cayuga county, and within two miles of the shore, or in Sodus Creek, within two miles of its mouth, in any way or manner, or by any device whatever except that of hook and line, and it shall be unlawful for any person to have in his or their possession, any fish excepting minnows, which have been taken from any of such waters, contrary to the provisions of this act.

CHAP. 550.—Sec. 1. No person shall at any time kill in Glen Lake, formerly known as Long Pond in the town of Queensbury, Warren county, or take from the waters thereof, or from the waters of the inlets or creeks emptying into the same, any fish of any kind, by any device or means whatever, otherwise than by hook and line or rod held in the hand.

Sec. 2. No person shall have in his or her possession at any time in or upon the ice or waters of Glen Lake, Warren county, any trap or net, stake poles, spear, instrument or device of any kind whatever, which may be used for killing or taking fish, except a hook and line.

Sec. 3. No person shall catch or kill any black bass, or Oswego bass, in the waters of Glen Lake, Warren county, between Jan. 1 and July 10 of any year. No person shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or Oswego bass from the waters of Glen Lake, weighing less than ½lb., or less than 8in. in length from end of snout to end of caudal fin, at any time, nor catch, kill, or expose for sale after the same has been killed, any black bass, or Oswego bass weighing less than ½lb. or less than 8in. from end of snout to end of caudal fin, at any time. No person shall expose for sale or have in his or her possession, after the same has been killed, any black bass or Oswego bass, save only from July 10 to Jan. 1, nor shall any person catch or kill or attempt to catch or kill any bullheads in the waters of Glen Lake, Warren county, or in the waters of any of the creeks or inlets emptying into the same between April 1 and July 1 in any year. Nor shall any person catch or kill any pickerel in the waters of Glen Lake, Warren county, between Feb. 15 and July 1 in any year.

CHAP. 556.—Sec. 1. No person shall at any time set or use any net, seine or other device of any description for the purpose of catching or killing fish of any kind in the waters of Owasco Lake, Cayuga Lake or in their outlets, or in Seneca River, Clyde River or Ganargua Creek; nor shall any person catch or kill any fish in any of the waters above mentioned by means of any net, seine or device of any description, or in any manner other than that of angling with a hook and line. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and, in addition thereto, shall be liable to a penalty of $100 for so setting or using such net, seine or device as prohibited by this section, and $10 additional for each fish caught or killed in violation of the above provisions. This act shall not operate to prohibit any person from catching minnows for bait with a net held in the hand.

CHICAGO FISHING WATERS.

CHICAGO, Ill., July 4.—On last Saturday, while a great portion of Chicago's citizens were out fishing, Chicago added 130 square miles to her territory, and increased her population to 1,100,000. When the boys got off the trains, on their return from fishing, they stepped into the second city of the Union in population, and the first in enterprise. Chicago sportsmen may now shoot ducks or go fishing for bass within the city limits, for by the annexation of certain suburbs Calumet Lake, Wolf Lake and other notable waters fall within the line. The old canvasback grounds, and the marshes which even yet hold some of the shooting, are to-day a part of the city of Chicago. Was ever a city so kind to her sportsmen?

I mention the above fact in these columns not from any vainglorious Chicago spirit, but simply to call attention again to the often-mentioned fact of the singular situation of this city in regard to sporting facilities. The city fairly shakes hands with the forest and the stream. This is a fact which grows on one through investigation, and yet one which has never had a thorough investigation in any sporting paper. It has been my purpose this season to make a series of trips to the angling waters about Chicago, to see what extent these really reached, and report what I knew to be authentic facts in regard to them. It has been impossible to perform more than a mere fraction of this intention, but what little has been done is enough to show how futile was the original intention. Given a radius of 100 miles about the city, and it would take a man a year to mention the better places for bass angling alone, and to visit more than the fewest of them would be out of the question. I therefore give up all claim to thoroughness of research and shall confine myself to visiting and mentioning a few of the more noteworthy locations near at hand.

To investigate the weekly exodus I went up the Wisconsin Central one recent Saturday, without having any definite point in view, and caring more to see the crowd than anything else. This road is the best patronized of any in the matter of short-distance angling traffic. It runs through a district truly unique, which lies all along the road, anywhere from 35 to 65 miles out of the city. The iron string has certainly threaded a vast number of rare pearls. A great many of our passengers—nearly all of whom carried angling insignia—got off at Lake Villa. The Fox Lake Hotel men will try to persuade any one, especially a newspaper man, that there is no use fooling around Lake Villa. Yet Deep Lake, lying near by, has lately yielded some grand bass, and Cedar Lake, a biscuit-toss from the car window, is also not to be sneezed at. There are boats at both of these lakes. It is only about a mile and a half over to the Loon Lakes, but there are not any boats there, and the angler will need to cart one over either from Lake Villa or Antioch, which lies two or three miles further up the track. Several anglers got off at Antioch. Accommodations there are rather tough, I am told, although I have not stopped there.

I passed the lakes above named, and also Camp Lake, where a considerable delegation disembarked, and went on up to Silver Lake, where I found good lodging and a good number of anglers. Among the latter were the two inseparables, W. W. McFarland and C. D. Gammon. "Well, do you fellows go just everywhere?" I asked them; and then they asked me if I wanted some frogs, which I did. Frogs is frogs this spring. It appeared that Mr. McFarland had broken the record on the lake that day with a take of eighty black bass and two pickerel. The largest of the latter weighed 8¼lbs., and the smaller 4 or 5, I believe, while the bass were a truly beautiful sight. The pickerel and one of the bass were taken on the spoon, the deadly frog getting away with the rest of the bass. These two gentlemen being on the point of returning home, I fell heir to their frog pail. I had, however, been disappointed in getting the casting-reel I had ordered, and had no confidence in the old one which Mr. Hirth, of Spalding's, had loaned me as a make-shift. I therefore stuck to my old favorite fly-rod, on which, with a little Skinner, I got a lot of rock bass and "strawberry bass." The former do not fight, but the latter are very gamy. The croppies of Silver Lake are also good fighters. I hooked and lost a big pickerel, which didn't trouble me seriously, as I don't love pickerel very much. What I wanted was to hook a bass on the little rod. But although I tried faithfully on the grounds of the bar small-mouthed bass, near the ice-houses to the right of the hotel, and also along the "big-mouth" grounds in the rushes along the left-hand shore, I did not get a big bass to strike the spoon. Cafferty, my boatman, complained of an east wind, but I think it was poor fishing that knocked us out. The fishing there is singular. You catch wall-eyed pike (pike-perch) in deep water in the middle of the lake. In 12ft. of water you catch the croppies, rock and strawberry bass and pickerel. The large black bass are almost altogether taken right at the edge of the lake, in the very shallow water and among the rushes. They seem to run in there to feed. The only way to take them is by casting from a distance, for they skurry off at the first alarming ripple of an oar. It is next to impossible to reach them with the fly-rod. I think this is why I took no bass. Cafferty and I were a good deal disgusted when we pulled our boat ashore at the culvert at the upper end of the lake, and sat down to think awhile. As we sat there we saw a big swirl out in the shallow water, and a great bass broke water and sprang out for a fly. He looked as long as an umbrella. Cafferty had been using my casting rod, with the old borrowed reel, fishing for croppies, and he had on a No. 2 sproat. We did not stop to tie another, but stuck this one through the lips of a monster frog, which was the first one at hand, and then I essayed a cast with the old reel. To my astonishment the heavy old concern worked nicely and laid out the line very well. I cast again and again, each time reaching further out. The bass was lying 50yds. out, and at the sixth cast I am sure I got within 10ft. of him. He came out with a big rush, and in a moment I had him. "Oh! my, that little hook!" cried Cafferty, and then we both trembled for five minutes or so. But although the bass—and it was a big-mouth, too—went out of water and tried all the usual stratagems, the little hook held fast and we landed him, Cafferty quite as proud as I. The bass weighed, it seemed to me, at least 20lbs., but Cafferty said 4lbs., and so said the scales. I then went back to the hotel, seeing clearly why I hadn't caught any more bass. I wasn't fishing right. It takes long casting. I shall soon give the methods of our Chicago casters a yet more thorough study, and shall then set it all down in black and white. I really believe that the art of single-handed bait-casting is seen in its highest form in these Chicago bass waters, and perhaps next week I shall go minutely into the method and the outfit of the Western bait-caster, believing that both will be of interest.

I did not return to the city until Sunday, being desirous of seeing what is known of as the "Wisconsin Central gang." I saw it. There were five carloads of anglers that came down on this one train, and as I believe an average of 80 to a car to be reasonable it seems certain that at least 400 fishers must have been out. Almost every one had fish. I presume that other evening trains on this and other roads must have brought in many times that number of anglers. That is the kind of a city this is; and I have reference not in the least to beer-drinking picnickers, who I do not class with anglers. There were none of those tolerated in the cars of the real, business-like, professional angling "gang."

On the train in question, it is fair to say there are thousands of fish brought in. I did not move about much, but in our one car saw plenty to open my eyes. J. M. Clark and a friend had eleven black bass, weighing 42¼lbs. They had taken eighteen and put back the rest. Their catch was on Loon Lake, the same place where Mr. Clark's earlier recorded catch was made a week ago. A Mr. Tammler had two pike, 7½ and 10¼lbs., taken on the frog in Camp Lake. He had them wrapped up in paper and was carrying them in his arms, a good deal prouder of them than if they had been babies. Innumerable baskets lined the aisles of the cars, and all of these were heavy. To specify names or catches I found to be impossible.

There are dozens of lakes easily accessible from this city where the bass fishing is excellent, of course with the usual fluctuations in favor now of this and now of that locality. Twin Lakes, up the C. & N. W., are very well spoken of indeed, although I have not tried them yet. Brown's Lake, on the same road, is good, and I saw a fine string of good ones taken there last week. Of course, if one cares to go so far up as Winnebago Lake, he can go to Neenah, and with the forty miles of that prolific water is always assured of grand sport. There are bass, pike-perch, pickerel and countless small fishes there, and you can't help catching them. A good hotel is Robinson's, at Neenah, rates $2.50 per day.

The prettiest lake about Chicago, a perfect little gem, clean and clear, is Power's Lake, accessible by a short cross-country ride from Genoa Junction, on the C. & N. W. There is beautiful fishing there, both as to the fish and as to the scenery. Geneva Lake lies directly beyond on the same railway. That is the Cisco Lake. On up north, in the direction of the Gaylord and Nee-pee-nauk clubs, and along the wonderful Northern Fox River—up in Father Marquette's country—well, it makes one's head swim to think about that. I have not touched the bass

or mascallonge fishing yet, and I have not spoken of the trout fishing, although Wisconsin and Michigan now have hundreds of our trout anglers hid up in their woods. I have been too busy and too hurried to get past the edge of the angling field here. But if "Seneca" or Mr. Spangler should so patiently investigate this field as they have those lying adjacent to New York and Philadelphia, I know they would surprise themselves and all readers of this paper, and would follow my often-made assertion that all Eastern people ought to come out here to live.

E. HOUGH.

THE BAY OF QUINTE.

BELLEVILLE, Ont., July 4.—Although the season for bass and maskinonge fishing opened on June 15, but few of either of these varieties of game fish have as yet been caught, owing to the fact that the bay fairly swarms with shad or gaspereaux, which furnish abundant food of a dainty character for their larger brethren of the finny tribes. But three maskinonge have so far been reported as having been taken at Mosquito Bay, the weights of which were 12lbs., 16lbs. and nearly 20lbs. A month hence, however, when the shad have disappeared, there will no doubt be grand fishing.

The close season for pickerel (doré) was much better observed than usual. The Forest and Stream Club, a new organization, took the matter in hand, and after some six or seven convictions had been obtained, fishermen and poachers were fain to respect the law.

The Dominion Government have partly complied with the representations of the clubs by prohibiting fishing with nets during the months of June, July and August; but violations of this law have been reported, and although the Government overseer is anxious to do his duty, his hands are tied by the parsimony of his department, which refuses to allow a sufficient amount for expenses. The Government ought to enforce their own regulations, but they seem to think that private parties will incur the expense, trouble and odium of doing so. It is to be hoped that a change will be made in this regard, and in the further respect of ordering the release of the nets and other gear of those fishermen who wilfully set the law at defiance, as has been done in several cases.

PORT TACK.

THE PRIZE YARN.—The New York *Evening World* recently offered a prize for the best fish story, and Mr. J. L. Gunckel, of Tolodo, O., who writes the "Sunset Club" papers in FOREST AND STREAM, won the prize with this yarn: "I was in a boat off Edgewater on Ten Mile Creek, a tributary to Lake Erie, fishing for perch. Near the wild rice on the opposite side of the stream, I noticed every now and then the splash of a large fish, and thinking there might be a hungry pike feeding, I changed my tackle, hooked a 5in. perch securely behind the dorsal fin and made a cast. A heavy strike, the reel spinned and a second strike followed. The movement of the fish ceased and a trembling sensation in the line and rod was experienced, which moved to the center of the stream, and a regular shaking ensued, resembling a terrier worrying a rat. I gave a jerk; no effect; the sensation continued the more savagely; it felt very heavy. Gradually I hauled in, and when within a few feet of my boat I saw the trouble. A 9lbs. pike had a savage hold of the head of the perch, a 7lbs. dogfish a firm hold of the tail, and the hook remained in its original position between the heads of the two fish who were struggling for the perch, and this continued after I landed them and neither would let go of the bait. The two large fish were caught without the hook touching either."

MAINE TROUT.—Camp Bemis, July 6.—Mr. Parish of Montville, Conn., who made some remarkable catches at our lakes with the fly last September, has been whipping the pool below the Upper Dam pretty constantly for the past few days. On July 3 he took one trout of 7lbs. 10oz.; on the 4th one of 6¾lbs., and one of 3¾lbs.; and on the 5th, in the same place, a salmon of 3½lbs. These were taken with flies by fair casting. About June 25 Mr. John W. Hill, of Waterbury, Conn., took with flies in the same pool, in one day, twenty-eight trout, one of which weighed something over 7lbs. Many of the others weighed between 2lbs. and 3lbs., and, I think, one 3¼lbs. About the same time Mr. French, the present proprietor of the Upper Dam House, took one of 6¼lbs.; also three 5¼lbs., 5lbs. and 4lbs. Many smaller ones have been taken lately. Now can any one tell us of a place anywhere on your present stamping ground where, at this season of the year, the trout do not hide any more successfully.—F. C. BARKER.

NOTES FROM A RAILWAY TRAIN.—At Cotopaxi, Colorado, men were fishing for trout, the season having just opened. At Green River, Utah, on the day following, we had for our breakfast "mountain trout," which were *Coregonus williamsoni* and not a species of *Salmo*. Near Castle Gate, in this Territory, several men were fishing in the vicinity of the coal mines. We were told that trout are plentiful along the route of the Denver and Rio Grande. At Ogden, June 15, we saw a big creel of trout caught in mountain streams near by. Fish are reported to be very plentiful in this neighborhood, and they are believed to be well protected. The sentiment in favor of protection is strong, and dynamiters are regarded as no better than murderers.—B.

BASS IN THE SUSQUEHANNA.—Millersburg, Pa., July 1.—Bass fishing in the Susquehanna since the flood is better than for two years past. Mr. Woodside, an old experienced fisherman, caught thirty-seven from 3 o'clock till evening, and Mr. Bowman, the champion fisherman, took fifty-three in the morning before 10 o'clock. When he came to shore he had to hunt a friend to help him carry them home, they tied them to a pole and carried it on their shoulders. The largest bass this season was caught by Mr. Kline, an amateur fisherman, who was fishing last week for the first time this season; it balanced the scales at 3lbs. 12oz. All the bass I opened the past week or two had crawfish in them. The baits they are taking the best now are helgramites.—H. S. G.

BERTHOUD, Colorado, June 26.—I went up Big Thompsen trout fishing a few days ago. Fishing not very good yet; river too high. Largest we caught was 13in. long. Heard of one caught that weighed 3lbs., but did not see it.—A. A. K.

TARPUM?—The Gloucester *Times* of July 5 reported: "A rare and beautiful fish was on exhibition at Quincy Market, Tuesday, said to be the second of the kind ever seen in Boston. Its scales are composed of a large circular substance, which has the appearance of bone, and a little larger than a silver dollar, being coated with a substance that wonderfully resembles silver. The fish weighs just 84lbs., and measures 6½ft. in length, with a well-rounded body, not differing very much from that of a halibut." The above was probably a tarpum. This fish is often found in the markets of Baltimore, Washington and New York, where they are used by the dealers as attractions, and to good effect.

SPANISH MACKEREL.—Very large catches of Spanish mackerel (*Scomberomorus maculatus*) are now being made in the Chesapeake. These fish are mostly taken on the eastern shore of Maryland, in pound and gill-nets. This species is somewhat of a game fish and at times takes the spoon. It is one of the most beautiful as well as one of the most valued of our food fishes. It visits our coast during the summer, going as far north as Cape Cod. The market price for this fish a few years ago ranged from twenty-five cents to as high as one dollar per pound; it is now selling in Baltimore for four cents wholesale.

SALT-WATER FISHING.—Newport, R. I., July 5.—I wish to make a correction in my short notice or record of tautog fishing. I have followed tautog fishing in connection with striped bass fishing since I was five years old and for the past twenty-five years. I took the first striped bass of the season this year in this locality with rod and reel, June 23, weight 4 and 6½lbs., also one of 7½lbs. July 2. —WM. M. HUGHES. [Mr. Hughes tells us that he is prepared to act as guide to fishermen seeking salt-water sport; and he sends us good references.]

STRIPED BASS IN CALIFORNIA.—Mr. Yale, editor of the *Scientific and Mining Press*, San Francisco, informs us that a gentleman caught a 45lbs. striped bass, June 16, in San Francisco Bay. The exact locality is unknown, but it was either at the west point of Hospital Cove, or in the rapid water beyond Lime Point. Small fish of this species are occasionally sold in the markets, and we are told that they sometimes bring $2 per pound, while shad are abundant and command only 8 cents.

Fishculture.

SAN FRANCISCO FISH MARKETS.

IN the month of June the display of fresh fish is not up to our expectations; the number of species is comparatively small and the supply is rather limited. We are informed, however, that there is no scarcity of fish in the waters near by. Mussels, clams, oysters, crabs, shrimp and prawns are common enough. The family of flounders, as usual, is well represented by species and individuals; but halibut are not found exposed on the stalls. The tomcod continues to be ubiquitous and insipid as of old. Whiting (*Merlucius*) are among the cheap fishes. Cultus cod (*Ophiodon*) and the rock trouts (*Hexagrammus*) are met with everywhere. Rock cod (*Sebastichthys*) are very abundant and always attractive. The bullhead (*Scorpænichthys*) is cheap and inferior. Bonito have made their appearance in small quantities, the individuals being much larger as a rule than the average in New York markets; the price is low, as the demand is not great. Spanish mackerel are scarce and high-priced. A species of mackerel mottled like our common Eastern one, but with a much larger eye, is coming in small numbers and brings from 30 to 50 cents per pound. The pompano of this market would be called butterfish or harvest fish on our coast. The viviparous perches are well-represented, but not greately prized. The Sacramento perch (*Archoplites*) is one of the few fresh water fishes found in stock. The sea bass is a weakfish reaching gigantic proportions, 75lbs. being given as its occasional weight; a smaller member of the same family is the corvinetta, or kingfish. Barracuda are appearing in all the markets. Smelt are everywhere common; this is not a species of *Osmerus* like our Eastern smelt, but a larger relative of the silversides or friar. Shad from the Sacramento and other rivers are to be seen daily. Some are in the spawning condition, but many of them are spent. May and June are the usual months for spawning. The smallest shad noticed in Clay street market was about 12in. long. The species has increased wonderfully and grows larger than in its native waters. During the winter, from December to February, large shad weighing 8 or 9lbs. are often taken in salmon gill nets of 8½in. mesh. We saw one recently that weighed 6½lbs. The limits of the spawning season are not accurately determined, but the increase of growth as compared with Eastern shad is unquestionable; it is said that individuals reaching 13lbs. have been taken. Salmon are in fair supply at moderate prices. The only trout seen at this time are called Tahoe trout (*Salmo henshawi*); the largest one observed weighed about 5lbs.; the average weight is less than 1lb. Anchovies are not very inviting at present. Carp are present, but not in abundance. One of the most plentiful fishes is the white sturgeon, of which the young individuals find a ready sale after the heads, tails, viscera and scutes have been removed. Skates may be observed occasionally and sharks rarely.

Ice is not used so freely as in the East, the lower temperature of the air making it less essential. A small steamer is employed with very satisfactory results in the capture and marketing of fresh fish.

B.

CARP AS SPAWN EATERS.—*Editor Forest and Stream:* Some time ago a correspondent wrote you advising the extermination of German carp in the Passaic River, on account of its alleged destruction of the spawn of other fish. I am fully satisfied that the charge is well founded. I have been raising carp for the past six years, and have watched their habits very closely, and have seen them invariably (for the last three years) eat their own spawn as soon as deposited, and doubt not the spawn of all other fish accessible to them would share the same fate. I have three carp ponds, averaging in size from ½ acre to 2 acres, and not one single carp has been hatched in them for several years, on account of the total destruction of the eggs by the parent fish. It is true my ponds are overstocked and the fish are always hungry, but I believe destruction of spawn will be the result in any waters in which they become numerous. Still I am a friend of the carp, and for rapidity of growth and ease with which it can be cultivated, in all waters not too cold, I don't think its equal can be found. Perhaps its spawn-eating propensities are instinctive when the water becomes so overstocked that no more fish can thrive in it. I was hoping "J. G. R." would tell us how to trap otters, but so far have seen nothing on the subject.—P. (Louisa County, Va.).

KANSAS CITY FISH SUPPLY.—A hasty glance at the market in Kansas City, Mo., June 12, showed the summer supply of fishes to be derived mainly from the East and from Minnesota. Lobsters and frogs were in stock. Flatfish and haddock were the Eastern species. The other kinds were white perch (or fresh-water drum), crappies, red-eyes, sunfish, buffalo and sturgeon, besides the Minnesota contingent of pike, whitefish and lake trout.

MONTPELIER, Vt., June 29, 1889.—*Yawman and Erbe, Rochester, N. Y.:* Gents—I desire to express my entire satisfaction with the automatic reel, one of which was ordered by Mr. John E. Hubbard for me some weeks since. I have used it for two weeks in the lakes of the St. Bernard Club, where with a party of seven 2,819 brook trout were taken ranging from one-third of a pound to four pounds each, and found it far ahead of what I had anticipated. I am sure that all who saw its working were highly pleased with the result. I have in no wise been solicited for this testimonial. I give it because I appreciate the merits of the reel. Yours very truly, HARLAN W. KEMP.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville; N.Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

THE POINTER CLUB.

Editor Forest and Stream:

At the regular meeting of the Pointer Club of America, held July 1 in the rooms of the American Kennel Club, 44 Broadway, New York, the following well-known gentlemen were elected members: Dr. John A. Hartmann, Latrobe, Pa.; Col. C. H. Odell, Gen. T. N. Logan, Mr. Thomas H. Terry, New York; A. C. Waddell, Kansas City, Mo.; W. B. Meares, Jr., Hillsboro, N. C.; H. B. Owen, Richmond, Va.; Worthington Hoyt, Cleveland, Ohio.

After deliberate consideration and much discussion, the Stonehenge standard for pointers was declared to be good enough for adoption by the club, and it was so ordered. (President Wise offered to supply a $7.50 copy to any one who applies in time.) Motion made by Mr. Anthony, seconded by Mr. Heath and carried as above.

Dr. Rowe has been requested to furnish written terms under which competition shall be invited for the cup (value $100) donated to the Club by the doctor last February.

The terms will appear in print in an early issue of the sporting papers.

President Wise appointed Messrs. F. R. Hitchcock, J. L. Anthony and G. Muss Arnolt a sub-committee to prepare plans for the distribution of such prizes as may be offered by and through the Pointer Club for the coming season.

A Produce Stake was discussed, intended for puppies whelped after a fixed date, value $100 to $200 cash, also several other prizes for bench and field merit. The prospects are very flattering for a liberal prize list under the auspices of the club.

The members will be invited to vote upon the selection of six gentlemen to be recommended by the club to bench show committees as proper persons to judge pointers at shows. It is intended to have an avowed "pointer man" judge pointers, if the members so elect. Blanks will be prepared and forwarded by the secretary.

Many other matters of importance to the pointer were discussed and after a very successful meeting it was adjourned until Aug. 20 at the same place, when reports of different committees will be received.

The report of the treasurer was read and accepted, showing the club to be in a prosperous condition financially with annual dues for 1889 now payable, for wich a notice will be sent.

Membership is increasing rapidly and a cordial invitation is extended to all lovers of the pointer to become enrolled before the busy season opens.

GEO. W. LARUE, Sec. and Treas.

THE MAIDEN MYSTERY SOLVED.—New York, July 8.—*Editor Forest and Stream:* A week ago to-day I visited your rooms and, with the kind assistance of Mr. Hammond, found in your files of English sporting papers criticisms of Meersbrook Maiden that answered so well for the bitch that has been known in this country as Meersbrook Girl, that I felt partially satisfied that the two were identical. The following day I received letters from England that convinced me that such was the case. The two black and tan terrier bitches Meersbrook Maiden and Meersbrook Girl have been shown, bred and have whelped under wrong names, and as your paper has kindly published notices of these events, I wish this to be published as a correction. The names and pedigrees wherever they have appeared should be changed about. In future the bitches will appear under their proper names and pedigrees, with the prefix Rochelle instead of Meersbrook, and the puppies will be brought up with respect for their true ancestry. The bitches were evidently accidentally changed in names while in transit to this country, and their breeders, Messrs. Hill & Ashton, merely expressed an opinion to this effect, leaving it entirely for me to determine. Had they done what they could have done to satisfy me of this fact, much of the recent unpleasantness could have been avoided.—H. T. FOOTE, M.D., V.S. (Rochelle Kennels, New Rochelle, N. Y.).

PETE THE DOG.

ONE pleasant afternoon in the fall I was hunting in the woods with a friend who had hunted buffalo on the plains, and had been hunted by the Indians, but his scalp was still where nature had placed it before the hair oil period of his existence.

To hear that man tell the story of his hunting days was to me what Othello's recital of his hairbreadth escapes was to Desdemona. I wished that heaven had made me such a man. His marvelous words roused the sleeping Nimrod in my soul, and with an imagination so excited that I could easily have magnified a woodchuck to a buffalo, I had accepted his invitation to break for the woods where we could both show our contempt for civilization.

Our happy hunting ground was easily reached. In due time we found ourselves treading the tangled mazes of young timber, where, though not many rods apart, we could not see each other. Bang went my companion's gun. I ran toward him and exclaimed, "What's up?" "Nothing." "What did you shoot at?" "Nothing." "Then what in the world did you shoot for?" "To encourage the dog."

Pete was our dog's name. He was a borrowed dog. Our acquaintance with him was purely accidental, but it soon developed into intimacy, and ripened into a friendship far more sincere than many acquaintances that are begun under the conventional forms of polite society.

It was blue Monday that we had chosen for our outing—that day of all others in the week when a minister feels the least like work and the most like getting away from every thing that reminds him of it.

My pastor, a young man who can fire a shot that will tell upon any of the evils of the times, and who can also hit a partridge on the wing about every other time he tries, had said to me: "Come; let's take our guns, get aboard the cars and go where no book agent can find us."

We stopped at an insignificant station, with woods on every side of it—a place that a traveling man on the train said was rather small at the center, but then it had a tremendous circumference.

There was a rude cabin in a little clearing where we entered the woods, and before we had gotten over the zigzag fence that inclosed it a fox squirrel started up and took refuge in a huge oak tree.

"Ye'll want a dog to tree them fellers," said a friendly voice in the potato patch near by. "But we have no dog. We must do our own barking."

"Maybe Pete would go with ye, if ye can git the right side of him. He's a bit partikler about his company, but when he takes a likin', he'll stick to ye like a burr to yer pants; and he's the best squirrel dog ye ever saw."

Pete came in response to a whistle from his master. He was a white dog, with great liquid black eyes that were really poetical in their expression.

He looked as if he could appreciate something higher than mere doggerel.

"Poor fellow!" said his master, "it took him a good while to get over it."

"Get over what?" said the minister, for he had just seen the dog get over the fence with wonderful celerity, and could not understand the remark.

"Why, you see," said the man, with a quiver of emotion in his voice, "Pete belonged to my boy, and last summer John—that was my boy's name—was in a boat with another boy. The boat was long and narrow, and the other boy leaned over too far and capsized her. At least, that's the only way we can account for it, for John was careful, and knew all the ins and outs of a boat as well as you do of a shotgun.

"John was a good swimmer and tried his best to save the other boy, but he could not swim as John could and was scared out of his wits. He got his arms around John, and in the struggle both went down. Pete gave the alarm, for he was on the shore, and I got there just in time to see both boys sink out of sight, but too late to help them, and besides I can't swim at all.

"I thought Pete would die. He fairly haunted the lake shore, and it was days before he would notice any of us. But he likes squirrel hunting. He was always treeing them for John, poor boy, and if ye coax him a little, mebbe he'll go along with ye. Once git him started and ye're all right."

Both of us took to Pete at once. The pastor, after a moment, induced him to jump over the fence, and very soon he struck the trail of the squirrel we had been after a few minutes before.

Pete seemed to think we were good fellows, and hurried from one piece of woods to another, often getting far ahead of us, but always barking furiously when he started a squirrel, and always placing himself at the foot of the tree in which the squirrel was and then waiting for us to come up and shoot him if we could. Pete was a dog who had opinions. I make his relative pronoun "who" because I am more than half inclined to think he has a soul. He certainly seemed to have a more clearly defined sense of duty than some bipeds who expect a dog to come and serve them whenever they choose to whistle.

Pete's eyes were far more effective than ours, and he could see a squirrel when we could not. At first we were disposed to think the dog was mistaken and that, misled by the scent on the ground, he had tracked the squirrel to a tree that he had left some time before, but we always found it next to impossible to get him away from a tree in which we could see nothing, when his view of the case did not coincide with ours. Even when almost compelled to come with us he would turn back, run toward the tree we were leaving, and bark as if to say, "There's your squirrel, now shoot him."

At last we tried an experiment. Unable to discover the squirrel that Pete said he knew was there, one of us fired into the tree and then called Pete to come away. He came, but quite reluctantly. I half believe Pete said to himself, "Well, perhaps you've done the best you can, and if you really can't fetch him, why try another tree."

Pete certainly had a delicate sense of the eternal fitness of things. Once when we had treed a squirrel, the pastor fired and wounded him. He sprang from the tree and by a series of vigorous bounds traveled over the tops of several tall oaks, landing on one at a considerable distance from his starting point.

It was now my turn. I fired and for a moment the victim hung by one claw, every nerve in his body quivering, and then fell to the ground. I never saw a nobler fox squirrel in all my life. Pete caught him as he fell, gave him one vigorous shake, and still holding the fellow between his jaws walked deliberately away from the spot, a distance of several rods and carefully laid down his prize at the foot of the very tree where he had discovered him. What in the world did that dog mean? Any other dog would have dropped his game anywhere on the dry leaves, but Pete seemed to think the squirrel should have fallen from the tree he found him in, but as he did not, the best thing to do under the circumstances was to make believe. So Pete placed him where he ought to have fallen and seemed immensely pleased when we patted him and called him an intelligent dog.

About noon we found ourselves at the little cabin where Pete's master lives. We spread our lunch upon a side table and were favored with a cup of tea that had steeped upon the kitchen stove. A tramp through the woods is a wonderful appetizer. And yet after two hungry men were fully satisfied, there was a generous pile of fragments left.

"These will make a glorious dinner for Pete," said the parson as we stood by the pump at the back door, ready for another start. "He don't get such a meal as that every day; but where is he?" "Hark," said I, "there he is," and sure enough, half a mile away Pete was barking enthusiastically, and we knew that he was calling for us to come. We took a generous meal to him, for no doubt he was hungry. The parson offered him the leg of a turkey. He actually turned away from it in huge disdain. Was it because he did not consider the second table good enough? Did he scorn to eat our leavings? No; Pete had no false pride, but he kept his bright eyes fixed wistfully upon the tree. Nothing would induce him to eat. "What shall we do?" said the parson, "he won't be satisfied till we do something."

Carefully following the direction of Pet's eyes I thought I could distinguish a small grayish hump on one of the high branches. I fired at it. Down came a gray squirrel. Pete was delighted. We again offered him the turkey leg, and this time he crunched it, meat, bone, marrow and all between his ravenous jaws. His white teeth were not like the mills of the gods, for now they ground with fearful rapidity.

Very pleasantly the hours sped. The slant light of the setting sun on the leaves and underbrush admonished us that we must leave this enchanted ground and go back to the haunts of busy men—one of us to study up original sin and convert original sinners, the other to show the honorable court that his client is in the right and that the man on the other side has neither law in his head nor a regard for justice in his heart.

Pete followed us to the little station. We stood upon the platform till a curve in the road hid him from our eyes. As long as we could see him he was on the track gazing after the train, as if some one that he loved was leaving him.

I pity a man who cannot return the love of a dog. I am sure my pastor would enjoy a pastoral call on Pete far better than he does his regular calls on some of the Peters and other good saints in his parish.

I hate to think that when Pete dies his career will be utterly and forever ended. So much intelligence, fidelity and gentle affection seem worthy to live a little longer than the ordinary life of a white dog. EGBERT L. BANGS.

FLINT, Michigan.

LOS ANGELES DOG SHOW.

LOS ANGELES, June 29.—*Editor Forest and Stream:* The first dog show of the Southern California Kennel Club was held in this city June 24 to 29, in connection with the exhibition of the Los Angeles County Poultry Association. The show was a very good one indeed, much better than I anticipated, as before the time of closing entries I did not know, nor did any one else, where the dogs were to come from to make it, and thought if we could get 40 or possibly 50, it would be as much as we could expect, but you will see we had 90, and quite a number of them were really good ones and will compare favorably with those of the best at shows of this size. Next year, if all goes well, we will give a rattler I think, as the interest is now awakened and all are talking dog. It has been the best attended show I have ever seen, the hall being completely crowded from the time of opening till the close, so it has been a paying one. Mr. H. H. Briggs, kennel editor of the *Breeder and Sportsman*, judged all classes and gave very general satisfaction, indeed I have heard no complaint whatever regarding his decisions. The only kick I have heard is from a party who showed a mastiff which was catalogued at $100, that was claimed at that price, but the owner refused to part with him, and proceedings at law may result. Below is a complete list of the winners. H.

AWARDS.

MASTIFFS.—*Dogs:* 1st, W. Piutti's Amado; 2d, Kirkhoven Mastiff Kennels' Imperial Arno. *Bitches:* 1st, Kirkhoven Mastiff Kennels' Lella M. *Puppies:* Absent.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* No entry. *Bitches:* 1st, W. Bowring's Sheila.—SMOOTH-COATED—No entry.

NEWFOUNDLANDS.—1st, withheld; 2d, A. A. Montano's Prince Myra.

GREAT DANES.—1st, Baron Rogniat's Montebello. *Puppies:* 1st, W. Beach's Strahgoff.—HARLEQUIN—*Dogs:* 1st, Dr. W. LeMoyne Wills's Tiger. *Bitches:* 1st, Dr. W. LeMoyne Wills's Clio.

GREYHOUNDS.—*Dogs:* 1st, withheld; 2d, A. D. Machado's Nadan. *Bitches:* Absent.—PUPPIES—*Dogs:* 1st, G. W. Gordon's Leo; 2d, A. S. Henderson's Muldoon. Very high com., Mrs. A. S. Henderson's Pete.

FOXHOUNDS.—*Dogs:* 1st, C. S. Campbell-Johnston's Jack. *Bitches:* 1st, A. N. Campbell-Johnston's Dina; 2d, C. Haskell's Venus. *Puppies:* 1st, M. Hamerwass's Sport.

POINTERS.—LARGE—No entries.—SMALL—*Dogs:* 1st, K. E. Benchley's Kan Koo. *Bitches:* 1st, A. B. Truman's Patti Croxteth T.; 2d, F. Handley's Nell. *Puppies:* No entry.

ENGLISH SETTERS.—*Dogs:* 1st, J. F. Holbrook's Tom Paine; 2d, T. Bright's Royal Sport; 3d, E. Unger's Tripler. Reserve, E. E. White's Jack. Very high com., E. B. Tuft's Dike II. High com., C. E. Fowt's Signet. *Bitches:* 1st and 3d, H. T. Payne's Princess Claude and Los Angeles; 2d, A. C. Ruschhaupt's Daisy.—PUPPIES—*Dogs:* 1st, S. A. Wattson's Peerless. *Bitches:* No entry.

IRISH SETTERS.—*Dogs:* 1st, A. B. Truman's Mike T.; 2d, E. B. Tuft's Duke Alexis. *Bitches:* 1st, A. B. Truman's Lady Elcho T. *Puppies:* No entries.

GORDON SETTERS.—*Dogs:* 1st, B. A. Breakey, Jr.'s, Duke; 2d, A. E. Dixon's Colonel; 3d, M. Katz's Dude. *Bitches:* 1st and 2d, J. B. Proctor's Lady Lupton and Burton Lass; 3d, J. Machell's Nun. Very high com., M. Katz's Queen. *Puppies:* No entries.

FIELD SPANIELS.—*Dogs:* 1st, withheld; 2d, T. C. Mark's Zip. *Bitches:* 1st, withheld; 2d, B. A. Heinman's Queen. *Puppies:* 1st and 2d, withheld; 3d, J. Singer's Venice.

COCKER SPANIELS.—*Dogs:* 1st, H. P. Rennie's Giffee. *Bitches:* 1st, Mrs. H. P. Rennie's Woodstock Belle; 2d, H. S. Sheppard's Lady. *Puppies:* No entries.

RETRIEVERS.—*Dogs:* No entries. *Bitches:* Absent.—PUPPIES—*Dogs:* 1st, withheld; 2d, J. J. Schallert's Pasha.

COLLIES.—*Dogs:* No entries. *Bitches:* 1st, withheld; 2d, J. J. Hanford's Bounce. High com., C. H. Gardner's Sport. *Puppies:* No entries.

DALMATIANS.—*Dogs:* 1st, withheld; 2d, C. D. Sherman's Prince II. *Bitches:* 1st, withheld; 2d, J. C. Preston's Flora.

BULLDOGS.—No entries.

BULL-TERRIERS.—CHALLENGE—1st, C. Barnes's Little Nell.—OPEN—No entries. *Puppies:* 1st, T. Savage's Nancy; 2d, H. Chevallier's Billy.

FOX-TERRIERS.—*Dogs:* 1st, Miss Susie Glassell Patton's Don Carlos; 2d, C. S. Campbell-Johnston's Rennis; 3d, Clara Bowring's Lory. *Bitches:* 1st, J. B. Martin's Golden Patch; 2d, Dr. C. P. Murry's Fan. *Puppies:* 1st and very high com., Ballyhooly Kennels' Rags and Tatters; 2d, Dr. C. P. Murry's Toby; 3d, J. G. Holborew's Don. Reserve, E. Bowring's Aphrodite. High com., C. W. Page's Trot.

BLACK AND TAN TERRIERS.—1st, F. Donaldson's Dick; 2d, Mrs. T. Bright's Ben Harrison.

SCOTCH TERRIERS.—1st, C. S. Campbell-Johnston's Tatters.

MEXICAN TERRIERS.—1st, Mrs. A. A. Sausergh's Rob Roy.

PUGS.—*Dogs:* 1st, Miss Julia M. Taylor's Pat. *Bitches:* 1st, Mrs. W. H. Lucas's unnamed; 2d, Rev. D. F. Mackenzie's Queen.

MISCELLANEOUS.—1st, H. Marteen's Bismarck; 2d, Mrs. E. Williams's Sir William.

SPECIAL PRIZES.

Kennel mastiffs, Kirkhoven Mastiff Kennel; greyhounds, A. S. Henderson; English setters (2), A. B. Truman; Irish setters, the same; best display, the same; best kennel (2), the same; best mastiff, Lella M.; St. Bernard, Sheila; Great Dane, Montebello; Newfoundland, Prince Myra; greyhound (2), Leo; owned by a lady, Pete; foxhound, Jack; pointer, Patti Croxteth T.; dog, Kan Koo; English setter, Princess Claude; brood bitch (2), the same; English setter dog, Tom Paine; Irish setter (2), Lady Elcho T.; bitch, the same; Gordon setter, Lady Lupton; bitch (2), the same; spaniel (2), Woodstock Belle; cocker, the same; retriever, Pasha; collie (2), Bounce; Dalmatian, Flora; bull-terrier, Little Nell; fox-terrier (2), Don Carlos; rough-haired terrier, Tatters; toy terrier owned by a lady (2), Rob Roy; pug (3), Mrs. W. H. Lucas's unnamed; any breed, owned by a lady, Woodstock Belle; sporting dog puppy, Kan Koo; bitch Aphrodite.

IMPORTING DOGS.

Editor Forest and Stream:

It occurs to me that there is a great deal of confusion on the above matter, and that parties importing dogs may be frequently, although innocently, violating the law. Of course the case of Mr. Morris is the suggestion here, but I do not mean to say that I refer to it in any way whatever, as I know nothing of the facts.

As I understand the case, the consular certificate sets forth that the animal is of a superior breed, calculated to improve the stock in the U. S., is imported for breeding purposes and not for sale. In the last paragraph lies the danger to the importer; he really does import the dog for his own breeding purposes, and at the time does not intend to sell it, but suppose he changes his mind, say six months or six years after, does he violate the law by selling? In point of fact, I think a great number of dogs are imported especially for sale, and passed through on consular certificates of the above character, and it seems to me that these are clear violations of the law, and that as the consular certificate is sworn to on the other side by the agent of the importer, and the latter presumably knows all the statements contained in the certificate (in point of fact generally knows them fully), he is clearly bound by the conditions, and comes within the pale of the criminal law if he violates conditions made for him, and in which he concurs. Disregard of custom laws is so general, and is so commonly looked on as not criminal, that the distinction between simple smuggling and evasion of the law, by what verges on perjury, is commonly overlooked, and it strikes me that one or two *causes célèbres* of late occurrence might bring the parties into trouble with the Custom House authorities.

Parties living outside the port of entry commonly have their animals consigned to some one in New York, invoiced to them, etc., etc., the name of the owner and real importer never appearing, as for instance, all dogs coming to me are consigned to a friend who keeps a Custom House stable in New York, and most satisfactory have I found him. This is to avoid the bother of executing Custom House papers at some distant point, forwarding them to the port of entry, delays, charges for keep, extra Custom House fees and an everlasting amount of bother. This is certainly all right and above board, no deceit being involved and no wrong done anybody. But I apprehend that even here the importer is liable to prosecution if he sells the dog imported under consular certificate. This is a point for lawyers to answer, but it seems to me that as he is the party who actually does the business, he is responsible for any wrong that is done.

I have a case coming up myself that will involve consider able "whipping the devil round the post" to steer clear of technicalities. I have bought the Russian greyhound bitch Iskra; I do not propose to keep her but to send her to the kennels of a friend. When she whelps and the sales of puppies clear me of expenses, all further profit goes to the friend who keeps her, practically she will belong to him, but I don't propose to formally sell her. In this case the real transaction is that I really do not buy her, but simply advance the money for my friend, and as she goes into my friend's possession direct from New York, the law is complied with as far as I can see. I merely quote the case to show the complication that may arise in such matters.

I trust that my valued friend, Elliot Smith, Esq., will not deem it too much to ask him to spare time to enlighten us poor laymen on what the law is in the matter; what an importer has a right to do as to the sale of a dog imported under consular certificate; has he not an undoubted right to sell puppies imported in utero, and generally what is the right as well as honest thing to do in such cases? The case of my Russian greyhound bitch seems to me exactly one the Custom House exemption as to breeding animals is designed to cover, *i. e.*, the improvement, and as a consequence, the introduction, of a breed to this country. I know that Mr. Smith is a busy man, and has practically withdrawn his attention from doggy things to the more important ones of his business, but I have always found him willing to take much more trouble than I dared ask for, when it was a matter of rendering service to his doggy friends; and with "taffy" kept most strictly under lock and key, I can honestly say that there is none whose opinion and advice will carry greater weight. W. WADE.

HULTON, Pa., June 28.

DOG TALK.

IN advocating compulsory reports from judges at dog shows the June issue of the *American Kennel Gazette* says. * * * "But what the Association requires for official record it demands to be furnished as a duty under penalties prescribed for non-compliance, and if the American Kennel Club decides to compel official reports from judges at shows to be included in these duties and deliberately through its delegates so enacts, we venture not only to predict that the enactment will be most strictly complied with, but that the judges themselves will support it." Our advice to the delegates is to go slow in the matter and not trade off a good judge for a poor report.

The ninth annual show of the St. Bernard Club, of England, was held at Windsor the last week in June. There were 203 entries, including all the best specimens of the breed in the country. The London *Field* says: "It was gratifying to find some few young dogs not shown before which are likely to take a high position for themselves in the future. This was most particularly noticable among the bitches, which, taken all through, form better groups than the dogs, the open all-aged class of the former being probably the best of the kind we have yet seen. There was also a marked improvement in the quality of the smooth-haired or short-coated variety; and, although the grand prize did not go to one of them, the immense Watch made quite a good fight for the trophy with the great Sir Bedivere, who secured the challenge cup for the third time, although this grand dog is not yet two years old."

Fanciers' Gazette publishes an interview with Mr. Sidney W. Smith, of Leeds, Eng., the well known St. Bernard fancier, who has recently returned from a trip to this country. Mr. Smith was greatly taken with Plinlimmon, Jr., owned by Mr. E. B. Sears, of Melrose, Mass, and would have taken him to England with him, but Mr. Sears refused to part with him. In answer to the query, "What do you think of canine prospects there," Mr. Smith replied: "From beginning to end I find a wish to purchase the best blood and the praiseworthy ambition to breed and come over here and beat us on our own grounds, and which they will succeed in doing unless we are very careful. * * * It seems to me the Americans have a good eye for a dog, and if only they knew where and how to lay their hands on the best blood they would soon be a trouble to us."

Spratts Patent have made a new departure that will prove of great convenience to many dog owners in this vicinity. The firm have established extensive kennels at Northvale, N. J., where they will board and care for dogs. Mr. Michael Murphy will have charge of the dogs, and as the kennels are in a healthy locality and convenient to New York, we have no doubt that they will be well patronized.

We learn that the Clumber spaniel bitch Bromine, winner of first at Barn Elms and Warwick, will soon leave England for Ottawa, Canada.

We have received from the Memphis and Avent Kennel an excellent picture of their well-knowm setter Roderigo,

which is a copy of the painting by Mr. J. M. Tracy. The grand performances of Roderigo in the field have made him an especial favorite of ours, and we are greatly pleased to have so good a likeness of him to adorn the walls of our sanctum.

The Pointer Club, as will be seen in the report of the meeting last week, very wisely decided that the standard for the breed as given by "Stonehenge" is "good enough for adoption by the club."

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Max. By Mrs. Dr. C. F. House, Painesville, O., for brindle and white St. Bernard dog, whelped Feb. 1, 1889, by Cato, Jr. (A.K.R. 6746) out of Vida (A.K.R. 6898).

Ponto. By W. Alvord, Painesville, O., for orange St. Bernard dog, whelped Feb. 1, 1889, by Cato, Jr. (A.K.R. 6746) out of Vida (A.K.R. 6898).

Bob Gates, Jr., Ned Gates and Dan Gates. By D. A. Goodwin, Jr., Newburyport, Mass., for two black, white and tan and one orange and white English setter dogs, whelped July 5, 1889, by Bob Gates (Count Rapier—Belle of Hatchie) out of Flo Maclin (Gath's Mark—Cosy).

Lilly Gates, Myra Gates and Breeze Gates. By D. A. Goodwin, Jr., Newburyport, Mass., for black, white and tan English setter bitches, whelped July 5, 1889, by Bob Gates (Count Rapier—Belle of Hatchie) out of Flo Maclin (Gath's Mark—Cosy).

Pearl Gates and Belle Gates. By D. A. Goodwin, Jr., Newburyport, Mass., for one orange and white and one chestnut, white and tan English setter bitches, whelped July 5, 1889, by Bob Gates (Count Rapier—Belle of Hatchie) out of Flo Maclin (Gath's Mark—Cosy).

Kitty Glendynne. By Michael Flynn, Jr., Bristol, R. I., for red Irish setter bitch, whelped May 17, 1889, by champion Tim (Biz—Hazel) out of Onota Belle (champion Chief—Bizreena).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Gipsey—Racket III. Clark & Rutter's (Lawrence, Mass.) beagle bitch Gipsey (Cameron—Nell) to A. C. Krueger's Racket III. (Cameron's Racket—Maggie), May 28.

Norah—Racket II. Clark & Rutter's (Lawrence, Mass.) beagle bitch Norah (Lee—Juliet) to their Racket II. (Cameron's Racket—Krueger's Myrtle), April 13.

Blossom—Bannerman. H. S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (A.K.R. 5711) to A. C. Krueger's Bannerman (A.K.R. 1709), June 11.

Cassandra—Balkis. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch champion Cassandra (Dexter—Dead Secret) to his champion Balkis (Clyde—Primrose), June 29.

Vistula—Baldur. Wacouta Kennels' (Omaha, Neb.) mastiff bitch Vistula (Montgomery—Nell) to W. Wade's Baldur (A.K.R. 6617), June 21.

Meteor's Dell—King Don. King Don Pointer Kennels' (Attica, Ind.) pointer bitch Meteor's Dell (Leon—Lillie Faust) to their King Don (Vandevort's Don—Vandevort's Luck), June 19.

Patti M. II.—King Don. King Don Pointer Kennels' (Attica, Ind.) pointer bitch Patti M. II. (Nick of Naso—Patri M.) to their King Don (Vandevort's Don—Vandevort's Luck), June 30.

Croxteth Rival Queen—King Don. King Don Pointer Kennels' (Attica, Ind.) pointer bitch Croxteth Rival Queen (Croxteth—Countess Rival) to their King Don (Vandevort's Don—Vandevort's Luck), July 2.

Lady Vegas—Fritz. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Lady Vegas (Bang Bang—Telie Doe) to his champion Fritz (Beaufort—Spot), June 19.

East Lake Virgie—Joe II. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (champion Bradford Ruby—Puss B.) to H. Eichler's Joe II. (champion Joe—Topsy), July 6.

Beatrice—Bradford Ruby II. F. H. Reikes's (Paducah, Ky.) pug bitch Beatrice to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), June 19.

Mesina II.—Merchant Prince. H. P. Ingalls's (Melrose, Mass.) St. Bernard bitch Mesina II. (Hector—Mesina) to C. G. Wheelock's Merchant Prince (champion Merchant Prince—champion Miranda), May 13.

Alpine—Merchant Prince. Dr. G. B. Sawtelle's (Malden, Mass.) St. Bernard bitch Alpine (Bayard, Jr.—Sappho) to C. G. Wheelock's Merchant Prince (champion Merchant Prince—champion Miranda), June 16.

Empress Merchant Prince. F. G. Gratz's (Everett, Mass.) St. Bernard bitch Empress (Everest—Sequa) to C. G. Wheelock's Merchant Prince (champion Merchant Prince—champion Miranda), June 24.

Vida—Cato, Jr. J. M. Gallaher's (Painesville, O.) St. Bernard bitch Vida (A.K.R. 6898) to his Cato, Jr. (A.K.R. 6746), June 5.

Merry Duchess—Bradford Harry. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Young Royal—Juno) to his Bradford Harry (Crawshaw's Bruce—Beale's Lady), April 15.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Norah. Clark & Rutter's (Lawrence, Mass.) beagle bitch Norah (Lee—Juliet), June 14, six (four dogs), by their Racket II. (Cameron's Racket—Krueger's Myrtle).

Silver Queen. G. W. Felton's (Barre, Mass.) collie bitch Silver Queen (Scot's Guard—Midlothian), June 25, three (two dogs), by C. C. Abbe's imported Gilderoy (champion Charlemagne—Hasty).

Beauty II. G. W. Felton's (Barre, Mass.) collie bitch Beauty II. (Victor Hugo—Gypsie). June 23, five (two dogs), by C. C. Abbe's imported Gilderoy (champion Charlemagne—Hasty).

Tyzah II.'s Daisy. C. C. Abbe's (Springfield, Mass.) collie bitch Tyzah II.'s Daisy (imported Gaffa—Tyzah II.), May 31, seven (three dogs), by his imported Gilderoy (champion Charlemagne—Hasty).

Lilly. R. Lambert's greyhound bitch Lilly (Harry—Jess), May 30, nine (five dogs), by H. W. Huntington's champion Balkis (Clyde—Primrose).

Marguerite II. J. H. Dey's (Red Bank, N. J.) pointer bitch Marguerite II., June 24, seven (two dogs), by Shrewsbury Spring; one dog and one bitch since dead.

Beda. J. Grant's (West New Brighton, S. I.) St. Bernard bitch Beda (Avalanche—Ursula), July 8, eight (six dogs), by F. C. Phebus's Barry (Minch—Bella).

Flo Maclin. D. A. Goodwin, Jr.'s (Newburyport, Mass.) English setter bitch Flo Maclin (Gath's Mark—Cosy), July 5, ten (four dogs), by J. L. Breeze's Bob Gates (Count Rapier—Belle of Hatchie).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Rena. White and tan beagle bitch, whelped March 20, 1888, by Cameron's Racket out of Vickey, by Clark & Rutter, Lawrence, Mass., to A. C. Krueger, Wrightsville, Pa.

Queeney. Black, white and tan beagle bitch, age not given, by Lee out of Dinah, by Clark & Rutter, Lawrence, Mass., to A. Parry, Linden, Mass.

Dandy. Black, white and tan beagle dog, age not given, by Lee out of Venus, by Clark & Rutter, Lawrence, Mass., to A. C. Krueger, Wrightsville, Pa.

Fritz—Patti Rosa whelps. Liver and white pointer dogs, whelped Oct. 22, 1888, by C. W. Littlejohn, Leesburg, Va., one each to F. A. Nims, Monroe, Mich., and Jon Lurman, Catonsville, Md.

Prince. Apricot fawn pug dog, whelped March 25, 1889, by Joe II. out of Daisy, by Henry Eichler, Covington, Ky., to Eberhart Pug Kennels, Cincinnati, O., and resold by them to C. Neilson, same place.

PRESENTATIONS.

Fritz—Patti Rosa whelps. Liver and white pointers, whelped Oct. 22, 1888, by C. W. Littlejohn, Leesburg, Va., a bitch to S. Carroll Chancellor, same place, and a dog to Dr. J. G. Wiltshire, Baltimore, Md.

FOR MAN AND BEAST.—While commenting on the innumerable comforts and pleasures bestowed upon humanity by the inventions of the past ten years, we observed by a statement in one of our exchanges that this advanced state of affairs has not alone dealt with the human race, but had reached rational and speedy methods of cure for the sudden and dangerous diseases to which horses and cattle are subject. Palmer Bros., city livery, LaCrosse, Wis., in a press letter, write: "We have used Humphreys' Veterinary Specifics for twelve years, and find no cause for regret, and we cheerfully recommend them to all our friends."—*Adv.*

Rifle and Trap Shooting

OUR TEAM ABROAD.

FIVE TEAM VICTORIES PRECEDE THE WEEK AT WIMBLEDON.

[From our Special Correspondent.]

ON BOARD CITY OF CHICAGO.—There is a national interest following any rifle team that has the temerity to cross the Atlantic and try conclusions with the English marksmen. This is as it should be; and it seems to be an additional incentive to the present team that each and their utmost in every way to honorably win. The previous team pulled well together, but a great mistake was made in the selection of the captain for that team; he was a lawyer and not a marksman. This is from a rifleman's point of view, and whatever is sent you by the subscriber in regard to the present team, its wins or losses, its victories or defeats, is strictly from a rifleman's point of view. Certain of the marksmen that came home on the defeated team under Lawyer Howard were not satisfied that the Americans had done their best. The captain, if he had been a practical rifleman, could have known and foreseen the mistakes that were made at the long ranges, where the match was lost. The present team have avoided the extreme long ranges, and will contest with a strictly military musket at military distances, viz., 200, 500 and 600yds.

This being the first international match with the regulation musket and ammunition of each country, will it not be a comparative test of the two systems? Take the ammunition, for instance, that of the U. S. is of .45-cal., containing 70grs. of powder, a round-headed bullet having three grooves filled with Japan wax set deep in the shell, and the muzzle of the shell crimped to securely hold the bullet in position. About half of the bullet is exposed, the grooved portion with the lubricant being concealed inside the shell. This cartridge can be covered by water for a week and still be as serviceable as before the immersion. The cartridges for the Martini-Henry are supplied with a paper-patched bullet, 85grs. of powder, a lubricating disc between the powder and bullet, the shell is tin-necked, made of folded and twisted thin brass, securely fastened to a steel head. It is known as the Boxer cartridge. Like the American ammunition it is central fire. It would seem to the writer that the English ammunition, with its paper-patched bullet, could not stand the exposure to wet and rough usage that would be incident to a serious campaign. The outfit of the present team in the way of uniform and equipments could hardly be improved upon. Thanks to the untiring energy of Major Frost, each member was measured and fitted from top to toe with full dress and fatigue, and a finer and more soldierly looking team it would be hard to find.

It should be borne in mind that this is a series of contests and not, as heretofore, a single match; the team is booked for five separate matches with as many distinct military organizations. The struggle will therefore be of value comparatively for rifles and ammunition, as skill of the marksmen. One serious obstacle has been present to the American marksmen ever since the dates for the matches were settled. The first contest on July 2 coming so soon after the arrival of the team in England, will hardly give them time to recover from a ten days' voyage across the Atlantic. The chances, however, had to be taken, and, at this present writing (one day from Queenstown), with the voyage almost completed, am glad to say, with only one or two exceptions, the members have done remarkably well to keep up, and scarcely to miss being at the table each meal time. The first few days were pleasant, but some very big waves were mixed up with the small ones, making the ship roll in a rather uncomfortable manner; this had a disastrous effect on the stomachs of a number, but the continuance of pleasant weather, and the big waves having in a great measure subsided, all recovered to the degree mentioned above. It was anticipated before the start that the team would arrive in London on Friday afternoon, but from the present appearance it will be Sunday morning before the great city is reached. This will allow but one night's rest before shooting, and should the present physical appearance of the team be deceptive, should a re-action set in, and certain of the team become incapacitated for good work with the mulish Springfield, that kicks clubs at each shot, then good-by to victory. The captain and the surgeon are taking great care of the men, and nothing is spared for the comfort and well being of each and every one. Aiming and snapping drill has been maintained each day, and hundreds of imaginary bullseyes have been wasted on the waste of waters.

Some gloom prevailed for the first few days, a steerage passenger died when Sandy Hook was barely out of sight. A burial at sea is impressive and this one was scarcely over, the pine box could yet be seen bobbing up and down far away astern, when it was whispered among the passengers that another man was dead. A fireman had come up from his labors covered with perspiration, lay down a grating, a draft of air had chilled his body, and he could not be awakened. Next day the second body was slowly slid from a plank into the blue waters and floated quickly astern, showing one end occasionally as it rose and fell with the waves. We have always supposed at sea the box or coffin should be weighted enough to cause it to sink immediately to unfathomable depths, but such was not the case with these two unfortunates. After the fifth day these occurrences were apparently forgotten. The team men began to count the intervening days before our arrival, how much time would they have to prepare for the first match with the team from the Berkshire regiment, commanded by Lord Wantage, chairman of the Council of the National Rifle Association of Great Britain. This regiment carries the colors of Princess Charlotte and of its team we learn a great deal; their scores are very creditable, and the Massachusetts team must meet them on their own grounds, where the Berks are perfectly at home. There they have been practicing assiduously for the last two weeks noting the varying winds, the changing atmosphere and puzzling radiance of the sunshine; these are the elements with which the marksmen must contend. The Americans are well versed in these changes on their home ranges and expect to "catch on" to the English variations without much difficulty.

Quartermaster Grathwicke of the 4th V. B. Devon has been appointed honorary secretary for the Massachusetts team. It is a very pleasant appointment of a most agreeable and business-like gentleman to the team's assistance. He holds the position of honorary secretary to the famous English Twenty Club, and is known to all riflemen in the United Kingdom. His arrangement of matches for the week consist of:

Tuesday, July 2, with team from the Royal Berkshire Reg't.
Wednesday, July 3, London Rifle Brigade, and lunch with Lord Sir Edward Pelham Clinton.
Thursday, July 4, Sussex County Team, dine with the Mayor.
Friday, July 5, South London Rifle Team.
Saturday, July 6, with a team selected from the London Scottish and the Queen's Westminster.

The conditions insisted on by Major Frost to govern these matches were very simple: Distances 200, 500 and 600yds., position standing, off-hand at 200yds., prone at 500 and 600yds., competitors to be volunteers in good standing in their respective corps, rifles bona fide Government muskets, with service ammunition.

The above matches will be competed with twelve men on each team, and seven shots at each distance, with two sighting shots at 200yds.

Some question has been raised by the Berks as to the position at 200yds., but Maj. Frost will insist on the standing off-hand position, and not allow the prone, as is desired by the Berkshires.

A word as to rifles. It is well known that the expert shots at Wimbledon do not use the Martini manufactured and furnished by the English Government, but these fine marksmen have Martini-Henry rifles made up by private rifle manufacturers to their order, thus securing as their own private property a finer and more accurate weapon. These weapons have to bear the Government viewer's marks for safety and compliance with the regulation Government pattern in length, weight and bore; otherwise it may have all the pains taken possible to improve its powers.

The captain of the American team having lately learned of this, will see to it that no unjust usage is made of rifles of private manufacture. It must certainly be conceded that the English Volunteers are not armed with rifles of private manufacture, no more than the National Guard of the States; and it is hoped that the teams will meet on equal terms and carry out the contests as was the intention and spirit of the promoters of the enterprise.

P. S.—June 27.—Major Frost received letters from Hon. Secretary Grathwicke, on the arrival of the Chicago at Queenstown, informing him that the Honorable Artillery Company will meet the team at Euston Station in London. It seems now possible that the riflemen will leave Liverpool for London on the 2 P. M. train, arriving at 6:30 the same evening. The Berkshires have accepted conditionally (subject to an interview with Major Frost) the position at 200yds., standing and off-hand. The Americans will not concede the prone or lying down to the "Berks," and this match may yet be declared off. F. ARROW.

LONDON, July 2.—Victory perched on the banner of the Massachusetts rifle team again to-day, and some people begin to suspect she intends to stay there as long as these crack target shooters remain on this side of the water. The team shot off a match with the First Royal Berkshires at Churn and defeated it even more easily than the Honorable Artillery Company was done for on Monday.

The Americans led in totals of 37 points at 200yds., 26 at 500yds., and 29 at 600yds. Their lead, accordingly, in the grand total at the three ranges was 92. The match was witnessed by about 500 people, among whom were Lord Wantage, Viscount Bury, and quite a number of ladies. The rifle range at Churn—Lord Wantage's—is an open one on the downs, and was pronounced by the Americans as first-class. The weather was pleasant, with a gentle and steady breeze blowing from the right.

As in Monday's match, the Americans shot with Springfield rifles, and their opponents with the Martini-Henry gun. The Americans increased their lead at each of the three distances, and at the 500 and 600 ranges did some quite brilliant shooting. The first table shows a total for each contestant out of a possible 35, at the 200 and 500 ranges respectively; the second table shows the totals at 600yds. and the aggregate for the three ranges.

The Visitors' Scores.

	200yds.	500yds.	600yds.	Total.
Bumstead	32	32	29	93
Huddleson	28	27	26	81
Sergt Bull	32	31	30	93
Merrill	28	33	27	88
Bull	25	31	32	88
Farrow	31	31	28	90
Doyle	28	35	34	97
Hinman	29	32	33	94
Farnsworth	23	33	28	84
Edes	26	28	27	81
Johnston	27	29	28	84
Hussey	20	33	32	91
	335	375	354	1,064

The Berkshire regiment made a total at the three ranges of 972. After the match both teams were tendered a lunch by Lord Wantage, who congratulated the Americans upon their victory. He said that they had a better rifle, and declared he was greatly impressed by their skill and steadiness in firing. He alluded to their having gained two substantial victories within a few hours of their landing on English soil, and expressed his hope that they would continue to be victorious.

LONDON, July 3.—The Massachusetts rifle team scored its third successive victory to-day by defeating the London Rifle Brigade at Rainham. The shooting was at ranges of 200, 500 and 600yds., as in the previous matches, and the Americans worsted their opponents at each of them, leading with 32 points at 200yds., 38 at 500yds., 7 at 600yds. and 77 in the grand total. The weather and all the conditions were very favorable for the marksmen. At the 500yds. range the Americans did some brilliant shooting, Doyle and Bumstead making clean scores. The following is the score:

American Team.

	200yds.	500yds.	600yds.	Total.
Bumstead	31	35	34	100
Huddleston	31	33	33	97
Sergeant Bull	29	33	29	91
Merrill	28	33	32	93
Bull	31	32	23	86
Farrow	28	32	31	91
Doyle	28	35	32	95
Hinman	32	33	30	95
Farnsworth	26	30	28	84
Edes	26	30	25	81
Johnston	29	32	26	87
Hussey	28	32	24	84
	347	390	347	1,084

The London Rifle Brigade made a total score at the three ranges of 1,007, and the Americans 1,084, thus leaving the latter easy victors by 77 points.

The American team will shoot against the Sussex team to-morrow at Brighton.

Last night at the Holborn Restaurant the London Rifle Brigade entertained the Massachusetts team at dinner. A large company was present. Major Edward Matthey occupied the chair. After the usual loyal toasts had been proposed and responded to the chairman proposed toasts to the President of the United States and to the health of the winning team, observing that he would carry the team back about one hundred years, the reason being that to-morrow was the Fourth of July, the anniversary of American independence. They were now associated one with another. In fact they were now brothers and not fighting one against another.

Major Frost, of the Massachusetts team, responded.

LONDON, July 4.—The Massachusetts rifle team went to Brighton to-day and shot against the Sussex County Volunteers. At the station the Sussex team was drawn up in line, and acted as a guard of honor. The riflemen drove through the city to the waterfront range, near the Brighton race track. A strong gale of wind was blowing. It was very puffy and bad for good shooting. It is the proud boast of the people hereabouts that the downs are always breezy, and the Americans quickly arrived at the conclusion that the natives must be right. The local sportsmen would not have it that the wind was more than fresh. The fact remains, however, that the wind was very strong, and blew right across the range in an erratic fashion, very bewildering to the strangers. Maj. Frost seemed anxious, and he became almost unhappy when, for the first time since their arrival in England, his men were beaten in their favorite standing range, 200yds., in which they were actually 12 points behind the Sussex men. On moving back for the 500yds., the Massachusetts team rallied and did good shooting, both at the 500 and 600yds. The first six men at the 500yds. made up the loss, and the rest was easy, the Americans finally winning the best contested match they have been engaged in this side of the Atlantic by 988 against 910 points. The best American score, 92 points, was made by Lieut. Hussey, which was seven ahead of the top score on the other side. Following are the scores:

Massachusetts—Hussey 92, Edes 90, Sergeant Bull 86, Farrow 86, Hinman 85, Private Bull 83, Huddleston 81, Farnsworth 79, Bumstead 79, Doyle 78, Merrill 78, Johnston 73; total 988.

Sussex team—Leggett 85, Tisdale 80, Brown 80, Fowler 80, Cortes 79, Barr 78, Lilley 78, Gates 73, Donovan 73, Kirk 71, Livesay 68, Milton 65; total 910.

After the match both teams were dined by Mayor Sendall, of Brighton. A large delegation of citizens was present, including several ex-mayors. Speeches were made by Mayor Sendall and others, and Maj. Frost responded.

All the Massachusetts boys started out to-day with a firm intention to enjoy the national holiday, with discretion, however. The South Londoners, although they have been practicing assiduously to-day, are not likely to lower the stars and stripes.

The Massachusetts men were invited to the Alhambra Theater this evening, where the top score man in to-day's match, Hussey, received a handsome prize from the Sussex team.

Following are the detailed scores of the Americans:

	200yds.	500yds.	600yds.	Total.
Bumstead	27	26	26	79
Huddleston	30	29	22	81
Sergt. Bull	25	32	29	86
Merrill	25	29	22	76
Bull	27	29	27	83
Farrow	30	32	24	86
Doyle	26	22	30	78
Hinman	25	31	29	85
Farnsworth	22	31	26	79
Edes	29	30	31	90
Johnston	22	24	27	73
Hussey	28	32	32	92
	316	347	325	988

LONDON, July 5.—The Massachusetts rifle team won its fifth successive victory to-day, defeating the South London Club at Nunhead by 43 points in the total. The weather was delightful; but, as seems to be the rule at Nunhead Range, a tricky wind was blowing. The conditions, however, were in pleasant contrast to those which prevailed on the downs at Brighton, and the American team showed its strength by running up at 200yds. the best score it has made from the shoulder since coming to England.

F. Bull registered a clean score at 500yds. The following is the record:

Massachusetts Volunteers.

	200yds.	500yds.	600yds.	Total.
Hinman	34	30	35	99
Merrill	27	32	29	88
Johnston	27	28	25	80
Bumstead	29	30	31	90
Doyle	32	31	25	88
Huddleston	33	29	24	86
Farrow	29	28	29	86
Farnsworth	31	33	29	93
Edes	30	33	28	91
Hussey	29	32	25	86
Sergeant Bull	33	30	32	95
F Bull	29	35	24	88
	360	372	336	1068

Against this the South London Club put in a total of 1,025, thus leaving the American boys victors by 43.

The conditions were upon the whole favorable. There was a blue sky and the wind was not too strong or erratic. The meeting was, as usual, a business one, and there were few spectators, but the number included Lieut. Charles E. Hawley of the United States Navy, who made a long journey to be present on reading of the team's whereabouts in the newspapers.

The home team used Martinis, which some of them cuddled in a manner highly diverting to the visitors. The feature of the afternoon was Major Hinman's shoot, which included the highest possible score on the longest range.

South London's range totals were 332, 368, 325; grand total 1,025. The highest individual English score was 95, made by young Lieut. Craig, and the lowest 77.

To-night the Americans are enjoying themselves at the Alhambra. To-morrow, Saturday, they will be the guests of Major MacKenzie, a veteran of the Honorable Artillery Company at his charming seat in Essex, and the day will be spent in practicing with the Martini rifle, which the Americans will have to use at Wimbledon, except in special team matches which are being arranged.

LONDON, July 6.—The American volunteer riflemen in their matches this week have broken the world's records with military rifles. Every team they have met has been picked from the finest English, Scotch and Irish twenties, to say nothing of the Queen's prize winners. For a team shooting entirely without practice, at a strange range every day, their record is remarkable and has set the English volunteers to thinking.

The American riflemen went to Chingford this morning to practice with the Martini-Henry rifles loaned by the National Rifle Association. They shot over the Honeylane range, Epping Forest, and the result was sufficient to warrant hopes of good showings in the individual matches at Wimbledon, where the National State colors are now flying. They will remain at Wimbledon next week, after which they will go to Paris for a week and then sail for home on the City of Chicago, July 31. Captain Frost is well pleased over the week's success, which bears out his predictions made before sailing.

In five matches Hinman and Bull tied for first place, the totals being: Hinman 453, Bull 453, Bumstead 451, Doyle 444, Farrow 440, Merrill 433, Huddleston 433, Pvt. Bull 432, Hussey 431, Edes 423, Farnsworth 432, Johnston 404

LONDON, July 8.—The Massachusetts riflemen have not as yet come to a decision as to the matches in which they will engage at Wimbledon. The decision of the Council, excluding Springfield rifles from the general contests, was expected. The American team are actively drilling with the Martini-Henry rifle, and showed to-day good form both in the pool practice and in the Alexandra cup match, which was limited to Martini-Henry rifles. None got first rank prizes. With 7 shots at 500 and 600yds. Hinman made a total of 60, Farrow 55, Edes 53, Doyle 51, Hussey 50; Johnston 49, and Huddleston 37. The winner made 68. In the 200yds. pool Johnston, standing, made two bullseyes in five shots at a 4in. disk.

Judge Henry A. Gildersleeve, who was a member of the famous small-bore rifle team which 14 years ago went to England and defeated the English riflemen at Wimbledon, was delighted when he learned that the Massachusetts team were proving such victors. "We can defeat them every time," said the judge. "It is not individual superiority in which we excel them, but in discipline. If the English shoot in cup matches individually they can beat us, but not in a team. These matches are more substantial victories than appear upon the surface. Our other contests have been with match rifles. These matches were shot with military rifles. In this State our national guards use the Remington 50-caliber rifle, which is out of date, and no competitor for the improved Martini-Henrys which the English use. But the rifles used by the Massachusetts team is an improved Springfield rifle, which has proved itself to be a match for the English arm."

RANGE AND GALLERY.

BOSTON, July 6.—The fine weather conditions brought out a large number of riflemen to the Massachusetts Rifle Association range to-day, and some fine scores were made. Mr. Burnite won the gold medal in the 20-shot rest match, and Mr. Lee won the gold champion medal. Following are the best scores finished to-day:

Twenty-Shot Rest Match.

W O Burnite	9	11	10	7	11	11	9	9	12	8	
	11	12	12	12	9	12	12	12	12	11	—212

CINCINNATI, July 4.—Messrs. B. Copeland and B. J. Robertson, the Cincinnati Pistol Club's expert shots, were defeated in their first telegraphic match with St. Louis's two experts as follows to-night: Out of each possible 100, Copeland 87, 91, 85; Robertson 85, 82, 87; total 517. Here's St. Louis: St. Louis, Mo., July 2, 11 P. M., total score 525.

WILMINGTON, Del., July 4.—The shooting at Healdmoor Rifle Range shared the common fate of all outdoor sports on the Fourth of July. From 12 to 1 o'clock the rain poured down in torrents, and the showers lasted until late in the afternoon. The pistol and revolver matches monopolized the attention during the morning, as it was intended to devote the afternoon to the rifle, and what was left of it was so done. A very large attendance was expected, not only of local marksmen, but from Philadelphia, West Chester and surrounding country, but the weather prevented. Both of the military badge matches were postponed until Monday. Following are the scores in detail, standard American target, off-hand:

Pistol Match, 50yds.

I P Taylor	8	9	7	10	9	8	9	10	5	10—85
E J Darlington	7	9	10	10	10	7	6	7	6	10—82

CREEDMOOR.—New York, July 4.—The third match for the Marksman's Badge was shot at Creedmoor on Thursday. The weather conditions were very bad, a heavy wind and drizzle in the morning proved very annoying to the competitors, and the rain in the afternoon put a stop to the shooting for some time. The attendance was very good and some good scores made. The following made sharpshooters' scores (42):

	200yds.	500yds.	Total
*Alex Stein, Co C, 7th Regt.	23	24	47

UNSER FRITZ.

COL. BLUNT, U. S. A.—Washington, July 5.—Col. Stanhope E. Blunt, Ordnance Department, has been relieved from duty at the headquarters of the army as inspector of small-arms practice and ordered to report in person to the Chief of Ordnance. Col. Blunt thus closes a connection with rifle practice which has extended over a period of nine years, commencing in 1880 as inspector of rifle practice in the Department of Dakota, and since 1884 in supervision of the instruction throughout the army. By 1883 he had so far become the leading authority on the subject that the Secretary of War then designated him to prepare a manual of rifle practice, and his works, "Rifle and Carbine Firing," published the next year, and its revision, "Small Arms Firing Regulations," prepared this last winter in accordance with Gen. Schofield's directions, have since been the tactics on the subject in the army, the marine corps and the navy, and to a great extent among the National Guard as well. Col. Blunt, as the author also of the extensive article, "Target Practice," in Farrow's Military Encyclopædia, and of many others that have appeared from time to time in the public press and military publications, has exercised a marked influence upon rifle practice and instruction in our service, and in now finally changing from these duties to those of his own corps leaves a valuable record and honorable name throughout the army. The army will cordially agree with Gen. Schofield in the following complimentary remarks, with which he closes his order: "Capt. Blunt's services in connection with the development of an effective system of rifle practice in the army have been of the highest importance, and his name will long be honorably connected with this great advance in the military service of the country."

NEW JERSEY STATE SHOOT.—The success attending the Massachusetts riflemen in England has stimulated interest in the military rifle matches arranged to take place at the State range, Seabright, N. J., in September next. These contests are supplementary to the annual prize meeting of the National Rifle Association at Creedmoor, and will comprise an inter-State and international military match with service rifles at regulation distances. Assurances have been received from nearly every State in which rifle practice is a part of the established system of National Guard training that a representative team will be sent forward to participate in the proposed contests. Liberal provision has been made by the State of New Jersey for the quartering and preliminary practice of competitors, and it is hoped that the attendance will be secured of a team representing the riflemen of the volunteer militia of the Dominion of Canada.

THE NEWARK SHOOT.—Newark, N. J. July 6.—The annual festival of the Newark Shooting Society, which ran from Thursday noon to this evening, was one of the most successful, so far as shooting goes, ever held by the society. The weather, up to 2:30 P. M., on the first day, was anything but favorable, but there was a good number of out-of-town riflemen on hand at the opening, and there were many more on Friday and to-day. The visitors declared themselves well pleased with the arrangements and with the manner in which they were treated by the local marksmen. Among the visitors were A. H. Merriman, Meriden, Conn.; H. Rothert and G. Homrighausen, Baltimore; A. C. Gates and L. Eggleston, Syracuse; George Schalk, the veteran gun maker of Pottsville, Pa.; J. P. Delahunty, Pittston, Pa.; C. E. Overbaugh, New York; Tom J. Dolan, New York; Geb. Krauss, Brooklyn; L. Flach and M. Dorrler, Zettler Rifle Club; H. Holges, L. Vogel, G. Schlicht, Charles E. Geusch and Geo. Kleinhub, Brooklyn, N. Y.; H. W. Pope, Hartford, Conn; C. I. Foster, Meriden, Conn.; J. T. B. Collins, New York; H. W. Hawes, expert fly-caster and rifleman, of Central Valley, N. Y.; Wm. Wurfflein, inventor of the Wurfflein rifle, of Philadelphia; Ed. J. Travis, a crack shot, of Philadelphia; Jos. M. Green, of Philadelphia; Bernard Walther, J. A. Boyken, C. G. Zettler, of the Zettler Club; F. W. Hofele, Dave Miller and Capt. R. W. Dewey, of the Miller Rifle Club of Hoboken; S. J. Lyons, of Collinsville, Conn. The members of the local society turned out in fair numbers. The scores put up on the first afternoon were very heavy, a 72, 71 and four 70's being recorded. The first bullseye was made by F. C. Watts, and the last by William Hayes. On Friday the conditions were not so favorable, but nevertheless some good shooting was done. Dave Miller got the first bullseye and the last by George Joiner in the morning. In the afternoon "Barney" Walther secured the first bullseye and William Hayes the last. The first bullseye this morning was made by A. C. Gates and the last by G. Homrighausen. The first in the afternoon by W. Hayes and the last by J. Coppersmith.

The shooting on the bulleye targets closed at 4 o'clock this afternoon, and on the other targets at 6 o'clock, the prize winners in full in order being as follows: Best bullseye—E. J. Travis, Philadelphia; A. C. Gates, Syracuse; G. D. Weigman, Newark; J. Coppersmith, Newark; S. J. Lyon, Collinsville, Mass.; B. Walther, New York; J. C. Foster, Meriden; C. G. Zettler, New York; Geb Krauss, Brooklyn; L. Fiach, New York; W. Hayes, Newark; D. Miller, Hoboken; H. Holges, New York; L. Eggleston, Syracuse; M. Dorrler, New York; W. H. Cleveland, Newark; F. C. Watts, Newark; E. C. Henn, Hartford; G. Schalck, Pottsville, Pa.; A. Begerow, Newark; J. A. Boyken, New York; G. Schlicht, New York; T. Felsberg, Newark; Geo. Joiner, Brooklyn; A. Seitz, Newark; H. W. Hawes, Central Valley, N. J.; J. P. Delahunty, Pittston, Pa.; C. E. Overbaugh, New York; W. Wurfflein, Philadelphia; P. W. Pope, Hartford. The first premium for the most bullseyes during the festival was won by William Hayes, second by S. J. Lyon, third by A. C. Gates, fourth by George Joiner, fifth being divided between G. Homrighausen and J. A. Boyken. Man target—D. Miller 59, J. Coppersmith 59, A. Begerow 58, L. Flach 57, M. Dorrler 56, A. Leitz 56, W. Hayes 56, G. Homrighausen 56, H. Rothart 55, J. A. Boyken 55, B. Walther 55, G. Schlicht 55, A. Hoffman 54, F. Ross 54, G. Joiner 54, C. G. Zettler 54, F. W. Hofele 54, P. Bell 54, H. Holges 54, R. Busse 54, A. C. Gates 53, J. Y. B. Collins 53, H. M. Pope 53, C. Gensch 62, G. Kleinhub 52, H. W. Hawes 71, L. Flach 70, L. Eggleston 70, J. A. Boyken 70, P. Bell 70, G. Homrighausen 70, A. Begerow 69, H. Rothart 69, S. J. Lyon 69, J. Coppersmith 69, D. Miller 69, B. Walther 68, H. C. Koegel 68, C. G. Zettler 68, H. Holges 68, G. Joiner 67, F. W. Hofele 67, L. Vogel 67, F. A. Freiensehner 67, G. D. Weyman 67, F. C. Watts 66, H. M. Pope 66, J. T. B. Collins 66, A. Fisch 65, R. Burse 65, T. J. Dolan 55, E. C. Henn 64. American champions—First prize, $14, won by W. Hayes on 69 points. Other prize winners were: J. H. Boyken 68, F. W. Watts 67, H. W. Hawes 67, D. Miller 65, B. Walther 65, A. C. Gates 65, H. Holges 65, J. Coppersmith 64, G. Homrighausen 63, H. Begerou 63, A. Fisch 62, L. Vogel 62, C. G. Zettler 61, S. J. Lyon 61, F. A. Freiensehner 61, G. W. Downs 60. The premium for the best three tickets on the ring target went to William Hayes, who scores 71, 70 and 71; M. Dorrler getting 67, 71 and 68 and taking the second premium. A. C. Gates scores 72, 66, 66; J. A. Boyken 70, 68, 67.

TORONTO, July 5.—A committee meeting of the Off-Hand Rifle Association was held to-day to make arrangements for the forthcoming tournament. President J. W. Crosoly, King City, took the chair, and the other members present were Simpson Rennie, Scarboro; J. Hay, Tottenham, and S. E. Wilton, Orilla. Rules governing the tournament were adopted and arrangements completed for the meeting, which will take place at Orilla, on Oct. 10 and 11. Orilla offers $10 in prizes for each team competing in the tournament. The team matches will be shot on the first day, commencing at 1:30 P. M. The championship and $10, $5 and $3 respectively for first, second and third teams, will be the prizes. On the second day the individual matches will be held, beginning at 9 A. M. The prizes will be $10 for first and 50 cents less for each of the next 19. Mr. Geo. E. Wilton, of Orilla, told of the preparations made by the Orilla Club. Three good targets had been provided and seven clubs were expected to compete.

TORONTO, Ont., July 6.—The Tenth Royal Grenadiers of Toronto have challenged the Massachusetts rifle team to shoot a match with eight or ten men on a side, either in Canada, Massachusetts or by telegraph.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 south Delaware avenue, Philadelphia.

CHICAGO AND THE WEST.

CHICAGO, July 5.—The Fourth was a great sportsman's day in Chicago and nearly all the shooting clubs had meets at their grounds and club houses. Mak-saw-bas and Grand Calumets had pleasant little gatherings. Mineola Club, of Fox Lake, led off with $250 worth of fireworks across the lake. Mr. F. J. Magin and family, Mr. Robt. Lindblom and family, Messrs. J. G. and Robt. Dwen, Mrs. Davis and family, Mrs. R. M. Fair and family, Mr. H. P. Wadhams and a number of others were present. The formal opening of the beautiful new Mineola club house will occur next Saturday evening, July 13, and will be a brilliant affair. Preparations are now making on a large scale for it, and a carload of refreshments will go up over the Wisconsin Central next week.

About the jolliest Fourth of July crowd, however, was the little one that gathered on the South Pier, out in the lake in front of the city, and indulged in a little trap-shooting, considerable fresh air and a lot of fun. The hosts of the party were Mr. Fred. C. Donald, General Passenger Agent of the C. & A. road, President of Gun Club of Chicago and President of the Illinois State Sportsmen's Association; Mr. Chas. S. Burton, City Passenger Agent of the Kankakee line; Mr. F. H. Lord of the Manitoba road, Mr. Chas. E. Willard of the Standard Cartridge Co., Mr. John Gillespie of the Jenney & Graham Gun Co., and Mr. Henry Smith of the West Side. The entertainment was gotten up on the spur of the moment by these gentlemen, but the refreshments were as copious and choice as a month's study could have made them, and the guests of the party will rise to maintain that same. There were present also Mr. J. R. Ballantyne, managing editor of the *Daily News*; Mr. A. H. Harryman, editor of the *Sanitary News*; Mr. H. W. McCinniff, Mr. W. Isbell, Mr. C. H. Kroell, Mr. A. Angelica and the representative of FOREST AND STREAM, which latter paper knows a good time when it sees it.

The afternoon was put in at smashing Keystones, and the scores, shot under such names as "Dago," "Sinbad," etc., were very good ones indeed, considering. It took 14 out of 15, 11 out of 12, and the like, to win anything. The penalty for missing a bird was to eat a sardine, and the unfortunate who couldn't get that windy right-quarterer always found some one waiting for him with the sardine. The traps were arranged so that the birds fell in the lake, the shooters standing under a large awning. A cool breeze swept inshore, and the day was simply beautiful. The city looked its

best off to the right, and all about the lake was filled with white-winged pleasure craft. A more delightful spot for trap-shooting never was invented, and a more delightful day than was put in there could not be imagined. I do not remember a pleasanter Fourth, and that seemed the opinion of all. I don't suppose John Gillespie ever did have quite as good a time or ever shot much better.

Lake George Club also celebrated with a pleasant affair of the gun, and it was reported that English Lake house had a few visitors. Tolleston Club had quite a little affair of a live bird shoot, with a general showing of good scores. Mr. F. A. Howe had 15 out of 25, Mr. W. R. Linn 48 out of 60, Mr. D. H. Denton 59 out of 70, Mr. O. H. Roche 32 out of 98, Mr. J. J. Gillespie 46 out of 60, Mr. C. E. Felton 54 out of 61, Mr. Carl Moeller 17 out of 20, Mr. W. C. Hough 49 out of 55. Mr. Roche seemed unable to miss a bird. He sat in a chair at 40yds. part of the time, using a 12-gauge gun, and got nearly everything he shot at. There was revolver and rifle practice also, and fireworks in the evening. Mrs. F. A. Howe caught a 7lbs. pickerel. The water on the marsh is high.

July 7.—Mr. Chas. E. Willard, who built up the Blatchford cartridge to what success it had, left the Blatchford Co. a few weeks ago. Mr. Willard will be superintendent of the Chicago and St. Louis factories of the Standard Cartridge Co., a new organization of which more will be heard later on. Charlie Willard's friends are delighted to see him now where he belongs, at the head of the work for a progressive and enterprising firm which is awake to the wishes of sportsmen and to the value of their trade. The quarters of the new company will be on the northeast corner of Randolph and Wabash, and are now being elegantly fitted. Mr. E. S. Rice, general agent of the Dupont powder, will be in the same office. There will be a large-sized hum around there next year.

E. HOUGH.

BOSTON TOURNAMENT.

THE second tournament of the American Shooting Association will be given at Boston, Mass., Aug. 13, 14 and 15, at Beacon Park; $1,700 cash in guaranteed purses, conducted under the management of Maj. J. M. Taylor, Room 184 Stewart Building, N. Y.

Tuesday, Aug. 13.—Twenty targets, free for all, entrance $3; 20 targets, open to classes B and C, entrance $3; 20 targets, open to Class C, entrance $3; 20 targets, free for all, entrance $3; 20 targets, Class A, open to Classes B and C, $150 guaranteed, entrance $5; 20 targets, Class B, open to Class C, Class A barred, $150 guaranteed, entrance $5; 20 targets, Class C, Classes A and B barred, $150 guaranteed, entrance $5; 2-men team match, 20 targets to each man, any 2 men from one club, $100 guaranteed, team entrance $5; 10 pairs targets, free for all, entrance $3; 10 singles and 5 pairs targets, open to Classes B and C, entrance $3, 20 single targets, open to Class C, entrance $3.

Second Day, Aug. 14.—Twenty targets, open to all, entrance $3; 20 targets, open to Classes B and C, entrance $3; 20 targets, open to Class C, entrance $3; 20 targets, 10 singles and 5 pairs, open to all, entrance $3; 20 targets, Class A, open to Classes B and C, $150 guaranteed, entrance $5; 20 targets, Class B, open to Class C, Class A barred, $150 guaranteed, entrance $5; 20 targets, Class C, Classes A and B barred, $150 guaranteed, entrance $5; West vs. East, 40 targets each, 5 men each team, viz., Western team: Ed Taylor captain, Al Bandle, J. R. Stice, C. W. Budd, Rolla O. Heikes. Eastern team: H. McMurchy captain, H. W. Eager, O. R. Dickey, W. E. Perry, H. B. Whitney; purse $150; 20 targets, free for all, entrance $3; 20 targets, open to Classes B and C, entrance $3; 20 targets, open to Class C, entrance $3.

Third Day, Aug. 15.—Twenty targets, open to all, entrance $3; 20 targets, open to classes B and C, entrance $3; 20 targets, open to class C, entrance $3; 10 pairs targets, open to all, entrance $3; 20 targets, class A, open to classes B and C, $150 guaranteed, entrance $5; 20 targets, class B, open to class C, class A barred, $150 guaranteed, entrance $5; 20 targets, class C, classes A and B barred, $150 guaranteed, entrance $5; team match, any four men from one club, 25 targets to each man, $100 guaranteed, team entrance $10. Special matches may be arranged to be shot after programme is finished.

Badges, for all who have qualified to shoot, will be furnished at the headquarters tent on the grounds. Entrance to any class will be refused to those not wearing a badge to designate their class, and any one using a badge to enter a class to which they do not belong will be disqualified from shooting in any tournament given by this association. Classification certificates sent to any one applying to New York office, Room 184 Stewart Building.

Matches marked free for all are open to classes A, B and C.
Matches marked class B are open to class C, with A barred.
In matches marked class C, classes A and B are barred.
Shooting begins promptly at 9 o'clock each day.
Money divided when 20 or more entries, 40, 30, 20 and 10 per cent.
Money divided when less than 20 entries, 50, 30 and 20 per cent.

All surplus entrance money in guaranteed matches Nos. 5, 6 and 7 each day after paying for targets used, will be divided equally between classes A, B and C, and these amounts will be divided among those making first, second and third best averages in their respective classes.

Any shooter in classes B and C can make an average in a higher class, in addition to his own, if he so elects, and his average will be considered in such class.

Shooters must compete in all guaranteed matches, in such classes as they may shoot in, to establish an average in said class.

Entrance money includes price of birds in all matches, and they will be deducted from the purse before a division of it. Birds in ties will be deducted from the respective ties.

Targets of the following companies will be used: Cleveland Target Co., Peoria Target Co., Ligowsky Clay Pigeon Co., Keystone Target Co., Standard Target Co., Cruttenden & Card King Bird Co., Bandle Clay Bird Co.

Owing to the large number of shooters that have signified their intention to be present 30 traps, in sets, each set in a straight line, will be kept in use.

An excellent dinner will be served each day (at a nominal price) from 1 to 2 o'clock, and all shooting will cease during the hour. Lunch can be had at any time.

Parties desiring hotel accommodation engaged, and any local information, can address the general manager at the New York office.

Beacon Park can be reached by Boston and Albany Railroad, also by horse cars from Bowdoin Square.

SPECIAL NOTICE—NOM DE PLUMES.

Any shooter may use a nom de plume, but it must appear on his classification card, and he must adhere to the same nom de plume in all shooting thereafter when he uses one. In case of any violation of the above by becoming known to the Association, a withdrawal of the card will be ordered. The shooter has a right to change his nom de plume by notifying the Association and sending his card for alteration.

TORONTO, July 6.—There was a large gathering at the Stanley Gun Club's shoot on McDowall & Co.'s grounds. The first event was a shoot for the president's handsome gold watch, which has now been shot for seven times, during which T. Sawdon, Jr., has won it twice out of three times. Mr. C. Charles wins the trophy for the first time. In addition to this there was a club shoot for five handsome prizes, donated by the club, value $35. This shoot having proved very satisfactory, a similar list of prizes will be offered for next Saturday.

Watch shoot at 25 birds:

Charles (21dys.)	23	T Bennett (21)	16
G Morley (21)	19	J Rice (23)	15
F Emond (22)	18	F Mallett (16)	12
C Kemp (20)	17	T S Bales (15)	12
W McDowall (24)	17		

Merchandise shoot for 5 prizes, at 20 birds: Charls 18, Emond 18, Drasy 18, McDowall 16, Hamson 15, Felstead 15, F. Morley 14, Bennet 13, Sawdon 13, Sawdon, Jr., 10, Rice 11, McClure 7, Winchell 9. Charles took first, McDowall second, Feistead third, Morley fourth and Bennet fifth.

WELLINGTON, Mass., July 6.—There was a good attendance at the grounds of the Wellington Club to-day, and several good scores were made in the prize matches and also in the sweepstakes. In the silver pitcher match Schaefer and Bond tied with 13 each, and in the shoot-off Bond won. The other scores in this match were as follows: Warren, Sanborn and Baxter 12, Savage, Field and French 11, Bradbury and Snow 10, Moore and Stagg 9, Melcher and Cowee 8. In the merchandise badge match, Sanborn and Chase tied with 15 straight, and in the shoot-off Chase broke 10 straight and won. The other scores were: Bradbury 14, Warren, Bond and Moore 13, Field and Copeland 12, Savage, Bradbury, Melcher and Schaefer 11, Baxter 10, Stone 9. The winners in the sweepstake matches, were as follows: 7 bluerocks, Savage; 8 clay-pigeons, French and Warren; 6 clay-pigeons, Snow and Field; 5 clay-pigeons, Warren, Sanborn and Bond; 5 clay-pigeons, Sanborn, Bond, Snow and Melcher; 6 bluerocks, Stone and Warren; 6 bluerocks, French, Warren, Snow and Sanborn; 5 clay-pigeons, Sanborn, Savage, Snow and Chase; 6 bluerocks, Sanborn; 5 clay-pigeons, Melcher, Moore and Warren; 6 bluerocks, Sanborn and Baxter; 10 clay-pigeons, Chase and Savage; 3 pairs clay-pigeons, Field and Stone.

MICHIGAN STATE SHOOT.

DETROIT, Mich., July 7.—I send you the scores of the late tournament of Michigan trap shooters, held here. These matches were open to Michigan trap shooters only, but a large number of side sweeps were open to all, and were taken advantage of by some good outside shots who happened to be in town, Mr. Rolla O. Heikes and Mr. E. S. Benscotten, of Ohio, being among the number. The shoot was not as much of a success as could have been had we had better car service, but the grounds are quite a way from the city and hard to get at. Financially it paid its way, and those that did attend had a pleasant time, but we would like to have had more shooters present to enjoy the sport with us.—WM. GARRISON, Secretary, West End Gun Club.

June 24.—Although the attendance was small, the first day's shoot was a success, everything working smoothly and to the entire satisfaction of all. A large number present who did not enter the regular programme shoots availed themselves of the opportunities offered at the side traps, and a number of exciting sweeps were shot. To-day the individual State championship medal, now held by Mr. John Parker, will be contested for, and another $15 will be added to the purses. On yesterday's shoot John Parker leads on the average with W. E. Walton a close second.

No. 1, 9 single bluerocks:

J Parker	111111111—9	E Wendt	011011111—7
F Jager	111011111—8	W G Butler	011101110—6
H H Fleischer	111101111—8	Chas Cooper	111110100—6
W C Walton	111111101—8		

Parker first, Fleischer second, Wendt third, Butler fourth.

No. 2, 10 single bluerocks:

J Parker	1111111010—8	E Wendt	1111111011—9
W E Walton	1111001111—8	Chas Cooper	1010000110—4
F Jager	1110011111—8	W G Butler	0110111011—7
H H Fleischer	0010111111—7		

Wendt first, Walton second, Butler and Fleischer third, Cooper fourth.

No. 3, $10 cash added to purse, 12 single bluerocks:

J Parker	111111111111—12	W G Butler	010011110111— 8
F Jager	101101111111—10	Chas Cooper	010011111010— 7
H H Fleischer	101011101010— 8	E Wendt	011101111011— 9
W E Walton	111111111110—11	J W Garrison	010011110001— 6

Parker first, Walton second, Jager third, Wendt fourth, Fleischer fifth.

No. 4, 3 pair and 9 single bluerocks:

F Jager	11 10 10 101111101—11	E Wendt	10 10 10 111111110—11
Walton	11 10 11 110111101—12	C Cooper	10 10 11 101111111—12
J Parker	11 10 10 111111111—12	Hutchings	10 01 11 101000011— 8
Butler	11 00 11 111011111—12	Fleischer	11 11 10 110101010—10

On shooting off ties Walton and Parker divided first, Jager and Wendt second, Fleischer third, Hutchings fourth.

No. 5, 9 single bluerocks:

F Jager	101111110—7	C Cooper	011101111—7
J Parker	111001111—7	W G Butler	011111101—7
W E. Walder	111011001—6	J W Garrison	101001100—4
C Stenton	110101011- 6	H H Fleischer	101111000—5
E Wendt	011111110—7	P Hutchings	011111010—6

Parker and Cooper divided first on the shoot-off, Walton, Stenton and Hutchings divided second, Fleischer third, Garrison fourth.

June 25.—The regular programme shoots were well filled and side traps were kept busy on open-to-all sweeps. The medal race was the last one of the day, and as John Parker had won it twice in succession, he would have been entitled to the championship of Michigan and the medal had he won it this time, but Emil Hebel, a member of both the Peoria and West End gun clubs and one of the strongest trap-shooters in this vicinity, came to the front with a record of 24 out of 25 and took the prize. To-day the team shoot will take place and both of these men will be again pitted against each other, Hebel shooting in the Peoria Club team and Parker with the West Ends. The West End Club having now won the team trophy twice will put in their strongest team and make a strong effort to again win the title of champions of Michigan. There will be $20 in cash added to the purse to-day.

No. 1, 9 bluerocks:

J Parker	111111101—8	A G North	100001111—5
Wm McSweeney	111111001—7	H J Carter	001101000—3
J H Remick	001001101—4	E Wendt	111111111—9
T J Bolton	011100111—6	J W Garrison	011000111—5
F Jager	010010110—5	W Remick	110110111—7
L C Scott	111111011—8	K Wolf	111111110—8
E Hebel	111111111—9		

Hebel and Wendt divided first, Wolf and Parker second, McSweeney and Remick third, Bolton fourth, Jager and North fifth.

No. 2, 3 pairs and 4 singles:

W McSweeney	11 11 11 1111—10	K Wolff	10 00 11 1100—5
F Jager	11 10 10 1011— 7	E Wendt	11 11 10 1110—8
E Hebel	11 10 01 1110— 7	W Remick	11 11 10 1111—9
A G North	10 10 11 1111— 8	H Fleischer	11 11 10 0111—8
J Parker	10 10 11 1111— 8	H J Carter	10 10 11 1011—7

McSweeney first, Remick second, Wendt and Parker div. third, Jager fourth and Wolff fifth.

No. 3, 10 bluerocks, walking match:

J Parker	1111011101—8	W G Butler	0101101110— 6
A G North	1100001001—4	E Hebel	1111111111 —10
W Remick	0010101101—5	H Fleischer	0000111011— 5
T J Bolton	1111110111—9	H J Carter	1110010000— 4

E Hebel	1011111111111111111111111—24

June 26.—The team shoot was won by the West End Gun Club with a score of 51 out of a possible 54. By winning this time it makes the third successive time they win the handsome silver set and the title of champion team of Michigan. Mr. John Parker, by making the best average in the three days' shoot, wins a handsome Winchester rifle, and Mr. E. Wendt wins the second prize of 500 loaded shells. Notwithstanding the very bad service of the Dix Electric Road, they not having cars running more than one-half the time, the tournament was well attended. This afternoon the West End Club hold their regular weekly medal shoot and practice shoots, sweepstakes, open to all.

No. 1, 9 bluerocks:

J Parker	111111101—8	W Remick	111101110—7
Wm McSweeney	111110111—8	A C Johnson	111011100—6

Frank Cook	111101100001100000101010—12
Chas Preston	111111111111101101110110—21

The shoot-off at nine birds resulted:

T J Bolton	011011111—7	J W Garrison	011101111—7
James Wilson	101101111—6	Charles Preston	111110110—7
Charles Schmitt	111111111—9		

DOMINION DAY SHOOTS.

OTTAWA, July 1.—The Stanley Gun Club's big artificial tournament began to-day, and was largely attended. The weather was fine and the shooting all through good. The St. Huberts, of Ottawa, carried off the laurels. Teams of 5 men were present from Ottawa, London, Hamilton, West Toronto Junction, also representatives from several other places. The shoot took place on McDowall & Co's grounds. The referees were Messrs. Lucas and Leach, and the scorer A. Jackes. The following are the results. First shoot at 15 birds, $2 entry, 25 entries:

Wayper	14	McDowall	12
Glover	12	Delauries	12
Dr Martin	12		

Second shoot at 12 birds:

C Charles	11	Felstead	9
C Kemp	10	Glover	9
Wakefield	10	Treblecock	8
Wyness	9	Budd	6
Emonds	9	Dr Martin, retired.	

Third shoot, team shoot at 20 birds:

St. Huberts, Ottawa.		West Toronto Junction.	
E White	19	T C Walton	16
A Martin	18	Clarke	14
A H Throp	18	D Beldam	11
S Thompson	15	P Wakeley	11
J E Deslauriers	13—83	E Dollery	10—62
Toronto Gun Club, Team 1.		Stanley Gun Club, Team 2.	
J Wayper	19	G Carruthers	13
T Sawden, Sr	16	J Mitchell	14
A Wyness	15	W Heatherington	9
W Felstead	14	Draisey	9
G Budd	9—73	C Harrison	9—59
Stanley Gun Club, Team 1.		Toronto Gun Club, Team 2.	
F Emond	17	J Townson	15
W McDowall	16	F Quarrie	14
C H Riggs	15	W Pearson	12
C Kemp	14	F Verity	10
G Morley	10—72	W Bugg	8—59
Hamilton Team.		Toronto Gun Club, Team 3.	
J Bowron	16	Dr Pearson	16
Clifford	15	F Martin	14
Stevens	14	D Van Vlack	12
Smith	11	G Pearsoll	10
Hunt	11—67	G Foreman	3—55
London Gun Club.			
Treblecock	12	Davey	10
Avery	13	Murray	6—52
Stone	11		

Fourth shoot, merchandise match for 11 prizes at 10 birds:

Dr Pearson	10	Clifford	7
Emond	10	Avery	6
Wyness	9	Brown	6
Kemp	9	Thompson	6
Mitchell	9	Hunt	6
Dr Martin	9	Dollery	5
C H Riggs	9	Budd	5
Glover	9	Treblecock	5
Wakefield	8	Grigg	4
J Bowron	8	Felstead	4
Murray	8	Cameron	4
Bayles	7	Tivey	4
Wayper	7	Draisey	3
Throop	7	Huffman	3

So far 100 entries have been received for the ladies' match, which began in the morning at 9 o'clock and will be continued till 4 o'clock to-morrow. In the individual match a keen competition was made between Dr. Martin, of the St. Huberts, A. Wayper, who shot with a 10-bore of L. C. Smith's make, and S. Glover. The Doctor's gun was a Lefever 12-bore. They tied, and in the shoot off tied again, and at 24yds. rise the Lefever fairly pulverized the birds, giving Dr. Martin quite a victory.

In the evening a meeting of gun men was held and steps taken toward putting Dominion trap work on a better basis.

July 2.—At the grounds this A. M., all the forces were to hand, and the entries for the ladies' match rattled away quite lively. The three man team match, 20 birds each, was next called, and for this there were seven entries. Everybody seemed off, even Wayper lost 3 in his string. Many of the entries were not of a *bona fide* nature, the match was a sort of scratch.

London.		St. Huberts, No. 2.	
S Glover	10111100111001110110—13	A Throop	00111111111101011111—16

The Stanleys and West Torontos shot off for second and third money, the former won by 1 bird. The London team, with S. Glover, of Carleton Place in, and No. 1 of St. Hubert, shot off for fourth and fifth, the Saints won by 3 birds.

MONTREAL, July 1.—Dominion Day was a great day in the annals of the Longueuil Gun Club, the weather was all that could be desired, and never was there such a gathering of sportsmen seen at the club house. The city clubs were very well represented and seem to have carried off the honors of the day, and their shooting was very much appreciated by the hundreds of lookers-on. Exactly at 1:15 P. M. Dr. Barnes of the Dominion opened fire

on the clays with a score of 5 straight; then followed the series of sweeps, and the excitement was kept up until old Sol had retired for the night, and every one seemed to have enjoyed a good afternoon's sport. Following were the scores: First sweep, 10 birds, 18yds. rise:

Dr Barnes, Dominion Club.....1100111110—7
G Brault, Dominion Club.....0011110101—6
J Smith, Dominion Club.....1011111110—8
W Plateau, Cote St Paul Club.....0100000100—2
A Aubin, Cote St Paul Club.....0100000001—1
A Brault, St Lawrence Club.....1110011000—6
P O Masse, St Lawrence Club.....1000100111—5
H Pance, St Lawrence Club.....1100011000—4
J Bedard, St Lawrence Club.....0001001000—2
J Cavenagh, Longueuil Club.....0000111000—3
F Jones, Longueuil Club.....0300010110—3
P Donnelly, Longueuil Club.....0000100100—2

Second sweep, 10 birds, 18yds. rise:

G Brault, Dominion Club.....1111111000—7
Dr Barnes, Dominion Club.....0010001100—3
J Smith, Dominion Club.....1110111000—7
W Plateau, Cote St Paul Club.....0001100000—2
A Aubin, Cote St Paul Club.....0101011111—7
A Brault, St Lawrence Club.....1100100011—5
J Bedard, St Lawrence Club.....1111111001—9
P O Masse, St Lawrence Club.....0001110100—4
H Pance, St Lawrence Club.....0010001000—2
J Cavenagh, Longueuil Club.....0101001011—5
F Jones, Longueuil Club.....1110100111—7
G Horn, Longueuil.....1100001000—3
W H Kerby, Longueuil Club.....0000000001—1
P Donnelly, Longueuil Club.....0100003001—2

The shoot-off for second place resulted as follows: J. Smith 4, G. Brault 1, A. Aubin 3, F. Jones 2.

Third sweep, double birds:

G Brault, Dominion.....10 10 10 10 10—5
J Smith, Dominion.....10 00 00 00 00—1
H Pance, St. Lawrence.....00 01 10 00 00—2
A Aubin, Cote St. Paul.....00 00 10 00 11—3
J Bedard, St. Lawrence.....11 11 11 10 00—7
J Cavenagh, Longueuil.....11 00 00 10 10—4

Fourth sweep:

J Smith.....0101111100—6 H Pance.....1101110011—7
F Jones.....0110000100—3 A Aubin.....1111011111—9
A Brault.....0111110011—7 J Bedard.....1111010110—7
G Brault.....1011011110—7 J Cavenagh.....1010000001—4

Shoot for second place resulted as follows: A. Brault 4, G. Brault 2, H. Pance 3, J. Bedard 1. Mr. Westgate, of Cote St. Paul, kindly refereed the shoot to the satisfaction of everyone present.

TOWANDA ROD AND GUN CLUB, Towanda, Pa.—Some of the leading sportsmen of this place organized about a year ago the above named club. On July 4 they gave their first tournament, which was very successful. Many of the shooters were grouse and quail hunters, and faced the traps for the first time. They found it more difficult to break the flying "saucers," as they called them, than to kill a bird on the wing, and those who had the most experience at trap-shooting were the winners. The events were shot from three traps, known angles and under American Shooting Association rules. Bluerock traps and targets were used. J. W. Mix acted as referee, W. A. Chamberlin, C. W. Dimock, C. S. Russell and Thomas Noble, judges. H. I. Graves, official scorer. The following are the scores:

For bronze whip thermometer, entrance 10 cents:

Dittrich.....01011—3 Snyder.....00111—3
Parks.....00101—2 Thomas.....00100—1
Montanye.....10000—1 Frutchey.....11110—4
Rittenbury.....01111—4 F Emery.....10100—2
J Emery.....11001—3 Davis.....00100—1

In shooting off tie Rittenbury won.

Sweepstakes, entrance 25c., divided 40, 30, 20 and 10 per cent.

Snyder.....000100—1 Dittrich.....110010—3
Park.....111111—6 Rittenbury.....111101—5
La Plant.....100111—4 Davis.....111101—5
Thomas.....100100—2 J Emery.....001100—2
Montanye.....001001—3

Park first, second divided, La Plant third, Dittrich fourth.

Match for one bag shot, walking match:

Dittrich.....11100—3 Park.....10111—4
Snyder.....10110—3 F Emery.....01111—4
Thomas.....10111—4 La Plant.....11101—4
Davis.....11000—2 J Emery.....00011—2

Park won in shooting off tie.

Sweepstake, entrance 50 cents, divided 50, 30 and 20 per cent.:

La Plant.....111011—5 Davis.....1110111—5
Parks.....000111—3 Rittenbury.....1110011—4
Snyder.....010011—2 Wilbur.....0110012
J Emery.....101101—4 Dittrich.....1111116
Crausha.....001100—2

Dittrich first, ties div.

For 100 loaded Rival shells, entrance 25 cents:

Parks.....1111111—6 Crausha.....0110103
Davis.....0111104 Thomas.....0111014
La Plant.....1110104 Dittrich.....1111116
J Emery.....1110104 Smith.....1001114
George.....0100001—1 Knaresboro.....1001114

Parks and Dittrich div. shells.

Sweepstake, entrance 25 cents, divided 60 and 40 per cent., 3 pairs targets:

Montanye.....10 01 10—3 Dittrich.....10 11 00—3
Carl.....10 01 00—2 Knaresboro.....11 10 11—5

Streeter.....00 11 00—2 Crauska.....10 00 10—2
Rittenbury.....10 10 10—3 Dittrich.....01 00 01—2

In shoot off Montanye won.—W. F. DITTRICH, Secretary.

SHERMAN GUN CLUB—Columbus, O., July 4.—The shooting contest on the Sherman Gun Club grounds was well attended. Many prominent lovers of the dog and gun drove out during the afternoon. In the match between the Sherman Gun Club and the Galion Club of Galion the former won by breaking 46 birds more than the latter. This is the most severe defeat any club ever suffered from the Sherman team. They defeated the Galion Club at Galion last summer, but not so badly. The conditions of the match were 25 bluerock targets per man, thrown from 3 traps, American Shooting Association rules to govern. Score:

Sherman Gun Club.

The following match was shot between Sprigg and Fink, the former to break more birds out of 27 than the latter out of 30. Score:

Sprigg.....1111111101011111111101111 —24
Fink.....1101110111011100111111111111—23

Spriggs won by one bird.

ST. LOUIS, Mo., July 5.—For the second time in the space of ten days Mr. William Crosby, of O'Fallon Depot, Ill., defeated Mr. J. L. Winston, of this city, to-day. The weather was favorable and a large crowd was present to witness the shoot. Betting on the result was heavy at odds of $100 to $80 on Crosby. Match at 100 single bluerocks, American Association rules, $100 a side. Both contestants used 10-gauge guns:

W Crosby.....0111110111— 8 J L Winston....1111110101— 8

A dead out of bounds.

Field won first after an exciting shoot-off that required 10 birds to decide, second was div. between Moore, Dozier, Wilson, Williams and Smith, Hayden, D. Rankin, Samuels and Andrews div. third, ties on 3 div. fourth.

Third shoot, handicap, insurance medal, value $150, presented to the club July 4, 1878, by the insurance agents and companies of St. Louis, to be shot for annually and owned by the member winning it three times in succession. Conditions: Nine live birds, ground traps, use of both barrels, handicap distance; 3 pairs pigeons, 21yds. rise. First tie at 5 single birds, second tie same, entrance cost of birds only, with an optional sweepstake of $2; club adds $30; money to be divided 35, 27½, 20, 12½ and 5 per cent.:

Longden.....1111111108—8 Rakestraw.....1111001117—7

Carter won first, Ross second, Rummell third.

Sweepstakes at 6 singles:

Dean.....1111116—6 Ross.....1111116—6
Osborn.....1111116—6 Rummell.....1011115—5
Carter.....1111116—6 Thomas.....0110013—3
Dick Smith.....1011115—5

Ross won first, Dick Smith won second.

HARRISBURG, Pa., July 4.—Eleven members of the West End Social Gun Club went out to the stock yard grounds to compete for the gold medal. Keystone targets and 3 traps were used. The slim attendance at the shoot can be accounted for by some of the members having gone for woodcock, fishing, on excursions, etc. The club is in a prosperous condition and will hold a picnic and tournament, beginning August 8, at Williams Grove, Cumberland county, Pa.

M. H. B.

EATON, N. Y.—Eaton Gun Club, July 9, match at 9 kingbirds, 5 traps, 18yds. rise:

Richardson.....1111011111—8 Bell.....1011011111—7
Ormsby.....0001110110—3 Briggs .....0111001101—5
Stone.....1111010117—7

Tie for second place Stone won. Badge shoot:

Richardson...10101111111101—11 Bell.....0011001111011100— 8
Ormsby.....0110100000111010— 6 Curtis.....1111111011101111—13
Stone.....0300010010110101— 5 Peet.....0111011111111111—12
Briggs.....1011101011111010—10

Curtis won. Peet was a little off because he shot the new gun that he won at Canistota July 4. He also got the honor of being the best shot in Madison county. Our club are soon to shoot a return match with Oneida. The clubs of the county are talking of an organization and a county badge to be shot for every month and held by the winning team.—G. F. BELL.

SUBURBAN SHOOTING GROUND.—Claremont, N. J., July 4.—The rain spoiled only one event at the New York Suburban Gun Club's grounds at Claremont to-day. That was a general sweepstakes contest. A good many people who were expected to be there did not come, and the event was omitted from the programme. Twelve events did take place. The shooting was fair, considering the weather. Clay-pigeons were the targets. The first event was a sweepstake. 75 cents entrance fee, 10 shots to each man: Miller 10, Johnston 7, Tukey 6, Hunt 9, Whitney 7, Schultz 7. The scores of the other events, all sweepstakes, entrance fee from 50 cents to $1, were as follows: Second event, 10 birds: Miller 9, Tukey 6, Johnston 9, Hunt 10, Whitney 6, Schultz 8, Quad 6, Yeoman 8, Higgins 8. Third event, 10 birds: Johnston 9, Hunt 8, Richards 2, Dayton 8, Albeer 10, Whitney 2, Miller 10, Schultz 6, Le Ray 7, Higgins 9, Yeoman 5. Fourth event, 10 birds: Dayton 7, Richards 5, Taylor 9, Johnston 9, Seigle 9, Le Ray 8, Quad 9, Whitney 9, Yeoman 9, Miller 10, Albeer 8, Hunt 10, Schultz 8, Higgins 9. Fifth event, 10 birds: Miller 9, Johnston 9, Le Ray 7, Quad 6, Whitney 8, Yeoman 7, Albeer 6, Hunt 8, Schultz 7, Higgins 7, Dayton 7, Taylor 9, Seigle 8, J. Richards 7. Sixth event, 10 birds: Miller 10, Johnson 9, Le Ray 9, Quad 7, Whitney 8, Yeoman 10, Albeer 9, Hunt 10, Higgins 7, Dayton 6, Taylor 7, Seigle 9, J. T. Richards 9, Jones 7. Seventh event, 10 birds: Miller 10, Johnson 9, Dayton 9, Hunt 9, Collins 9, Levison 5, Taylor 10, Quad 5, E. D. Miller 9, Richards 5, Yeoman 8, Seigle 9, Jones 7, Lindsley 7. Eighth event, 15 birds: Miller 14, Johnston 15, Hunt 11, Dayton 12, Collins 12, Quad 15, Seigle 12, Jones 13, Higgins 12, Lindsley 12, Taft 9, Rice 12. Ninth event, 15 birds: Miller 14, Lindsley 11, Johnston 14, Rice 13, Taft 11, Dayton 9, Seigle 12, Collins 13, Jones 13. Tenth event, 10 birds: Miller 10, Johnston 8, Lindsley 3, Sundersun 3, Moffatt 6, Evans 6, Dayton 7, Rice 8, Taft 6, Collins 9, Seigle 10, Jones 10. Eleventh event, 10 birds: Miller 9, Johnston 10, Seigle 10, Lindsley 9, Hunt 7, Dayton 5, Rice 9, Taft 6, Collins 10, Jones 5. Twelft event, 10 birds: Miller 9, Hunt 5, Seigle 7, Sundersun 7, Evans 7, Moffatt 6, Dayton 6, Rice 7, Tait 6, Collins 10, Lindsley 8, Jones 7, Johnston 9,

BLAUVELTVILLE, N. Y., July 4.—The regular holiday matches of the Spring Hill Gun Club were held to-day, and resulted as per the following scores. Had it not been for the rain, which came down in torrents and delayed the shooting for about two hours, the day would have been perfect, although the members of the Spring Hill Gun Club were perfectly satisfied with the result of the day's shooting, as they captured the championship of Rockland county for the season of 1889, under the following conditions: Pursuant to a call of delegates from the various clubs of Rockland county there assembled at Haverstraw, N. Y., on Feb. 22, 1889, delegates from the Rockland, Nyack and Spring Hill Gun Clubs, and it was resolved that there be held during the season of 1889 a series of three matches between teams composed of members of the above clubs, said matches to be at 25 bluerocks per man, Keystone rules, and to be governed by the shooting rules of the National Gun Association, said matches to be held as follows: Decoration Day, at the Rockland Gun Club's grounds, Haverstraw, N. Y.; July 4, at the Spring Hill Gun Club's grounds, Blauveltville, N. Y., and on Labor Day, September, at the Nyack Gun Club's grounds, Nyack, N. Y. The club winning two out of the three matches to be declared the champion club of the county, and in case of a tie the tie to be decided on the same day and on the grounds where same is made. The Spring Hill Gun Club having won the match on Decoration Day and also on July 4, was declared the champion gun club of Rockland county for the season of 1889. Perhaps the rain had something to do with quenching the spirits of the Nyack and Rockland gun clubs teams, but our boys were like ducks, they seemed to like it.—C. A. KITTLE.

Event No. 1, 10 single bluerock clay-pigeons, Keystone rules, sweepstake:

A D Kittle	1010000000—2	A Ten Eycke	0100100101—4

Second shoot, 9 bluerocks, entrance $1—F. S. Osborn and T. Tulley first, J. L. Hommedieu second, Wm. Cramer third, C. Wallace fourth.

Third shoot, 12 bluerocks, entrance $2—J. O'Connell and T. Tulley first, T. A. Winfield and C. Mallace second, Geo. Naylor and W. Cramer third, L. B. Arkwright fourth.

Fourth shoot, 7 live birds, entrance $3—T. A. Winfield first, H. Klee second, W. E. Ward third, Geo. Naylor fourth.

Fifth shoot, 7 live birds, entrance $3—John Naylor first, W. E. Ward and D. Morris second, W. H. Ward and Geo. Naylor third, Wm. Cramer and Wm. Naylor fourth.

Sixth shoot, 12 bluerocks, entrance $1.50—L. B. Arkwright and T. Tulley first, Geo. Naylor second, J. O'Connell third, Wm. Cramer fourth.

Seventh shoot, 12 bluerocks, entrance $1.50—L. Fry and W. H. Ward first, T. Tulley second, J. O'Connell and T. A. Winfield third, L. B. Arkwright fourth.

Eighth shoot, 9 bluerocks, entrance $1—Wm. Cramer first, D. Morris second, E. Tulley third, Geo. Naylor fourth.

Ninth shoot, 12 bluerocks, entrance $1—Wm. Cramer first, D. Morris second, Geo. Naylor third, Wm. Tulley fourth.

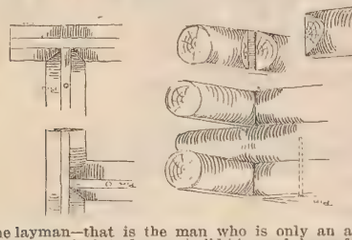
Tenth shoot, 25 cents entrance, miss and out—E. Tulley first.

BELLEVILLE, Ont., July 6.—The Forest and Stream Club have done something for trap and rifle shooting. They have fortnightly matches at the traps for valuable prizes offered by Mr. Henry Corly, M. P., president, and Mr. S. B. Burdett, M. P., at Cleveland bluerocks (3 traps) and composition balls (Card trap, revolving), the winners being handicapped 2yds. for each win. The winners so far are—Corly prize, 9 single and 3 pairs double bluerocks, 18yds. rise: Fred Roote (twice), R. S. Bell; Burdett prize, 6 single bluerocks and 7 composition balls, trap revolving, 18yds. rise: F. Roote, Geo. Twining, Robt. Day. The matches continue until Aug. 23. The rifle matches are conditioned as follows: 100yds., off-hand, standard American target, any rifle with open front sight, 10 shots. There are three prizes, for first, second and third; an aggregate prize for five best scores during season, and a handicap prize given by W. H. Biggan, first vice-president. The winners of first in match up to date are: Geo. Twining, W. H. Biggar, R. S. Bell and R. Day. In handicap: Geo. Twining, W. Mills, R. S. Bell and R. Day. These matches also continue till Aug. 23.—PORT TACK.

YOUNGSTOWN, O., July 5.—The Youngstown Gun Club at its weekly shoot this afternoon had a large attendance, nearly every member being present. The conditions were 25 birds, 3 traps, 18yds. rise, National rules governing, resulting as follows: Class A—Will Smith 24, J. N. Whiteside 22, Warner Arms 18. Class B—Independence Grove 21, R. Lawlor 21, Robert Bentley 18, Isaac Gray 18, John A. Logan, Jr., 15, Will Hitchcock, Jr., 15. Grove won the badge in shooting off the tie with Lawlor. Class C—The best scores were made by Will Stambaugh and F. G. Nixon, each securing 18, and in shooting off the tie Nixon won. In the practice shoot the best scores were made by Frank Hitchcock and J. F. Whiteside, each securing 20. The winners in the three classes of the Franklyn Gun Club shoot were E. S. Franklyn and John Batteson.

OTTAWA, July 6.—The members of the St. Hubert Gun Club are highly pleased with their success in Toronto, but complain of the Toronto Team No. 1 putting in Wayper, of Guelph, and Wyness, of Buffalo, alleging that neither is a *bona fide* member of the Toronto club. The St. Huberts, by winning the Stanley cup and $88 in cash, proved themselves probably the best amateur club in Canada to-day. To-day their shooting was a sweep at 15 birds each: P. N. Thompson 14, Dr. A. Martin 14, Ed White 12, R. G. Dalton 12, P. Trudeau 11, S. White 8. Sweep at 10 each: Dr. Martin 9, P. Thompson 8, Ed White 7, J. Deslauriers 7, R. Dalton 6, W. Lett 6, S. White 6. Sweep at 5 doubles: Ed White 8, P. Thompson 8, Dr. Martin 6, R. Dalton 5, J. Deslauriers 5.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.



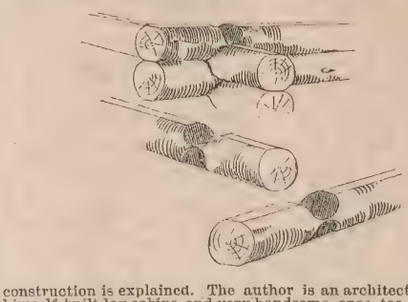
NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

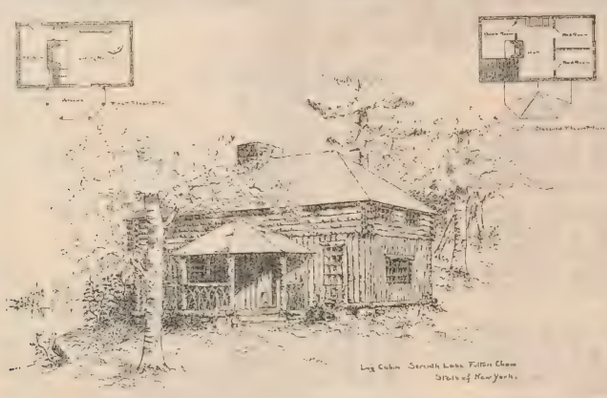
LOG CABINS.

LOG CABINS: How to Build and Furnish Them, by William S Wicks, New York: Forest and Stream Pub. Co., price $1.50.

Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction, from digging the post holes for the foundation to cutting out the ridge-pole for the peak; and he has described the successive steps so well



that the layman—that is the man who is only an amateur in handling carpenter's tools—can build his woods home for himself.



It is a book that has come just in time, for every favorite region of summer and autumn outdoor resort testifies to the growing taste for substantial, permanent camps. It is delightful to take one's tent and pitch it wherever fancy may choose, here this year and there the next, and at all times to be ready for a change. And yet many are finding out, too, the satisfaction of some fixed abiding place, even on going into the woods or to the lake shore or the river bank. If one falls in love with a pretty lake or a knoll with its delectable vista, there is added to the enjoyment of it a home feeling, if in place of the transient tent there be a substantial rough-hewn cabin.

In the Adirondacks and in the Maine wilderness and on the Western lakes there have sprung up, of late years, beautiful specimens of rustic architecture called camps, but which are in reality very comfortable dwellings of backwoods log cabin pattern, beautiful and made charming by the skill of the architect. These permanent camps are multiplying; and they are destined to be made all the more popular by this manual, which Mr. Wicks has prepared as a labor of love.

The book is thoroughly practical. Every step in the process of

construction is explained. The author is an architect, who has himself built log cabins, and very handsome ones, too, as shown in the plates. These designs are numerous and varied. They are a pleasing revelation of the artistic possibilities of log cabin architecture. Nothing is more appropriate for camps—the permanent private lodges or club houses—than the log cabin; and it

would be difficult to find a more thoroughly enjoyable and satisfactory mode of spending one's leisure days in camp than in building—with the aid of Mr. Wicks's manual—a log cabin for one's own occupancy.

Plans are given for cabins, large and small, with details of exterior and interior finish; and there are also some very useful directions for constructing temporary shelters—the Indian camp, brush camp, Indian wigwam, brush house and bark camp. The furnishing consists of tables, chairs, bedsteads and other articles, all made of the material at hand, and all in keeping with the style of the house. The illustrations are numerous and helpful.

The illustration here given is reduced from that in the book.

31. Pleon, Open.
31. Hull, Ladies' Day.
31. Cedar Point.

REGATTA WEEK ON THE SOUND.

THOUGH it is only a few years since the Larchmont Y. C. came in with its annual regatta on July 4 to supplement the June races in New York Bay, the courses between New Rochelle and Stamford are almost as well-known, and promise in time to become as famous for hard fought battles as the older ones about Sandy Hook and the Narrows. Of course the big craft that have sailed so many races in the past about the Lower Bay will never come to the Sound, but from present indications it would seem almost as though they had done with racing in the Bay as well. The only classes above 53ft. that can be said to have any life this year or in fact last year either, are the 90ft. schooners and the 70ft. single stickers; besides them the racing is left to the small fry. If the present interest in the small classes, notably the 40 and 30ft., should prove permanent, this may not be such a great evil, but at this time it is very hard to say what the future is apt to bring forth. Plenty of races and good prizes fail to bring good entries in the larger classes, many classes not filling at all, while in the smaller, in spite of the existing activity and excitement, it is an open question whether the fight will be kept up for more than one or two seasons, and if not what is to follow it. There is no ground for fear that yacht racing in America will die out or even decline, on the contrary it must grow as the interest in yachting extends, but beyond this its future is hard to divine. The refinements of late introduced into racing have served to bring in some new men by the additional excitement offered, but to discourage more by the increased labor and cost of racing a yacht in winning form. Where the happy mean between overdevelopement on the one hand and lack of interest and excitement on the other is to be reached, is a problem which all yacht clubs could study to advantage. Just now a great boom is on in the 40ft. class, promising plenty of sport for this year at least, and though the offered boom in the 70ft. class has been shut off by the practical selection of Volunteer to meet Valkyrie, it is very probable that the races between the latter and the leaders of the class here for the Paine Cup will result in a revival of the class next year.

That there is not more racing in all classes is not the fault of the clubs, as more races are on this year than ever before. The Larchmont annual is this year backed up by four others, the whole series being, we hope, the inauguration of a second race week on the Sound, in addition to the regular June races on the Bay. The week opened with a special race for the forties given by the Oyster Bay Y. C. on Monday, followed on Thursday by the Larchmont annual for all classes, and on Saturday came the Larchmont special for the forties again, and on Monday a regatta for all classes by the American Y. C., its first venture in the way of sailing races. Besides these leading events the New Rochelle Y. C. sailed its annual regatta on Saturday, and the Oyster Bay Y. C. on Thursday, the Cedar Point Y. C., further to the east, also sailing on the latter date. Altogether the week has been a lively one on the Sound.

OYSTER BAY Y. C., 40FT. CLASS, JULY 1.

The present Oyster Bay Y. C., a young and flourishing club that is snugly esconced in one of the most beautiful nooks of the Atlantic coast, is to a certain extent the successor of the Seawanhaka Y. C., first organized on the same spot in 1871, and it is only natural that the older club should find a hearty welcome in its first home on the occasion of each annual cruise. This year, in recognition of the new class that is carrying all the brunt of the racing, the customary festivities on shore were supplemented by a special race for a cup costing $200, offered by the Oyster Bay Y. C., for the 40ft. class, the course being from the red buoy in the mouth of the harbor to a markboat off Great Captain's Island, 6¾ knots, thence around Mattinnecock Buoy, 4½ knots, and home by the way of Center Island Buoy, 7 knots, or nearly 18 in all. The fleet of the Seawanhaka C. Y. C. was anchored in the harbor over Sunday night, the weather being rainy and unpleasant, and Monday morning was no better, the wind being S. E. and light rain falling. The regatta committee, Messrs. F. D. Weeks, F. T. Underhill and R. T. Townsend, were out early in the Mayflower's naphtha launch, and on the arrival of the first train from New York on the new extension lately completed to Oyster Bay, the fleet of forties stood out for the starting line.

The starters were Liris, sailed by Capt. Sloan, Gorilla, sailed by Capt. Smith, Maraquita, sailed by Capt. Haff, Jr., Banshee, sailed by Mr. Alley, Minerva, sailed by Capt. Chas. Barr, and Pappoose, sailed by Capt. Nat Watson. The boats were not all measured by the Seawanhaka rules, under which the race was sailed, but Liris allowed the others in the order as above. Owing to the lack of sailing directions there was some doubt as to the time of starting on the part of several yachts, and those who counted on the regular 10 minutes interval were all handicapped, as but 5 minutes were allowed between guns. The wind was moderate and over the port quarter at the start, spinaker booms being lowered to port. Pappoose and Maraquita, both with clubtopsails set, were waiting for the gun and crossed without a handicap, but Liris and Minerva, the former with jibheader and the latter with a small clubtopsail, were dogging each other above the line with plenty of time to spare, as they supposed, but were caught by the gun, Liris having a few seconds handicap. She came for the weather end of the line at a good speed, Minerva under her lee quarter, but just as Liris was up with the buoy and within 30ft. of it as she was going, Minerva luffed sharp up under Liris's stern. As soon as she was clear of Liris's sail her skipper was able to see how close he was to the buoy, and to avoid it he tacked, narrowly shaving Banshee's bowsprit end, and stood up the harbor, losing a couple of minutes before he was able to come on his course for the line again.

A protest followed immediately after the race, but was not allowed, the evidence being insufficient to show that Minerva had established an overlap, or done any more than luff under Liris's stern. Banshee and Gorilla followed Liris across, Minerva being last. Pappoose was timed at 12:03:49, Maraquita at 12:04:59, and the rest at 12:05:00. Maraquita was evidently looking to retrieve her losses down the bay, as she had Capt. Haff, Sr., of Titania, on board with his son, and for a time she did very well, streaking along a little astern of Pappoose, and with the rest in a straggling pack some distance astern. The lightening breeze did not suit Liris with a jibheader, and after a short time she set her huge club, the result being she came up on the leaders and dropped the laggards. Her worst rival, Minerva, was kept busy by Banshee and Gorilla astern, leaving Liris a clear field for a time. After some four miles were gone and she had nearly caught the leaders, the wind went around to the east, bringing spinakers in and booms over to port. Liris ran to windward of Maraquita, leaving her for the day, and then came up on Pappoose when within half a mile or less of the turn. Liris was to leeward, heading squarely for the mark and going through Pappoose's lee, when the latter bore away until her boom was in Liris's starboard rigging, being shoved clear by the forward hands. After this little episode and some persuasive language Pappoose bore up and left the way clear. No time was taken, but Liris turned first, then Pappoose and Maraquita in close succession, while Banshee, Minerva and Gorilla were still well astern, rounding in the order given.

After jibing Liris lowered her clubtopsail and set a small jibtopsail, but Pappoose held on to a balloon jibtopsail she had set some time before, though it was only hurting her in a strong breeze and a close reach. She had a short tussle with Maraquita and then dropped to third place. The wind freshened and drew ahead as the next mark was neared, Liris constantly gaining. Pappoose failed to hold either, as was to be expected from her small size, while Banshee, though still ahead, had all she could do with Minerva, Gorilla being practically out of it. The times at Mattinnicock Buoy were:

Liris	1 40 50	Banshee	1 45 55
Maraquita	1 42 30	Minerva	1 47 32
Pappoose	1 43 50	Gorilla	1 50 22

The last leg was a close reach, with the tide, until the Centre Island Buoy was reached, then a hard jam in against a very strong ebb tide. Liris gained a good deal on the windward work in spite of a weak boom and very bad mainsail, headsails and topsail, and finished well ahead of the fleet. Minerva did some good work, coming up to second place. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Liris	12 05 00	2 46 10	2 41 10	2 41 10
Minerva	12 05 00	2 52 15	2 47 15	2 44 09½
Maraquita	12 04 59	2 51 52½	2 46 53½	2 45 43½
Banshee	12 05 00	2 55 01¾	2 50 01¾	2 47 06¾
Pappoose	12 03 49	2 55 53½	2 51 44¼	Not m'd
Gorilla	12 05 00	2 55 56	2 50 56	2 49 48

Liris beats Minerva 2m. 59½s., Maraquita 4m. 33½s., Banshee 5m. 56¾s. and Gorilla 8m. 38s. on corrected time. The Pappoose was not measured.

In this, her first race, Liris sailed very fast considering the incomplete condition of her outfit and the poor sails and spars. Captain Sloan handled her very skilfully all day. After the race Maraquita left for City Island for a new boom, and the next day Liris sailed to Whitestone and took a tow for Bay Ridge. Her hollow spar was sent ashore on Wednesday morning and in spite of the continual rain the sailmakers were at work all the afternoon on her wet mainsail and jib. Her new boom, a solid spruce stick, was shipped at 6 P. M., and by 7 she was under way for Larchmont with a dinghy and naphtha launch in tow. She dropped anchor at Larchmont shortly after 11 P. M., in readiness for her second race.

LARCHMONT Y. C. ANNUAL REGATTA, JULY 4.

The experience of the Larchmont Y. C. on Thursday gave ample proof, if any were needed, of the impossibility of running a race to suit yachtsmen in connection with a regatta for the ladies. The ladies and guests' steamer is a necessary feature of the annual regatta of every club, and cannot be neglected, but unfortunately it is the cause of more flukes and spoiled races than any other part of the programme. No doubt the men aboard the racing craft love their wives and sweethearts dearly, and were anxious for them to see the race, but it is rather trying to box about the line for a good two hours after all is ready, watching the morning wind that would have made a quick race die slowly but surely away. In such a case there is but one resource and consolation, to heap curses loud and deep on the heads of the regatta committee, and Thursday was no exception; though as it appears the fault did not lie with the committee. The landing places about Larchmont are very bad, and steamers will not come near the shore, so that there is great difficulty in getting the ladies aboard. In the present case a small steamer had been engaged to carry them out to the Albertina, but it broke down and did not appear at all. Some three hours were spent in the endeavor to carry out the guests in small boats, one launch load of pretty girls being nearly swamped under the Albertina's guards.

The morning had been fairly clear, with a moderate breeze from S.W., and had the race started promptly on time it might have been sailed through before the calm came; but owing to the delay it was 12:42 before the preparatory gun was fired from the tug Dalzell, on which were Messrs. E. J. Greacen, C. C. Munroe and Otto Sarony, the regatta committee. The conditions were as follows:

Prizes will be offered in each class where two yachts start with full intention of completing the course, and in each class where four or more yachts start, a second prize will be given. An individual prize will be given to each member of the crew of the winning yacht in any of the Classes 12, 13, 14, 15, 16, in which three or more yachts start with full intention of completing the course.

The following special prizes are announced: The cups presented to the club in 1883 by Washington E. Connor and George J. Gould as challenge cups, will be sailed as follows: For Class III. the Connor Cup; for Classes VI. and VII. the Gould Cup. The cups are to be held for the yachting season and the names of the winning yachts and date of regatta will be inscribed thereon. Bayard Thayer has presented to the club a cup valued at $350, to be competed for by yachts in Class VII., upon the condition that it shall become the property of the yacht winning it twice, not necessarily consecutively. The Thayer Cup will be sailed for at the annual regatta, and also at the special race on July 6, and will be open for competition to all yachts in Class VII. competing in those races. The Connor and Gould cups will be only open for competition to yachts enrolled in the Larchmont Y. C. All yachts entered for this regatta must report to the regatta committee at the club house by or before 9 o'clock the morning of the race, where they can obtain sailing directions and a chart of the course to be sailed. Except in Classes A and B, and 1 and 2, sloops, all yachts must be manned by amateurs exclusively, but any cabin yacht may carry and use her regular crew.

The courses were from a starting and finishing line off the harbor (which, by the way, was not well placed, as the course still was covered by some of the fleet at anchor) to a markboat in Hempstead Harbor, and thence around a markboat off Great Captain's Island, and back, for all classes of cabin craft. The open boats rounded the red buoy off Scotch Caps, then rounded the Hempstead markboat, and returned over the same course. One point in passing in regard to the markboats, that at Hempstead mark had a good sized sailboat and a skiff with long painters fast to her stern, making a serious obstacle to yachts when turning close. It would be an interesting question as to whether a foul would be made by a yacht touching such unexpected attachments to a markboat. The starters were:

CLASS D—SLOOPS AND CUTTERS.

Length.	Owner.	Helmsman.
Clara (cut) 53.00	Dr. J. C. Barron	Owner.
Anaconda 52.00	John G. Prague	Owner.

CLASS 7—SLOOPS—COURSE 20 MILES.

Nymph (cb) 39.10¾	F. W. Flint	E. A. Willard.
Liris (kl) 39.08½	C. W. Wetmore	J. F. Lovejoy.
Maraquita (kl) 39.11½	August Belmont, Jr.	Fred Swift.
Gorilla (cb) 39.11	R. P. Carroll	R. N. Ellis.
Banshee (cb) 39.11¾	Paul S. Pearsall	A. B. Alley.

CLASS 8—SLOOPS—COURSE 20 MILES.

Eurybia 34.06	Chas. Pryer	Owner.
Volusia 32.09½	J. M. Williams	Thornton Smith.

CLASS 9—SLOOPS—COURSE 20 MILES.

Kathleen (kl) 29.10¾	Wm. Whitlock	Owner.
Amazon (cb) 25.10	Z. E. Lewis	Owner.
Vorant (cb) 28.00	Geo. Tyson	

CLASS 11—CAT-RIGGED—COURSE 13 MILES.

Lakshmi 29.10	C. McK. Loeser	
Dorothy 22.01	W. H. Coombs	
Aura 29.00	W. H. Simonson	
Brunhilde 27.02	C. T. Willis	

CLASS 13—CAT-RIGGED—COURSE 10 MILES.

Apache 22.10	T. E. Woodbury	
Coyote 20.03	H. W. G. Bucknall	

CLASS 15—CAT-RIGGED—COURSE 10 MILES.

Orienta 21.10	Geo. I. Seney, Jr.	

CLASS 16—CAT-RIGGED—COURSE 10 MILES.

Rival 19.11	Geo. W. Butts	
Ione		
Giggle 19.08	Leonard Jacobs, Jr.	

Only Azalea turned up to represent the two-stickers, and she could not find a rival. There are, we believe, some very fine boats in the 70ft. class about New York, but none appeared at the line, and the handsome Connor cup went begging. Clara and Anaconda were the largest yachts starting. The 40ft. class turned out but five starters, Minerva being on her way to Marblehead, Tomahawk at Newport, while Pappoose had neither amateurs nor professionals for a crew. While waiting for the start a funny incident occurred: the saucy little Giggle, noticing the number 13 on Liris's mainsail, and that her long overhang gave her by Larchmont rules one more man than the shorter boats, or 13 in all, ventured some comments on unlucky numbers. In spite of the many thirteens Liris won in her class, while the Giggle was turned bottom up in the squall.

Before noon a bank of black clouds had been growing larger in the north, and by the time the start was given the whole northern sky was covered with varying tints of black, shading from the darkest down to a soft gray near the horizon. The sight was a most beautiful one, but after the starting gun fired at 12:47 the eager sailors had little time to study cloud effects. Clara led off the dance to Hempstead, with boom off the port quarter, Anaconda hurrying after her, and then came the forties, led by Banshee, with Liris, Gorilla, Maraquita and Nymph in order, the latter holding back until some 7 minutes had gone. Maraquita was tangled up with Lakshmi just at the line, being delayed a little, but it did not count in the time. Banshee led out to windward, but Liris was soon on her beam, and just ahead of Gorilla. Banshee luffed out, forcing Liris to do the same, thus aiding Gorilla. After a minute Banshee paid quickly off and laid her true course for the mark at Hempstead Harbor, Liris following. The overture to the squall now began, the fleet jibing over as the new wind struck the boats from the northwest. Clara and Anaconda were about the same as at the start, but Liris was soon ahead of her class, with Banshee next, then Gorilla and Maraquita, while Nymph was just starting under the impulse of the squall. The little fellows astern had weakened as the clouds grew blacker, and some dropped everything, Kathleen very wisely housing her topmast and keeping on under low sails. Liris rounded first of the forties, but with three boats at her heels, the times being:

Clara	1 17 04	Banshee	1 20 58
Anaconda	1 17 16	Gorilla	1 20 58
Liris	1 19 15	Nymph	1 22 23
Maraquita	1 20 41		

Nymph had gained about 2½m. on Liris in coming across. Once around the mark all settled down to work through the squall, which was now at its height, the rain soon pouring in perfect torrents. Liris was the weather boat, boiling along with plank-sheer to, while to leeward were Banshee, Maraquita and Gorilla, the latter in trouble with her gaff topsail, the sail streaming out to leeward. Nymph was coming up astern, but there was no time for a close scrutiny of positions and changes, those on the yachts were too busy and those on the judges' tug could see nothing for the rain. After a couple of miles had been covered, Liris still ahead, her bowsprit doubled up into an S curve, a bow to leeward just outside the gammon, and a corresponding bow to windward in the outer end. For a minute or more, before the word was passed and the boat run off the wind, the stick went through some wonderful gyrations, bending like a piece of steel, the cheese and lime joint opening and closing, but still it stood, though badly sprung. The stick was a beautiful piece of clear spruce, hollowed and bolted in addition to the cement, but by the time the jib was lowered it was past all use in any wind. The yacht was hove to for three or four minutes until the jib was stowed and the full damage ascertained, and then, though to all appearances out of it, with some 14 miles yet to go, through a heavy squall, and with four sound boats against her, she was brought on her course for Captain's Island under foresail and whole mainsail, and kept going through the rain. She had made well to windward before the collapse, and even now the others were made out in a string to leeward and but little ahead. As the mark was neared the rain lessened as well as the wind, and boats at some distance were visible. Kathleen had lost her nominal opponents, Vorant and Amazon, and had passed Eurybia, in the next class, during the squall. Giggle was the only one of the small craft to come in grief, as previously noted, her crew being picked up safely. The times at Captain's Island were:

Clara	2 07 50	Banshee	2 17 44
Anaconda	2 10 35	Gorilla	2 18 21
Nymph	2 16 47	Liris	2 18 43
Maraquita	2 17 20		

Clara had gained nearly 3½m. on Anaconda; while Nymph had done the best of all the forties, being now leading boat. Liris had hung on bravely, but with lightening wind and a beat home she had little show under such canvas as she could set. However, after rounding the mark her No. 2 jib was set, and she was eased along very carefully, the small jibtopsail and the working topsail also being sent aloft. Nymph was leaving her, but she could about hold Maraquita, and had at least a show for second if nothing carried away. As the last turn was neared and the breeze grew still lighter, a preventer was put on the spar and the second jib was shifted for the first, the balloon foresail and small jibtopsail being still on her. Both Banshee and Gorilla were well astern, not being timed with the others at the mark. The times of the leaders were:

Clara	3 05 55	Maraquita	3 33 25
Anaconda	3 15 50	Liris	3 34 51
Nymph	3 28 43		

Clara was well over the last leg, with very little wind in toward Larchmont, when Liris turned Hempstead mark astern of Nymph and Maraquita, the former being 6m. ahead of her, to say nothing of the difference at the start. The stern chase seemed hopeless, but when Nymph was seen standing straight for Larchmont, with little wind and a strong ebb tide to carry her down, the skipper of the Liris decided to try a different course, and, instead of tacking in Maraquita's wake, held on the starboard tack, working the shore close in to Sands's Point, to windward, so far as there was any wind, and lee-bowing the strong ebb. The heavy wet mainsail, jib and working topsail, all sitting badly, were worthless, and all the work was done by the balloon foresail and jibtopsail. With most careful steering and both balloon sheets in hand and constantly tended, the boat was worked slowly across the tide, while her two rivals, further to leeward, were tacking back and forth in the effort to find the breeze, all the time losing ground in the tide. Clara had worked well across under the north shore and was moving very slowly, but with a draft to her sails from a shore breeze, while Anaconda, further out, was waiting for the wind to come.

Inch by inch Liris drew to windward of the others and nearer to the finish, though sometimes entirely becalmed. Banshee had rounded, ahead of Gorilla, and stood on after Liris, but was hopelessly astern. For nearly three hours the game went on, Nymph once getting a little puff that threatened to send her over the line, the last mile being made in phenomenally slow time, but at last Liris was well across the tide and to windward of the line, and bore down in triumph the winner of a hard race. She had done well from the start until the accident, and also under easy canvas on the way home, and while she never could have outsailed Nymph from the Captain's Island mark home in her crippled condition, the final victory was won not by any shift of wind which gave her an advantage over her rival, but by hard and careful work in piloting and trimming sails on the last leg. Besides the regular class prize she wins the first leg for the Thayer cup, Nymph taking the Gould cup, as neither Liris nor Maraquita belong to the club. Maraquita finally beat Nymph in, while little Kathleen finished after Banshee and ahead of Gorilla, beating Eurybia in the 35ft. class by a large margin on even time.

OYSTER BAY Y. C., ANNUAL REGATTA, JULY 4.

The fifth annual regatta of the Oyster Bay Y. C. was sailed on July 4, in a strong S.W. breeze, the course being twice around a triangle, 17 miles in all, with 7 starters:

SLOOPS.

Name.	Owner.	Length.
Mirth	J. W. Beekman	31.00
Indolent	S. V. R. Cruger	31.00
Tahoe	F. T. Underhill	29.00

JIB AND MAINSAIL BOATS.

Nadjy	A. P. Montant	27.06
Mist	Alfred Roosevelt	25.00
Dodo	E. M. Townsend, Jr.	24.08
Eleanor	W. J. Youngs	22.06

The prize in the first class was the club challenge cup, which has been raced for in four regattas, no boat ever winning three legs; so that this year it was offered to the winner of the annual regatta. A $75 cup was given in second class. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Mirth	10 26 00	12 42 10	2 16 10	2 16 10
Indolent	10 28 30	12 50 30	2 22 00	2 21 60
Tahoe	10 26 30	12 58 00	2 31 30	2 29 05
Nadjy	10 29 50	12 57 00	2 27 30	2 23 25
SECOND CLASS.				
Mist	10 29 15	Did not finish.		
Dodo	10 27 15	12 56 00	2 28 45	2 28 45
Eleanor	10 28 15	1 05 10	2 36 55	2 34 45

The regatta committee were R. C. Townsend, E. M. Townsend, Jr., T. D. Weeks and F. T. Underhill.

CEDAR POINT Y. C. ANNUAL REGATTA, JULY 4.

The second of a series of regattas by the Cedar Point Y. C. was sailed over a triangular course of 19 miles, on July 4, in a strong southwest wind followed by a thunder storm. The times were:

	Start.	Finish.	Elapsed.
CLASS E.			
Clytie	11 24 38	2 47 09	3 22 31
Hebe	11 25 53	2 59 59	3 34 06
CLASS F.			
Amateur	11 20 21	Did not finish.	
CLASS H.			
Alice	11 21 21	Did not finish.	
Tern	11 26 30	Did not finish.	
Rival	11 21 01	2 42 19	3 21 18
Remona	11 20 49	2 43 11	3 22 22
CLASS K.			
Compo	11 16 49	Did not finish.	
Wawa	11 17 15	Did not finish.	
Peggy	11 16 20	2 59 56	3 43 36
Quaker City	11 15 09	2 45 10	3 30 01

LARCHMONT Y. C. SPECIAL RACE, JULY 6.

The special race of the Larchmont Y. C. for a prize cup valued at $150 was sailed on Saturday in light and fluky weather. In addition to the regular prize the Thayer cup, valued at $250, was also up for the second time. Liris had won one leg for the cup on Thursday, and her chances were considered very good to take it finally in the second race, but she was unable to get a new bowsprit in time at Piepgrass's yard. The old one was fished, and she came into Larchmont on Saturday morning under full canvas, but the stick was still very weak, so a batten was lashed on. The race was delayed for some time waiting for her, but finally she was ready. Besides her were Nymph, steered by Mr. E. A. Willard; Maraquita, steered by Mr. Burgess; Gorilla, steered by Mr. A. Cary Smith, and Pappoose, steered by Capt. Nat Watson, her skipper. By an agreement of owners made in the morning there were no restrictions on sails or crew, and all swung clubtopsails and were at liberty to have professional skippers at the wheel. The course laid out was ten miles to windward and return, the wind being east and of moderate strength, so the tug was sent to lay off the course, the regatta committee going on the steam yacht Inanda. As soon as Liris came on the wind for the line her bowsprit doubled up again, so she ran to leeward and took in her jib, not starting. The start was given at 12:05, and the fleet crossed as follows:

Maraquita	12 06 02	Gorilla	12 06 25
Pappoose	12 08 20	Nymph	12 09 38

Mr. Burgess steered Maraquita and Mr. Smith steered Gorilla, the first time that the two designers have sailed side by side. Capt. Sloan was on board Gorilla, being engaged to steer her in her races at Marblehead.

All stood over on port tack, Maraquita well ahead and gaining for some time. The wind soon fell very light, while the flood tide was running strong against the fleet. Pappoose and Nymph worked the north shore and Maraquita the south for some time, but at last all came together off Oak Point, Maraquita still ahead. Liris had kept to leeward of the fleet with second jib set, and was not far from the leaders, but near Oyster Bay she took the ground, hanging for a quarter of an hour. The fleet was becalmed off Oyster Bay for several hours in company with the racing fleet of the Oyster Bay Y. C., but finally Pappoose managed quietly to give the slip to the larger craft, and started across on starboard tack. After some very slow work she managed to turn the mark at 4:48, the others still lying becalmed. After a time the wind came in light from S. W., and the three set spinakers to starboard, Gorilla being now ahead of Maraquita and Nymph. The three were timed:

Gorilla	5 32 35	Nymph	5 39 49
Maraquita	5 36 43		

Pappoose was miles away, working to windward, when Gorilla turned. The three had a very pretty fight all the way. Nymph showed up best in the windward work, finishing a few seconds ahead of Gorilla, and an hour after Pappoose. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Pappoose	12 08 20	6 31 37	6 23 17	not fig'd
Nymph	12 09 38	7 37 55	7 28 17	7 28 06
Gorilla	12 06 25	7 35 10	7 28 35	7 28 45
Maraquita	12 05 02	7 38 58	7 32 56	7 32 37

Shortly after the race Pappoose and Maraquita left for Marblehead. On Sunday morning Gorilla and Kathleen both started for Marblehead, where they will race on Saturday. Liris ran up to City Island, shipping her new solid bowsprit in the evening and returning to Larchmont late at night in readiness for Monday's race. Neither she nor Nymph will go around the Cape. It is just announced that Gen. Paine has bought Baboon, and if he carries into the 40ft. class, the spirit and skill that have won fame for him in the 90ft., he is likely to set a lively tune for some of the forties to dance to. Baboon is one of the handsomest and fastest of the Burgess forties, and with a sail plan of about 2,900ft. she will receive time from all of this year's craft except Minerva. The races east of the cape will probably bring together the Fife keel Minerva, the Smith centerboarder Gorilla, the two McVey keels, Helen and Alice, and the Burgess boats Baboon, Pappoose, Maraquita and Verena, the latter a centerboarder. The Weld and Hovey cups, as well as the regular prizes of the E. Y. C., will be raced for. In the 30ft. class Kathleen will meet Elf, Saracen, Marguerite, and several boats of less note.

NEW ROCHELLE Y. C., FOURTH ANNUAL REGATTA.

The fourth annual regatta of the New Rochelle Y. C. was sailed on July 6, the courses being:

Course No. 1.—For all above the 30ft. class: From the starting line to and around the horizontally striped buoy at the west end of Execution Reef, leaving the same on the port hand; thence to and around buoy off Matinicock Point, leaving the same on the port hand; thence to and around stakeboat flying the club flag anchored south of Captain's Island, leaving the same on the port hand; thence to the horizontally striped buoy at the east end of Execution Beef, leaving it on the starboard hand; thence to and around the horizontally striped buoy at the west end of Execution Reef, leaving all buoys on the said reef on the starboard hand; thence to and across the finishing line in an opposite direction from the start. Distance, 22 nautical miles.

Course No. 2.—For the 30ft. and all smaller classes: From the starting point to and around the horizontally striped buoy at the west end of Execution Reef, leaving the same on the port hand; thence to and around the Black Buoy off Matinicock Point, leaving the same on the port hand; thence to and around the easterly home stakeboat, leaving the same on the port hand; thence to the horizontally striped buoy at the east end of Execution Reef, leaving it on the starboard hand; thence to and around the horizontally striped buoy at the west end of Execution Reef, leaving all buoys on the said reef on the starboard hand; thence to and across the finishing line in an opposite direction from the start. Distance, 17 nautical miles.

The guests' steamer, Pomona, ran on a rock off David's Island, knocking a hole in her bottom, and much time was lost in waiting for a steamer to take off her passengers. The gun was fired at 1:04, the fleet being timed at the line:

Clara	1 04 15	Square	1 06 57
Phantom	1 04 15	Gracie L	1 06 55
Anaconda	1 04 15	Orienta	1 06 08
Volusia	1 04 15	Emily B	1 06 08
Black Hawk	1 04 30	Apache	1 07 17
Waconda	1 04 45	Edna	1 07 03
Ida K	1 04 55	Curlew	1 07 35
Ione	1 04 57	Hanlon	1 08 12
Giggle	1 05 00	Vixen	1 09 00
Eurybia	1 05 16	Empress	1 09 00
Kathleen	1 06 43	Amazon	1 13 45
Wabasso	1 06 00	Flora	1 51 43

All went over on the port tack in a light easterly air, which fell after a time, making the race a drift. Kathleen went up into the 35ft. class, winning as easily there as among her own size, beating Eurybia by 28m. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—58FT. CLASS.				
Flora	1 05 43	Did not finish.		
SLOOPS AND CUTTERS—55FT. AND UNDER.

Gracie L	1 06 55	Did not finish.		

The regatta committee included Messrs. E. T. Smythe, G. R. Sheffield and P. J. O'Kelly.

AMERICAN Y. C. REGATTA—JULY 8.

The efforts of the American Y. C. to further yacht racing on Long Island Sound met with very little encouragement from yacht owners, as only 4 yachts above 35ft. came to the line on Monday morning. The courses and conditions for the race were:

Course No. 1.—For all cabin yachts: From Milton Point to and around a stake-boat anchored in Hempstead Harbor (course S. ¼ W.) (from stake-boat Sands Point Lighthouse bears W. by S., and Execution Lighthouse bear W. by N. ¾ N.), passing same on the port hand; thence to and around a stake-boat anchored one-half mile S.W. ¾ S. of Captain's Island Lighthouse (course N.E. ¾ N.), passing also on the port hand; thence to and around the stake-boat anchored in Hempstead Harbor (course S.W. ¾ S.), passing same on the starboard hand; thence to and across the finish line at Milton Point (course N. ¼ E.). Distance about 20 nautical miles.

Course No. 2.—For all open yachts: From Milton Point to and around a stake-boat anchored in Hempstead Harbor course S. ¼ W.), passing the same on the port hand; thence to and around the black buoy off Matinicock Point (course N.E. by E. ¾ E.), passing same on the port hand; thence to and across the finishing line at Milton Point (course N.W. by W. ¼ W.). Distance about 10 nautical miles.

Race to be sailed under Larchmont Y. C. rules. The wind was light from W.N.W., with an ebb tide through the morning. As Magic and Clara each had no competitor a match was made between the c.b. schooner, 80ft. 3in. l.w.l., and the keel cutter, 56ft. 6in. l.w.l.; the former to receive an allowance for rig of 15 per cent., making her nominally 65ft. 3in., by Larchmont rule, Clara being 55ft. 11in. Thus Magic would allow Clara 5m. 31s. Only two forties were present, Nymph and Liris. The latter came into Larchmont late at night with her new bowsprit, a wet and heavy spar. The week had been a hard one for her crew, with night passages and shipping new spars, and those left on board were well tired by Monday morning. Both she and Nymph had difficulty in finding men to take the place of the absentees, and sailed short-handed with scratch crews. When the yachts were ready Nymph refused to sail the course laid out by the club, a reaching course, demanding a six-mile course to windward and return, two rounds. Liris declined to accede to any change of the regular course, and Mr. Alley, on behalf of the regatta committee, promised the prize in case she was compelled to sail alone. When the signal was given Nymph came to the line, having changed her mind. Neither she nor Liris were allowed clubtopsails, but Clara carried hers. The starters were:

CLASS 2—MIXED RIG—COURSE 20 MILES.

Sailing Length.		
Magic, schr	65.03	A. W. Mott.
Clara, cutter	55.11	Dr. J. C. Barron.
CLASS 3—SLOOPS AND CUTTERS.		
Nymph	42.04½	F. W. Flint.
Liris	42.06	C. W. Wetmore.
CLASS 4—SLOOPS.		
Eurybia	36.01	Chas. Pryer.
Amazon	26.04	Z. E. Lewis.
CLASS 6—SLOOPS.		
Julia	18 03	R. F. Downing.
Poningo	20.00	J. H. Wainwright
CLASS C—CABIN CATS.		
Brunhilde	28.00	C. T. Willis.
Orienta	21.10	Geo. I. Seney, Jr.
CLASS G—CATRIGGED.		
Giggle	19.03	L. Jacobs, Jr.
Ione	18.06	Sherman.
Sayonara	16.06	——.
Zelda	19.04	Williams.

When the first gun was fired at 1:05 the wind was W. N. W., so spinaker booms were dropped to starboard. Poningo and Julia went over first, but Nymph and Liris, the former steered by Mr. E. A. Willard and the latter by Mr. J. F. Lovejoy, worked about, watching each other. When 7m. had gone Nymph made a start, Liris following close astern, being timed 54sec. later. The start was timed:

Poningo	1 14 45	Brunhilde	1 19 17
Julia	1 14 51	Giggle	1 19 50
Amazon	1 15 25	Clara	1 19 52
Nymph	1 16 55	Orienta	1 20 00
Liris	1 17 49	Zelda	1 20 00
Magic	1 18 15	Sayonara	1 20 00
Eurybia	1 18 50	Ione	1 20 00

Amazon and Nymph were the leaders, Liris, Magic and Clara being close together. Spinakers, braced well forward, continued to draw for a few minutes, but all were soon obliged to lower them. When less than a third of the three-mile leg to Hemstead had been covered the breeze died out entirely, Magic and Clara drifted up on Liris, luffing her out a little and breaking her wind. For another mile the drift continued, and then Nymph and Amazon caught the breeze again, spinakers being reset. The others were becalmed for some little time, and when they finally caught the wind Nymph had turned the mark and with a freshening breeze was bowling away on the second leg. Liris gained on Clara and led her around the mark, with Magic after both. The times were:

Nymph	2 07 50	Clara	2 18 15
Amazon	2 11 45	Magic	2 18 30
Liris	2 16 45	Eurybia	2 20 20

That Nymph's gain of 8m. on this leg was but a fluke is shown by the times; the three miles were sailed in a little under the hour, and Clara, carrying a clubtopsail, was beaten 7m. 28s. by Nymph, with a jibheader, and 2m. 3s. by little Amazon.

Nymph, with jibtopsail set, and the wind forward of the beam, now sailed very fast, running into a much stronger breeze as she neared Captain's Island. Liris had her sails in better shape than in any previous race, but the topmast rigging stretched so badly that before half of the six mile leg was covered she was obliged to lower her No. 1 jibtopsail. Magic and Clara soon passed her, the schooner reaching ahead of the sloop for a time, but finally Clara shifted her balloon for a working foresail, and luffed from under Magic's lee and out across her bows. When near the mark Magic ran by her enough to turn a little ahead, the times being:

Nymph	3 06 30	Liris	3 15 30
Magic	3 10 45	Eurybia	3 20 30
Clara	3 11 20	Amazon	3 22 30

The times of Nymph and Liris over this leg were 58m. 40s. and 58m. 45s., showing that Nymph had gained but 5s. Liris set her jibtopsail at the mark.

The wind was now a trifle abaft the beam, decreasing steadily as Hempstead was again neared. Magic gained now on Clara, but the forties held about the same positions. The times at Hempstead were:

Nymph	3 54 00	Clara	3 55 00
Magic	3 51 00	Liris	4 03 31

The elapsed times over the return course were quicker, the wind and tide being both more favorable. Nymph ran the leg in 47m. 30s., and Liris 48m. 1s., a gain of 31s. for Nymph. Eurybia had passed Amazon on the way out, and now had a good lead, though neither was timed. The last short leg was to windward in a light breeze that drew ahead at times, and across a strong tide. Clara overtook and passed Magic, and Liris lost but 7s. to Nymph. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS A.				
Clara	1 19 52	4 33 07	3 13 15	3 07 44
Magic	1 18 15	5 33 02	3 15 47	3 14 47
CLASS 3.				
Nymph	1 16 55	4 35 18	3 18 23	3 18 16
Liris	1 17 49	4 44 56	3 27 07	3 27 07
CLASS 4.				
Eurybia	1 18 50	5 15 00	3 56 10	3 56 10
Amazon	1 15 25	5 45 16	4 29 51	4 16 13
CLASS 9.				
Giggle	1 19 50	4 02 54	2 42 55	2 42 48
Ione	1 20 00	4 10 27	2 50 27	2 49 14
Sayonara	1 20 00	4 12 20	2 52 20	2 51 07
Zelda	1 20 00	4 08 12	2 48 12	2 48 12
CLASS C.				
Orienta	1 20 00	4 03 03	2 43 03	2 36 55
Brunhilde	1 19 17	4 10 53	2 51 36	2 51 36
SPECIAL CLASS.				
Julia	1 14 51	4 31 50	3 16 59	3 13 49
Poningo	1 14 45	4 38 52	3 24 07	3 24 07

The cutter Clara beats the schooner Magic 7m. 3s., corrected time; Nymph defeats Liris 8m. 51s. in Class 3 and Eurybia defeats Amazon by 20m. 3s. in Class 4. Class 9 Giggle beats Zelda 5m. 24s., in Class C Orienta defeats Brunhilde 14m. 41s., and Julie wins over Poningo by 10m. 18s. in the special class.

Nymph was better handled in the matter of setting and shifting sail, but the elapsed times over the last three legs of the course, when the wind held, show that she gained but 23s. in 15 knots. Clara, despite her keel and narrow beam, made a very good showing against Magic. Compared with the forties, her elapsed time from Hempstead mark, out and home, 15 knots, is 12m. 26s. better than Nymph; the latter's allowance for this distance being about 7m. 30s. The regatta committee included Messrs. Geo. W. Hall, Ezra S. Connor, Thos. L. Scovill, Edward S. Innet, Wm. Weeber, W. S. Alley and J. H. Wainwright.

GREAT HEAD Y. C.—First championship regatta, July 6. Courses for first and second classes, 7½ miles; for third class, 5 miles:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
E. W. D., Edwin W. Dixon	25.01	1 28 00	1 04 02
The Owl, J. S. Cushing	25.04	1 31 00	1 07 00
Moondyne, Elliott Shaw	24.08	1 34 41	1 10 22
THIRD CLASS.			
Modoc, D. W. Belcher	16.08	1 05 50	0 42 53
Scud, L. B. Meston	17.02	1 13 35	0 52 04
"Topsy, S. 1581," H. J. Vinal	14.04	1 19 15	0 54 46
Fannie, R. E. Fraiser	13.00	1 24 49	

Regatta committee, H. Hutchinson, P. M. Bond, A. P. Bicknell, R. H. Mitchell, C. H. Brown. Judges, Harry Hutchinson and C. B. Belcher.

BEVERLY YACHT CLUB.

142D REGATTA, 1ST OPEN SWEEPSTAKES, MONUMENT BEACH, JUNE 29.

THIS was the first open race sailed under the club measurement of waterline and sail area; the result was a very hard day's work for the judges.

In first class Surprise was noticeable by her absence, but Climax and Quissett made a very good race.

Second class this year promises to have the largest and most exciting races; Mist will have to look to her laurels, and all but one of her formidable competitors were on hand.

Thyra and Gymnote are two new boats built by Dunn; they are not yet thoroughly in shape; but sailed a good race, though not troubling Mist much.

Hamana is a new one from the builder of Mist, and is built on Mist's model with an overhang added. She did poorly, and is presumably not in form as yet.

Mollie, which under old rule was at foot of first class, is now at head of second class. She is very fast, and pushed Mist hard, beating her on actual time, but losing on allowance. It is to be regretted that Crawl did not enter.

In third class last year's champion, Daisy, met Hanley's Eina, who had already shown great speed in her matches with Kiowa.

In fourth class Hanley's new Kitten sailed her first race. She did poorly, and evidently to be shaken into trim.

Courses: First and second classes leaving Pine's Buoy on starboard, Bird Island Buoy and Scraggy Neck Buoy on port, and return, 11 miles; third class leaving Pine's Buoy, Abeel's Ledge Buoy and Dry Ledge Buoy on starboard, Pine's Buoy on port, and return, 7½ miles; fourth class leaving judges' yacht and Pine's Buoy on starboard, and return, 6½ miles. Wind, W. S. W., light. Summary:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Climax, E. C. Stetson, Mattapoisett	30.04	2 11 55	2 04 27

Kitten, G. H. Richards *et al.*, B. Y. C.	17.11	1 42 10	1 28 10
Jola, J. C. Dexter, Malta	15.11	1 51 57	1 34 32

Winners First Prize—First Class, Climax; Second Class, Mist; Third Class, Eina; Fourth Class, Edith. Second Prize—First Class, Quissett; Second Class, Mollie. Third Prize—Second Class, Wildcat. Regatta committee, W. Lloyd Jeffries, T. S. Edmunds, B. B. Crowninshield, Robt. Saltonstall, P. Grant, Jr. Judges, T. S. Edmunds, Patrick Grant, Jr.

143D REGATTA, FIRST BUZZARD'S BAY CHAMPIONSHIP, MONUMENT BEACH, JULY 4.

The race was sailed in a very heavy sea and a strong southwesterly gale of wind, which greatly reduced the number of starters, all hands being closely reefed. Mattie had a walkover in first class, Kitten won easily in fourth. Second and third promised very well, in second the champion Mist met Tantrum, always a good boat in a blow, and Dunn's new Gymnote, who ought to be a heavy weather boat, in third champion Daisy met Hanley's new Eina and Bonnie Bairn, the latter a deep Burgess sloop with a heavy lead keel.

Gymnote's boom broke short off as she crossed the line, and Tantrum carried away peak halliards within 50yds. of the start, leaving Mist a walk. Daisy fared no better, her boom went within 100yds. of the start; the owner of Eina did not realize Bonnie Bairn was in his class, but being a good sport objected to a walkover, consequently he lay by Daisy for fifteen or 20 minutes, then asked judges to resail race at some later date, but on finding that the sloop was in his class and had from 15 to 20 minutes start Eina at once went after her, gaining rapidly. Bonnie Bairn led by five minutes at end of first round, but Eina finished ten minutes ahead, a very good performance.

Courses for first and second classes—Leaving Pines Buoy Scraggy Neck Buoy and Bird Island Buoy on starboard and return, 11 miles. Third class—To and around Pines Buoy and repeat, 6½ miles. Fourth class—To and around Black Buoy 11, off Jacob's Neck and return, 2½ miles. Wind, a strong gale from S.W.:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Mattie, Howard Stockton	26.10	1 55 05	1 44 05
SECOND CLASS.			
Mist, Geo. H. Lyman	25.06	2 07 00	1 47 37
Tantrum, Wm. Amory	22.10	Disabled.	
Gymnote, W. E. C. Eustis	25.11	Disabled.	
THIRD CLASS.			
Eina, John Parkinson	22.00	1 42 45	1 32 41
Bonnie Bairn, Geo. S. Fiske		1 53 10	1 43 59
Daisy, Howard Stockton	20.06	Disabled.	
FOURTH CLASS.			
Kitten, G. H. Richards *et al.*	17.11	33 00	27 37
Nymph, Geo. G. Amory		35 15	29 04

Winners of first prize and leg for pennant: First class, Mattie; second class, Mist; third class, Eina; fourth class, Kitten. Judge, T. S. Edmonds.

144TH REGATTA, 1ST CUP RACE, MARBLEHEAD, JULY 2.

It had been blowing hard S. W. by S. all through the afternoon and night of July 3. The 4th opened with a strong breeze from the same direction, and at 10 A. M., when the boats got under way for a trial spin, it was blowing pretty strong. Several of the boats ran outside to test the wind, and as a result Saracen, Swordfish, Witch and Otter housed topmasts, Hoiden, Swordfish, Dolphin and Nonpareil put in single reefs, but the wind kept steadily decreasing, and just before the start Swordfish shook out her reef.

First and second classes ran down the harbor, had a beat to S. E. Pig Breaker, whence spinakers were carried to Half-way Rock; from the rock they laid their course to mouth of harbor and crossed the line in a couple of tacks.

Saracen and Elf were off prompt in first class, Saracen a second or two in the lead. She spun out a good lead in the beat to windward and held her own afterward.

In second class Marguerite got to line ahead of time, and had difficulty in keeping on right side of it. When gun was fired she was dangerously close to stakeboat and on wrong tack; in jibing she fouled it, but no protest was made. Swordfish was first off, followed closely by Marguerite, Otter and Witch. Swordfish gained steadily and won hands down. Otter withdrew, while the other two made a pretty good fight, resulting in favor of Marguerite.

In the third class Kiowa met Mosca for the first time, and as the wind was much lighter on the third class course and there was a good deal of running and reaching, it was expected that the Mosca, with her big sail spread, would win.

Kiowa and Wraith led off together almost on the flash of the gun, Mosca and Kathleen just behind them. It was almost before the wind to Buoy 3, and some of the sloops boomed out their jibs. To the surprise of all, the Buzzard's Bay catboat Kiowa at once began to draw away from the others, getting a lead of 40s. at first buoy, Hoiden and Mosca coming next. Here they hauled sheets a little for Curtis Point, which Kiowa, still gaining, rounded first, then Hoiden, Mosca, Wraith and Kathleen.

From here was a free reach to Bowditch Ledge, with the best breeze of the day, and it seemed as if the jib-and-mainsails ought to take the lead. Wraith and Kathleen got their booms into the water, which seemed to stop them. Mosca gradually passed Hoiden, rounding Bowditch's just ahead of her, Kiowa steadily gaining, have rounded a little more than ten minutes ahead of Mosca.

Here wind was very light, and kept on getting lighter for rest of the race. Kiowa took a short tack to the southward, then headed for the Salem shores; Mosca and Hoiden going round at the same time. Hoiden tried for Mosca's weather, but failing broke tacks and seemed to lose a little by it; about this time she shook out her reef. Kathleen was close on Wraith at Bowditch, but the latter did well to windward and Kathleen dropped out of race; her bottom was foul, she will do better next time. Kiowa gained steadily, while Wraith did well with the others.

In fourth class Dolphin led all round, coming home under full sail. Nonpareil would have done better to follow suit. Hoiden has not been measured, she may be larger than figured here.

Course; first and second classes from judges' yacht, leaving black buoys Nos. 5 and 3, Tom Moor's Rock, Tinkers Island and Roaring Bull on starboard; Can Buoy off S. E. Pig Breaker, Half-way Rock and black buoys Nos. 3 and 5 on port, and return; 10 miles. Third and fourth classes leaving black buoy on Selman's Berth on port, black buoys Nos. 3, 5 and 7 on port, stakeboat off Curtis's Point on starboard, Bowditch's Ledge Beacon on starboard, Red Buoy No. 6 on port, to judges' yacht; 7½ miles.

Wind, S. W. by S., fair at start, rapidly dying out; very light for last half of race. Summary:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Saracen, W. P. Fowle	38.03	2 00 21	1 59 18
Elf, W. H. Wilkinson	36.00	2 07 06	2 04 35
SECOND CLASS.			
Swordfish, Com. Paine	31.07	2 15 57	2 10 12
Marguerite, F. Skinner, Jr.	28.01	2 29 35	2 20 38
Witch, B. B. Crowninshield	28.03	2 34 59	2 24 24
Otter, Percy Chase	25.07	Withdrew.	
THIRD CLASS CATS.			
Kiowa, W. C. and W. L. Jeffries	22.03	1 34 32	1 23 09
Hoiden, Gordon Dexter	21.11	1 39 40	1 27 59
THIRD CLASS SLOOPS.			
Mosca, C. H. W. Foster	24.06	1 38 24	1 29 03
Wraith, H. P. Benson	22.03	1 40 55	1 29 32
Kathleen, R. S. Peabody	25.10	Withdrew.	
FOURTH CLASS.			
Dolphin, R. C. Robbins	18.00	1 49 17	1 33 13
Nonpareil, W. D. Taylor	18.09	1 54 35	1 39 27

Winners—Leg for cup, first class, Saracen; second class, Swordfish; third class cats, Kiowa; fourth class sloops, Mosca; fourth class, Dolphin. Judge, W. Lloyd Jeffries.

145TH RACE, 2D CHAMPIONSHIP, MARBLEHEAD, JULY 6.

The race was sailed, except in Marblehead Harbor, where there was a light breeze, in the faintest kind of an air from S.S.E., being little better than a drift, particularly in the windward work. As none of the printed courses gave any windward work the judges improvised a course, sending all classes to Red Buoy 6 (a run with wind on starboard quarter), then a short beam reach to Cutthroat Ledge, a beat to Half Way Rock and a run home, a scant 8 miles.

In first class Beetle took seven hours drifting down from Boston, arriving just at the start, but not having her crew aboard did not start. Elf sailed a good race with Saracen.

In second class Swordfish won as usual.

In third class Wraith and Kiowa found it altogether too light; it was Mosca's day, and she worked out a good lead in the long swell and faint air. Nerina sailed very well, beating Mosca on allowance. It was so light to windward that some of the crews laid out to leeward to keep boom on right side.

In fourth class Dolphin did not like it any better than Kiowa. Elf was officially measured 36.02.

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Saracen, W. P. Fowle	38.03	1 33 58	1 33 08
Elf, W. H. Wilkinson	36.02	1 37 06	1 35 12
SECOND CLASS.			
Swordfish, Com. Paine	31.07	1 43 32	1 38 56
Witch, B. B. Crowninshield	28.01	1 56 06	1 49 12
Marguerite, F. Skinner, Jr	28.03	1 58 52	1 51 50
THIRD CLASS SLOOPS.			
Mosca, C. H. W. Foster	24.06	1 53 24	1 43 26
Wraith, H. P. Benson	22.03	1 59 47	1 47 39
THIRD CLASS CATS.			
Nerina, Robt. Saltonstall	21.10	1 55 13	1 42 39
Kiowa, W. C. and W. L. Jeffries	22.03	1 58 57	1 46 49
FOURTH CLASS.			
Nonpareil, W. O. Taylor	18.09	2 00 13	1 54 05
Dolphin, R. C. Robbins	18.00	2 10 23	1 59 15

Winners: First class, Saracen; second class, Swordfish; third class sloops, Mosca; third class cats, Nerina; fourth class, Nonpareil. Second class champion pennant won and held by Swordfish; first class champion pennant won by Saracen, tieing Beetle; third class champion pennant won by Mosca, tieing Kiowa; fourth class champion pennant won by Nonpareil, tieing Dolphin. Judges, H. H. Buck and E. M. Parker.

SING SING Y. C. OPEN REGATTA, JULY 4.

THE Sing Sing Y. C. sailed a regatta on July 4, open to all yachts, from off Sing Sing around a stakeboat off Dobb's Ferry, for all but Class 9, which sailed a short triangular course, two rounds, off Sing Sing. There was a strong S.W. wind during the early part of the race, followed by a severe N.W. squall and then a calm. The full times were:

NEW YORK Y. C. CRUISE.

THE following general order has been issued:

FLAGSHIP ELECTRA, N. Y. Y. C., HARBOR OF NEW YORK, July 1, 1889.

General Orders No. 2.

1. The vessels of the squadron will rendezvous at New London, off Pequot House, on Wednesday, Aug. 7.

2. Captains will report aboard the flagship on the same evening at 9 o'clock.

3. Special attention is called to the race for the cups presented by Capt. Goelet, which will take place at Newport, Friday, Aug. 9, unless otherwise decided at the meeting of captains.

4. The squadron cruise trophies of 1889, given by the club, will be raced for by yachts of the New York Y. C. The rules and regulations governing competition for the same will be issued to captains by the regatta committee.

5. During the cruise the Owl and the Game Cock colors will be raced for by the four-oared gigs and double-scull cutters and dinghies belonging to the yachts of the squadron, and the holders will be subject to challenge at any time, on one day's notice.

6. There will also be a race for the steam and naphtha launches belonging to the squadron, the time, conditions and prizes for which will be hereafter announced by the Commodore.

7. The routine and rules contained in the Club Manual will be observed during the cruise. Particular attention is called to the fact that they have recently been changed in many important particulars.

8. There will be special cups given for competition by third class sloops (70ft.) and seventh class sloops (40ft.), dates of which will be announced by the Commodore.

9. Yachts when in squadron are earnestly requested to take their ship's time in striking bells from that of the flagship, and in no case to anticipate it.

By order of the Commodore.

STEPHEN PEABODY, Fleet Captain.

AWA.—The new Hasbrouck 40 was launched on July 6 at Lawley's.

INTERNATIONAL YACHT RACES.

THE following letters were received last week by the New York Y. C. It is certain that Valkyrie will cross the Atlantic to race the 70ft class for the Paine cup and in private matches. She has not been successful in the late races on the Clyde.

20 ST. JAMES SQUARE, S. W., LONDON, June 20.

DEAR CAPTAIN GRANT: There is no doubt that the New York Y. C. are quite correct in their contention that you are in error when stating that Mr. Oddie's letter of April 12 contains a condition "not previously alluded to." I hold myself, however, responsible for the mistake, and can only express my extreme regret at the misunderstanding. The accompanying letter from Mr. Watson will explain the misunderstanding.

When talking the matter over with you I fully believed that the correspondence between Mr. York, secretary of the Royal Clyde Y. C., and Mr. Bird, the then secretary of the New York Y. C., showed that a challenge would be accepted on exactly the same terms as the Volunteer and Thistle contests, but on subsequent examination I find that the correspondence in question may bear two readings. Mr. York, in his letter of Nov. 27, 1883, addressed to the secretary of the New York Y. C., mentions the existence of the proviso, but in a postscript says: "In the event of the paragraph being perfectly true and that a challenge will be accepted under the same conditions as in the Genesta, Galatea and Thistle contests, please cable 'True'." To this letter the secretary of the New York Y. C. cabled the reply "True."

Now, the conditions that governed the Genesta, Galatea and Thistle contests can have nothing whatever to do with the provisions in the new deed of gift, since the deed was not then in existence, while the reply "True" may be taken to refer either to the body of Mr. York's letter, which recognizes the proviso, or to the postscript, which makes no difference to the same. Hence, probably, Mr. Watson's mistake and mine. In like manner your letter of March 19 last, referring to the same cablegram, may or may not be taken to include the proviso, while the words "the same terms would be accepted as in the Volunteer and Thistle matches" can have no reference to the new deed of gift. Therefore it is evident that while the New York Yacht Club have taken one reading we have taken the other. Yours truly, DUNRAVEN.

20 ST. JAMES SQUARE, S. W., June 24.

DEAR SIR: I beg to acknowledge the receipt of your letter of May 24, with inclosure.

I am exceedingly sorry that a difficulty has arisen with regard to the challenge of the Royal Yacht Squadron made in my name for the America Cup; and my regret is the greater since I find I was mistaken as to the terms on which the challenge would be accepted.

I did not know that the "new deed of gift" was in any way involved, and can only express my sincere regret at being under a misapprehension in that respect.

What I intended to do, and what I thought I had done, was to challenge to sail the Valkrie for the Cup against any vessel the New York Y. C. might select, according to the conditions that governed the last three international contests, and to the spirit of that challenge I wish to adhere.

As far as sailing for the America's Cup is concerned I am in the hands of the Royal Yacht Squadron. If they instruct me to sail, well and good.

But, on the other hand I attach no importance to the nature of the prize, all I care for is the interest belonging to a fair competition between the two vessels, and if the New York Y. C. find themselves unable to offer the America Cup as a prize I shall be ready on my part to sail against whatever yacht would have been selected to defend it, either for a prize of equal value or nothing at all.

Since there is scarcely time for further correspondence on the subject it would be very convenient that I should be represented by some one on your side of the ocean. I have therefore written a letter to Gen. Paine, of which I inclose a copy, and if he will kindly consent to act for me I will abide by whatever arrangements he makes.

I am sending a copy of this letter to Gen. Paine. Yours truly, DUNRAVEN.

20 ST. JAMES SQUARE, S. W., June 24.

DEAR SIR: Although I have not the pleasure of your personal acquaintance I feel sure you will excuse the liberty I take in writing to you concerning the America's Cup. Your name is so well known over here in connection with international yacht racing that it naturally suggests itself to me under the circumstances in which I find myself placed,

The Royal Yacht Squadron challenged for me under a misapprehension, for which I am responsible, as to the terms under which a challenge would be accepted, and it is possible that my challenge may fall to the ground, owing to a difference of opinion between the Royal Yacht Squadron and the New York Yacht Club about the new deed of gift.

I have no wish to express here any opinion as to the relative merits or demerits of the different deeds under which the New York Yacht Club has held the Cup, or to discuss their legal aspect, or the various interpretations that may be put upon the "new deed."

Whether I race for the America Cup or some other prize, or nothing at all, it is equally immaterial to me; all I care about is the sport, the interest of the race, to see what my ship can do, and to have the relative merits of the two vessels fairly demonstrated.

I see no reason, therefore, why the match should not take place, as I am ready and anxious to sail against whatever yacht the New York Yacht Club would have selected to defend the Cup, all the conditions of sailing remaining unaltered, with the exception that we should sail for some prize other than the Cup.

Time is too short to permit of my settling this matter by correspondence; I should be very grateful if you would kindly consent to act for me.

As you are probably aware, the conditions of sailing, courses, etc., are pretty well agreed to. The only point outstanding to which I attach any importance being the time of starting.

As expressed in my letter of May 3 to Mr. Smith, many and obvious objections appear to exist in leaving the time of starting in a match of this kind entirely in the hands of a sailing committee, and I proposed that it should be compulsory on the yachts to start at the specified time if the committee so decided, and compulsory on the committee to start them at the specified time if either vessel so desired; otherwise the time of starting to be at the option of the committee.

I do not see that any suspicion of unfairness or any inconvenience could arise under these conditions. But in this respect, as in all others, I am perfectly content to leave myself in your hands, if you will be so good as to act for me and arrange for the match.

I cannot, however, afford to race for a large sum, but should be glad if the sum, if any, that we sail for be such as to enable the victor to buy something commemorative of the event.

I believe the value of the America Cup was 100 guineas. I suggest the same sum.

If in any way you find it inconvenient to accede to my request I trust you will not hesitate to say so.

I inclose a copy of my letter sent this mail to Mr. Smith. Yours faithfully, [Signed] DUNRAVEN.

ROYAL YACHT SQUADRON, COWES CASTLE, June 27, 1889.

To James D. Smith, Esq.

DEAR SIR: With reference to your letter of the 27th ult., addressed to Mr. Richard Grant, Secretary to the Royal Yacht Squadron, relative to the challenge for the America Cup in behalf of the Earl of Dunraven, and having given it the fullest consideration, we have first to admit that the challenge was sent under a misapprehension as to the terms alluded to in your letter of Dec. 14 last, addressed to the Secretary of the Royal Clyde Y. C. as the inclosed copies of letters from the Earl of Dunraven and Mr. C. L. Watson will show. We therefore much regret that we are unable to confirm the challenge with the condition attached that "if the cup is won by the club challenging it shall be held under and subject to the full terms of the new deed," the acceptance of which we consider would preclude the renewal of that friendly competition which it is so desirable to encourage and maintain, and for which the cup appears to have been originally conveyed to the New York Y. C.

We could not undertake the responsibility of entering into such a covenant, which would make the terms of the new deed of gift binding in any future challenge.

We would further point out that the effect of accepting the conditions of the New York Y. C. would be to compel the Royal Yacht Squadron to insist upon receiving, should it be successful in winning the Cup, more favorable terms from a challenger than those under which it is challenged.

We have the honor, etc.

CHARLES BARING,
JOHN MULHOLLAND,
ALLEN YOUNG, C. B.

To the Earl of Dunravan, K. P.:

DEAR LORD DUNRAVEN—I told you about a month ago by word of mouth, but now repeat it by letter, that I had made a serious

overlook when advising you as to the terms of challenging for the America Cup.

Most unfortunately, when we spoke to Mr. Grant on the matter we had not a copy of Mr. York's letter to the New York Y. C., where the conditions attached to the winning of the cup are quoted. I had seen Mr. York's letter before it was dispatched, and certainly should have remembered such a very important condition; but, as a matter of fact, I clean forgot about its existence and unwittingly misled you and Mr. Grant. Will you, therefore, read this letter to Mr. Grant or the Royal Yacht Squadron, who are interested in the matter, as it would materially add to my regret were any one but myself blamed for my blunder. I am, etc., G. L. WATSON.

ROYAL YACHT SQUADRON, CASTLE COWES, June 27, 1889.

To James D. Smith, Esq.:

SIR: I have laid your letter of the 27th ult., relative to the challenge of the Royal Yacht Squadron, on behalf of the Earl of Dunraven, for the America's Cup, before the special committee appointed at the annual general meeting of the squadron, to decide any question that might arise thereon. I beg now to forward you the decision that has been arrived at by them. I have the honor, etc., RICHARD GRANT, Secretary R. Y. S.

On the receipt of these letters Chairman Smith wrote as follows to General Paine:

NEW YORK, July 8, 1889.

DEAR GENERAL PAINE: I received a letter from Lord Dunraven this morning enclosing a copy of the letter he had sent to you, also advising me he had sent you a copy of his letter to me. I asked you by telegraph if you were willing to give the press of New York a copy of his letter to you for publication.

I notice that Lord Dunraven proposes to "leave himself in your hands to act for him"—in other words make you his representative. Are you willing to act? Yours, faithfully,

JAMES D. SMITH.

To this note General Paine replied by telegraph as follows:

JAMES D. SMITH: I have no objection to your publishing it as part of correspondence with you. Shall wish to know what action you propose. CHARLES J. PAINE.

STEAMERS AND THE RULES OF THE ROAD.

Editor Forest and Stream:

A subject of interest to canoeists and yachtsmen in this locality, and no doubt that matter on every body of inland water, is the danger to small craft from the steamers carrying passengers to and fro. Such steamers are not governed by the existing inspection laws, and seem to care but very little for the rules of navigation.

Irondequoit Bay is such a body of water as I refer to; it is about 5 miles long by ½ to 1 mile wide and connected by an outlet with Lake Ontario, over which are two bridges without draws. It is claimed that this bay is not navigable water in the sense of the U. S. or State laws governing steam craft, although there are some half a dozen steamers running thereon, which carry several thousand people during holidays and Sundays, and many hundreds during week days.

Why are these steamers not obliged to carry life preservers, boats or rafts and lights, and stand proper inspection as well as on other waters? The lives of passengers are just as much in danger from explosion or collision as elsewhere! Why should they not be obliged to obey the rules of the road regarding sailing craft as elsewhere?

To show the spirit of some of the captains on these steamers, regarding the matter I will mention what might have been an accident of some moment, which happened yesterday. Several members of the Rochester C. C. were sailing on the bay, and were about to land at the Newport House docks, and as one of them was running into the dock a steamer was also approaching from almost abeam, and it seems she intended passing one steamer dock and landing at the next; between these two docks was the low landing stage for small craft. When it was certain that the steamer was going to the upper dock, it was too late for the canoeist to go about as the steamer was to windward and it would have been very unlikely that the canoe could have gained any headway to get out of the way on the other tack, therefore the only thing to do was to keep her course and depend upon the rules of the road being observed. When the steamer got within 20ft. the pilot called to the canoeist to get out of the way or he would run over him. As the steamer was about to strike the canoeist jammed the tiller over, throwing the canoe partly into the wind, easing the shock, and the only real damage was the twisting of the rudderhead, which was caught by the steamer's bow as she scraped along the after gunwale of canoe. When the pilot was remonstrated with afterward, he said there was no use trying to bulldoze him, as he understood his business, and that "if any more of the canoeists got in his way that he should do just the same again"

Now it would seem that there should be a State law governing navigation on these small bodies of water, if the United States laws do not include them; for New York has many a small lake on which passenger steamers ply. I know that New Hampshire has such laws, and the steamers on her lakes are governed by similar laws and rules to those of the ocean and rivers.

ROCHESTER, July 5. SINGLE HANDER.

[The United States laws have full jurisdiction in this and all similar cases. All steam craft are a tenable to them, and can be held accountable for their violation.]

SEAWANHAKA CORINTHIAN Y. C. CRUISE.

THE fleet of the Seawanhaka C. Y. C. was at the appointed rendezvous in Oyster Bay by Sunday, the following yachts being at anchor: Sea Fox, schr., Com. A. Cass Canfield; Medusa, cutter, Vice-Com. Robert Center; Iroquois, schr., Rear-Com. R. N. Ellis; Stranger, schr., Mr. Geo. Scott; Ruth, schr. Mr. H. C. Marquand; Crusader, schr., Mr. Chas. A. Cheever; Mayflower, schr., Mr. F. T. Underhill; Clara, cutter, Dr. J. C. Barron; Gracie, sloop, Mr. J. P. Earle; Thistle, sloop, Mr. Malcolm Graham; Iola, sloop, Mr. F. H. Weeks; Maraquita, cutter, Mr. A. Belmont, Jr.; Minerva, cutter, Mr. C. H. Tweed; Liris, cutter, Messrs. Wetmore and Hoyt; Gorilla, sloop, Mr. R. P. Carroll; Banshee, sloop, Mr. P. S. Pearsall; Kathleen, cutter, Mr. Wm. Whitlock; Vandal, sloop, Mr. Henry Stanton. On Monday morning the auxiliary naphtha yawl Etcetera, Mr. L. Q. Jones, joined the fleet. In spite of rain and bad weather generally a number of ladies were on board the yachts to witness the race of the forties. In the evening a meeting was held on board the Iroquois, at which it was decided to sail from Larchmont on Friday morning for Newport, the programme for the rest of the cruise to be determined on there. On Tuesday morning the fleet saluted the flag of the Oyster Bay Y. C., afterward dressing ship. At noon all hands were welcomed by Dr. J. West Roosevelt, the fleet surgeon, and his wife, at his handsome residence, Waldeck, where a breakfast and garden party were given in honor of the club, and in the evening, in spite of the long continued rain, all were present at the ball given by Mr. F. T. Underhill. On Wedesday several swimming matches for prizes, given by Mr. Underhill, took place between the crews of the different yachts. On Thursday morning the fleet sailed to Larchmont where the members joined in the festivities of the day as guests of the Larchmont Y. C.

On Friday the cruise was resumed, and on July 9 the fleet was at Vineyard Haven waiting for Gorilla and Kathleen before sailing around the Cape.

BAYSWATER Y. C.—The Bayswater Y. C., of Far Rockaway, sailed a race on July 4 over a 11 mile triangular course, the wind being strong S.W. and squally, one craft capsizing. The times were:

	Start.	Finish.	Corrected.
Edith, Wm. Armstrong	12 19 44	2 19 44	2 19 14
Lizzie, Geo. Bouker	12 01 04	2 19 22	2 17 08
Bertha B., D. C. Bouker, Jr.	12 00 38	2 24 38	2 21 56
Mattie, T. Leitch	12 00 04	2 24 18	2 20 50
Gaviota, J. Ackerson	12 01 21	2 23 13	2 18 35
Corporal, F. W. Shepard	12 00 13	2 29 44	2 25 56

The judges and timekeepers were: Isaac P. Hubbard, C. E. Schaffner and B. J. Dankleisen.

"GIVE THE LITTLE FELLOWS A CHANCE."—*Editor Forest and Stream:* Your editorial of June 20, "Give the Little Fellows a Chance," should be posted in every yacht club's headquarters; indeed it would not be a bad scheme to hang it up in yachts' cabins. The Q. C. Y. C. annual regatta was one of the finest that has taken place on the Delaware River. Com. Middleton and his aides worked hard to make it a success, as it was, and yet a lack of courtesy threw a shade over the otherwise fine sailing. The little Lucette, third class sloop, after fighting her way through the fleet to third position, which she held for over six miles, was blanketed by the big fellows, one after another after the wind began to blow hard enough to strip them down to their lower sails. There was no occasion for this, no excuse, save that they kept within the law. It was this that lost her the race in her class. A few lessons in the etiquette would not come amiss hereabouts. The race between the tuckups Patterson and Flick for a purse of $500 was won by the latter, the former capsizing on the homestretch.—R. G. W.

CHESAPEAKE BAY Y. C. ANNUAL REGATTA.—The annual regatta of the Chesapeake Bay Y. C. was sailed on July 4, and was a very hotly-contested race. The regattas of the club are open to all craft owned in the State that come within the classification. The match of the 4th was open to all boats measuring over 25ft. "oyster measurement" (which is from inside of stem to inside of sternpost) to 35ft. in first class and all boats 28ft. and under in second class. The time allowance is 6s. per foot per mile for difference in length, four boats required to start in each class to make a race. Only two boats entering in second class, these two were allowed to start in the first class, taking the minimum length of that class. The course was in Miles River, starting at Deep Water Point, thence to buoy off Long Point, thence passing "Hill" buoy on starboard hand to buoy on east end of Herring Island, thence to finish, line drawn from Deep Water Point to "Hill" buoy, distance 14 miles. Wind very fresh S. W. All the boats in the race were Chesapeake canoes, very able and fast craft, especially fast in beating and running, at which points of sailing we think they cannot be beaten in strong winds by any single-hulled vessel. The time allowance taken at start, the boats starting in the following order and time:

	Length.	Start.
Edward	26.05	11 10 00
Saidie	26.06	11 10 01
Moses	28.05	11 10 42
Lucy Lee	29.08	11 13 04
Gertie	30.00	11 13 32
Vickers	30.07	11 14 14
Little Jim	32.00	11 16 08
White Wings	33.08	11 18 28
Island Bride	35.00	11 20 20

The Edward and Saidie started at 28ft. The first leg of the course was a reach close hauled. Edward broke her foremast after going a couple of miles and was out of the race. The order of rounding Long Point Buoy could not be taken, as, owing to a misunderstanding, the club steamer with regatta committee did not get under way in time. After turning the Long Point Buoy the boats had the wind on port quarter and came very fast to Hill Buoy. The Gertie by this time having picked up all boats ahead of her and passing the Hill Buoy at 11:58, closely followed by Saidie, Lucy Lee, Moses, Island Bride, White Wings and Little Jim. From this point to Herring Island it was dead before the wind. The Gertie turned first, Vickers second and Island Bride third, Saidie fourth, others not timed. They had a beat back to the finish, Gertie holding her lead of a few lengths, closely pressed by the Vickers, with the Island Bride gaining on both, but slowly. The Vickers tacked for the line when off Deep Water Point, and the Gertie, watching her closely, also went on port tack, but they had miscalculated the strong ebb tide running, and both failed to weather the point, involving another short hitch to starboard and then to port before they would weather the line. In the mean time, the Island Bride had held her starboard tack, and the excitement on the club steamer, anchored just across the line, was intense among the members and the numerous ladies on board. Just as the Bride came about for the line the lacing in the head of her foresail gave way, but she kept on sailing the last tack practically under mainsail and jib. The Gertie and Vickers tacked just ahead of her, and Gertie crossed the line at 12:45, Vickers 8s. behind her, and Bride 10s. behind the Vickers, with Saidie and one other of the boats well up. Gertie wins first prize, Vickers second prize and Island Bride third. A match has been made between the Island Bride and the Gertie to sail another match over the same course. The usual large crowd attended the regatta, and the event was a great success, only marred by the heavy rain that came up just after the match was over.—J. G. MORRIS, Sec'y Chesapeake Bay Y. C.

SIPPICAN Y. C. SEVENTH (OPEN) REGATTA, JULY 6.—Course No. 2, weather fair, wind light N.E., tide ebb:

SIPPICAN Y. C.—At the annual meeting of the Sippican Y. C., held July 1, the following officers were elected: Com., Jasper Whiting; Vice-Com., J. E. DeKay; Sec'y-Treas., J. Henry Clarke, Jr.; Meas., J. W. Austin, 2d. Directors, Commodore, Vice-Commodore, Secretary and Treasurer ex-officio, and Dr. J. S. Whiting, Geo. L. Luce, James DeKay and F. R. Wing. Regatta Committee, J. Whiting, F. R. Wing and F. H. Luce.

FOURTH OF JULY RACES.—Owing to lack of space, reports of the Boston city regatta and some other races are left until next week.

AUGUSTA.—The steam yacht Augusta, built for Mr. I. L. Elwood, of Chicago, was launched by the Herreshoffs on June 12. She is a composite craft, 128ft. over all, 17ft.6in. beam, with a Herreshoff boiler and engines 10, 16 and 25×13in.

NOW THEN—Steamer, formerly owned by Mr. N. L. Munroe, has been sold to Mr. Addicks, of Boston. The new Mosher boat building in a sealed shop at Pryor's yard is said to be for Mr. Munroe.

TELEGRAM—Steamer, designed several years since by J. Beavor-Webb and built by Lawley for Mr. James Gordon Bennett, is reported sold to the Hohenstein Co. of Newark, N. J.

DAUNTLESS—Schr., C. H. Colt, was ashore off Cuttyhunk last week, while on a cruise to Halifax. She came off safely, but the cruise was abandoned.

CORINTHIAN MOSQUITO FLEET.

SPECIAL CANOE RACE.

A SPECIAL canoe race of the Corinthian Mosquito Fleet was sailed on June 29 off Larchmont, over a 3-mile triangular, twice around. Among those responding to the invitation were Paul Butler, of Lowell, Mass., C. B. Vaux and C. J. Stevens, of New York, and Geo. Forrest, of Hartford. The Mosquito Fleet presented a very handsome oxidized silver bowl to the winner, who proved to be Paul Butler in the Fly. The Larchmont Y. C. very kindly extended the privilege of their well appointed house and grounds to the Mosquito Fleet on this occasion, which was appreciated by the contestants, who could ship their canoes direct and be assured of care on their reception, and also have large floats on which they could rig and prepare for the contest. The race was started at 3:53, the Sound being flat and glassy up to that time, when a light air came in from S.E., changing an hour later to S.S.W., when it remained strong enough to compel Mr. Butler to get out on his piazza.

By close timing at the start Vaux went over first, followed very closely by Butler, both on starboard tack. Stevens coming for line on port tack, going about on line in their wake. Forrest went in stays on line, losing 3m. at the start. After a short hitch all four stood to westward under the shore to avoid the strong ebb tide; it was high tide at 12 o'clock.

At first mark to windward Butler turned 1m. ahead of Vaux, 1¾m. ahead of Forrest, who changed his place from fourth up to second and back again several times, fighting for second place at finish and would have gotten it but stood on too far, allowing Vaux to shoot under his stern and across the line second to Butler's first.

The race was one of much interest to the many yachtsmen at Larchmont, who filled three naphtha launches, and followed around the course. Mr. L. Q. Jones tendered his naphtha launch Etcetera to Com. Thornton Smith and Sec'y Theodore Ledyard, who acted as regatta committee.

Following is a summary of the race:

	Start.	Finish.	Elapsed.
Atom, C. B. Vaux, N. Y. C. C.	3.53	6 48 30	2 55 30
Fly, Paul Butler, Vesper C. C.	3.53	6 44 30	2 51 30
Vagabond, C. J. Stevens, N. Y. C. C.	3.53	6 50 55	2 57 55
Dimple, Geo. Forrest, Hartford C. C.	3.53	6 49 30	2 56 30

ROYAL C. C.

RACE FOR THE CHALLENGE CUP, JUNE 15.

YEAR by year sees an increasing number of canoes at Hendon Lake, and plenty of young blood coming forward to compete for the much coveted trophy. Feeling that a race of this importance should not be carried off by a fluke, or accident, the R. C. C. this year arranged that the cup should be sailed for on two days, instead of one, as hitherto, and, in the event of different canoes winning, that a final tie should be sailed off on a third occasion. The first race came off at Hendon last Saturday, but the weather was very paltry, the competitors taking six and a half hours to cover the ten miles—almost the slowest race on record. The winner turned up in an unexpected quarter, as Mr. G. E. Webster, in the Stella (late Nautilus), succeeded in beating Charm and Nautilus.

Race for first, second and third class canoes, five rounds, leaving all buoys on the port hand:

Nautilus	W. Baden-Powell.	Vanessa	B. de Q. Quincey.
Charm	Walter Stewart.	Ulidia	Robert Workman.
Stella	G. E. Webster.	Nina	Frank T. Miles.
Severn	T. H. Holding.	Diamond	H. Church.
Wanda	W. B. Lesslie.	Kitten	E. A. Leach.
Atalanta	R. de Q. Quincey.		

They were started in a very faint air from the westward at 3 P. M., Wanda, Atalanta and Nautilus leading, with Stella and Charm in close attendance. Nina, Severn, Diamond, Vanessa and Kitten were all in a cluster, and it was not until after rounding the buoy in the bight that they began to spread out at all. In the turn to windward to the western buoy, Nautilus stepped away from the others, although it was tedious work in the light wind. With spinaker set she ran up the lake, followed by Stella, Charm, Severn and Ulidia, in the order named. In the second round the wind seemed inclined to freshen; but after a faint effort it died away again. Nautilus held the lead for the two first rounds, and Severn passed Charm, who was going very badly and not at all up to previous form. Stella was only one minute behind the leader at the home buoy, and on the turn to windward to the west buoy secured the lead. By the time the third round was completed Severn, Ulidia, Nina, Diamond and Kitten had retired, the weather looking anything but promising as far as wind went. Stella, well handled throughout, kept her lead, but Nautilus, never giving away a chance, hunted her pretty close round after round, without, however, materially altering the distance between them. After the leader had finished the third round, the wind drew suddenly round to the N. E., leaving Charm and the others to peg to windward, while Stella and Nautilus carried a fair wind right round the lake. In the fourth round it was as nearly calm as possible and getting on for 8 P. M., so that a postponement seemed inevitable, but with alternate airs and calms the leading boats managed to scrape round the course by 9:30, both having sailed a tedious race through in a most careful and persistent manner.

The winner, Mr. G. E. Webster, cannot be too much complimented on the careful manner in which he sailed his boat, as, though the weather prevented a true test of sailing, the ever watchful Nautilus was close at hand to take advantage of any slip or error of judgment on the part of his rival. The times of the rounds were as under:

	First Round.	Second Round.	Third Round.	Fourth Round.	Fifth Round.
Stella	4 23 15	5 11 00	6 47 30	8 03 00	9 29 00
Nautilus	4 21 00	5 10 00	6 48 00	8 06 00	9 31 00
Wanda	4 33 30	5 25 00	7 32 35	8 47 00	Retired.
Vanessa	4 31 50	5 25 00	7 49 00	Retired.	
Severn	4 23 20	5 13 15	Retired.		
Charm	4 23 18	5 14 00	7 27 00	Fouled buoy.	
Atalanta	4 29 00	5 23 30	7 32 30	Retired.	
Ulidia	4 23 21	5 16 15	Retired.		
Nina	4 33 00	Retired.			
Diamond	4 29 30	Retired.			
Kitten	4 33 00	Retired.			

The next race will be on the 22d, and the final if necessary, on the 29th.—*Field, June 22.*

PEQUOT CANOE ASSOCIATION.—*Editor Forest and Stream:* The clubhouse on Rogers Island was formally opened on July 4, and despite a very wet afternoon the day was a great success. The committee in charge of the house went to the island on Com. Borden's yacht on Tuesday and remained until the following Monday, as the visitors kept coming from July 4 to the 8th, and there was a great deal of interest taken in the club and its summer home. On the opening day the club house was decorated with signals and bunting, and during the evening hung with Chinese lanterns around the entire veranda. The fireworks in

the evening were very good, and the only drawback to the day was the rain, which kept all under cover during the afternoon. The view from the island is magnificent, and the island itself a large one, with plenty of good locations for tents, besides the house, which is very large. Cruisers will be welcomed, the flag of any club being a passport to the hospitality of the camp.—PEQUOT.

A. C. A. MEMBERSHIP.—Northern Division: Herbert R. Tilley, Toronto; Godfrey Bird, Thos. F. How, F. L. Stephen, Gananoque; H. G. Wiser, Prescott. Atlantic Division: Wm. F. Marvin, Joseph Stewart, John Macfarlane, W. J. Stewart, Edward C. Burling, Wm. P. Dodge, Harry S. Farmer, all of New Jersey; George L. Metze, Staten Island.

SOUTH BOSTON C. C. REGATTA.—The first regatta of the season of the South Boston C. C. was sailed on July 6, off the club house, at the south end of K street. The programme included three races, a sailing race, the first of a series of three for the club championship for 1889; a single paddling event, and a tandem paddling race. The course was 1½ miles triangular, wind light. The times were:

Marguerite, J. J. Martin	0 48 15	Sappho, A. M. Hird	1 01 22
Ullie A., V. B. Johnson	0 59 30	Dolly, S. M. Wales	1 07 40
Winoah, J. F. Lannon	1 00 16		

Toltec, G. E. Armstrong, Mohawk, J. A. Langford, were not timed.

The single paddling race, ½ mile straightaway, was timed:

Sappho, A. M. Hird	4 10	Birdie, W. J. Looney	4 49
Moondyne, J. F. Ackland	4 35	Wenonah, J. F. Lannon	Dist.

The tandem race, over the same course, was timed:

Elaine, J. J. Kelliher, V. B. Johnson	2 59
Wenonah, J. F. Lannon, F. S. Lovis	3 01

Marguerite, Sappho and Moondyne were not timed.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. L. R., Smithville Flats, N. Y.—There is located four miles from here a body of water, belonging to the State, that contains somewhere near 100 acres. The pond was stocked fourteen years ago with 15,000 or 20,000 salmon trout. It has always contained pickerel, perch, sunfish, bullheads, eels, pond shiners and pond suckers or minniedabs. The pond is fed by springs, and the drainage from a small section of country. The water is quite clear; there are no swamps draining into it. Depth varies from 2 to 40ft. In the shallows are stumps, logs, pond lillies, numerous grasses. In the deep water (which predominates) the bottom seems to be free from logs, and is of a hard mud or gravelly character. 1. What kind of fish would you advise us to stock this pond with? How would catfish do for one kind, and black bass for another? 2. Can catfish be obtained at the State hatchery? 3. What do you suppose has become of the 15,000 or 20,000 trout put in fourteen years ago? There has not been one caught that I know of. 4. Would wild rice be apt to grow in the shallow water as an attraction for wildfowl? 5. Are the game laws of Rockland and Westchester counties in regard to exportation of game successful in stopping market hunting? 6. Where can I get a full copy of their game laws? 7. Of the Oneida county law mentioned in last week's paper is the extract, as published, complete? Ans. 1. Stock with large-mouthed black bass, which would probably do best. 2. Yes, at Caledonia Hatchery. 3. Have escaped through brooks or perished. 4. The wild rice will probably do well. 5. The non-export game laws have done good when they have been enforced. 6. Write to the county supervisors. 7. The law was given in full, save for the enacting clause.

ANGLER, Sing Sing, N. Y.—Is there any law against catching small striped bass with hook and line; if so, what is the limit as to size? Ans. The law prohibits killing black bass or fresh-water striped bass or salt-water striped bass weighing less than one-half pound, or less than 8in. in length from end of snout to end of caudal fin.

N. C. L., Salem, Mass.—How much is the muzzle of the gun contracted to constitute a full-choke, and how much a modified choke? Ans. From thirty-thousandths to forty-thousandths of an inch for the full choke, and five-thousandths for the modified.

INFORMATION WANTED.

Can any of your readers give me information about the region of the lower lakes of the Penobscot, Milinoket, Pumedumcook, etc.? Is it a good place to go for a month's fishing and hunting in the early fall? Can provisions be obtained there, and is it accessible from below?—W. G.

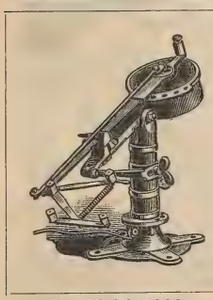
KIFFE'S TRAVELER'S COMPANION.



No. 1.

Copyright, 1889, by H. H. KIFFE.

An article indispensable to parties camping out, etc. As the above drawing illustrates, it consists of a KNIFE, FORK and TABLE SPOON, which are 8in. long, including handle when open; blade of knife is 3¾in. long; handle of fork has a small penknife blade, and handle of spoon has a small corkscrew. All these, when closed up and locked together, as in Fig. No. 1, do not occupy more space than a long pocket knife. Price, each, $2; by mail $2.10.

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure, and it is Soluble.
To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.
W. Baker & Co.'s Breakfast Cocoa
is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.
W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*
SOLD BY
Forest and Stream Publishing Co.
PRICE, $2.50.

"NEAR-BY"

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 18, 1889.

VOL. XXXII.—No. 26. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

BITS OF TALK.

III —CONCERNING QUAIL.

THE man with the feather in his cap had tried to kick them out from the corn-stacks where they had taken shelter at the first discharge of the gun; the man with the red setter had poked at them in a stone wall; and the man from Hackensack had captured them by hand when they had run into a hollow stump. "At another time," he continued, "we lost them entirely; there was not a sign nor a scent nor a sound. It was at sunset; and I was just tired enough to set my gun up against the fence and perch on the top rail myself, while the rest went on further for a last try at them. I was looking at the sunset and thinking to myself what a glorious thing this going shooting was, whether or no, birds or no birds, when all of a sudden I heard a quail's call, low and sweet and timid, with a sort of 'Where are you?' and 'Whist, there!' turn to it. I could not make out just where it came from; but a second later, from the rail fence on which I was sitting, in fact, almost from directly under me, out stepped Bob. After him, from under the next rail, came another and another, and then more until there were seven. I kept mum and as motionless as a brooding Buddha; and without appearing to see me they went leisurely off in single file. It was a pretty sight, too, I tell you."

"What a chance for a raking ground shot," suggested the man with a feather in his cap. "Why didn't you pot them?"

"Couldn't get to my gun," explained the man from Hackensack with a smile; but the others knew him well enough to know that that was not the reason, for if he had had forty guns those birds would have been safe enough.

"That was odd, you being 'onto' those quail, and their not knowing it," said the man fast to the dog chain. "It is not often that we can get the advantage of the birds in that way; but it often enough happens, I fancy, that they are close by us without our ever finding it out, even with the nose of 'the best dog in the world.' Why, down on my place on Long Island I one day came upon a deserted quail's nest, with the broken shells, under an evergreen not more than three feet from the edge of the lane; and we had been coming and going there all the time, the carriage went by there three or four times every day; yet none of us had ever seen that quail nor mistrusted that the nest was there under our noses. As a nest-hider the quail may be voted a success; madam can keep a secret, despite the noisy proclivities of her lord and master. By the way, we have one fellow down there, who always gives his full name, *Robert White*, three syllables, clear and distinct every time; he has been there for three or four years; we can distinguish him unmistakably from the rest, and know just where to find him. I've seen him, and he appears to think some pumpkins of himself, probably insists on being addressed as Robert in public, though I don't doubt his wife calls him Bob."

"Why don't you put him on toast some November? He might taste better than the common brood."

"'No shooting allowed' is the sign you'll find nailed up on my place. Besides, if I devoured him I would have to fall back on the pipers of plain Bob White; and I prefer melody to a mouthful."

"A quail by any other name, even colin," said the man with the feather in his hat band. "I notice your love of melody does not protect the quail to any great extent, when you go up into Connecticut."

"Excuse me, gentlemen," said a stranger, dressed for a long journey, "but that's where I shoot, and last season I had a queer thing happen to me. I was shooting once at the very tail of the season on the Sound, where birds are not too plenty, and in the light snow we had seen quail tracks and had found where they had flown. We hunted for them high and low, but could not move them, and at last, just before night, we started for home. We had to pass over a sand ridge, from which the dry snow had been blown. As we did so the old dog, who was still working busily ahead of us, came to a point. We walked up, thinking that now we had them, and that we would at least get four barrels into them before dark. But when we got to the dog he was pointing a woodchuck's hole. We stepped about in front of him, but there was no grass on the ground, nothing but the bare sand, and of course no birds in sight. The dog was pointing straight down the hole. 'Darned ole fool,' said Sam, 'I'll larn ye to pint woodchucks. Here, hold my gun.' I took the gun and he drew out his whip and hit the dog a cut, and as he did so—*Br-r-r-r-r*—the birds rose all about him. I was holding both guns and was so paralyzed that I forgot to shoot, and the birds disappeared in the woods and we never saw them again."

"Those little incidents do linger in one's memory," put in the man with the setter. "A fellow has some odd experiences when he is out."

"I think the neatest thing in quail shooting I ever came across," said the man from Hackensack, "was something I saw last Saturday, when I was out 'hunting without a gun.' Barnes, from New Brunswick, was visiting me. He is a sportsman, and has hunted game on three continents, but he had never seen any American quail shooting, and he wanted to take a hand at it. I had no dog, but I suggested that we walk out and we might at least flush a bird or two. So we went out and down to our little brook, you know where it is, built us a fire, and settled down to smoke a pipe and talk of game. Barnes was just telling about one of his adventures in Ceylon, when through the bushes I caught sight of a man coming our way; and then I saw that he had a gun and was following a dog. After him came another man. They were heading directly for us, and soon the dog came to a point. I signaled to the man to hold his dog on point, and Barnes and I circled around, and came up pretty near. The birds flushed, the gunner shot both barrels, bringing down two birds within 10ft. of each other; and his companion got a third one and missed with his second. The birds dropped within 30yds. of Barnes and me. The whole thing was just as pretty a bit of quail shooting as I ever saw, and you may imagine how delighted the New Brunswicker was with it all. Why, if we had had things all our own way and planned out ahead, I couldn't have arranged for him a better exhibition of quail shooting as it is shot."

By this time the ferryboat had reached her slip; the man with the setter found himself and the dog and the chain tangled up with several hundred pairs of legs; and the others lost sight of him in the jam, as they separated to their trains.

WAYS OF THE WOODCOCK.

THE notes on the habits of the woodcock printed in another column will undoubtedly bring a smile to the lips of many a reader, yet they are deserving of a thoughtful consideration, which shall winnow the facts from the fancies.

We really know very little about the private life of the woodcock, or indeed about that of any of our best known game birds. A few of the most obvious facts with regard to each species have been seized and written of so fully that we are all of us prone to think that these few facts comprise all that there is to the bird's life. The same thing—but in a greater degree—is true of the habits of our game animals. Take for example the question of the woodcock's boring. How many have seen the bird do this? Of those who have seen the operation, how many have been able to decide for themselves whether he knows the position of the worm by the sense of touch or that of hearing? The familiar twitter or whistle is another point about this bird concerning which there are diverse opinions. A correspondent a week or two since expressed the confident opinion that it was made by the bird's wings; we believe that it is not made by the wings, and could give reasons which to us appear conclusive.

"Paul Pastnor's" theory that the woodcock perforates the ground and then imitates the pattering of rain to induce the worms to visit the surface, appears fanciful in the extreme, but the error may be in his conclusions and not in his observations. At the same time we should like to have a little more testimony as to the distance at which an earthworm is visible, even on a bright moonlight night and through a pair of strong opera glasses.

We wish that more of our sportsmen would devote a portion of their time to the study of the birds and mammals that they pursue with so much ardor, and that the results of their observations might be set down and publicly recorded. Almost every man who shoots or fishes much, has seen a great many interesting things which would be of value to others, and these observations ought to be given to those whose tastes lead them in the same direction. It is a remarkable fact that we still lack full and complete life histories of birds so familiar as the woodcock, the ruffed grouse and the quail, and of mammals so well known as the Virginia deer, the red fox and the common gray hare. Who will take hold of one of these species and supply the needed book?

SNAP SHOTS.

ARTICLES of incorporation were recently filed in Minnesota incorporating the National Park Transportation Co. with a capital of $60,000. The names of the incorporators are Charles Gibson, St. Louis; Thomas F. Oakes, St. Paul; George W. Wakefield, Bozeman, and Ella C. Waters of Billings, Montana. This company has bought out the stage lines and property heretofore belonging to George W. Wakefield, and will in future operate them under the name of the "National Park Transportation Company."

Charles Harvey Bollman, late museum assistant in the University of Indiana, a young naturalist of great promise, died at Waycross, Georgia, July 13, at the age of 21. Mr. Bollman was at the time acting as assistant to the U. S. Fish Commission, having in charge the work of exploration of the rivers of Georgia. Last year he was employed in the exploration of the lakes of Michigan, and he had previously done a good deal of similar work in Indiana, Arkansas and Florida. Although so young, Mr. Bollman was the author of numerous scientific papers on insects and fishes, published chiefly in the Proceedings of the United States National Museum. He was the highest authority in America on Myriapods, and he was one of the few men in America who had a thorough scientific knowledge of fishes.

In the Michigan Legislature a bill to prohibit the deposit of sawdust in streams was defeated, as was also a bill, strongly supported, making the game and fish warden the inspector of all dams and giving him authority to order the erection of fishways.

Mr. George Shepard Page has taken to England a large number of American birds, bobolinks, cardinals, Baltimore orioles and nonpareils, which have been liberated on English estates.

The Sportsman Tourist.

ON THE BORDER.

TIA JUANA, Mexico.—In my letter from the Rancho de Las Palmos I incidentally mentioned this old Mexican town as being the terminus of the railroad from San Diego, eighteen miles distant. While it is within the Province of Mexico, it is not in Mexico proper, but in Lower California; and the town is equally divided between Americans and Mexicans, the boundary line separating the two countries running crosswise through the center of the town—Americans on one side, Mexicans on the other. On the American side are several stores, beer saloons, residences, and a rather pretentious-looking, half-finished three story hotel—one of the numerous monuments commemorating San Diego's boom of two years ago. On the Mexican side the sight is truly Mexican. Here is the Custom House, a long, low one-story adobe building, whitewashed within and without. To the tourist who goes to see what he can see, gets his handkerchief or one of his cards stamped with the Mexican seal as a souvenir of the place, quaffs a glass of the fiery mescal or purchases a bunch of fifty cigars, breaking the package before returning to the American side, I say to him with a clear conscience, the Custom House, with its numerous bowing, smiling, polite officials, presents a peculiarly unique sight. But to the guilty wretch who drives along with a number of dutiable articles concealed within his wagon, his eyes penetrating every nook and corner of the village, fearfully dreading the sudden appearance of an armed and mounted officer, who will pounce upon him "like a wolf on the fold"—to such an one the meek little Custom House looms up like an ancient bastile, while the green and white flag, waving peacefully over two nations, with its writhing snake firmly clutched within the talons of a monster eagle, assumes an aspect truly awful. If he should happen to be born under a lucky star he drives quietly on, and with bounding heart and bated breath reaches the other side with his booty. And all for a few cents! Oh, mammon, mammon, for shame! It must be an awful thing to be wicked. Now, if he had a wagon-load of opium, or a few bushels of diamonds, or a kit of plumber's tools, or other articles absolutely necessary for the maintenance of life, we would not so seriously object to his beating this heartless, sun-dyed government; but—we will draw the curtain and allow the wicked man to pursue his way while we return to our subject.

Beyond the custom house, on both sides of the street, are low, squatty adobe buildings, some dwelling houses, some stores, and several saloons. In a room 8x10, with a ground floor, is a grocery, saloon and general country store. Here you can buy a bible, or a glass of mescal, and with anything from a pin to the expensive and elegant sombrero one can be accommodated by a dried and withered old Mexican wrapped in a red blanket and the sun blazing hot. Inconsistent? Well, perhaps so, but a fact nevertheless. Further down the solitary street is a more pretentious saloon. The building (mud, like all the others) stands back ten feet from the street line—and in front we observe an awning, forked poles driven into the ground, other poles crossing and recrossing on top, and the whole covered with grass. Beneath this awning is a full-equipped bar, and the barkeeper reclines lazily in a chair and twangs a crazy old guitar. In another corner sits a lazy lout, vainly endeavoring to twist a song out of his Mexican gullet, and as we approach the bar to buy a cigar or something, he saunters up and says he will "take a leetle of ze muskell." He is not one of us, hence it is none of our business what he takes, and we pay no attention to him. Finding a discrepancy of fifteen cents in my change, I ask the "barkeep" if he can talk English. "Si, si,, señor, me speak-a ze good Inglis—so good as ze Spanish." "Well, sir," I continued, "you made a mistake in my change. You owe me fifteen cents." "No, señor, el comprendo," "You don't understand?" "No, señor—es eez all right," bowing and scraping, and retiring into the house. "I suppose he kept out the fifteen cents for that Mexican 'drink," said the doctor. "Perhaps so," said I, "but I don't like that way of doing business, and if I had the infernal scoundrel by the throat I'd shake the life out of him. But there he comes now, and on second thought I have no desire to raise a rumpus on Mexican soil, so we will walk on down street." And we walked. If I ever catch that villain on American ground I'll wallop him—I'll—I'll do some of the most artistic street mopping with him that was ever known.

Until very recently Tia Juana has been the "sporting" headquarters for San Diego and all Lower California. Twenty feet across the line, on the Mexican side, was located a bull ring of considerable proportions, and here, every Sunday throughout the year, congregated thousands of people to witness bull fights, and an occasional prize slugging match. Gambling of all kinds, indoors and outdoors, was rampant, and thousands of dollars changed hands daily. Finally Gov. Torres ordered the bull ring demolished and all gambling suppressed. This was done, and to-day Tia Juana is the quiet, sleepy old town of a hundred years ago.

While sitting under a pepper tree to day perusing the FOREST AND STREAM and enjoying a quiet smoke, I noticed a ripple of excitement further up the street. Watching a little more closely I saw half a dozen "sporty" looking chaps separate from the crowd, and two of them carried baskets. Thinks I to myself "chickens;" and while they were quietly conversing I as quietly sauntered up and inquired, "Where is it to be?" "Where is what to be?" "The main." "What main?" "Oh, come. Don't give us anything like that. Where is it?" They said they were looking for a man, and just then he came up. They stowed away the birds for safe keeping, and after imbibing a cigar or two we all started for a place on the Mexican side to witness a quiet little fight. We found a dozen Mexicans and as many birds, and watched two or three rounds with no little interest. Finally one of these San Diego chaps said he could "get a bird right here in Tia Juana that will do up any one you've got for $50." The match was made instanter, and returning to a place of concealment the San Diego bird was produced. He was armed with spurs, and the Mexican bird wore slashers—at least that is what those fellows called them. Two or three shots from the San Diego bird knocked his Mexican highness cold, and the stakes were duly pocketed by the winning parties. Excitement ran high and mescal flowed freely. In a moment another fight was arranged, this time for $25, and the San Diego bird waltzed in, wafted a bifter with his off foot on the head of his antagonist, and all was over. The Mexicans looked at each other in amazement, and as the San Diegans raked in the stakes they boiled over with rage. They jabbered and jabbered, and swore that the Americans would never leave the place alive unless they returned the money. Better council prevailed, and after talking the matter over among themselves one of the party advanced to the Americans and remarked that they need not give up the money to them, but they must go to the Custom House and leave it, they could not take it out of the country. Another wrangle ensued, and finally the Mexicans called out the Alcalde (justice of the peace) to settle matters. This official listened to both sides, and when they had finished and every one was waiting breathlessly for his decision, he jumped up and swore by the long horn spoon, or something, that he had a rooster which could lick anything either in Mexico or San Diego, and that he would just let him at the San Diegan, and not only keep in Mexico the money won by the Americans, but he would add $50 more to the pot! The bird was produced, the money put up, and in exactly twenty-one minutes the Alcalde's bird lay dead in the pit. Then the fun began. The Mexicans swore, the Alcalde gesticulated, and all declared that not an American should return across the line. I told him I was an orphan and strictly decent, and that I didn't want to come to the fight, but was persuaded into it by these bad men, and that if they would let me go I would never do it again. While this was transpiring the San Diegans made a dash for liberty, and succeeded in crossing the line, and were safe in America. I am slightly di-figured, but not in the ring. PACIFIC.

AN ADIRONDACK TRAIL.

THERE were four of us—three lawyers and a layman, the latter writing this sketch that it might be truthful. It was a congenial quartette, too, for each did as he pleased, and each pleased to do as the others did. So the first requisite of a pleasant trip was assured, for nothing is more destructive of the enjoyment of such trips than a member of the party who can be satisfied with nothing but the accomplishment of his own desires when they conflict with the desires of the other members.

The trip from Syracuse to Malone, the principal northern gateway to the Adirondacks, was somewhat tedious and wholly uneventful. But there was rare pleasure in the fourteen-mile drive to the State Dam, southeast from Malone, and real luxury in the hostelry of R. G. Low, who knows exactly what to do to make a tired man seeking rest and recreation happy and contented. There is no place in the Adirondacks where a man of gentlemanly instincts will be better satisfied with the treatment he receives. State Dam has long been known for its fruitfulness of anglers, and at proper seasons yields up abundance of sport. Its contiguous waters are scarcely less popular, and the wonderful breeding grounds maintain the supply of trout from year to year. Four miles from this resort is the home of the Ragged Lake Club of Syracuse, which is being converted into a place of rest and pleasure for business men who like a ten days' retreat to the great forest. The southern view from State Dam embraces a magnificent panorama, scattered along which are the peaks of some fifteen well-known mountains. A solid mass of mixed timber makes up the foreground, with silvery lakes and streams in contrast with the dense green of the heavy foliage. It was among constant delights that we spent four days, when three of us started upon a trip through the heart of the great wilderness, one of the very genial lawyers being called home, much to our regret, for none could have appreciated the trip better than he, and we should have revelled in his Scotch wit, apt allusions and opinions of men and things.

On Tuesday morning, June 18, at an early hour, we set out for the railroad six miles distant, to pass Loon Lake, Round Pond and Rainbow Lake, and reach Paul Smith's via Bloomingdale. This narrow-gauge road extends from Plattsburgh to Saranac Village. It is extremely crooked and has ever-varying grades. Trains are stopped wherever a person signals, and their running is much like that of the New York elevated trains. But the locomotives are engines of destruction. Already have they burnt over great strips of land on either side of the road, and the terrible devastation must continue until a pathway will be laid waste, which will seriously disfigure a great region of heretofore solid timber.

We found about forty guests at Paul Smith's, with every prospect of a full house early in July. From year to year improvements occur at this place, until it has become a wilderness Eden, but still changes are made which add to its comfort and loveliness. The great house and outbuildings have recently been supplied with a complete fire service, to be operated by a drilled fire brigade of employees in case of necessity, so that no more disasters from fire are probable. Paul's sons are the active managers of the resort—capable, efficient, courteous gentlemen.

Beautiful St. Regis! Your glories have often been sung, but only feebly. It is the eye rather than the ear that appreciates your loveliness.

Our start from Smith's through to Booneville was made soon after 8 o'clock, with a guide and boat for each of us. The distance to be traveled was about one hundred miles, and we had three days in which to make the trip. I shall endeavor to describe the route so clearly that any person wishing to cover it will recognize this as a condensed and ragged, but truthful pen-sketch. The distance, then, across the lower St. Regis is one and one-half miles, into Spitfire and across it, one and one-half miles; and into the upper St. Regis, two miles in length. There are many expensive and beautiful cottages or "camps" to be seen on the points of the beautiful shores, and the scenery is constantly most charming. At the head of this lake (these waters run northward) is Bunker's carry, one and one-half miles to Big Clear Lake; but the "carry" is made with a horse and wagon over a good road, at $1.25 per boat.

Taking a brief rest at a well-kept hotel at the end of the carry, and taking a glance at the grand scenery round about, and you hasten three miles across the crystal waters of the Big Clear to another carry four miles in length. If you have telegraphed ahead from Paul Smith's you will be met at this and the carry previously mentioned by wagons to transport boats and a four-seated wagon to carry persons from Big Clear to the Upper Saranac, where the four-mile carry ends, directly at Saranac Inn, owned by a club of gentlemen, with Dr. Ward, of Albany, at its head. This was formerly known as the Prospect Home, but its name was recently changed. It is the inn where Mr. Cleveland has spent parts of several seasons, and the same telegraph instruments in the office which gave daily records of his doings still do duty for visitors. The Upper Saranac is a central figure of the Adirondacks, the "Queen of the Saranacs." Its elevation above tide-water is about 1,700ft, and commands a picturesque view. In the foreground are hills approaching mountains, while far in the distance are Whiteface, Marcy (said to be the oldest rock formation known to geologists), McIntyre, Seward, and others of prominence, with smaller ones between the foreground and background, forming successive steps like the seats of an amphitheater. This scenery ranks with the finest in the wilderness. There are many lakes in the vicinity where anglers enjoy rare sport, good fishing being procurable at almost any season of the year.

When we left the Saranac Inn at 8 o'clock in the morning, continuing our trip southward, there were five boats in line to buffet the head wind and rough water for eight miles. It was a beautiful morning; everything seemed to combine to create a dreamland for our especial benefit. Something of interest was constantly spread before the little flotilla of bounding boats, from whose bows a spray was often thrown through which rainbow hues were occasionally reflected. At Corey's, now kept by Ed. McCoy, the guides had dinner while we followed the boats over the two-mile carry to Raquette River on our way to Long Lake. The water of the river was high, the current strong and the channel crooked, so that the guides needed rest when they had rowed seven miles to Raquette Falls, near which the noted "Mother" Johnson for many years ministered to the comfort of tourists. The place is now most disagreeable in every respect. The proprietor seems to be of the same mind of the man who bought a hotel under promise that it would return the purchase money the first year, and to make sure that it would do so charged his first guest all that the place was worth. With the boats drawn a mile and a half around the falls—really rapids—and seven miles more of Raquette River, we emerged into Long Lake in a rain storm, but found comfortable shelter at Amos Robinson's, situated on an island two miles from the foot of the lake. Long Lake is fourteen miles in length, with an average width of about one mile. Its scenery is variegated and generally attractive. On the eastern shore is the pleasant camp of Senator Platt, whose wife achieved unpleasant notoriety by charges which she made against a guide, who was hunted down and shot—unjustly so, the guides very generally say. The home of Mitchell Sabattis, the most noted guide of his time, attracts attention. The Sagamore Hotel is a large, well-fitted hostelry near Long Lake village, which has stage connection with Blue Mountain, two miles away. The town of Long Lake embraces an area of 440 square miles, and has a population of less than one person to a square mile.

After leaving this lake the Raquette River again becomes the waterway to Forked Lake. Soon Buttermilk Falls comes to view, and he who has read Murray's "Adirondacks" thinks how wildly his imagination ran. He describes his sensations as he descended their boiling, tumbling, seething rapids, through which a log can scarcely go without having its bark torn off by the many rocks it would bound against and over. Here is a carry of forty rods, then two miles of smooth water to the carry, one and one-half miles long, to Forked Lake, seven miles in length, with ragged, jagged shores and many tongues of land extending hither and thither. It is a fair sheet of water, surrounded with natural beauty. It is possible to "run" the inlet into Raquette Lake, but better to make the carry of half a mile. Once upon the "Queen of the Adirondacks," the eye becomes entranced by the beauty and loveliness so bountifully spread before the vision. The shores of this lake are so irregular that they are said to have a waterline of one hundred miles, while the greatest length or breadth is only about ten miles. Its elevation above tidewater is about 1,750ft., and its surroundings are uninjured by the hand of man. Many expensive and attractive camps are to be seen, amid dense foliage, and wild flowers are found in great abundance. A small steam yacht plies the lake, and connects travel with Blue Mountain, ten miles away, through Marion River. The Antlers is a well-fitted cottage, surrounded by rustic lodges, where the public is well cared for. And beautifully situated is the Raquette Lake Hotel, formerly known as "Under the Hemlocks," which has recently come into the possession of two New York gentlemen, E. and F. Finck, who seem to possess every needful quality to win abundant success. The house, the cottages and various buildings, and everything about the place promise abundant rest and pleasure to guests. Connected with it is a post office and telegraph station, and New York morning papers are received on the day of their publication.

We left the lovely Raquette early Friday morning en route to Old Forge, at the western end of the famed Fulton Chain of eight lakes. The start was through a tortuous, winding, sluggish stream some four miles: thence to Eighth Lake over a carry of about a mile; thence through this pretty lake and another mile carry to the Seventh Lake, and on to the ever glorious Fourth Lake, grand in its scenery and majestic in formation. One leaves this lake with regret as he hurries onward toward Old Forge, through waters not specially attractive, but among the oldest known of any. The Forge derives its name from an attempt made three-quarters of a century ago to establish iron works at this point, but which proved disastrous to the undertakers. Two and one-half miles further down the river is Arnold's, where a hunter and trapper lived many years ago, who resented what he thought to be an insult by murdering the man and drowning himself. From Old Forge to Booneville it is best to go down the river ten or a dozen miles by boat, and then go eight miles over a tram railway to Moose River, and there meet your carriage to take you twelve miles to the Black River Railroad.

I am aware that I have endeavored to condense matter enough for a book into this short but too long article. It was my purpose only to roughly describe the route of this trip of over one hundred miles for the benefit of tourists and sportsmen, and nowhere else, I believe, can they find a "trail" like this.

In conclusion, I must express the regret I feel, that the same avarice which drove patronage from Niagara Falls is finding its way into this region. There is a disposition

in many places to kill the golden goose. This spirit will much more quickly drive summer visitors from the Adirondacks than four times the present amount of devastation from fire, railroads and timber cutters. Murray opened the great gateway; will those who are profiting therefrom close it by their own blindness?

This grand combination of lakes and rivers, mountains and valleys, chasms and peaks, comprising altogether nearly or quite 4,000,000 acres—more than seventy miles across in any direction—would not long remain in its present condition if it were in almost any European country. It would come under the ownership and control of the State, and be preserved for the people of the State. But our own country, first in much that cannot be too strongly commended, is sadly slow in doing those things which would give it a reputation for something besides business, push and enterprise. The general Government should do as other general governments would do if they had opportunities for acquiring so many national parks as might now be secured for this country, in different parts of it. More money is squandered every year by Congress than would be required to purchase and maintain for many years all of the gifts of nature which have been so bountifully bestowed upon us. Are we to forever reject these gifts? D. H. B.

SYRACUSE, July 4.

A WEEK OFF.

IT was mid-summer, with the hot August sun beating down with relentless fervor on the city pavements, when Mark and I were granted our week off. We had clerked faithfully for Benjamin & Co., carpet dealers, these five years; and they had always rewarded us with a week's outing in August, just when business is dull. Hitherto we had improved our furloughs by running down Kalamazoo way to see the old folks, but this summer had been so unusually torrid and dry, and in consequence we felt so physically enervated, that the thought of the scorching harvest fields and white dusty highways of our boyhood homes made us perspire instead of mentally recuperate, so we resolved to go up North and cool off. This was a bold decision for even Grand Rapids clerks to make, and we held our breath and refrained from lisping it to our most intimate friends. We were getting the fishing tackle ready on the Saturday night before our departure, when Mark proposed that we carry our Winchesters too. I sat down on the hard boarding-house bed and stared at him in amazement. "Look a-here, old fellow," I ejaculated, "don't you know it's out of season to hunt deer, and that's all the big game we would be likely to run against." "But there's bear up there," mildly suggested Mark. We looked into each other's eyes as only two friends can when one of them has made such a startling proposition that the other's credulity is staggered. Before Monday morning Mark had won me over to the idea of taking the rifles, but we were so afraid that some of our waggish acquaintances might see us accoutred on the street that we sent the guns to the station by a boy to be expressed to our destination. Then we walked boldly to the Union depot and boarded the "Cadillac Limited," on the Grand Rapids and Indiana Railroad. It was 7 o'clock in the morning, and the air was already close and sultry.

The train stood away straight as an arrow for higher latitudes, and we dozed in our seats and dreamed of piny ozone breezes, limpid lakes and gurgling streams. Maple Hill, where the track reaches the end of a long grade and then descends northward till it is lost in a converging point, seemed a miniature paradise to our eyes. Here the meadows, the rustling cornfields and terraced maple woods wore a bright vivid green coat, and just the faintest of zephyrs tempered the arid quivering atmosphere. From this pleasant summit till we struck the low-lying Muskegon valley at Big Rapids, the desolation of the landscape was appalling. The lumberman's axe had razed the choicest sylvan giants to the ground, and then the fire fiend had charred and blackened the inferior timber remaining, till nothing but their skeleton trunks existed to make the scenery hideous. Big Rapids is a pleasant city of about 5,000 population, its streets tastefully lined with sugar maples. Several riffles in the Muskegon occur here, give the town its name and furnish splendid water power. Just above the city we crossed the turbid river that has borne more logs to market than any other stream in the State. It was chock-full from bank to bank with its pine wealth, and looked more like a great crooked corduroy road than a booming river.

Mark groaned aloud when he came to Reed City. "Here we are nearly to our proposed hunting grounds," he said, "and there is as much civilization in sight as we left on Monroe street, Grand Rapids. I fear that no game dare abide within sound of this bustling little city." However, we smothered our apprehensions, marshalled our grip together in readiness for a quick light, and gazed nonchalantly at the whirling landscape. "LeRoy!" The picturesque name came in stentorian accents from the throat of the versatile brakeman, the car windows jarred ominously, the slow revolving wheels grated harshly, and we came to a stop with a shock. We hustled out of the hot coach into the broiling mid-day sunshine, and vowed it was a veritable leap from the frying pan into the fire. As the train glided off toward its Mackinaw destination we vigorously mopped our perspiring physiognomies and surveyed the situation. We were eighty-two miles north of our starting point, and heaven only knew how many miles from fish and game, particularly bear. But we had our own route previously outlined, and were not going to be swerved one iota from the course now by any discouraging aspect. We walked straight to the "principal hotel" with the independence of drummers, and partook of substantial refreshments. Then we sat on the veranda and looked the burg over. It was a typical lumbering village, but more substantially built than most sawdust towns.

As our plan was to go in light marching order and depend on the country for forage, preparations for the start were soon complete. They consisted of picking up our Winchesters, fishing rods and blankets, etc., and sallying forth. The first man we met volunteered the information "that work could be had at Sawyer's mill, as there was a scarcity of help there." As this lumber manufactory lay on our line of march we did not undeceive our "mossback" friend as to our intents and purposes, but simply thanked him and passed on. Our path was a tram-road, or in other words a wooden railroad even to the flat maple rails. An empty tram car soon overtook us, and the driver gave us a lift to Sawyer's mill, three miles into the forest. The tram-road was used for drawing lumber to the railroad, and in many places it was of costly construction, running on high trestles over swamps and morasses. A log-surfaced lake, a Titanic mill guarded by two black smokestacks, and the scattered houses of employees, constituted Sawyer's mill and its environments.

We bought all of the bread one housewife could muster and denuded the cupboard of another of all its berry pies, and then with the dark pine forest to the eastward for an objective point we tramped on, wearily shifting our equipage from one galled shoulder to the other. We were getting tired and foot-sore; there was no use in denying it. The fresh spicy breeze rustling through the quaking asp and blackberry copse on the shady side of the logging trail we were following, dried up the moisture on our feverish faces, but sharpened our hunger to the verge of poignancy. We had brought no tent with us, as it would have added to our luggage, and we had been told that "canvas was unnecessary, as plenty of deserted lumbermen's shacks would be found in the woods." How some men can contort their veracity when giving advice to a party about to camp out, especially if that party consists of two innocent city carpet house clerks! We did not spend much time in looking about in that great lonesome pine forest for fabled woodsmen's shanties, but seeing a glimmer of water through an opening we beat our way toward it, falling over slippery logs and being mercilessly tripped with thorny briers. Mark swore that some of those particular mosquitoes that were perforating the scruff of his neck were by breed a pure cross with bumble bees, and I had no reason to question his opinion. It was all fun anyway, and sport and recreation was what we had entombed ourselves in the savage wilderness for. So we emerged on the shores of little Silver Lake, making its sylvan shores peal with our silvery laughter. Silver Lake was rightly named; it was as round as a silver dollar, and the purple evening light was reflected from its clear surface in an incandescent glow. We soon had a big smudge going, for the insect pests were intolerable. As we stood in the thick smoke and alternately rubbed our bitten faces with oil of pennyroyal to guard against future vampire attacks and staid our stomachs with big samples of brown bread and berry pies we exchanged practical views for the plans and specifications of our night's camp. It was then after 6 o'clock and the work must be done quickly. We bent over some poplar saplings against a gigantic pine log for the framework, and with a hatchet lopped the boughs from several youthful hemlocks, which crude balsamic material both shingled our house and formed the ground work for our beds.

The slapping of the limpid surface of the lake by several frisky black bass had aroused my piscatorial instinct to such a pitch that I left Mark to ignite the fire at the door of our evergreen canopy, and picking up my fishing rod felt my way carefully along a partly submerged log out among the pond lily leaves and nodding water grasses. I put on a grub for bait and cast forth for luck. The tempting bait was taken with avidity and I swung in a ½lb. bass. I tossed it on shore to Mark, and whipped the water far beyond the lily pads with my long line. The linen went off with a swirl, the tip of my pole tapped the water, and the lurch caused me nearly to lose my balance and take an ignominious bath. But my blood was up, and bracing myself for the effort I lifted as fine a bass from the water as it was ever my luck to land. He was indeed a beauty, would weigh 5 or 6lbs., and had the strength of a young leviathan. Mark had now joined in the sport and succeeded in landing several fine fish. I caught a couple of slim perch but had no more bass bites, and as the shadows of night were descending fast on the gloomy forest, we retired to the shelter of our improvised bungalow to dress our finny victims and broil them on the coals. I can remember to this day how they tasted, eaten then by the flickering firelight with the shadowy outline of the great pine towering above us, the flashing of luminous insects in the summer air, and the soft ripple of diminutive wavelets on the lily pads. The evening was a trifle chilly, and Mark stirred up the fire and I spread our blankets on the bough bed. At this juncture a demoniac shriek pierced our ears and died away in a horrible gurgling laugh that froze the marrow in our bones. Mark and I gasped the word "panther!" in the same breath, and with a hoarse cry of terror we swung our rifles into position and crowded back under the protecting log. A moment of utter silence and awful suspense followed, then a twig snapped to our right. Our pieces moved around in that direction with the automatic action of a battery anticipating a flank charge, and we fired simultaneously. A hundred booming guns responded from the wooded shores of the lake, and as their bellow waned to a fusilade of rollicking echoes, a flutter was heard overhead, and we knew that an owl was winging his way over the pine-sentineled loch. Our teeth ceased to chatter, the blood came back to our blanched cheeks, and we laid down the rifles with the meekness of lambs. Strange how the sudden hoot of an owl will upset a man's nerves, isn't it?

We lay down on our aromatic pallets that night and slept the sleep of the just. But the atmosphere must have been different from what we were used to breathing in the Ionia street boarding house, for when old Sol awoke us in the morning by shining unceremoniously in our faces, our vocal cords could only vibrate a hoarse bullfrog croak. We made a hasty breakfast, whipped the lake for more fish, and then worked back toward the logging trail of the previous evening. No sun ever penetrated the dark pine woods we were now traversing, but their gloom was flavored with balsamic exhalations and the pure ozone that circulates alone in forest avenues; we drew it in at great draughts and trudged on our way rejoicing. About noon we came to the shores of Indian Lake, our final destination, and greeted its sparkling surface with a hurrah of welcome. The trail that had led us to this lovely spot diverged to the left here and passing on via Strawberry Lake, had its terminus in the thriving village of Evart, ten miles southeast. We discovered a decayed shingle-maker's hut near the border of the water, and repairing it, making it our headquarters for the rest of the week. We spent the other four days of our outing in wanton joy, tramping through the neighboring thickets, firing at partridges whose feathered coats would somehow always turn a bullet, and canoeing on the bosom of the lake in hollowed out logs with poles for paddles. We grew brown and rugged even in those few blissful days. We had located a house about a mile away whose matron for a reasonable consideration kindly furnished us with eatables, and we spiced the menu with the trophies from our hooks. But yet we had seen no bear!

But as fate would have it we were not destined to see the metropolis of western Michigan again without scenting bear; the most remarkable day of all proved to be the last one of our stay. We got up that morning with the sun and stretched our limbs like a couple of spring chickens. We had planned to make a trip to Todd Lake, four miles distant, and there troll for pickerel. We paused at the door of our cuisine benefactor's log residence, and she gave us a large, warm sugar cake to carry for our noon lunch. Then getting minute directions as to the location of the lake, we consulted our compass and plunged anew into the darksome forest. What a wild jaunt that was! We had not gone a mile before Mark lost our magnetic guide from a hole in his pocket, and we lost much precious time in a vain search for it. Then we trusted to luck for the outcome and marched forward much as De Soto must have done in his interminable search for the Georgia gold mines. Ah, but there was something savagely grand about our surroundings. It was treading softly over the yielding carpet of nature's great cathedral, with rustic boughs for rafters and the interstices canopied with trembling leaves for frescoe. There were tall, graceful silver birches with milk-white trunks, hiding under the wings of dark-robed somber hemlocks, whose cone-studded plumage was in turn overlapped by the dirge-moaning crests of mastodon white pines. Near 11 o'clock we emerged on an oozy alder bottom, and here noticed the tooth marks of the extinct beaver on many a gnawed stump. What a labyrinth of sylvan lanes that alder copse was laid out in! We straggled through them, holding our guns high above the cruel saw-grass that slashed at our unprotected wrists, many a time having to bend low and grope our way through green tunnels, where the willow branches had interlocked overhead. Suddenly we stepped into a bright, clear sunlight, and instead of being enraptured by a view of the broad expanse of Todd Lake, there lay before us a billowy sea of blue-joint grass. It was a magnificent spectacle, an oblong meadow of nature's own making, fringed on the yon side by pea-green tamaracks and feathery-crested pines. As we paused the silence was absolute, save for the thumping of heart beats in our excited bosoms.

Then we pushed out into the rank grass growth that enveloped us to the shoulders, and struggled through its impeding interlacement of blades toward the converging end of the field. Some haycocks loomed into view, and we were soon walking on stubble shaved smooth by the keen edge of a scythe. Who could be baying it here in this wilderness? We did not weary our brains over such an inexplicable problem, but, panting and exhausted, hastily utilized one of the soft cocks for a couch, and lying flat on the wild-scented hay munched our sweet cake, saying nothing, but thinking a good deal. Just below us the marsh narrowed, the meadow left off, and the alders and willows began again. Presently down there a dry pole snapped, as if some one stealthily walking had made a misstep. My eyes lazily opened from a part doze, but I felt too comfortably located to investigate. Mark evidently had heard nothing; he lay as one who slumbereth. Two, three, five minutes had elapsed, my eyes were closing again, the summer air quivered with heat, a locust rasped from a linden tree back in the forest. A rod of scythe-clipped marsh lay between us and where the green wall of tall grass abruptly recommenced. A couple of rods of this, and then in the background, where hard land arose, a thicket of quaking asp flourished that closed the cavernous mouth of the forest recesses. I was dreamily watching the blue joint border, enchanted by its feathery head tufts that spangled and scintillated in the solar glow, when a hoglike snout arose above their crest and pushed up higher and higher till there was revealed a long, peaked head of swinish contour, paws hung daintily down as if in supplication, diminutive ears and cunning little eyes that looked straight up and revealed nothing but their whites. The whole apparition was as black as the shades of Egypt, and it had been sprung on my vision so easily and noiselessly that I did not have time to be startled. I was simply fascinated. It paused there an instant, the long "smellers" on its olfactory tip oscillating rapidly, and then it sank behind the tall grass as silently as it had arisen. My spell had broken, I softly jogged Mark's elbow, and he quietly opened his eyes just as the creature arose again, fully a rod nearer us. This time the pointed head wagged our way, the little cunning eyes looked into our fixed gaze, and then with a hoarse "wooh!" of terror "our bear" dropped to his feet. There was a wild swirl in the grass, a crashing of brush in the quaking asp thicket that caused their quivering leaves to dance a jig, and we were alone with our chagrin and our Winchesters. We decided not to look any further for Todd Lake, but took the back track and made our camping place about 4 P. M. The next morning was Saturday, and with a reluctant farewell to the charming scene of our outing, we shouldered our traps and wended our way toward Evart.

I can only give you a passing glimpse of the narrow escape we ran by fire before we reached the railroad. We had noticed great volumes of white smoke looming up in the southeast the day before, but had considered it a long way off. Now we found our path was leading us directly into it. We made a wide detour to the westward, scrambling through the lumber slashings that had been denuded of their choicest timber the winter before. But the flames scurried after us and played like the forked tongues of demons along the lurid horizon. Boom! crash! boom! sounded the forest giants as they thundered to the earth and shook loose dense clouds of glittering sparks. We dropped everything but our guns and run like mad. It was not like giving a man a fair chance for his life in an open space. We were tripped by wiry ground hemlock and dashed stunned and bleeding to the ground; we ran blindly against upturned gnarled roots and were hurled back into the teeth of the fiery tempest by the recoil. We broke through to the armpits in great piles of dry brush and madly struggled to get out with the horror of despair, while the seething flames hovered over us and almost licked our scorched bodies. O, the joy of relief and rescue, when we staggered into a damp swamp and buried our blistered faces in the oozy moss. The fire rolled on and left us as brands snatched from the burning, and eventually we safely reached Grand Rapids to recount the tale in a careless,

off-hand way to our envious fellow clerks. But we never mentioned the bear incident only in mutual whispers in the sacred cloister of our own room. Then Mark said that on our next bear hunt we would bait a trap with fresh-baked sweet cake, and when bruin had gotten safely into it we would finish him with our indomitable Winchesters. GEORGE E. NEWELL.

"AN EPISODE OF THE WAR."

POST MILLS, Vt., July 10.—*Editor Forest and Stream:* Will Mr. Edward Manning, of Montclair, N. J., please give the name of the Confederate cruiser, who captured the Flora, and whose prize crew "the mate and colored cook" made food for the sharks? Confederate cruisers were few, and their custom of manning prizes from their own too scanty crew, to run the gauntlet of Federal gunboats that cruised and blockaded every port in the Confederacy, was not a rule laid down in our logbook. Ransom or bonding, scuttle or the torch (but few of the former, however), were the common and general ways of disposing of prizes. Of course we don't question the truthfulness of the "Episode of the War," still it reads a little like a story to the marines.—EX-CONFEDERATE NAVY.

Mr. Manning brought us the "Episode" as a substantially true relation, the name of the schooner being changed; and in response to "Ex-Confederate Navy's" request he has sent us the text of the petition in the case, presented to the Court of Commissioners of Alabama Claims. It was on the showing of the facts as in this petition that the firm alluded to by the writer of the "Episode" was awarded the sum which it had paid as salvage to Tillman and Skedding for recapturing the schooner and bringing her back to New York. We quote from the petition certain paragraphs which appear to us to demonstrate that Mr. Manning's account may be accepted as a bit of history:

"Fourth—That on the fourth day of July, 1861, as your petitioner is informed and verily believes, the said schooner S. J. Waring with the aforesaid boxes of merchandise and other goods on board for the ports of Buena Ayres and Montevideo, in South America, and thereafter and on or about the seventh day of July, 1861, as your petitioner is informed and verily believes, the said schooner, while prosecuting her said voyage with the aforesaid boxes of merchandise and other goods laden on board of her, was attacked, seized, and captured on the high seas by the Confederate cruiser Jeff Davis.

"Fifth—That as your petitioner is informed and verily believes those in command of the said cruiser carried away the captain and chief officers of the said schooner and all of her crew, excepting a negro named Tilman, who was her steward; a sailor named Skedding, and two passengers named McLeod and McKinnon, and placed on board of said schooner a prize crew, which prize crew changed the course of the said schooner with the declared intention of making the port of Charleston, in the State of South Carolina, or some other port in the so-called Confederate States, and of there disposing of the said boxes of merchandise, the said schooner and other goods laden on board of her.

"Sixth—That as your petitioner is informed and verily believes, at about half-past eleven o'clock in the night of the 16th day of July of the said year, and while the said schooner, with the said boxes of merchandise and other goods laden on board of her, was proceeding under the command of said prize crew, the said negro steward Tillman rose upon the said prize crew, and with the assistance of the said Skedding killed the captain and the two officers thereof, and taking command of said schooner himself brought her and the aforesaid boxes of merchandise and other goods laden on board of her into the port of New York, where she arrived on the 21st day of July in the said year."

The petition further sits forth that for their salvage services the two sailors and the two passengers were paid $15,000; all of which is a matter of court record. It is also recalled by the attorney, who conducted the firm's case for the recovery of their share of the salvage, that the negro steward Tillman, and the sailor Skedding were arrested by the U. S. Marshall at the instigation of some parties not known, for the murder of the captain and officers of the prize crew, but were afterward released. The full account of the proceedings in this case is a matter of record in the U. S. Circuit Court for this district.

Natural History.

OUTDOOR NOTES FROM LOUISIANA.

YEARS ago I spent a summer vacation in Missouri, chasing the "hoopsnake," but, like the ague in Indiana, he was always in the next county. I am now after the "hornsnake," and expect to obtain the same result. This, to me, latest contribution to ophiology, is devoutly believed in by the natives here, and their accounts of him agree marvelously well. He is from 3 to 5ft. long, slender, of a dull bluish-black color, striped longitudinally with yellow, and the last two or three inches of his tail is a slender, sharp bone, carrying a deadly poison. He stings instead of biting, and his sting is instant death—not even immediate amputation, if the bite is in an amputable part, being quick enough to stop the lightning-like action of the poison. One old Acadian, the Nestor of the neighborhood, told me how some twenty years ago his cousin was found lying dead in the rice field, and a large hornsnake coiled up beside him. One of the party, bolder than the rest, killed the snake, cut off his horn, and gave it to 'Sieur 'Polyte, who showed it to me. Unfortunately, it was so exactly like the horn in a stingaree's, or stingray's tail, that even the old man's honest belief could not convince me that it was anything else. I have offered a reward of $5 for a full-blown specimen of the "critter," but so far without result. I suspect he's but an avatar of the hoopsnake.

I fear I have lost my credit as a man of science among my Acadian neighbors forever. I spent the day, not long since, at the house of one of them, and, during the forenoon, one of the tribe of small boys killed a joint snake in front of the veranda on which we were sitting. This led, of course, to the remark from one of the company that the pieces would re-unite before sundown, and the snake be whole again. I ought to have held my tongue, but no; I must needs demur to the statement, and the controversy was finally settled by both parties agreeing to the crucial test of letting the remains lie undisturbed and allowing facts to decide. The subject was forgotten by all of us, until we broke up to go home after supper, when some one remembered it, and we all went to see which disputant was right. Alas for me! every joint but one had disappeared, and there, but a few feet from where they had been, lay coiled—a jointed snake! On my attempting feebly to hold my own by evidence of the one joint that was left, arguing that this was consequently another snake, and not the "original Jacobs" at all, I was met with the triumphant statement that this snake was just that one joint shorter, and that, in the hurry and agitation of his reconstruction movement, he had overlooked this one member, and thus failed to incorporate it into the new body politic. "Logic is logic," and I retired defeated from the field.

I saw something lately that I am almost afraid to record in FOREST AND STREAM, for fear that some "bird sharp" will say I was blind, or blind drunk, or "don't know a hawk from a hern-shaw," or that "the books" make no mention of such a fact. However, here goes, and if they prod me too sharply, perhaps FOREST AND STREAM will allow me to kick back. Imprimis, then, the white egret is a common bird here—ditto the blue. I have often seen the white and the blue in the same flock, but some three weeks ago I saw a flock in which were not only whites and blues but white-and-blues and blue-and-whites; in fact they were as variegated and parti-colored as a flock of barn-pigeons. Of course, I had left my gun at home ("what things a fellow do see when he ain't got a gun"), and when I next went that way, armed, the flock had left the pond. They were so tame that I drove within twenty yards of them, and when they flew they simply circled around me, within easy gunshot, and lit again in the same place as I passed, so I had ample opportunity for observing them closely. May be this thing of parti-coloration is not so rare in wild birds as I thought, but I have never seen nor heard of such a thing before.

Can any of your readers tell me something about the specific and generic affinities of a bird called down here the "water turkey?" In structure and habits he is the most contradictory bird I ever came across. Web-footed and short-legged like a duck, I have never seen him in the water, but when at rest always perched in trees. With a long neck and spear-shaped head and bill, like a crane or heron, and so, one would suppose, feeding as they do on frogs and small fish, the stomach of the only two specimens I was able to secure contained nothing but the shell cases of insects and green vegetable matter.

LAKE CHARLES, Louisiana. H. P. U.

[H. P. U. is sound in his observations on the pied heron. It is *Ardea cærulea*, the little blue heron. The adult is usually slaty blue with maroon-colored neck, while the young is pure white, and between these two colors there are all grades. The water turkey, known also as snake bird, is allied to the gannets, cormorants, pelicans, etc., the tolipalmate swimming birds. Its name is *Anhinga anhinga*.]

THE SPARROW PEST.

SOME time ago you had quite an interesting discussion on the English sparrow. If I remember right there were few pros, but many cons brought out. If not too late let me in with a most decided con, for I know whereof I speak.

The blizzard of a year ago almost obliterated Bob White from all the northern counties of New Jersey; yet this same terrible cyclone spotted our parks, streets and byways with the dead bodies of thousands of these English sparrow pests. This was in March. In April a few robins appeared around our homes, then came bluebirds and wrens and other feathered reminders of other days. The enemy seemed to have departed and they prepared to tarry with us as of old. Years ago in front of our house, in order to keep this English pest from building in our porch and soiling the walls, we had hung up a number of empty powder kegs and cans, which houses these creatures immediately availed themselves of; and we have had our shade trees loaded down with a chattering, fighting, thieving set of feathered scoundrels without one trait of commendation, for they won't touch the worms now—the very object for which they were brought across the water—but they insist upon the best of seeds, grain and even cake—confound 'em. Eat worms! not much, except in the following way: In our back yard we have a couple of pear trees that used to bear well year after year. Our next door neighbor has some peach trees that produced fruit large and delicious in flavor. Do we get them now? Not much. Where we used to get bushels now we can find but a few. Why? I can see from my back window day after day scores of these sparrows pecking at the buds. Naturalists may say they are after the worms or larvæ in the buds, but they take buds and all, and I don't believe the yarn that there is an incipient destroyer in every bud for the delectation of these tyrants. They have an educated palate, and a tender peach bud is ice cream to them, larvæ or no larvæ.

In our back yard we have a grape arbor, on one end of which I had hung a tin powder can several years ago. This being rather in the shade, the sparrows did not take to it, in fact I do not remember that any paid any attention to it for housekeeping purposes. Along in April there came a pair of wee yellow wrens; and the coast being clear, after due prospecting and delicate deliberation, they moved in and commenced housekeeping or preparing for it. All went well for several days. I congratulated myself. "The country was safe." Most of the pirates were *non est* and what were left were so demoralized that our little darlings would be left in peace. But alas! they were one day discovered in their cosy retreat; and soon one brown-coated scoundrel commenced his annoyance of the female wren when alone. She fought manfully back and he had to retreat. He soon returned with another; and they were driven off. Again he returned with four brown villains besides himself. These, with the help of her lord, our little darling put to ignominious flight. Did these insatiable, vindictive rascals remain flighted? Not much. They returned with a dozen and I believe more, and they pestered and pecked and annoyed these little yellow wrens in a home that they did not want (and have not used since) until they were compelled to leave. This is a positive fact as witnessed by myself and different members of my family. The robins too, and the bluebirds, and the oriole—he of the intelligent pendent cradle just started on a willow across the street—all went; and we have in their places these pestiferous vermin.

If only the sparrows could be exterminated, our parks and groves would once more echo with the melodious notes of our own songsters, and the summer foliage would again be beautiful with the red of the robin, the indigo of the bluebird and the gold and black of the gorgeous oriole. What good is the English sparrow? He is not large enough to be used as food; and even if he were I believe he is too mean to taste good anyway.

JACOBSTAFF.

DR. M. G. ELLZEY, of Woodstock, Md., a frequent contributor to the FOREST AND STREAM, has assumed the editorship of an agricultural science department in the *Natural Economist* of Washington; and good work may be expected from him there.

MORE ABOUT OTTERS.—Indian Rock, Me.—While traveling their beats otters frequently have what trappers call slides. Sometimes they have a place to leave the water to go on to some knoll (to scratch and dig the moss), and when they get ready to start for the water they slide on their bellies. Any person will readily see that in going from the water an otter would place his hindfeet close to the edge of the bank. There is where I set the trap. Anywhere from three to eight inches under water and I never had an otter pass the trap without putting his foot in it, and if the trap is smart I always find the otter. They never twist their foot off, as most other animals do, but fight the trap and everything within their reach until they become exhausted, when they lie down and die, probably within twenty-four hours after being caught. If your correspondent is not satisfied with this explanation I can give him two other modes. I wish all correspondents to criticise all I may have to say in your valuable paper, as I do not intend to write one word I cannot substantiate. I am neither sensitive nor nervous and do not object to difference of opinion, so as to get at the facts.—C. J. RICHARDSON.

RUFFED GROUSE EGGS.—Coralville, Ia., June 20.—Noticing the clipping from the Worcester *Spy*, relative to the finding of a nest of the ruffed grouse containing fifteen eggs, I add a little evidence in regard to the numbers sometimes found in a single nest. In early June, 1885, a young man living here found a nest containing 23 eggs. He flushed the old bird from the nest. This spring a man, in burning some brush piles, discovered a nest containing 18 eggs. In 1884 I found a nest near here and will append my notes in regard to it. It will show the period of incubation to be different from that given by some writers: May 2, 1884—I found this day a nest of the ruffed grouse containing 12 eggs; one must have been laid to-day, it looked so fresh and clean. May 4—The above nest contains 14 eggs to-day. May 28, 7 P. M.—The old bird was away from the nest, but the eggs are all right and sound. May 31—Thirteen eggs hatched, and old bird and young all gone; I got the shells and one addled egg. The first nest of a quail that I ever found was in New London county, Conn., and contained about 15 eggs. The old birds were just four weeks in incubation. By looking up notes, I could give other instances of large clutches of ruffed grouse.—JOHN WILLIAMS. [Our correspondent's notes are worth putting on record, and we shall hope for the rest of them.]

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One West Australian kangaroo (*Macropus oeydromus*), ♂, two Gillespie's hair seals (*Zalophus gillespii*), ♂ and ♀, one grison (*Galictis vittata*), one skunk (*Mephitis mephitica*), four prairie foxes (*Vulpes macrurus*), two bald eagles (*Haliaetus leucocephalus*), two green jays (*Xanthura luxuosa*), one ring-necked parakeet (*Palæornis torquatus*), two yellow-throated parakeets (*Brotogerys tovi*), one Barbary partridge (*Caccabis petrosa*), one blue-headed pigeon (*Starnœnas cyanocephala*), three alligators (*Alligator mississippiensis*), two alligator snapping turtles (*Macrochelys lacertina*), two black hog-nosed snakes (*Heterodon platyrhinus niger*), one hog-nosed snake, black variety (*H. platyrhinus atmodes*), three hog-nosed snakes (*H. platyrhinus atmodes*), two hog-nosed snakes (*H. platyrhinus*), one hog-nosed snake (*H. simus*), one indigo snake (*Spilotes crebennus*), and one king snake (*Ophibolus getulus*). Presented—Two opossums (*Didelphys virginiana*), one gray squirrel (*Sciurus carolinensis*), two woodchucks (*Arctomys monax*), one blackbird (*Quiscalus purpureus*), one crow (*Corvus americanus*), three screech owls (*Scops asio*), two reed birds (*Dolichonyx oryzivorus*), one king rail (*Rallus elegans*), one pintail duck (*Dafila acuta*), one Canary bird (*Serinus canarius*), one soft-shelled turtle (*Aspidonectes ferox*), six alligators (*Alligator mississippiensis*), two water snakes (*Tropidonotus sipedon*), two Agassiz tortoises (*Xerobates agassizi*), one grass snake (*Cyclophis œstivus*), one horned lizard (*Phrynosoma cornuta*), one crowned horned lizard (*Phrynosoma coronata*), and one punctated gecko (*Sphærodactylus punctatissimus*). Born—One buffalo (*Bison americanus*), one Virginia deer (*Cariacus virginianus*), one elk (*Cervus canadensis*), three peafowl (*Pavo cristata*), and one zebra finch (*Estrelda subflava*).

Game Bag and Gun.

A STUDY OF WOODCOCK.

TO me there is no bird so interesting as that shy, mysterious, semi-nocturnal haunter of shades and swamps, the woodcock. I have studied it for years, and yet it seems to me as if I knew very little more about it than when I began. It is a bird which almost baffles the efforts of the student of natural history, because it seems to live always under the consciousness of being watched. It is the coyest, most retiring game bird of our Northern coverts. To know it intimately, one must be as assiduous in one's attentions as the most devoted lover.

I do not hesitate to say that I have some theories about the woodcock which I have not yet succeeded in verifying. Some of them are altogether contrary to the commonly received statements of well-known writers on natural history. I may be laughed at for advancing one or two of these theories in the present paper, but I console myself with the thought that many mirth-provoking theories, in the course of modern investigation, have become science.

Among other things I believe the woodcock has the power of song. To be sure I have not verified this theory yet, but I think I am on the way to do it. I have heard the song, but I haven't quite fastened the responsibility for it upon the woodcock. However, that will come in time.

Not long since I spent a moonlight night on a certain water, a famous breeding ground for woodcock, making a nocturnal study of these birds. The record of it may not be uninteresting. I chose a night when the moon was full, so as to have all the light possible. In my pocket I carried an ordinary opera glass and a small metal whistle. The use of these appliances will be described presently.

I left the road just before it reaches the bridge over the river, and crossing a wide meadow came to the breeding covert I have spoken of. It lay not far from the river, and was abundantly watered by a little stream which ran through it with many a zigzag and devious digression. The covert was composed of alders, birches, hemlocks and a few cedars. When I reached the ground it was late in the afternoon. The air was oppressively warm, and not a sound broke the absolute stillness of the place. I sat down on a little knoll, lit my pipe, and tried to drive away the persistent cloud of mosquitoes which hovered around me. But in vain. They swarmed into the cloud of tobacco smoke as if enamored of its fragrance. I had forgotten my "Jumboline," and all that remained for me to do was to grin and bear the inevitable affliction as best I could.

Presently I heard some animal—it may have been a dog—passing rapidly through the covert up a little distance. As I listened there was a familiar sound of whistl-

ing wings, and suddenly, as lightly as a feather, a woodcock alighted on the knoll where I sat, not six feet from me. I remained absolutely motionless, permitting the insatiable mosquitoes to drive their suction pipes into all the exposed portions of my body. The woodcock stood for a moment perfectly still, as if listening. Then it began to strut around like a barnyard cock, its pert little head nodding and its great bright eyes glistening like beads. It evidently had no notion of my presence, though, between the mosquitoes and a strong impulse to laugh at what looked like a little old wood witch hobbling about with a very long black cane, I could hardly keep still. Suddenly a stick cracked, and as quickly and lightly as she came, the wood witch with her long black cane was gone.

I slapped myself frantically, and sent at least a dozen half-gorged mosquitoes out of the world. Then, jumping up I took a walk through the covert. Near the edge a woodcock flushed, flew a few feet only and then came down and fluttered along the ground as if wounded. I knew her young were near and stopped where I was. Seeing that her counterfeit agony had no effect upon me the mother bird returned, picked up one of her concealed fledglings with her feet and flew away with it. She barely rose above the alders with her burden; but in a minute or two she returned and carried off another of the young birds in the same way. This time I tried to follow her, as she seemed to fly very slowly, but she succeeded in giving me the slip.

I now proceeded to test another of my theories, with the aid of the metal whistle aforementioned—the theory, namely, that the woodcock, in common with many other wild creatures, has considerable of a bump of curiosity. Placing myself in the vicinity of a spot where I had flushed a bird I kept perfectly still for about fifteen minutes and then began to blow a succession of soft notes at regular intervals on the whistle. In less than four minutes Master Cock, stepping very daintily and stopping to listen at almost every step, emerged from his hiding place and came toward me. Having previously taken the opera glass from its case, I watched to the best of advantage every motion of my little friend, whose actions were exceedingly amusing. Every now and then he would stop, rest his long bill on the ground and close his eyes as if going to sleep. Then he would start up, strut in a circle, trail one wing and cock his head, as if trying to locate the sound. I am of the opinion that he was actuated, not only by curiosity, but by some vague association of the note of the whistle with the note of the female. At last an inadvertent movement on my part startled him, and away he flew.

From what I observed on this occasion, and at other times, I am convinced that the woodcock is only a semi-nocturnal bird, and perhaps feeds and moves about as much in the daytime as at night in retired spots. In the course of the afternoon I flushed six or eight different woodcock from the banks of the little brook I have mentioned, and in every instance fresh borings in the soil proved to me that the birds had been feeding when disturbed.

Just at dusk, however, there was a veritable uprising among the woodcock. Standing on the edge of the swale I saw cock after cock leave the cover and fly out into the open meadow. In fact they darted around me on all sides, with flight almost as erratic as bats. Whether these excursions were merely for exercise and amusement, or whether the birds visited and returned from other feeding grounds, or whether (actually) they were in pursuit of insects in the air, I am sure I cannot say. At all events this peculiar activity did not last above half an hour. My theory is that these flights of the woodcock, just at dusk, are mere playful ebullitions of bird spirits—explosions of nerve-energy, if you choose. All birds are vivacious and joyful by nature. They are the optimists of the animal creation. What more natural, then, than that the woodcock (which, I am almost confident, has a song, and which most certainly has a bright eye and coquettish little ways) should break over its hermit habits once a day and enjoy a mad, merry whirl in the air?

I remember that once when I was camping on the east shore of Mallett's Bay, in Lake Champlain, as we were lying outstretched, four of us, in the glow of the campfire, after supper, right in the middle of us there dropped down an audacious woodcock. The bird stood within 3ft. of the blaze and 2ft. of the dog's nose, a mischievous, alert, playful adventurer, which could have had no reason under the sun—or, more correctly speaking, under the moon—for floating down into our midst, except to give us a surprise and enjoy our amazement. It was a maneuver "just for fun." I could see it in the bird's eye. There the woodcock stood for ten or fifteen seconds, and the dog was so completely taken aback that he simply stared, like the rest of us. Suddenly, as if at the wave of a magician's handkerchief, the bird was gone. Up jumped our cocker spaniel, and with furious yelps rushed up the trunk of a leaning tree into the very branches, over which the woodcock had disappeared, and there stood shivering and whining, wondering where the bird had gone, and how he himself should get down again. That woodcock, I am sure, was out on a frolic.

To return to the swale by the river. When the moon rose I took a position near one of the moist places along the brook, where the borings were freshest and most plentiful, and awaited developments. For a long time the bright light of the moon fell full upon the spot I wished to observe, and I could see everything with the utmost plainness. At about 8 o'clock a woodcock dropped down silently beside the brook. Presently another bird walked out of the shadow and joined it. Both began to "bore" for worms—an operation I had never seen before, and a curious performance it was. The birds would rest their bills upon the mud and stand in this position for several seconds, as if listening. Then, with a sudden, swift movement, they would drive the bill its entire length in the soil, hold it so for a second, and then as swiftly withdraw it. Though I watched the birds carefully with the glass, I could not detect the presence of a worm in their bills when they were withdrawn. But a subsequent process gave me the clew to their method of feeding. After having bored over a considerable piece of ground—a square foot or more—they proceeded to execute what looked comically like a war dance upon the perforated territory. They also occasionally tapped the ground with the tips of their wings.

My intense curiosity to know the possible utility of this process was at length gratified by seeing a worm crawl, half-length, from one of the borings, when it was immediately pounced upon and devoured by one of the woodcock. Presently another worm made its appearance, and so on until the two woodcock had devoured as many as a dozen of them. Then the "vein" seemed exhausted, and the birds took their leave.

I have subsequently studied the philosophy of this method of digging bait, and have come to the conclusion that certain birds are a great deal wiser than certain bipeds without feathers. If you will take a sharpened stick and drive it into the ground a number of times, in a spot which is prolific with worms, and then tap on the ground with the stick for a few minutes, you will find that the worms will come to the surface, and that they will come up through the holes which you have made. I account for it by the supposition that the tapping of the stick somehow affects the worms the same as the patter of rain, and it is a well-known fact that worms come to the surface of the ground when it rains. The antics of the woodcocks after they had made their borings, then, were simply mimetic, and intended to delude the worms into the belief that it was raining in the upper world. The worms, being deceived, came up and were devoured. All this may seem ridiculous, but if it is not true, will some naturalist please state how a woodcock can grasp and devour a worm when its bill is confined in a solid, tight-fitting tunnel of soil, and also how it is enabled to know the exact spot where it may sink its bill and strike a worm? And further, of all those who have seen a woodcock feeding, how many ever saw it withdraw a worm from the ground with its bill?

After the pair of birds I have mentioned flew away, I found another open place by the brook, where the light of the moon poured in, and after watching for perhaps an hour, saw a solitary cock alight and go through exactly the same process of feeding which has been already described. When the woodcock left, I went to the spot and examined the borings. They were very close together, and, of course, it was impossible that the bird should have found a worm for every boring. I do not think that the woodcock is able to determine anything with respect to the presence of worms before it thrusts its bill into the mud, except that the spot which it has chosen is a "likely place."

Although I remained in the cover until the moon went down, I saw only the three birds feeding which I have mentioned. There were some low and mysterious sounds in the swale during the night, which may or may not have been the conversation of the little community I have been describing.

About midnight a small black animal passed through the covert, and I crept forward to see what it was. Judge of my surprise and consternation when, instead of fleeing, the animal turned upon me in the most threatening manner. I lingered only long enough to perceive that it was a skunk, and then quitted the vicinity in the shortest time possible. Skunks are oftentimes amazingly bold, especially in the summer. They seem to realize that they are held in universal respect. Evidently the same motive had brought this particular skunk to the woodcock covert which had brought me—namely, a scientific interest in the habits of the birds, reinforced in the skunk's case by the pleasing possibility of a woodcock chick for breakfast. No wonder the four-legged scientist was indignant at the meddling impertinence of his two-legged brother!

I left the covert immediately after the moon set and made my way homeward, sleepy, but satisfied that I knew more of the woodcock than I had ever known before. But I shall probably live a good many years yet before I discover all I want to know about this hermit bird.

PAUL PASTNOR.

A MUZZLELOADER.

Editor Forest and Stream:

A dear old friend and ardent sportsman having, in his will, bequeathed all his firearms to me, I send you the following description of one of them, a double muzzle-loading rifle by Purdey, thinking that some of your readers may perhaps be interested by an account of the kind of weapon preferred by many of the best deer-stalkers on this side of the Atlantic, in the days before express rifles were invented or efficient breechloaders known.

The Purdey rifle has barrels of Damascus twist, 29in. long, and weighing 5lbs. 1½oz. They are of 30-bore (about .54-gauge), rifled with two grooves, each of which is $\frac{5}{16}$in. broad. The rate of twist is one turn in five feet. The fore sight is of dark steel in the form of a strong elongated bead, and is dovetailed in the central rib lengthwise, so that it cannot be moved sidewise by a blow. There is a fixed hind sight for 100yds., and there are also folding leaf sights for 150, 200 and 250yds. Each of these has a very broad V with a semi-circle notch in the center and a perpendicular line of platina underneath. When aiming, the bead of the foresight has very much the same appearance in this notch as it would have if viewed through the hole of the peep sight. The weight of the rifle with ramrod is 8lbs. 4oz.

Each barrel has a round piece of platina let into the breech just behind the nipple, with a very minute slit in it to act as a vent and allow the air to escape when ramming down the bullet. The locks are exquisitely made and have safety bolts in front, to fix the hammers at half cock if desired. On the left side of the comb of the stock is a projection for the cheek to rest against when aiming, and near the butt is a steel patch-box like those often seen on American muzzleloaders. The ramrod is very stout and on one of its pipes, and also at the back of the stock, are a couple of strong iron loops, to which a leather sling can be attached.

Being by Purdy, the rifle is, of course, perfect in finish, balance and in handiness, for bringing quickly and accurately to the shoulder. And it ought to be so, considering that, until within the last few years, Purdey made only one quality, charging £36 for a single and £78 for a double muzzleloader.

The bullets are of a sugarloaf shape with rounded base, like those made twenty-five years ago for American muzzleloaders. They have two wings fitting the grooves and weigh 417 grains. The flask in the case has a charger holding 62 grains, but as powder when the rifle was made was of very fine grain, having a sharp recoil, a much larger quantity of the coarse grain now in use would be required to make the barrels carry parallel. With these light large-bore rifles an increase or decrease in the strength of the charge causes them to either throw apart from or across each other.

I have not yet had time to find out the proper quantity of Curtis & Harvey's No 5, but tried 70 grains with the following results, using a chair for resting my elbows but without any rest for the rifle. The target was in shade and a strong freezing wind was blowing across the range from 8 o'clock. I fired 4 shots at 50yds. 1¼in. wide by 1¼ deep, aiming at the intersection of the cross lines, 5 at 100yds. in 10¼ wide and 1¼ deep, 5 at 150yds. in 10¼ wide and 2¼ deep. In all these the bullets of the right and left hands crossed each other considerably, showing that more powder was required. I ought to have mentioned that I placed thick lubricating cloth wads next the powder, because they allow of easy loading for any number of shots, and so are useful at target practice, but they diminish the recoil and thus necessitate more powder than when the bullets are used with patches only. Without the wads they begin to be difficult to ram home after six or eight shots from the barrel, owing to the fouling at the breech. This is one disadvantage of mechanically fitting bullets, but they possess the advantage of much greater accuracy than the easy-loading expanding bullets used in the old Enfield and Springfield muzzleloaders.

Last week I tried the Purdey again, with 82grs. of powder and the seat of a chair for resting my elbows. Weather calm, light gloomy, slight snow falling occasionally. I fired six shots at 100yds., the right in 2¾in. deep and ¾in. wide, left in 3¼in. deep, ¼in. wide. The whole group in 7¼in. wide and 3¼ deep. Average height above lower edge of horizontal line 5⅝in. and ¼in. over. Four shots at 50yds., with same sight, in 4¼in. wide and 2¼in. deep. Average above line 6⅜in. and ¼in. over. Five at 150yds. in 12in. wide and 12¼in. deep. The uppermost shot being evidently wild, owing to my bad holding or some defect in the bullet, I only measured the height of the other four above the lower edge of the line. This averaged 2¼in. and $\frac{7}{10}$in. Four shots at 70yds., with same sight, in 5¼in. wide and 1¾in. deep. Average above lower edge of line 7⅛in.

The rifle being provided with two moulds, I have had a plunger made for one, in order to cast hollow bullets. These weigh 376grs. Having no more of the solid left I now tried five of the hollow, all I had brought. The same charge of powder, 82grs., was used, but without wads, which brought the bullets much closer together. I fired at a 4in. bullseye at 150yds., with this result: The lower left ¾in. from edge of bullseye, the upper 1¼in. The three right in 4¼in. wide by 4in. deep.

It will be seen that in these last shots the right and left barrels have thrown very little across each other, although the bullets weighed 40 grains less than the solid. It is therefore probable that the latter would go practically in the same bullseye with the 82-grain charge if loaded without wads, and that the hollow bullets would do the same with about 90 grains. I hope to try this on some future occasion, but will be too busy for six or eight weeks to come. The heights given for the bullets above the horizontal lines will enable a rough idea to be found of the allowance necessary when firing at game. The trajectory is doubtless flat for the proportion of powder to lead, in consequence of the shape of the bullet causing very little friction. The portion actually pressing against the barrel when loading is only ¼in. from the base upward.

After rifles of this kind had been in use a short time, Purdey reduced the gauge to about .50, with bullets of 20 to the pound and (3¼drs.) 88 grains of powder, the grooves having one turn in 6ft. A further reduction to .41 was made about the year 1865. I have two of the bullets used in that bore, the weight being 200 grains.

The charge of powder was at first 62 grains, but was increased until, as stated by the late Mr. Walsh, editor of the London *Field*, in his book on rifles, it reached 4 drams. Mr. Purdey used to show visitors to his shop some of the bullets of these small-bores taken from the carcasses of deer. Although cast solid, they had been flattened to the shape of a mushroom by the velocity given by the heavy powder charges. They were all of the original sugarloaf-shape with wings fitting the two grooves, and Mr. Purdey adhered to this system of rifling until breechloaders came into use. About three years ago he told me that he had found none superior in accuracy up to 200 yards.

My old friend, to whom the above described rifle belonged, always insisted that although a breechloader might be useful for some kinds of shooting, nothing was better than a double muzzleloader for fair stalking on foot, or what is called "still-hunting" in America; and it is a fact that during four seasons' stalking with muzzle-loading rifles, during which I bagged eighty-two head of large game, I am aware of having lost only one wounded animal with a doublebarrel, and that would have been lost even with a breechloader. With a singlebarrel many wounded escaped, but with the double I invariably, except on that one occasion, killed with the first or second shot or else missed with both.

I only determined upon adopting breechloaders after the native who carried my spare gun ran away with it on one occasion when we suddenly met a tiger, and on another when we came across a herd of wild elephants in the Sewaliks, a range of hills near the foot of the Himalaya Mountains.

I wish a good American geologist would thoroughly explore those hills. Some grand discoveries would probably be made. Many interesting fossils have been found, among which are those of the sivatherium and an extinct species of hippopotamus. These were in the museum of the Government Botanic Gardens at Saharunpore when I was there.

J. J. M.

DUBLIN.

DAYTON, Ohio, July 15.—The woodcock season opened to-day, and a number of hunters were in the marshes before daylight. Young birds are abundant and fat, and fair bags are being made. Drouth through the hatching season has resulted in plenty of birds. Ashton Webb on Saturday bagged 41 doves. Phil Wenz killed 29 the evening before. The birds have been left undisturbed until now and are very plenty.

VERMONT GROUSE.—Waterbury, Vt., July 12.—Game prospects for the coming season look better than for several years. Grouse—our only game bird—have not been plenty for many years, but they are showing up better this season, and young birds are more numerous than for many years.—F. E. A.

MAINE'S BIG GAME.

THE reports of big game in the Maine woods and the woods of the other New England States and Canada are something surprising this year. The Maine papers have many items of deer, and even moose, coming out into the fields. Fishermen on the lakes and streams in the interior speak of seeing more deer than ever before. Dr. E. B. Kellog, of Tremont street, Boston, with his wife and friend, has recently returned from a fishing trip to Erol Dam, and thence to the Diamond Ponds and through the Dixville Notch to the vicinity of the Canadian Pacific Railroad in Canada. On the Big Diamond they saw two deer on the shore. They followed the railroad down on a handcar—the line is still in process of construction—till they came to Moose River, where it is a small stream. Here they did considerable fishing, and splendid luck they had, with a plenty of fair-sized trout. They stopped at a camp on the line of the road. Here there is a lake—one of the Megantic chain, I think—and here there is a small greyhound kept. The Doctor says it is but a pup, and that its owners have no notion of training it to run deer. But the deer are very plenty on the little lake. Fifteen have been seen this season. At one time two does with their fawns came out in sight on the shore of the lake, and the puppy was let go at them. In play he caught one of the fawns and tossed it in the air more than 10ft. It came down without injury and the puppy refused to hurt it, but was disposed to play with it. The owners of the dog took the fawn into custody and it is now at the camp, the admiration and wonder of all visitors. The Doctor says it is a spotted beauty about two-thirds grown and is becoming quite tame. The party found fishing good, but the mosquitoes were simply unbearable.

The story is currently told that Edgar Harlow and Charles Morris caught a live caribou in the waters of Moosehead Lake, a week ago last Sunday, and the story is, further, that the caribou is still kept at the Kineo House as an attraction to visitors. How this is going to work, so far as the law is concerned, is a question. The Maine Fish and Game Commissioners have ruled that moose, deer or caribou thus caught and held in confinement are the property of the State, and the holder is to be held responsible to the State for the safety of the animal. If it die, then the holder is responsible to the State to the extent of the fines for killing out of season. In one or two cases, in years previous, the commissioners or wardens have appeared, and putting their hands on the animal, they have notified the holder that the creature belonged to the State, and that they should hold him responsible for the liberation of the animal in the spring, and that its death would be punished by the usual fine. In this case the animals were caught by crusting in the winter.

But there are other cases of the above nature to come to the attention of the authorities, it seems. Recently an old cow moose, with two calves, was seen in the vicinity of Mr. Harlen Durrell's, in the town of Freeman, in Franklin county. The next day the same animals came down again, so the story goes, and one of the calves strayed away from the mother and its mate, till the boys succeeded in driving it to the barnyard of one Leroy Luce. A boy by the name of Hacket and a Luce boy are said to have captured the little moose alive, and at last accounts it was still alive at Hiram Hackett's, in Freeman. I do not know that this story is true, but the papers have had it, and it is current among sportsmen who have been into that section of the country. It also seems that moose are very plentiful in that part of the State. Four have been seen this season in Lang Plantation, in the northern party of the county. Deer are also plenty, being seen in the fields and on the ponds very frequently. There is not the slightest doubt about the plentifulness of this large game in Maine, and it is a shame that the law that makes the chances for shooting equal to all cannot be enforced. Sportsmen are already fitting out for jack shooting in August. Indeed, if there is not some of it being done in July, then appearances are deceptive. Almost every party that fits out for the woods this summer takes a jacklight along. One noted lantern maker in Boston has made several improved jacklights this season, and two of them have already gone into the woods. There is not the slightest doubt but what jacking deer is being done this summer at Tim and Seven Ponds, also at Parmachene Lakes. At the Rangeleys it is not so openly practiced, for there is a better law-abiding sentiment rife there. The claim of these jackshooters is that they will not shoot a doe, "especially if she has fawns—oh, no!" But who can tell a doe from a buck in the night time? Who can be sure that the doe he shoots, by the glimmer of a jack light, is not the mother of fawns that must die of starvation? In one case of the building of lanterns, mentioned above, the person for whom the lantern was made was very desirous of the strongest power possible in a lantern; for it was hoped that the light would be strong enough to distinguish a buck from a doe at a distance of 100ft. in the night. Whether the lantern is strong enough to do this I am not able to say, but I am inclined to think that it will answer the purpose of the buyer, for he will shoot, if he is lucky enough to get within shooting distance of a deer, and the thought of its sex will not enter his buck-fevered brain. Then if his shot is effectual enough to kill, and it happens to be a doe—why, the guide will quickly sever all signs of the sex, and the hunter's friends will hear about the magnificent buck he killed. The antlers won't tell any story in July nor but little in August.

It would hardly do not to mention the latest invention in this line, though I hate to do it, for fear that it may be a success, though it has not yet reached that dignity. A Boston inventor proposes an electric light for jacking deer. He has already adapted one to sleighs and other carriages, and why not one for the boat? The weight and the difficulty of transporting the storage battery are the principal objections thus far discovered. Then there must be added the unreliability of a battery thus transported. The light is a powerful one, and it may yet be introduced into the forest. Maine will have to enforce her game laws, or her moose, deer and caribou are going to get shot, and that, too, generally out of season; for the close season is the vacation season, when the city sportsmen can be there, and besides it is the season when jackshooting can be most successfully practiced. Let the enforcement of the fish and game laws go at loose ends for a couple of seasons, and there will be electric jacklights and infernal machines enough invented to blow every moose and deer out of the Maine woods. Then there are foxhounds (?) enough being bred within 100 miles of Boston to run every deer into the lakes and ponds of Maine, where they can be shot by the sports who have the money to pay a guide for his services, but not the skill and endurance to kill a deer by fair hunting in the open season. SPECIAL.

SMALL CALIBER RIFLES.

Editor Forest and Stream:

Some time ago I bought a Winchester singleshot, c.f., .22-15-45, and have had bushels of fun with it. With a Lyman ivory front sight it is good for anything, from a kangaroo mouse at 20yds. to an alligator at 100. (Killed an 8ft. 'gator last week with it at 92 paces, and I am frightfully long-legged. At the first shot he never moved, so thinking I had missed him I put in a second; still he didn't move, and I went to investigate. Found the two bullet holes within half an inch of each other, just above and between the eyes. The first one must have killed him as instantly as a flash of lightning.) I have owned almost as many rifles of different makes and caliber as I have hairs left on my head and wouldn't give my present battery for all I have ever had or seen. They are Sharp's Old Reliable .44-110-370 for bear, elk, moose, etc.; Marlin .32-40-165 for deer, turkey, *et al*, and the Winchester for miscellaneous vermin. Am not sure but what for elephants and hippopotami I might want something different, but for all game the American continent holds I consider myself well "heeled." If they were the only three guns of the kind in existence I don't think I'd take $1,000 for them.

If the Winchester folks would only put a little finer sights on their rifles, even if they charged a little more, I think it would be an improvement. The factory sights are too coarse. By a fine sight I don't mean a half-inch circle at 500yds., which, or its equivalent, some of your rifle shots talk about, but say a duck's head at 100yds. or a squirrel's at 125. If I could make either of these shots twice out of five times I should "think no small beer of myself." As to hitting a duck's head at 200yds., as some of your correspondents tell about, that's a notch beyond me—and—well, I'd like to watch them do it. I have met but few, very few, men in my life time who are blessed with a better pair of eyes than I am—Providence be thanked for the same—as proved on shipboard, on the plains and at the laboratory table, but when it comes to seeing a duck's head at 200yds. plainly enough to draw a practical bead on him, count me out. Let's figure it out mathematically. The smallest globe sight is, I believe, about $\frac{1}{20}$in. in diameter. Allowing the average distance between the front sight and the eye to be 3ft., then the $\frac{1}{20}$in. sight at 200yds. would obscure a circle 4in. in diameter. Somewhere within that circle lies the duck's head, but where? Not much chance for accuracy with such a "calculus of error" as that. H. P. U.

LAKE CHARLES, Louisana.

Editor Forest and Stream:

I have used in my time quite a good many different rifles and have now a .22 chambered for the 15-45 and it shoots splendidly; but I would like a little heavier charge. I think the .25 would just fit, but I want a center-fire shell, for my experience is that I get much better shooting than with a rim-fire, and I believe that a good .25 center-fire with a good charge of powder in proportion to the ball would fill the wants of a large class of sportsmen. B.

LACONIA, N. H.

HOLLOW BULLETS.—Bergerville, Quebec.—I have for some time past been using hollow bullets of my own manufacture. I think the reasons why the Winchester express bullet does not always expand are these: The cavity is of too small diameter, and the inserted copper tube does away with most of the effect of the hollow by rendering the bullet too stiff. If the hollow were increased in diameter and diminished in length and a slight hollow made in the base of the ball, it would, I think, prove satisfactory. The bullets which I have been using are the .44-40-200 Winchester. I cast my own bullets and use 45grs. powder with them. I made a slight hollow in the base of the ball, and after inserting it in the shell drilled a hole in the point as far as where it joins the shell. I then reamed out the hole till the sides of it corresponded to the shape of the ball. I now had only to close the hole. I did this with a long gun cap from which I extracted the priming. I fired one ball into a hard snow bank, and it made a hole about 2in. in diameter. I could not find it, so do not know how much it expanded. Fired into soft earth or pine, they resemble a mushroom in shape, expanding from $\frac{3}{4}$in. to 1$\frac{1}{4}$in. in diameter. I was satisfied that they would do good work on game, but could find no better mark than a muskrat. There were a few bits of flesh and strips of skin left after the ball struck him. I hope to try them on large game before long. As regards accuracy, I find them perfect. I shot a bluejay at 75yds., and put a ball in the middle of a bush 1$\frac{1}{2}$ft. square at over 200yds.—L. D. VON I.

AN EXPENSIVE BUNNY.—Towanda, Pa., July 1.—Hundreds of young rabbits are reported seen along the country roads, one of which brought $7 last week in this market. A drummer, out on a business trip looking over his country customers, just purchased a new target rifle and was anxious to try it on live game. A half-grown cottontail was potted. Throwing the kitten under his buggy seat he drove into town and put up at the hotel. Enthusiastic over his new gun, he related to a friend what he had done and where it was. Within five feet of him stood a game warden. His name was ascertained, he was arrested, fine and costs amounting to $7, willingly paid and he said he had learned a valuable lesson.—D.

THE MICHIGAN DEER SEASONS, as prescribed by the new law, are: Open season in Lower Peninsula the month of November; in Upper Peninsula, from Sept. 25 to Nov. 15.

A GEORGIA POSSUM FARM.

IT was in the early afternoon when we arrived, and to the uninitiated the farm appeared to be an immense fruit orchard, bearing an oblong, whitish sort of fruit hanging from the dead limbs of the trees by a long black stem. But appearances were deceptive. It was not fruit, but between 700 and 800 possums taking their afternoon siesta. Our party was somewhat unacquainted with the habits of the Georgia possum, and, consequently, plied question after question to our highly amused hosts. I now consider myself an expert on the possum, and here is what I learned and saw:

The possum, when desiring to take a nap, simply climbs the most convenient tree, walks out on a limb, wraps his tail one and a half times around and swings his body out into space. His legs and feet are drawn close into his body and his head drawn up between his shoulders until it forms an almost perfect ball and appears to be a great pear covered with white fur.

The sun was slowly setting below the distant pine mountains, and we were still gazing at the queer objects in amused wonder, when a half-dozen little possums emerged from the pocket of their mother, ran up her tail and commenced playing on the limb above. In a few minutes this marsupial stretched her head and then her fore feet out. She swung herself once or twice, grabbed her tail with her forepaws, and climbed up it to the limb, which she caught with her claws, untwisted her tail and pulled up. Hardly had she balanced herself when the half-dozen young ones climbed into her pocket and were hid from view. She then climbed down the tree. While this was going on more than 700 others had awakened and were coming down from the trees. Reaching the ground each one made for the creek, drank, and then ran up the hill to a pen in which they were to be fed.

They were of all sizes. Some would barely weigh a half a pound, while others would tip the scales at 30lbs. The possum, when hungry, utters a sound which is a cross between a mew and a moan. Over 700 possums were together so thick that the ground could not be seen between them, and the small ones had been forced upon the backs of the larger. All were uttering this peculiar sound, reminding one of an army of soldiers moaning over the death of their general, when through the gate a negro pushed a wheelbarrow, heaped full of all kinds of trash and slops—consisting of fruit pealings, vegetables, meats, bones and bread. As he hove in sight the scene among the possums reminded one of feeding time in a menagerie. The little ugly animals screamed and scratched and bit at one another until the negro had scattered the contents of the wheelbarrow over the ground. Then, although it was well scattered, all wanted to eat in one place just like hogs, and there was considerable more scratching and biting. But this did not last long, for the rations were soon consumed by the great drove of possums, and they commenced to disperse, seemingly contented, and this time climbed the persimmon trees.

During the persimmon season the possums are not fed at all, for it is on this fruit they become rolling fat and ready for market. Mr. Throckmorton will probably ship 500 to Eastern points and the cities throughout Georgia this winter. They will average him $1 each, and he makes quite a good thing out of it, as they are practically no expense to him. In shipping to Atlanta and Georgia points they are generally dressed, but the majority go to Washington and are shipped alive. The large shipments to Washington are perhaps due to the average Southern Congressman's fondness for "baked possum and 'taters." Congressman Stewart, who comes from Griffin, and Congressman Barnes, of Augusta, are perhaps the most inveterate possum eaters in Congress, and it has already leaked out that these two distinguished Georgians have ordered two dozen of Mr. Throckmorton's finest and a couple of bushel of sweet potatoes to be sent to them at the Metropolitan Hotel next Christmas.—*Atlanta Constitution.*

Sea and River Fishing.

MICHIGAN FISH LAWS.

SYNOPSIS of the important provisions of the new general fish law relating to the inland waters of the State:

The catching of trout, salmon and grayling is lawful only from May 1 to Sept. 1, and then only if the catching is by hook and line. (If of a size less than 6in. in length, they must be returned to the water.)

Bass may be caught at any time, but only by hook and line.

The use of any explosive substance in catching any kind of fish is unlawful.

The spearing of any kind of fish (except mullet, grass pike, red sides and suckers) is unlawful from March 1 to July 1.

The use of any species of net (except dip nets, in catching mullet, etc., as above) is unlawful at all times.

It is unlawful to catch or ship brook trout or grayling for the purpose of sale, at any time, and it is unlawful to buy or sell the same during the close season.

A violation of any provision of this law is punishable by a fine of not less than $5 nor more than $100 and costs, or imprisonment thirty days if the fine is not paid.

An act of the Legislature of 1889, regulating fishing with nets in the Great Lakes, and the bays and harbors connected therewith, regulates the size of meshes as follows:

The meshes of the funnel or lead of pound nets shall not be less than 5in. in extension.

The meshes of the pocket of pound nets, not less than 3$\frac{1}{2}$in. in extension. (Pound nets with 2$\frac{1}{2}$in. mesh pocket may be used for taking perch, herring and pickerel.)

The meshes of gill nets shall not be less than 4$\frac{1}{2}$in. in extension. (Gill nets not less than 2$\frac{3}{4}$in. in extension may be used for taking perch, herring, black fins and long jaws.)

The meshes of seines shall not be less than 3$\frac{1}{2}$in. in extension.

The drifting or towing of all drag nets with boats is unlawful. Seines must be fastened to shore or dock.

A fine of not less than $10 or more than $100 and costs, or imprisonment thirty days, is the penalty prescribed for a violation of this law. WM. ALDEN SMITH.

State Game and Fish Warden.

CAMPS OF THE KINGFISHERS.—I.

ECHO LAKE, ONTARIO, CANADA.

WE had spent our vacation of 1885 in the old camp at the mouth of Sweeny's Creek on Central Lake, Mich., a spot around which cluster many pleasant memories of happy days of floating and fishing and dreaming and idling along the rush-lined shores of the Intermediate Chain; and when "old Knots" and the "old pelican of the Sangamon" (Uncle Dan Sloan) suggested that we hunt up a new lake on whose shore to kindle our campfire for the summer fish of 1886, it seemed like turning our backs on an old friend who had stood by us through dismal days of blustery storm and pelting rain, and pleasant weeks of genial sun, when woods and waters wore their fairest mood.

The smiling waters of Central, Sisson's, St. Clair, Six-Mile, and the others, each with some special claim to be remembered by us, seemed to invite to one more season of gentle wooing with rod and line, and an abiding love for the old camps of this Traverse region that has grown with the years, made strong remonstrance against a change of base. But as old Ben—our oracle—says, "A change o' camp, an' a triflin' with strange waters is only a shiftin' o' the affections which don't count agin ye in the general roundup," it was finally decided that other waters than the Intermediate should receive the homage of the Kingfishers for the next annual camp, and we at once set about the task of selecting a locality where bass might be found in fair numbers, with mayhap a *maskinonge** now and then just to fill the measure of our happiness, and a stream or two within easy reach where trout enough might be had to keep the old smell from dying entirely out of the well worn frying pans.

Through some hunter friends old Dan had learned of a chain of small lakes on the Upper Peninsula of Michigan near Waucedah, a station on a branch of the Chicago & Northwestern R. R., about forty miles west of Escanaba, that promised to fill all the requirements, but a letter of inquiry to Mr. E. P. Dillon, of Waucedah, about supplies, boats, etc., brought a backset to the scheme in the shape of "All kinds of supplies that you want, but no boats except a couple, such as they are, and plenty of Indian

* I believe that Mas'-kin-on'-je, is the proper name of this noblest of all the game fish of the North. This name is certainly far more musical than muskylunge, mascallonge, muscallunge or any other of the half dozen different ways of spelling it, and is to be preferred if for no other reason.

canoes." Fancy old Dan in "a couple of boats, such as they are," or old Knots in a giddy-minded birch bark canoe. Dan's infirmities require a good steady boat to make him measurably comfortable, while the adipose of old Knots and the unreliability of his legs as "sea legs," call for a craft with a breadth of beam that will give security against any frolicsome capers in a mild blow, or in case he wanted to "swap legs." "Birch bark canoes might do," he said, "for Indians and wildfowl with web feet that didn't mind a ducking now and then, but he wanted a boat that would stand still long enough to give him time to sit down in it." Clearly the craft indigenous to that region would not suit Knots, and we concluded to look elsewhere for a camping place.

Green and Duck Lakes, fifteen miles southwest of Traverse City, had been highly spoken of to us the year before as fine bass waters, but the obstacle of hauling boats from Traverse and back presented itself, and this, too, was abandoned. Platte Lake came next for consideration, a body of water five miles long by three wide, lying over near the coast line of Lake Michigan and some thirty miles west of Traverse City. It has a clear outlet into Lake Michigan three miles in length, and is said to be the very best lake for bass in that whole region; but to get to it would require an overland ride with all our "calamities," besides the trouble of hauling in boats from Frankford, twelve or thirteen miles to the south.

We had heard so much good of this lake that with all the discomforts of reaching it we had about made up our minds to go there, when Knots received a letter from a brother angler living in Detroit, Mich., a Mr. F., that upset all our plans and started us on a new trail. As brother Friz was to be one of our party he was entitled to a voice in the selection of the waters to be fished, and he wrote that if the camp had not already been located he would suggest that we try the waters around the Les Cheneaux Islands, above Mackinaw Island or the St. Mary's River, at the foot of the West Auebish rapids.

Then, when the time was getting short before the day set for the start, he wrote that he had heard of a new lake three miles back in the Canada hills and about fourteen miles below the Sault de St. Marie, which promised good trout fishing in a stream flowing into it, and as the lake had a free outlet into the St. Mary's River, we reasoned there must of course be bass, pickerel and maskinonje in it. Besides, in making this trip we could gratify a desire that had been growing in some of us for years; we could see the Soo, and doubtless get a sight of some untutored Lo balancing himself in the jacket of a birch tree, scooping whitefish out of the rapids with an overgrown landing net; and when he wrote again that Echo Lake was surrounded by magnificent scenery, bold rocky cliffs and wooded hills that aspired to the dignity of small mountains, we all "echoed" his wish to explore its waters and determined to take our camp somewhere on its rocky shores if soil enough could be found in which to drive the tent pins. It was the blindest trail we had ever started on, for we knew nothing certain of the locality of the lake, its size, nor the character of the fishing we might find; nor had we secured any boats, but we were willing to risk the chance of securing them at the Soo (Knots even agreeing to try conclusions with a birch bark canoe if necessary) and then find our way to the lake if it took the best part of the time allotted to our stay in the woods.

A word here about the party may not be out of place, for the roster of the Kingfishers does not show the same names every season, albeit Old Knots, the old Pelican and Old Hickory (the writer), three of the original party of years ago, have not failed to answer to roll call at each annual reunion for so many years that we would feel young again could we go back to the first camp we made together on the banks of the well-beloved old Tippecanoe River.

The year before, the general passenger agent of the Grand Rapids & Indiana Railroad, Mr. C. L. Lockwood, had referred a brother angler of Frankfort, Ky., to the writer for information about some of the lakes of Upper Michigan, and the correspondence ended in an invitation for him (since known to the readers of FOREST AND STREAM as "Snakeroot") and his chum, Charley F., to join us for a short season in the "bresh," which they did. The acquaintance thus begun has never been regretted, for they are a couple of as square, big-hearted sportsmen as ever pulled a trigger (both excellent shots) or dug worms of an afternoon for an early start to the "crick" on a morning. "Judge Snider," of Cincinnati, another old angler friend with a heart as big as a bar'l, had also been one of the party the previous year, and the Upper Michigan fever had fastened on these three with such a firm grip that nothing short of the certainty of being flayed alive by mosquitoes, black flies and no-see-'ems would have kept them from the North Woods, and when the roll was called they were ready with, figuratively speaking, twenty-five days' rations in their gripsacks, and otherwise equipped for the expedition to Echo Lake.

Knots and the "Jedge" were to start a couple of days ahead and look out for boats at the Soo; Brother Friz would follow up and join us about the time we had the camp in running order and the browse stripped for his bed, and Old Dan, with a couple of other good fellows from Decatur, would join the writer and the "hunters from Ole Kentuck" at Richmond, Ind., from whence we would follow "the fishing line"—the Grand Rapids & Indiana Railroad—to where it lost itself in the waters of the straits of Mackinaw City.

Rare old Ben Renshaw, with his quaint jest, his inimitable, mirth-provoking speech, his genial ways and inseparable brier root—the life of the camp and the faithful comrade whose place none could fill—was not to be one of us; he wrote that he could not leave the farm at that time in the season, and that "instid o' ketchin' trout an' muskylunge in Michigan or Canada, he'd hev to be satisfied with a little plain fishin' fur cats and mud-turkles in the Sangamon, fur the Joneses never wus used to the very best o' everything nohow." But disappointments and minor calamities must be borne with a certain amount of resignation, and the old "mud-turkle" was left behind with genuine regrets and a promise that he would jine the gang the next year.

Old Sam S. (the good people of Frankfort, Ky., call him "Snakeroot") and chum Charley turned up smiling and happy on the evening of July 14, and next morning we were off, with one end of the baggage car half filled with our camp calamities, among which was the same old stove that brother "Seneca" scored me about in FOREST AND STREAM, and for which I have long since forgiven him.

At Richmond we looked in vain for old Dan and his friends, and at Fort Wayne another backset awaited us, and we went on our way wondering what manner of misfortune had overtaken the old Pelican, for we had come to believe that nothing less than the "old man with the scythe" would deter him from being on time when "Hickory" wanted him to go a-fishin'. It was a sore disappointment, but there was nothing to do but go on to camp, trusting he would follow the trail on the next train.

At Grand Rapids the train waited an hour and forty minutes (for a connection) to give us a chance to pass the time industriously swapping fish lies with "old Bill Hess," who was at the depot to meet us charged to the muzzle with good humor that beamed from his honest old phiz, and a batch of fresh yarns save l up for our especial delectation. Among all the brothers of the rod, with whom we have smoked the pipe of good fellowship in the flicker of the camp-fire in the past score of years, none is more worthy, none more welcome to share our blanket and our last flapjack than old Bill; may he live a thousand years.

As we were going to a strange country where the frog crop might not have "hit," as they say in the wilds of Tennessee, the menagerie box had been sent up ten days ahead to Bellaire with instructions to Tommy Derenzy—our little tow-headed friend on Central Lake—to "hive" 350 of the speckled beauties and have the box at Mancelona on the morning of the 16th as we went through.

With the prospect of five big, bright silver dollars in view, Tom laid himself out (Tom's a hustler when it comes to "hivin' a frog") to fill the order, and as we pulled up at the station in the gray of the morning we were hailed with, "Hello, Mister H., here's yer frogs—350 of 'em by Tommy's count; but he couldn't come over himself, an' I thought I bring 'em over for ye; an' I reckon you'll find 'em all alive an' akickin', though some of 'em hes been ketched more'n a week," all this in one breath while a handshake was in progress by Pap Derenzy, who had come as Tommy's representative, and "Mr. Hickory." It may be noted that Pap Derenzy has a wondrous and tenacious grip when it comes to hanging on to a dollar of our daddies, and if Tom got the whole of the $5 he was in great luck, and the old man laboring under a temporary aberration of mind at the time of the transfer. If this should ever meet the eye of Pap it may remind him of something.

We arrived at Mackinaw City just in good time to miss the steamer Messenger for the Sault, which was in the nature of another decided backset, as we would have to stay there till the next morning. Here was a "category;" however, we concluded to take the ferry steamer, Algomah, which would leave in a few minutes for Mackinaw Island and St. Ignace, and spend the day and night on the island, and take a steamer of another line for the Sault in the morning; but as we were on the point of carrying out this plan Mr. W. M. Carpenter, the genial and obliging agent of the G. R. & I. R. R., shed a ray of hope on the situation by saying there was a possibility that the Messenger had not yet left the island, and a brief talk through the telephone brought back the cheering word that she was still there and would await the arrival of the ferry steamer. Thanks to friend Carpenter's thoughtfulness, the "category" was not so bad after all. We were shortly aboard the Algomah, and in forty-five minutes were transferring our "duffle," to quote brother "Nessmuk," to the Messenger, the frog box creating a stir among the hangers on around the dock equal to the arrival of a "sure enough circus," but, as old Ben was not along to "talk up the show," they were left in wondering ignorance as to the part the frogs were to take in the performance.

To our surprise there were the Jedge and Knots on the dock, their faces smiling and rubicund (owing doubtless to the "coloring matter" concealed in the hot sun rays), the lazy loons having concluded to stop over and "rest" and see the sights of the island instead of going on above to secure boats and learn something about the lake; but as it turned out their presence at the Sault a day or two ahead would have done little good in getting us to the camp sooner than we did.

We left the island, headed for Detour Point, with a faint breeze setting softly from the west, a thick blue haze hanging in the air that gave the shore to the north the appearance of a low bank of clouds peeping over the edge of the horizon, so dim and indistinct that it required the aid of a glass to dispel the illusion. The haze and smoke grew thicker as we advanced till at last we could not see the waters or the lake outside a radius of a hundred yards or so, and Capt. Barker slowed down the speed till the steamer had barely steerage way, blowing the whistle at short intervals for a response from the fog horn at Point St. Vital to determine his whereabouts. The Captain was evidently off his bearings. The smoke came from forest fires that had been raging for days along the railroad between St. Ignace and Marquette, and was a source of great annoyance to vessels navigating the upper end of Lake Huron and the St. Mary's River when the wind was from the west. The people at the lighthouse seemed however to be in no hurry to answer the signal, but finally after a half hour of vigorous blowing a hoarse hail from the fog horn came floating over the water through the smoke from a point away off on the larboard beam, and a fortunate veer of the wind a little while after drove the smoke northward till we could see the shore plainly, with Detour Point two or three miles away. For a half hour or more the big, fat, jolly mate had been industriously heaving the lead, "feelin' for the bottom" as he said in answer to a question from Charley, but it was now laid aside with the consoling information that had the steamer held the course a few minutes longer she would have been hard and fast on a reef. "Port a little," from the Captain to the man at the wheel, some sharp pulls at the bell for full steam, and we were soon leaving a streak of bubbles and the reef astern, thankful that we were well out of another "category."

At Detour, a small hamlet of 200 inhabitants and the inevitable Catholic church at the entrance of Detour passage, we stopped a few minutes to discharge a small lot of freight and take on three or four passengers and a cow that seemed to have misgivings about the stability of the gang plank, her doubts being finally overcome by a few vehement twists of her tail at the hands of the jolly mate, a proceeding that moved old Sam (Snakeroot) to observe "would have ended in a catastrophe to the manipulator of the caudal had that critter been an old time army mule with his business end in good workin' order." Off to the east, a matter of three miles across the passage, we could see through the lingering smoke the green shores of Drummond Island lying on the American side of the national boundary line, which Capt. Barker told us was indented with numerous small bays, some of which afforded fine bass fishing, adding as a postscript that "they didn't bite much till 'long in September."

Under way again, we were soon at the foot of St. Joseph Island (lying on the Canada side of the line), a body of land twenty-five miles long by fifteen at the widest point, the chief products of which, the jolly mate kindly informed us, were "peasoupers an' black bears, with the bears slightly in the majority."

Off the lower end of St. Joseph on the American side of the boundary we passed Limestone Island, a high, rock-girt, forest-clad strip of land two or three miles long and one of the loveliest of the many lovely islands that dot the length of this glorious river, and shortly after were admiring the beauties of Mud Lake on the Michigan side (a widening of the river), which old Sam gravely made out to be "a mighty handsome piece o' water with a mighty ugly name." KINGFISHER.

[TO BE CONTINUED].

IN PRAISE OF BATTLE LAKE.

BATTLE LAKE, Minn., July 8.—*Editor Forest and Stream:* Please allow me space to correct an error in last week's letter, and also to give our Eastern neighbors a pen picture of our place. You dated my letter of last week from Battle Creek, Minn., when there is no such place in the State. It is Battle Lake, the place being named after the beautiful lake on the shores of which it is situated. Years ago the Sioux and Chippewa Indians met here and engaged in a three days' fight, and the place has since been known as Battle Lake. It is located 218 miles west of north from St. Paul, within forty miles of the Dakota line, on a branch line of the Northern Pacific Railroad, known as the Fergus Falls and Black Hills branch. We are thirty-three miles from Wadena, where we leave the main line, and twenty miles from Fergus Falls, a place of 6,000 inhabitants, and the county seat of Otter Tail county. The waters of Battle Lake are purity itself and teem with all varieties of fresh-water fish, the black bass and wall-eyed pike predominating. Three good hotels cater to the public who happen in this the most fascinating spot in the Park Region. We have with us every season from two to three hundred guests, who remain during the months of June, July, August and September, and partake of the joys that this climate and bewitching scenery can give. Chickens, ducks, geese and brant are plenty in their season, and plenty of good boats and liveries can be had at very reasonable rates. The prices charged here are what we brag on. Our hotel accommodations are very highly spoken of by our Chicago, St. Louis, Kansas City and Fort Scott guests, and it costs the visitor but $1 per day to enjoy them. Good boats, with bait and necessary equipments, can be had at $3 per week, and good teams for hunting are furnished at $3 per day.

A writer has said of Battle Lake: "If you are seeking health or pleasure go straight to Otter Tail county, in the center of the famous Park Region of Minnesota. Find a resident of Battle Lake and he will lead you to fields elysian. He will show you 900 as beautiful lakes as God ever made, teeming with every variety of fresh-water fish. Go with him to this elevation, and as far as your vision extends (and that is for miles) he will show you a panorama of surpassing beauty and loveliness—fertile valleys, primeval forests, a veritable paradise open to all. With an altitude of 1,400ft. above the sea, it has an atmosphere that contains rest and health in every zephyr. This, with an almost perpetual sunshine, makes life here a constant joy." That is the way our visitors talk, and through the columns of the FOREST AND STREAM I want to say to those of its readers who desire rest, recreation or health, come to Battle Lake once and you will certainly repeat your visit.

Here is a specimen of the every-day news items the *Review* prints: "Wallace Delafield and Richard Hanenkamp, of St. Lewis, C. E. Wilson, Russellville, Alabama, and J. A. Colehour, of this village, went to Lost Lake last Monday (July 8) and caught sixty-five black bass that weighed 145lbs., twelve pike and over a hundred pickerel and rock bass. The lake flies are now very thick, which accounts for the small catch." BRONSON STRAIN.

TROUT AND LEECHES.—Montreal, July 6.—*Editor Forest and Stream:* Just back of the Manor House at St. Melnage is a lake fed by springs of cold water; it is about a half mile long, 200yds. wide, in places over 100ft. deep. Three years ago I caught large gray trout there; this year the lake appears to be completely inhabited by large black leeches, and no gray trout nor fish of any kind are left. Have the leeches killed them all? In trolling deep with minnows, upon bringing them up to the surface, I found a leech was fastened to each one. Now what is the best way to get rid of these leeches? I cannot poison the water because the farmers round use it for drinking and watering their cattle. My idea is to get a fish that will feed upon them. Will the red trout do it?—PISCATOR.

[We know of no successful exterminator of this pest. It is reported to have done great injury to Tahoe trout in California. From Francis Francis we quote the following: "I know also a small lake in Wales, where the fish never take a fly until after dark, when fish from 2 to 3lbs. weight may be taken. This lake abounds in leeches, and the trout are very fine in it." This is very singular, as Mr. Daubeny writes in London *Field* of March 22, 1884, viz.: "The most deadly enemy to young fish I believe to be leeches (*Piscicola geometra*), and in some streams it seems to me a puzzle how any of the fry, when just emerged from the egg, can escape them. * * * I think that they will not touch trout ova, the shell being too tough for them, but fry a few days old on being placed in a saucer with some of these tiny leeches, by way of an experiment, were at once seized upon and devoured." As is well known, in France they drive old horses and cattle into waters containing leeches for the purpose of gathering the leeches for leeching, but whether the crop is ever exhausted in certain waters we are not informed. The red spotted trout is an enemy of the leech, but in the presence of more tempting food it would probably not prove an exterminator of the leech. We will be pleased to learn of any proper device for the extermination of this or any other pest of fishes.]

BASS CASTING CHICAGO STYLE.

CHICAGO, July 6.—Pursuing my investigation of Chicago's fishing waters, I last week went to Loon Lake, about fifty-five miles up the Wisconsin Central Railway, where the lately-mentioned large strings of bass had been taken. The railway station for this point is Antioch, which is also the point of disembarkation for Camp Lake, Lake Maria, and if one likes, for Channel Lake, Deer Lake, and I know not how many others, in any of which a good angler can not go amiss. There is a passable country hotel at Antioch, where a great many anglers stop. I counted fifteen hacks, omnibuses, etc., at the depot when the train pulled in, and each of these bore off a load averaging six or eight, to the different lakes of the adjacent region. Other trains brought other anglers, and other stations also claimed their dues, for fifty miles along the line. The general results of all this I noticed in the countless baskets of fish which went down on the city train the next day, but not being able to be everywhere at once, I can only speak definitely in regard to the limited field covered by our little party.

The visit to Loon Lake was made at the instance of Mr. J. M. Clark, of the John Wilkinson Company, whom I have often mentioned as a successful angler, and as the inventor of a bass rod which is growing to be the one most in use in this lake system. Of course, nothing would do but I must buy one of these rods and go along with Mr. Clark, who kindly volunteered to show me all about bait-casting as she is did, and also to give me points on general sportsmanship, of which Mr. Clark felt that I, in common with all the rest of the world, stood in serious need. Somebody will just about kill him some day in the middle of one of his arguments on the correct style of tackle, or on the heinous offense committed by an angler who catches anything but a black bass, or who does that with anything but a frog, or on anything but such and such a rod, a line of just such grade, or a reel of any but just the sort that Mr. Clark uses. I had a great notion to kill him myself, for I don't fancy having the law laid narrowly down to me in an occupation where all law should be broad and generous; but after I got on to his pitching, as the current slang goes, I concluded to laugh instead of going down after my gun. There is nothing so amiable as the fellow with the hobby, and if you don't find a plenty of such among anglers I'm sure I don't know where you will. It is best not to kill them. The chances are all in favor of the probability that you have a hobby of your own, somewhere or other, whose entire reasonableness it seems to you the world should accept on your mere assertion, without further argument or quibble.

Inasmuch as this particular hobby is in the main after all a protest against the unsportsmanlike methods of taking fish, and inasmuch as Mr. Clark is a very fair exponent of the art of bait-casting as practiced by the best Chicago anglers, I shall be at pains to ventilate this hobby and shall describe fully the outfit used and the method employed in what I shall call the Chicago style of bass fishing, that style being quite definite, successful and distinct enough to merit a name of its own.

The involution of the bass rod during the past five years has been a curious study, and I have watched it in the West with a great deal of interest. The fly-rod idea dies hard, for almost any genuine angler loves and clings to the lithe and steely action, which is the first principle of the rod in upper anglerdom. Yet such a rod as this is almost useless in our best Western bass waters. Here we have broad lakes, deep in the middle and running out to say a 50yds. margin of shallow water filled with rushes and moss. This bank of rushes may run out a quarter of a mile into the lake and be broken by numerous open spots of water locally known as "pockets." The big bass lie in these pockets, or at the edge of the rush bank fronting the deep water after the general manner of the *Percidæ*. The water is clear and the least motion among the rushes is apt to disturb its surface to a considerable distance. The plash of an oar, the shadow of a boat or of a rod would be fatal, for it would send the bass scurrying into the deep water on one hand, or into the thick rushes on the other. The bass can be reached by a long line and long rod and by deep fishing or by skittering a frog. With such tackle they are killed in quantities by the class who are here known as "pot-fishermen." This, however, is not a method which appeals to the more æsthetic angler.

The problem, therefore, is how to reach these bass with lighter tackle at distances which must usually be at least 20 to 30yds. It takes an exceedingly skillful fly-fisher to make any record under such conditions. The Comstock brothers are the only ones I know of here who stick to the fly altogether and still get good catches. They catch bass on the fly at Fox Lake, and the bass up there are educated citizens. When it came to casting the bait with the light and flexible rod, it did not take long to show that neither distance nor accuracy could be attained. Slowly, and with reluctance, the bass rod began to shorten. It shrank to 8ft. 8in., 8ft. 6in., 8ft. 2in., and stopped at 8ft., while everybody laughed at it for its stubby clumsiness. At this point split-bamboo was still a favorite material, "because it was so springy, you know." It took quite a while to eradicate the idea that this springiness was just what was not wanted. To-day the man who carries a split-bamboo casting rod to the bass lakes is set down at once as being no expert. Ash, or ash and lance, also have practically disappeared as rod materials among our bass cracks, and solid lancewood, in three equal pieces, seems now the favorite and very practical rod. The backward journey of the rod has gone on until now 7ft. 8in. is standard length. A few of our gilt-edged anglers have gone lower than that, and I know of two rods of 7ft. which kill plenty of bass. Our little party, on the trip referred to, all had 7ft. 8in. rods of lancewood, weighing 8½oz. I found my rod capable of doing better casting than I could, tough, stiff, a splendid sling for the 2oz. frog, and withal very killing when the fish was hooked, although necessarily destitute, at that stage of the game, of the diviner qualities of the ideal angling rod. I do not wholly like bait-casting, for this reason, although undoubtedly it is the only practical way of killing these bass. It is a business man's sport, and there is no poetry about it. The skill required in the use of the casting reel is the only claim this style of angling has to be called sportsmanlike. Barring that, it is simply murderous. My friend who loudly protests against the catches of the pot-fisherman does not reflect that he himself catches more, and under circumstances barely better, so far as the rod is concerned. When it comes right down to brass tacks in the argument, the bait-caster must hide behind his reel, and that is all there is to it. I caught ten bass whose total weight was 36lbs., and out of the lot there was only one bass to which I gave the least fighting chance. As quick as a fish was hooked the cry was, "Pull him in; don't let him run or he'll get into the weeds!" I don't know what others call it, but I call that yanking 'em. The tackle is strong enough to stand it; and although at the end of the day I found my gallant little rod warped and crooked by the heavy work it had had, I never for a moment had a doubt of its staying together when I put it against a rushing bass, keeping the point well down to divide the strain between rod and line. I must confess, however, that I enjoyed the fun, and gloried much in the grand fish we took. It is my privilege to be inconsistent, and yet my privilege to laugh at the inconsistency of the others who, cowering behind their casting reels, deplore the depletion of our waters by pot-fishermen and those unspeakable men who will take pickerel and croppies home with them in their baskets. I know very well that the man who cannot cast cannot catch many large bass in these lakes, and I beg permission to turn up my nose at him for fooling with little fish. I beg permission also to brand him as a destroyer of our noble game fish the black bass. Meanwhile I shall join the army of righteous bait-casters, who every week lug in thirty or forty pounds of bass. Whenever I want to go fishing on business principles, and for the purpose of getting bass, I shall take just the sort of outfit used on this trip. It is practical, no question of that. All that worries me is that it is too practical. This will not worry so very many, perhaps, and for those I would continue a description of the Chicago style.

I found Mr. Clark the most skillful caster I ever saw. He cast over my head with perfect ease, and with an accuracy which seemed to me perfectly marvelous. Mr. Clark thinks so much of his own casting that he says next year or the year following he will issue a challenge to the entire country, preferring to meet Dr. Henshall. He uses only one make of reel, and declares that to be the only perfect reel, and all others worthy of nothing better than contempt. This, of course, is all nonsense. There are three or four makes of reels quite as good as his. I shall let the angler choose unassisted from among the standard casting reels, any of which will do better work than he himself. Mr. Clark has bored an oil-hole in his reel, and declares that any casting reel needs frequent oiling. This is directly contrary to the advice of the Kentucky reel-makers, who claim that oil is harmful to the working of a finely-made reel. I did not find that my reel needed any oil, but that may be due to the fact that it had plenty of time to get cool while I picked out the back-lashes when it got away from me. This latter state of affairs is called in the vernacular of the lakes "catching a buck." I caught several. The question of oil or no oil is for individual taste. I imagine that few casters will call oil a necessity, although I should think constant heavy casting would be apt to warm up the bearings of a reel considerably.

All sorts of lines have been tried by our bait-casters, in linen, oiled, pure and raw silk. No. G, raw silk, of Mansfield's make, is coming to be thought best. I paid $1 for a pure silk line, and found that it was no good. It flattened out when wet, and did not run well. Fifty yards of the No. G raw cost 50 or 60cts. It wears out rapidly in the guides, and at the end of two days' fishing it is best to lay the line aside and get another. No. F is heavier and wears longer, but is not so artistic in its work.

My friend Mr. Clark last year declared that a No. 6-O Limerick hook was the only one fit to use in these lakes for bass. When we talked about using that hook I always told him that I would die first. This year Mr. Clark says that a Sproat hook is the only one fit to use in these lakes for bass; and I wish I might think it was I who corrected him. No. 5-O Sproat will do. Some prefer 6 O. I used 4-O and believed that large enough. On this trip there was a marked percentage in the matter of lost strikes in favor of the Sproat model over the Limerick and side-bend models. The latter sometimes fail to hold the fish. The straight-draught of the Sproat makes it very deadly. In buying the Sproat hooks or any other kind for bass fishing, the angler should get the double snelled make of the very highest quality and price. Then they will not pull off the snells.

It is necessary that the apparent connection between the hook and the line be broken, and for this purpose a short bit of doubled leader of the very best quality, heavy, is used, the total length of gut including the snell being about 15in. This is the distance the frog will hang below the tip of the rod in the act of the cast, and it is not too far. There should not be any swivel used on the gut for frog-casting, and the young angler should remember this, in spite of any "authority" he may have read. The swivel is desirable for minnow casting, not for frog. You do not want a particle of metal showing about your cast if you can help it.

The immature caster will wonder why the expert will outfish him with the same tackle, and take larger fish. This lies very largely indeed in the matter of choosing, hooking and handling the frog. The biggest bass do not bite the biggest frog. You want the smallest frog, about two ounces in weight, of the sort known here as "meadow frogs." Our anglers here take all their frogs up to the lakes with them, buying them here in the city. There is a man by the name of Grossman, down at Sixty-seventh street and Cottage Grove avenue, who catches and sells the bulk of the frogs sold in this market. He supplies the Palmer House, Grand Pacific, Kinsley's, and other crack cafés with their frogs. He sells from 200 to 400 dozen every week. Go to him, and he will tell you what size frog to get for bass fishing. He will sell you the "fishing frogs" at thirty cents a dozen. You will, of course, if you are a regular Chicago bait-caster, have a little "frog bag," made of cheesecloth, in which you will carry your frogs, thus keeping them fresh and strong.

The frog should be hooked close to the lips, not back between the eyes. The hook must be passed from below up. The weight of the shank of the hook has a tendency to pull the frog over and make it swim belly down, as it always should. The young angler would not think of this very vital point, perhaps, nor reflect that a large frog would not so easily turn over. It is all-important that the frog should swim belly down. As it is kept in motion, it does not make so much difference whether it is dead or alive then; but a bass knows the normal position of a normal frog is with the white side down.

The largest bass do not bite right at the surface. The frog should be allowed to settle down before it begins its journey into the boat. A small sinker is therefore necessary. This should be a split buckshot, and should be fastened on the line just above the top of the leader. It should not be put closer to the hook, as it would tend to frighten the fish. It should not be a long sinker, as it will then make more splash. Arranged just as above, it will keep your frog swimming beautifully at just the right depth.

I have in the foregoing described a perfect outfit for bass fishing in the Chicago style. It is simple, compact, neat and not so very expensive. Its cost is from $25 to $30, the reel being the main item. That it is serviceable and perfectly practical, I know very well, and I only wish it were less deadly. In regard to the use of it, I wish I had more space to expatiate. The constant catches of large bass by our leading frog casters (the minnow is not used on these lakes) is evidence of the skill they have. Bait-casting is by all means the only way to catch these big bass here, and the followers of this style of angling now number hundreds where formerly they did tens. These Chicago casters, with customary originality, have cut loose entirely from all rules and precedents, and have invented a style of their own. The casting is done almost entirely from the boat, owing to the nature of the country, although a few expert casters wade and take good strings. An expert caster disdains to stand up in the boat, but keeps low down, to allow no shadow to fall on the water. He cannot, therefore, follow the rules and diagrams set forth by Dr. Henshall in his "Book of the Black Bass." He laughs at Henshall with Western audacity, and with Western vigor and practicality invents a style of his own. He casts with the forearm and wrist, making the snap of the stiff and sturdy little lancewood rod do the work, and bringing the tip of the rod up and over in what is practically an overhead cast. This he does so lightly and easily that the boat is not even jarred, and the distance to which the speckled frog flies is a matter of simple wonder. Our better casters lay out 30 and 35yds. of line, cast after cast, and go over 40yds. easily. When the frog alights away out in the coveted "pocket," a quick upward turn of the wrist tightens the long line and makes the frog take a most enticing hop. Then, slowly, and allowing the frog to swim well down in the water, the angler begins to reel in. As many bass are taken in the reel-up as on the drop. The old bigmouths love to swallow a lazily-kicking frog. While the latter is navigating the rush-grown depths between the ultimate splash of the cast and the hither safety of the boat, there comes a mighty swirl boiling up to the surface, and a lightning-like rush that tests everything there is in the boat. You know how that is yourself.

Messrs. Clark, Porter and myself brought down twenty magnificent black bass, of which four went over four pounds and a half. I also added to my basketful a big croppie which had got tangled up with my new fishing rod, whereat Mr. Clark contemptuously remarked that I wasn't as much of a sportsman as he thought I was. I shall certainly have to kill that fellow yet.

I shall add to even so imperfect a glance at our bait-casting interests a word more on the casting reel. The only model of reel used by our casters is the balance-handled. The single-crank reel, popular in the South, is not tolerated here. I used a single-crank for an hour or so on my first evening's fishing, being obstinately determined to show my autocratic friend that it would work as well as any. I had to give it up, and after that used a heavy old fall-down Sexton reel which I picked up down in Kentucky, and which, by the way, is a mighty good casting reel, though not on the market to any extent. The single-crank reel jerks too much, no matter how smoothly it is made.

There is no line of sport growing more rapidly in this section than bait-casting. It has a field which calls for it, and a field which yields astonishing results. It is a fascinating sport, and grows on one to that extent he soon loses sight of its more immoral attributes and becomes a blind devotee, making all sorts of excuses to his wife every Saturday for just one more trip up to the lakes. I have been as severe as I could with it, but I confess that if there were no fish in the house, and we had to have fish, I should take my casting outfit along with me; albeit breathing high scorn for all pot-fishermen.

Much as I regret it, on account of that croppie incident, I should be obliged to head any partial list of our better bait-casters with the name of the amiable crank whom I have chosen in this article as a type. Mr. J. M. Clark has been the apostle of bait-casting here, and is the one who did most toward forming the little army that goes north out of this city every week. Mr. Clark, however, got his first lessons from Mr. Elmer Wilkinson, the artist, who is a beautiful caster, but not above, or below, using a fly for bass, which he is now doing at Camp Lake with success. Among our better men who go into Fox Lake are Messrs. Chas. F. Hills, Geo. E Cole, Robert Miller, Geo. R. Davis, Coroner Hertz, Dr. Fuller, Mr. Dwen and Mr. Smith, of Shea, Smith & Co. These men all get fish, even in the hard Fox Lake fishing in the lily-pad pockets. Among those who favor Antioch Station are Dr. Carson, Mr. Lee, Mr. Chas. Hyde, Mr. Fred. Ray, Mr. W. H. Brown, Mr. Lawrence Earl and Mr. W. Cutler. Mr. Miller and Mr. Hyde took their boats over from Fox Lake on the day that our party struck Loon Lake, and left the latter water just as we started in. They had thirty-three black bass. There were four in their party, but the two mentioned did most of the fishing. I should say they had enough. In the Silver Lake and Camp Lake districts prominent figures are Mr. Chappelle, of Giles Bros., Messrs. Frank Noble, Edward Van Bergen, Capt. Ramage, Thos. McKee, Thos. Waters, Jos. Hislop, Edwd. Hewfurt, H. Dunkinson, Mr. Sturgis, of Proctor & Gamble, and Mr. Jenkins, of Shea, Smith & Co.

E. HOUGH.

"TROUTING ON THE SOUTH BOARDMAN."—Petoskey, Mich., July 10.—*Editor Forest and Stream:* I inadvertantly made a mistake in the heading of my letter, the first part of which was published in your issue of July 4. It should have read "Trouting on the Boardman," instead of South Boardman.—ALEX. STARBUCK. Mr. Starbuck writes that he is on the way to the north shore of Lake Superior on a trouting expedition, and may at the same time go to the famed Nepigon for big trout.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

ALLIGATOR GARS AND BLACK BASS.

A NEGRO man, heretofore found credible, told me yesterday about an alligator gar attacking a boy some two weeks ago. The little fellow, about ten years old, was bathing in the Calcasieu River. The colored man, at work in a field near by, heard him call for help, and, running to the rescue, found him in the clutch of a monster gar, and it was not till he had been hammered three or four times lustily with a club that the fish let go his hold. The boy was so badly mangled about the abdomen, the walls of which were cut in a dozen different places, that peritonitis set in, and he died on the third day.

Can any one tell me how large the alligator gar grows? I saw one caught on a trot line on the Lower Calcasieu, about a month ago, so large that two men could not lift him into the boat, after his skull was smashed with a hatchet. They started to tow him to shore, but, unfortunately, the line broke, and he sunk. One of the men estimated his length at 12ft. and his weight at 150lbs., the other thought he was at least 15ft. and would weigh 200lbs. Probably both over-estimated, but he certainly was a monster.

"Macon Angler" complains that the black bass in his vicinity will not rise to the fly, and attributes it to the abundance of insect life in the waters which they inhabit. I hardly think that can be the reason, from the fact that in a small pond on my plantation, where a number of bass have been left by the recession of the waters of the bayou, and which abounds with insect life (I caught eighteen different species of insects there one evening, "and it wasn't a very good day for bugs, either,"), they take the fly freely. The more gaudy-colored the better, the red-ibis and a green and yellow nondescript of my own making being the favorites. It is the first time, by the way, that I have ever found the red-ibis amounting to anything as a bass fly.

To what extent has the black bass been found in salt water? I caught one, *M. salmoides* (big-mouth), in the Calcasieu River, so near the Gulf that the water was too brackish to use, and, in fact, where the tide was running fast enough to make rowing against it quite laborious.

H. P. U.

LAKE CHARLES, Louisiana.

SPEAKER BOYD'S WINNINISH.

A TALL man, over 6ft. in height, who hails you cordially, but with an expression of disappointment because he cannot swap some fish stories with the Lone Fisherman of Beaver, left Quebec one night in the month of last September. Twenty-four hours later he was a tired but welcome guest at the Fifth Avenue Hotel. This man of symmetrical figure holds a high position in the Keystone State. It is the Speaker of the Pennsylvania House of Representatives, Henry K. Boyd, who grasps you by the hand as he says: "Well if I can't find one fisherman, I'm in luck to stumble over another." He introduces me to a natty man, a slightly undersized and agreeable gentleman with a diamond scarf pin, and the man inside the well fitting clothes answered to the name of "Bald Eagle, of Herkimer," for it is the Hon. Jimmy Husted.

It was midnight, but everybody keeps "early" hours in New York, at least while the dog star rages, and I heartily enjoyed Speaker Boyd's "over-true tale" about his two weeks' sojourn with his Indian guides at Chicontinic, away at the end of navigation on the Saguenay River, below Quebec, and his grand luck in Lake St. John, 175 miles from Quebec, among trout and winninish.

Brown as a berry, with a suspicion of Canadian wilderness appetite still on him, Mr. Boyer describes his journey in the Canadian wilds in pursuit of the gamiest fish that swims and the liveliest fighter of the northern lakes. He says: "Many fishermen dote on grayling fishing, this fish having many of the characteristics of speckled trout, and the pursuit under difficulty of the grayling adds ardor to the sportsman's joys, because they are hard to find and still more difficult to catch. These are smaller in size and do not fight with a hundredth part of the pluck and tenacity of the winninish, which are by a peculiarity of piscatorial nomenclature called 'landlocked salmon.' The distance, the expense and physical exertion required to catch this wonderful fish, and the few isolated localities in this or any other land where the winninish can be captured, makes the sport rare and adds vastly to its charm. I had a friend who fired my imagination by telling me of a beautiful spot in Canada, at the foot of the Great Discharge, where the whole Saguenay River pours out though a narrow gorge into a circular lake dotted with islands; this tremendous current meeting in its reckless course the little rocky islands becomes churned up into all conceivable sorts of eddies and swirls. It is in the white cream and froth of this boiling mass that the best and biggest fish love to resort. He told me one could see the fish rolling like porpoises in the foam, as they disappear exposing to view their large fork-shaped tails. When you see a four-pound winninish playing in the foam, pick out the biggest tail, let your cast of flies go overboard and you've got him.

"I spent one day as the guest of the Laurentian Club, at Montreal, which takes its name from the Laurentian Mountains that surround Lake Edward, twenty-five miles long, and full of trout. At the Laurentian Club I heard more of the winninish; I resolved to make a break for Quebec and the fish country. The next day I bought my supply at Quebec, and having long since discarded the red worm for a fly-book, I had every fly from a Jack-Scot to a grizzly-king in my pocket. I made the time fly at Quebec, for my mind was all aglow with the prospect of sport, novel enough to kindle any angler's imagination.

"My guides were selected, two trusty Indians, who accompanied me to Lake St. John, 175 miles distant, as magnificent a sheet of water as my eyes ever beheld; its width is twenty-five miles, and it was a thing of beauty to watch the glowing sunset among the hills which were grim and grand, gloomy and majestic along the Saguenay River, where I did my best fishing. We camped on the banks of the river, and for ten days slept on beds of balsam boughs, a sleep so sound that no noises could disturb us. I caught all the fish we wanted on the first evening after we erected our tent, they were broiled and 'done brown' for a breakfast which Augustin might have envied. But it would take me till broad daylight to tell you the joys of sitting in the stern of a birch bark canoe, 9ft. long, comfortably surrounded by camp duffle, while two stalwart Indians rush the light canoe up seemingly impossibe rapids which leap and dance with fairy foam, through the most beautiful and picturesque country in Canada.

"On the 30th of August I began my fishing for the jumping fish on Murray's wa-na nish. In three hours I had seven good-sized fish, in spite of the rain in the morning, one of 3½lbs., one of 2½lbs. and five of 1lb. each, 11lbs. in all. Tuesday, Aug. 31, I had my best day, and caught twenty fish in spite of the storm and rain, one 3½lbs., one 3lbs., two 2lbs. each, two 1½lbs. each, three 1¼lbs. each, eleven 1lb. each, 28lbs. in all.

"Never again do I expect to have such joyful and hilarious experience, save I come again among the Laurentian Mountains and among those jumping fish. Five times (I had two flies on) I made double catches: four times I landed both fish, but the fifth I lost the end fish, a 3-pounder, while the other jumped over the head of the Indian, who sat in the bow, and I caught the 'winny' on the jump in the landing-net. Oh, the joy of it! I don't wonder now that President Arthur used to spend the summer months in this fisherman's paradise. My biggest catch was a 3¼-pounder on my lead fly, and a 1-pounder on the tail fly, and I landed both. My Laurentian Club friends advised my taking strong tackle. I took my very light bethabara trout rod, with lancewood tip, which I have used fifty times among the trout streams in the Pocono Mountains of Pennsylvania, and with a light but strong silk line, it admirably answered my purpose. We got caught in a storm five miles out on my first day's fishing on Lake St. John, where there are said to be 8lb. winninish, and nothing but the level-headed Indian, Sebago, my best guide, saved us. Our light skiff would not have lived twenty minutes longer, as we sprung a leak a mile from shore.

"Saturday ended my glorious sport, for all things have an end, and Walter Scott says 'a bag pudding has two ends.' I bade my guides farewell on the wooded shores of Lake St. John, a regretful one to us all, and as our locomotive pulled out of the forest primeval, the glowing words of that famous fisherman, Adirondack Murray, kept repeating themselves: 'Less than one hundred miles from Lake Edward, due north, lies the famed Lake St. John, the 'native soil' of the grandest and most illustrious game fish, without any exception whatever, that plows through fresh waters.'"

JAMES M. SCOVEL.

CHICAGO AND THE WEST.

CHICAGO, July 8.—Mr. E. C. J. Cleaver is just back from a trip around Ashland. He and Mr. Mat. Benner had great success with the trout in the Brunswillow, near Philip Kohl's cabin, three and a half miles west of Minersville. Their trout did not run heavy. They did not face the rough country which had to be crossed for the 2lb. trout country. They went over into Turtle River country after mascallonge, but found that country wild and with no boats but 30ft. dugouts, which they could not use. They found mascallonge at Butternut Lake. All these points in Wisconsin.

Mr. Fred C. Donald, G. P. A. of the C. & A. railway, and Mr. Chas. S. Burton, city passenger agent of the Kankakee line, had good luck a short time ago on Wausaukee River, Wisconsin. They caught sixty-one trout in one day before 3 P. M. A nine miles buckboard ride is a feature of that trip. Mr. C. E. Rollins had a great catch on those waters a week earlier. Mr. Burton is now hesitating between a trip this week to the Pentwater, on the west shore of the lower Michigan peninsula, and one to Eau Claire, Wisconsin. He gets good reports and strong invitations from both places.

The Oconto and the Pike in Wisconsin have both been doing well this spring. Ellis Junction, on the C. & N. W., is a good point to go in on the former stream.

Mr. F. P. Taylor says he can get grayling any time he wants to in Michigan, but he won't go with me after them. He says he caught plenty—five years ago!

Messrs. A. Hirth, Chas. Heath, Nath. Moore, Mr. and Mrs. L. F. Loeb and Mr. M. Lippman went over the foot of the lake to St. Joseph, Mich., Saturday, after bass.

Mr. W. C. Wise starts this week for a fly-fishing trip in Washington Territory.

Mr. W. Kennedy, of Pittsburgh, Pa., lately passed through here after a most successful trip after Lake Superior big brook trout.

Mr. Frank Greenwood Pratt, of St. Louis, outfitted heavily here Saturday for a Lake Superior trout trip.

Col. Jas. Kilbourne, of Columbus, who lately led into Gogebic paradise country Messrs. H. A. Lanman, F. F. Hoffman, F. W. Prentiss and R. E. Sheldon, proved himself so doughty an angler and so worthy a chief, the above gentlemen, when they reached this city on their return, presented him with a beautiful fly-book and 12 dozen flies, the book bearing the names of the donors.

We are having lovely fishing weather at this date. Our anglers are all going out, and are all having success, whether at bass or trout. The season seems unusually favorable. There has never been so much fishing tackle sold in any year in Chicago as during this season, and buyers ask for the better grades. Sporting interests are growing here.

CHICAGO, July 9.—Fishing for bass and pickerel has been unusually good of late below the dam on the Kankakee at Momence, Ill. Two men caught thirty bass there in one day of last week. The run seems to be in which was due in early June.

This same peculiarity seems noticeable at the lakes also, and is doubtless due to the late and cool spring. The earlier bass taken seemed to be mostly two or three years old and averaged small. The big ones are now biting ravenously, and it is questionable if any season ever offered better fishing here in any late years.

Mr. W. A. Toles, of the Globe Light and Heat Co., just back from Twin Lakes, Wis., where he spent two weeks, reports the fishing better there than he ever knew it. He and his friend Mr. Hobler took 75lbs. of large and small-mouthed bass and pickerel in two hours' fishing. The fish were rising much better the last week than the week before.

A somewhat noted sportsman came to his end this week in Mr. Hiram A. Pearsons, who was drowned while bathing from a yacht off the lake front here. Mr. Pearsons was late of San Francisco, where he had quarters at the Pacific Club. He was thirty-one, a bachelor, a mine owner, very wealthy, and noted in the Rockies as an enthusiastic and liberal sportsman. He is said to have had the exclusive privilege of fishing the headwaters of the Columbia River, for which he paid $15,000 yearly. He for years kept up a hunting box near Bonanza City, Idaho, which was located on the top of the Continental Divide, according to report.

Mr. C. E. Fargo, of C. H. Fargo & Co., is just back from a lucky trip at Gaylord club house in Wisconsin. Mr. M. M. Gaylord is up with the club now, and will probably remain during the greater part of the summer, his health being poor.

I have spoken earlier of Messrs. W. H. and E. F. Comstock as expert fly-fishermen for bass. These gentlemen are just back from Brown's Lake, Wis., where they have had their usual success. They tried the rather novel experiment of fly-fishing for bass by moonlight, and one evening took 15 black bass, besides a number of rock bass and the like. M. E. F. Comstock took 10 bass on the fly in that lake after 10 A. M. of July 6, and in the evening of the same day took 7 more after supper. In Twin Lakes, in last June, these two gentlemen on two consecutive days, caught 18 bass, some of which weighed 3lbs. On the 10th of June, 1888, the two killed 108 bass in one day on Brown's Lake, all on the fly. Mr. W. H. Comstock took a 3½lb. large-mouthed bass on the fly in Loon Lake this spring, and says the large-mouth rises closer to the surface than the small-mouth, and requires more delicate casting, rarely taking a trailing fly or one badly cast; whereas the small-mouth will take the fly lower in the water while trailing. Both of these gentlemen say that the small-mouth is out of sight gamer than the large-mouth, and both insist that in proper weather they can take more bass with the fly than can be taken with bait so far as the number is concerned. As they laugh at the idea of returning all bass weighing less than 3lbs., I presume they do not catch fish on the average so heavy as those taken by our bait-casters. There is no misstatement in regard to the latter fact. A few of our best bait-casters here will not keep a bass weighing less than 3lbs.; but considering the murderous qualities of bait-casting, and the constant heavy strings thus killed, I think this is the least they can do to relieve themselves of the odium attaching to pot-fishermen. E. HOUGH.

NEW BRUNSWICK TROUT NETTERS.—Kingston, N. B., July 6.—One can scarcely think it possible in this enlightened age, with books and journals such as the FOREST AND STREAM to read, that young men having the least grain of spirit in their composition could so far forget themselves as to drive a long distance to one of our best streams to fish trout with a net. Sunday, June 23, several parties started from Moncton. Just as the last few people were going to church they drove through the streets on their way to the fishing grounds, with fishing rods sticking out of the carriage. That is about all the use they put their rods to. To one of our fishery overseers, Mr. Lazare Guimnauel, great credit is due for the effective manner in which he traced, captured and fined the law-breakers. Upon his arrival at the brook he seized a lot of trout bearing marks of a net. They refused to pay the fine, and stated that they did not net the trout but bought them from a fellow that they met on the brook. Mr. Guimnauel thought the statement rather transparent, as some of the same party were known to have netted trout on the same stream last year, and told them that unless they paid the fine he would call assistance and take every one of them to jail. They at once saw that Mr. G. meant business, and paid the fine, which amounted to $30. I have no doubt they felt good, and enjoyed their drive home. Too much cannot be said in favor of Mr. Guimnauel in this the initial move made by any fishery overseer in this county to protect the trout fishing. We would have good trout fishing if others would follow in his steps and snub these netters, which are a disgrace to themselves and the community in which they live. I would advise Mr. G. to keep a watch on those living much nearer to the brook than Moncton, and if reports are true, he could reap a rich harvest by visiting a certain freezer situated less than a hundred miles from Tweedies Brook.—SPORTSMAN.

THE COLOR OF TROUT.—A recent writer in one of the New York newspapers under the above title tries to explain the variations in the external and internal colorations of the brook trout. The nature of the bottom and of the body of water determine the hues of the fish. The color of the flesh is regulated by the food. These statements may contain more or less truth and they may satisfy some readers; but we must not lose sight of the fact that the external colors can be changed suddenly at the will of the fish, as explained in the abstract of Mr. Goode's paper published in FOREST AND STREAM May 16, 1889. It has long been a favorite theory that the pink color of the salmon is derived from crustaceans which it is said to feed upon at sea; but we do not know, in the first place, that such food really nourishes the salmon, and, in the next place, several other well-known fishes—mackerel, menhaden, alewives—devour immense quantities of red crustaceans, but their flesh never changes to pink. Evidently some writers have simply jumped at conclusions and there is room for more elaborate study of the color problem.

VERMONT TROUT.—Waterbury, Vt., July 12.—There remain but two weeks more for trout fishing in this State, as the new law makes the close season begin Aug. 1, one month earlier than formerly. I believe it would have been even better had the date been July 15 or even July 1. I have dressed several trout containing well developed eggs as early as July 4. The law seems to have been very generally regarded in this section, and I believe next season will show the value of the measures taken to protect what trout we have. "Catch all you can" still remains the motto, but trout are so scarce it usually requires hard work and many trials to get even a moderate string, and except in a few instances the "trout hog" would have no chance here. I recently returned from a very enjoyable two days' trip to one of the best streams in this county. Heavy rains and high water made the fishing poor, and my friend and myself had only seventeen good trout to share at the end of two days' steady work.—F. E. A.

THE NEW JERSEY TROUT SEASON CLOSED JULY 15.—The trout, however, had closed the season before I was ready, as I got only nine in two days' fishing with all kinds of conceivable flies.—C. A. S. (Paterson).

A TUSSLE WITH A MUSCALONGE.—The largest muscalonge ever taken at Swanton was caught at 5 A. M. Wednesday by Carl Roberts, Claulde Sowles and Louis Suter while trolling about the dam. It took Roberts's spoon near the cove above the iron railway bridge, and it took all three to rescue him. Just as he was landed on shore he broke the gang of hooks and would have escaped, but Louis Suter couldn't think of losing such a prize, and quick as an athlete he leaped upon the back of the 24-pound fish, and after a terrible tussle in which he was badly bitten and a new suit of clothes ruined, he succeeded in overpowering the fish, which is 4ft. long and as handsome as any trout.—*St. Albans (Vt.) Messenger.*

CANANDAIGUA LAKE.—Canandaigua, N. Y., July 12.—The lake is well stocked with salmon trout, black bass, pike, pickerel and perch. Since its organization in January, 1888, the Canandaigua Anglers' Association has put into the lake about 250,000 salmon trout fry. The fishing is better than it has been for many years, owing largely to the fact that those persons who have heretofore drawn seines have been debarred from doing so on account of the formation of the association.—C. B. L.

Fisheulture.

FISH MORTALITY IN SOUTH CAROLINA.—From a monthly report of the Department of Agriculture of South Carolina we glean the following letter of Fish Warden R. J. Donaldson, relative to the destruction of fish in the summer of 1887: "A remarkable destruction of fish occurred in a lake in the central portion of this county in the early summer of this year. It is only a small lake, having little inlet or outlet of water, but abounding in such fish as bream, perch, mud-cat, eels, and similar coarse-grained fish. The growth of various kinds of trees around its margin is very dense. A tornado or small cyclone, accompanied with heavy hail, passed over this section, and the lake was in its path; branches and limbs and the leaves of the various trees were cast into the lake in vast numbers, but no fish were observed dead immediately after the storm; but a week or ten days after dead fish became common, and, finally, it would seem that every fish in the lake died and came ashore, the entire body of water becoming offensive. I think the true theory of the killing of the fish is to be found in the presence of the tannin which exuded from the branches and leaves of the trees which were cast into the lake in such vast quantities by the storm, or, perhaps, the simple process of decomposition of such matter in a lake which had only a very limited inflow of water during the hot weather was of itself sufficient to cause their death. I am satisfied, from a careful collation of all the data reported at the time of the occurrence, that the storm was not the immediate cause of death. I frequently find large numbers of dead fish in a rice field if the water remains unchanged for six weeks in the heat of summer. During last winter hundreds of tons of sea fish were cast dead upon the shores of this county."

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary.
Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.
Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.
Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.
Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. Greville Harrison, Secretary.
Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.
Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.
Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.
Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.
Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

ETHAN ALLIN.

ETHAN ALLIN died at his home in Pomfret, Conn., last Friday, July 12. Mr. Allin was born in Providence, R. I., Feb. 14, 1814. In April, 1815, his father removed to Pomfret, Conn., to the old homestead where Mr. Allin passed the remainder of his days. As a boy he was very fond of shooting, and whenever he could secure a few hours of leisure they were spent in his favorite pursuit. He early became very fond of ruffed grouse shooting, and as these birds were very abundant in his locality, he was soon familiar with their habits, and very expert in their capture, often with the aid of his old flint-lock musket bringing to bag in a few hours as many as he could well carry. In the fall of 1831 he became the proud owner of his first bird dog, a pointer, and great was his satisfaction in the possession of this new aid to his pleasure. Although not at this time an expert wing-shot, he devoted his time to the practice, and soon became very proficient. For a number of years he would shoot over pointers only, considering them the hunting dog *par excellence*. Early in his shooting career his fame as a shot and the excellence of his dogs brought sportsmen from quite a distance to witness their performance and share the sport, and it was at the solicitation of these sportsmen that he began training dogs for others. The amount received was $25. The quality of the dogs sent him was often very poor, and he was far from satisfied with the results obtained.

After sticking to the pointer for three or four years, he received a setter to train that proved to be so good that his love for the pointer waned, and the setter became ever after his favorite. About this time Mr. Allin determined to breed his own dogs, his ambition being to breed a strain that would be reliable, and he began by mating first-class fielders without regard to strain, using, indiscriminately, English, Irish and Gordon, the only requisite being that they must be able to go and stay and do work that was satisfactory to him. In a few years he succeeded in establishing a strain that soon became noted far and near for the excellence of their work on ruffed grouse; and many prominent sportsmen from the large cities came to visit Mr. Allin and his wonderful dogs. In this way many pleasant acquaintances were made that grew with the years to warmest friendship, and each season the pleasant farm house was filled with genial spirits who came to enjoy the hearty old-fashioned hospitality and cheerful companionship of their friend.

Mr. Allin was a capital host, an excellent companion and a devoted friend. His knowledge of the locality and of the habits of the game birds of his secton of country and his skill in their capture, together with his unflagging spirit of cheerfulness, made him a delightful companion when afield. Many of his oldtime friends have gone before, but many yet remain, and we join with them in mourning the loss of a dear friend. Mr. Allin was stricken with paralysis June 3, 1886, and, although he partially recovered the use of his limbs, and was able to walk about and oversee the work on his little farm, he was unable to pursue his favorite sport. On Friday last, July 12, the last summons came, and he peacefully passed away. The cause of his death was heart failure.

The writer first knew Mr. Allin in 1842. Three years later we met while out shooting, and for the first time I saw a dog on point and for the first time saw a bird shot on the wing. After this we were frequent companions, and a friendship grew up that has continued unbroken since. Many days of rare sport have we enjoyed together afield, and to him I am greatly indebted for instructions in woodcraft that have often been of inestimable value. The dogs bred by Mr. Allin were generally capital dogs for ruffed grouse as well as for woodcock and quail. Many of them I have shot over and retain vivid recollections of their performances. About thirteen years ago Mr. Allin bred a blue, tan and white dog that was an excellent fielder, and he was reserved for the stud. Many of the descendants of this dog inherited the color, which is very similar to that of a maltese cat, or nearly a mouse color. These dogs were exceptionally good, and Mr. Allin was very proud of them.

DISEASES OF THE RESPIRATORY ORGANS.

ACUTE disease of the organs of the chest and its lining membrane is common in dogs of all varieties, for reasons which are obvious. The lungs are large and active, and are largely supplied with blood. At the same time it may be noticed that the walls of the chest are thin, and any influence which may modify the circulation in those structures will readily affect the organs contained in the cavity. Dogs are exposed to conditions which are likely to induce disease in the central breathing organ. Even when left to themselves, the animals take their exercise in a very erratic manner, alternating between rest and violent motion at short intervals, regardless of the state of the weather. At the caprice of their owners, the animals are compelled to plunge into cold water and dry themselves as best they may; and often an active run of some miles, multiplied by the animal in its constant rushing to and fro, is succeeded by a long period of rest on a cold doorstep, or perhaps on the wet grass, while the master is paying a visit to a friend.

Considering the common conditions of a dog's life, which include frequent exposure to changes of temperature, wet and dry in turn, and irregular periods of exertion and inaction, it is remarkable that acute disease of the respiratory organs is not more frequent. According to Blaine and Youatt, to whom later writers on canine diseases are largely indebted, pneumonia, or acute inflammation of the lungs, is a very fatal malady in the dog, and sometimes in an epizootic form. It is evident, from the account which Blaine gives, that the disease to which he alludes is inflammation of the pleura as well as of the substance of the lungs, because he speaks of dogs being suffocated by the effused fluid in the chest. Steel remarks, in regard to acute diseases of the lungs of the dog, that the substance of the lungs, the pleural membrane, and the mucous lining of the bronchial tubes are all implicated in the disease, although the different structures may be affected in different degrees, the most pronounced type of inflammation usually being exhibited in the tissue which is primarily affected. Symptoms of chest disease consist chiefly of quick breathing—panting, in fact—with rapid beating of the heart. The dog sits on his haunches and rests on the fore feet. There are, besides, finer shades in the indication, which will be recognized by a careful observer.

In pleurisy the respiration is short and jerky, and the cough is suppressed, the effort evidently causing pain. Twitching of the muscles of the sides is a distinctive symptom, which cannot fail to be seen, and the least pressure on the outside of the chest causes pain. Auscultation of the chest, which is easily managed in the dog, enables the examiner to detect the friction sound over the whole of the inflamed part.

Effusion of serum into the pleural sac is the one termination of pleurisy which is almost sure to happen, and equally sure to prove fatal. The occurrence is indicated by an improvement in the symptoms for a short time, followed by a labored flank movement in breathing, dropsical swelling underneath the body, sometimes extending to the limbs, great depression and rapid loss of condition. The extent of the effusion may be ascertained by auscultation. No sound will be heard over the space occupied by the fluid, but the murmur above the level of the fluid will be much more distinct than usual.

Pneumonia is attended in the first stage by very similar signs to those of pleurisy—shivering, with slight colicky pain; but, on auscultation, there is no friction sound, and the murmur is only lost in patches of the lungs where the accumulation of blood in the vessels is most marked.

Complication with inflammation of the bronchial membrane is evidenced by a soft cough, and hot air expired from the lungs. On auscultation, the distinctive mucous *râle* is heard. Treatment of acute disease of the breathing organs will not vary much, whether the affection be centered in the lungs, pleura, or bronchial tubes. The old authorities on canine diseases—Blaine and his friend and pupil, Youatt—agree in recommending that the treatment should be commenced by free bleeding, to be followed by a dose of castor oil, given in broth. Afterward febrifuge and sedative medicines are exhibited, the favorite mixture being: nitre, 20grs.; digitalis, 4grs.; and antimonial powder, 2grs. These quantities must have been intended for an adult dog of average size—not a toy spaniel, for which a third of the dose might be considered sufficient.

Blisters to the sides were looked upon by the old school of practitioners as the sheet anchor of any curative system in inflammatory diseases; and in cases of pleurisy they suggest that, if the effusion goes on to an extent which threatens suffocation, the fluid may be drawn off, although it is added that it is doubtful if any benefit arises from the operation, as the fluid is poured out as fast as it can be removed. The use of the modern aspirator is one improvement on the old plan of drawing off the fluid by the aid of a trochar, and in the human subject effusion into the pleural sac is by no means a hopeless complication.

Modern canine surgeons will look upon the curative measures advocated by Blaine and Youatt with alarm. Heroic treatment of acute disease is no longer tolerated by the faculty; bleeding went out of fashion years ago, and counter-irritants are deemed to be deadly in acute inflammation. Steele remarks, in regard to the treatment of pneumonia and its complications in the dog: "Emetics, bleeding, drastics, and other debilitants must be carefully avoided, and in place thereof stimulants, with febrifuges, should be given; and in cases where the bronchial tubes are affected, expectorants may be combined with the other agents."

Stimulants, as a class, may be represented by alcohol in the form of good brandy, which may be given in beef tea or a little milk. The dose will vary from a teaspoonful to a tablespoonful every three or four hours, as the condition of the animal may seem to require.

As a febrifuge and expectorant, Dover's powder may be given, or, instead, a mixture of syrup of squills and ipecacuanha wine. Counter-irritants to the chest may be best substituted by hot fomentations, followed by friction with a stimulating liniment, such as soap liniment or a mixture of ammonia and oil.

Recovery from acute inflammation of the principal respiratory organs is generally slow, and in many cases extreme debility is present, necessitating the use of concentrated food, with the addition of tonic medicines, among which the preparation known as dyalized iron is the most reliable; but in these cases good nursing is more important than drugs.—*London Field.*

DOG TALK.

THE city of Chicago has a new dog ordinance which provides for a tax of $2 for each dog. The mayor whenever he deems it necessay may order all dogs muzzled that run at large. Provision is made that no dog can be molested by the dog catcher while on the premises of his owner or when led by any one. The penalty for allowing a fierce or dangerous dog to be at large and annoy any one is $10 for the first offense and $25 for the second, with possibly the penalty of death in addition. It is also provided that if a dog in any manner disturbs the quiet of any person or neighborhood, or has bitten any one not trespassing upon the owner's property, the magistrate shall order the dog removed or killed within twenty-four hours under penalty not exceeding $25, and the further sum of $25 for every day thereafter until the dog is removed or killed.

At a special general meeting of the English Kennel Club July 10, Mr. J. S. Turner's proposed amendment to the rules relative to cropping was discussed, and it was voted that dogs whelped after July 31 shall not be eligible for admission to any dog show held under K. C. rules if their ears have been cut. There was considerable talk of an appeal from the decision among the owners of some of the breeds that cropping is supposed to improve, but it is to be hoped, for the sake of humanity, that the edict will remain in force.

The field trial of the Irish Red Setter Club will be held Sept. 17 near Omagh, Ireland, on grouse. Six stakes will be run, the Irish setter puppy stakes, Irish setter all-aged stakes, Irish setter brace stakes, derby stakes for all breeds, grand all-aged stakes for all breeds and grand brace stakes for all breeds. The judges will be Dr. Salter and Captain J. K. Millner.

There will be a dog show at Toronto, Canada, Sept. 10 to 19 in connection with the Industrial Fair. A liberal premium list is promised and valuable special prizes will be offered. Messrs. John Davidson and C. H. Mason have been invited to judge. The address of the secretary is Captain Greville Harrison, Toronto, Canada.

Messrs. Oldham and Willey have had the misfortune to lose by death their black field spaniel bitch champion Miss Newton Obo. She died July 15 in parturition. A post mortem showed a fine litter of 10, but all are dead. The date appears to be an unlucky one, as on July 15 last year they lost three, among them Newton Abbot Beau.

Mr. E. B. Goldsmith received last week from the kennel of Mr. George Cartwell, Kendal, Eng., two English setter dogs that were forwarded to their purchaser, Mr. William H. Weiss, Bethlehem, Pa. A pair of pugs accompanied them, also imported by Mr. Weiss.

Mr. K. E. Hopf has had the misfortune to lose by death the smooth-coated St. Bernard bitch champion Daphne. She was 7 years old, and was well known to dog show visitors. The loss is doubly severe as she was in whelp to champion Hector.

There is quite an excitement in England regarding the spread of rabies. An article from the London *Field* advocating the muzzling of all dogs for the purpose of stamping out the dread disease will be found in another column.

A fox chase will be one of the features of the dog show of the Farmers' Lancaster County Agricultural Fair, to be held Sept. 9 to 14. The chase will take place on Tuesday, the 10th, at 1 P. M., with prizes of $12, $8, $6 and $4.

The Indiana Kennel Club propose having a stake exclusively for Irish setters at their field trials next November, if a sufficient number of entries are received. The address of the Secretary is P. T. Madison, Indianapolis, Ind.

There were 1,472 entries at the dog show of the English Kennel Club, held at Olympia last week.

We learn that Mr. Charles Heath has purchased the well known pointer bitch champion Revel III.

STAMPING OUT RABIES.

THERE are some indications, of a negative character, it is true, that the idea of restrictions on the freedom of the dog, as a means of getting rid of rabies, is not so distasteful to owners of these animals as it was.

Several writers in the daily papers, among them Dr. Drysdale and Mr Kerslake, the honorary secretary of the Society for the Prevention of Hydrophobia and Reform of the Dog Laws, besides several anonymous writers, have advocated the use of the muzzle over the whole kingdom for a certain period, and the various suggestions have not been met by any strong expressions of dissent.

Dr. Drysdale proposes to adopt measures to prevent rabies in dogs and also to provide for the protection of persons who have been bitten by rabid animals. In his letter to the *Morning Post* of June 13, he observes:

"It appears that that terrible affection rabies is again on the increase in London. It is reported that there have already this year been no less than twenty-two cases of the disease among the dogs killed by the police. In 1887, when a similar state of things occurred, the disease was got rid of in London by the simple application of the muzzle law for a few months. But a far more thorough method of stamping out rabies would be to imitate the authorities of Germany and

Sweden, and to make the muzzling of all dogs throughout the United Kingdom obligatory for a period of six months. If this was done at once—as it ought to be—we should soon be as free from hydrophobia in this country as they are in Prussia, where the disease has been stamped out of late years. While on the subject of hydrophobia, I am glad to note that there is some hope that, both in this country and in Belgium, those who have been unfortunate enough to be bitten by a rabid dog, are likely soon to be able to be treated by M. Pasteur's most successful method without having recourse to a long journey to Paris, as upward of 200 of our countrymen, on account of the supineness of our authorities, have already been compelled to do. The present Lord Mayor of London seems to be alive to the great value of M. Pasteur's plan, and desirous to have it domesticated in this country. In Belgium the same idea is passing the minds of the sanitary authorities, although superstition is still common enough in that country; for I see that on March 18 three inhabitants of Diest, in Belgium, were bitten by a rabid dog, and instead of going to M. Pasteur they betook themselves to the shrine of St. Hubert, and consequently two of the poor people have succumbed to this terrible malady. It is high time that such sentimental cures were discountenanced, and that we should imitate the Prussians and the French in their prevention and treatment of rabies."

Mr. Frank Kerslake, in the same paper, adopts very much the same line of argument as Dr. Drysdale; and another writer advocates a leather muzzle in place of the wire muzzle, which, he says, "is stupid and cruel, and very soon makes the dog's head and nose a mass of bleeding sores. Whoever heard of a horse's gear being made of wire, and if not a horse's, why a dog's? If a dog has a properly made muzzle on, such as are made abroad, in leather, wide enough round the mouth to allow him to keep it wide open—which a dog requires to do in hot weather, in order to enable him to pant freely—loose enough round the neck to slip over the head and off again, without unbuckling, the dog suffers no more inconvenience from such a muzzle than he does from wearing a leather collar. If every dog were muzzled in such a manner the dogs would be perfectly happy, there would be no more hydrophobia, no more dog fights in the streets, nor would they be able to pick up and eat the refuse in the roads, as they do now, and which cannot contribute to their health, or to the comfort of their owners."

The London County Council have petitioned the Privy Council to pass an order to make muzzling compulsory over the whole kingdom, and it was stated in the House of Commons by the Home Secretary, in answer to a question, that the proposition is under the consideration of the Privy Council.

Any difficulty which may arise in reference to the enforcement of an order for general muzzling of dogs must come from the action of the owners of dogs themselves. Neither the authorities nor the people who do not own or care about dogs themselves can possibly object to such a precaution. It may be presumed that the objections against the use of the muzzle are based on the idea that the instrument is inconvenient or injurious to the animal; and the way to get rid of the opposition is to provide an effective and convenient muzzle, which may be easily slipped on, and will not cause the wearer any inconvenience.

That the ingenuity of the mechanics of this inventive age is equal to the solution of the problem can hardly be doubted, and it is probable that the issue of a general muzzling order would give the necessary stimulus to the inventive faculty which must be lying dormant somewhere.

Of the several preventive measures which have been advocated the muzzle is the most convenient and most easily applied. The plan suggested by a French count of filing the teeth, especially the canine teeth or tusks would, if rightly done, prove efficacious by preventing the dog so treated from inflicting a wound on the person whom he attacked. The inventor of this method tried experiments which satisfied him that his system would answer. He allowed mad dogs, after their teeth had been filed, to bite his gloved hand, and finding that the glove remained uninjured, he next submitted his bare hand to the jaws of the rabid animal, and escaped without a puncture of the skin.

Obvious objections to the mode above described of rendering dogs incapable of biting present themselves. Some skill is necessary for the performance of the operation of filing the teeth. Pain is inflicted on the dog, and it is highly improbable that an owner of a dog would permit the process to be applied. Seizure and destruction of vagrant dogs is a very necessary part of any system of prevention; but it is clearly only a part, and does not do away with the necessity for further precaution. And in the same category may be placed the use of any means to check the production and discourage the keeping of useless dogs, which are the active agents in propagating the disease.—*London Field.*

A CANINE TARGETEER.—One of the most remarkable dogs in point of inventive intelligence that has ever gamboled upon this mundane sphere, says the New York *Times*, is Bob, a small animal of shadowy pedigree and light yellow color, who is owned by the senior member of a prosperous firm of plumbers in West Harlem. Bob's full name is Robert L. Smear, so called from a way he has of smearing himself and the walls of the shop with the contents of the red lead pots and other color-holding utensils that belong to the place, but he is called by the shorter name for various and obvious reasons. Bob is a bright dog in many ways, but his chief claim to notoriety is the following performance: He reaches the shop every morning at an early hour with the senior partner, with whom he lodges, and begins operations by dipping his long, thin tail into a tin of pot-black and with it drawing a fresh target on a small bit of board that always stands at the end of the store and is sacred to his use. He then proceeds to the putty keg, bites off a big mouthful of the oily compound, and repairs to the front steps. There he sits facing the wind with extended jaws, and lets the cool morning air pour down his throat until his bronchial tubes get in a state of wild irritation. Then he sits down on the floor at the end of the room facing the target, and proceeds to cough small putty balls with remarkable accuracy at the bullseye. He guides his aim by squinting along his extended right foreleg, and has been known to make a score of 75 out of a possible 90. Bob often has an admiring audience during his daily target practice, and his owner would not part with him for a five-carat diamond.

TORONTO DOG SHOW.—Toronto, July 12.—We hold an international dog show in connection with our coming exhibition, under the auspices of the Dominion of Canada Kennel Club. The date of the show will be from the 16th to the 19th of September, inclusive, at Toronto. One thousand dollars will be offered in prizes and special prizes for kennels.—H. J. HILL, Manager.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybiliene" and other competent authorities to be the best treatise on the subject extant.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Buffalo Girl. By A. W. Smith, Buffalo, N. Y., for black and tan terrier bitch, whelped May 24, 1889, by Buffalo General (Halifax General—Lady Lottie) out of Meersbrook Girl (Punch—Meersbrook Jessy).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie McGregor—Prince Charlie. E. C. Powell's (Ghent, N. Y.) collie bitch Nellie McGregor (champion Rex—Juno II.) to Jas. Watson's Prince Charlie (Sefton—Mavis), July 8.

Wanda—Robber Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Wanda (Gunner—Sheila) to their Robber Chieftain (Chieftain—Lorna II.), July 11.

Brazen—Robber Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Brazen (Brass—Mercia) to their Robber Chieftain (Chieftain—Lorna II.), June 6.

Lorna II.—Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Lorna II. (Bruce—Lorna) to their Chieftain (Bevis—Heather), June 26.

Mercia—Robber Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Mercia (Warwick—Minnie) to their Robber Chieftain (Chieftain—Lorna II.), June 20.

Ramona—Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Ramona (Bran—Thora) to their Chieftain (Bevis—Heather), June 28.

Spinaway—Derby. G. E. Stickney's (Newburyport, Mass.) Irish setter bitch Spinaway (champion Chief—Tyrrell's Nellie) to his Derby (champion Berkely—Aura), June 6.

Bessie King—Buffalo General. J. G. Burns's (Buffalo, N. Y.) black and tan terrier bitch Bessie King (King—Gipsey Queen) to A. W. Smith's Buffalo General (Halifax General—Lady Lottie), July 12.

Hillside Model—Mixture. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Model (Reckoner—Meersbrook Nan) to their Mixture (Spice—Fairy III.), June 10.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

[*From Our Special Correspondent.*]

LONDON, July 5.—It was the intention of the writer to give to your readers the details of each match contested by the Massachusetts team, but everything has been so crowded that it has been impossible to do so.

The team arrived in London Saturday, at 5:30 P. M., went immediately to dinner with the representatives of the Honorable Artillery Company, who were waiting at the depot for the arrival of the team; at 8:30 the team went to the theatre by invitation of Miss Hauthorn to witness "True Heart." Did not get to bed until 1 o'clock, then up at 7:30 and away by train to Nunhead range for practice; in the P. M. first match with the Honorable Artillery Company. Think of it, not 48 hours in England and shooting a match with one of the best teams in England. That same evening the team dined and wined with the same company until 10:30 at their armory. Up next morning to go to Churn, 65 miles in the country, to the Berkshire range at Churn, getting back at 10 o'clock, to bed at 11. Up again early to go to Raynham, 17 miles from London. Dine in the evening at the Holborn Restaurant with the London Rifle Brigade, in bed at 12, up again yesterday at 8; a ride to Brighton, 60 miles, to compete with the Sussex team. Think what an amount of nerve the team has to carry, and at this writing we are about starting for another match and only 5 minutes before we start. Such a series of victories is proving a great surprise to the entire force of volunteers. I send you complete scores of our first quartette of victories. F. ARROW.

July 5, at Nunhead Range:

LONDON, July 9.—Several members of the Massachusetts Rifle Team entered the contest for the Alfred Cup at Wimbledon today. Each marksman fired 7 shots at the 200yds. range, the highest possible score being 35 points. The winner scored 33 points. Of the American riflemen, Johnston took a minor prize with a score of 32; Hinman and Huddleston made 31 each, Bull scored 30, Hussey and Farrow 29 each, and Edes 27.

LONDON, July 11.—Private Rippon, of the 2d Essex Regiment, won the first prize, a bronze medal, in the shooting at Wimbledon for the first stage of the contest for the Queen's Cup. He made 99.

Some of the Massachusetts riflemen took part in the Windmill contest to-day. Seven shots were allowed at 200 and 500yds., the highest possible score being 70. Huddleston scored 63, Hinman 58, Farrow 57 and Edes 54. In the 800yds. pool Merrill made 4 bulls-eyes out of 5 shots.

This evening the American team gave an "At Home," which was attended by a large company, including Lord and Lady Wantage, Earl and Countess Brownlow, Viscount and Viscountess Bury, Sir Henry Halford and all the officers in the camp. Major Jas. P. Frost received the guests.

LONDON, July 12.—In the shooting at Wimbledon to-day Ogg (Canadian) won first prize in the Windmill contest, with a score of 68. In the St. George's contest Rogers, Weston and Armstrong (Canadians) won money prizes.

In the Stewart contest, 7 shots at 200yds., standing, Massachusetts riflemen scored as follows: Huddleson 34, Hinman 33, Bumstead 31, Hussey 30, Edes and Merrill 29 each.

Americans using open sights are entitled to compete in the military breechloading contests.

In the Perinet and Bertram contests, 7 shots at 500yds., Hinman made 34 and 32 respectively. In the All-Comers' Aggregate he made 179.

LONDON, July 13.—The American riflemen have done splendid work at Wimbledon this week, considering that their own rifles were barred and that they were compelled to shoot strange guns among strangers.

Hinman has won a good place in the Alexandria match, and in the Albert competition Hinman, Huddleston and M. W. Bull are among the leading prize winners, Hinman and Huddleston are the highest competitors. In the "Graphic" match Huddleston and Doyle are at the top. The Stuart prize competition finds Huddleston the top man, with 34 out of 35, and with very little chance of his score being beaten, as it begins with four and ends with six bullseyes. Bumstead and Farrow each have 31 in the Heath prize, while Hinman made 33; this is good for a first-class prize. The same officer in the Perinet et fiis match has scored 34 out of 35, which will probably win the match.

British marksmen highly compliment the shooting of the Massachusetts rifle team.

SPRINGFIELD, Mass., July 8.—Before the Massachusetts rifle team left for England to do such excellent work for their country, it was agreed that five marksmen of the 2d Regiment living in Springfield should shoot in competition with the Springfield men on the team. To-day was chosen as the time, because it was supposed in advance to be the sharpest test of the regular team abroad. The home men shot at the 200yds. range at Lake Lookout, using the Government range at Watershop Pond for 500 and 600yds. Owing to Bumstead's phenomenal record, the stay-at-homes were beaten by just one point in the total, as the scores show:

The Team in England.

The American volunteer riflemen in their matches in England last week broke the world's records with military rifles. Every team they have met has been picked from the finest English, Scotch and Irish twenties, to say nothing of the Queen's prize winners. For a team shooting entirely without practice, at a strange range every day, their record is remarkable, and has set the English volunteers to thinking. Saturday the Americans went into camp at Wimbledon, where they will compete this week with the English volunteers, shooting with the Britishers' own rifles, after which they will go to Paris for a week, and then sail for home on the City of Chicago July 31.—*Philadelphia Public Ledger.* The above is rot of the worst description, as the American riflemen have neither broken the world's records nor met a really good team, far less the pick of the members of the English, Scotch and Irish twenties. How the Americans could have met Scotch or Irish riflemen when they have not been out of England, is a conundrum. If ever they do meet a representative team their "world's records" will not save them from defeat. Their record is far from being remarkable, and when they run up against the Canadian team they will have to do much better shooting than they have yet shown.—*Toronto Mail.*

The Grenadiers have sent a challenge to the Massachusetts team, which will no doubt be attended to when the team returns, and another defeat given our Dominion shots.

BOSTON, July 13.—The Massachusetts Rifle Association held its weekly shoot to-day, a very large number of riflemen being present. The day was fine, but hot, with a rather bad wind from 7 to 9 o'clock. Mr. Leo won the champion gold medal, and Mr. Munroe won the gold medal in the 20-shot rest match. Next Wednesday the range will be open at 12:30 P. M. for rifle and pistol shooting. Following are to-day's scores:

20-Shot Rest Match.

J R Munroe	9 10 9 8 11 12 10 12 11 12	
	9 12 10 10 12 10 11 8 11 10—207

WILMINGTON, Del., July 8.—There was a great deal of excellent shooting at Healdmoor Range to-day. The third and last match of the series between two local riflemen and two members of the Kent County Rifle Club was concluded, and resulted in a victory of 7 points for the latter, which, with the second match won by them by 3 points, made them winners of the contest. The first match was won by the local team by 20 points, and although it doubled the lead of the opposing team in both matches combined, still the terms required the counting of each match separately. The contest was close and shows the teams very evenly matched. Following are the scores in detail, standard American target, off-hand:

Pistol Match, 50yds.

E J Darlington	5 6 8 10 10 9 10 10 8 8—84	
E Jackson	6 8 9 9 6 6 10 6 9 7—76

	9 9 8 8 9 6 7 10 7 7—80	
	6 9 7 7 7 9 10 10 7 7—79—235	
B J Robertson	91 91 94—276	
B Copeland	85 95 87—267—543	

Cincinnati wins by 45 points. Scores of July 2: St. Louis 525, Cincinnati 517.

CREEDMOOR, July 13.—The fourth of the series of N. R. A. matches for the Marksman's Badge was shot to-day. The weather was fair though very warm, but a very tricky six o'clock fish-tail wind proved very troublesome to the competitors. The attendance was fair and scores good. The following made scores of 42 and over in a possible 50:

	200yds.	500yds.	Total

NEWARK, N. J.—The following officers were elected in the Puritan Rifle Club last week: F. Weiler, President; Wm. Hanselman, Vice-President; G. Morgenroth, Corresponding Secretary, Wm. Mehling, Financial Secretary; C. Kopf, Treasurer; F. Miller, Sergeant-at-Arms; V. Albert, Captain.

Girls who use powder don't go off any quicker than those who don't.—*Boston Courier.*

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

July 31 to Aug. 2.—Dakota Territorial Sportsman's Association Tournament, Aberdeen, Dak. C. Sam Vroom, Secretary.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

KEYSTONE TOURNAMENT.

THE Keystone Manufacturing Co. are out with the programme of their second annual tournament, to be held at Corry, Pa., Aug. 20 to 24, inclusive. A very attractive array of events is offered, including some of a novel character, notably the team race match, in which the ages of the contestants must foot 80 years. There are three trophy shoots, for the Keystone cup, the L. C. Smith cup and the Peters Cartridge Co. cup, which are to be held for one year and then returned to the donors for future competition. In addition to these the Keystone Manufacturing Co. offers a handsome diamond ring, to be the personal property of winner and to carry with it the title of "Champion Target Shot of America." A new system of handicapping the entrance moneys will be in vogue at this tournament, thus equalizing the chances of all contestants.

The tournament proper will commence on Tuesday, Aug. 20, but traps and grounds will be in readiness on Monday for sweepstake shooting, so that all who wish to may become familiar with the grounds and rules. Over $1,000 in money is guaranteed; in fact all the events on the first four days are guaranteed with the exception of the trophy shoots, and this should induce a large attendance. The team race between the East and the West consisting of teams of 6 men residing east and west of Corry as the dividing line will be productive of much rivalry and interest. The programme in full is here given and will be sent to any one on application by the Keystone Manufacturing Co., of Corry, Pa.

Aug. 20.—Keystone Trophy Day—No. 1, 10 singles, $50 guaranteed, entrance $2.50. No. 2, 15 singles, $75 guaranteed, entrance $4. No. 3, 20 singles, $100 guaranteed, entrance $5. No. 4, trophy contest, 50 singles, entrance $5; trophy and 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, 10 per cent. to fourth. No. 5, 10 singles, $50 guaranteed, $3.50.

Aug. 21.—L. C. Smith Trophy Day—No. 1, 10 pairs, $50 guaranteed, entrance $2.50. No. 2, 20 singles, $75 guaranteed, entrance $4. No. 3, 25 singles, $100 guaranteed, entrance $5. No. 4, trophy contest, Smith championship cup, 50 singles, entrance $5; cup and 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, 10 per cent. to fourth; winner of cup to hold it one year, when it shall be returned to the donor to be again contested for at the next Keystone Manufacturing Company tournament; all contestants in this event to shoot L. C. Smith guns. No. 5, 10 singles, $50 guaranteed, entrance $2.50.

Aug. 23.—Peters Cartridge Co. Day—No. 1, 10 singles, $50 guaranteed, entrance $2.50. No. 2, 12 singles, $60 guaranteed, entrance $3.50. No. 3, 25 singles, $100 guaranteed, entrance $5. No. 4, trophy contest, handsome silver pitcher, 50 singles, entrance $5; trophy and 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, 10 per cent. to fourth; winner of this trophy to hold it for one year, when it shall be returned to the donor to be again contested for at the next Keystone Manufacturing Company tournament. No. 5, 15 singles, $75 guaranteed, entrance $4.

Aug. 23. No. 1, 10 singles, $50 guaranteed, entrance $2.50. No. 2, 20 singles, $75 guaranteed, entrance $4. No. 3, 15 singles, $50 guaranteed, entrance $3. No. 4, 10 singles, $25 guaranteed, entrance $1.50. No. 5, 10 singles, entrance $3.

August 24.—Championship day: No. 1, 10 singles, entrance $2. No 2, individual championship contest, 100 singles, entrance $5. No. 3, team race, must be 80 years old between them, entrance $10 per team, divide 40, 30, 20, 10 per cent. No. 4, between the East and West, team race for championship of American, 100 singles, entrance $10. No. 5, team race, any two, entrance $10 per team.

Contest No. 2 will be the greatest event of the fifth day. This contest is to determine who is the champion target shot of America from year to year. The ring is to be duplicated each year and become the personal property of the winner. As our targets are acknowledged to be the "strongest flyers," we consider this a fair trial to determine who is the champion target shot each year. There will be nobody barred, no favorites played and no handicaps. The ring is a handsome diamond; the setting emblematic of a Keystone target.

The team race between East and West is looked forward to with great interest by both sides, and will evidently be one of the most important events ever shot in America. We have appointed O. R. Dickey, of Boston, Mass., as our Eastern captain, and C. W. Budd of Des Moines, Iowa, as our Western captain. Six men constitute a team. Corry is the dividing line. Dicky has his choice of any six men living east of Corry, and Budd of any six men living west of Corry. The entrance for this event will be $60 per team. Each captain is expected to have at least 10 men on the grounds to select from.

In framing the Keystone rules for 1889, we have been very careful to use only such rules as we feel will give perfect satisfaction to all. We do not believe in allowing a shooter another shot, unless through the fault of the gun. If we do not have a rule to compel all to lose their shot, if through their own fault, we are satisfied that it will cause a great deal of trouble for the referee, and will not teach young shooters to be careful, which we consider very important; so we shall continue to use the old rule. If the fault of the gun, the shooter is entitled to another shot. If the fault of the shooter—lost bird. There are a good many hammerless guns in use at the present day that can have a shell placed in the chamber without being cocked. In this case we consider this the fault of the gun, and shall allow another shot; but the gun must not be opened until handed to the referee. These rules were printed in FOREST AND STREAM April 6, 1889.

Tickets to Lakewood and return will be honored to Corry and return from all points west. Lakewood is situated 24 miles east of Corry, and all shooters coming from the East are advised to buy tickets to Lakewood and return, and pay local fare from there to Corry. These rates are better than the excursion rates offered by the railroad companies, and have been an inducement for giving our tournament in August. Those purchosing tickets to Lakewood and return can have their baggage checked to Corry, Pa. Everything pertaining to a tournament will be at hand. The ladies of the Episcopal Church will serve meals on the grounds.

BLAUVELTVILLE, N. Y., June 13.—The Spring Hill Gun Club of this place had an informal shoot this afternoon as follows: 15 live birds each, 28yds. rise, ground traps, 12-bore guns:

Frank Waite..1021212212102l—13 Dr. C. C. Allen1121110212112120—13

On shooting off ties, Waite 2, Allen 1. The day was fine and birds a fair lot. Sweep at 10 bluerocks, 50 cents entrance, three traps, Keystone rules:

Wahlen (25)	1101111—6	Russell (26)	1111111—7
Bohmcke (25)	1111011—6	Chevallier	1111110—6
Duryea (30)	1111101—6		

There were three sweepstakes shot, $1 entrance, miss and out, first won by Winholz, second divided by Bohmcke and Manning, third by Bohmcke.

HELENA, Mont., July 5.—The Helena Rod and Gun Club gave a half-day tournament July 5, at the elegant new grounds on the motor railroad near the famous Hot Springs. A large crowd was present and all enjoyed themselves. A terrible mountain dust-storm was in progress and made the shooting very difficult and tended to make one's very existence miserable for the time. The club entertained as their guest Mr. W. H. Skinner, of St. Paul, who could not catch on to the mountain background and was beaten every time, but had a splendid time nevertheless. The Helena Club is composed of about 60 prominent citizens, among whom is A. J. Fisk, of the *Herald*, who showed the writer many courtesies, and also beat him every time at the trap. He is one of the best shots in Montana, and it is no disgrace to be beaten by one as clever as he is. Five screened traps and bluerocks were used and the American rules governed. The prizes were donated by Mr. H. Bryan, of the Helena gun store: Baker gun, value $30, trunk gun case, value $10, cash $5, cash $2.

First event, 20 single bluerocks, $2:

Fisk	11111111111101011111—18	Oswald	1a01101100101111010001—12
Skinner	01111101010111101110—14	Hansen	10110010101010100000—10
Barbour	11011100101100001110—12	Cronin	01100111100111111000—12
Bryan	01010100111111011000—12	Wallace	01101010001000110100—9
Kennett	00111101111111111110—18	Sharp	11011101000010110110—11
Manuel	11111110011111111110—18	Boos	11000110010101010110—10
'Hinckly'	00110010000000100000—4	Clark	01100001010101111110—11
Prosser	10011110010100011110—11	Scanlan	10001101010110011101—11
Harrity	10011110110011000110—11	Balliett	11000111011101111010—13
Clarke	01100110111111110000—12		

Fisk won gun on shoot-off, Skinner second, Balliet third, Oswald fourth.

Fifteen singles, Keystone rules, $1.50, birds extra:

Manuel	11111111111111100—13	Harrity	01111111010100—11
Fisk	11011111010111—13	Oswald	01001101111011—9
Hinckley	01100010001101— 7	Cronin	10111000111111—12
Clarke	10111100011001— 9	Bryan	10111010000111101— 8
Barbour	10101110101101—11	Kennett	00011111111010— 9
Balliett	11110101101101—11		

Manuel won first on shoot off, Cronin second, Barbour, Balliett and Harrity divide third, Oswald fourth, Bryan fifth.

Sweepstakes, 5 Macomber metal targets, 50 cents, one trap:

Fisk	11111—5	Hanson	11010—3
Skinner	11111—5	Davis	11100—3
Barbour	11111—5	Clark	01010—2
Kennett	01111—4	Cronin	00110—2
Balliett	11011—4	Bryan	10001—2
Oswald	11101—4	Prasser	11000—2
Boas	01101—3	Hinckly	10000—1
Manuel	01110—3	Jones	00001—1

First and second divided, Hanson third on shoot-off.

Ten singles, $2, Keystone system:

Kennett	1111000111— 7	Cronin	1101011010— 6
Fisk	1111111111—10	Skinner	1111110111— 9
Manuel	1111111011— 9	Balliett	0101111111— 8

Ties divided. This closed the day's shooting. They will give a tournament in September, to which all sportsmen who are not professionals are cordially invited.—WILLIAMS.

CHICAGO, Ill, July 8.—Following are scores shot at the Government Pier traps on July 4 and 7. Shooters will please bear in mind that this very pleasant spot is easily accessible, and the traps are open to all every Tuesday, Thursday and Saturday afternoon. There should be a good turnout, for a nicer trap ground is not to be found anywhere about the city:

Twelve Keystones:

Swasey	1111111110110—10	Mack	1001011011011— 7
Kroell	1011100101111— 8	Smith	0111100101101— 7
Lee	0101001111101— 7	Willard	1011111111111— 9
Burton	0110110111111— 8	Sinbad	1101001010000— 5
Gillespie	1001001010110— 5		

Ties on 8 div.

Five pairs:

Swasey	11 11 10 11 10—8	Mack	01 11 00 11 10—6
Kroell	10 10 10 10 10—5	Smith	10 10 10 11 10—6
Lee	00 11 10 10 10—5	Willard	00 11 00 11 10—5
Burton	10 10 10 01 10—5	Sinbad	10 11 11 10 11—8
Gillespie	11 11 00 11 10—7		

First div., Smith third on shoot off.

Twelve Keystones:

Burton	1101111111111—11	Smith	0110111111111—10
Swasey	1110101011111—10	Gillespie	1111011110010— 8
Mack	1110011011110— 8	Isbell	1101111111111—11
Kroell	1011011111110— 9	Sinbad	1030101011111— 8
Willard	1111111111100—10		

Burton first on shoot-off, Willard second on shoot-off, Kroell third.

Six singles and 3 pair doubles:

Burton	011110 11 11 11—10	Smith	011110 11 10 10— 8
Swasey	111111 11 11 01—11	Gillespie	111111 11 10 10—10
Mack	100111 11 11 10— 9	Isbell	011111 00 10 11— 8
Kroell	011111 00 00 11— 7	Sinbad	111101 10 10 11— 9

Saturday, July 6, 20 Keystones: Finlay 8, Knoke 13, Pennell 16, Patton 11, Kroell 16, Johnson 12, Peters 11, James 10.—E. HOUGH.

THE TUCKER SYSTEM.—Pittsburgh, Pa., July 13.—*Editor Forest and Stream:* At a recent shoot held at Jeannette, Pa., one of the matches was shot according to the Tucker system, and the inclosed score was made at 9 bluerocks, entrance $1, five moneys:

	1st Div.	2d Div.	3d Div.
Snyder	111	111	111—9
Rumlaugh	111	111	111—9
Crosby	111	101	111—8
McClure	111	101	111—8
Chain	111	011	111—8
Cochran	111	101	111—8
Pierce	111	111	110—8
Miller	001	111	111—7
Davison	111	100	111—7
Taylor	101	111	001—6
E E Shaner	111	011	010—6
Richardson	011	000	111—5
Wampler	101	100	110—5
D Shaner	100	111	100—5
McCrickart	111	011	000—5
Cummings	001	110	001—4

On turning the indicator, the third division was the one to settle the ties. The manager ruled that the men who broke 6 birds were not entitled to any portion of the money, because they did not break their 3 birds in the third division (the one that settled the ties) straight. He accordingly gave four th money to the men who broke only 5 birds. The decision was protested and the score sent to you to decide how the score should be divided.—E. E. S. [The two 8s divide Rev. Crosby, McClure, Chain and Cochran second, Miller and Davison third, Taylor and E. E. Shaner fourth, and Richardson fifth. The winning classes are determined by total scores.]

CANADIAN TRAP MEETING.—The Dominion Gun Alliance is rapidly extending its influence among the sportsmen, and clubs are being added to its list every day. Some such organization was much needed in the Dominion, and the want is now supplied. Shooting rules will be uniform; handicaps for professionals or mug-hunters will be settled upon, and all can now enter on a fair basis. Last and not least, the Alliance by united effort intends to prosecute all offenders against the game laws, and this alone should secure it support from all true sportsmen. Mr. J. A. Keyes, of St. Catharines, is secretary, and will give clubs who have not yet joined all necessary information. Judge Chadwick, Guelph, is the president, and Alderman C. C. Small, Toronto, treasurer. The Peninsular Gun Club, of St. Catharines, have decided to hold a shooting tournament under the auspices of the Dominion Gun Alliance about the end of this month, and a very attractive lot of prizes will be offered.

NEVADA, Ia., July 4.—Tournament, all matches under American Association rules, 10 single Peorias, 3 traps, 18yds., 4 percentages:

Everett	0011010011— 5	A D Blyth	1110111101—8
Georgeson	0111111111— 9	L E Allen	1001110000— 5
Bateman	1111111111—10	Ingverton	0010010010—3
Kirk	1001001101— 5	Briggs	0100110010 - 4
A E Blyth	1110111111— 9		

Ties divided.

Same conditions:

Georgeson	1111110111— 9	Ingverson	0110001110—5
Batman	1111111111—10	Will Woolley	0000000000—0
Leonard	1001111111— 8	Fargo	0100000003—1
Apple	0111000101— 5	Nelson	0100110000—3

Six single live birds, 5 ground traps, 30yds:

Everett	011111—5	Ingvertson	000000—0
Georgeson	101110—4	Lockwood	001011—3
Batman	010110—3	Evans	110100—3
A E Blyth	111011—5	Nelson	110110—4
A D Blyth	111111—6	Briggs	000011—2

Ties divided.

Ten single live birds, ground traps, 30yds.:

Everett	1011011111—8	A E Blyth	1111100101—7
Georgeson	1110111010—7	Leonard	1111001011—7
Bartlett	1111100111—7	McLain	1110111101—8
Nelson	0001111100—5	A D Blyth	1111011100—7

First div., second, miss and out, won by A. E. Blyth.

Team shoot, 3 pair live birds, 2 plunge traps, 26yds., 80yds. boundary, $10:

A E Blyth	01 11 10—4	Georgeson	11 10 11—5
A D Blyth	11 01 11—5—9	McLain	01 11 10 -4—9

Tie shot off:

A E Blyth	01 11—3	Georgeson	11 00—2
A D Blyth	01 00—1—4	McCain	00 00—0—2

Ten single Peorias, 3 traps, 18yds., 60 and 40 per cent.:

Georgeson	1111111110—9	Leonard	1110100101—6
Ingvertson	1010110100—5	Allen	1001011111—7
Lockwood	1101011101—7	Nelson	1000100111—5

Ties of 7, won by Allen on shoot-off.

LODI, O., July 4.—Lodi Gun Club tournament, 3 traps, 18yds. rise, Chamberlain rules, 50, 30 and 20 per cent. Practice shoot No. 1, 50 cents entry, 6 bluerocks:

McDonald	111111—6	F L Aldrich	101011—4
H Aldrich	001011—3	McKinney	111110—5
Crosier	101110—4		

Third divided. Practice shoot No. 2, 50 cents entry:

Crosier	111111—6	McDonald	110101—4
W W Roger	011111—5	McKinney	100110—3
F L Aldrich	011010—3	H Aldrich	101000—2

Match No 2, 50 cents entry, 6 birds.

Lee	001101 3	McDonald	000010—1
Rogers	001110—4	Elliott	001010—2
McKinney	110111 -5	Chase	100010 -2
Smalley	110110—4	H Aldrich	111111—6
F L Aldrich	011110—4	Crosier	100103—2

Third divided. Match No. 2, 50 cents entrance, 9 birds:

H Aldrich	010111100—6	Crosier	111011011—7
Lee	010011110—4	Collins	101011100—5
Leonard	000001110—3	McKinney	011101011—6
Smalley	000010001—2	F L Aldrich	110000111—5
Rogers	010101000—3	Elliott	010101110—5
McDonald	111000010—4		

Ties divided. Match No. 3, 4 pairs, entrance 75 cents:

Crosier	01 11 01—4	H Aldrich	10 11 10—4
McDonald	10 10 10—3	A M Robinson	10 01 10—3
Rogers	00 10 00—1	J N High	10 11 10—4
McKinney	10 01 10—3	Steele	10 11 10—4
Smalley	11 11 00—4		

Ties shot off: Crouin first, McDonald, McKinney and Robinson divided second, Rogers third.

Match No. 4, $1 entrance, 12 birds:

Crosier	011111101111—10	Collins	001101111011— 8
Lee	000101000100— 4	McKinney	011010111111— 8
Robinson	101011110110— 8	Steele	100001010101— 6
Rogers	111101101110— 9	Barnes	011110111101— 9
McDonald	101010011101— 7	H Aldrich	101011000w.
Smalley	010100001011— 5	F L Aldrich	010000001w.

Ties divided.

Match No. 5, $1 entrance, 10 birds:

Robinson	1011111111— 9	H Aldrich	1101100000— 5
McKinney	1001111001— 8	F L Aldrich	0010001100— 4
Crosier	0111110011— 7	Smalley	1111101111— 9
Lee	0101010111— 6	McDonald	0011111101— 8
Rogers	1111010111— 8	Barnes	0101110010— 5

High 1011011111— 8

F rst and second div., third shot off won by Rogers.

Match No. 6, $2 entrance, $30 guaranteed, 20 birds:

Rogers	10101111111010101101—15	Kennard	00110030011100000111— 8
Robinson	11101111111111111—18	Steele	01011001101011011100—12
Crosier	0011010000w.	Smalley	11110101110111001010—13
McKinney	11101011111111111010—16	Barnes	11000101100101101110—11
High	10110011001110113111—13	Collins	01011111001110100111—14
McDonald	10011111111111111111—19	F Aldrich	11111000011111111101—15
H Aldrich	11101001111010101111—14	Chase	10100100110101111011—12

Tie on third shot off Aldrich winning.

NORTHAMPTON, Mass.—The Norwood Gun Club, of this town, had for visitors at their weekly shoot Messrs. Keyes, Bugbee and DeMan, of Springfield. The shooting of the visitors was very good, particularly that of Mr. Keyes, whose score of 22 out of 25 is away the best ever done on the grounds. In double rises Messrs. Cartwright, of this place, Keyes and Bugbee did well. The Keystone traps and targets were used and American Shooting Association rules governed. Match at 25 Keystones:

H L Keyes	1111110111111111101010111—22
T T Cartwright	1101101111101111101010101—19
P N DeMan	1011101101111010011111—18
S E Bugbee	0111000110100011111111001—17
L Gaylor	1001110101111010111011101—17
H H Chilson	1011101111111010010010010—15
E T Clapp	1110101001110010111101100—15
E L Abercrombie	1000111110010010101010011—12
E Feiker	1010100011001010100000111—11

At 3 double rises:

T T Cartwright	11 11 10—5	DeMan	01 00 10—2
L Gaylor	11 10 10—4	Chilson	10 10 01—3
H Keyes	11 10 01—4	Abercrombie	00 10 00—1
S Bugbee	10 00 11—3		

At 3 pairs:

Keyes	11 10 11—5	Clapp	10 00 10—2
Bugbee	11 11 10—5	Chilson	01 01 11—4
Deman	10 10 11—4	Gaylor	10 10 10—3
Cartwright	10 10 10 -3	Abercrombie	10 00 00—1

Practice shooting: F. L. Clapp 6 out of 25, Chilson 13 out of 25.

At 23yds. rise:

Cartwright	01111—4	Gaylor	01101—3
Clapp	10011—3		

At 25yds. rise:

Cartwright	11101—4	Gaylor	01001—2
Clapp	00011—2		

At 25yds rise:

Cartwright	11001—3	Clapp	11100—3

The club will build a new club house and expect to hold a two-days' tournament.—NORWOOD.

TRAP ARRANGEMENT.—Cazenovia, July 13.—*Editor Forest and Stream:* Most of the shooting is done from three traps and nearly every bird is a straightaway shot. This is all wrong, the angles should be more acute, and no two birds thrown at the same angle or elevation. Neither should a single target be thrown over 45yds. To throw them 70 and 80yds. is simply handicapping the slow and inexperienced shooter against one who has learned by experience that the only way to smash them is to get on quick, keeping the gun nearly against the shoulder and pulling the trigger while the target is within range of his gun. A slow or moderate shot cannot compete successfully against such odds. The day will surely come when all this will be changed. The targets will not be thrown over 30yds., from five traps, unknown angles, each bird at an acute and different angle and also at different elevations. The 10-bores will stand at 32, the 12 at 30, and the 16 at 28yds.; gun below the armpit or elbow. This will bring all the shooting within the reach of their guns, and give sufficient time for a moderate shooter to poke the gun aright, providing his eye and nerves are in unison. Then 100 straight (when it is made) will be good shooting. The sooner it comes the better for all who wish to improve their shooting for field use.—WILL CRUTTENDEN.

DAYTON, O., July 16.—At the Kennel Gun Club regular monthly cup shoot Whitney Brown was winner by breaking 27 targets. Three traps, 12-gauge Letevers, 16yds., 30 targets each:

Brown	011011111111111101111111111—27
A Sander	111101111111101111111101111110—26

Every week we are obliged to defer to the next week trap scores which come to too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

CLEVELAND, July 12.—To-day was a great day for Cleveland trap-shooters. The sport commenced early and lasted till nearly dark. The county badge shoot was held in forenoon, and had but ten entries, probably due to the early hour at which it commenced. Mr. D. A. Upson, the winner at the last contest, was not present, but was represented by Andrews. Sheldon won the badge with a score of 46 out of 50. In the afternoon the Cleveland Target Co.'s prize contest and the Cleveland Gun Club's badge shoot were held in conjunction. The scores made in the afternoon were of a high order, Roberts and Coryell leading with 23. 25 bluerocks at 18yds. were used. Following are the scores:

County Badge Shoot.

Holt	0011111101111010101010001—15

Miller	1111111111—10	Dettmar	0100110100— 4
Johnson	1001111109— 8	F Pringle	1111110101— 8
Lindsley	1101111111— 9	W Pringle	0111011101— 7
Collins	0101111111— 8		

No. 7, same: Miller 9, Johnson 8, Lindsley 8, Collins 8, Moffatt 9, Dittman 4, F. Pringle 9, W. Pringle 7.

No. 8, same: Miller 9, Dittman 6, Collins 7, Moffatt 8, W. Pringle 5, F. Pringle 5, Johnson 9, Lindsley 5.

No. 9, same: Miller 10, Johnson 7, Lindsley 4, Collins 7, Moffat 8, F. Pringle 6, W. Pringle 5. Dittman 6.

No. 10, same: Miller 10, Moffat 9, Dittman 8, Collins 8, F. Pringle 8, W. Pringle 7, Johnson 8. Jonnson takes third on shoot-off.

No. 11, same, one money: Miller 10, Johnson 9, Moffat 9, Collins 7, Lindsley 8.

NEWARK, N. J., July 12.—The West Side Gun Club grounds on Grove street, Irvington, between Springfield and South Orange avenues, were lively to-day, over twenty-five members taking part in a sweepstakes at ten live birds, and another at twenty-five bluerock targets. The scores at the bird sweep were: Reibold 10, H. Weber 9, Spann 9, J. Weber 9, Schilling 9, John Weber 9, Burchard 9, Gerst 9, Drastel 9, Meusel 9, Jaquin 8, Deisler 8, Bischof 8, Astfalk 8, Heller 8, Buob 8, Meyer 6, Bauer 6, Doersbacher 5, Bartholomew 4. At the bluerocks the scores were as follows: Drastel 21, Jaquin 20, H. Weber 19, Meyers 19, Spann 19, Astfalk 19, Schilling 18, J. Weber 17, John Weber 16, Heller 14, Buob 11, Burchard 12, Bauer 10, Bischof 8, Bartholomew 7.

EATON, N. Y., July 13.—Eaton Gun Club, 15 kingbirds, 3 traps, 18yds., Association rules, for badge:

Richardson	1111011111101111—13	Bell	1101100010101101— 8
Peet	1111101111101111—13	Briggs	1011110111101111—11
Curtis	1111101111111111—14	Fryer	1111111101111011—13

WALNUT HILL, July 10.—The grounds of the Massachusetts Rifle Association presented a lively scene to-day after the trap shooters had assembled for their fortnightly meeting The event of the afternoon was the sixth competition in the Gold Coin match, in which Messrs. Curtis and Stanton tied, after an exciting contest. This match has proved very popular, as the ingenious method adopted of grading competitors, not only by the excellence of their score, but also by the regularity of their attendance on shoot days, is a very acceptable novelty. By this method the marksmen who regularly frequent the range obtain a better chance at the higher prizes on the list, while those who put in but an occasional appearance will have an excellent list of trophies to compete for. The scores in the match will be found in the following summary, as well as the winners in the minor sweepstakes. Gold Coin match, 15 clay birds and 15 standard targets, Keystone squad system, sixth competition:

	Clays.	Standards.
Curtis	111011111111111—14	111111111101111—14—28
Stanton	111111110111111—14	110111111110011—12—26
Parker	111111011111111—14	111011110101111—12—26
Swift	111111011111111—14	111011110101111—12—26
Bowker	111101011111011—13	011111110111110—12—25
Hosmer	101101111101110—11	111110111101111—13—24
White	111110111110111—13	111011100110111—11—24
Dodge	101111011111111—11	010111011111111—12—23
Nichols	111111011111111—13	110101101101010—10—23
Roxton	111110011100111—11	111110011101101—12—23
Field	111101111010010—10	101110111110111—12—22
Snow	101101011001010— 8	011111111111011—13—21
Knowles	111001110011101—10	110011000101110— 8—18
Hall	101011111011000— 9	000001000100100— 3—12

Five Keystone targets, Bowker, Nichols, Swift 6, first; Martin 3, second. Seven Keystone targets (squad system), Knowles, Stanton 7, first; Bowker, Swift 6, second; Martin, Nichols 5, third. Six standard targets, Bowker, Nichols 6, first; Stanton, Swift 3, second: Martin 3, third. Seven clay birds, Bowker, Swift 7, first; Nichols, Stanton 6, second. Six standard targets, Bowker, Nichols, Boxton 6, first; Knowles, Stanton, Swift 5, second; Dodge 3, third. Seven clay birds, Boxton 7, first; Knowles 6, second; Martin, Nichols 5, third. Seven clay birds, Stanton 7, first; Knowles 6, second; Bowker, Martin, Boxton 5, third. Six standard targets, Knowles 6, first; Nichols, Stanton, Swift 5, second; Dodge, Boxton 4, third. Six standard targets, Bowker, Knowles, Stanton 5, first; Boxton, Swift 4, second; Dodge, Nichols 3, third. Seven Keystones (squad firing), Bowker, Stanton, Swift 6, first; Martin, Nichols 5, second; Dodge, Knowles 3, third. Six standard targets, Stanton 6, first; Knowles 5, second; Hosmer, Swift 4, third; Boxton 3, fourth. Seven clay birds, Keystone rules, Knowles, Stanton 7, first; Bowker, Boxton, White 6, second; Curtis, Dodge, Parker 5, third; Hall, Snow 3, fourth. Fifteen clay birds, Parker, Stanton, Swift 14, first; Bowker, Nichols, White 13, second; Dodge, Hosmer, Boxton 11, third; Field, Knowles 10, fourth; Fifteen standard targets, Stanton 14, first; Hosmer 13, second; Boxton 12, third; White 11, fourth. Ten Keystone targets, Keystone rules, Bowker, Stanton 10, first; Dodge 9, second; Curtis, Swift, White 8, third; Knowles 6, fourth. Six standard targets, Dodge, Boxton 6, first; Knowles, Stanton, White 5, second; Bowker 4, third; Nichols 3, fourth. Seven standard targets, 30yds. straightaway, Nichols 6, first; Knowles 5, second; Stanton 4, third. Six standard targets, Dodge 5, first; Knowles, Stanton 4, second; Hall 3, third. Ten standard targets, Hall, Stanton 8, first; Knowles 7, second; Nichols 5, third. Four pairs standard targets, Knowles 8, first; Nichols 5, second; Stanton 3, third. The next shotgun meeting at this range will be held on Wednesday, July 24.

CORRY, Pa., July 11.—The Corry Gun Club held their weekly shoot this afternoon at Keystones under Keystone rules. While the attendance was not large some very good scores were made; notably Willie Lew's 25 straight and Blydenburg's 23, standing at 22yds. rise:

Willie Lew	11111111111111111111111—25
Blydenburg	11111111101111101111011—23
Penrose	11111111101111111101111—23
Oliver	11111101111111011111110—22
Arnold	11111101011101111101111—21
Laurie	11011101111011011011111—20

Blydenburg, Jr	00010010001110010011001—11
McKenzie	10100011010101001101O000 11

Gold medal Lewis, silver medal Blydenburg, leather medal McKenzie.

WORCESTER, Mass., July 11.—At the week's meet of the Worcester Sportsmen's Club there were two events, a challenge match between Russell and Dean, and the fifth contest for the Norcross trophy. The challenge match was for 4 strings of 5 birds each with a possible 100. The work in detail follows:

W R Dean	34443—18	G W Russell	54435—21
	54425—20		45355—22
	55555—25		53445—21
	52554—21—84		24345—18—82

By the result of the Norcross contest the trophy goes to C. B. Holden for the next two weeks. In the contest each man has a possible 30 birds, and the work of Mr. Holden was the best this season. The total of each man follows: C. B. Holden 30, E. B. Burbank 27, H. D. Jourdon 27, G. W. Russell 27, E. Welsh 25, G. J. Rugg 25, E. T. Smith 25, L. H. Houghton 25, W. R. Dean 24, G. W. Sampson 24, E. F. Swan 24, C. R. B. Claflin 24, E. S. Knowles 23, C. Forehand 22. C. H. Howe 22, M. D. Gilman 22, H. Johnson 22, W. L. Davis 22, F. Forehand 21, M. A. Luffield 20, A. B. Franklin 20, T. P. Wilkinson 19, Dr. Bowers 17, C. R. Holman 17, V. F. Prentice 16, C. Crompton 16, A. L. Gilmo 16, H. W. Webber 15, H. Smith 15.

ST. LOUIS, Mo., July 13.—Last Saturday was a delightful day, and the St. Louis Gun Club took advantage of it to hold a medal and sweepstakes shoot, which was well attended by its members. Five traps and American Association rules were adopted for all events:

Shoot No. 1, medal, 15 single and 5 pair Keystone birds:

J L Winston	110111111111110	11 11 10 10 11—21
H P Wilson	111000111111101	11 11 10 01 11—19
J Coles	110111101101111	11 11 10 11 11—21
J Williams	110111101110101	01 11 00 11 11—18
C H Peck	001111000101010	10 10 01 11 01—13
W E Field	110101111101111	00 00 01 10 00—14
A H Blanke	110011110001001	10 11 00 11 00—13
A Stoll	003000001010100	11 11 10 11 10—11
Col Moore	001011101011101	01 11 00 01 10—14
W H Horner	001011111011111	11 11 10 10 01—18
G H Westervelt	010111111110001	01 11 01 01 11—17
W Scudder	000001001111000	01 11 11 11 11—14
F Bradford	011011000110100	01 10 01 10 01—13
Dr C E Michel	010100001011101	11 10 10 10 10—12
J C Addington	111111110011101	11 01 11 00 01—17
E W Hayden	011000100000000	10 10 10 00 00— 6

Coles won the medal after an interesting shoot off.

Shoot No. 2, sweepstakes, 10 single Keystone birds:

W E Field	1110011101— 7	Wilson	0011101111— 7
Al Bandle	1111111111—10	Scanell	1000000010— 2
G H Westervelt	1111111111—10	Scudder	1110000110— 5
J G Schaaf	0010111111— 7	Hayden	0010010100— 3
Blanke	0101011000— 4	Coles	1111110111— 9
Winston	1111110111— 9	Williams	1000011101— 5
Stall	1101010011— 6	Cobanne	1000011110— 5
Col Moon	1111111010— 7	Peck	1011011101— 7
Horner	1111111101— 9		

Three moneys, all ties divided.

BROOKLYN, July 10.—The shooting tournament of the Coney Island Rod and Gun Club, held this afternoon at Woodlawn Park, Gravesend, L. I., was more than usually successful. Twenty members of the club went to the traps, and, although the birds were as a rule good flyers, with a duffer only here and there, the scores made were above the average. Fred Quimby, J. E. Lake, P. Ward and F. Leibinger tied for first prize, the handsome medal offered by the club's president. At the shoot-off Mr. Lake won on 9 straight. A. Eppig, G. L. Ayres, C. Plate and F. Lanzer tied on 6 killed, and preferred to divide second money. J. Voorhees, J. Kowenhoven, J. Schliemann, C. Detlefsen and H. Meyer killed 5 each out of 7. At the shoot-off Schliemann and Detlefsen dropped out; the other three shooters after tying again on 5 decided to divide. Fourth money went to I. McKane. Dr. Northride won the consolation prize. In a sweepstakes at 3 birds, miss and out, I. McKcKane won first and F. Quimby second. Mr. J. Simpson, referee.

ROCHESTER, N. Y., July 12.—The members of the Flower City Gun Club had their annual outing at Old Point Comfort this afternoon. There was some shooting followed by a good dinner.

LOS ANGELES, Cal., July 5.—The first shoot for the Peters medal, donated by the Peters Cartridge Company to the sportsmen of southern California, was held to-day at Prospect Park. The attendance was fair considering the weather and the contest spirited, but the scores were very poor indeed. San Diego was represented by her crack shot, Martinez Chick; San Bernardino by her champion, Gus Knight, and Dr. Tabor: Riverside by one of her favorites and Los Angeles by Jim Unger and three or four others under assumed names. The conditions of the shoot were 50 single and 25 double bluerocks:

	S.	D.		S.	D.
Chick	42	34—76	Dr Tabor	35	20—64
"Partington"	42	33—75	"Dr Willard"	34	29—63
Knight	40	30—70	Packard	33	26—59
Unger	37	31—68	Townsend	39	20—59

July 6.—The shooting tournament was concluded to-day at Prospect Park. There were three contests at live birds, 30yds. rise, Hurlingham rules. In the first match Unger, Chick and Partington each killed 10 out of 12. In the second match Unger and Partington grassed 11 out of 12 and Chick 10. In the third match Chick killed 12 straight, and Unger grassed 10 and Partington 9. The total scores in the three matches were as follows: Out of a possible 36, Chick 32, Unger 31, Partington 30. Maxwell, Townsend and Rose also competed.

BOSTON GUN CLUB.—Wellington, July 13.—This was "expert day" of the Boston Gun Club at Wellington traps. The attendance, though not large, was enthusiastic, the fine trap practice adding much to the day's enjoyment, while first-class scores were made. The next shoot on these grounds will be for the amateurs, the sixth of the handicap series, July 17. The principal event was the 50-bird match at standard targets, this being the second of a series of five 50-bird matches at five different targets, for a series of prizes offered by the Boston Gun Club for the best aggregate score. Stanton made the highest score 43, closely followed by Swift with 41, the others scores ranging down to 34. This match was divided into five 10-bird sweeps, the following being a summary of these and other events: Ten standard targets, Stanton; 10 standards, Roxton and Stanton; 10 standards, Swift and Roxton; 10 standards, Swift and Roxton; 10 standard, Swift, Stanton and Gerrish; 10 clays, 5 traps, Swift; 10 Peorias, Stanton; 10 clays, 5 traps, Stanton and Ross; 10 Peorias, Roxton and Stanton; 10 clays, 5 traps, Ross; 10 Peorias, Stanton; 10 Peorias, Ross.

WELLINGTON, Mass., July 13.—There was a good attendance at the Wellington Club to-day. The weather conditions were favorable for good scores, but the new guard in front of the trappers, which was built during the week, and on which the sun made the light rather dazzling, prevented fine shooting. In the silver pitcher match, at 7 bluerocks and 8 clay-pigeons, Warren, Sanborn and Bradbury tied with 11 each, and in the shoot-off Bradbury won. The other scores in this match were: Savage, Boud, Herrick and Dan 9, Gale and Field 8, Schefer and Copeland 7, Stone and Baxter 6. In the merchandise badge match at 15 clay-pigeons, Warren and Snow tied with 13 each. The other scores were: Bond, Savage and Sanborn 12, Baxter and Bradstreet 11, Cowes and Stone 10, Melcher 7. Fourteen sweepstakes were shot.

YOUNGSTOWN, O.—The Flint Hill Gun Club recently elected the following officers: R. Harry, President; A. K. Gaither, Vice-President; W. Smith, Secretary and Treasurer; L. B. Arkwright, Captain; W. Smith, H. Kipper, C. Barger, C. Weaver and F. E. Hubler, Trustees. The club now has the finest grounds and most commodious club house of any club in the valley. The following is the score made Thursday last. 28 standards, 18yds. rise, American rules: A. K. Gaither 10, W. Smith 17, F. Hubler 11, F. Gaither 12, C. Barger 19. Second shoot, 10 birds, Keystone rules: A. K. Gaither 6, F. Huber 8, W. Smith 6, F. Gaither 8. Third shoot, 15 birds, American rules: A. K. Gaither 9, F. Hubler 12, F. Gaither 6, W. Smith 9.

ST. CATHARINES, Ont.—The Peninsular Gun and Game Club will give a tournament July 31 and Aug. 1, under auspices of the Dominion Gun Alliance. Address for information, James A. Keyes, St. Catherines.

THE MONTREAL C. C. MEET.

THE first annual meet of the young Montreal C. C. took place at Como, on the Ottawa, on June 29 and 30 and July 1, and although the programme was not carried out in its entirety, this the first attempt to hold a meet in the waters about Montreal was a great and triumphant success. The camp site was at the bottom of the deep bay formed by a long point which juts far out to the eastward, immediately to the north of which beautiful Como nestles amid her noble elms, and faced a lake-wide reach of the Ottawa, and was everything that a camp site should be. Behind was a beautiful open wood, a sandy beach shelved up to a few rods of green turf, partially shaded by two magnificent butternut trees. In front was the broad river and the blue hills of Oka.

The first canoe that reached the camp was that old veteran the Lucile, and the commodore, Mr. J. White, the "Cock Robin" of last year's meet, had his camp in order, the flag flying and his famous frying-pan at work before the next arrivals, the Pointe Claire district men, came straggling in.

The wind, light all day, had been conspicuous by its absence during the latter part, and the "White Crows" fleet, which was composed of the Mab, Inez, Cigarette and the sloop Fawn, had been all day in sailing nineteen miles. Before the crescent moon showed itself, however, tents were up, canoes were berthed, a meal cooked and consumed, and the twelve men who had reached camp that first night, built them a monstrous fire, brewed them an unpretentious jorum of hot lemonade, and proceeded to wake up the echoes in the Oka hills.

"Lucile" sang "Cock Robin" with all the old gusto, "Rosalie" produced his guitar and accompanied "Marguerite" while he convulsed the assembly with the "Woes of Mary Ann Taylor," the "Agonies of the Amateur Yachtsman" and many another rollicking song, for Marguerite can sing all night without repeating himself. When "Ino" (he's gone in for a big boat this year, but he's a canoeist still) produced his "piano" and attempted to spring "Home Sweet Home" with variations on the multitude it was decided that the time for "Auld Lang Syne" had come, and then to bed.

It had been a long day, and every man in camp slept like a Trojan, with one exception. "Cigarette" had elected to sleep under his canoe, and about 4 o'clock in the morning he turned out and began to chop wood. "Mab" joined him, and the persistence with which these two evil doers built a bonfire brought out the whole camp before half-past 5 o'clock. This made a long morning of it. A substantial meal was cooked, the camp got into Sunday trim, and when about 11 o'clock the St. Lawrence fleet, in tow of the fires, came round the point, that camp looked as if it had been there for a month.

With the yachts came half a dozen canoes and a couple of dozen of the Lake St. Louis and Below Rapid men, and during the long afternoon others straggled in, until by nightfall between thirty and forty M. C. C. men and about six A. C. A. men were in camp. The Valois and St. Ann's men did not turn up at all, however, the lack of wind, the strong current and picnics originated by the ladies of their respective clubs proved too strong repellant forces. It was a quiet day, that long Sunday, in spite of the bustle of the new camp. A good many bass and dory were caught in the afternoon. A dozen craft cruised down to Oka and explored the quaint old Indian village, and the Pointe Claire mess indulged in a grand fish dinner. The evening was spent in rambling along the beautiful Como woods and about the campfire, but the camp was collectively and individually tired, and it went to bed at an early hour.

The young Dominion never had a fairer natal day than was the first of July, and when the morning gun went and the red flag with its heraldic bearings went up, three lusty cheers rang over the calm water and through the all too still air. There was not a breath of wind for an hour. When it did come it came straight up the "Lac Two Mounting," and there was not enough of it to blow away a smoke wreath. As the steam yachts had deserted the sailing yachts, and all hands and the cook were anxious to get away—always excepting of course the paddling men, and as it was too hot to paddle and there was not enough wind to sail, it was decided, with the consent of the entered contestants, to postpone the regatta, which was to have been held on Monday morning, and put on a set of scratch races instead of it.

The first race was a four in a canoe, single blade, and four crews, a Lake St. Louis, a Pointe Claire, a Mabel and a Minnie A. crew, started. The Lake St. Louis crew, captained by Nash, won, the Pointe Claire crew, captained by Higgenson, coming a good second.

The hurry-scurry followed, and the way Commodore Duggin climbed into and out of his canoe was a caution. He won easily, Irvine a poor second, and Archibald third.

The last race was a tandem, and it was a hard fight straight through. Nash and Grissette, of the Lake St. Louis, won; Irvine and Shaw second.

Then camp was broken and the fleet, under sail and paddle, started on what proved to be an all-day's bout with the current, aided only by a breeze that hardly had weight enough in it to tighten the sheets. Every man who went to the meet or took part in the cruise had, as far as heard from, a good time, and he either has or will have a sore face, for the way the sun burned was "a caution, don't yer know!" This is the first time the Montreal canoeists have ever tried a meet, but it won't be the last, not much. At least "them's the sentiments" of THE COOK.

P. S.—The way those boys ate planked bass and doré was something frightful.

P. S. No. 2.—What became of the commodore's left slipper?

LAKE HOPATCONG C. C.

Editor Forest and Stream:

The Lake Hopatcong C. C held its second annual regatta off Elba Point, Lake Hopatcong, N. J., on the Fourth of July at 4 o'clock P. M., and a crowd of about 300 gathered to witness the races. The time for the start was fixed at 2 o'clock, but on account of the rain was delayed until 4 P. M., by which time the light wind which had been blowing had almost completely died out.

The first race was the yacht race, which was declared off by the judges, as none of the racers rounded the third buoy, which had sunk for some reason unknown. The canoe sailing race was won by L. B. Palmer, of the Ianthe Club, in canoe Ianthe, with D. D. Gessler, of the Lake Hopatcong Club, second, in canoe Sylph, and T. A. Gessler third in the canoe Naiad. The rest did not finish on account of the wind having died out so completely that they could not make their buoys. The race was for the Breslin challenge cup, valued at $30, which must be won three times in succession before becoming the property of the winner.

The paddling race was won by Mr. Stewart, of the Ianthe, in the Scoot, with Theo. A. Gessler second, about a boat length behind, in the Naiad; prize, silver cup.

The hurry-scurry was won by Commodore Gessler in Sylph, with T. A. Gessler second in Naiad, and J. Van Fleet third in canoe Arrow; prize, a nickle drop rudder.

Upset paddling race was hotly contested for between T. A. Gessler and L. B. Palmer, Gessler finally winning by about a length and thus capturing a silver cup.

Lewis F. Pilcher won the swimming race by a length and received a silver medal.

Two rowing and an all-comers' race were also gone through with, for which the prizes were handsome silver cups.

Among those present and interested in the furthering of the canoeing interest at the lake were: Miss Lotta, Miss Rosina Vokes, the Misses Dunlap, the Misses Poole, Mr. E. G. Blackford, Fish Commissioner of the State of New York, Mr. George Bryant, Mr. H. P. Frothingham, Hon. Walter Knight and Col. John R. Fellows.

The judges were Mr. Geo. M. Brockway, of the Gilsey House and Hotel Breslin; Mr. R. L. Edwards, president of the Bank of the State of New York; Mr. Robt. Dunlap, the Broadway lathe; Mr. Geo. Damerel, Mr. D. W. C. Ward and Hon. O. F. G. Megie. Judges' boat, steamer Raccoon. L. F. PILCHER, Purser.

ROYAL C. C.

THE second race for the sailing challenge cup of the Royal C.C. took place on Saturday, June 22, and brought 9 starters. A good whole sail breeze from N.E. and N. promised a better test of the performances of the canoes than did the light breezes of the previous race. The following is a list of the starters:

Nautilus	W. Baden-Powell.	Ulidia	R. Workman.
Charm	W. Stewart.	Severn	T. H. Holding.
Stella	G. E. Webster.	Wanda	W. B. Lesslie.
Atalanta	R. Quincy.	Mayola	D. H. Marrable.
Vanessa	B. Quincy.		

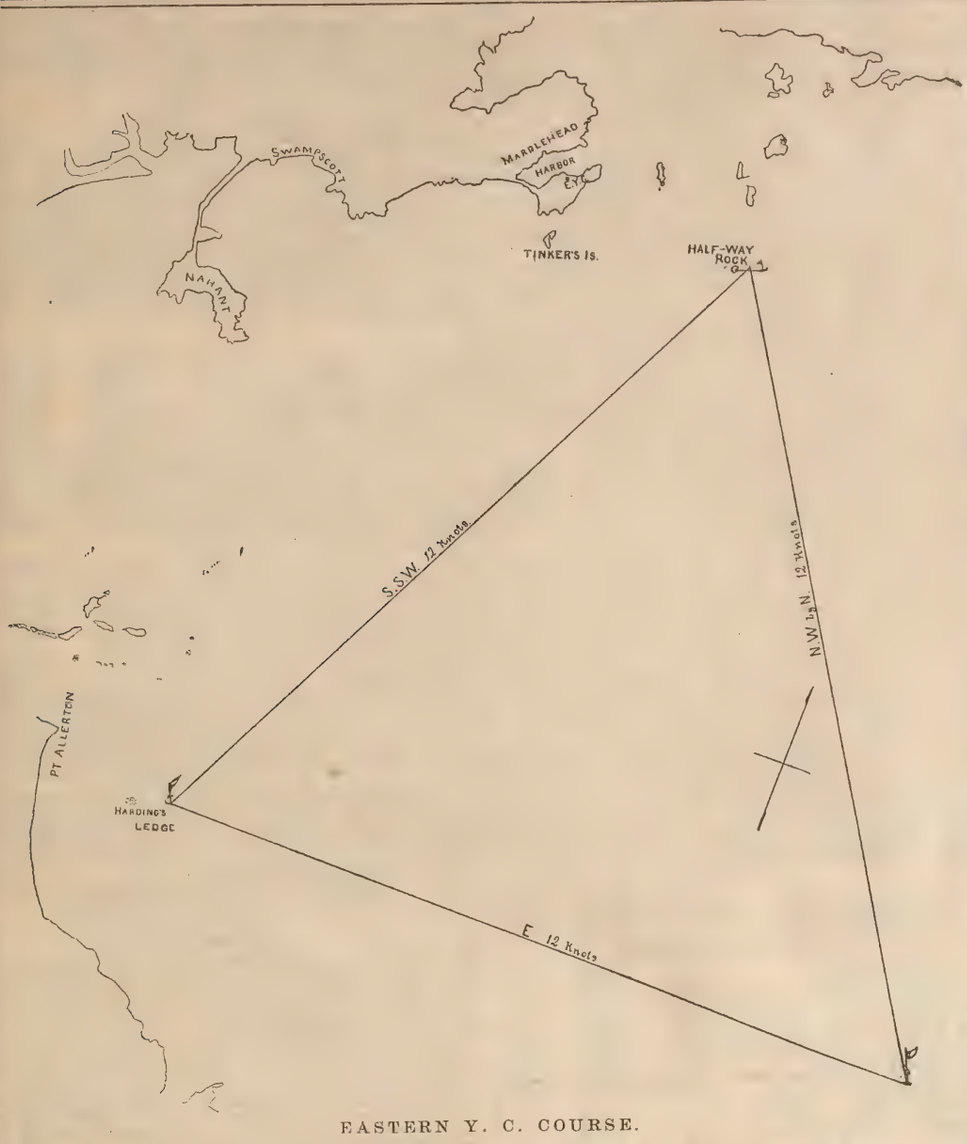
The signal was given at 3 o'clock punctually, and Charm, Nautilus, Vanessa, Ulidia and Wanda crossed the line in the order named. Severn appeared to have been delayed at the raft, for she crossed the line several minutes after the others, and Atalanta got into trouble of some sort with her steering gear, which compelled her skipper to unship the mizen and spend an uncomfortable 10 minutes on the after hatch. She, however, eventually started and pluckily took up the race. The canoes were closehauled to the buoy in the bight, and Wanda appeared to be gaining a lead, but she was soon collared by Charm; there was, however, very little distance between them on rounding this mark and coming on the run to the lower end of the lake. Stella rounded the lower buoy first, with Severn second and Nautilus last. All the canoes except Nautilus made a board over to the south shore after rounding, but she stood over on the starboard tack well out into the lake, and was able to fetch the home buoy in one board. Charm followed her closely, but did not succeed in passing her until the end of the second round, when a shift of wind enabled her, and also Vanessa, to round the home buoy ahead of Nautilus. In the following three rounds Charm increased her lead, and Stella passed Nautilus and also Vanessa. The times of the rounds were as follows:

	First Round.	Second Round.	Third Round.	Fourth Round.	Finish.
Charm	3 29 15	4 00 00	4 30 30	5 04 10	5 37 25
Stella	3 33 00	4 06 10	4 37 50	5 08 15	5 41 05
Vanessa	3 32 00	4 00 05	4 32 20	5 07 35	5 42 10
Nautilus	3 29 00	4 01 00	4 32 50	5 07 30	5 44 45
Wanda	3 33 00	4 04 00	4 43 40	5 12 50	5 45 30
Severn	3 34 00	4 07 10	4 46 20	5 14 10	5 46 45
Ulidia	3 34 00	4 07 00	4 44 20	5 15 40	5 48 00

The final race for the challenge cup will be sailed between Charm and Stella on Saturday, June 29.

SECOND CLASS CHALLENGE FLAG.

The second race for the sailing and paddling challenge flag for second class canoes took part on Friday, June 21, when only Illawarra (A. B. Ingram) and Spindrift (Col. Howland Roberts) started.



At the start there was a fresh breeze from the N.E. Spindrift went off with the lead on the paddle to the buoy in the bight, but Illawarra passed her and rounded first. She increased her lead in the run to the lower buoy, and during the beat back the wind fell off considerably. Shortly after completing the first round Spindrift gave up, both canoes being becalmed; Spindrift in the bight and Illawarra at the lower end of the lake. A few minutes afterward a strong breeze came up, and Illawarra had to reef down on the beat back. There being no other competitor the course shortened to two rounds, and Illawarra was therefore the winner of the second class challenge flag. It is to be hoped there will in future be a better entry in this class.—*Field, June 29.*

ST. LAWRENCE RIVER SKIFF RACE.

NEW YORK, July 13.—The first race under the management of the newly-organized St. Lawrence River Skiff Sailing Association was sailed to-day upon the Hudson River. The start was from the foot of 152d street, and the course over which the little fellows contested led them three miles to windward and return. The wind, a good wholesail breeze from the southwest, with the assistance of a strong ebb tide, managed to kick up a lively little sea, making the thrash to windward wet and exciting. The racers were all yawl-rigged, and carried in addition to their regular sails a goodly spinaker.

The entries were Germania, Sophie, Noname, Puck and Elsie. Exactly at 5 o'clock the whistle on Com. Sooysmith's steam yacht Errante sounded prepare, and five minutes later the signal for the start was blown. Close hauled on the port tack, the rivals stood away on a long leg for the Jersey shore, the Sophie in the lead, closely followed by the Noname and Germania.

In the thrash to windward Sophie worked ahead, outfooting and outpointing her sisters. At 6:06 she rounded the stake boat and neatly breaking out her spinaker, sped away for home. Close together, Noname and Germania came rushing along, and starting sheet hurried away in chase of the fleet-footed leader. But in spite of the freshening breeze and the big spinaker of the Noname, Capt. Stevenson's flyer was not to be caught, and crossed the line an easy winner at 6:40. Noname followed at 6:44, Germania at 6:47. The first prize, a handsome whale-boat compass, presented by the builders of the skiffs, was added to the equipments of Sophie, while Capt. Guest's Noname flies the second prize, a set of colors, the gift of Mr. John J. Bockie. The next race will be sailed in about ten days, and the committee expect to have from fifteen to twenty entries. F. F. D.

EASTERN Y. C. COURSE.

NEW JERSEY ATHLETIC CLUB, July 6.—On July 6 the canoe fleet of the New Jersey Athletic Club of Bergen Point held its first regatta under the direction of Messrs. W. H. Mitchell, G. R. Frost and A. B. Herrick. The first race, unlimited sailing, 3 miles, was won by Atom, C. B. Vaux, N. Y. C. C., Nenemosha, G. B. Douglas, Ianthe C. C., second, out of a fleet of seven. The junior sailing was won by Sybil, N. H. Day, N. J. A. C., with Addie, W. Scott, Essex J. C., second. The sailing upset was won by Mr. Douglas. The senior paddling was won by Sybil, W. E. Stewart, with Squaw, L. B. Palmer, second, both of the Ianthe C. C. The junior paddling, 1 mile, was won by White Lake, N. H. Day, with Sybil, O. F. Coe, two lengths astern. The tandem race was won by Spray, Collins brothers, from Toddie, Scofield and Beardsley, all of the Bayonne C. C. The hurry-scurry was won by G. F. Douglas. The N. J. A. C. has extended an invitation to the Atlantic Division to rendezvous at its house preparatory to the division meet. Sybil is an amateur built canoe, constructed by her owner, Mr. O. F. Coe, a similar design to Vagabond.

IANTHE C. C.—The Ianthe C. C. held the first of its paddling record races on the evening of July 5. The junior paddling was well contested and was won by O. T. Conner, with W. J. Stewart, R. Hobart, J. Duguid and E. Burling in the order named. The senior paddling was very exciting, as it was anybody's race from start to finish, B. Fredericks finally winning by one foot; G. P. Douglass, second; L. B. Palmer, third; C. V. Schuyler, of Arlington C. C., fourth. The tandem paddling was won by Duguid and Burling; Conner and Farmer, second; Dorland and Schuyler, of Arlington C. C., third. Prizes have been offered by the regatta committee as follows: For seniors, sailing, paddling and the highest combined; for juniors, a separate series for the same races.

ROGERS.—Sergt.-Major H. S. Rogers, son of Col. H. C. Rogers, graduated from the Royal Military College at Kingston this month. He carried off the Stanley gold medal for obtaining the highest aggregate of marks in the whole course, and the Lord Stanley prize to a qualified graduate intending to pursue the military profession, either in the Imperial forces or in the Dominion militia, for highest proficiency at the final examinations in military engineering, military administration and law, strategy and tactics, military surveying, topography and reconnoissance. He also won the class prize for highest proficiency and five class prizes in the entire course. Sergt.-Major Rogers has been recommended for a commission in the Royal Engineers.

A. C. A. MEMBERSHIP.—Central Division: Wm. L. Martin, Albany, N. Y.; Harry S. Moody, Rochester, N. Y.; H. B. Minor, Saugerties, N. Y. Atlantic Division: F. K. Shears, Yonkers, N. Y.; Anton von Buest, Geo. W. Baxter, Jas. Duguid, New Jersey. Northern Division: C. E. Britton, Frank P. Jones, D. F. Jones, Gananoque, Ont.

THE ARLINGTON C. C. will hold its annual regatta Monday, Sept. 2.—C. V. SCHUYLER, Sec'y-Treas.

RACING AT MARBLEHEAD.

IT always has been the custom in the Eastern Y. C. to sail the annual regatta about the last of June, a date that practically prevents the attendance of the New York fleet, as it follows too closely on the mid-June regattas, and also very near to the July races on the Sound. This year a decided departure has been made in placing the race after all the New York regattas, and just at the time the fleet of the Seawanhaka Corinthian Y. C. was at Marblehead. Even under the most favorable conditions it is difficult to get many New York yachts around the Cape, a long and tedious if not dangerous voyage, and it is impossible to do so when they must hurry home at once for the racing at Larchmont. By waiting until the latter are over, and taking advantage of the Seawanhaka Y. C. cruise, it should be possible in the future to carry the leading boats through all the races from the New York in the middle of June to the Eastern a month later. This year several of the smaller boats made the trip to New York for the races there, while several here made the return trip to Marblehead. Of the forties, however, Pappoose and Gorilla have come East to try their luck, while with them is the little Kathleen, of 30ft. Neither Nymph, Banshee, Liris, Maraquita nor Tomahawk have ventured round, so that the racing is robbed of part of its interest, but at the same time some new boats have taken up the game, notably the Verena, just completed, and Chiquita, one of the best of last year's craft. Clara comes round with little show for a competitor, while the 70ft. class is entirely unrepresented.

The fleet of the Seawanhaka Y. C. came in on Thursday and Friday in rather straggling order, the little fellows having lagged behind for the races, and of course being unable to catch the schooners. The passage round the Cape proved unusually trying, mostly calm winds and some sea, with strong head winds at times. The fleet includes Sea Fox, schr., A. Cass Canfield; Medusa, cutter, Vice-Com. Robt. Center; Iroquois, schr., Rear-Com. Ralph W. Ellis; Mayflower, schr., F. T. Underhill; Dauntless, schr., C. H. Colt; Crusader, schr., Chas. H. Cheever; Viator, schr., G. H. Upham; Oneida, stmr., E. C. Benedict; Clara, cutter, J. C. Barron; Minerva, cutter, Chas. H. Tweed; Gorilla, slp., R. P. Carroll; Kathleen, cutter, Wm. Whitlock. Kathleen left Larchmont on July 7, but only made Marblehead at dark on July 12, the evening preceding her first race. She had intended to haul out at Lawley's, but had not time, so her crew put her on the beach at high water, nearly midnight, and scrubbed her bottom at low water, going off at the next tide.

The Eastern Y. C. fleet, including Com. Hovey's flagship Fortuna, Vice-Com. Tucker's Clytie, and Rear Com. Dexter's Foam, was at anchor on Friday, and on Saturday Gitana, Rebecca, Quickstep and other large yachts, with small craft without number, came in. On Friday afternoon the fleet dressed ship, and Com. Hovey invited the visitors to a lunch on board the flagship, after which they were carried off by Com. Crowninshield, of the Corinthian Y. C., to an afternoon tea at his residence in Marblehead. Saturday and Sunday were spent in harbor, a breakfast being given on Sunday morning to the Seawanhaka C. Y. C. by the officers of the Eastern Y. C. Prior to the start of the joint fleet on a course further East, three races were sailed at Marblehead, the special 40ft. race of the Eastern, the championship race of the Corinthian, both on Saturday, and the annual regatta of the Eastern on Monday.

EASTERN Y. C. HOVEY CUP, JULY 13.

The Hovey cup, valued at $200 and presented by the commodore of the Eastern Y. C., is one of the many special prizes offered for this class during the present season. It is a handsome silver tankard, with lid of solid silver; and was offered to 40ft. yachts of any club, the course being from off Marblehead Rock, around the Graves whistling buoy, 7¾ knots; thence around Halfway Rock, 8½ knots, and home to starting line, 2½ knots, the allowance being calculated for 19 knots. The starters were:

	Owner.	Helmsman.	Length.	Allows. m. s.
Gorilla, c. b.	R. P. Carroll	Thos. Sloan	48.50	. ..
Verena, c. b.	J. A. Beebe	Ed. Burgess	47.00	1 30
Alice, k.	P. D. Wheatland	Capt. Walsh	47.00	1 30
Chiquita, c. b.	A. Hemmenway	Sidney Burges	46.88	1 30
Helen, k.	C. A. Prince	Aubrey Crocker	46.50	2 01
Minerva, k.	W. H. Tweed	John Barr	46.07	2 01
Pappoose, k.	Bayard Thayer	Natb. Watson	42.60	5 52

The morning was calm and hazy, but a light air came in from the south at 9 A. M., and before 11 o'clock there was enough wind to start the fleet. The start was from the gun at 11 with 5m. preparatory, and Capt. Sloane came for the line on starboard tack in good time. All the rest of the fleet were an port tack and bunched closely together, and Chiquita hailed Gorilla to tack, which she did, though having the right of way, getting a very poor position in return. Verena had the best start and immediately walked away, Gorilla being to leeward of her, with Chiquita in third place. The new boat from the start did the best sailing, leaving the others steadily. All carried club and jibtopsails, Gorilla, Minerva and Pappoose being content with babys, the carrying the intermediate Minerva did not move with her customary activity, seeming to have little life. Capt. John Barr of Clara was steering her for the first time, while she started with a small clubtopsail set, looking for strong winds. After a time this was shifted for a large club, with better results. Alice had a very bad start, the boat not moving in the light wind with her reduced sail plan. After a few minutes she tried the starboard tack for luck without finding it. Verena was gaining steadily, Chiquita having taken second place with Minerva, Gorilla, Pappoose strung out, Alice being far astern. Helen was the first to break tacks, Minerva and Pappoose following when about half the leg was covered, standing well to the eastward, out to sea, while Verena and the rest held inshore toward Nahant. The offshore boats managed to pick up a nice little breeze, Minerva took in her jibtopsail and shifted to her largest club, and when the two divisions met at about 12:15 she crossed well ahead of Verena's bows. The time at the Graves Buoy was:

Minerva	1 06 45	Gorilla	1 20 45
Pappoose	1 09 30	Chiquita	1 21 55
Verena	1 13 49	Alice	1 30 45
Helen	1 18 17		

Balloon jibtopsail and spinaker were quickly set on Minerva, and she hauled away for Halfway Rock before the wind. When half of the leg was covered she found more wind and from the east by a couple of points, so that the spinaker came in. She continued to gain, partly through the increased wind, and made 2m. 32s. on Verena, and 6m. 57s. on Pappoose in the 8 mile run. The times were:

Minerva	2 18 42	Gorilla	2 34 20
Pappoose	2 26 22	Chiquita	2 36 40
Verena	2 27 36	Alice	2 46 10
Helen	2 34 10		

The last leg was short and quickly run off with balloon jibtopsails to starboard, Minerva leading over the line by over 8m., with Pappoose and Verena very close together in second place. The official times were:

	Finish.	Elapsed.	Corrected.
Minerva	2 36 19	3 56 19	3 33 18
Pappoose	2 44 40	3 44 40	3 37 20
Verena	2 45 08	3 45 08	3 43 16
Helen	2 55 27	3 55 27	3 52 56
Gorilla	2 54 35	3 54 35	3 54 35
Chiquita	2 55 34	3 55 34	3 53 42
Alice	3 06 48	4 06 48	4 04 56

Minerva wins the Hovey cup, of course helped to by the fluky weather, but in the latter half of the race she sailed much better than at the start. Pappoose sailed a good race all day, while Verena gave every promise of being a very fast boat in a fast class. She is very similar to Nymph in dimensions, but superior in design. Chiquita did quite poorly, being beaten by Helen. Gorilla was steered by a tiller and though she was helped by smart handling of sails and some good work at the tiller at times, she did not accomplish much. The race was under the management of the regatta committee of the Eastern Y. C., Messrs. Charles H. Joy, T. Dennie Boardman, J. S. Fay, Jr., R. D. Sears, Wm. S. Eaton, Jr.

CORINTHIAN Y. C., 1ST CHAMPIONSHIP, JULY 13.

The meeting of Kathleen, the new Gardner 30, with the crack boats of her class in Eastern waters, two of which she lately defeated in New York, was looked forward to with a degree of interest hardly less than that in the 40ft. class; in fact, as in New York, the small craft are making most of the sport. Kathleen has thus far met with but one defeat in a number of races with her own class and that above her about New York, but it was evident she would have no walkover in the East, as both Saracen and Elf had laurels to retrieve, while there were several new boats to be met. Her initial race was on the afternoon of July 13, in the first championship regatta of the lively Corinthian Y. C. Besides the special prize of $50 offered for the 30ft. class the regular prizes and conditions were as follows:

The first prize in each class will be a leg for the championship cup, which is offered for the winner of two championship races. First Class—All yachts 27ft. and less than 30ft. waterline; second prize, $10. Second Class—All yachts 24ft. and less than 27ft. waterline; second prize, $10. Third Class—All yachts 21ft. and less than 24ft. waterline; second prize, $10. Fourth Class—Centerboard yachts 18ft. and less than 21ft. waterline; second prize, $5. Fifth Class—Keel yachts 16ft. and less than 21ft. waterline; second prize, $5. Sixth Class—Centerboard yachts 16ft. and less than 18ft. waterline; second prize, $5. Schooners and yawls to race at ⅞ sailing length. In case a yacht has no competitor, she can enter the next higher class at her usual rating. No prize will be awarded to any yacht which has not defeated a competitor. The start will be a flying one, and all yachts will be timed from the gun.

Each yacht must be steered by a member of this club. Yachts in the first and second class may carry six men, yachts in the third class five men, yachts in the fourth, fifth and sixth classes four men. None but amateurs shall be allowed on board any yacht when contending for prizes, except that yachts in the first, second and third classes may carry one paid man, provided he be regularly employed on the boat. In the first, second and third classes there will be no restrictions in regard to sails. Fourth, fifth and sixth classes to carry lower working sails only. No shifting of ballast during a race. No ballast shall be shipped or unshipped on the day of the race in either the first, second or third classes. The race must be sailed by one boat in the first, second and third classes in 3½ hours; by one in the fourth, fifth and sixth classes in 2½ hours. All protests must be made to the judge within an hour after the race.

Courses for first, second and third classes—From judges' line, leaving buoy 3 on starboard, to and around flagboat anchored ⅜ of a mile northeast of buoy 3, leaving it on the starboard; buoy 1 and Tom Moore's Rocks on starboard; stakeboat anchored 200yds. southeast of Tinker's Island on port; Half-way Rock on port, buoy on Gooseberry Ledge on starboard; buoy at Cutthroat Ledge on port; buoy on Eagle Bar on port; to judges' line, 10 miles.

Course IV. The reverse of Course III. For fifth class—From judges' line, leaving buoy 3 on starboard; Cat Island Rock on port; buoy on Gooseberry Ledge on port; Bowditch Ledge Beacon on port; buoy on Eagle Bar on port; to judges' line, 6½ miles.

Course VI., the reverse of Course V. Buoys 3 and 1 were formerly numbered 5 and 3.

Kathleen's late arrival gave her crew a great deal of work during the night and morning preceding the race, the boat being beached and scrubbed and all her stores and furniture taken ashore, so that when the start was called at 2 P. M. she was hardly ready. Saracen was launched from the ways in the morning, and beside Elf and Beetle the Mignon, last year's Gloucester craft, came in to sail her first race since she has been raised and otherwise improved. The entry list was very good, there being 22 yachts in all. The wind was light S.E. in the afternoon, all the larger boats carrying clubtopsails.

The start was made off the handsome new club house at 2 P.M. for class 1 and at 5m. intervals for the other classes, all starting from the gun. Saracen, sailed by Mr. Fowle, crossed the line promptly and soon had a clear lead of the fleet, but Kathleen was last over, with Elf, Mignon and Beetle ahead of her. She was only allowed 6 men, a much smaller crew than she has sailed with before. Mr. Everett Paine, of the Brenda, the secretary of the Corinthian Y. C., sailed as pilot, but did not help in working the ship. The course, a very crooked one, was new and perplexing in spite of the pilot. The yacht made a short leg out of harbor and then stood across toward Beverly for a time, while the other four stuck closely together. Kathleen tried to shake off Mignon and Elf, but was unable to do so, while even little Beetle hung to her for a long time. Coming in the wind they worked out to Half-Way Rock, Saracen turning with a lead of 7m. over Kathleen and 6m. over Mignon. Reaching across to the Tinker's Island mark, Kathleen passed Mignon and turned ahead. Saracen held her lead and ran home without spinaker, the rest carrying them to port. She won very easily, Mignon being second and Kathleen third. Swordfish, Mr. J. B. Paine's 22ft. boat, sailed a very fast race over the same course, though in another class, coming in just after Kathleen on elapsed time. The full times were as below. In the evening a dinner was given to the crews of Elf and Kathleen:

CLASS 1.—COURSE NO. 4.

	Length.	Start.	Finish.	Elapsed.	Correct'd
Saracen	38.03	2 35 00	4 25 40	1 50 40	1 49 37
Beetle	35.08	2 35 00	4 36 15	2 01 15	1 58 32
Mignon	32.09	2 35 00	4 32 58	1 57 58	1 54 37
Elf	36.01	2 35 00	4 34 10	1 59 10	1 56 43
Kathleen	40.03	2 35 00	4 31 50	1 56 50	1 56 50

CLASS 2—COURSE NO. 4.

	Length.	Start.	Finish.	Elapsed.	Correct'd.
Sira	32.06	2 45 00	4 51 49	2 11 49	2 06 38
Moondyne	32.09	2 45 00	4 45 55	2 05 35	1 57 39
Agnes	31.02	2 45 00	4 52 44	2 12 44	2 06 39

CLASS 3—COURSE NO. 4.

Swordfish	31.06	2 45 00	4 44 55	1 59 55	1 54 06
Posy	27.03	2 45 00	4 51 13	2 06 13	1 56 53
Thelga	27.05	2 45 00	4 58 12	2 13 12	2 03 47

CLASS 4—COURSE NO. 6.

Nerena	21.08	2 53 00	4 20 17	1 30 17	1 19 56
Myrtle	20.09	2 53 03	4 20 09	1 30 06	1 18 57
Corsair		2 53 00	Not timed.		
Wanda	21.07	2 53 00	4 24 55	1 31 55	1 21 30

CLASS 5—COURSE NO. 6.

Kathleen	25.07	2 55 00	4 28 45	1 33 45	1 26 23
Wraith	23.03	2 55 00	4 35 25	1 40 25	1 31 16
Mosca	25.03	2 55 00	5 28 51	1 33 51	1 24 17
Bantam	25.02	2 55 00	4 32 47	1 37 47	1 30 10
Vaga	20.05	2 55 00	4 44 31	1 49 31	1 38 03

CLASS 6—COURSE NO. 6.

Dolphin	18.00	2 55 00	4 49 30	1 49 30	1 35 35
Josephine	21.06	2 55 00	4 43 39	1 43 39	1 33 09

Winners of prizes: Class one, Saracen, Mignon. Class two, Moondyne, Siva. Class three, Swordfish, Posy. Class four, Myrtle, Nerena. Class five, Mosca, Kathleen. Class six, Josephine. Regatta committee: Geo. A. Stewart, F. W. Chandler, Wm. P. Fowle, John B. Paine, H. P. Benson.

EASTERN Y. C. ANNUAL REGATTA, JULY 15.

As has happened before at Marblehead, Sunday was an ideal regatta day, warm, bright and sunny, with a good breeze all day; but Monday proved e actly the reverse, with a northeaster, a pour of rain and a heavy sea. The fleet ran out to Halfway Rock about 10 o'clock, and a start was made. Clara, Alga, Fanita and all larger craft being sent to the S. mark of the triangular course first, then to S.W. mark and home, 36 knots; while the smaller craft ran out to S.W. mark, near Harding's Buoy, and beat home, 25 knots. As it happened, neither mark boat went out, so the large boats sailed over fifteen miles out to sea and returned. The forties and thirties all turned Harding's Bell Buoy, thus making a race.

Verena led to the buoy, with Chiquita, Gorilla and Minerva in order; but once on the wind the little Scotch cutter left the fleet, winning by 7min. In Tom Sloan's hand Gorilla did better than she has ever done before, beating all the Burgess boats fairly. Whatever fluking was done on Saturday, all admit that Minerva won on her merits to-day. In the 30ft. class the big Cape catboat Harbinger beat both Saracen and Kathleen, but she was inside the island in smooth water and out of the very heavy sea where the deep boats could not follow her. Saracen beat Kathleen, as the times show. The larger boats will sail again on Tuesday, and Mr. Thayer has offered a special cup for an extra race of the forties. The times were:

40FT. CLASS.

	Start.	Turn.	Finish.	Elapsed.	Corrected.
Minerva	11 31 21	12 57 59	2 58 18	3 22 18	3 19 14
Gorilla	11 30 28	12 57 20	2 56 28	3 26 28	3 25 28
Chiquita	11 31 45	12 57 05	3 04 32	3 34 32	3 32 14
Verena	11 30 49	12 57 00	3 09 33	3 39 33	3 37 15
Pappoose	11 31 03	1 03 30	. . ..	. . ..	. . ..
Alice	11 31 55	1 02 25	. . ..	. . ..	. . ..

35FT. CLASS.

Ramona	11 32 41	. . ..	3 39 45	4 09 45	. . ..

35FT. CLASS.

Harbinger	11 36 19	. . ..	3 31 43	3 56 43	3 37 56
Saracen	11 35 49	. . ..	3 45 49	4 00 09	3 56 50
Kathleen	11 35 51	. . ..	3 34 56	3 59 56	3 59 05

Minerva wins the cup offered by Mrs. Canfield, the corrected times being: Minerva 2:19:14, Kathleen 3:41:14.

BEVERLY YACHT CLUB.

146TH REGATTA, SECOND OPEN SWEEPSTAKE, MONUMENT BEACH, JULY 13.

BEFORE describing the race I wish to correct an error and misprint in last week's FOREST AND STREAM. In 143d B. Y. C. race read: Polly, Richard Codman, in place of Nymph, Geo. G. Amory. This was my error, but in 144th race the printer made me say Kiowa led round Bowditch by "ten" minutes while I wrote "two."

There was a strong S.S.E. breeze on 18th; all but Mattie, Mist, Tantrum, Petrel, Daisy and one or two others being reefed.

As 9 out of the 18 entries had to be measured before race, the judges had a lively time, but race was started on the second. Mr. Stockton had cut down the spars of both his boats to save measurement; he succeeded admirably, reducing Mattie 3in. and Daisy 15in., but in latter case did not seem to have left enough mast to hold up his sail; it bagged badly, and how she got to windward as she did was a wonder.

In first class A. P. E. and Mattie were sailing a good race, when Mattie drew out the patent bolt holding peak halliard block and withdrew.

Second class sailed a very close race, Mollie tieing Mist on actual time and Wildcat and Mollie pressing her close on corrected time. Gymnote and Thyra showed marked improvement. Tantrum carried away forestay and withdrew.

In third c ass Eina met the new Ebenezer, the crack of the Sippican Y. C., of whom great things were predicted. Petrel astonished every one by carrying full sail. Eina, single reefed, started two lengths after Daisy, who led off. She sailed well, gradually taking first place and shaking out reef at windward mark. Time of first round: Eina 2:28:40, Daisy 2:29:50, Ebenezer 2:30:45, Petrel 2:32:06, Algonquin 2:34:42. Petrel was picking up Ebenezer on the run. As they started again to windward it breezed up stronger. Eina was happy, getting up to windward in a remarkable manner. Daisy also did very well, holding Eina for a time. Petrel still kept picking up Ebenezer, but coming home, while well within her time allowance for third place, she broke her tiller and withdrew.

In fourth class Kitten was entered but hit a sandbar before start, breaking her centerboard. Edith had not studied up the course; twice she lost time hunting for a buoy and twice she gained a good deal by cutting a buoy; she beat Mab 9m., but of course was ruled out. The little Mab is a new boat, and time allowance tables only run to 15ft., consequently her corrected time was not figured.

Courses first and second classes. Leaving Pines Buoy, Scraggy Neck Buoy and Bird Island Buoy on starboard and return, 11 miles. Third class, leaving Pines Buoy, Abiels Ledge Buoy, judge's yachts and Pines Buoy on starboard and return, 8 miles. Fourth class, leaving B Buoys 7 and 9 on port, B Buoys 11, 9 and 7 and judge's yacht on starboard, Buoys 7 and 9 on port, 11, 9 and 7 on starboard and return, 5 miles. Wind strong S.S.W.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
A. P. E., D. Crosby, Ostervillo	27.01	1 54 22	1 43 38
Grekel, D. P. Robinson, B. Y. C.	26.07	2 01 56	1 49 39
Mattie, Howard Stockton, B. Y. C.	26.07	Disabled.	

SECOND CLASS.

Mist, Geo. H. Lyman, Jr., B. Y. C.	25.06	1 57 33	1 45 03
Mollie, T. D. Plumley, Mon. Beach	26.01	1 57 33	1 45 43
Wildcat, S. P. Hill, Mon. Beach	25.00	1 58 34	1 45 29
Gymnote, W. E. O. Eustis, B. Y. C.	25.11	1 58 57	1 46 56
Thyra, Paul Bartholow, B. Y. C.	25.04	2 01 04	1 48 23
Susie, N. F. Smalley, Harwichport	25.05	2 02 09	1 49 33
Tantrum, Wm. Amory 2d, B. Y. C.	22.10	Disabled.	

THIRD CLASS.

Eina, John Parkinson, B. Y. C.	22.00	1 48 56	1 36 33
Daisy, H. Stockton, B. Y. C.	19.03	1 54 58	1 39 28
Ebenezer, Louis Bacon, Sip. Y. C.	21.11	1 56 09	1 43 41
Algonquin, H. W. Harris, Quissett	21.05	2 00 54	1 47 54
Petrel, Vice-Com. Richards, B. Y. C.	20.07	Disabled.	

FOURTH CLASS.

Mab, F. B. Beaumont, B. Y. C.	12.07½	0 50 15	. . ..
Edith, Irving Chapman, B. Y. C.	18.10	Wrong course.	

Winner first prize, class one, A. P. E.; class two, Mist; class three, Eina; class four, Mab. Second prize, class two, Wildcat; class three, Daisy. Third prize, class two, Mollie; class three, Ebenezer. Judge, W. Lloyd Jeffries. X. Y. Z.

DAUNTLESS Y. C.—The Dauntless Y. C. of Jersey City held their annual meeting on July 4 and elected these officers: Com., John Flaherty; Vice-Com., Wm. Royal; Treas., W. H. Boynton; Sec., W. H. Winkle; Financial Sec., E. L. Jones; Meas., John Clark; Sergeant-at-Arms, Thos. Wissell; Regatta Committee Chairman, John W. Bolen; Trustees, John W. Bolen, W. H. Boynton, Edward Cordner; Chairman Ways and Means Committee, C. E. Reynolds; House Committee, W. H. Boonton, John W. Bolen and John Clark. The annual cruise and dinner took place on July 14, the rendezvous being at Muller's Pavilion at Clifton, Staten Island.

BOSTON CITY REGATTA, JULY 4.

THE annual city regatta at Boston brought out a good fleet of starters this year, including a number of new craft. In the special 40ft. class the new Burgess centerboard Verena met the McVey keels, Helen and Alice, the first race the latter have sailed. The McVey 30, Crystal, the new Wood boat Duchess, and the Auk and Victor sailed their first race. The courses and conditions were:

Forty-footers—For all yachts 35ft. and less than 46ft. Prize $100, provided three or more start.

First class—For centerboard and keel yachts, 30ft. and less than 35ft. First prize $50, and for centerboard yachts a second prize of $30.

Second class—For centerboard and keel yachts, 25ft. and less than 30ft. First prize $40, second prize $20, and third prize $10.

Fourth class—For centerboard, all-rigged yachts, 18ft. and less than 20ft. First prize $25, second prize $15, and for centerboards a third prize of $10.

Fifth class—For centerboard catboats, 15ft. and less than 18ft. Prizes $25, $15 and $10.

Special class—For jib and mainsail centerboard yachts less than 20ft. Prizes, $25, $15 and $10.

Mosquito class—All yachts less than 15ft. Prizes $12, $8 and $5.

The distance for the forty-footers was 30 miles, and the course was from judges' boat to Broad Sound, leaving Long Island on the starboard, Ram Head buoy on the starboard, whistling buoy on the Graves on the starboard, bell boat on Harding's Ledge on the starboard, Point Allerton buoy, Hunt's Ledge buoy, 5, off George's Island, on the port, bell boat off Nix's Mate, Long Island and Spectacle Island on the port, buoy 7 off Fort Independence on the starboard, passing between the judges' boat and the flagboat.

The distance for the first and second classes was 15 miles, and the course from judges' boat down West Way, leaving Thompson's and Rainsford islands on the starboard, Long and George's islands and Point Allerton buoy No. 3 on port, and back through the Narrows, leaving Fort Warren, Gallop's Island and Nix's Mate buoys on the port, buoy No. 7, Castle Island on the port, to flagboat anchored off Marine Park pier, leaving it on the port, passing between the judges' steamer and the flagboat.

The course for the the third, fourth, fifth and sixth classes was 10 miles. From judges' boat to Cow Pasture Buoy No. 6 (off the pumping station), leaving it on the port, to flagboat, southeast, leaving it on port, to buoy No. 7 off Fort Independence, leaving it on the starboard, to Sculpin Ledge Buoy, leaving it on the port, to Buoy No. 6, Lower Middle, leaving it on the port, to Buoy No. 7, Castle Island, leaving it on the port, to flagboat off the Marine Park pier, leaving it on the port, passing between judges' steamer and flagboat.

The mosquito class course was three miles. From judges' boat to Buoy No. 7, off Fort Independence, leaving it on the starboard, to red buoy No. 2, about southeast, leaving it on the port, Fort Independence to the port, to black buoy No. 9, leaving it on the port, to flagboat off Marine Park, leaving it on the port, passing between the judges' boat and the flagboat.

The start was made at noon in a strong S. W. wind. Of the forties Alice led at the start, but soon lost her advantage through luffing out of the way of another boat, being left to leeward of the Neptune. Verena and Helen sailed well together for the first dozen miles, the former leading. When near the Devil's Back a luffing match came off, resulting in a protest from Helen, she claiming that Verena tried to luff her aground, her draft being 10ft. 6in. Helen sailed much better than she has yet done, her sail plan being materially reduced, but Verena finally left her. The official summary is as follows:

40-FOOTERS.

	Length.	Elapsed.	Corrected.
*Verena, J. A. Beebe	40.00	3 17 31	2 31 08
Helen, Gordon Prince	39.08	3 21 07	2 34 16
Alice, P. D. Wheatland	39.08	3 31 03	2 44 12
Neptune, Neptune Associates	38.00	3 43 08	2 53 57

*Prize winners.

Shadow protested Nimbus and Judith protested Echo, both demanding remeasurement.

The regatta committee included Wm. Power Wilson, chairman; John C. Short, Samuel Kelley, Wm. G. Reed, Horace G. Allen, Louis M. Clark, David F. Barry, Wm. H. Oakes, Josiah J. Hoar, Sidney Cushing, John A. Campbell. The judges were M. J. Kiley, chairman; Wm. B. McClellan, F. H. Blaney, E. B. Coleman, P. M. Bond.

ROYAL CANADIAN Y. C., JULY 1.

THE Royal Canadian Y. C. celebrated Dominion Day by a regatta off Toronto, open to yachts from Hamilton and other ports, the course being 12 miles triangular, one round for the smaller craft and two for the larger. The Royal Y. C. is one of the very few clubs which still clings to that obsolete monstrosity, the scaled handicap, and through the unfairness or ignorance of the handicapping committee it was worked to the great disadvantage of the visiting boats. White Wings, the fastest centerboard sloop, received a handicap that for once made her very weary indeed, being scratched with the schooner Oriole, 73ft. l.w.l., and allowing the Watson cutter Aileen, 55ft l.wl., 6m. 40s., her own length being but 43ft., while she had to give 19m. 6s. to the Watson cutter Verve No. 2, of her own length. Under the club rules the Oriole allows her 8m. and Aileen allows 11m. The full times were:

CLASS I.

	Start.	Finish.
Oriole, G. Gooderham	12 0 50	3 29 40
Verve, A. R. Boswell	12 2 40	3 55 40
White Wings, Æ. Jarvis	12 0 19	3 49 50
Aileen, John Leys	12 3 53	4 22 30
Condor, C. A. B Brown	12 6 30	4 39 12
Rivet, Hume Blake	12 2 35	4 39 33
Aggie, Marlett & Armstrong	12 3 00	4 51 08
Verve, A. V. Dick	12 1 20	Did not fin.

Handicap—Oriole and White Wings allow Aileen 6m. 40s., Chicago Verve 19m. 6s., Aggie 20m. 6s., Toronto Verve 25m 20s., Condor 29m. 20s., Rivet 29m. Oriole thus takes first prize, having beaten White Wings 20m. 10s. and Chicago Verve 26m., or 7m. corrected time, while Chicago Verve beat White Wings 13m. 10s. corrected time, although she crossed the finishing line 5m. 50s. after the Hamilton cutter.

CLASS II.

	Start.	Finish.
Cyprus, J. F. Monk	12 17 00	2 37 00
Escape, F. A. Turner	12 16 00	2 40 30
Little World, T. World	12 16 00	2 50 40
Kelpie, L. V. Percival	12 18 30	2 54 20
Volante, C. Black	12 16 00	3 00 08
Ripple, C. E. Stone	12 16 00	3 00 35
Yolande, D. Baldwin	12 16 00	3 21 20
Imogene, H. Elliott	12 15 50	did not finish
Naiad, Gardner Boyd	12 15 55	did not finish

Handicap—Cyprus, Ripple and Little World allow Volante 2m., Escape, Yolande and Kelpie each 3m., Naiad 6m. and Imogene 11m. Cyprus thus having to allow Escape 3m. wins by only half a minute, while Escape beats Little World 13m. 10s. for second place, and the last mentioned only beats Kelpie for third by 40s.

The judges of the races were Vice-Commodore Thomas McGaw and Mr. C. W. Postlethwaite, while Mr. J. E. Robertson was timekeeper.

Aileen lost her topmast on the first round. The prizes were given on Saturday night at a meeting on the island, being a handsome silver "loving cup" to Mr. George Gooderham, of Oriole; a handsome cup to Commodore Boswell, of Verve No. 2; a beautiful clock, barometer and thermometer to Mr. Monk, of Cyprus, and solid silver medals to the owners of the yachts White Wings of Hamilton, Escape and Little World.

The new steam yacht Abeona was out for her trial trip during the race, with her owner, Mr. A. E. Gooderham, aboard.

LIRIS.

THERE are a good many races to be sailed and some hard fighting to be done before the question of supremacy in the 40ft. class is decided for the season. Verena and Chispa are yet to be heard from, the new Awa will be in the races very soon and should prove a dangerous boat, Gorilla, in Sloan's skillful hands, is likely to do far better work than she has thus far, Baboon, if raced, is sure of some prizes, while a new Burgess forty is promised in time for the fall races. As far as the races yet sailed about New York can be taken it looks now as though the winners were to be found in the two extremes, Liris and Minerva, both keels, the former the largest and the latter the smallest boat in the class. Owing to the many delays on the part of her builder and the failure of her hollow spars Liris has only been able to start in four races, and even now is so far from complete that it was impossible to take her around the Cape, but while her races thus far cannot be taken as conclusive she has been able, in spite of many drawbacks, to inspire respect on the part of all her classmates and has the record of being the only new boat of the year that has won any prizes. The most interesting feature in connection with her is that she represents the extreme limit of the 40ft. class up to date, if not the extreme beyond which it will prove undesirable to go, even though the rules should allow it. In length on l.w.l. she is nearly up to the limit, 39ft. 9in. in racing trim, her beam is 13ft. and draft between 9ft. 6in. and 10ft. Her length over all is about 57ft. from intersection of plankskeer and rabbet to after side of archboard or 2ft. more than the new Burgess boats Chispa and Maraquita, the after overhang being 11ft. The sheer is peculiar, a moderate curve forward, not so straight as the usual parabolic sheer, while aft the whole counter turns up very quickly with more curve than any of the cutters of Watson, Fife or Burgess. In both Liris and Kathleen Mr. Gardner has struck a sheer peculiarly his own, and more like that of the old sloops than the modern cutters.

The clipper stem is very long, being carried out by a handsome trailboard and figurehead, as in the English boats, while the after overhang is light and graceful, being very narrow on the end. The bulwark is about 4in. high and shows as part of the side from without, the gold stripe being lowered to increase the apparent freeboard and increase the bulwark, thus lightening the appearance of the boat. Her extreme length, from fore end of figurehead to after side of rail, is about 60ft., or 150 per cent. of the l.w.l.; but with a sail plan nearly 96ft. on the foot this great length does not appear excessive, the hull sitting very gracefully on the water. That Mr. Gardner has the eye of an artist, as well as the skill of the successful designer, is amply shown by a glance at the boat from any point of view when at anchor or under way.

The under-water section of the sheer plan shows a sharp elbow just below the l.w.l., the fore foot being much cut away. From this elbow the keel runs down quite straight, finding its maximum depth just abaft the midships, and rockering up a little at the heel of the post. The rake of the sharp rabbet is about 42 degrees, or more than any of the Burgess or Smith boats. The lead keel is a huge piece, of probably 16 long tons, about 20ft. long, extending nearly to the heel. Unlike the later Burgess boats, it is very wide, being 12in. on bottom and 16in. on top, with a depth of 30in. Compared with Chispa and Maraquita, the midship section is narrower by about 6in., with a slight round to the side above water, a harder bilge, and thinner through the floors above the garboards and thicker through the keel itself. As a result, the weight of the keel is much lower, while by a lighter construction it is also much greater. Without any authentic figures to guide us, we should say that Liris carries at least 60 per cent. of her displacement in the form of lead, while Chispa has probably 45 per cent. and Maraquita 55. To secure this remarkable lightness of hull the composite construction used abroad in sailing yachts and here by the Herreshoffs has been adopted. The wood keel is sided 18¾in., moulded 10in., while the frames are of hackmatack forward and aft, and of bent oak and steel angles amidship. The steamed frames are 2¾in. at heels, 2in. at heads, and sided 2in., with iron floor knees 2×⅝in. on each. The steel angles are 1½×2¾×¼in., let into the keel and bolted, with a floor plate 6×⅝in., backed by an angle 3½×3½×⅝in. riveted to it and lag screwed to keel. There are two steamed frames between each angle frame, the spacing of all frames being 15½in. The hackmatack frames in the bows and counter are single, the latter quite light, but with a good transom knee and timbers and ample quarter timbers. The shelf is in two pieces, each 3½×2½, running the entire length, while below are two bilge clamps, 6×1½ also running from the stem to the end of the counter, and helping the latter greatly. All of these are of yellow pine. The deck frame is of hackmatack, beams 2½×2½, partner and main hatch beams ¼×3¼. There are iron hanging knees on both partner beams, runner beams and abreast the bitts.

The garboards are of 1¾in. oak, about 18in. wide, and the shearstrakes are also of oak, 6in. wide. The rest of the planking is double, an inner skin of white cedar and an outer one of mahogany, breaking joints, the two fastened between the frames with copper rivets. The fastenings are copper on the bent frames and composition screw bolts on the steel frames. The plankshear is of oak, 7×1¾in. The deck is also in two thicknesses, cedar and white pine, a total of 1½in., being nailed to the beams, with brass screws from the inside between the beams. The deck itself is very large and handsome in outline, owing to the clipper stem and long stern. The light pine bulwark is capped with a

small oak rail. The hatches and skylights are of mahogany, and the bitts are of steel plate ⅜in. thick. A powerful but compact crank capstan is placed just forward of the mast, on the starboard side is a circular forehatch, and to port a 10in. opening for a ventilator over the galley. There is one skylight over the main cabin, then the companion, and abaft that a second skylight over the after cabin. Abaft the latter is a circular sail hatch, also used for a steering well.

Des ending the main companion on the port side is a seat 3ft. long, back of which is a long closet for coats and wraps, with a set of drawers beside it. On the starboard side is the w. c. and toilet room, opening into the after cabin. The main cabin is a large and handsomely fitted room, 9ft. across. On each side is a wide sofa, the back swinging up to make a second berth. At the fore end of each sofa is a cellaret locker and closet above. The after cabin has a fixed berth with a seat in front on each side. All the joiner work below is in mahogany, but as light as possible. The after stateroom is upholstered in light colors, with rich curtains to the berths and a handsome carpet. The main cabin has cushions of a dark blue, above which are curtains of yellow silk, sliding on brass rods and hiding the sides of the ship above the sofa backs, there being no ceiling. The swinging table gives room for eight persons. Opening from the cabin on the port side is a second toilet room, while on the starboard side is a door to the galley and forecastle.

A large icebox occupies the space opposite the toilet room, while just forward of the latter is the galley, with a four-burner gasoline stove, besides pantries, shelves, etc. A pump next the icebox brings fresh water from a large tank beneath the cabin floor. The chain locker is just forward of the mast. The fore part of the forecastle contains four hammock beds, swung up by day, besides table and lockers. The sail plan of Liris is the largest of the class, the base line by New York rule being 95.65ft and the perpendicular 69.65ft., giving an area of 3,603sq.ft., or 300 in excess of Tomahawk and Maraquita and 900 more than Minerva. The main shrouds are led to steel plate channels, the chainplates being long and carried well down the side. The spars were all hollow, but only the gaff and spinaker boom now remain, the rest having been replaced by solid sticks. The new mast is a fine stick of Oregon pine, the rest being spruce. The new boom, not thoroughly dried, and the bowsprit, just out of the water, a stick, by the way, of Canada black spruce from the great Joggins raft, have not helped the boat as her hollow spars did while they stood, but this disadvantage will disappear with time. The boat has showed a remarkable degree of stiffness, especially when compared with Maraquita and Tomahawk, each carrying less sail and the former with 6in. more beam. The new solid sticks will detract a little from this quality, but she still has an amount of stability in excess of all other boats in the fleet. She steers with a tiller. The bowsprit is fitted to house about 5ft., the shrouds fleeting aft to a hole in each channel, while a short section is shackled into the bobstay.

While Liris was designed and built for speed, to win honors in the best racing class ever seen on this side of the Atlantic, at the same time she will be used for two-thirds of the year as a cruising yacht, the home of her owners, and to this end nothing has been sacrificed that could make her comfortable, in fact the finish and furnishing are both very elaborate for a racing craft, and she is no more a racing machine than she is a cruiser, save in the extent of her rig and ballast. Mr. Wm. Gardner, the designer of Liris and Kathleen, is a young New Yorker, a graduate of Cornell University. After graduation he studied for a time with Mr. John Harvey, and then went to Roach's shipyard at Chester. Later on he spent three years in England, studying at the Royal Naval College at Greenwich, and visiting the British shipyards. In these, his first boats, he has shown an unusual amount of ability, Kathleen having simply outsailed beyond question the class above her, both centerboards and keels, while nothing in her own class has been able as yet to touch her. Both yachts were built by Mr. Samuel Ayres, of Bay Ridge, who has turned them out in very creditable shape, especially when the novel nature of the work on the Liris is considered, she being the first of her kind yet built about New York or Boston. Liris is owned by Messrs. C. W. Wetmore and Colgate Hoyt, both members of the Seawanhaka Corinthian Y. C., and Mr. Samuel Mather of Cleveland, a member of the New York Y. C.

ST. LAWRENCE Y. C., JULY 6.—Regular club course; distance, 10 miles. Weather fair. Wind, light from southwest:

	Start.	Finish.
Black Eagle	3 57 50	6 17 20
Chaperon	3 56 10	6 42 10
Lulu	3 55 00	6 02 00
Minnie A	3 56 00	6 14 40
Breeze	3 56 10	6 46 00
Madge	3 55 10	6 43 00
Mable	3 55 40	6 26 00

Lulu takes first place, Minnie A. second, Black Eagle third, Mable fourth.

The Chaperon, a deep-draft boat did wonderfully well in the first part of the race:

Skiff race, flying start:

	Finish.		Finish.
Yukwa, Wallace	5 18 15	Tara, Scott	5 36 00
Koorali, Young	5 24 00	Vreda, Duggan	5 16 15

Vreda first, Yukwa second.

The skiff race was a good one, especially between the Vreda (the Commodore's new boat) and the Yukwa, a new one, also of the celebrated Lance built. Judges—J. S. Simmons and T. Paton.—N. J. WALLACE, Hon. Sec.

TAXING YACHTS.—The assessors of Winthrop, Mass., will after Sept. 1 tax all yachts and bicycles as personal property, the residents refusing to pay taxes on carriages unless the yachts and bicycles are included.

DUXBURY REGATTA, JULY 4.—The annual regatta was sailed at Duxbury on July 4, over a 10-mile course for Class 1 and 8-mile for Class 2, in a strong S.W. breeze. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
White Swallow, E. M. Watson	18.09	1 21 21	0 41 01
Dux, William Adams	18.01	1 29 11	0 47 45
Pearl, E. M. Stoddard	....	1 28 47	.. ..
Fly, W. L. Sprague	19.06	1 29 10	0 50 00
SECOND CLASS.			
Ben Harrison, S. S. Richards	17.00	1 06 10	0 31 20
Mayflower, S. Richards	16.00	1 07 00	0 31 40
Fairplay, George D. Bartlett	16.07	1 09 32	0 32 16
Myra, S. B. Chancy	16.03	1 12 15	0 36 27
Florence, George B. Cushing	15.00	1 15 47	0 37 56
Blizzard, F. A. M. Pratt	17.02	1 12 46	0 38 21
Katharine, Everett Ewell	16.04	1 16 09	0 44 29
Henrietta, F. M. Watson	16.09	1 16 11	0 45 09
THIRD CLASS.			
Clear-the-track, O. Hunt	15.05	1 09 03	0 31 55
Amy C. Winsor, E. S. Goodspeed	15.01	1 10 35	0 32 53
Hornet, A. M. Watson, Jr	16.04	1 09 50	0 24 10
Paul Revere, Clarence Smith	16.00	1 13 10	0 36 58

The committee were: Capt. Charles M. Cook, Alfred Green, Capt. Joshua M. Cushing, Col. Frank H. Palmer and Capt. L. Granville Sampson. The judges were: William J. Wright, Sidney M. Hedges and John A. Irwin.

QUAKER CITY Y. C. REGATTA.—The corrected time of the Quaker City Y. C., June 21, has just been completed. Mr. Ellis's new sloop Nanon, built by Burgess, of Boston, is the winner of the Middleton cup for first class sloops on corrected time by 2m., the old Venitzia, which won the Ellis cup for fastest time over the course, irrespective of class or time allowance, by beating the Nanon 2m. 34s. actual time, being second. The correct time of the Nanon is the fastest in any class over the course. The official schedule of correct time for the first and second boats in each class is as follows:

	Elapsed.	Corrected.
SCHOONERS.		
Helen	4 16 28	4 16 28
Arathua	4 49 01	4 30 22
FIRST CLASS SLOOPS.		
Venitzia	4 10 21	4 10 21
Nanon	4 12 55	4 08 21
SECOND CLASS SLOOPS.		
Rosita	4 54 01	4 54 01
Consort	4 43 14	4 50 58
THIRD CLASS SLOOPS.		
Ratz	4 49 08	4 49 08
Luzetta	4 59 43	4 51 31
OPEN YACHTS.		
Nohican	5 12 59	.. ..
Coronet	4 20 00	.. ..

The delay in preparing this schedule was caused by the difficulty in getting the various captains to appear before the committee.

DELAWARE TUCKUPS.—An exciting match was sailed on July 1 between the tuckups George Flick and Robert S. Patterson, the course being down the river around Chester buoy, 32 miles, a run down against the tide and a beat up. The start was made at 10 A. M. in a light E. wind, the Patterson leading and gaining until she turned the mark at 12:33 with a lead of 2m. 30s. Off Billingsport a squall came up, and while reefing she was capsized, being out of the race. The crews were: G. Flick—J. Cemrod, D. Schellinger, George Taylor, Thomas Sherman, J. Reilly, Geo. Bergen and W. Flick, captain. R. S. Patterson—Frank Kleinitz, Hugh Boyle, G. Harkghesheimer, J. Dusenberger, George Florence, J. Hagen and George Campbell, captain. The following was the official time:

	Start.	Chester Buoy.	Finish.
R. S. Patterson	10 02	12 33	.. ..
George Flick	10 02	12 35½	2 33

Time, 4h. 31m. The officers of the regatta were: Referee, Geo. Thompson; judges, Amos Bailey and John Armstrong, representing Southwark and Kensington. The prize was $200 and the championship of Philadelphia. A second match for $500 per side has been arranged. The fourth class tuckups, Oakey No. 1, Jos. Nobre, A. Rivel, Jos. Jacobs and Chas. Duputy sailed a sweepstake for $25 from Greenwich Point to Billingsport buoy and return, distance 15 miles:

	Start.	Turn.	Finish.
Oakey	2 07 00	3 01 00	4 15 10
Jos. Nobre	2 07 00	3 02 31	4 15 00
A. Rivel	2 07 00	3 05 00	4 16 08
Jos. Jacobs	2 07 00	3 05 15	4 28 00
Chas. Duputy	2 07 00	3 02 00	4 16 00

BUZZARD'S BAY Y. C.—At a meeting of yachtsmen of Buzzard's Bay, held at the Glen Cove House at Onset, recently, a yacht club was formed with forty members. M. N. Bray, of Boston, owner of the sloop yacht Romona and two other boats, was elected Com.; J. E. Jeffries, Vice-Com., and C. H. Strant, Sec.-Treas. The club proposes to hold a regatta this season for craft in Buzzard's Bay. The Onset Grove Association will, in all probability, grant the club a tract of land for the erection of a club house.

SIPPICAN Y. C.—At the annual meeting of the Sippican Y. C., held July 1, the following officers were elected: Com., Jasper Whiting; Vice-Com., J. E. De Kay; Sec.-Tres., J. Henry Clarke; Directors, commodore, vice-commodore, secretary and treasurer (*ex officio*), Dr. J. S. Whiting, Governors L. Luce, James DeKay and F. R. Wing; regatta committee, J. Whiting, F. R. Wing and F. H. Luce.

THE MARTHA'S VINEYARD CUP.—On July 13 a meeting of the executive committee of the Martha's Vineyard Association was held, at which the following regatta committee was appointed: Dr. H. A. Tucker, Gen. Rodney C. Ward, Major T. K. Boggs, Willard C. Vanderlip and W. F. Young. The race will be sailed on Aug. 12 from off the club house, around Buoy 25 off Gay Head, and return. One or more cups will be given. Com. Gerry was present at the meeting, returning to New York on Monday on the flagship Electra.

JERSEY CITY Y. C.—The annual regatta of the Jersey City Y. C. will be sailed on Aug. 10 over the club's course on New York Bay. The event is open to the craft belonging to the following clubs, members of the New York Yacht Racing Association: Columbia, Harlem, Hudson River, Newark, Newark Bay, New Jersey, Sing Sing, Pavonia, Staten Island, Tappan Zee, Williamsburgh, Yonkers Corinthian and Cedar Point yacht clubs. No entrance fee.

BUFFALO Y. C.—The usual city regatta did not take place this year on account of the action of Common Council. This body appropriated the sum of $250 for the regatta, the entries to be confined exclusively to home yachts. The Buffalo Y. C. had already sent out invitations to neighboring clubs to compete, but was obliged to recall them, explaining the unpleasant circumstances. The club declined to have anything to do with the matter, and no regatta was held.

DAISY—Steamer, formerly Henrietta, has been purchased by E. D. Morgan from the estate of the late Allen Thorndike Rice.

PUZZLE—Steamer, has been sold by J. L. Mott to Arthur Claflin.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

IGNORAMUS, Philadelphia, Pa.—Nonpareille is laid up at Staten Island.

E. R. C., Lewiston, Me.—On a still day good scores have been made at 100yds.

H. W. B., JR.—Parrsburg, Nova Scotia, is a desirable point. We cannot supply the addresses.

E. O. T.—Holberton's "Art of Angling" will be the best of those named for your purpose. The price is 50 cents and we can supply it.

L. M. F., Chicago.—We cannot give more definite information than that contained in Mr. Hough's papers of last week and today.

J. E. A.—We can only suggest that you experiment with varying proportions of powder and shot, but we doubt if you can obtain the results sought by any device. The pads cost 75 cents per dozen; 60 sheets in a pad; sent by express.

MOHAWK CAMPING CLUB, New York.—We think that for the season and game desired you will do well to follow the line marked out in the two papers, "To the Allaguash Lake and Beyond," in our issues of June 27 and July 4.

CAMPER.—You will find a forester, who is there by direction of the Forest Commission, on One Hundred Island, in Lake George, to give information about camping sites on the islands. All islands which bear the sign "State Lands" are free to the public, whether they have houses on them or not. The address of the Forest Commission is Albany, N. Y.

J. P. T., Aylmer, Canada.—In a trap-shooting match at 15 targets, 4 prizes, National rules, no class shooting, A scores 13, B and C 12, D E F and G 11, H, I and J 10. How are the prizes distributed? Ans. A takes first, B and C shoot off for second, the winner taking this and the loser third (or they may divide the two) and D E F and G divide fourth or shoot off for it.

LODI, O.—In a match one of the shooters did not shoot at his 20th bluerock, as the trap loader put in trap a bird filled with shavings from box, and when bird left trap the shooter thought it was a broken bird. The mistake was caused by the shavings falling out. The referee decided no bird, and the shooter was given a new bird. In your opinion was the referee right or wrong? Ans. Right.

GREENHEAD, Nevada, Ia.—In a live bird shoot, the shooter fired his first barrel and brought his bird to ground, and tried to use his second barrel, but the first shot had disabled the gun and he could not fire the second barrel; the bird still remained on the ground and was challenged. The shooter did not at once go after the bird, believing he had a right to the second barrel. He finally did go and bring the bird in dead, but the bird was scored lost, as he did not get it in the three minutes allowed from the time he was challenged. Was this decision of the referee correct? The shoot was under American Association rules. Ans. We understand that the three-minute limit applies to a wounded bird; in this case, as it appears that the bird was actually killed with the first barrel, and as failure to fire the second barrel was due to an accident, this causing the delay in gathering the bird, it should in equity have been scored to the shooter's credit.

Hotels and Routes for Sportsmen.

GRAND TRUNK RAILWAY.

When planning your summer piscatorial tour remember that this company controls over 4,100 miles of railway, equipped in the most approved modern style, and passing through a magnificent country, noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, ME.—For salt water fish.
RANGELEY LAKES (via Bryant's Pond or Bethel, Me.)—For brook trout, pickerel, yellow perch, rock bass.
THE WHITE MOUNTAINS (via Gorham, N. H.)—For pickerel, trout, bass, cusk.
THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).
LAKE ST. JOHN DISTRICT.—For Ouiananiche (reached via Quebec).
THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascalonge, pike, bass, whitefish, pickerel, perch.
THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalonge, pike.
MUSKOKA LAKES (the best place on the continent for fishing, shooting and camping, reached from various points on Northern and Northwestern Division).—For brook and salmon trout, black bass, mascalonge pickerel.
PARRY SOUND AND GEORGIAN BAY.—For pickerel, mascalonge, black bass.
LAKES ONTARIO, ERIE, HURON AND MICHIGAN, (via stations at all principal ports).—For the varieties of fish for which they are noted.
LAKE SUPERIOR (via Collingwood, Wiarton, Sarnia, in connection with steamship lines).—For lake trout, etc.

The charges for hotels, guides, and camping at many of the fishing waters named above, are extremely low. Full particulars of same, with many valuable hints as to baits, best months and general facilities are published in a pamphlet entitled **"Fishing and Hunting Resorts of the Grand Trunk Railway,"** which will be furnished gratuitously on application to any of the company's principal agents, or of the General Passenger Agent, Montreal, P. Q.

WM. EDGAR, Gen. Pass. Agent. JOSEPH HICKSON, Gen. Manager.

TAKE THE
Grand Rapids & Indiana Railroad,
The "FISHING LINE,"
THE DIRECT ROUTE TO
TRAVERSE CITY, PETOSKEY, MACKINAC, MARQUETTE, and Other Delightful Health and summer Resorts of
NORTHERN MICHIGAN
And the Celebrated Trout and Grayling Streams, Beautiful Lakes and Grand Forests of this Famous Country.

The waters of Northern Michigan are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this Territory.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing.

THE CLIMATE is peculiarly beneficial to those suffering with HAY FEVER and ASTHMATIC AFFECTIONS.

New hotels with all modern improvements have been erected, as well as many extensive additions to the older ones, which will guarantee ample ACCOMMODATIONS FOR ALL.

The Grand Rapids and Indiana Railroad in connection with the Duluth, South Shore and Atlantic Railway at Mackinaw City, forms the most direct route to Marquette, Sault Ste. Marie, Negaunee, Houghton, Hancock, and all points in the Upper Peninsula of Michigan.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to tourists and sportsmen.

For Tourist's Guide, Time Cards and Folders, giving full information, address
C. L. LOCKWOOD, Gen'l Pass'r Agent, Grand Rapids, Mich.

Only 33 hours from New York, 29 hours from Boston to Roberval, Lake St. John.

ANGLER!

Did you ever catch a fresh-water salmon? If not, try Lake St. John; or, if you want the largest of brook trout, try Lake Edward. Bring your families at the same time, to enjoy some of the most delightful scenery in America. Comfortable hotels at Roberval and at Metabetchouan, Lake St. John, 190 miles, and at Lake Edward, 115 miles, from Quebec. Express trains each way daily.

For particulars of lakes and fishing, read "Adirondack" Murray's "Doom of Mamelons," or Kit Clarke's "Where the Trout Hide." For folders and other information address, ALEX. HARDY, Gen'l Pass. Agent, Quebec, or G. LEVE, 315 Madison avenue, New York.
J. G. SCOTT, Sec'y and Manager.
General offices, 92 St. Peter st., Quebec, Can.

An Illustrated Pamphlet
Descriptive of the Las Vegas Hot Springs, New Mexico, prepared for the information of tourists, tired people, invalids of all classes and those who seek a summer and winter resort with the benefit to be derived from Medicinal Baths and Mineral Water, can be obtained by addressing C. D. SIMONSON, General Eastern Agent Santa Fe Route, 261 Broadway, New York.

Hotels and Routes for Sportsmen.

THE
Northern Pacific RAILROAD
Reaches the Best Fishing Waters on the Continent.

DETROIT AND BATTLE LAKES, MINN., afford excellent fishing for black bass, mascalonge, pike and other varieties.

First-class hotel accommodations, boat equipment and services of carsmen at reasonable rates.

The waters of the Yellowstone, Gallatin, Madison and Jefferson Rivers, in Montana, all immediately accessible from Livingston, Gallatin and Townsend, are a revelation to fishermen. These streams and their numerous tributaries abound in GRAYLING and the various species of speckled trout known as "ROCKY MOUNTAIN," "RAINBOW" and "COLORADO," many of which reach a size unknown in other American waters. Lakes PEND D'OREILLE and COEUR D'ALENE, in Idaho, are also in immediate proximity to the line and with tributary streams yield the finest species of mountain trout and other varieties.

The SPOKANE RIVER, in Washington Territory, accessible from Spokane Falls on the main line, is one of the finest trout streams in the Northwest.

THE LAKESIDE HOUSE at Lake Pend d'Oreille, for sportsmen, will be opened by this company in the spring of '89. Terms reasonable. Attractions and facilities for sport unsurpassed.

The streams and lakes now comparatively easy of access, by the Northern Pacific, assure the veteran sportsman a new experience and a quality of sport not now attainable in eastern waters.

Special Rates for Sportsmen will be Made to all Points on the Line.

A handsomely illustrated book entitled "The Wonderland" will be sent free to any address on application to the undersigned and a mention of FOREST AND STREAM. The preliminary chapters contributed by John Hyde, F. R. S., are descriptive of the Fishing Resorts along the line of the N. P. R. R., the Yellowstone Park, Lake Coeur d'Alene and Puget Sound Resorts. The chapters "Through Wonderland," etc., written by Lieutenant Frederick Schwatka, the celebrated explorer and writer, are descriptive of the "INLAND PASSAGE," THE NORTHWEST PACIFIC COAST AND THE TOURISTS' ROUTE TO ALASKA. Other publications of interest will also be forwarded.

ROUND MOUNTAIN LAKE.
A New Trout Fishing and Hunting Resort.

KENNEDY SMITH, so long and favorably known to sportsmen and summer tourists who have visited the Dead River Region, has within the past year built the best set of camps in Maine. All are neatly furnished and will be kept in a first-class manner; plenty of very nice boats. Trout are plenty and rise well to a fly. Large and small game very plenty. This camp has no equal for lake and mountain scenery in Northern Maine. High up among the mountains over 2,000ft. above sea level. Pure air; no hay fever. For any other information address
KENNEDY SMITH, Eustis, Me.

Bromfield House, Boston.

EUROPEAN PLAN.
MESSENGER, Proprietor.
